DOMINGUEZ CHANNEL WATERSHED MANAGEMENT AREA GROUP
ENHANCED WATERSHED MANAGEMENT GROUP
2015 Municipal Separate Storm Sewer System Annual Report
Non-Stormwater Control Measures

This report provides an update on the Non-Stormwater Outfall Screening and Monitoring Program (NSW Program) currently being implemented by the Dominguez Channel Watershed Management Area Enhanced Watershed Management Group (DCWMA EWMP Group). Pursuant to Attachment E, Monitoring and Reporting Program of the Municipal Separate Storm Sewer System (MS4) Permit, the DCWMA EWMP Group submitted a Draft Coordinated Integrated Monitoring Program (CIMP) to the Los Angeles Regional Water Quality Control Board (Regional Board) on June 30, 2014. The NSW Program is described in the Draft CIMP.

The DCWMA EWMP Group consists of the following MS4 Permittees:

1. City of El Segundo
2. City of Hawthorne
3. City of Inglewood
4. City of Lomita
5. City of Los Angeles
6. County of Los Angeles (Unincorporated County)
7. Los Angeles County Flood Control District (LACFCD)

After the 2014-2015 reporting period, the Cities of Carson and Lawndale were added to the DCWMA EWMP group.

The following sections follow the format provided in Part XVIII.A.3 of Attachment E.

Part XVIII.A.3.a Estimate the number of major outfalls within the Permittee's jurisdiction in the subwatershed.

Table 1. Number of Major Outfalls

Jurisdiction	Outfalls 36" and Greater	Outfalls 12"-36" Within/Near Industrial Areas	Total No. of Major Outfalls	Estimated No. of Underground and Inaccessible Outfalls
Upper Dominguez Channel	24	54	78	3
Dominguez Channel Estuary	5	83	88	02
Wilmington Drain	8	37	45	0
Torrance Lateral	14	46	60	0
Totals	51	220	271	0

The Dominguez Channel Watershed is surrounded by highly industrial areas. As such, the majority of the receiving water in the Dominguez Channel Watershed is within and/or near some industrial land uses. Thus all outfalls between 12" to 36" are categorized as major outfalls and were screened.

Part XVIII.A.3.b Provide the number of outfalls that were screened for significant nonstormwater discharges during the reporting year.

For the purposes of the NSW Program, the Dominguez Channel Watershed Management Group identified four receiving waterbodies: Upper Dominguez Channel, Torrance Lateral, Wilmington Drain, and the Dominguez Channel Estuary. The outfalls entering Machado Lake are not accessible due to ongoing Lake Rehabilitation Project. As of June 30, 2015, two screening events were conducted for the Upper Dominguez Channel, Wilmington Drain and Dominguez Channel Estuary. Three screening events were conducted for Torrance Lateral. The initial screening conducted from 3/10/2015 to 5/6/2015, provides the dual purpose of completing an inventory of MS4 outfalls greater than 12 inches and conducting the first visual evaluation. The second and third screenings include visual evaluation of major outfalls, which are those greater than 36 inches in diameter and those between 12 inches and 36 inches in diameter if they are near industrial areas. The second screening was conducted from 3/24/2015 to 6/16/2015, and the third screening was conducted for Torrance Lateral section on 3/17/2015.

Table 2. Number of Outfalls Screened

Jurisdiction	First Screening	Second Screening	Third Screening
Upper Dominguez Channel	78	78	N/A
Dominguez Channel Estuary	88	88	N/A
Torrance Lateral	60	60	60
Wilmington Drain	45	45	N/A
Totals	271	271	60

Part XVIII.A.3.c Provide the cumulative number of outfalls that have been screened for significant nonstormwater discharges since the date this Order was adopted through the reporting year.

Same as Table 2 since this is the first year of program implementation.

Part XVIII.A.3.d Provide the number of outfalls with confirmed significant nonstormwater discharge.

This information will be available after December 28, 2015.

Part XVIII.A.3.e Provide the number of outfalls where significant nonstormwater discharge was attributed to other National Pollutant Discharge Elimination System permitted discharges; other authorized nonstormwater discharges; or conditionally exempt discharges pursuant to Part III.A of this Order.

The Dominguez Channel Watershed Management Area EWMP Group will prioritize the major outfalls with significant discharges by December 28, 2015 as well as conduct source investigation for no less than 25% of the outfalls, and the remaining outfalls by December 28, 2017.

Part XVIII.A.3.f Provide the number of outfalls where significant nonstormwater discharges were abated as a result of the Permittee's actions.

An update will be provided after source investigation is completed.

Part XVIII.A.3.g Provide the number of outfalls where nonstormwater discharges was monitored.

An update will be provided after source investigation is completed.

Part XVIII.A.3.h. Provide the status of all multi-year efforts, including Total Maximum Daily Load implementation, that were not completed in the current year and will continue into the subsequent year(s). Additionally, if any of the requested information cannot be obtained, the Permittee shall provide a discussion of the factor(s) limiting its acquisition and steps that will be taken to improve future data collection efforts.

The Dominguez Channel Watershed Management Area EWMP Group will continue to implement the NSW Program in accordance with the Conditionally Approved CIMP.
