NOTATIONS ON DRAINING PIT No 91

Jan. 2. 1941

Began pumping in Pit No 91 at 1:15 P.M., Water surface of 167.28. Trench Water surface at 167.28 University of California Pit, water surface at 167.28

2:15 P.M. Elev. of water in Pit No 91 - 165.5
do " " " in Trench - 166.7
do " " " " U of Cal. Pit - 167.22

Pumped in Pit No 91 to elevation 162.9
Water in trench stood at 166.2
" " U of C. Pit at 167.13

At 11 A.M. Jan. 3, 1940. The following observations were noted.
Pit No 91 - The water had risen to 165.31
U of Cal Pit " " " Dropped to 166.78
Trench " " " to 165.82

Elev. of water surface in adj. pits are shown on Pages 20 & 21.

Water is running in ditch, at elev. 165.2
In Pit No 91, along the northerly edge and about elev. 166.2 water came in to pit very fast from adj pit. after pumping out pit No 91 water seeped in along south edge from Trench slow over entire bank.
Total pit very wet and shows signs of sluff. on east edge.
Cribbing consists of six 9"x15" vertical with 4"x4" stringers.

Art. 2. Comparison with similar soils in other locations, it is essential that the material be accurately classified. As different soils are frequently given the same name in different localities, the following definitions are given to eliminate some of the resulting confusion (see Report of Committee on Soils, Proc. Am. Soc. C. E., Feb., 1921):

ADOBE is a sandy, calcareous clay occurring in the southwestern part of the United States.

ALLUVIUM is the finer deposit of earth, sand, gravel and other transported material which has been washed away and deposited by rivers, floods, or other causes on land not permanently submerged.

BOG is a quagmire covered with grass or other plants.

CLAY is a general name for cohesive soils, which are firmly coherent, weighty, compact, and hard when dry, but stiff, viscid and ductile when moist, and smooth to the touch. Clay absorbs water greedily but not readily, is diffusible in water and, when mixed, does not readily subside in it. Other characteristics of clay are discussed in Art. 3.

DRIFT or GLACIAL DRIFT is a deposit of loose detrital material, fragments of rocks, boulders, sand, gravel, or clay, or other soil driven together, or a mixture of two or more of these deposits, resting on the surface of the bedrock.

GRAVEL consists of small stones or fragments of stone or very small pebbles larger than the particles of sand, but often mixed with them.

GRIT consists of angular, rough, hard particles of sand or gravel in a loose form.

GUMBO is a dark-colored, very sticky, highly plastic clay, occurring abundantly in the central and southern parts of the United States.

HARDPAN is a rather loosely used term, but is most commonly applied to a very dense heterogeneous mass of clay, sand and gravel of glacial drift origin; it is also applied to the hard stratum of consolidated soil underlying the surface soil.

LOAM is a mixture of sand and clay with oxide of iron, and generally a varying amount of organic matter.

PEAT is a brown soil of vegetable origin consisting of partly decomposed roots and fibers, more or less saturated with water.

QUICKSAND is a condition rather than a type of soil; it is generally a fine granular soil, supersaturated with water temporarily and when under pressure acting as a fluid.

SAND is any mass or collection of fine particles of stone, particularly of siliceous stone, but not strictly reduced to powder or dust.

SILT is a fluvial sediment of mud or fine soil deposited from running or standing water.

"In classifying soils, it is a decided advantage to the investigator to be able to check his estimates by rubbing samples of the soil between his fingers. As a rule sand feels gritty; silts are velvety, smooth and floury; and clays, which are smooth and plastic, offer considerable resistance to pressure, roll into balls when moist and adhere to the fingers. By the degrees in which they combine these salient characteristics of the primary constituents, soils other than pure sands, silts and clays may be distinguished as sandy loams, siltloams, sandy clays, clay-loams, silty clay-loams and silty clays." (From "Public Roads," Vol. 6, No. 5, July 1925.)
