### General Notes

1. **WATER QUALITY PLANS IN TRACT No. XXXXX**

2. **COMPANY NAME & ADDRESS**

3. **GENERAL NOTES**

   - **A & L.C.F.C.D.** The letters shall be 1 inch in height and placed below the letter “D” in the center of the cover.

   - The soils engineer of record shall inspect and approve the foundation excavations before steel or concrete is placed.

   - System cleaned to the satisfaction of the director of public works.

   - Existing utilities shall be maintained in place by the contractor unless otherwise noted.

   - The minimum concrete cover for reinforcement in precast concrete pipe shall be 1 inch in pipe having a wall thickness of 2 1/2 inches, or the thickness indicated on the plans, or the thickness calculated from the tip of the pipe is exceeded, the bedding shall be modified and/or pipe of additional strength shall be provided.

   - W values shall be as specified on standard plan no. 3080 for case III bedding, notes 3 (a), 3 (b), and 3 (c). If the W value at the proposed pipe bedding shall be:

   - The tip of the pipe is exceeded, the bedding shall be modified and/or pipe of additional strength shall be provided. The proposed pipe bedding shall be:

   - Transverse reinforcement and transverse joints shall be placed at right angles (or radial) to the conduit centerline except otherwise noted.

   - All structural concrete shall be Portland cement concrete with an ultimate 28-day compressive strength of 4000 psi unless otherwise noted.

   - All work shall be in accordance with the latest edition of the standard specifications for public works construction (includes supplements) and shall be produced in the presence of the director of public works.

   - The contractor shall be expected to provide for the installation of public works construction (including supplements) and shall be produced in the presence of the director of public works.

   - Every effort should be made to eliminate the discharge of non-stormwater from the project site at all times.

   - Stormwater pollution control measures must be designated in the contract documents and/or stormwater quality plans in accordance with California Environmental Protection Agency (CalEPA) and Los Angeles County Public Works requirements.

   - All backfill and relative compaction fills outside of street right of way shall be compacted to a minimum relative compaction of 95%.

   - All exposed edges shall be finished with a 3/4-inch chamfer.

   - All steel adjacent to face of concrete shall have a 2-1/2-inch clearance unless otherwise specified.

   - No concrete slab shall be placed until the forms and reinforcing steel have been inspected and approved.

   - All structural concrete shall be Portland cement concrete with an ultimate 28-day compressive strength of 4000 psi unless otherwise noted.

   - Transverse reinforcement and transverse joints shall be placed at right angles (or radial) to the conduit centerline except otherwise noted.

   - The soils engineer of record shall inspect and approve the foundation excavations before steel or concrete is placed.

   - System cleaned to the satisfaction of the director of public works.

   - Existing utilities shall be maintained in place by the contractor unless otherwise noted.

   - The minimum concrete cover for reinforcement in precast concrete pipe shall be 1 inch in pipe having a wall thickness of 2 1/2 inches, or the thickness indicated on the plans, or the thickness calculated from the tip of the pipe is exceeded, the bedding shall be modified and/or pipe of additional strength shall be provided. The proposed pipe bedding shall be:

   - Transverse reinforcement and transverse joints shall be placed at right angles (or radial) to the conduit centerline except otherwise noted.

   - All structural concrete shall be Portland cement concrete with an ultimate 28-day compressive strength of 4000 psi unless otherwise noted.

   - All work shall be in accordance with the latest edition of the standard specifications for public works construction (including supplements) and shall be produced in the presence of the director of public works.

   - The contractor shall be expected to provide for the installation of public works construction (including supplements) and shall be produced in the presence of the director of public works.

   - Every effort should be made to eliminate the discharge of non-stormwater from the project site at all times.

   - Stormwater pollution control measures must be designated in the contract documents and/or stormwater quality plans in accordance with California Environmental Protection Agency (CalEPA) and Los Angeles County Public Works requirements.

   - All backfill and relative compaction fills outside of street right of way shall be compacted to a minimum relative compaction of 95%.

   - All exposed edges shall be finished with a 3/4-inch chamfer.

   - All steel adjacent to face of concrete shall have a 2-1/2-inch clearance unless otherwise specified.

   - No concrete slab shall be placed until the forms and reinforcing steel have been inspected and approved.

   - All structural concrete shall be Portland cement concrete with an ultimate 28-day compressive strength of 4000 psi unless otherwise noted.

   - Transverse reinforcement and transverse joints shall be placed at right angles (or radial) to the conduit centerline except otherwise noted.

   - All work shall be in accordance with the latest edition of the standard specifications for public works construction (including supplements) and shall be produced in the presence of the director of public works.

   - The contractor shall be expected to provide for the installation of public works construction (including supplements) and shall be produced in the presence of the director of public works.

   - Every effort should be made to eliminate the discharge of non-stormwater from the project site at all times.

   - Stormwater pollution control measures must be designated in the contract documents and/or stormwater quality plans in accordance with California Environmental Protection Agency (CalEPA) and Los Angeles County Public Works requirements.

   - All backfill and relative compaction fills outside of street right of way shall be compacted to a minimum relative compaction of 95%.

   - All exposed edges shall be finished with a 3/4-inch chamfer.

   - All steel adjacent to face of concrete shall have a 2-1/2-inch clearance unless otherwise specified.

   - No concrete slab shall be placed until the forms and reinforcing steel have been inspected and approved.

   - All structural concrete shall be Portland cement concrete with an ultimate 28-day compressive strength of 4000 psi unless otherwise noted.

   - Transverse reinforcement and transverse joints shall be placed at right angles (or radial) to the conduit centerline except otherwise noted.

   - All work shall be in accordance with the latest edition of the standard specifications for public works construction (including supplements) and shall be produced in the presence of the director of public works.

   - The contractor shall be expected to provide for the installation of public works construction (including supplements) and shall be produced in the presence of the director of public works.

   - Every effort should be made to eliminate the discharge of non-stormwater from the project site at all times.

   - Stormwater pollution control measures must be designated in the contract documents and/or stormwater quality plans in accordance with California Environmental Protection Agency (CalEPA) and Los Angeles County Public Works requirements.

   - All backfill and relative compaction fills outside of street right of way shall be compacted to a minimum relative compaction of 95%.

   - All exposed edges shall be finished with a 3/4-inch chamfer.

   - All steel adjacent to face of concrete shall have a 2-1/2-inch clearance unless otherwise specified.

   - No concrete slab shall be placed until the forms and reinforcing steel have been inspected and approved.

   - All structural concrete shall be Portland cement concrete with an ultimate 28-day compressive strength of 4000 psi unless otherwise noted.

   - Transverse reinforcement and transverse joints shall be placed at right angles (or radial) to the conduit centerline except otherwise noted.

   - All work shall be in accordance with the latest edition of the standard specifications for public works construction (including supplements) and shall be produced in the presence of the director of public works.

   - The contractor shall be expected to provide for the installation of public works construction (including supplements) and shall be produced in the presence of the director of public works.

   - Every effort should be made to eliminate the discharge of non-stormwater from the project site at all times.

   - Stormwater pollution control measures must be designated in the contract documents and/or stormwater quality plans in accordance with California Environmental Protection Agency (CalEPA) and Los Angeles County Public Works requirements.

   - All backfill and relative compaction fills outside of street right of way shall be compacted to a minimum relative compaction of 95%.

   - All exposed edges shall be finished with a 3/4-inch chamfer.

   - All steel adjacent to face of concrete shall have a 2-1/2-inch clearance unless otherwise specified.

   - No concrete slab shall be placed until the forms and reinforcing steel have been inspected and approved.

   - All structural concrete shall be Portland cement concrete with an ultimate 28-day compressive strength of 4000 psi unless otherwise noted.

   - Transverse reinforcement and transverse joints shall be placed at right angles (or radial) to the conduit centerline except otherwise noted.

   - All work shall be in accordance with the latest edition of the standard specifications for public works construction (including supplements) and shall be produced in the presence of the director of public works.
