The Honorable Anthony Adams  
State Capitol, Room 4015  
Sacramento, CA 94249-0059

The Honorable Fiona Ma  
State Capitol, Room 3091  
Sacramento, CA 94249-0012

Dear Assembly Members Adams and Ma:

**ASSEMBLY BILL 222 (AMENDED MAY 28, 2009)  
BIOREFINERIES**

The Los Angeles County Solid Waste Management Committee/Integrated Waste Management Task Force (Task Force) continues to **strongly support** Assembly Bill 222 (AB 222) as amended on May 28, 2009. We were pleased to see the bill was voted out of the Assembly with strong bipartisan support and a broad, substantial coalition of supporters. AB 222, if enacted, would correct scientifically inaccurate definitions within California Statute which have hampered the development of conversion technologies. AB 222 would also establish a new category of industries termed "biorefineries" and level the playing field for the development of advanced technologies to increase biofuel and electricity production within California, while upholding the most stringent State and local environmental protection standards.

Pursuant to Chapter 3.67 of the Los Angeles County Code and the California Integrated Waste Management Act of 1989 (AB 939, as amended), the Task Force is responsible for coordinating the development of all major solid waste planning documents prepared for the County of Los Angeles and the 88 cities in Los Angeles County, with a combined population in excess of 10 million. Consistent with these responsibilities, and to ensure a coordinated and cost-effective and environmentally-sound solid waste management system in Los Angeles County, the Task Force also addresses issues impacting the system on a Countywide basis. The Task Force membership includes representatives of the League of California Cities-Los Angeles County Division, the County of Los Angeles Board of Supervisors, the City of Los Angeles, the waste management industry, environmental groups, the public, and a number of other governmental agencies.

AB 222, if enacted, would delete the scientifically inaccurate definition of gasification within State statute. AB 222 would define the term "biorefinery," enabling these facilities to be permitted under the same provisions as are required for other manufacturing facilities, while simultaneously requiring them to meet or exceed all National, State, and local environmental protection standards; the most stringent standards in the world. AB 222 would also require a biorefinery that is managing solid waste feedstock to remove recyclable products prior to the conversion process to the maximum extent possible. AB 222, if enacted, would revise the definition of "transformation" to mean the incineration of solid waste with or without the recovery of energy, excluding composting, biomass conversion, or conversion at a biorefinery. Finally, AB 222 specifies that energy and biofuels, when produced from carbon-based waste feedstocks, will qualify as renewable energy for purposes of the State's Renewable Portfolio Standard, and that solid waste diverted to a biorefinery would count as diversion for a solid waste diversion requirement above 50 percent.

Conversion technologies are processes capable of converting residual waste into useful products, green fuels, and clean renewable energy, without combusting the waste. Despite implementing many of the most aggressive waste reduction and recycling policies and programs in the country, California continues to send over 40 million tons of residual, post-recycled solid waste to landfills and incinerators each year. For many years, the Task Force has been a strong supporter of conversion technologies as an alternative to traditional disposal of this residual waste, and has played a major role in promoting their development. Reports completed on behalf of the California Integrated Waste Management Board, in concert with the Universities of California at Davis and Riverside, affirmed that conversion technologies offer a superior alternative to landfilling and incineration of solid waste, offering a number of substantial benefits with regards to renewable energy production, resource conservation, and pollution reduction. The reports also reaffirmed that developing conversion technology facilities in California will complement and even enhance our recycling industry, and lessen our dependence on landfilling, all while complying with strict environmental standards.

Conversion technologies can also help the State simultaneously address a number of its most vital environmental goals, including reducing greenhouse gas emissions (AB 32 - California Air Resources Board's Economic & Technology Advancement Advisory Committee); recovering biomass resources for beneficial use (Bioenergy Action Plan); producing renewable fuels within the State (AB 118/Local Carbon Fuel Standard); and producing local, baseload renewable energy that is accessible without the need for large transmission lines (Renewable Portfolio Standard).

Its important to note that establishing a pathway for the development of conversion technologies will attract potentially tens of billions of dollars in investment within the State and stimulate research and development by private companies and universities to quickly commercialize good processes, leading to the development of thousands of

green-collar jobs within the State and spurring the kind of economic development we so urgently need right now.

Therefore, the Task Force **strongly supports** AB 222. If you have any questions, please contact Mr. Mike Mohajer of the Task Force at (909) 592-1147.

Sincerely,

*Margaret Clark*

Margaret Clark, Vice-Chair
