You Can Be the Solution to Pollution

Watch how you use and dispose of different materials around your home. Fertilizers, yard clippings, automotive fluids, and animal waste can all be souces of pollution in our waterbodies. Please take care with these materials around your home, because your actions DO make a difference.

- Apply Fertilizers and Pesticides SPARINGLY and never apply these materials prior to rain!
- Talk to your gardener or landscaper about proper ways to dispose of yard waste and debris.
- Clean up after pets and dispose of waste into a trash can, don't let them wash away.

Nutrients can change the delicate balance of food and oxygen in fresh and coastal waters. An abundance of nutrients can result in algae blooms, dead zones, die offs, and change marine habitat. Nutrients are often found in fertilizers and other garden chemicals, along with animal waste, including manure.

- Make sure all leaf blowers, if used, do not blow yard clippings into the street or canyons.
- Do not dump manure or yard waste into streets, or canyons, or on slopes; it can make GREAT composting material and can also be recycled.
- Collect and recycle used oil and filters when servicing your vehicle.
- Fix all oil leaks and use an absorbent material such as kitty litter to clean up spills.
- For more information on protecting our precious resources log onto: www.888CLEANLA.com

RECYCLE USED OIL FILTERS

RECYCLE USED OIL

Reduce - Reuse - Recycle

A message from the Cities of Rancho Palos Verdes, Rolling Hills Estates, Rolling Hills and Palos Verdes Estates.
