FILE NO. 2-20
SUBJECT Annual Report on Hydrologic Data Season of 1943-44

All Districts.

Honorable Board of Supervisors
Los Angeles County Flood Control District
501 Hall of Records
Los Angeles 12, California

Gentlemen:

There is transmitted herewith for your files the Los Angeles County Flood Control District's Annual Report on Hydrologic Data for the Season of 1943-44. This report is the fourteenth of a series of annual or biennial reports which have been published covering seventeen years of records.

This report includes data collected and compiled by the District's Hydraulic Division on precipitation, evaporation, runoff, dam operation, ground water and conservation. These data are basic for hydrologic study, planning, design, and operation of flood control and conservation projects. The value of continuing the collection, compilation, and publication of this type of data cannot be over-estimated, due to its widespread use by the District and also by an ever increasing number of interested public and private agencies and individuals.

The District wishes to record its appreciation of the valuable cooperation rendered by the various individuals and organizations who have furnished data and have served as observers.

Yours truly,

H E Hedger

H. E. Hedger, Chief Engineer

Los Angeles County Flood Control District
Hydraulic Division

June 1, 1946

Col. H. E. Hedger
Chief Engineer
Los Angeles County
Flood Control District
Los Angeles 14, California

Dear Sir:

Transmitted herewith is the "Annual Report on Hydrologic Data" for the season 1943-44. This report includes data collected and compiled by the Hydraulic Division of the District which is presented as follows:

1. Precipitation
2. Evaporation
3. Runoff
4. Dam Operation
5. Conservation and Ground Water

Precipitation records include the monthly records of 433 stations of which 95% furnished complete seasonal records. Of these stations, 230 have a continuous record for fifteen years or longer, and 14 stations have a continuous record for over fifty years.

Intensity records were obtained from 69 recording rain gages. Comparative intensities of rainfall for periods varying from five minutes to 24 hours and including storm totals and maximum intensities of record are included in this report for 10 representative stations.

The rainfall for the season 1943-44 was 132% of normal for the County. The only large storm of the season occurred during the period February 19-23. Recorded precipitation for this storm varied from a maximum of 21.07 inches at Camp Singer in the West Fork of San Gabriel Canyon to a minimum of 3.77 inches at Yato Kya Indian Museum in Antelope Valley. This storm was characterized by unusually heavy snowfall at the higher elevations in the mountain areas. Maximum snowfall recorded was at Cedar Springs in the San Gabriel Mountains and amounted to 150 inches for the storm.

Seasonal rainfall distribution throughout the County is shown by the following relation to the 72-year normal indices for four areas of the County:

		% Normal
1.	San Gabriel Mt. Area	122
2.	Valley and Coastal Plain	124
3.	Santa Monica Mts.	138
4.	Desert Area	164

Seasonal amounts of snowfall for five mountain locations are also included in this report. The depths of snowfall ranged from 99 to 369 inches at the various locations.

Evaporation records were received from 22 stations each month. The total seasonal evaporation recorded at the various stations averaged approximately 90% of normal. Amounts varied from a maximum of 86.95 inches at Pine Canyon Patrol Station in the vicinity of Elizabeth Lake to a minimum of 36.25 inches at the District's Puente Hills station.

Runoff records presented include streamflow measurements, mean daily runoff, and storm hydrographs compiled from the District's water stage recorder records.

The District during 1943-44 operated 67 recording streamflow stations located on the main streams and tributary channels. Twenty-three of these stations are in the Los Angeles River drainage area, 20 are in the San Gabriel River drainage area, and 16 are located in the Rio Hondo drainage area. Records obtained from these stations are supplemented by the records of the 13 stations operated by the U. S. Geological Survey, Water Resources Branch, which are also included in this publication. Cooperative assistance was given by the District in making measurements at these stations, while the District in turn received cooperation at several stations from the Los Angeles Office of the U. S. Engineer Department.

Runoff for the season was above normal throughout the District. Peak flows occurred during the storm of February 19-23 at most of the District's gaging stations. Runoff from this storm was not excessive except in the Santa Clara River drainage area, where a heavy snowfall followed by heavy rains and warm winds caused peak flows approximating those experienced in March of 1938.

Dam operation data included in this report show daily reservoir water surface elevation, storage, and amount of inflow and outflow for 14 dams operated by the District. These dams control 407 square miles of mountain drainage with a total controlled storage of 87,635 acre feet.

Two tabulations giving pertinent data for the season for four debris dams and 16 debris basins owned and operated by the District are included in the report.

Reclamation of storage capacity in District reservoirs and debris basins during 1943-44, obtained by sluicing and excavation operations, amounted to 1067 acre feet.

Conservation and ground water data continued as an important phase of the work of the District, due to the increased draft upon various underground basins resulting from the demands of war industry and increase in population. Included in this report are ground water maps of the several primary basins showing approximate high and low seasonal ground water

conditions. These maps are compiled from data taken in more than 1200 wells during the annual spring and fall well measurements.

Key well measurements taken monthly by the District were reduced to the form of hydrographs, and ten of these have been included in the report to show the fluctuations in the more important basins.

The investigation of the intrusion of sea water into the West Coastal Basin was continued during 1943-44. This is being carried on by the United States Geological Survey with whom the District and several municipalities are cooperating. A similar study was also continued during the year in the South Coastal Basin by the United States Geological Survey in cooperation with the City of Long Beach Water Department and the Orange County Flood Control and Water Districts. The purpose of these investigations is to determine how best to retard the intrusion of sea water and possibly repel it.

Conservation of water by absorption in various stream channels amounted to 203,039 acre feet during the season. Conservation of 59,587 acre feet of water was effected by off-channel spreading grounds. A total of 334,660 acre feet of runoff wasted into the ocean as measured on the San Gabriel River at Spring Street, on the Los Angeles River at State Street, and on Ballona Creek at Sawtelle Boulevard. This was 57% of the maximum recorded waste of record which occurred during the season 1937-38.

We wish to thank the many individuals and agencies who have cooperated by furnishing an appreciable part of the precipitation data and other records included in this report.

Respectfully submitted,

Walter J. Wood

Walter J. Wood, Acting Chief
Hydraulic Division

PRECIPITATION RECORDS

PRECIPITATION

FOREWORD

This report is the sixteenth of similar seasonal reports. It contains precipitation data for the season in summarized form. It is published to provide current basic data for reference and to inform those interested public and private agencies and individuals of further precipitation data which may be found in the District's files.

The District's season includes the period between October 1st and September 30th, which conforms with the water year as used by the United States Geological Survey, Water Resources Branch.

SUMMARY

For the seventh time in the last ten seasons, seasonal precipitation in Los Angeles County was above normal. The County average as a whole was 132% of normal precipitation. The percent of normal varied considerably in various sections of the County. The East San Gabriel Valley area was low with 109% of normal, while the Desert area with 177% of normal was high. See tabulation of Rainfall by Areas on page 8, for a more general picture of the season's rainfall throughout the County.

Only one storm was outstanding, principally because it was the first in order of magnitude and importance for the season. This storm occurred over a 5-day period, February 19 to 23 inclusive, and aside from being the largest storm of the season, in most areas, it produced unusual depths of snow in the mountains.

Precipitation prior to the February storm was only 82% of the accumulated mean rainfall to date at Los Angeles. The deficiency was caused by a very dry January. The lack of precipitation in January overcame the lead gained by the above normal precipitation for the month of December.

At Los Angeles there was only .97 of an inch of rain for the month of January.

Storm of February 19-23, 1944

Precipitation started in Los Angeles at about 3:10PM February 19th, with a shower of rather high intensity but of short duration, followed by a five-hour period of little or no precipitation. Light to moderate precipitation started again about 9PM and continued at a moderate rate through the night to 2:30PM the following afternoon, at which time the accumulated rainfall for the storm was 2⅛ inches. This was followed by a three and one-

half hour period of moderate to moderate-heavy intensities during which time 1.85 inches fell. This was the period of maximum intensity for the storm in Los Angeles and occurred between 2:30PM and 6:00PM, February 20.

Precipitation continued through the next two days with low to moderate intensities, being intermittent at times, to bring the storm total to 7.19 inches at Los Angeles.

In the mountains the occurrence was somewhat different, aside from being greater in amounts and intensity. The period of maximum intensity for the storm in most mountain areas was from the evening of February 21 at about 5PM to 5PM of the following day. During this 24-hour period 13.69 inches fell at Camp Singer (Opid's). This 13.69 inches followed 7.47 inches accumulated during the preceding two days from precipitation of moderate intensities at Camp Singer. The storm total here was 21.07 inches with a maximum depth of snow on the ground of 41 inches on February 22.

At Camp LeRoy (Hoegee's) the period of maximum intensity was from 12:30PM to 4:00PM, February 21 with 1.80 inches for the 3½ hour period. The storm total here was 15.92 inches.

Following are some storm totals which give a picture of the storm in different sections across the County:

Sta. No.	Location	Precipitation	Elevation (M.S.L.)
	Stations from West to East		
381B	Santa Monica	5.49 inches	100 feet
213	West Los Angeles	6.48 "	177 "
577F	Los Angeles-Weather Bureau	7.19 "	548 "
108B	El Monte	7.20 "	301 "
178	Azusa	7.10 "	545 "
92	Pomona	5.29 "	1190 "
	Stations from South to North		
224	Long Beach	6.44 "	80 "
577F	Los Angeles-Weather Bureau	7.19 "	548 "
311B	Pasadena	9.38 "	918 "
338B	Mt. Wilson	15.56 "	5709 "
57B	Camp Singer (Opid's)	21.07 "	4350 "
440B	Chilao	16.50 "	5250 "
351D	Palmdale	6.61 "	2648 "
121	Lancaster	4.55 "	2350 "

Recorded storm precipitation amounts varied from a maximum of 21.07 inches at Camp Singer and 20.51 inches at Crystal Lake to a minimum recorded amount of 3.77 inches at Yato Kya Indian Museum at Piute Butte in the Antelope Valley.

Snowfall for the February 19-23 Storm

Snow depths unusual for a single storm, in this area, were recorded in the higher mountain areas.

Sta. No.	Name	Elevation	Snowfall During Storm	Maximum on Ground During Storm and Date
54	Loomis Ranch	4050	61 inches	48 inches 2/21
83	Big Pines	5860	82 "	105 " 2/24

DISTRIBUTION OF GAGES

Location and distribution of gages are very important factors in the value of rainfall data. The location of any one station must be chosen carefully as the rain catch can vary considerably in short distances due to obstructions such as trees, buildings, and topography.

Subsequent to 1927 the District has made considerable progress in securing a representative coverage of the County as shown by the following figures.

Number of stations reporting to the L. A. Co. Flood Control District:

Season 1926-27 79
Season 1943-44 433

Following are the number of stations for which the District has records for periods of 15 years or more.

	15 to 49 years	50 years and over
Continuous records	201	11(°)
Broken records	36	
Adjacent to Los Angeles County	15	3
Total	252	14

The District has a better distribution of gages in the valley and foothill areas than in the mountains because a larger

(°) In some cases the station was moved a short distance or in case of inactivity another station in the immediate locality has been substituted to give a continuous long time record.

number of cooperative observers are available. Practically a maximum possible coverage of mountain areas has been attained as far as present available cooperative observers are concerned. Additional locations are desirable when satisfactory automatic reporting equipment is developed for locations which have difficult access. Station locations are shown on Map I, page 20.

An annual inspection trip was made in the fall of 1943 at which time the location and condition of each gage was checked. Helpful suggestions and instructions were given to observers to assist in obtaining more accurate and complete records. Supplies for the entire season were furnished at this time, thus saving considerable mailing cost. These annual trips also provide an opportunity to investigate locations for new stations and to secure cooperative observers.

Where observers are available, automatic rain gages have been located in areas which will furnish the most representative intensity data for flood flow analysis and computations. During the 1943-44 season 28 of these gages were in the mountain area and 26 were in the valley area. In general, each automatic gage is operated in conjunction with a standard 8" United States Weather Bureau type gage placed nearby as a check.

USES OF PRECIPITATION DATA

1. In operation of District Dams
2. In calculation of flood flows for design purposes
3. In water conservation studies
4. By public and private agencies for flood control, irrigation and water supply or related investigations
5. Court cases

The District furnishes rainfall data to many outside agencies and individuals among which are:

United States Weather Bureau
United States Engineer Department
United States Forest Service
Division of Water Resources, State of California
City of Los Angeles
Pasadena Water Department
Southern California Edison Company
Los Angeles County
    Survey Department
    Forestry Department
    Road Department
Ventura County
San Bernardino County

Rainfall, evaporation, temperature, and other data furnished to the District by the above and other agencies is an important addition to that otherwise obtained.

SOURCE AND NUMBER OF RECORDS

The list, which follows, shows the number, type, and ownership of rain gages:

Rain Gage Ownership and Type			Number of Gages 1943-44	Number of Gages Total

		Total stations from which the District receives records regularly.		433

The District owns 64% of all the gages from which records are received each month. The remainder are privately owned as shown above and are cooperative with the District.

The following shows the number of stations which furnished complete records or records which could be completed by estimates from adjacent stations for not more than 10 percent of total seasonal amount. Thus out of the 433 stations reporting during the season, 95 percent furnished complete records.

	Season - 1943-44
F. C. Automatic Rain Gage Stations	54
F. C. Non-Recording Rain Gage Stations	197
Private Automatic Rain Gage Stations	15
Private Non-Recording Rain Gage Stations	145
Total	411

Table I, page 6 presents a complete list of the automatic rain gages which were active during the season 1943-44, with the length of active record included.

°Represents number of standard gages at automatic rain gage stations deducted from total number of gages to agree with the number of records published.

(6) " " " " B " " 11-8-37
(7) " " " " A " " 1-16-41

The District also has records of 41 automatic gages at stations which are now inactive. These records are available in our files.

AVERAGE RAINFALL INDICES FOR LOS ANGELES COUNTY

The following table presents the 72 year seasonal indices for Los Angeles County. The 72nd year index (1943-44 season) was based on the computed 70 year normal. Seasonal indices are the ratios of seasonal rainfall to seasonal normal expressed as a percentage. Indices furnish a more convenient and satisfactory measure for comparing seasonal rainfall in different localities, than do the actual amounts expressed in inches. These indices have been obtained by averaging the computed indices of 8 representative areas in the County. The indices of each area were obtained by averaging the indices of representative long time stations, known as Master Stations, for that area. An isohyetal Map for the 70 year normal was shown on Map II, page 21, of the District's 1941-42 Annual Report on Hydrologic Data.

Season°	Index				
1872-73	86	1896-97	118	1920-21	96
74	148	98	41	22	143

° October 1 to September 30.

COMPARATIVE RAINFALL

Eight locations used in previous reports have again been compared. These represent stations with long time records in the valley, mountain, foothill, and coastal areas in Los Angeles County.

Comparison of Rainfall by Stations

Sta. No.	Name	Elev.	Yrs. of Record	70 Yr. Normal Inches	1943 1944 Inches	% of Normal
224	Long Beach	80	50	13.36	16.93	127
577E	Los Angeles (USWB)	548	72	15.71	19.23	123
610A	Pasadena	865	72	20.29	26.88	118
60A	Camp LeRoy (Hoegee's)	2400	19	43.57	43.68	100
587	Mouth of San Antonio Cn.	2500	40	27.66	31.50	114
53A	Colby's Ranch	2950	47	31.40	41.42	132
57B-E	Camp Singer (Opid's)	4350	27	41.37	50.84	123
338A	Mount Wilson	5650	40	37.08	42.50	114

The following list compares precipitation by areas using averages of a number of stations. Stations used are identical with those used in similar tables in previous reports, except that where those stations are now inactive, nearby stations have been substituted.

Comparison of Rainfall by Areas

Area	No. of Sta. Used	Ave. 70 yr. Normal Inches	1942-43 Season Ave. Amt. Inches	% of 70 yr. Normal
Coastal Plain	8	14.88	18.67	126
San Fernando Valley	7	16.71	24.03	144
San Gabriel Valley-East	12	19.82	21.65	109
San Gabriel Valley-West	6	21.74	25.91	119
Santa Monica Mountains	5	18.05	24.81	138
San Gabriel Mountains	16	29.01	35.55	122
Desert	6	10.87	19.20	177
Sierra Pelona (Vicinity of Bouquet Cn.)	6	15.04	22.61	150

MAXIMUM AND MINIMUM SEASONAL RAINFALL

The following tabulation presents maximum and minimum rainfall amounts in Los Angeles County for the period of this report using the 5PM Pacific War Time standard gage readings only.

Maximum and Minimum Rainfall

No.	Station	Minimum Seasonal	Maximum Seasonal	Maximum Day	Date
456	Yato Kya Indian Museum-Piute Butte	10.80			
402D	Cedar Springs Prison Camp		57.42		
57B	Camp Singer (Opid's)			13.69°	2-22-44

°Sta. No. 283A - Crystal Lake - East Pine Flats had an estimated 14.00", 2-22-43. Estimated from a nearby station.

Table II, page 11, shows a comparison of maximum intensities for ten representative stations in the District during the season and the maximum intensities of record.

Table III, page 12, presents monthly and seasonal rainfall amounts for stations from which the District received records during the season 1943-44.

Table IV, page 16, entitled "Rain Gage Station Location", gives pertinent data regarding each of the stations.

SUMMARY OF SEASONAL SNOWFALL

Snowfall at five high mountain stations is shown as follows:

Sta. No.	Location	Elev.	Season-1943-44 Amount in Inches
82	Table Mountain	7500 ft.	185
83	Big Pines Rec. Camp	5860 "	232
2?3a	Crystal Lake - E. Pine Flats	5740 "	99°
?2D	Cedar Springs	6800 "	369
440	Chilao	5250 "	113

°Partly Estimated
Note: Sta. No. 308 at 8300 ft. elev. - no record.

The following table shows snow survey data for the San Antonio and Big Rock watersheds for Season 1943-44:

San Antonio Watershed

Snow Survey Course	Date	Course Elevation	Mean Depth Snow	Density Percent	Water Content
Mt. San Antonio #2	3-30-44	8400	107 in.	42.4	45.3 in.
Upper Ice House Cn. Courses #2, 2A & 3	3-27-44	7500-8000	106.9 "	44.7	47.7 "

Big Rock Watershed

Snow Survey Course	Date	Course Elevation	Mean Depth Snow	Density Percent	Water Content
North Baldy #1	4-3-44	7500	89 in.	44.6	39.7 in.
Mt. Islip #1	4-4-44	7000	84.7 "	48.2	40.7 "

COOPERATION OF RAINFALL OBSERVERS

Observers have continued their valuable cooperation with the District in the collection of these data, as indicated by the fact that 95% of all observers reporting each month to the District have sent in complete reports for the 12 months period.

We wish to express our appreciation to the many agencies and individuals who have so freely cooperated with us in the col-

lection of these data and by so doing have made such a complete report possible.

RESPONSIBILITY

Reports on rainfall and evaporation have been compiled by Mr. John W. Luce. This work was done under the immediate supervision of Mr. Walter J. Wood, Assistant Chief, Hydraulic Division.

LEGEND REGARDING GAGE TYPE AND OWNERSHIP

S - - - - Standard 8" gage unless followed by number showing diameter.
Owned by Flood Control District.
A - - - - Flood Control District Automatic gage.
Sp - - - Private gage of standard type 8" diameter.
Sp 6" - - Private gage of standard type 6" diameter.
Sp 5" - - Private gage of standard type 5" diameter.
Sp 4½" - Private gage of standard type 4½" diameter.
Sp 3" - - Private gage of standard type 3" diameter.

Dial - - - - Gage registers cumulative rainfall only.
8.81" - - - Uses glass graduate with special Henson type collector ring. (8.81" diameter.)
cw - - - - - Gage owned by the Los Angeles City Water Department.
co - - - - - Gage owned by Los Angeles County but not Flood Control.
Spl - - - - Special type gage.
wb - - - - - Gage owned by United States Weather Bureau.
Ap - - - - - Private automatic gage.
E - - - - - Indicates Evaporation tank at Station.

Quad Index Numbers

The "Quad" index numbers assigned to precipitation stations serve as a location guide. The portion of the index number preceding the hyphen indicates the number of the "six minute" or 1:24000 scale topographic quadrangle as published by the United States Geological Survey. These "Quads" have been numbered from left to right beginning with the most south westerly and ending with the most north easterly "Quad" in Los Angeles County. The two digits following the hyphen indicate the horizontal and vertical coordinates respectively of each "Quad", the "Quads" having been divided into ten equal divisions both horizontally and vertically numbered from 0 to nine reading from left to right and top to bottom respectively.

EVAPORATION RECORDS

FOREWORD

This report contains monthly and seasonal data for all stations reporting to the District during the 1943-44 season. Past records are available in the District's files.

SUMMARY OF SEASONAL EVAPORATION

The 1943-44 season's evaporation was below normal, averaging about 90% of the seasonal normal.

The following table indicates the maximum and minimum rate of evaporation at District stations for the season.

Maximum Seasonal Amt. Inches	- Pine Cn. Patrol Sta.	86.950	
Maximum Monthly Amt. Inches	- Pine Cn. Patrol Sta.	12.820	in August
Maximum Daily Amt. Inches	- Pine Cn. Patrol Sta.	0.585	July 27
Minimum Seasonal Amt. Inches	- Puente Hills	36.252	
Minimum Monthly Amt. Inches	- Puente Hills	0.734	in December

The Pine Canyon Patrol Station, which registered the most evaporation during 1943-44, is situated in the Elizabeth Lake District at an elevation of 3275' on a moderate southeast facing slope. The station is located on the side of a small valley between rather low hills which are covered with sparse desert growth. These hills form the edge of Antelope Valley. Desert-like conditions prevail.

The Puente Hills Station is located on the south slope of the Puente Hills at an elevation of 675'. Surrounding areas are covered with irrigated citrus and avocado groves. The area is subject to fog and general marine air conditions.

The minimum evaporation at any location in the District is largely influenced by the rainfall and sometimes by freezing weather.

During some winter months a number of stations indicate water as frozen or partially frozen, thus giving incomplete total evaporation as a result.

Table I presents monthly evaporation data for the stations operated.

Daily evaporation data at most stations are available in the District's files.

Evaporation readings are taken at 5:00 p.m. at all District stations to be consistent with the rainfall readings.

LOCATION AND NUMBER OF STATIONS

The District receives records from 22 evaporation stations each month of which the District maintains 21. Eleven of these stations are at the larger reservoirs; the remaining 11 are distributed throughout the District.

San Gabriel Dams Number 1 and Number 2 and Encino Reservoir are equipped with both land and lake pans.

LENGTH OF RECORD

The first pan was installed at Santa Anita Dam in March, 1929. By October, 1931, the District was maintaining 24 evaporation stations throughout the District. The number of stations has varied slightly since 1931 due to lack of cooperative observers, insufficient readings and for various other reasons.

The District has 18 stations with records from 11 to 14 years in length.

EQUIPMENT

The land pan in use by the District is 24 inches in diameter and 36 inches in depth and is sunk in the ground 33 inches, with the water surface normally at ground level. A one-quarter inch brass rod embedded in a block of concrete, to hold it in a vertical position, is placed in the center of the tank. This rod has a sharp point at the upper end, and serves as a reference point for water levels.

The lake pans in use at San Gabriel Dams No. 1 and No. 2 are 30 inches square and 18 inches deep with a 6 inch wave baffle to prevent water splashing in. The pan is floated on suitable rigging and is submerged to make the reservoir surface and water level in the pan and the water temperatures practically identical.

The Los Angeles City Bureau of Water Works and Supply reservoir at Encino maintained a United States Weather Bureau type pan and a lake pan from which the District received data in addition to records from the District's pan. The Metropolitan Water District at Morris Dam maintained 6 foot and 4 foot diameter land pans from which the District received records.

The Baldwin Park Experimental Station, which is cooperatively maintained by several agencies and the District, is equipped with the following instruments: an eight inch standard rain gage, maximum and minimum thermometers, hygro-thermograph, anemometer, four foot diameter evaporation pan of the United States Weather Bureau, type, six foot diameter evaporation tank, two foot diameter evaporation tank, and a District two foot diameter evaporation tank. All tanks, except the one which is furnished by the District, are equipped with hook gages for reading the evaporation. The District's tank here, as all other District tanks, utilizes for determination of evaporation, a graduated cup which represents, when full of water, 0.025 inch depth of water in the pan. A sufficient number of cups and portions of cups of water are added to bring the pan water level to the level of the point gage.

Four stations are equipped with thermographs. Most stations include maximum and minimum thermometers as standard equipment.

RUNOFF RECORDS

RUNOFF

FOREWORD

This is the fourteenth report on runoff published since the creation of the Hydraulic Division (formerly the "Hydrographic Department") in April 1927°. These reports cover 17 years of records on various streams and channels throughout the District.

SUMMARY

Runoff during the 1943-44 season averaged above normal throughout the District.

The storm of February 19-23 produced the peak flow of the season on all streams in the district with few exceptions. While precipitation during this storm was heavy, it fell in the form of snow above elevation 2500 feet in the San Gabriel Mts., resulting in peak flows that were neither unusually high nor of sufficient magnitude to cause flooding. The exception to this was in the Santa Clara River drainage area, where a heavy snowfall followed by heavy rains, accompanied by warm winds, produced a peak flow of flood proportion, approaching the 1938 flood peak.

EXTENT AND METHOD OF COLLECTING AND PRESENTING DATA

I. Drainage Area and Stations

The Flood Control District operated 67 recording streamflow stations during the 1943-44 season. These stations were distributed on the main streams and tributaries of the various drainage systems through the County as follows:

Drainage Area	No. of Stations
Los Angeles River	23
San Gabriel River	20
Rio Hondo	16
Ballona Creek	3
Santa Monica Mountains-Coastal	2
Santa Clara River	1
San Antonio Creek	1
Antelope Valley	1

The locations of all stations are shown on Map II , page 30.

°Records prior to 1927 on some streams are available in either the office of the U.S.G.S. Water Resources Branch or in the office of the State Division of Water Resources. Reference to these records, if available, can be found under "Station Descriptions" herein published.

II. Types of Channels

The types of channels on which these stations are located are listed below in order of predominance:

(1.) Natural sections - shifting sand and gravel, clay or permanent rock.
(2.) Concrete lined or riprap channels with no definite control point.
(3.) Artificial controls - concrete, placed rock, flumes, and weirs.

III. Types of Recorders Used.

The flow stage is recorded by various types of automatic recorders usually mounted over a concrete or corrugated iron pipe stilling well. The types of recording instruments used at stations are determined by the importance of the particular record, gage height range, time scale required, and the practicability of frequent access by a district hydrographer and include the following:

Type	No. in Use	Time-Duration
Au	18	Continuous
°H.C.F.	33	Continuous
Stevens (Type A)	2	Continuous
Stevens (Type L)	6	Weekly or daily
Rational (horizontal)	6	Weekly
Rational (Duplex)	1	12 days or daily
Friez (Horizontal)	1	Continuous

IV. Records of Recording Streamflow Stations

These records are, in general, published under each station in four sections, giving the following information:

(1.) Station Descriptions which present the pertinent data regarding location, drainage areas, channels, and controls, available measurements, recorders, regulations, diversions, available records, extremes of discharge, accuracy of records and operation.

(2.) Lists of measurements for all actual meter measurements together with observed water stage, areas of cross-section, and mean velocities. These lists include 2,747 measurements taken by the District

°The H.C.F. recorder was designed and developed in the District's Hydraulic Division to furnish a medium-cost, accurate, and dependable continuous water stage recorder.

during 1943-44 at 67 recorder stations.

(3.) Mean Daily Runoff Tabulations which show the mean daily runoff in second-feet; total monthly and yearly runoff in second-foot days and acre-feet.

(4.) Hydrographs showing a curve of instantaneous rate of flow versus time for the larger storms of the period. In general the storm producing the peak flow of the season at the maximum number of stations was selected so that hydrographs on a major stream system might be compared.

V. United States Geological Survey, Water Resources Branch Records

Included in this report as additional information are the records of the thirteen permanent streamflow recording stations owned and operated in this District by the United States Geological Survey, Water Resources Branch. The Flood Control District cooperates with the U.S.G.S. by taking streamflow measurements at these stations. During the current season 229 such measurements were taken. The U.S.G.S., in turn, publishes the records of 23 District stations in their Water Supply Papers for Pacific Slope Basins in California.

VI. Staff Gage Station Measurements

Records of 669 measurements taken at various staff gage stations are also included herein. The measurements are correlated with the water stage at an established metering section. Included in this type of record are the measurements of "Rising Water at Whittier Narrows" which are taken weekly, at established staff gage stations. A Graph of "Rising Water" showing mean monthly flow fluctuations for a period of 22 years is included on page 176.

VII. Miscellaneous Station Measurements

In various drainage areas throughout the County 409 miscellaneous measurements were taken. These data were collected for specific purposes and are insufficient to determine mean daily flow. They are grouped by drainage areas.

VIII. Percolation Data

Two sets of percolation measurements were taken on selected reaches of various streams. These are tabulated by streams.

IX. Limitations

For various reasons there are a number of incomplete recorder records at certain stations. Flows for periods of incomplete record are estimated by various methods. In general, estimates were made by comparison with other flow records and rainfall or by

interpolation between known or measured values. Reference to such periods is made under "Accuracy" in the Station Descriptions.

In the tabulation of mean daily runoff, incomplete totals were avoided by estimating any missing or unreliable records. It was felt that estimating missing current records was more satisfactory than leaving the records incomplete. Familiarity with a current season's characteristics facilitates making such estimates, while leaving the record incomplete may make it necessary to provide the estimate in later years, when the reconstruction of the available data would be much more difficult.

Only meter measurements, pitot tube measurements, and quantities determined by float velocities taken with depth soundings or over a known cross-section are published; other determinations are omitted.

Due to shifting channel conditions at many locations, the accuracy of the record depends largely on measurements made at crucial points on each storm hydrograph.

RESPONSIBILITY

The collection of the field data was the responsibility of the following hydrographers:

District	Name
1A	G. H. Middleton assited by E. K. DeVore and E. W. Godfrey.
1B & 3	T. E. Moon assisted by P. A. Haig, F. H. Mellen, and R. A. Waddicor.
2	C. L. Brewster assisted by Floyd Smith.
4	E. S. Bonadiman assisted by G. L. Walton.
5A & 5B	C. E. Bollinger assisted by G. Eckert.
6	L. J. Turner assisted by R. D. Belt.
8	S. E. Blakely assisted by M. V. Pardieck.
7, 9, & 10	J. W. Luce assisted by E. T. Hemphill.

The compilation of the records was performed under the immediate supervision of R. E. Lindsay and P. A. Haig, with the assistance of the above mentioned hydrographers.

All field and office work was under the direction of W. J. Wood, Assistant Chief, Hydraulic Division.

COOPERATION

Certain records included in this report were obtained through the cooperation of the San Gabriel River Water Committee, the U.S.G.S. Water Resources Branch, and the United States Engineer Department, Los Angeles Office. Acknowledgment is given with each individual record.

LEGEND

Stations are designated by numbers to which prefixes and suffixes are added to indicate ownership, operating agency, and type of station. The letters used have the following connotations:

Prefix F - indicates the stations owned and operated by the Los Angeles County Flood Control District.
Prefix E - indicates stations owned and operated by the U.S. Engineer Department.
Prefix U - indicates stations owned and operated by U.S.G.S. Water Resources Branch.
Prefix P - indicates stations operated by the District and the U.S.G.S. Water Resources Branch, formerly operated by the Pasadena Water Department.
Prefix L - indicates station operated by the District and formerly operated in cooperation with the Little Rock-Palmdale Irrigation District.
Prefix S - indicates a station owned and operated by the San Gabriel River Water Committee.
Suffix R - indicates recorder station.
Suffix S - indicates staff gage station.
Suffix B or C - indicates that the station has been moved.
B - represents second location and
C - represents third location, etc.

In working up the chart gage height record the following legend is used for indicating estimates:

"a" - No gage height record due to recorder or clock failure.
"b" - No gage height record due to obstructed communication or sanded well.
"c" - Gage height record affected by backwater.
"d" - Gage height record doubtful.
"f" - Gage height record partly estimated. (Estimated part represents less than 75% of the flow; otherwise a, b, c, or d is used).
"v" - Gage height-discharge relation failed due to extreme and undetermined shift or unusual drawdown in stilling well.

These letters are placed in the discharge column; letters are not used if the estimated portion of the record represents less than 10% of the mean daily flow or if the total flow is estimated at 0.05 C.F.S. or less.

Note: All data pertaining to runoff is based on Pacific War Time.

Accuracy

The legend used in plotting the hydrographs has the following significance:

The solid line indicates the portion of the hydrograph lying below the maximum meter measurement taken during the period of the storm, unless the control was stable and other measurements were applicable.

The dash line indicates computed flow based on water stage records and the stage discharge relation determined by float measurements or extrapolation.

The dotted line indicates estimated flow for periods when the water stage record was considered unreliable, or was not available due to inoperative equipment.

The mean daily Runoff Tabulations are qualified under "Accuracy" in the Station Description. "Excellent" indicates that error in the record is probably less than 5%. "Good" indicates a possible error greater than 5% but probably less than 10%. "Fair" indicates a possible error greater than 10%, but probably less than 20%. "Poor" indicates a possible error greater than 20%.

MAP II

STATION F81D-R

ALHAMBRA WASH near Short Street

LOCATION:

Water-stage recorder, lat. 34°03'22", long. 118°05'11", on the left (east) side of channel about 250 feet above Short Street and 2650 feet below Garvey Avenue. Elevation of zero gage height 243.74 ft.

Abandoned stations F81-R, F81B-R, and F81C-R were 2650 feet, 4050 feet, and 1750 feet, respectively, upstream from station F81D-R.

DRAINAGE AREA:

14.5 square miles.

CHANNEL AND CONTROL:

Channel-concrete 40 feet wide by 12.7 feet deep to bottom of invert with 0.5 foot fillets at vertical side walls.
Channel forms control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from footbridge at station.

RECORDER:

Installed September 2, 1936, over a 3.25 ft. x 4.0 ft. concrete stilling well.
An H.C.F. recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

None.

DIVERSIONS:

None.

RECORDS AVAILABLE:

At station F81-R:
January 14, 1930 to September 30, 1934.
At station F81B-R:
October 1, 1934 to February 25, 1935.
At station F81C-R:
February 25, 1935 to April 27, 1936.
At station F81B-R:
April 27, 1936 to May 22, 1936.
At station F81D-R:
September 2, 1936 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 1,860 second-feet February 22.
Minimum + flow at flow at various times.
1929-1944 (Stations F81-R, F81B-R, F81D-R, F81D-R)
Maximum 4,890 second-feet January 1, 1934.
Minimum no flow at various times.

ACCURACY:

Good.
Flows occasionally estimated during low flows.

OPERATION:

Located, operated and recorder house constructed by the Los Angeles County Flood Control District; the stilling well and communication channel were constructed by U. S. Engineer Department.

STATION F152-R

ALISO WASH at Nordhoff Street

LOCATION:

Water-stage recorder, lat. 34°14'08", long. 118°32'52", on the right (west) abutment of the highway bridge at Nordhoff Street about one mile northwest of Northridge and 3600 feet west of Reseda Avenue. Elevation of gage, about 823 feet (from topographic map).

DRAINAGE AREA:

7.15 square miles.

CHANNEL AND CONTROL:

Channel-clay and sand.
Control-channel forms control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from upstream side of highway bridge.

RECORDER:

Installed November 3, 1939 over an 18 inch corrugated iron pipe stilling well.
An H.C.F. recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION AND/ OR DIVERSIONS:

None.

RECORDS AVAILABLE:

November 3, 1939 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 1,600 second-feet, February 22.
Minimum no flow most of year.
1939-1944
Maximum discharge not determined.
Maximum 1,750 second-feet, January 22, 1943.
Minimum no flow at various times.

ACCURACY:

Fair.

OPERATION:

Located, constructed and operated by the Los Angeles County Flood Control District.

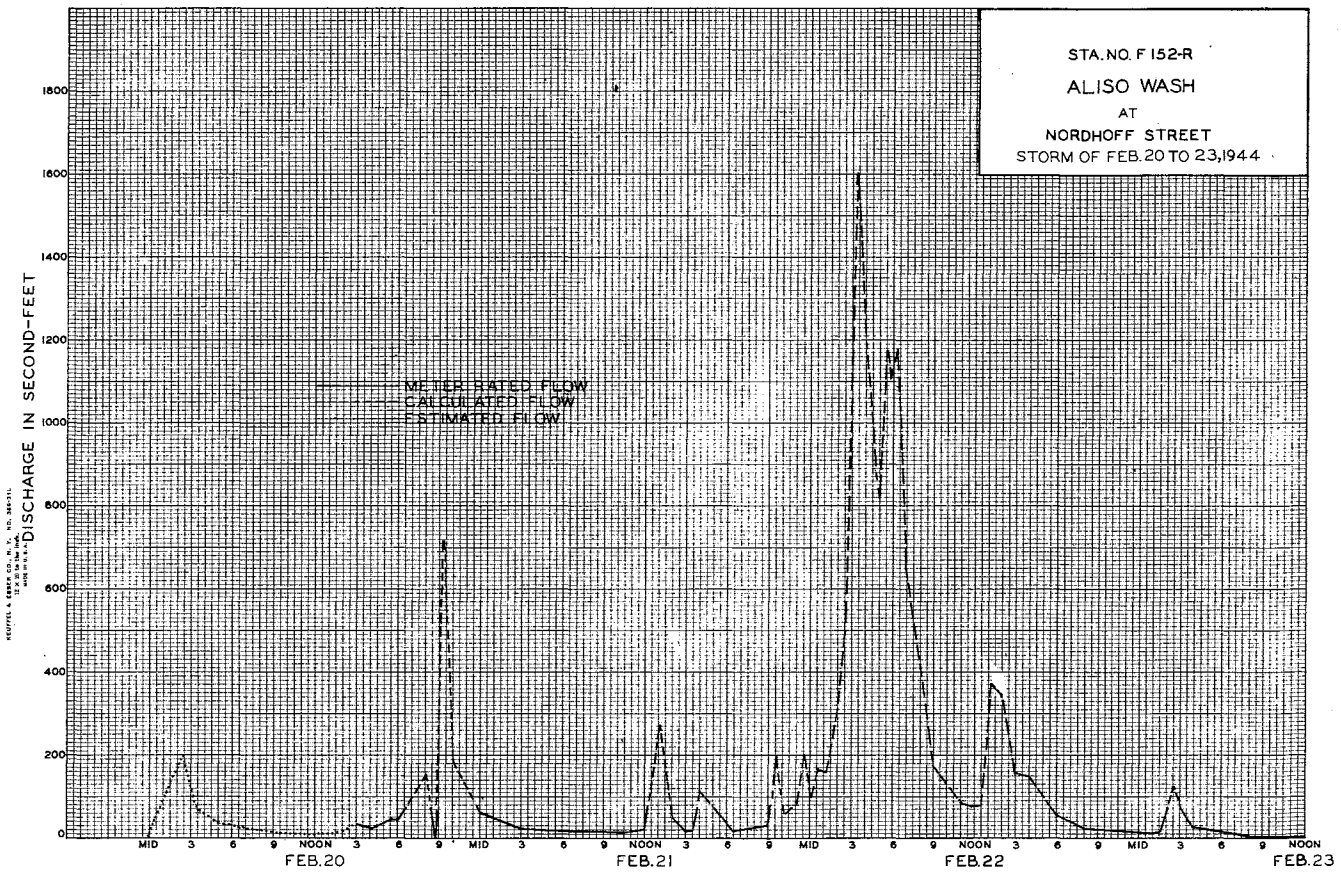
YEAR OR PERIOD — MEAN 1.68 — ACRE-FEET 1220.



STATION U1-R

ARROYO SECO above Mouth of Canyon

LOCATION:

Water-stage recorder and broad-crested weir control, lat. 34°13'20", long. 118°10'40", near north line of sec. 31, T. 2 N., R. 12 W., 1.5 miles upstream from Millard Canyon and 5.5 miles northwest of Pasadena. Altitude of gage, about 1,400 feet.

DRAINAGE AREA:

16.4 square miles.

RECORDS AVAILABLE:

December 1910 to September 1944.

AVERAGE DISCHARGE:

30 years (1913-15, 1916-44) 11.0 second-feet.

EXTREMES:

1943-1944
Maximum discharge during year, 1,800 second-feet Feb. 22 (gage height, 9.00 feet); minimum daily, 2.0 second-feet on days in October, November, and August.

1910-44:
Maximum discharge, 8,620 second-feet Mar. 2, 1938, by slope-area method; practically no flow for several months in most years.

REMARKS:

Records good. No diversions above station.

COOPERATION:

Records furnished by the United States Geological Survey, with the exception of 21 measurements furnished by the Los Angeles Flood Control District in cooperation with the United States Geological Survey.

Remarks:

YEAR OR PERIOD — MEAN 18.9 — ACRE-FEET 13,740.

STATION P277-R

ARROYO SECO below Devils Gate Dam

LOCATION:

Water-stage recorder, lat. 34°10'48", long. 118°10'19", on the left (east) side of the channel about 0.5 mile below Devils Gate Dam and about 0.5 mile above Washington Street, Pasadena. Elevation of gage, about 926 feet.

DRAINAGE AREA:

32.5 square miles.

CHANNEL AND CONTROL:

Natural channel of rock and sand from Devils Gate Dam to the station at intake structure to improved channel where an ogee section 80.2 feet wide and 18 feet high with a rectangular, broad-crested weir 14.2 feet wide and 2.0 feet high forms the control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from Washington Street bridge about 0.5 mile below station.

RECORDER:

Installed November 30, 1942, over a 32 inch diameter stilling well. An H.C.F. continuous recorder was in service from October 1, 1943, to September 30, 1944.

REGULATIONS:

Flow regulated by Devils Gate Dam and Pasadena Water Department's gated diversion into channel above station.

DIVERSIONS:

Pasadena Water Department diverts flow approximately two miles above Devils Gate Dam for domestic use. Flow may be diverted to channel between Devil's Gate Dam and station from Pasadena Water Department tunnel.

RECORDS AVAILABLE:

November 30, 1942, to September 30, 1944. For records prior to November 30, 1942, see Pasadena Water Department.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 1540 second-feet, February 20.
Minimum no flow several times.
1942-1944
Maximum 5640 second-feet, January 23, 1944.
Minimum no flow.

ACCURACY:

Good.

OPERATION:

Located, constructed, and operated by the Pasadena Water Department January 1940. The operation taken over by the Los Angeles County Flood Control District November 30, 1942, in cooperation with the Pasadena Water Department.

YEAR OR PERIOD MEAN 11.5 ACRE-FEET 8270.

STATION F38B-R

BALLONA CREEK at Sawtelle Boulevard

LOCATION:

Water-stage recorder, lat. 33°59'48", long.118°24'07", on the downstream side of Sawtelle Boulevard bridge, about 1.5 miles South of Culver City. Elevation of zero gage height, 11.40 feet. Former station F38-R was at Centinela Boulevard, 1 mile downstream.

DRAINAGE AREA:

111 square miles.

CHANNEL AND CONTROL:

Channel-heavy adobe overlaid with coarse gravel, and sand, with rock paved levees on a 3 to 1 slope. Channel forms control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cable car 300 feet above station.

RECORDER:

Installed at station F38-R February 27, 1928.
Recorder removed April 27, 1936.
Installed at station F38B-R May 14, 1936, over an 18 inch diameter, corrugated iron pipe stilling well.
An Au continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Stone Canyon Reservoir, Upper and Lower Franklin Canyon Reservoirs, Hollywood Reservoir and Silver Lake Reservoir.

DIVERSIONS:

Some small diversions for irrigation.

RECORDS AVAILABLE:

At station F38-R
February 27, 1928 to April 27, 1936.
At station F38B-R
May 14, 1936 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 8,800 second-feet, February 22.
Minimum 0.4 second-feet, October 8.
1928-1944 (Stations F38-R and F38B-R)
Maximum 19,000 second-feet, March 2, 1938.
Minimum no flow at various times.

ACCURACY:

Fair.
Flows occasionally estimated due to clock failure, or obstructed communication.

OPERATION:

Located and constructed by the Los Angeles County Flood Control District and operated in co-operation with the U.S. Engineer Department and with the U.S.G.S., Water Resources Branch.

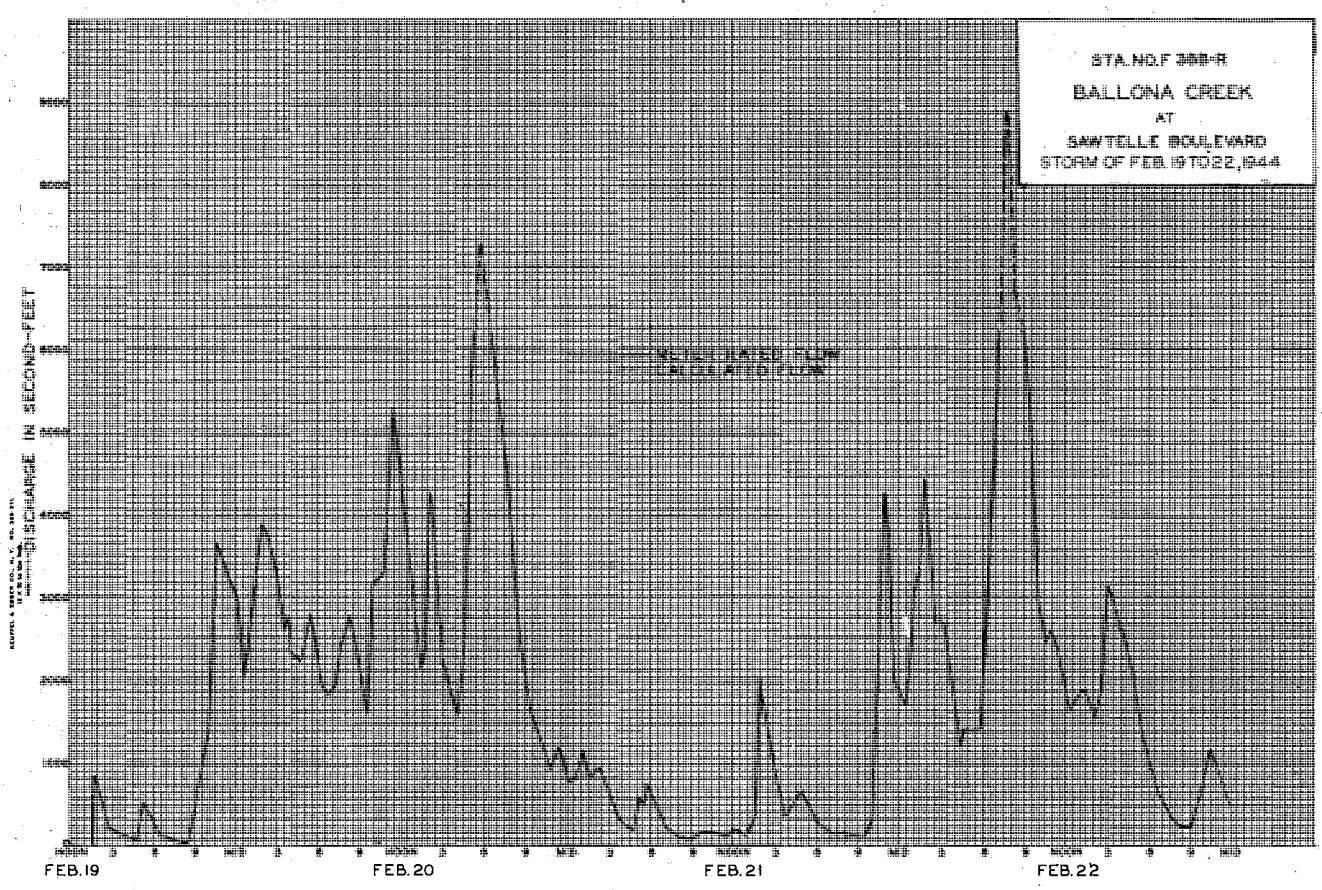
Remarks:

YEAR OR PERIOD — MEAN 45.4 — ACRE-FEET 33,000.



STATION F120-R

BIG DALTON CREEK below Big Dalton Dam

LOCATION:

Water-stage recorder, lat. 34°10'12", long. 117°48'33", on the left (southeast) bank about 200 feet below the old toe wall on the downstream side of Big Dalton Dam and about 5 miles northeast of Glendora. Elevation of gage, about 1570 feet (from topographic map).

DRAINAGE AREA:

4.8 square miles.

CHANNEL AND CONTROL:

Channel-gravel and rock lined with willows. Control - concrete cutoff with a Cipolletti weir and a removable V-notch weir.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
No facilities for measuring high flows.

RECORDER:

Installed June 3, 1940 over an 18 inch corrugated iron pipe stilling well. A Stevens type L recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

4.5 square miles regulated by Big Dalton Dam.
0.3 square miles unregulated flow from Keril Canyon.

DIVERSIONS:

None.

RECORDS AVAILABLE:

Reservoir outflow records from October, 1929 to June 3, 1940. Recorder records from June 3, 1940 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 56 second-feet, February 23.
Minimum no flow part of year.

1940-1944
Maximum 111 second-feet, March 4, 1943.
Minimum no flow part of year.

ACCURACY:

Good.

OPERATION:

Located, constructed and operated by the Los Angeles County Flood Control District.

YEAR OR PERIOD — MEAN 1.60 — ACRE-FEET 1160.

STATION U9-R

BIG DALTON CREEK near Mouth of Canyon

LOCATION:

Water-stage recorder and broad-crested weir control, lat. 34°09'25", long. 117°49'55", in center of sec. 21, T. 1 N., R. 9 W., 0.2 mile upstream from mouth of canyon, and 2.5 miles northeast of Glendora. Altitude of gage, about 1,125 feet (from topographic map).

DRAINAGE AREA:

7.5 square miles.

RECORDS AVAILABLE:

December 1919 to September 1944.

AVERAGE DISCHARGE:

24 years (1920-44), 1.37 second-feet.

EXTREMES:

1943-1944

Maximum discharge during year, 161 second-feet Feb. 22 (gage height, 2.08 feet); no flow for several periods.

1919-44:

Maximum discharge, about 850 second-feet Mar. 2, 1939, from record of release from Big Dalton reservoir. No flow for several months of each year.

REMARKS:

Records good. Glendora Irrigation Co. diverts water above gage through 10-inch pipe line. Regulation at Big Dalton Dam about 1 mile upstream.

COOPERATION:

Records furnished by the United States Geological Survey, with the exception of 31 discharge measurements furnished by the Los Angeles County Flood Control District in cooperation with the United States Geological Survey.

Remarks:

YEAR OR PERIOD MEAN 1.35
ACRE-FEET 982.

STATION F274-R

DALTON WASH at Merced Avenue

LOCATION:

Water-stage recorder, lat. 34°04'28", long. 117°57'48", on the left (east) bank and on the downstream side of the Merced Avenue Bridge, about one-half mile above the junction with Walnut Wash and about one mile south of Baldwin Park.
Elevation of gage, about 347 feet(from topographic map).

DRAINAGE AREA:

28. square miles.

CHANNEL AND CONTROL:

Channel-earth, sand and gravel covered with weeds and grass during summer months.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from upstream side of bridge.

RECORDER:

Installed November 11, 1940 over a 24 inch diameter iron pipe stilling well.
An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Partially regulated by Big Dalton Dam, Big Dalton Spreading Grounds and Little Dalton Spreading Grounds. The Covina and Azusa Canals at times spread flows in both Big and Little Dalton Washes.

DIVERSIONS:

Glendora Mutual Water Co. diverts flow from both Big and Little Dalton Canyons.

RECORDS AVAILABLE:

November 11, 1940 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 2,650 second-feet, February 22.
Minimum no flow part of year.

1940-1944
Maximum 2,650 second feet, February 22, 1944.
Minimum no flow part of each year.

ACCURACY:

Good.

OPERATION:

Located, constructed and operated by the Los Angeles County Flood Control District.

STATION F111B-R

BIG TUJUNGA CREEK above Edison Road

LOCATION:

Water-stage recorder, lat.34°18'18", long.118°09'32", on the right (northwest) bank 400 feet above crossing of Edison Road, about 4 miles upstream from Big Tujunga Dam No. 1. Elevation of gage, about 2410 feet (from topographic map). Former Station F111-R was about 300 feet downstream.

DRAINAGE AREA:

67 square miles.

CHANNEL AND CONTROL:

Channel - Gravel and boulders.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cable car at station.

RECORDER:

Installed on November 30, 1930 at Station F111-R; removed August 17, 1932.
Installed on September 15, 1932 at Station F111B-R over a 24 inch diameter corrugated iron pipe stilling well.
An Au continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATIONS:

None.

DIVERSIONS:

None.

RECORDS AVAILABLE:

At Station F111-R
November 30, 1930 to August 17, 1932.
At Station F111B-R
September 15, 1932 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 3,300 second-feet, February 22.
Minimum 2.5 second-feet, October 2 to October 7.
1930-1944 (Stations F111-R and F111B-R)
Maximum discharge not determined.
Maximum discharge of record, 14,800 second-feet January 23, 1943.
Minimum no flow at various times.

ACCURACY:

Good.

OPERATION:

Located, constructed and operated by the Los Angeles County Flood Control District in cooperation with the U.S.G.S., Water Resources Branch.

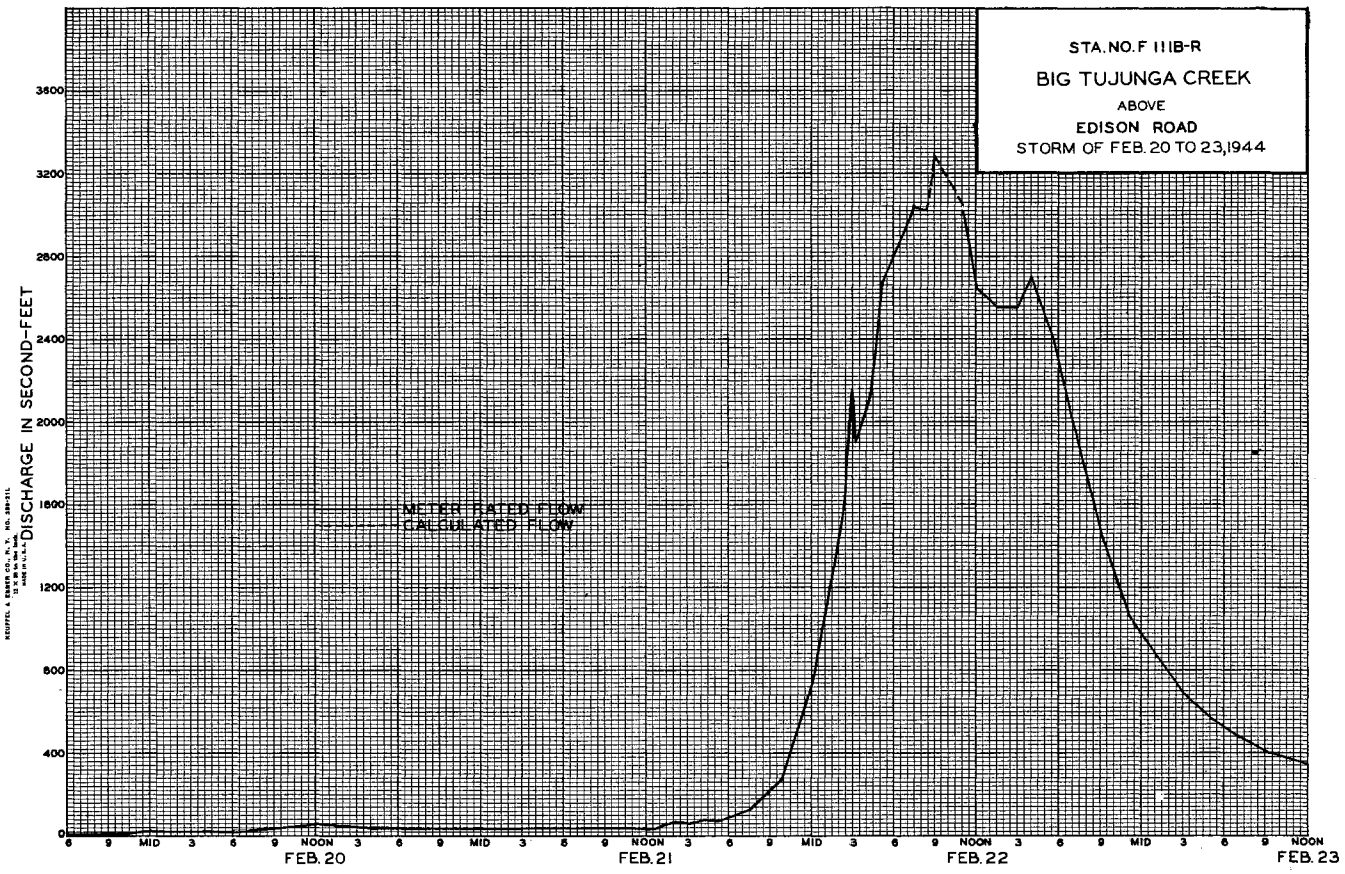
Remarks:

YEAR OR PERIOD MEAN 50.2
ACRE-FEET 36,470.



STATION F168-R

BIG TUJUNGA CREEK below Big Tujunga Dam No. 1

LOCATION:

Water-stage recorder, lat.34°17'20", long.118°11'38", on the right (northwest) bank, 2800 feet below Big Tujunga Dam No. 1, and about 12 miles northeast of Sunland. Elevation of gage, about 2060 feet (from topographic map).

DRAINAGE AREA:

81.7 square miles.

CHANNEL AND CONTROL:

Channel - sand, gravel and boulders.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cable car 125 feet above station.

RECORDER:

Installed on November 8, 1932. Washed out during the March 2, 1938 storm.
Installed on May 31, 1938 in a concrete house over a 4 ft. x 4 ft. concrete well at approximately the same location as the old well.
An Au continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow regulated by Big Tujunga Dam No. 1.

DIVERSIONS:

None.

RECORDS AVAILABLE:

Stream measurements from December 8, 1931 to November 7, 1932 and January 20, 1938 to May 29, 1938; recorder records from November 8, 1932 to January 13, 1938 and from May 31, 1938 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 3,310 second-feet, February 22.
Minimum 0.3 second-foot, November 9 to November 12.
1932-1944
Maximum 33,000 second-feet, estimated, March 2, 1938.
Minimum no flow several days in October, 1936.

ACCURACY:

Fair.
Flows frequently estimated from valve operations at Big Tujunga Dam No. 1, or interpolated between measurements taken at the station.

OPERATION:

Located, constructed and operated by the Los Angeles County Flood Control District.

Remarks: Low flows estimated due to obstructed communication to well.

YEAR OR PERIOD — MEAN 57.5 — ACRE-FEET 41,400.

STATION F213-R

BIG TUJUNGA CREEK above Gold Canyon

LOCATION:

Water-stage recorder, lat.34°18'02", long.118°16'02", on the left (south) bank 2 miles above mouth of canyon, 7 miles below Big Tujunga Dam No. 1 and about 4 miles northeast of Sunland. Elevation of gage, about 1,580 feet (from topographic map). The former station U11-R was about 1000 feet upstream at the location of a partly constructed and abandoned dam.

DRAINAGE AREA:

106 square miles.

CHANNEL AND CONTROL:

Channel composed of gravel and boulders.
Channel forms control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cable car 90 feet below station.

RECORDER:

Installed in 1932 over a 36 inch corrugated iron pipe stilling well.
An Au continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow from 81.4 square miles regulated by Big Tujunga Dam No. 1.
Flow from 24.6 square miles unregulated.

DIVERSIONS:

There are several small irrigation diversions above the station.

RECORDS AVAILABLE:

October 1, 1932 to September 30, 1944.
(Records at U.S.G.S. Station, Tujunga Creek, near Sunland, are available from October 1, 1916 to September 30, 1932 in Water Supply Papers.)

EXTREMES OF DISCHARGE:

1943-1944
Maximum 4,760 second-feet, February 22.
Minimum 2.3 second-feet, November 15.
1916-1944
Maximum 50,000 second-feet, estimated, March 2, 1938.
Minimum 0.8 second-foot November 18, 1936.

ACCURACY:

Fair.
Due to loss of communication by sanding during sluicing period and to undetermined control shift.

OPERATION:

Constructed and operated by the Los Angeles County Flood Control District in co-operation with the U.S.G.S. Water Resources Branch.

STATION F20B-R

TUJUNGA WASH at Glen Oaks Boulevard

LOCATION:

Water-stage recorder, lat. 34°15'08", long. 118°23'11", on the downstream side of the Glen Oaks Boulevard (formerly Remsen Avenue) bridge approximately 3 miles southeast of San Fernando and 0.5 mile below Hansen Dam. Elevation of gage, about 947 feet (from topographic map).

DRAINAGE AREA:

148 square miles.

CHANNEL AND CONTROL:

Channel is wide and composed of sand, gravel, and boulders, boulders predominating.
No artificial control.

DISCHARGE MEASUREMENT:

Low flows measured by wading.
High flows measured from cable car above station.

RECORDER:

Installed April 29, 1932 at Station F20-R at Stonehurst Avenue. Washed out during the March 2, 1938 flood. Reinstalled at Station F20B-R at Glen Oaks Boulevard (formerly Remsen Avenue), July 2, 1940 over a 21 inch corrugated iron pipe stilling well. H.C.F. recorder was in service from October 1, 1943 to September 30, 1944. August 25, 1944 a water-stage recorder was installed 0.5 mile upstream from Glen Oaks Boulevard at F 286-R by Corps of Engineers, U. S. Army.

REGULATION:

Flow regulated by Hansen Dam. Inflow to Hansen Dam partially regulated by Big Tujunga Dam No. 1 and by Haines Canyon Debris Basin.

DIVERSIONS:

Some water diverted for irrigation near mouth of Big Tujunga Canyon.

RECORDS AVAILABLE:

January 1931 to April 1932 random measurements available. Recorder records from April 29, 1932 to December 31, 1933. No communication from December 31, 1933 to March 9, 1934, random measurements available. Recorder records from March 9, 1934 to March 2, 1938. From March 2, 1938 to July 25, 1940 random measurements available. Recorder records from July 25, 1940 to September 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 1,100 second-feet, February 22.
Minimum no flow most of year.
1932-1944 at Station F20-R, F20B-R, and F20C-R.
Maximum 54,000 second-feet, estimated, March 2, 1938.
Minimum no flow part of each year.

ACCURACY:

Good.

OPERATION:

Located and constructed by the Los Angeles County Flood Control District. Operated in co-operation with the United States Geological Survey and Corps of Engineers, U. S. Army.

Remarks:

YEAR OR PERIOD MEAN 60.3 ACRE-FEET 43,750.

STATION F105-R

TUJUNGA WASH at Magnolia Boulevard

LOCATION:

Water-stage recorder, lat.34°09'53", long.118°24'43", on the downstream side of Magnolia Boulevard bridge, about 2 miles west of North Hollywood. Elevation of zero gage height, 632.91 feet.

DRAINAGE AREA:

Indeterminate due to a natural split which divides the Tujunga Wash into two branches.

CHANNEL AND CONTROL:

Channel-loose sand.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from highway bridge.

RECORDER:

Installed August, 1930 over an 18 inch diameter corrugated iron pipe stilling well. Washed out in March 2, 1938 flood. Reinstalled on October 17, 1938 over a 21 inch diameter corrugated iron pipe stilling well. A Stevens type L recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow partially regulated by Big Tujunga Dam No. 1, Haines Debris Basin, and Hansen Dam.

DIVERSIONS:

Some water diverted for irrigation, near mouth of Big Tujunga Canyon.

RECORDS AVAILABLE:

August, 1930 to February 17, 1938 and October 17, 1938 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 460 second-feet February 20.
Minimum 0.3 second-foot various days.
1930-1944
Maximum discharge not determined.
Maximum discharge of record, 1,350 second-feet January 22, 1943.
Minimum no flow.

ACCURACY:

Fair.
Low flows usually interpolated between measurements.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

STATION F106-R

TUJUNGA WASH - CENTRAL BRANCH at Magnolia Boulevard

LOCATION:

Water-stage recorder, lat. 34°09'53", long. 118°22'53", on the downstream side of Magnolia Boulevard bridge in North Hollywood.
Elevation of zero gage height, 618.83 feet.

DRAINAGE AREA:

Indeterminate due to a natural split which divides Tujunga Wash into two branches.

CHANNEL AND CONTROL:

Channel-loose sand.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading near gage.
High flows measured from highway bridge.

RECORDER:

Installed August 1930 at Station F106-R. Removed March 1936. Installed temporarily March 1936 at Station F106B-R at Chandler Blvd. Removed July, 1936. Reinstalled August 1936 at Station F106-R. Removed March 2, 1938.
Reinstalled September 25, 1939 at Station F106B-R at Chandler Blvd. Removed November 11, 1941.
Reinstalled November 24, 1941 at Station F106-R over a 20 inch diameter corrugated iron pipe stilling well. An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow partially regulated by Hansen Dam, Big Tujunga Dam No. 1, and Haines Debris Basin.

DIVERSION:

Some water diverted for irrigation near the mouth of Big Tujunga Canyon.

RECORDS AVAILABLE:

At Station F106B-R
March 20, 1936 to July 29, 1936.
September 25, 1939 to November 11, 1941.
At Station F106-R
August, 1930 to March 18, 1936.
August 20, 1936 to March 2, 1938.
November 24, 1941 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 1,540 second-feet, February 22.
Minimum no flow most of year.
1930-1944
Maximum discharge not determined.
Maximum discharge of record, 3,110 second-feet, January 1, 1934.
Minimum no flow most of year.

ACCURACY:

Fair.
Discharge-gage height relation unreliable at times.

OPERATION:

Located, constructed and operated by the Los Angeles County Flood Control District.

STATION F270-R

CALABASAS CREEK at Ventura Boulevard

LOCATION:

Water-stage recorder, lat.34°09'27", long.118°38'18", on the right (east) bank of Calabasas Creek near the upstream end of a concrete horse shoe culvert under Ventura Blvd., and about 100 feet west of the westerly city limits of Los Angeles. Elevation of gage, about 928 feet.

DRAINAGE AREA:

2.4 square miles.

CHANNEL AND CONTROL:

Channel-sand and clay adobe.
Control-entrance to a concrete horse shoe culvert, 6.0 feet wide and 5.0 feet deep.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from footbridge 32 feet above station.

RECORDER:

Installed February 17, 1940 over a 24 inch corrugated iron pipe stilling well. A horizontal rational recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION AND/OR DIVERSIONS:

The existence of small dams upstream has been verified by local residents. However, the extent of regulation is not known.

RECORDS AVAILABLE:

February 17, 1940 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 550 second-feet, February 22.
Minimum no flow most of year.
1940-1944
Maximum 551 second-feet, February 20, 1941.
Minimum no flow part of each year.

ACCURACY:

Fair.

OPERATION:

Located, constructed and operated by the Los Angeles County Flood Control District.

STATION F37B-R

COMPTON CREEK near Greenleaf Drive

LOCATION:

Water-stage recorder, lat.33°52'54", long.118°13'27", on the left (east) bank of the concrete channel, 120 feet South of the center line of Greenleaf Drive extended and about one and one half miles Southwest of Compton. Elevation of zero gage height, 50.14 feet.

DRAINAGE AREA:

30.3 square miles.

CHANNEL AND CONTROL:

Channel-rectangular, concrete, 13.0 feet deep and 60 feet wide. Invert is 1.05 feet below bottom of vertical side walls.
Channel forms control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cable car 10 feet below gage.

RECORDER:

Installed January 22, 1928 at Station F37-R at Rosecrans Avenue. Removed June 9, 1938 due to new channel construction by Corps of Engineers, U.S. Army. Installed October 3, 1938 over a 4.0 ft. x 3.2 ft. concrete stilling well.
An H.C.F. recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

None.

DIVERSION:

None.

RECORDS AVAILABLE:

At Station F37-R
January 22, 1928 to June 9, 1938.
At Station F37B-R
October 3, 1938 to September 30, 1944

EXTREMES OF DISCHARGE:

1943-1944
Maximum 2,370 second-feet, February 20.
Minimum 0.8 second-foot at various times.
1928-1944 (Stations F37-R and F37B-R)
Maximum discharge not determined, overflowed banks March 2, 1938.
Maximum discharge of record, 2,660 second-feet, December 23, 1941.
Minimum no flow at various times.

ACCURACY:

Good.

OPERATION:

Located and constructed by Corps of Engineers, U. S. Army, and operated by the Los Angeles County Flood Control District in conjunction with the Corps of Engineers, U. S. Army.

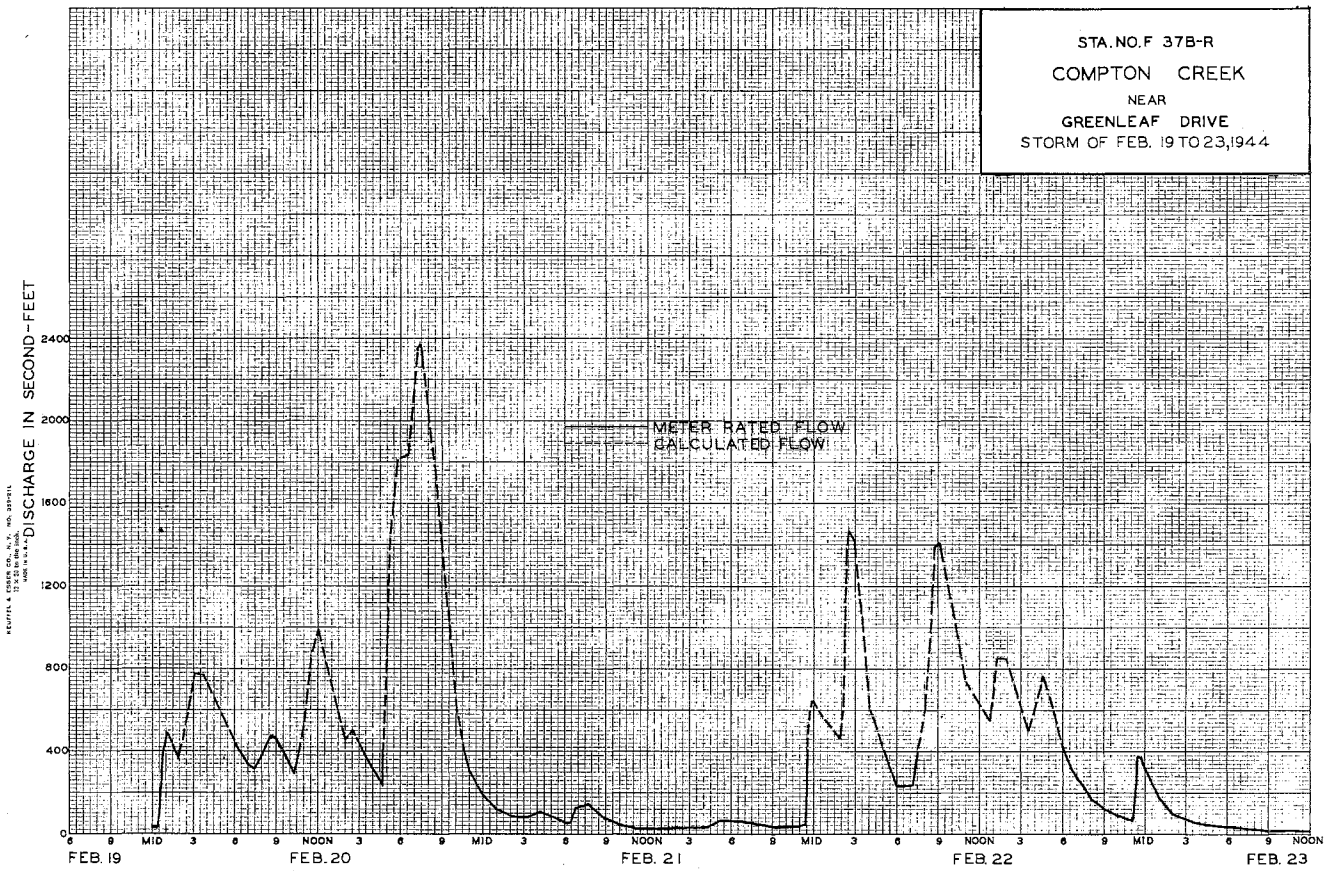
YEAR OR PERIOD — MEAN 15.6 — ACRE-FEET 11290.



STATION F41C-R

COYOTE CREEK at Del Amo Street

LOCATION:

Water-stage recorder, lat.33°50'47", long.118°03'30", on the right (west) abutment and downstream side of the Del Amo Street (formerly Anaheim Street) highway bridge, 30 feet above the upstream side of Pacific Electric Railroad Trestle, and 1.8 miles southeast of Artesia. Elevation of zero gage height, 29.00 feet.

DRAINAGE AREA:

110 square miles.

CHANNEL AND CONTROL:

Channel-clay, covered by tules during the summer months only.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from upstream side of P.E. Railroad trestle.

RECORDER:

Installed January 14, 1930 at Station F41-R.
Moved to Station F41B-R on October 30, 1936.
Removed on February 17, 1937.
Installed February 18, 1937, at Station F41C-R over an 18 inch diameter, corrugated iron pipe stilling well.
An Au continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

None.

DIVERSIONS:

None.

RECORDS AVAILABLE:

At Station F41-R.
Steam measurements taken from December 1, 1928 to January 14, 1930.
Recorder records from January 14, 1930 to October 30, 1936.
At Station F41B-R
October 30, 1936 to February 17, 1937.
At Station F41C-R
February 18, 1937 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 3,550 second-feet, February 22.
Minimum no flow at various times.
1929-1944 (Stations F41-R, F41B-R, and F41C-R)
Maximum 4,190 second-feet (at Station F41 B-R) February 6, 1937.
Minimum no flow at times each year.

ACCURACY:

Fair.

OPERATION:

Located, constructed and operated by the Los Angeles County Flood Control District.

STATION F265-R

DOMINGUEZ CHANNEL at Carson Boulevard

LOCATION:

Water-stage recorder, lat. 33°49'56", long. 118°15'12", on the left (east) bank on the upstream side of the Carson Boulevard bridge about one half mile east of Avalon Boulevard. Elevation of gage, about 15 feet (from topographic map).

DRAINAGE AREA:

56 square miles.

CHANNEL AND CONTROL:

Channel-dredged earth.
Control-channel forms control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from upstream side of bridge.

RECORDER:

Installed November 23, 1938 over an 18 inch diameter corrugated iron pipe stilling well. A Horizontal Rational recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Regulated by Laguna Dominguez area, subject to ponding.

DIVERSION:

None.

RECORDS AVAILABLE:

November 23, 1938 to September 30, 1944. For previous records, see earlier reports on station F46-R, Nigger Slough at Wilmington Ave.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 1,020 second-feet, February 23.
Minimum 4.6 second-feet, September 4.
1938-1944
Maximum 1,020 second-feet February 23, 1944.
Minimum no measurable flow, water ponded at gage.

ACCURACY:

Fair.

OPERATION:

Located, constructed and operated by the Los Angeles County Flood Control District.

STATION F53-R

DUME CREEK at Roosevelt Highway

LOCATION:

Water-stage recorder, lat.34°01'02", long.118°49'00", on the downstream side of Roosevelt Highway bridge, near Dume Point about 0.2 mile from Pacific Ocean, 22 miles west of Santa Monica. Elevation of gage, about 25 feet (from topographic map).

DRAINAGE AREA:

8.8 square miles.

CHANNEL AND CONTROL:

Channel-sand and gravel.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from highway bridge.

RECORDER:

Installed January 15, 1930. Removed November 26, 1937 due to construction of new bridge. Reinstalled November 3, 1938 over a 21 inch diameter galvanized iron pipe stilling well.
A Stevens, Type A, continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

None.

DIVERSIONS:

None.

RECORDS AVAILABLE:

January 15, 1930 to November 26, 1937.
November 3, 1938 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 627 second-feet, February 20.
Minimum no flow for several months.
1930-1944
Maximum discharge not determined.
Maximum discharge of record, 6,800 second-feet, January 24, 1941.
Minimum no flow at times each year.

ACCURACY:

Fair.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

STATION U2-R

EATON CREEK above Mouth of Canyon

LOCATION:

Water-stage recorder and broad-crested weir control, lat. 34°11'40", long 118°06'15", in SE¼ sec. 2, T. 1 N., R 12 W., at mouth of canyon, just upstream from bridge on old Mount Wilson toll road, and 4 miles northeast of Pasadena. Altitude of gage, about 1,230 feet (from topographic map).

DRAINAGE AREA:

6.5 square miles.

RECORDS AVAILABLE:

March 1918 to September 30, 1944.

AVERAGE DISCHARGE:

26 years, 2.93 second-feet. Average combined discharge of creek and diversion, 26 years, 4.20 second-feet.

EXTREMES:

1943-1944
Maximum discharge during year, 390 second-feet Feb.22, (gage height, 2.49 feet); no flow for several months.

1918-1944
Maximum discharge, 2,400 second-feet Mar. 2, 1938, from record of inflow to Eaton flood-control reservoir; no flow for some periods in each year.

REMARKS:

Records good.

COOPERATION:

Records furnished by the United States Geological Survey, with the exception of 4 discharge measurements furnished by the Los Angeles County Flood Control District. Eaton Creek diversions above Station U2-R were furnished by the City of Pasadena and are herein published.

STATION F271-R

EATON WASH below Eaton Wash Dam

LOCATION:

Water-stage recorder, lat.34°10'05", long.118°05'28", on the right (west) bank of the concrete outlet channel 190 feet below the beginning of the open section at the base of Eaton Wash Dam. Elevation of gage, about 840 feet (from topographic map).

DRAINAGE AREA:

9.5 square miles.

CHANNEL AND CONTROL:

Channel-rectangular, concrete 12 feet deep and 26 feet wide with 0.5 foot fillets.
Channel forms control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from footbridge at gage.

RECORDER:

Installed October 10, 1940 over a 4 ft x 4 ft concrete stilling well.
An H.C.F. recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow regulated by Eaton Wash Dam.

DIVERSIONS:

The Pasadena Water Department diverts flow just above the mouth of Eaton Canyon.

RECORDS AVAILABLE:

Reservoir outflow records from February 2, 1937 to October 10, 1940. Recorder records from October 10, 1940 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 268 second feet, March 14.
Minimum no flow most of year.
1940-1944
Maximum 1,080 second-feet January 23, 1943.
Minimum no flow most of each year.

ACCURACY:

Fair - Sequence of gates operated at Eaton Wash Debris Dam affects gage height discharge relation.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

STATION F104-R

EATON WASH at Ellis Lane

LOCATION:

Water-stage recorder, lat.34°05'08", long.118°03'21", on the downstream side of Ellis Lane bridge (formerly Sunset Avenue) about one mile northwest of El Monte. Elevation of zero gage height, 288.34 feet.

DRAINAGE AREA:

18.4 square miles.

CHANNEL AND CONTROL:

Channel-sand and gravel.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from upstream side of bridge.

RECORDER:

Installed October 1, 1930. Removed December 1930 due to bridge construction.
Reinstalled November 10, 1931 over an 18 inch corrugated iron pipe stilling well.
An H.G.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow partially regulated by Eaton Wash Dam.

DIVERSIONS:

The Pasadena Water Department diverts some water just above the mouth of Eaton Canyon.

RECORDS AVAILABLE:

October 1, 1930 to September 30, 1944. From December 28, 1930 to November 10, 1931, the recorder was located at Broadway (designated as Station F104B-R).

EXTREMES OF DISCHARGE:

1943-1944
Maximum 412 second-feet, February 22.
Minimum no flow most of year.
1930-1944
Maximum 2,280 second-feet, January 23, 1943.
Minimum no flow most of each year.

ACCURACY:

Fair.
Shifting control.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

STATION U7-R

FISH CREEK above Mouth of Canyon

LOCATION:

Water-stage recorder and broad-crested weir control, lat. 34°10'00", long. 117°55'25", in SW¼SW¼ sec. 15, T. 1 N., R. 10 W., three-quarters of a mile upstream from mouth of canyon and 3 miles northeast of Duarte. Altitude of gage, about 1,000 feet (from topographic map).

DRAINAGE AREA:

6.5 square miles.

RECORDS AVAILABLE:

July to September 1916; July 1917 to September 30,1944.

AVERAGE DISCHARGE:

27 years (1917-44), 4.68 second-feet.

EXTREMES:

1943-1944
Maximum discharge during year, 680 second-feet Feb.22 (gage height, 3.80 feet).
Minimum daily discharge 0.5 second-foot Aug.30,31.

1916-1944
Maximum discharge, about 2,180 second-feet Apr. 4, 1925; no flow during periods in 1919-21, 1924, 1929-30.

REMARKS:

Records good. No diversions or regulation above station.

COOPERATION:

Records furnished by the United States Geological Survey, with the exception of 19 discharge measurements furnished by the Los Angeles County Flood Control District.

Remarks:

YEAR OR PERIOD MEAN 5.78
ACRE-FEET 4,200.

STATION U12-R

HAINES CREEK above Mouth of Canyon

LOCATION:

Water-stage recorder and broad-crested weir control, lat. 34°15'50", long. 118°16'15", in NW¼NW¼ sec. 17, T 2 N., R. 13 W., half a mile upstream from mouth of canyon and 1⅞ miles northeast of Tujunga. Altitude of gage, about 2,430 feet (from topographic map).

DRAINAGE AREA:

1.2 square miles.

RECORDS AVAILABLE:

February 1917 to September 1934, October 1935 to September 30, 1944.

AVERAGE DISCHARGE:

26 years, 0.186 second-foot.

EXTREMES:

1943-1944
Maximum discharge during year, 74 second-feet Feb. 22. (gage height, 3.35 feet).
Minimum daily discharge, 0.01 second-foot Oct. 1,7.

1917-1934, 1935-44
Maximum gage-height, 11.0 feet Jan. 1, 1934 (discharge not determined). Maximum discharge of record, 265 second feet March 2, 1938 (gage height 4.60 feet).
No flow for periode in most years.

REMARKS:

Records good. Water diverted for domestic use above and below gage.

ACRE-FEET 296.

STATION F149-R

LIMEKILN WASH at Devonshire Avenue

LOCATION:

Water-stage recorder, lat.34°15'27", long.118°33'29", in the center on the downstream end of a double box culvert under Devonshire Avenue about 2⅔ miles east of Chatsworth. Elevation of gage, about 970 feet (from topographic map).

DRAINAGE AREA:

3.8 square miles.

CHANNEL AND CONTROL:

Channel-sand, gravel and small boulders. Control-a concrete apron extended past the gage insures low flow communication.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from top of culvert.

RECORDER:

Installed November 9, 1939, over a 12 inch iron pipe stilling well. A vertical rational recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

None.

RECORDS AVAILABLE:

November 9, 1939, to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 288 second-feet, February 22.
Minimum no flow most of year.
1939-1944
Maximum 318 second-feet, February 17, 1941.
Minimum no flow most of year.

ACCURACY:

Fair.

OPERATION:

Located, constructed and operated by the Los Angeles County Flood Control District.

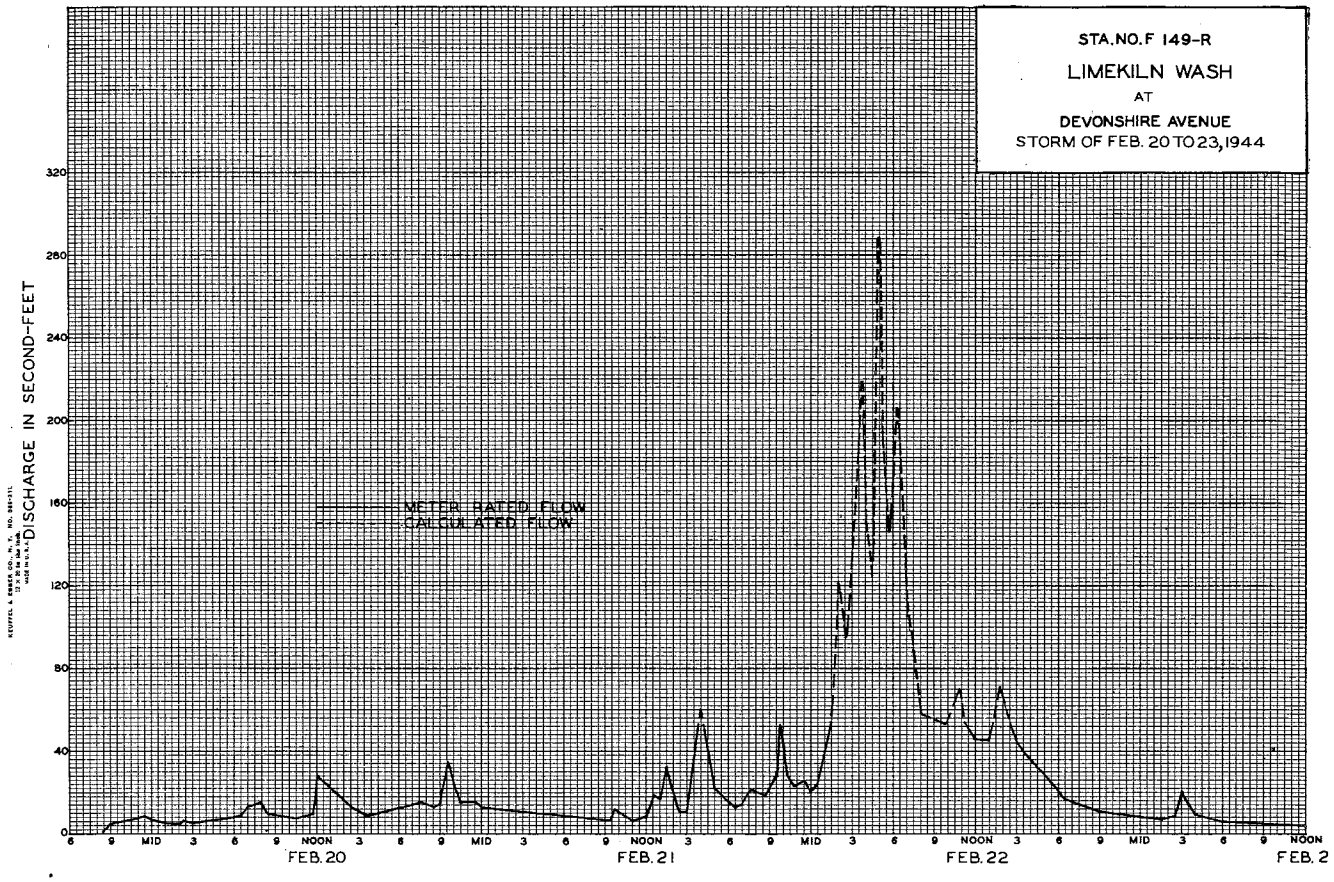
YEAR OR PERIOD MEAN 0.53 ACRE-FEET 382.



STATION F65B-R

LITTLE DALTON CREEK above Mouth of Canyon

LOCATION:

Water-stage recorder, lat.34°10'05", long.117°50'17", on the left (east) bank about 120 feet above Glendora Mountain Road crossing, 0.8 mile above mouth of canyon and about 3 miles northeast of Glendora. Elevation of zero gage height, 1334.19 feet.

DRAINAGE AREA:

2.7 square miles.

CHANNEL AND CONTROL:

Channel-rock and gravel with wire mat riprap on sides.
Control-rubble and concrete checks in channel bottom.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from bridge crossing 122 feet below station.

RECORDER:

Installed January 1929 at Station F65-R at mouth of canyon (drainage area 3.3 square miles).
Removed November 23, 1938.
Reinstalled November 30, 1938 at Station F65B-R over a 21 inch diameter corrugated iron pipe stilling well.
An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

None.

DIVERSIONS:

Glendora Consolidated Mutual Water Company.

RECORDS AVAILABLE:

At Station F65-R
January 28, 1929 to November 23, 1938.
At Station F65B-R
November 30, 1938 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 198 second feet, February 22.
Minimum no flow for several months.
1929-1944
Maximum 960 second-feet, estimated, March 2, 1938.
Minimum no flow several months each year.

ACCURACY:

Good.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District with cooperation of the United States Geological Survey, Water Resources Branch.

STATION L1-R

LITTLE ROCK CREEK above Little Rock Dam

LOCATION:

Water-stage recorder, lat.34°27'50", long.118°01'05", on the right (east)bank about 2 miles above Little Rock Palmdale Irrigation District's Dam, approximately 1500 feet upstream from Santiago Creek, and 5 miles south of Little Rock. Elevation of gage, about 3,290 feet (from topographic map).

DRAINAGE AREA:

49.0 square miles.

CHANNEL AND CONTROL:

Channel-gravel and boulders.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading near gage.
High flows measured from cable car below gage.

RECORDER:

Installed September 1930. Washed out during March 2, 1938 storm. Reinstalled March 31, 1939. Station dismantled May 20, 1943 and moved about 500 feet upstream over a 24" corrugated iron pipe stilling well.
An H.C.F. continuous recorder in service from October 1, 1943 to September 30, 1944.

REGULATION:

None.

RECORDS AVAILABLE:

October 1, 1930 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 1,230 second-feet, February 22.
Minimum no flow part of year.
1930-1944
Maximum 17,000 second-feet, estimated, March 2, 1938.
Minimum no flow at times each year.

ACCURACY:

Good.

OPERATION:

Originally located and installed by Little Rock Palmdale Irrigation District, reinstalled by the Los Angeles County Flood Control District, and operated in co-operation with the U.S.G.S. Water Resources Branch.

STATION U3-R

LITTLE SANTA ANITA CREEK above Sierra Madre Dam

LOCATION:

Water-stage recorder and control, lat. 34°11'15", long. 118°02'35", near center of NW¼ sec. 9, T. 1N., R. 11 W., 2 miles northeast of Sierra Madre. Altitude of gage, about 2,200 feet (from topographic map).

DRAINAGE AREA:

1.9 square miles.

RECORDS AVAILABLE:

April 1916 to September 30, 1944.

AVERAGE DISCHARGE:

27 years (1916-25, 1926-44), 1.02 second-feet.

EXTREMES:

1943-1944
Maximum discharge during year, 63 second-feet February 22. (gage height, 2.07 feet).
Minimum daily, 0.3 second-foot Aug 28-30, Sept. 9,10,23,30.

1916-1944
Maximum discharge, 536 second-feet Mar. 2, 1938, computed on basis of inflow to Sierra Madre flood-control reservoir; no flow during periods in 1919, 1924, and 1925.

REMARKS:

Records good. No diversions above station.

STATION F67B-R

LITTLE SANTA ANITA CREEK below Sierra Madre Dam

LOCATION:

Water-stage recorder, lat. 34°10'33", long. 118°02'33", on the left (east) bank about 270 feet below Sierra Madre Dam and about 1¼ miles northeast of Sierra Madre. Elevation of zero gage height, 1082.69 feet.

DRAINAGE AREA:

2.4 square miles.

CHANNEL AND CONTROL:

Channel-rubble masonry, depth 7.5 feet, width 24.6 feet at top and 22.5 feet at bottom. Artificial concrete control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading near station.
High flows measured from foot bridge at station.

RECORDER:

Installed January 28, 1929 at Station F67-R about 1000 feet downstream from present location. Removed May 20, 1936. Reinstalled May 21, 1936 in a 4 ft. x 3 ft. combination concrete stilling well and house.
An H.O.F. recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

The 30 inch diameter gate valve in the Sierra Madre Dam remains open except in emergency conditions.

DIVERSIONS:

Underground and surface flow developed and diverted by Sierra Madre Water Department.

RECORDS AVAILABLE:

At Station F67-R
January 28, 1929 to May 20, 1936.
At Station F67B-R
May 21, 1936 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 69 second-feet, February 22.
Minimum less than 0.05 second feet several months during year.
1929-1944
Maximum 620 second-feet, estimated, March 2, 1938.
Minimum no flow several months during most years.

ACCURACY:

Good.

OPERATION:

Located, constructed and operated by the Los Angeles County Flood Control District.

STATION F267-R

LITTLE SANTA ANITA CREEK at Woodland Avenue

LOCATION:

Water-stage recorder, lat. 34°09'19", long, 118°01'41", on the left (northeast) channel wall about 30 feet upstream from Santa Anita Wash, about 20 feet east of the intersection of Woodland Avenue and First Street and about one mile north of Arcadia. Elevation of zero gage height, 557.22 feet.

DRAINAGE AREA:

3.8 square miles.

CHANNEL AND CONTROL:

Channel-rectangular concrete, 6 feet deep and 10 feet wide.
Channel forms control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from downstream road culvert headwall at station.

RECORDER:

Installed December 30, 1938 over an 18 inch diameter corrugated iron pipe stilling well. A Stevens type L recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Partially regulated by Sierra Madre Dam. Usual regulation affects high flows only.

DIVERSIONS:

Underground and surface flow developed and diverted by Sierra Madre Water Department. Flow also diverted about one mile above station for spreading in Sierra Madre Spreading Grounds.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 202 second-feet, February 22.
Minimum no flow most of year.
1938-1944
Maximum not determined.
Maximum discharge of record, 542 second-feet January 22, 1943.
Minimum no flow most years.

ACCURACY:

Fair.

OPERATION:

Located, constructed and operated by the Los Angeles County Flood Control District.

REMARKS:

Several prior years records are not published due to insufficient reliable records.

STATION F19-R

LITTLE TUJUNGA WASH at Foothill Boulevard

LOCATION:

Water-stage recorder, lat. 34°16'28", long. 118°22'20", on downstream side of Foothill Boulevard bridge, 4 miles east of San Fernando. Elevation of zero gage height, 1067.20 feet.

DRAINAGE AREA:

21.0 square miles.

CHANNEL AND CONTROL:

Channel-sand and silt.
Concrete control below gage.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from highway bridge.

RECORDER:

Installed December, 1928 over an 18 inch diameter corrugated iron pipe stilling well.
An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

None.

DIVERSIONS:

None known.

RECORDS AVAILABLE:

December 26, 1928 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 4,220 second-feet, February 22.
Minimum no flow part of year.
1929-1944
Maximum 8,500 second-feet, estimated, March 2, 1938.
Minimum no flow part of each year.

ACCURACY:

Fair.

OPERATION:

Located, constructed and operated by the Los Angeles County Flood Control District in co-operation with the United States Geological Survey, Water Resources Branch.

STATION F31-R

LIVE OAK CREEK near Mouth of Canyon

LOCATION:

Water-stage recorder, lat. 34°07'34", long. 117°44'37", on the right (west) bank of stream near mouth of canyon, about 0.5 mile below Live Oak Dam, and about 2 miles northeast of La Verne. Elevation of gage, about 1,335 feet (from topographic map).

DRAINAGE AREA:

2.6 square miles.

CHANNEL AND CONTROL:

Channel-sand, gravel and rocks.
Control-concrete with a 2 foot Cipolletti weir 12 inches deep.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from bridge 350 feet below station.

RECORDER:

Installed January 4, 1928 in a concrete house over a 3 ft x 4 ft concrete stilling well. An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow regulated by Live Oak Dam.

DIVERSIONS:

None.

RECORDS AVAILABLE:

January 4, 1928 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 24 second feet, February 22.
Minimum no flow most of year.
1928-1943
Maximum 257 second-feet, March 2, 1938.
Minimum no flow most of each year.

ACCURACY:

Good.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

STATION F5B-R

LOS ANGELES RIVER below Sepulveda Boulevard

LOCATION:

Water-stage recorder, lat.34°09'42", long.118°27'45", on the left (north) bank about 700 feet below Sepulveda Boulevard and about 0.5 mile below Sepulveda Dam. Elevation of zero gage height, 654.31 feet.

DRAINAGE AREA:

157 square miles.

CHANNEL AND CONTROL:

Channel-natural adobe overgrown with weeds during summer months.
Control-concrete slab at gage.

DISCHARGE MEASUREMENTS:

At Station F5B-R
Low flows measured by wading.
High flows measured from cable car 7 feet above gage.

RECORDER:

Installed December 19, 1928 at Station F5-R. Removed March 2, 1938. Reinstalled April 28, 1938. Moved to station F5B-R on August 23, 1941 and installed over a 24 inch diameter, corrugated iron pipe stilling well. Communication to well is thru 31 feet of 36 inch corrugated iron pipe.
An Au continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Inflow to Sepulveda Dam partially regulated by Chatsworth Reservoir, Upper and Lower San Fernando Reservoirs, Twin Lakes Dams, Encino Reservoir and several small dams in various mountain tributaries. Discharge less than 1,000 second-feet passes unrestricted through ungated openings of Sepulveda Dam. Discharge above 1,000 second-feet regulated by Sepulveda Dam.

DIVERSIONS:

Several diversions for irrigation on the mountain tributaries.
Several water supply reservoirs divert flow.
Flow may include irrigation waste at various times.

RECORDS AVAILABLE:

At Station F5-R
December 19, 1928 to March 2, 1938 and from April 28, 1938 to August 23, 1941.
At Station F5B-R
August 23, 1941 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-44
Maximum 5,060 second-feet, February 22.
Minimum 5.5 second-feet, October 4.
1929-1944
Maximum 12,000 second-feet, estimated March 2, 1938.
Minimum flow negligible at various times.

ACCURACY:

Records good except those for Feb. 21,22, which are fair.

OPERATION:

Located and constructed by Corps of Engineers, U.S. Army. Operated by the Los Angeles County Flood Control District in cooperation with Corps of Engineers, U.S. Army, and the United States Geological Survey, Water Resources Branch.

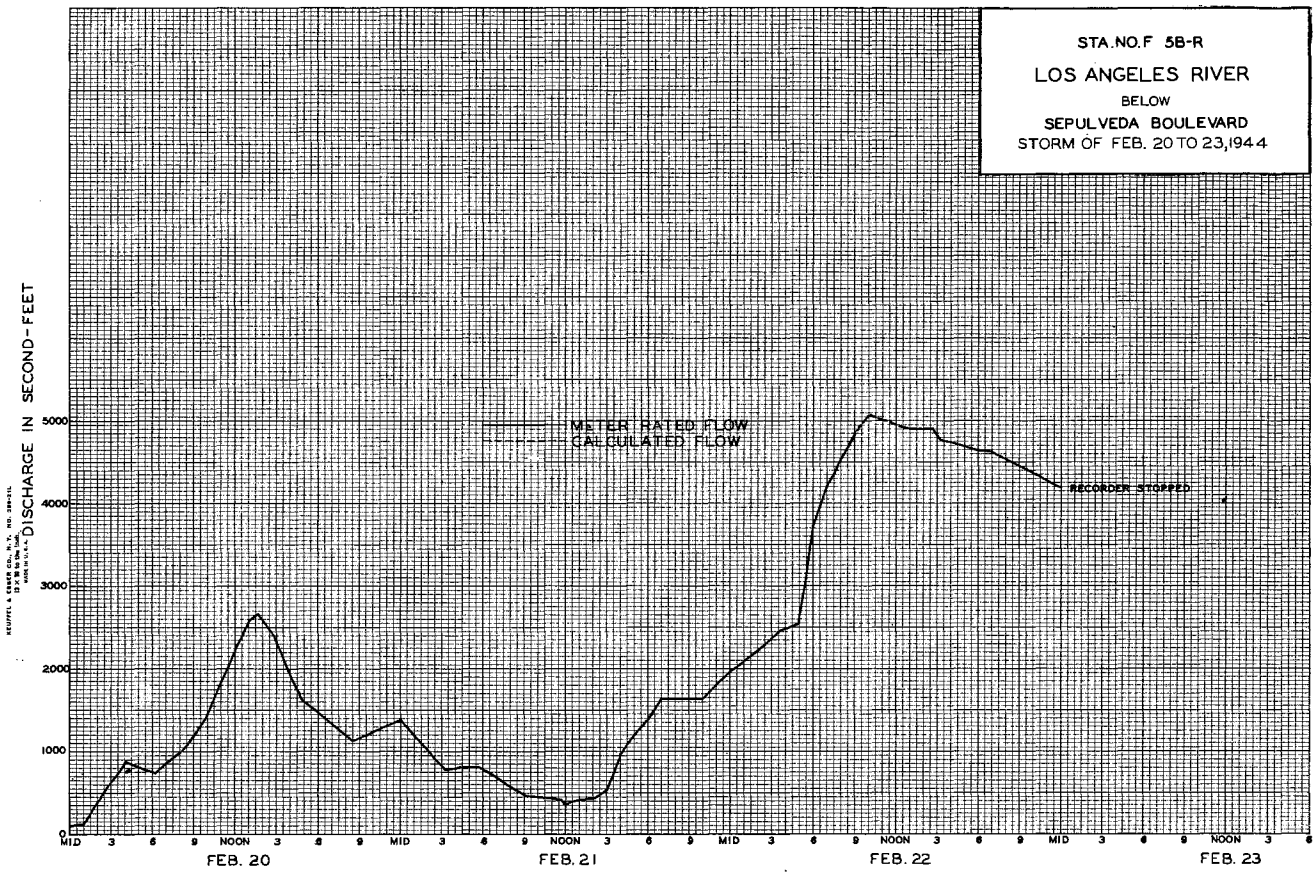
Remarks:

YEAR OR PERIOD MEAN 48.5
ACRE-FEET 35,210.



STATION F266-R

LOS ANGELES RIVER at Mariposa Street

LOCATION:

Water-stage recorder, lat. 34°09'17", long. 118°18'40", on the left (north) channel wall about sixty feet east from the center line of Mariposa Street extended, and about 2 miles southeast of Burbank. Elevation of zero gage height, 468.61 feet.

DRAINAGE AREA:

430 square miles.

CHANNEL AND CONTROL:

Channel-concrete 130 feet wide with 18 foot vertical side walls. Bottom forms a regular trapezoidal section 130 feet x 82 feet on the bottom by 1.25 feet deep.
Channel forms control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from equestrian bridge 70 feet above station.

RECORDER:

Installed December 20, 1938 in a concrete house over a 4 ft x 4.3 ft. concrete stilling well. An H.C.F. recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION AND/OR DIVERSIONS:

Subject to same regulation as Station F5B-R and in addition, by Pacoima Dam, Hansen Dam and Big Tujunga Dam No. 1.

DIVERSIONS:

Several irrigation diversions in the mountain tributaries, other flow is diverted at the several water supply reservoirs, and the Los Angeles Water Department diverts flow for spreading above the station.

RECORDS AVAILABLE:

From December 20, 1938 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 9,040 second-feet, February 22.
Minimum 14 second-feet, Aug. 29 to Sept. 15.
1938-1944
Maximum 9,040 second-feet, Feb. 22, 1944.
Minimum 6.5 second-feet, May 20 and 21, 1940.

ACCURACY:

Fair.

OPERATION:

Located and constructed by Corps of Engineers, U.S. Army, and operated by the Los Angeles County Flood Control District in conjunction with the Corps of Engineers, U.S. Army.

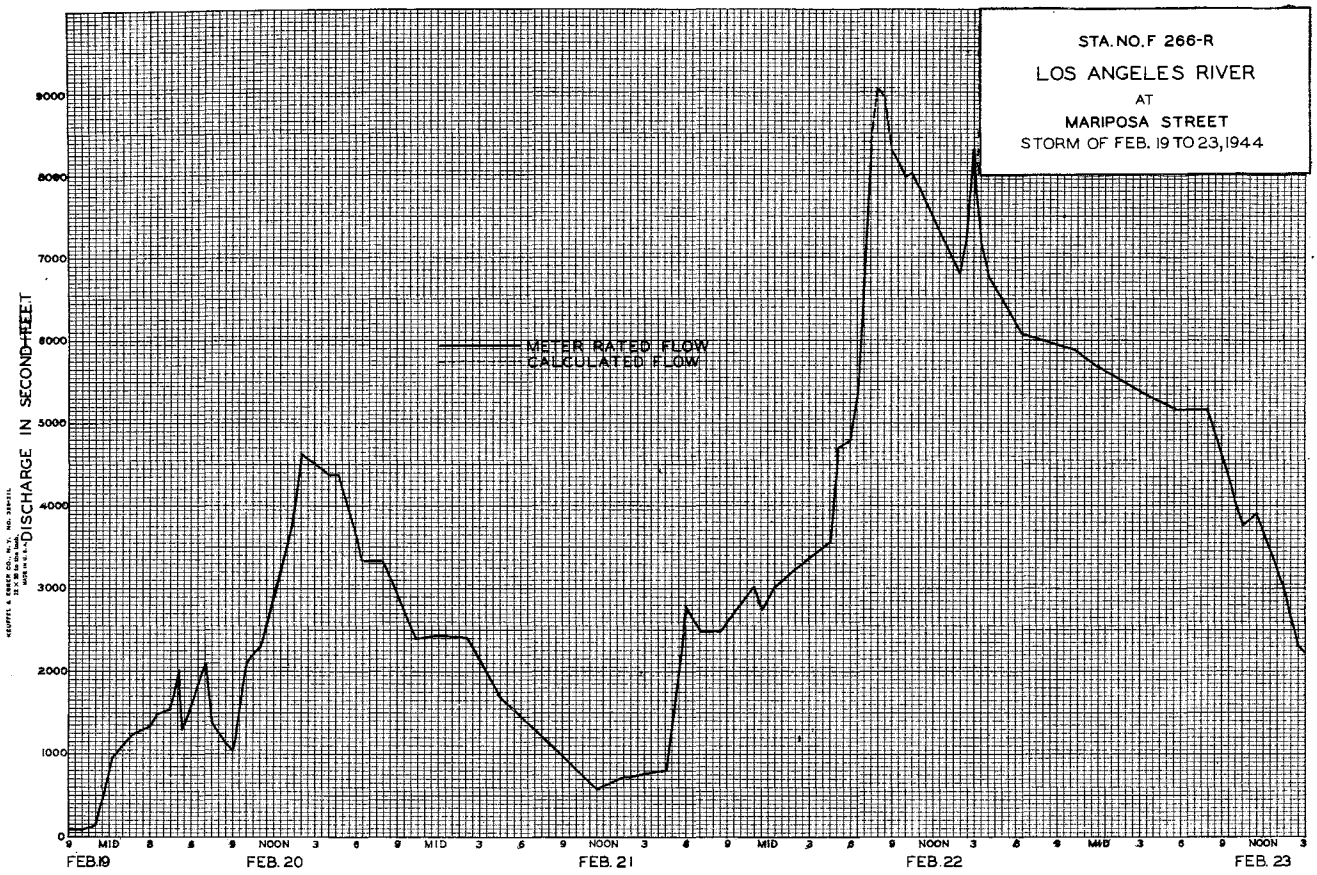
Remarks:

YEAR OR PERIOD MEAN 113.
ACRE-FEET 82,390.



STATION F57C-R

LOS ANGELES RIVER above Arroyo Seco

LOCATION:

Water-stage recorder, lat. 34°04'55", long. 118°13'35" on the right (west) channel wall 800 feet above the junction with the Arroyo Seco. The former Station F57B-R was 450 feet above the junction with the Arroyo Seco. Elevation of zero gage height, 292.58 feet.

DRAINAGE AREA:

510 square miles.

CHANNEL AND CONTROL:

Channel-rectangular concrete 177 feet wide and 29 feet deep with an invert 20 feet wide at top, 16 feet wide at bottom and 1 foot deep one-third distance from right wall. Channel forms control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cable car 15 feet above gage.

RECORDER:

Installed May 26, 1938 at Station F57B-R. Removed April 5, 1939. Installed at Station F57C-R December 8, 1939 in a 4.5 ft x 4.5 ft. concrete house and stilling well combined. A Friez continuous recorder, furnished by Corps of Engineers, U.S. Army, was in service from October 1, 1943 to September 30, 1944.

REGULATION AND/OR DIVERSIONS:

Subject to same regulation as Station F266-R. Several debris basins regulate flow on additional tributaries. The Los Angeles Water Department spills surplus flow into the channel from water developed in the Griffith Park area.

RECORDS AVAILABLE:

At Station F57-R
December, 1929 to May 26, 1938.
At Station F57B-R
May 26, 1938 to April 5, 1939. April 5, 1939 to December 8, 1939, bi-weekly measurements.
At Station F57C-R
December 8, 1939 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 14,600 second-feet, February 22.
Minimum 22 second-feet, July 1.
1929-1944 (Stations F57-R, F57B-R and F57C-R)
Maximum 68,000 second-feet, estimated, March 2, 1938.
Minimum no flow at times each year from 1929-1930 to 1933-1934.

ACCURACY:

Fair.

OPERATION:

Located, and constructed by the Corps of Engineers, U.S. Army. Operated by the Los Angeles County Flood Control District, and Corps of Engineers, U.S. Army, with the co-operation of the United States Geological Survey, Water Resources Branch.

DIVERSIONS:

Several irrigation diversions in the mountain tributaries; other flow is diverted at the several water supply reservoirs, and the Los Angeles Water Department diverts flow for spreading.

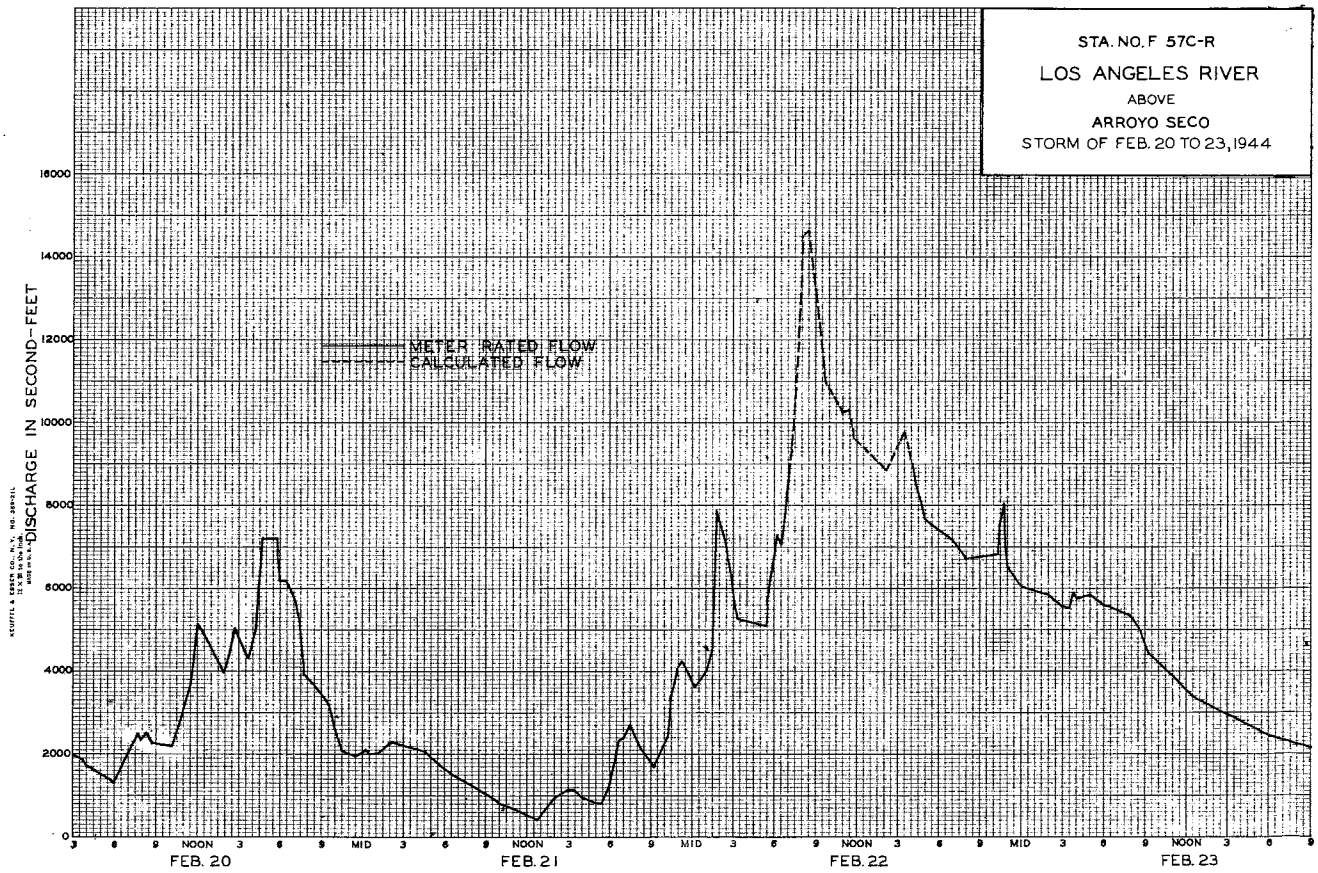
Remarks:

Year or Period: Mean 151; Acre-Feet 109,800



STATION F34B-R

LOS ANGELES RIVER at Firestone Boulevard

LOCATION:

Water-stage recorder, lat. 33°57'03", long. 118°10'22", on the downstream side of Firestone Boulevard bridge, about 3 miles west of Downey. Elevation of zero gage height, 95.09 feet.

DRAINAGE AREA:

614 square miles.

CHANNEL AND CONTROL:

Channel-sand and silt, about 340 feet wide with 3:1 riprapped slopes.
Control-concrete sill across channel bottom about 150 feet below station.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from upstream side of bridge.

RECORDER:

Installed April 11, 1938, over an 18 inch diameter corrugated iron pipe stilling well.
An Au continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow is subject to same regulation as station F57C-R. In addition, the flow is partially regulated by Devil's Gate Dam.

DIVERSIONS:

Flow is subject to same diversions as Station F57C-R.
Several irrigation diversions in the mountain tributaries; some flow is diverted at several water supply reservoirs and the Los Angeles Water Department diverts flow for spreading. The City of Pasadena diverte water from the Arroyo Seco.

RECORDS AVAILABLE:

At Station F34-R
March 1, 1928 to April 11, 1938. (For previous records see State of California Division of Water Rights Bulletin No. 5.)
At Station F34B-R
April 11, 1938 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 24,750 second-feet, February 22.
Minimum 38 second-feet, December 5.
1928-1944 (Stations F34-R and F34B-R)
Maximum 79,000 second-feet, estimated, March 2, 1938.
Minimum no flow at various times.

ACCURACY:

Fair.

OPERATION:

Located and constructed by the Los Angeles County Flood Control District, and operated by the Los Angeles County Flood Control District with cooperation of Corps of Engineers, U.S. Army, and the United States Geological Survey, Water Resources Branch.

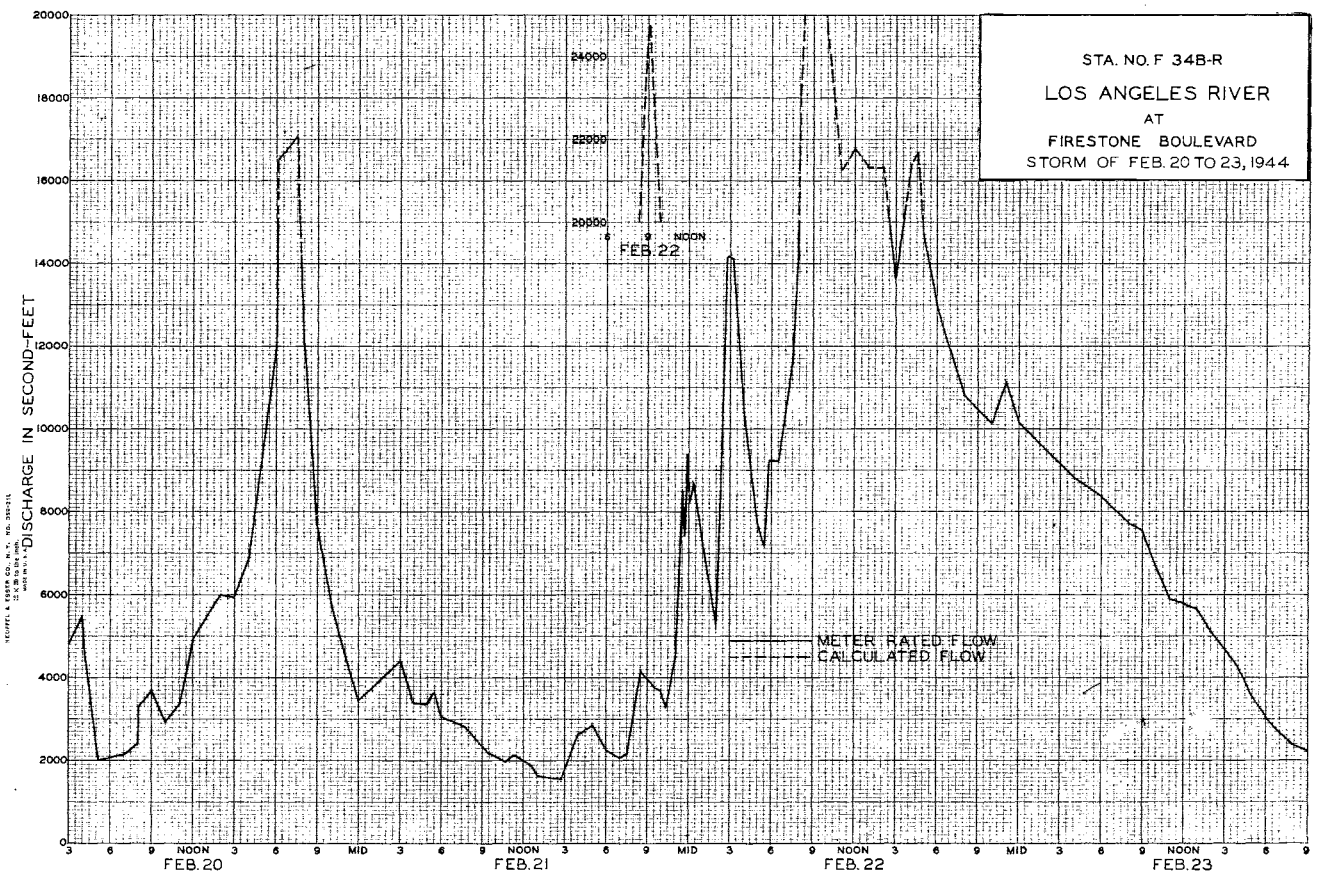
Remarks:

YEAR OR PERIOD — MEAN 249. — ACRE-FEET 180900.



STATION F180-R

LOS ANGELES RIVER at Pacific Coast Highway

LOCATION:

Water-stage recorder, lat. 33°47'25", long. 118°12'17", on the downstream side of Pacific Coast Highway Bridge about 1.8 miles upstream from the Pacific Ocean.

CHANNEL AND CONTROL:

Channel-fine sand and silt, 570 feet wide with riprapped levees.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from upstream side of Pacific Coast Highway bridge.

RECORDER:

Installed October 31, 1931, over an 18 inch diameter corrugated iron stilling well.
A Stevens continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow is subject to the same regulation as Station F34B-R and Station F45-R.

DIVERSIONS:

Several water supply reservoirs in the Los Angeles River area divert flow.
The City of Pasadena diverts water from the Arroyo Seco, from Eaton Creek.
Various cities, parties and agencies have miscellaneous domestic and irrigation diversions. Several agencies divert flow at various locations for spreading.

RECORDS AVAILABLE:

October 31, 1931 to September 30, 1944.
For earlier records, see Station F36-R, Los Angeles River at Willow Street.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 34,000 second-feet, February 22.
Minimum 35 second-feet, several days.
1931-1944
Maximum 99,000 second-feet estimated, March 2, 1938.
Minimum no flow at various times in 1934.

ACCURACY:

Fair.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District in co-operation with the United States Geological Survey, Water Resources Branch and Corps of Engineers, U.S. Army.

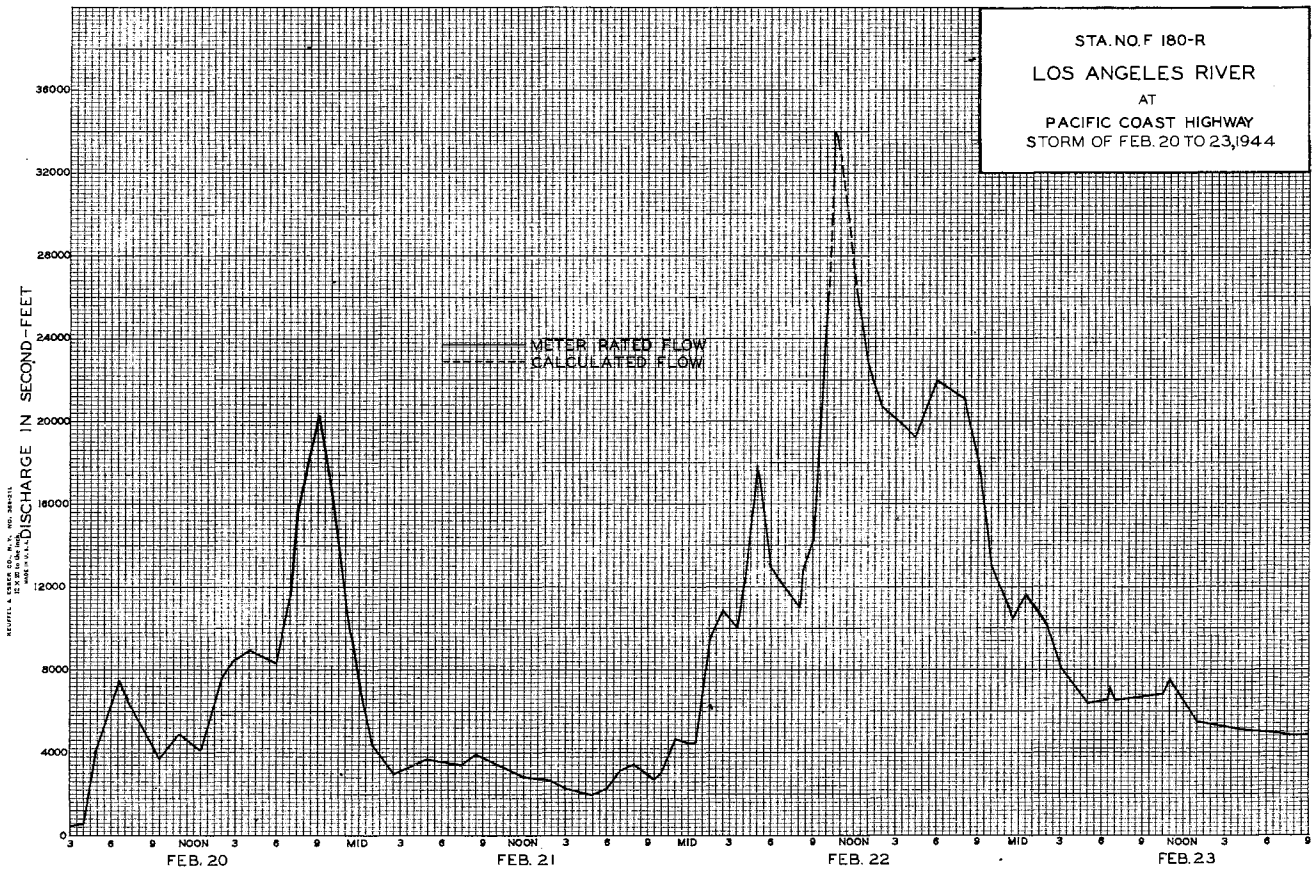
Remarks:

Year or Period: Mean 299. Acre-Feet 217400.



STATION F130-R

MALIBU CREEK at Crater Camp

LOCATION:

Water-stage recorder, lat. 34°04'30", long. 118°42'10", at upper end of Malibu Gorge, about 0.2 mile downstream from Crater Camp in the Santa Monica Mountains, and 6 miles southwest of Calabasas. Elevation of gage, about 412 feet (from topographic map).

DRAINAGE AREA:

103 square miles.

CHANNEL AND CONTROL:

Channel-coarse sand and gravel lined with brush and trees.
A check dam of sand bags functioned during part of the year as a low water control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cable car 10 feet below gage.

RECORDER:

Installed January 17, 1931 over an 18 inch diameter, corrugated iron pipe stilling well.
An Au continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATIONS AND/OR DIVERSIONS:

Lake Sherwood Dam, Lake Eleanor Dam, Malibu Lake Mountain Club Dam, and Crags Dam.
Other low dams built for recreational purposes affect the low summer flows.

RECORDS AVAILABLE:

January 17, 1931 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 7,700 second-feet, February 22.
Minimum 0.7 second-foot Oct. 1-27.
1931-1944
Maximum 12,240 second-feet, January 22, 1943.
Minimum no flow at various times.

ACCURACY:

Fair.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District in co-operation with the United States Geological Survey, Water Resources Branch.

)2

STATION F22-R

MONROVIA CREEK above Sawpit Creek

LOCATION:

Water-stage recorder, lat. 34°10'28", long. 117°59'22", on the right (south) bank of Monrovia Creek 200 feet upstream from Sawpit Creek, and about 2.5 miles north of Monrovia. Elevation of zero gage height, 1252.70 feet.

DRAINAGE AREA:

1.9 square miles.

CHANNEL AND CONTROL:

Channel-rock and gravel.
Control-natural channel forms control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from footbridge at station.

RECORDER:

Installed November 10, 1927 in a concrete rubble house over a 4 ft x 3 ft concrete stilling well. An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

None.

DIVERSIONS:

Monrovia pipe line diverts water above gage.

RECORDS AVAILABLE:

November 10, 1927 to September 30, 1944

EXTREMES OF DISCHARGE:

1943-1944
Maximum 97 second-feet, February 22.
Minimum flow less than 0.03 second-feet.
1927-1944
Maximum discharge not determined.
Maximum discharge of record, 109 second-feet, April 8, 1935.
Minimum no flow at various times.

ACCURACY:

Good.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

STATION F195-R

MONROVIA STORM DRAIN at Peck Road

LOCATION:

Water-stage recorder, lat. 34°07'27", long. 118°00'13", on the left (east) wing wall of approach to concrete outlet channel of Monrovia Storm Drain into Peck Road and about 1 mile south of Monrovia. Elevation of gage, about 387 feet (from topographic map).

DRAINAGE AREA:

4.5 square miles.

CHANNEL AND CONTROL:

Channel-sand and gravel, upstream from stilling well; concrete channel starts at well.
Control-concrete sill at beginning of concrete lined channel - 22.5 ft wide x 3.2 ft deep.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured by floats near station.

RECORDER:

Installed April 25, 1932, over an 18 inch diameter corrugated iron pipe stilling well.
A Stevens type L recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

None.

DIVERSIONS:

None.

RECORDS AVAILABLE:

April 25, 1932 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 828 second-feet, February 22.
Minimum no flow most of the year.
1932-1944
Maximum 1,200 second-feet, estimated, March 2, 1938.
Minimum no flow most of each year.

ACCURACY:

Fair.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

STATION F181-R

MONTEBELLO STORM DRAIN above Rio Hondo

LOCATION:

Water-stage recorder, lat. 34°00'08", long. 118°06'14", on right (south) wing wall of the storm drain outlet, 200 feet east of the east end of Mines Avenue and 220 feet west of west bank of the Rio Hondo near Montebello. Elevation of zero gage height, 161.97 feet.

DRAINAGE AREA:

9.6 square miles.

CHANNEL AND CONTROL:

Channel-concrete apron with wing walls below a 14 ft x 10 ft concrete covered drain. A drop off exists just below the station. On April 11, 1935 a diversion wall 4 inches high was built across the drain 20 feet above the station.
The stage-discharge relation, during flood flows in the Rio Hondo, is affected by backwater from the Rio Hondo.

DISCHARGE MEASUREMENTS:

Low flows measured by wading at outlet.
High flows measured from head wall at end of covered section.

RECORDER:

Installed January 21, 1932 over an 18 inch diameter corrugated iron pipe stilling well.
An H.C.F. continuous recorder was in service, from October 1, 1943 to September 30, 1944.

REGULATION:

None.

DIVERSIONS:

None prior to April 11, 1935.
Subsequent to April 11, 1935, a gated twelve inch pipe diverts the summer flow from a point 20 feet above the station to the Rio Hondo.
No diversions during the winter months.

RECORDS AVAILABLE:

January 12, 1932 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 1,040 second-feet, February 22.
Minimum 0.1 second-foot at various times.
1931-1944
Maximum 1,400 second-feet, estimated, March 2, 1938.
Minimum no flow at various times.

ACCURACY:

Poor due to extreme draw down in stilling well.
Low flows usually estimated due to communication being obstructed by sand.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

STATION F118B-R

PACOIMA CREEK below Pacoima Dam

LOCATION:

Water-stage recorder, lat. 34°20'07", long. 118°23'50", 4 miles northeast of San Fernando, and about 500 feet downstream from Pacoima Dam; former Station F118-R was approximately 450 feet downstream. Former Station U13-R was approximately 0.5 mile downstream. Elevation of gage, about 1,650 feet (from topographic map).

DRAINAGE AREA:

28.2 square miles.

CHANNEL AND CONTROL:

Channel-sand, gravel and boulders above and below flume.
Control-a ten foot San Dimas type rubble and concrete flume.
A 90° V-notch weir, in guides in the 10 foot flume, can be dropped to measure low flows.

DISCHARGE MEASUREMENTS:

From footbridge over flume.

RECORDER:

Installed at Station F118-R on March 24, 1933; removed February 1, 1935.
Installed at Station F118B-R on February 9, 1935; removed April 28, 1937. Reinstalled June 25, 1937.
An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Regulated by Pacoima Dam.
Stations F118-R and F118B-R do not include spillway discharge.
Station U13-R was so located that it would have included spillway discharge.

DIVERSIONS:

Water passing over Pacoima Dam spillway enters Pacoima Creek below Station F118B-R.

RECORDS AVAILABLE:

At Station U13-R, Pacoima Creek near San Fernando, California at office of U.S. Geological Survey, Water Resources Branch, Los Angeles, from March, 1916 to September , 1929. From October 1, 1929 to March 23, 1933, records based on dam outflow records and gage readings at the Parshall flume below Pacoima Dam. These records are available at the office of the Los Angeles County Flood Control District.
At Station F118-R
March 24, 1933 to February 1, 1935.
At Station F118B-R
February 9, 1935 to April 28, 1937, and June 25, 1937 to June 15, 1943, and from September 15, 1943 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 326 second-feet, March 2 and 3.
Minimum no flow at various times.
1929-1944 (Stations F118-R, F118B-R, and Parshall Flume and dam records)
Maximum 685 second-feet, March 2, 1938.
Maximum 2,060 second-feet, March 3, 1938 including Spillway Discharge.
Minimum no flow at various times.
1916-1929 (Station U13-R)
Maximum 1,860 second-feet, February 16, 1927.
Minimum no flow at various times.

ACCURACY:

Good.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District in co-operation with the United States Geological Survey, Water Resources Branch.

REMARKS:

Flow over Pacoima Dam Spillway from May 18 to 26, 1944 does not pass F118B-R:

STATION F16-R

PACOIMA WASH at Parthenia Street

LOCATION:

Water-stage recorder, lat. 34°13'42", long. 118°27'32", on the downstream side of Parthenia Street bridge approximately 3 miles northwest of Van Nuys. Elevation of zero gage height, 813.63 feet.

DRAINAGE AREA:

50.6 square miles.

CHANNEL AND CONTROL:

Channel-composed of sand and gravel. Weeds and brush along banks.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows Measured by wading.
High flows measured from upstream side of highway bridge, or from R.R. bridge just upstream from highway bridge.

RECORDER:

Installed December 26, 1928, over an 18 inch diameter corrugated iron pipe stilling well. An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow partially regulated by Pacoima Dam, and Pacoima Spreading Grounds.

DIVERSIONS:

Two small diversions for irrigation near mouth of canyon. Water diverted to the Pacoima Spreading Grounds during spreading operations.

RECORDS AVAILABLE:

December 26, 1928, to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 355 second-feet, March 1.
Minimum no flow most of year.
1929-1944
Maximum 2,400 second-feet, estimated March 3, 1938.
Minimum no flow most of each year.

ACCURACY:

Fair.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

STATION F40-R

PUDDINGSTONE CREEK below Puddingstone Dam

LOCATION:

Water-stage recorder, lat. 34°05'35", long. 117°48'38", on the right (east) bank about 1000 feet below Puddingstone Dam near San Dimas. Elevation of gage, about 825 feet (from topographic map).

DRAINAGE AREA:

32.3 square miles, including areas controlled by several dams in the mountain tributaries.

CHANNEL AND CONTROL:

Channel-sand, gravel and puddingstone. Control-reinforced concrete Cipolletti weir 25 feet on bottom by 3 feet deep with a Cippolletti weir in center 24 inches on bottom by 18 inches deep.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
No facilities for measuring high flows.

RECORDER:

Installed December 28, 1927 in a concrete house over a 3 ft x 4 ft concrete stilling well. An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow regulated by Puddingstone Dam.

DIVERSIONS AND/OR REGULATIONS:

San Dimas Creek, which is regulated by San Dimas Dam and Puddingstone Diversion Dam, can be diverted to Puddingstone Reservoir at Puddingstone Diversion Dam. Metropolitan water District Aqueduct occasionally spills flow into Puddingstone Diversion Channel.

DIVERSION:

San Dimas Water Company diverts outflow from dam above the station.

RECORDS AVAILABLE:

December 28, 1927 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 51 second-feet, March 2.
Minimum + at various times.
1929-1944
Maximum 287 second-feet, March 4, 1943.
Minimum + at various times.

ACCURACY:

Good.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

YEAR OR PERIOD — MEAN 1.54 — ACRE-FEET 1120.

STATION F280-R

RIO HONDO DIVERSION below Santa Fe Dam

LOCATION:

Water-stage recorder, lat. 34°06'45", long. 117°58'25", on the left bank of the diversion canal, 400 feet downstream from the stilling basin outlet of Santa Fe Dam and 1.5 miles north of Baldwin Park. Elevation of gage, about 403 feet.

CHANNEL AND CONTROL:

Channel-sand and gravel.
Control-concrete apron 3 feet wide 10 feet below station.

DISCHARGE MEASUREMENTS:

Made by wading at control.

RECORDER:

Installed May 12, 1944 over a 16 inch diameter iron pipe stilling well. A Stevens recorder was in service from May 12, 1944 to September 30, 1944.

REGULATION:

Flow regulated by 5 gated openings from the stilling basin outlet of Santa Fe Dam to the Rio Hondo Diversion Canal.

RECORDS AVAILABLE:

Recorder records from May 12, 1944 to September 30, 1944. October 1, 1942 to May 12, 1944, determined by gate openings. A list of measurements at Station F280-S from October 1, 1942 to May 12, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 253 second-feet, May 18 to 23 and 29.
Minimum no flow most of year.

ACCURACY:

Good.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District in co-operation with the Corps of Engineers, U.S. Army, and the United States Geological Survey, Water Resources Branch.

YEAR OR PERIOD MEAN 20.9
ACRE-FEET 15180.

STATION F192-R

RIO HONDO at Lower Azusa Road

LOCATION:

Water-stage recorder, lat. 34°05'33", long. 118°01'52", on the downstream side of the Lower Azusa Road bridge, about 1.5 miles north of El Monte. Elevation of zero gage height, 287.54 feet.

DRAINAGE AREA:

40.9 square miles. (Excludes drainage above Santa Fe Dam).

CHANNEL AND CONTROL:

Channel-sand and gravel.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cable car 46 feet below the station.

RECORDER:

Installed March 29, 1932 over a 21 inch diameter corrugated iron pipe stilling well.
An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow partially regulated by Sierra Madre Dam, Big Santa Anita Dam, Sawpit Dam, also spillway and diversion at Santa Fe Dam.

DIVERSIONS:

The City of Monrovia diverts water from Monrovia Creek and Sawpit Creek. The City of Sierra Madre diverts water from Little Santa Anita Canyon. Flow from San Gabriel River below Santa Fe Dam is occasionally diverted to Rio Hondo. There are also several diversions for irrigation and spreading grounds.

RECORDS AVAILABLE:

February 22, 1932 to March 29, 1932 stream measurements only.
March 29, 1932 to September 30, 1944, recorder records.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 1,080 second-feet, February 22.
Minimum 0.3 second-foot at various times.
1932-1944
Maximum 31,000 second-feet, estimated March 2, 1938.
Minimum no flow at times some years.

ACCURACY:

Fair due to undetermined shift at extremely high flows.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

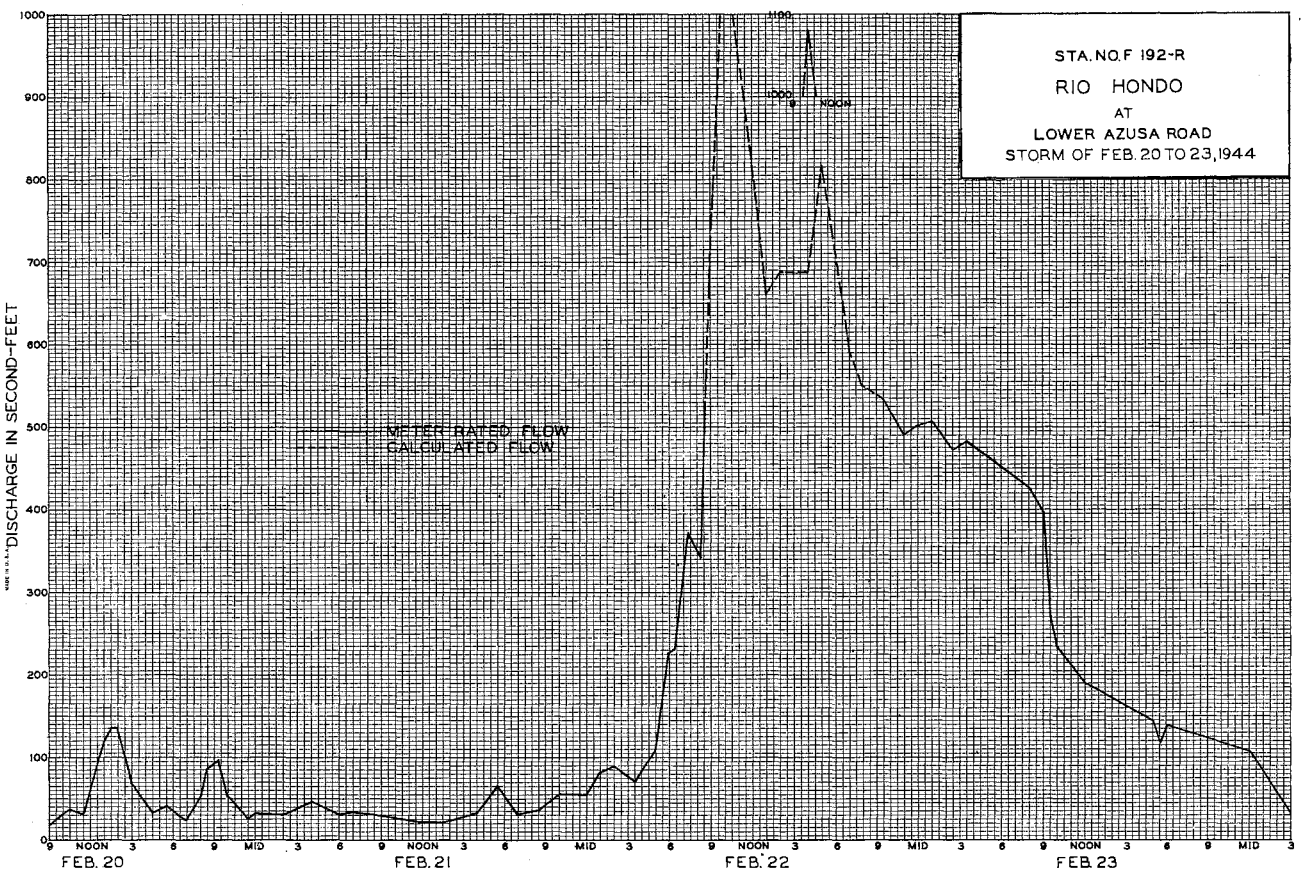
Remarks:

YEAR OR PERIOD MEAN 15.9
ACRE-FEET 11600.



STATION F64-R

RIO HONDO above Mission Bridge

LOCATION:

Water-stage recorder, lat. 34°01'57", long. 118°04'18", on the right (west) bank approximately 1,000 feet above Mission Bridge (San Gabriel Boulevard) and 2 miles northeast of Montebello. This supplements the station operated from 1923 to 1928 by the State Division of Water Rights at Mission Bridge. Elevation of gage, about 193 feet (from topographic map).

DRAINAGE AREA:

115 square miles. (Excludes drainage above Santa Fe Dam).

CHANNEL AND CONTROL:

Channel-sand and silt.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cable car 60 feet below station.

RECORDER:

Installed in July, 1928. Removed about 10 p.m. March 2, 1938. Reinstalled on March 6, at a temporary station F64B-R on Mission Bridge. Removed on March 26, 1938. Reinstalled at station F64-R in a 48 inch diameter, corrugated iron pipe which serves both as a stilling well and shelter house.
An Au continuous recorder was in service from October 1, 1942 to September 30, 1944.

REGULATION:

Flow partially regulated by Sierra Madre Dam, Big Santa Anita Dam, Sawpit Dam, Eaton Dam, Los Flores and Rubio Debris Basins, and Santa Fe Dam.

DIVERSIONS:

The City of Pasadena diverts water from Eaton Creek.
The City of Monrovia diverts water from Monrovia Creek, and Sawpit Creek.
The City of Sierra Madre diverts water from Little Santa Anita Canyon.
Flow from San Gabriel River below Santa Fe Dam is occasionally diverted to Rio Hondo. There are also several diversions for irrigation and spreading grounds.

RECORDS AVAILABLE:

July, 1928 to September 30, 1944 (for records prior to July, 1928 see State Division of Water Rights Bulletins). (Records from March 6, 1938 to March 25, 1938 are from Station F64B-R.)

EXTREMES OF DISCHARGE:

1943-1944
Maximum 4,390 second-feet, February 22.
Minimum 21 second-feet, October 6.
1928-1944
Maximum 28,000 second-feet, estimated, March 2, 1938.
Minimum 5 second-feet October 15, 1931.

ACCURACY:

Fair.

OPERATION:

Operated by the Los Angeles County Flood Control District in co-operation with the United States Geological Survey, Water Resources Branch.

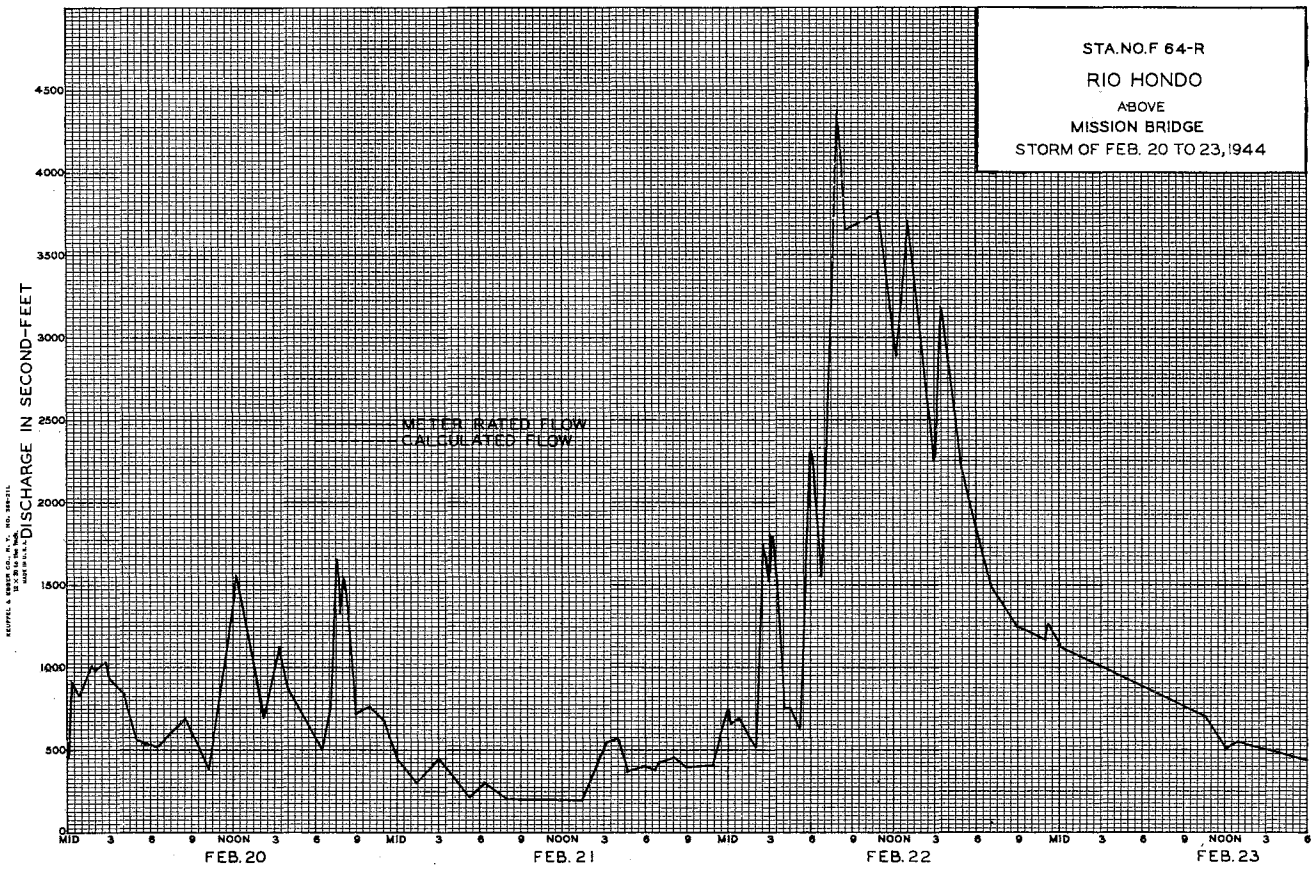
Remarks:

YEAR OR PERIOD MEAN 70.8
ACRE-FEET 51,390.



STATION F45-R

RIO HONDO at Stewart and Gray Road

LOCATION:

Water-stage recorder, lat. 33°56'40", long. 118°09'50", on the downstream side of highway bridge, 0.5 mile upstream from junction of Rio Hondo and Los Angeles River and about 1.5 miles west of Downey. This station is near the location of the station operated from 1923 to 1928 by the State Division of Water Rights. Elevation of zero gage height, 90.20 feet.

DRAINAGE AREA:

140 square miles. (Excludes drainage above Santa Fe Dam.)

CHANNEL AND CONTROL:

Channel-clay and sand between granite riprap levee on left (east) bank and earth levee on right bank. No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading near gage.
High flows measured from cable car 250 feet above station.

RECORDER:

Installed March 1, 1928, over a 21 inch diameter corrugated iron pipe stilling well. An Au continuous recorder was in service from October 1, 1942 to September 30, 1944.

REGULATION:

Flow partially regulated by Sierra Madre Dam, Big Santa Anita Dam, Sawpit Dam, Eaton Dam, Santa Fe Dam, Los Flores and Rubio Debris Basins.

DIVERSIONS:

The city of Pasadena diverts water from Eaton Creek.
The City of Monrovia diverts water from Monrovia Creek, and Sawpit Creek.
The City of Sierra Madre diverts water from Little Santa Anita Canyon.
There are also several diversions for irrigation and spreading.
Flow from San Gabriel River below Santa Fe Dam is occasionally diverted to Rio Hondo.

RECORDS AVAILABLE:

March, 1928 to September 30, 1943. (For records prior to March, 1928 see State Division of Water Rights Bulletins.)

EXTREMES OF DISCHARGE:

1943-1944
Maximum 6,670 second-feet, February 22.
Minimum no flow at various times.
1929-1944
Maximum 24,400 second-feet, estimated, March 2, 1938.
Minimum no flow at various times.

ACCURACY:

Fair.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District in co-operation with the United States Geological Survey, Water Resources Branch.

STATION F83-R

RIO HONDO SLOUGH at San Gabriel Boulevard

LOCATION:

Water-stage recorder, lat. 34°,01'47", long. 118°04'07", on the upstream end of the right (west) abutment of San Gabriel Boulevard bridge, just east of the Rio Hondo, about 2 miles northeast of Montebello. Elevation of gage, about 193 feet.

DRAINAGE AREA:

About 6 square miles.
Flow originates almost entirely from rising water.

CHANNEL AND CONTROL:

Channel-sand, covered with weeds and brush; some cross fences which catch debris.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading approximately 400 feet below station.
High flows measured from highway bridge.

RECORDER:

Installed June 14, 1930, over an 18 inch diameter, corrugated iron pipe stilling well. Horizontal Rational 7 day recorder, in service October 1, 1943 to September 30, 1944.

REGULATION:

Some water pumped just downstream from bridge.

DIVERSIONS:

None.

RECORDS AVAILABLE:

Recorder records June 14, 1930 to September 30, 1944. Some weekly stream measurements were taken prior to installation of recorder.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 336 second-feet, February 22.
Minimum 20 second-feet, at various times.
1930-1944
Maximum discharge not determined.
Maximum discharge of record, 336 second-feet, February 22, 1944.
Minimum 4.8 second-feet, October 4, 1934.

ACCURACY:

Good.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District in co-operation with the United States Geological Survey, Water Resources Branch.

Remarks:

YEAR OR PERIOD MEAN 26.0
ACRE-FEET 18,850.

STATION U14-R

ROCK CREEK above Mouth of Canyon

LOCATION:

Water-stage recorder, lat. 34°25'10", long. 117°50'17", in NE¼ sec. 20, T. 4 N., R. 9 W., 1-3/4 miles southeast of Valyermo. Altitude of gage, about 4,050 feet.

DRAINAGE AREA:

23.0 square miles.

RECORDS AVAILABLE:

January 1923 to September 1937, May 1938 to September 1944.

AVERAGE DISCHARGE:

20 years (1923-37, 1938-44), 16.9 second-feet.

EXTREMES:

Maximum discharge during year, 180 second-feet, December 19, (gage height, 2.98 feet); minimum, 6.5 second-feet November 28 to December 4.

1923-1944

Maximum discharge, 8,300 second-feet Mar. 2, 1938, by slope-area method; minimum, 1.2 second-feet Aug. 22, 1925.

REMARKS:

Records good. No diversions above station.

COOPERATION:

Records furnished by the United States Geological Survey, with the exception of 12 discharge measurements furnished by the Los Angeles County Flood Control District in co-operation with the United States Geological Survey.

Remarks:

Year or Period: Mean 33.2; Acre-Feet 24,120.

STATION U6-R

ROGERS CREEK above Mouth of Canyon

LOCATION:

Water-stage recorder, lat. 34°09'55", long. 117°54'22", in NW¼NW¼ sec. 23, T. 1N., R. 10W., half a mile upstream from mouth and 2.5 miles north of Azusa. Altitude of gage, about 800 feet.

DRAINAGE AREA:

6.4 square miles.

RECORDS AVAILABLE:

May 1916 to June 1917 (discharge measurements only), October 1917 to September 1944.

AVERAGE DISCHARGE:

27 years, 3.49 second-feet.

EXTREMES:

1943-1944
Maximum discharge during year, 494 second-feet, February 22 (gage height, 6.48 feet), no flow for several days.
1917-1944
Maximum discharge, about 2,600 second-feet April 7, 1926; no flow for parts of each year.

REMARKS:

Records good below 60 second-feet and fair above. Entire flow diverted above station at times.

COOPERATION:

Records furnished by the United States Geological Survey with the exception of 24 discharge measurements furnished by the Los Angeles County Flood Control District in co-operation with the United States Geological Survey.

Remarks:

YEAR OR PERIOD MEAN 4.27
ACRE-FEET 3,100.

STATION F 82C-R

RUBIO WASH at Glendon Way

LOCATION:

Water-stage recorder, lat. 34°04'27", long. 118°04'35", on the left (east) side of channel 10 feet south of the westerly extension of Glendon way, Rosemead. Elevation of zero gage height, 274.06 feet.

DRAINAGE AREA:

13.4 square miles.

CHANNEL AND CONTROL:

Channel-rectangular concrete 48.1 ft. wide x 10.5 ft. deep to bottom of 0.5 ft. invert with 0.5 ft. fillets at vertical side walls.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from footbridge at station.

RECORDER:

Installed November 6, 1936, over a 4 ft. x 3 ft. concrete well.
An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow partially regulated by Los Flores and Rubio Debris Basins.

DIVERSIONS:

None.

RECORDS AVAILABLE:

November 6, 1936 to September 30, 1944. For previous records on Rubio Wash see Stations F82-R, F107-R, F82B-R, in previous reports.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 1,930 second-feet, February 22.
Minimum no flow part of year.
1930-1944 (Stations F82-R, F82B-R, F82C-R)
Maximum 2,780 second-feet, March 4, 1943.
Minimum no flow at times each year.

ACCURACY:

Good.

OPERATION:

Located and operated by the Los Angeles County Flood Control District; the stilling well and communication channel were constructed by Corps of Engineers, U.S. Army.

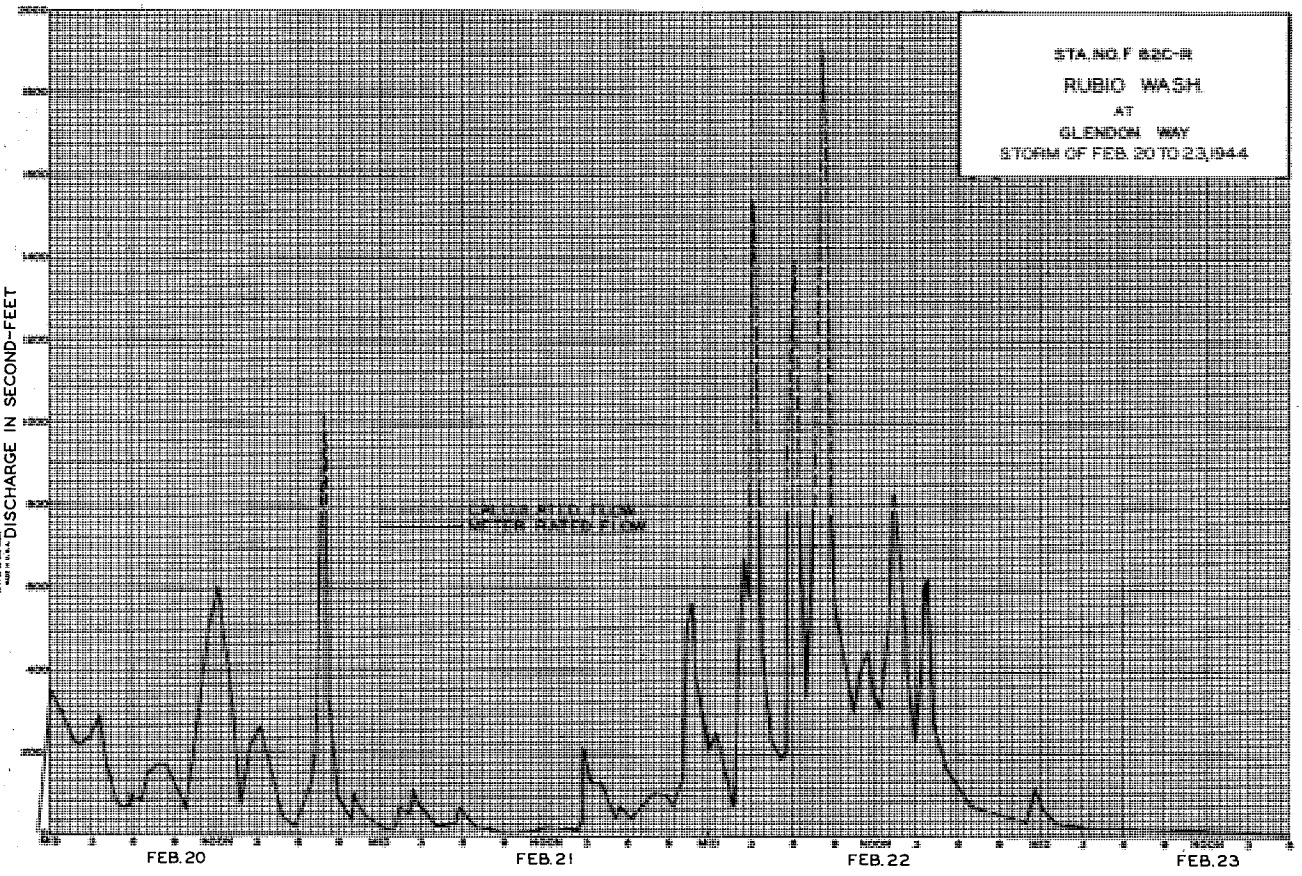
YEAR OR PERIOD MEAN 4.40
ACRE FEET 3190.



STATION U15-R

SAN ANTONIO CREEK below Edison Company Power Plant

LOCATION:

Water-stage recorder and broad-crested weir control, lat. 34°12'50", long. 117°40'00", in NW¼SE¼ sec. 36, T. 2 N., R. 8 W., half a mile upstream from Southern California Edison Co.'s. Sierra power plant and 8 miles northeast of Claremont. Altitude of gage, about 3,400 feet.

DRAINAGE AREA:

16.9 square miles.

RECORDS AVAILABLE:

March 1901 to September 1944.

AVERAGE DISCHARGE:

27 years (1917-44), 11.8 second-feet. Average combined discharge of creek and conduit, 27 years (1917-44), 24.7 second-feet.

EXTREMES:

1943-1944
Maximum discharge during year, 120 second-feet, April 8, (gage height, 2.30 feet); minimum 1.2 second-feet September 26, 27.

1917-1944
Maximum discharge, 21,400 second-feet March 2, 1938, by rainfall-runoff studies; minimum, less than 0.1 second-foot for several days in October 1934.

REMARKS:

Records good. Southern California Edison Co.'s conduit diverts water above station, and is published in combination with U15-R.

Remarks:

YEAR OR PERIOD — MEAN 35.8 — ACRE-FEET 25,980.

STATION F151-R

SAN ANTONIO CREEK at Mouth of Canyon

LOCATION:

Water-stage recorder, lat. 34°09'20", long. 117°40'54", on the right (west) bank, upstream from all headgates of Pomona Valley Protective Association spreading grounds and about 4 miles northeast of Claremont. Elevation of zero gage height, 2079.57 feet.

DRAINAGE AREA:

26.5 square miles.

CHANNEL AND CONTROL:

Channel-gravel and boulders.
No artificial control.

DISCHARGE MEASUREMENTS:

Flows up to 300 second-feet measured by wading.
No facilities for measuring higher flow.

RECORDER:

Installed February 20, 1931 over a 21 inch diameter corrugated iron pipe stilling well. Station was out of service from March 2, 1938 to March 30, 1938 and from January 24, 1943 to July 1, 1943.
An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

None.

DIVERSIONS:

There are diversions for irrigation and power development.

RECORDS AVAILABLE:

February 20, 1931 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 490 second-feet, February 22.
Minimum no flow for several months.
1930-1944
Maximum 23,400 second-feet, estimated, March 2, 1938.
Minimum no flow for several months each year.

ACCURACY:

Good.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

STATION U10-R

SAN DIMAS CREEK at Mouth of Canyon

LOCATION:

Water-stage recorder and broad-crested weir control, lat. 34°08'45", long. 117°45'35", in SW¼NE¼ sec. 25, T. 1 N., R. 9 W., at mouth of San Dimas Canyon, 0.7 mile downstream from flood-control reservoir and 3 miles northeast of San Dimas. Altitude of gage, about 1,245 feet.

DRAINAGE AREA:

18.3 square miles.

RECORDS AVAILABLE:

April to September 1916 (discharge measurements only), December 1916 to September 1944.

AVERAGE DISCHARGE:

27 years (1917-44), 5.13 second-feet.

EXTREMES:

1943-1944
Maximum discharge during year, 749 second-feet Feb. 22, (gage height 3.39 feet); minimum daily discharge, 0.3 second-foot Dec. 15,16.

1916-1944
Maximum discharge, about 4,250 second-feet Mar. 2, 1938, from records of release at San Dimas Dam; no flow for several months during most years.

REMARKS:

Records good. Flow regulated by San Dimas Dam above station. San Dimas Water Co. diverts water just below gage for irrigation.

COOPERATION:

Records furnished by the United States Geological Survey, with the exception of 46 discharge measurements, furnished by the Los Angeles County Flood Control District in co-operation with the United States Geological Survey.

Remarks:

YEAR OR PERIOD MEAN 8.61 ACRE-FEET 6,250.

STATION F209-R

SAN GABRIEL RIVER-WEST FORK below San Gabriel Dam No. 2

LOCATION:

Water-stage recorder, lat. 34°14'45", long. 117°57'25", on the left (northeast) bank of the West Fork of the San Gabriel River about 7 miles above junction of the East and West Forks and 0.5 mile downstream from San Gabriel Dam No. 2. Elevation of gage, about 2,080 feet (from topographic map).

DRAINAGE AREA:

41.0 square miles.

CHANNEL AND CONTROL:

Channel-sand, gravel and boulders.
Control-concrete about 35 feet below the station.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cable car 6 feet below station.

RECORDER:

Installed December 8, 1933. Washed out in the March 2, 1938 storm. Reinstalled March 10, 1938. Removed May 30, 1938. Installed July 8, 1938 in a concrete house over a 4 ft. x 4 ft. concrete well in the same location as the old well.
An Au continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

40.4 square miles regulated by San Gabriel Dam No. 2.
0.6 square miles unregulated.

DIVERSIONS:

None.

RECORDS AVAILABLE:

May 26, 1932 to December 8, 1933 stream measurements only. Recorder records December 8, 1933 to February 21, 1938; March 10, 1938 to May 30, 1938; and July 8, 1938 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 1,210 second-feet, February 22.
Minimum 2.2 second-feet, December 28, 30.
1933-1944
Maximum 25,000 second-feet, estimated, March 2, 1938.
Minimum + at various times.

ACCURACY:

Good.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District, for measuring outflow from San Gabriel Dam No. 2.

Remarks:

YEAR OR PERIOD MEAN 51.9
ACRE-FEET 37,700.

STATION P3-R

SAN GABRIEL RIVER-WEST FORK above Forks

LOCATION:

Water-stage recorder, lat. 34°14'30", long. 117°51'45", on the right (south) bank, 0.2 mile above Rincon Ranger Station, 2 miles above East Fork and about 13.5 miles north of Azusa. Elevation of gage, about 1450 feet.

DRAINAGE AREA:

102 square miles.

CHANNEL AND CONTROL:

Channel-sand, gravel and boulders.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cable car 15 feet below station.

RECORDER:

Installed December 3, 1930. Removed March 2, 1938. Installed on April 4, 1938, in a temporary recorder house and well at the original location. Removed July 12, 1938, and installed at Station P3B-R. Removed on September 27, 1938, and reinstalled at original location in a concrete house over a 4 ft. x 4 ft. concrete well.
An Au continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow partially regulated by San Gabriel Dam No. 2.

DIVERSIONS:

None.

RECORDS AVAILABLE:

December 3, 1930, to September 30, 1944. For records prior to December 3, 1930, at the Los Angeles County Flood Control District office filed with Station P1-R, San Gabriel River-West Fork 0.5 mile above Forks; records from July 12, 1938, to September 27, 1938, are from Station P3B-R, San Gabriel River-West Fork 400 feet below North Fork.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 5,760 second-feet, February 22.
Minimum 19 second-feet, at various times.
1930-1944 (Stations P1-R, P3-R, P3B-R).
Maximum 34,000 second-feet, estimated, March 2, 1938.
Minimum 0.3 second-feet, October 17, 1931.

ACCURACY:

Good.

OPERATION:

Moved from a previous location by the District for the Pasadena Water Department. This Station was later taken over, reconstructed, and operated by the Los Angeles County Flood Control District in co-operation with the United States Geological Survey, Water Resources Branch.

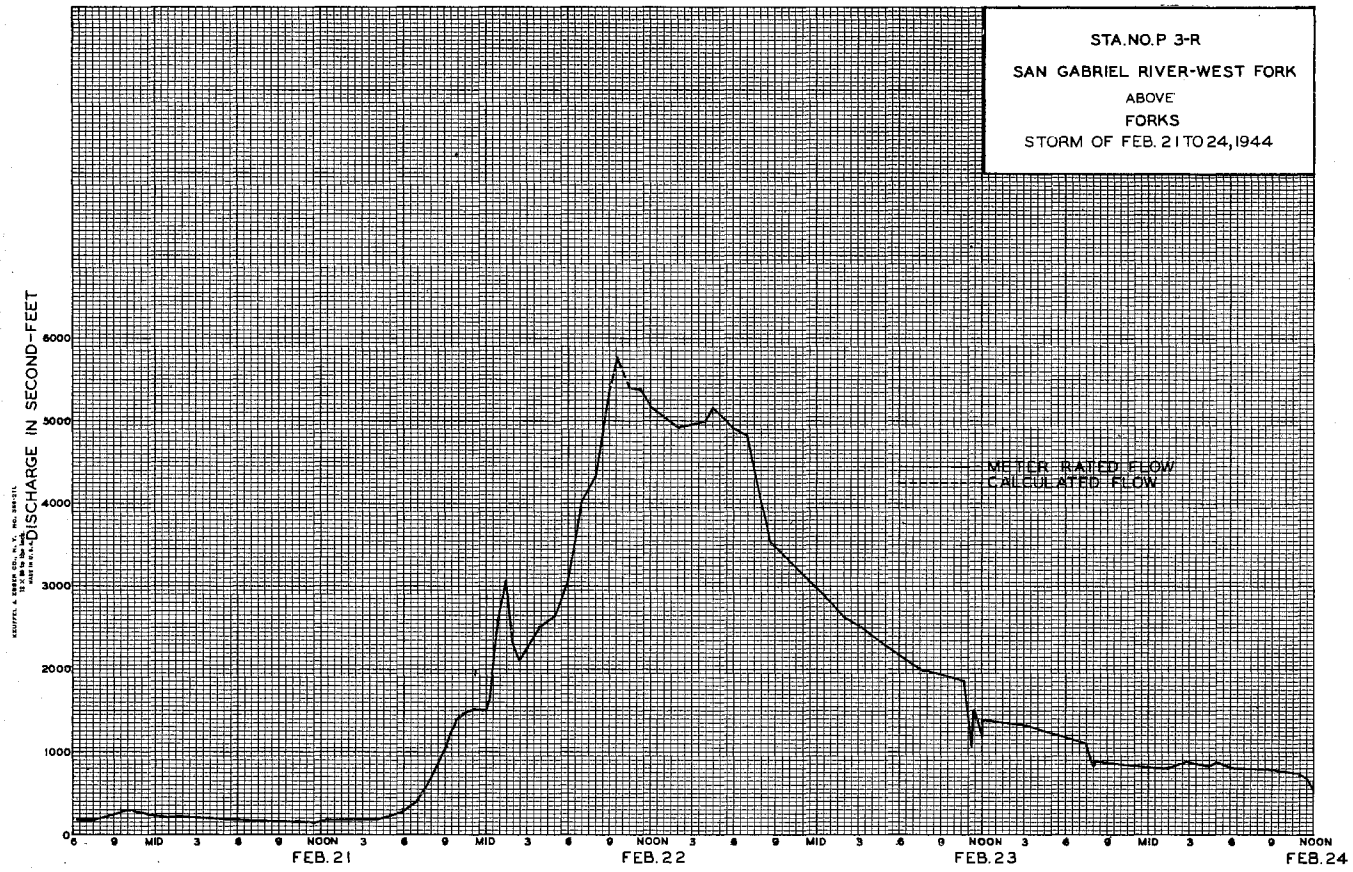
Remarks:

YEAR OR PERIOD — MEAN 144. — ACRE-FEET 104500.



STATION P4B-R

SAN GABRIEL RIVER-EAST FORK above Forks

LOCATION:

Water-stage recorder, lat. 34°14'12", long. 117°48'30", on the right (north) bank above the high water line of San Gabriel Dam No. 1, 2.5 miles above the West Fork, and 8 miles northeast of Glendora. Elevation of gage, about 1,500 feet, (from topographic map). Former station P4-R was about 1,500 feet downstream.

DRAINAGE AREA:

88.2 square miles.

CHANNEL AND CONTROL:

Channel-sand, gravel and boulders.
Channel forms control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cable car 23 feet above gage.

RECORDER:

Installed November 30, 1932, at Station P4-R. Moved to Station P4B-R December 10, 1938, and installed in a concrete house over a 4 ft. x 4 ft. concrete stilling well.
An Au continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

None.

DIVERSIONS:

Some water diverted for placer mining.

RECORDS AVAILABLE:

At Station P4-R and P4B-R. November 30, 1932 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 2,410 second-feet, February 22.
Minimum 19 second-feet, October 16.
1932-1944
Maximum 46,000 second-feet, March 2, 1938 (computed by Geological Survey).
Minimum 1.5 second-feet, October 1, 1934.

ACCURACY:

Fair.

OPERATION:

Moved from a previous location by the District for the Pasadena Water Department. The Station was later taken over, reconstructed and operated by the District in co-operation with the United States Geological Survey. Water Resources Branch.

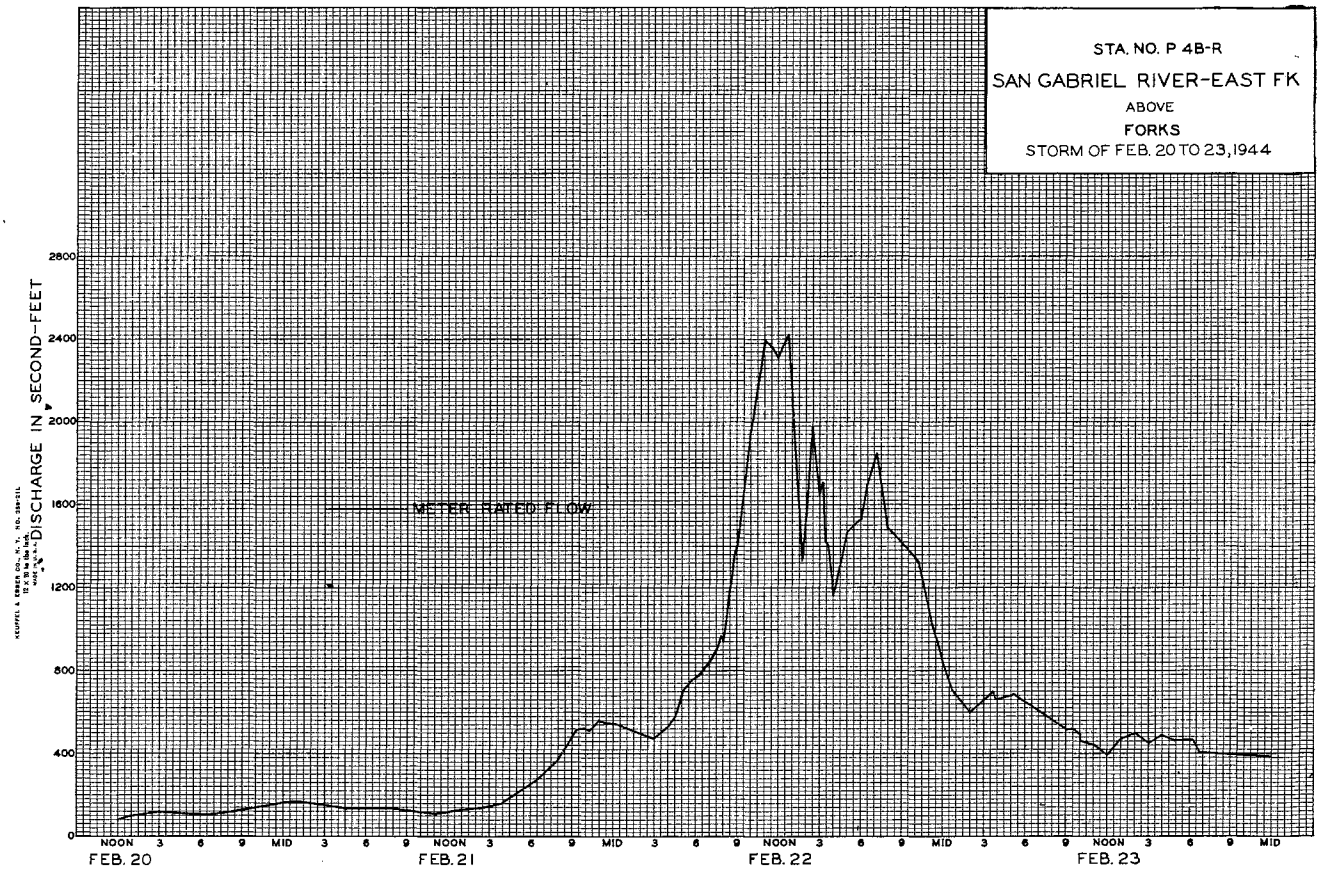
Remarks:

YEAR OR PERIOD — MEAN 113. — ACRE-FEET 81,900.



STATION F250-R

SAN GABRIEL-AZUSA CONDUIT at Weir below San Gabriel Dam No. 1

LOCATION:

Water-stage recorder, lat. 34°12'15", long. 117°51'18", on the left (east) side of the sandbox on Azusa Conduit, 12 feet above the 25 foot weir and approximately 100 feet below the 30 foot outlet tunnel at San Gabriel Dam No. 1; approximately 2500 feet below the Old Edison Intake (abandoned), and approximately 3900 feet above Station F220-R.

CHANNEL AND CONTROL:

Channel-concrete sandbox with sluice gates and a concrete by-pass channel. A secondary box with a Taintor gate and a 10 foot weir controls the flow into the conduit.
Control-25 foot sharp crested weir with two end contractions.
Station F250-R gives a record of the head on the 25 foot weir: Station F220-R gives a record of the flow down the Azusa conduit below the Taintor gate.

RECORDER:

Installed February 14, 1935 over a 24 inch corrugated iron pipe stilling well.
An Au continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

The flow of the San Gabriel River, available at San Gabriel Dam No. 1 is partially regulated by San Gabriel Dam No. 2, and the entire flow into the sandbox is regulated by valve discharge from San Gabriel Dam No. 1.

RECORDS AVAILABLE:

February 14, 1935 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 165 second-feet, January 4.
Minimum no flow various times.
1935-1944
Maximum 165 second-feet, January 4, 1944.
Minimum no flow at times each year.

ACCURACY:

Excellent.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

REMARKS:

Station F250-R is a record of discharges from San Gabriel Dam No. 1 through the sand box only and does not necessarily reflect discharge to the Azusa Conduit (see Station F220-R).

STATION F220-R

SAN GABRIEL - AZUSA CONDUIT at Garcia Canyon

LOCATION:

Water-stage recorder, lat. 34°11'30", long. 117°51'25", on the west side of opening in concrete conduit connecting tunnels 4-A and 4-B of the Azusa Conduit which diverts water from the San Gabriel River. The station is about 0.8 mile below San Gabriel Dam No. 1, and 2 miles above Morris Dam. Elevation of gage, about 1200 feet.

CHANNEL AND CONTROL:

Station located on short open section of concrete channel.
Channel walls straightened on December 19, 1936.
The flow over the 25 foot weir (Station F250-R) may be spilled before reaching Station F220-R. Flow which reaches Station F220-R may not pass over, but may be by-passed around the 25 foot weir at Station F250-R.

DISCHARGE MEASUREMENTS:

From top of tunnel portal.

RECORDER:

Installed February 26, 1933 over a 21 inch diameter corrugated iron pipe stilling well.
An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

RECORDS AVAILABLE:

February 26, 1933 to September 30, 1944.
(See "Recorder") (See "Remarks")

EXTREMES OF DISCHARGE:

1943-1944
Maximum 94 second-feet, July 14,15.
Minimum + at various times.
1933-1944
Maximum 100 second-feet, (approximate capacity), April 11, 1935.
Minimum + at various times.

ACCURACY:

Excellent.

OPERATION:

Located, constructed and operated by the Los Angeles County Flood Control District.

REMARKS:

The Azusa Conduit was inoperative from March 2, 1938 to March 27, 1940. Intake to the Azusa Conduit was at Morris Dam from March 1, 1941 to November 19, 1941. Published herewith are the records of diversion from Morris Reservoir. These records together with Station F220-R complete the records of the annual diversion through the conduit.

Remarks: + = 0.05 c.f.s. or less.

YEAR OR PERIOD MEAN 56.9
ACRE-FEET 41310.

STATION U8-R

SAN GABRIEL RIVER below Morris Dam

LOCATION:

Water-stage recorder lat. 34°10'10", long. 117°53'16", in SW¼ sec. 13, T. 1. N., R. 10 W., 1 mile downstream from Morris Dam and 3 miles northeast of Azusa.
Altitude of gage, about 870 feet.

DRAINAGE AREA:

211 square miles.

RECORDS AVAILABLE:

1894 to September 1944.

AVERAGE DISCHARGE:

1896-1944
48 years 120 second-feet. Average combined discharge of river and diversions, adjusted for storage and evaporation in Morris Reservoir and San Gabriel River flood-control reservoirs 1 and 2.
1895-1944
49 years 169 second-feet.

EXTREMES:

Maximum discharge during year, 5,170 second-feet, Feb. 22, (gage height, 5.70 feet).
Minimum daily, 3.6 second-feet November 23-28.
1894-1944
Maximum discharge, 65,700 second-feet March 2, 1938, by computation of flow over spillway at Morris Dam; no flow for several months in each year 1894-1936, 1940, and 1941.

REMARKS:

Records good above 700 second-feet and fair below. Flow regulated by San Gabriel flood control reservoirs 1 and 2, and by Morris Reservoir of Metropolitan Water District of Southern California. Azusa Canal (formerly power canal of Southern California Edison Co.,) diverts above high-water line of Morris Reservoir at point about 3 miles above station.

COOPERATION:

Records furnished by the United States Geological Survey, with the exception of 35 measurements furnished by the Los Angeles County Flood Control District in cooperation with the United States Geological Survey.

NORMAL UNREGULATED FLOW:

Combined runoff of river and Azusa Canal, adjusted for storage and evaporation in Morris Reservoir and releases from San Gabriel River flood-control reservoirs 1 and 2 using records furnished by the Los Angeles County Flood Control District. These figures of runoff are equivalent to combined records of San Gabriel River and Southern California Edison Company's canal as published from 1894 to 1933.

STATION S100A-R

SAN GABRIEL RIVER - AZUSA DUARTE TUNNEL DIVERSION
at Mouth of Canyon

LOCATION:

Water-stage recorder, lat. 34°09'33", long., 117°54'27", at weir box at the downstream portal of the Azusa Duarte Tunnel about 250 feet south of the canyon road at the mouth of San Gabriel Canyon. Elevation of gage, about 750 feet.

GENERAL:

This station measures all flow diverted by the San Gabriel River Water Committee at the mouth of San Gabriel Canyon.

CHANNEL AND CONTROL:

Concrete weir box with two broad crested weirs. These weirs divide the flow between the east side spreading grounds and the Duarte spreading grounds. Either side can be diverted for irrigation.

REGULATION:

River flow at the Canyon mouth is partially regulated by Morris Dam and San Gabriel Dams Nos. 1 and 2. The division of the diverted flow can be regulated at the weirs by inserting constrictions.

RECORDS AVAILABLE:

The tunnel was constructed in 1887. Records of diversion since 1918 are available at the office of the San Gabriel River Water Committee, 124 West Foothill Boulevard, Azusa.

ACCURACY:

Excellent.

OPERATION:

Located, constructed, and operated by the San Gabriel River Water Committee.

REMARKS:

These records were furnished by Mr. Morgan Peirce, Water Master of the San Gabriel River Water Committee. Published herewith are the records from October 1, 1943 to September 30, 1944. Records prior to October, 1939 were published with the records of Station F100-R which was abandoned November, 1940.

YEAR OR PERIOD MEAN 13.9
ACRE-FEET 10,100

STATION F190-R

SAN GABRIEL RIVER at Foothill Boulevard

LOCATION:

Water-stage recorder, lat. 34°08'13", long. 117°56'32", on the downstream side of Foothill Boulevard bridge 2 miles west of Azusa. Elevation of zero gage height, 558.81 feet.

DRAINAGE AREA:

230 square miles.

CHANNEL AND CONTROL:

West side of channel is a concrete wall.
Bottom is composed of sand, gravel and boulders.
East side of channel is a rock and wire levee.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cable car 340 feet below the station.

RECORDER:

Installed April 25, 1932. Removed on April 20, 1938, and installed in a 30 inch diameter corrugated iron pipe serving both as a house and as a well.
An Au continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow partially regulated by San Gabriel Dams No. 1 and No. 2, and Morris Dam.

DIVERSIONS:

There are diversions for irrigation, power development and spreading.

RECORDS AVAILABLE:

Stream measurements starting February 22, 1932.
Recorder records April 25, 1932 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 4,840 second-feet, February 22.
Minimum no flow at various times.
1932-1944
Maximum 62,000 second-feet, estimated, March 2, 1938.
Minimum no flow at times each year.

ACCURACY:

Good.

OPERATION:

Located, constructed and operated by the Los Angeles County Flood Control District.

STATION E281-R

SAN GABRIEL RIVER below Santa Fe Dam

LOCATION:

Lat. 34°06'40", long. 117°58'20", on left bank of stilling basin outlet of Santa Fe Dam, 0.3 mile north of Arrow Highway, and 1.5 miles north of Baldwin Park. Elevation of gage about 400 feet.

DRAINAGE AREA:

231 square miles. Indeterminate when reservoir water surface exceeds spillway elevation.

CHANNEL AND CONTROL:

Santa Fe Dam outflow enters a stilling basin. The lip of the stilling basin acts as a control and is point of zero flow for all flows going down the San Gabriel River. There are five gated openings on the right edge of stilling basin providing an opening to diversion canal which are operated by the Los Angeles County Flood Control District.

DISCHARGE MEASUREMENTS:

Low flow measurements may be made on lip of basin below gage height 2.5 feet. High flow measurements may be made from cable 1,000 feet below gage.

RECORDER:

Installed February 9, 1943, over 6 by 5 feet concrete stilling well. A Stevens A-35 recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow partially regulated by San Gabriel Dams No. 1 and No. 2 and Morris Dam. At present, there are no gates in Santa Fe Dam.

DIVERSION:

There are diversions for irrigation, power development, and spreading. Discharges over the spillway of dam flow to the Rio Hondo , and are not recorded at this station.

RECORDS AVAILABLE:

Recorder records February 9, 1943, to September 30, 1944. For measurements prior to February 9, 1943, see Los Angeles County Flood Control District staff gage station F247-S at Arrow Highway.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 3,480 second-feet, February 22.
Minimum no flow most of year.
1942-1944
Maximum 6,700 second-feet January 24, 1943.
Minimum no flow most of each year.

ACCURACY:

Good.

COOPERATION:

Records furnished by Corps of Engineers, U.S. Army, and the United States Geological Survey, Water Resources Branch with the exception of 26 discharge measurements furnished by the Los Angeles County Flood Control District in co-operation with the Corps of Engineers, U. S. Army, and the United States Geological Survey.

REMARKS:

Records include 15,180 acre-feet diverted below Santa Fe Dam to the Rio Hondo during May, June, and July as published in this report with Station F280-R, Rio Hondo Diversion below Santa Fe Dam.

Remarks:

YEAR OR PERIOD — MEAN 133. — ACRE-FEET 96,890.

STATION F261B-R

SAN GABRIEL RIVER at Valley Boulevard

LOCATION:

Water-stage recorder, lat. 34°03'25", long. 118°00'25", on the right (west) abutment on the downstream side of Valley Boulevard bridge about 1.8 miles southeast of El Monte.

CHANNEL AND CONTROL:

Shifting sand and gravel. Banks protected by piling and wire mesh.
Channel forms control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from Highway Bridge.

RECORDER:

Installed March 11, 1937 over a 21 inch diameter corrugated iron pipe well.
A Horizontal Rational recorder was in service from October 1, 1942 to September 30, 1944.

REGULATION:

Flow partially regulated by San Gabriel Dams No. 1 and No. 2, Morris Dam, Big Dalton Dam, San Dimas Dam, Puddingstone Diversion Dam, Puddingstone Dam, and Live Oak Dam. There are no gates in Santa Fe Dam.

DIVERSIONS:

There are also several diversions for irrigation, spreading, and power development.

RECORDS AVAILABLE:

Station F261-R
March 11, 1937 to September 30, 1941.
Station F261B-R
October 1, 1941 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 5,950 second-feet, February 22.
Minimum no flow part of year.
1941-1944
Maximum 9,400, estimated, January 23, 1943.
Minimum no flow each year.

ACCURACY:

Fair. Mean daily flows compared with Santa Fe Dam outflows, and discharges of the San Gabriel River at Beverly Boulevard. Rating curve extropolated from measurements to 5,290 second-feet.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District in co-operation with the San Gabriel Valley Protective Association.

REMARKS:

Station established primarily to determine percolation losses in the main San Gabriel Basin. Walnut Creek discharge is not included in this record except during the peak of the February 22 storm.

STATION F263-R

SAN GABRIEL RIVER at Beverly Boulevard

LOCATION:

Water-stage recorder, lat. 34°00'20", long. 118°04'05", on the downstream side of the Beverly Boulevard bridge, 0.5 mile east of Pico. Elevation of gage, about 180 feet.

CHANNEL AND CONTROL:

Channel-sand and silt.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cable car 145 feet above station.

RECORDER:

Installed on February 4, 1937 over a 21 inch diameter corrugated iron pipe stilling well.
An Au continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow partially regulated by San Gabriel Dams No. 1 and No. 2, Morris Dam, Big Dalton Dam, Puddingstone Diversion Dam, Puddingstone Dam, Live Oak Dam, and Thompson Creek Dam. There are no gates in Santa Fe Dam.

DIVERSIONS:

There are several diversions for irrigation, power development, and spreading.

RECORDS AVAILABLE:

February 4, 1937 to September 30, 1944. (For records prior to February 4, 1937 see Station F63-R, San Gabriel River at Whittier Boulevard in previous reports. For records prior to 1929 see State Division of Water Rights Bulletins V and VI.)

EXTREMES OF DISCHARGE:

1943-1944
Maximum 14,000 second-feet, February 22.
Minimum no flow several days in October.
1936-1944
Maximum 22,700 second-feet, estimated, March 2, 1938.
Minimum no flow at various times. (For earlier years see Station F63-R.)

ACCURACY:

Fair.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District in co-operation with the United States Geological Survey, Water Resources Branch.

STATION F262-R

SAN GABRIEL RIVER at Florence Avenue

LOCATION:

Water-stage recorder, lat. 33°56'20", long. 118°06'00", on the downstream side of the Florence Avenue (formerly Easy Street) bridge about 2 miles east of Downey. Elevation of zero gage height, 111.00 feet.

CHANNEL AND CONTROL:

Shifting sand bottom between earth levees. No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from upstream side of Florence Avenue bridge.

RECORDER:

Installed on February 27, 1937 over 18 inch diameter, corrugated iron pipe stilling well. The recorder was removed on March 2, 1938 and was reinstalled on April 4, 1938. An H.C.F. recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow partially regulated by San Gabriel Dams No. 1 and No. 2, Morris Dam, Big Dalton, San Dimas Dam, Puddingstone Diversion Dam, Puddingstone Dam, Live Oak Dam, and Thompson Creek Dam. There are no gates in Santa Fe Dam.

DIVERSIONS:

There are several diversions for irrigation, power development and spreading. Variable quantities of irrigation waste returns are recorded at the station.

RECORDS AVAILABLE:

February 27, 1937 to September 30, 1944. Recorder record lost from August 19, 1938 to November 23, 1938 due to theft of recorder. For earlier records see Station F237-R, San Gabriel River at Telegraph Road.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 15,960 second-feet, February 22.
Minimum no flow at various times.
1937-1944
Maximum not determined.
Maximum discharge of record, 15,960 second-feet, February 22, 1944.
Minimum no flow at various times.

ACCURACY:

Fair. Occasionally estimated by comparison due to extreme and undetermined control shifts or loss of communication.

OPERATION:

Located and constructed by the Los Angeles County Flood Control District; and operated in co-operation with the San Gabriel Valley Protective Association.

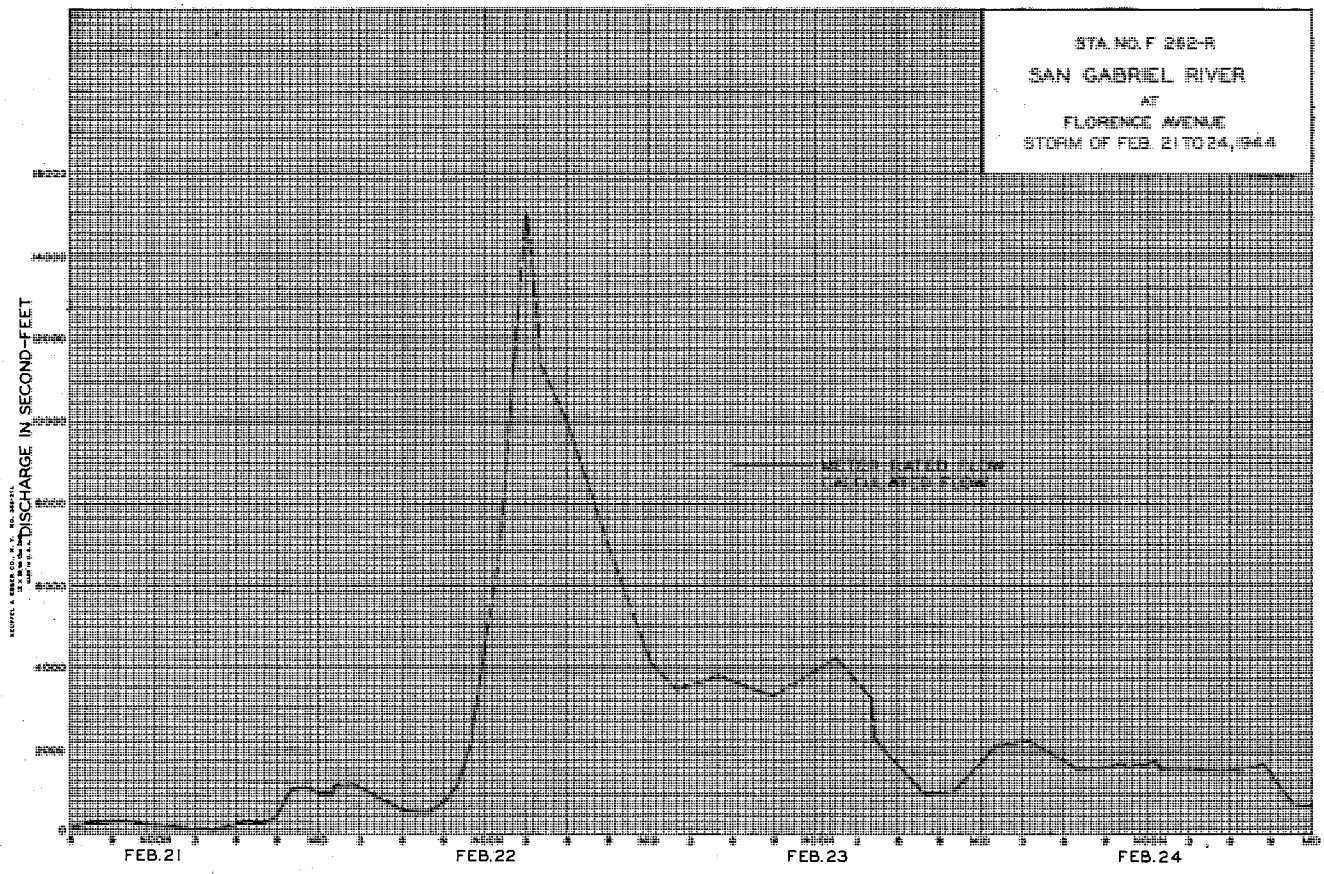
Remarks:

YEAR OR PERIOD — MEAN 110. — ACRE-FEET 79930.



STATION F42-R

SAN GABRIEL RIVER at Spring Street, Long Beach

LOCATION:

Water-stage recorder, lat. 33°48'38", long. 118°05'25", on downstream side of Spring Street bridge about 4 miles east of Signal Hill, near Long Beach. This station is near the location of the station operated in 1924 by the State Division of Water Rights. Elevation of zero gage height, 16.67 feet.

CHANNEL AND CONTROL:

Channel-sand and silt over adobe with earth levees protected by wire mesh.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cat-walk on upstream side of Spring Street bridge.

RECORDER:

Installed February 6, 1928 over a 21 inch diameter corrugated iron pipe stilling well.
An Au continuous recorder in service October 1, 1943 to September 30, 1944.

REGULATION:

Flow partially regulated by San Gabriel Dams No. 1 and No. 2, Morris Dam, Big Dalton Dam, San Dimas Dam, Puddingstone Diversion Dam, Puddingstone Dam, Live Oak Dam, and Thompson Creek Dam. There are no gates in Santa Fe Dam.

DIVERSION:

There are several diversions for irrigation, power development and spreading.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 15,000 second-feet, February 22.
Minimum no flow most of year.
1927-1944
Maximum 27,000 second-feet, estimated, March 2, 1938.
Minimum no flow most of each year.

RECORDS AVAILABLE:

February 6, 1928 to September 30, 1944. (For periods prior to February, 1928 see State Division of Water Rights Bulletins.)

ACCURACY:

Fair. Clock stopped or communication was obstructed and mean daily flows were estimated for several days.

OPERATION:

Operated by the Los Angeles County Flood Control District. Located by the State Division of Water Rights.

STATION F48-R

SAN JOSE CREEK at Workman Mill Road

LOCATION:

Water-stage recorder, lat. 34°01'24", long. 118°02'05", on the downstream side of Workman Mill Road bridge, about 3 miles north of Whittier. This Station is near the location of the station operated from 1923 to 1929 by the State Division of Water Rights. Elevation of gage, about 230 feet (from topographic map).

DRAINAGE AREA:

85.0 square miles.

CHANNEL AND CONTROL:

Channel-clay, sand and gravel.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cable car 150 feet below station.

RECORDER:

Installed January 2, 1929 over an 18 inch diameter corrugated iron pipe stilling well.
An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow partially regulated by Thompson Creek Dam.

DIVERSIONS:

Small diversion for spreading. (See Station F276-R).

RECORDS AVAILABLE:

January 2, 1929 to September 30, 1944. (For records prior to January 2, 1929 see State Division of Water Rights Bulletins.)

EXTREMES OF DISCHARGE:

1943-1944
Maximum 6,000 second-feet, February 22.
Minimum 1.2 second-feet, August 7.
1928-1944
Maximum 13,100 second-feet, January 1. 1934.
Minimum no flow at various times.

ACCURACY:

Good for low flows.
Fair for high flows due to undetermined shift.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District in co-operation with the United States Geological Survey, Water Resources Branch.

STATION U4-R

SANTA ANITA CREEK above Santa Anita Dam

LOCATION:

Water-stage recorder, lat. 34°11'30", long. 118°01'00", in SW¼NE¼ sec. 10, T 1 N., R. 11 W., at head of Hermits Falls, 4 miles northeast of Sierra Madre. Altitude of gage, about 1,460 feet (from topographic map).

DRAINAGE AREA:

10.5 square miles.

RECORDS AVAILABLE:

July 1916 to September 1944.

AVERAGE DISCHARGE:

28 years, 6.60 second-feet.

EXTREMES:

1943-1944
Maximum discharge during year, 740 second-feet, Feb. 22 (gage height, 6.00 feet); minimum daily 1.3 second-feet, July 19,20.
1916-1944
Maximum discharge, about 5,200 second-feet, Mar. 2, 1938, based on inflow to Big Santa Anita Reservoir; practically no flow Aug. 18 to Sept. 14, 1929.

REMARKS:

Records good. No diversions above station.

STATION F260B-R

SANTA ANITA WASH at Foothill Boulevard

LOCATION:

Water-stage recorder, lat. 34°09'03", long. 118°01'37", on the downstream side on left (east) end of Foothill Boulevard bridge, about one mile north of Arcadia, and approximately 0.2 mile below the confluence of Santa Anita Creek and Little Santa Anita Creek.
The former Station F260-R was about 0.4 mile upstream, from Foothill Boulevard. Elevation of zero gage height, 519.60 feet.

DRAINAGE AREA:

17.2 square miles.

CHANNEL AND CONTROL:

Channel-sand, gravel, and boulders; banks protected with wire and rock.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from upstream side of Foothill Boulevard bridge.

RECORDER:

Installed April 22, 1938 over an 18 inch diameter corrugated iron pipe stilling well.
An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow partially regulated by Big Santa Anita Dam and Sierra Madre Dam.

DIVERSIONS:

About 2 second-feet diverted for irrigation at mouth of Santa Anita Canyon. The City of Sierra Madre diverts water from Little Santa Anita Canyon.
Flow occasionally diverted for spreading from Little Santa Anita Creek at Sierra Madre Spreading Grounds.

RECORDS AVAILABLE:

April 22, 1938 to September 30, 1944.
For records prior to April, 1938, see Stations F21-R, F119-R, and F260-R.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 747 second-feet, February 22.
Minimum no flow at various times.
1936-1944 (Stations F260-R and F260B-R)
Maximum not determined.
Maximum outflow from Santa Anita Dam, 5,070 second-feet, March 2, 1938.
Minimum no flow at various times.

ACCURACY:

Fair.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

Remarks: += 0.05 c.f.s. or less.
Flow at Station 267-R.

YEAR OR PERIOD — MEAN 8.46 — ACRE-FEET 6140.

STATION F92B-R

SANTA CLARA RIVER at Highway 99

LOCATION:

Water-stage recorder, lat. 34°25'35", long. 118°35'08", on the downstream side of the U.S. Highway 99 bridge about 3 miles west of Saugus. Elevation of gage, about 1,040 feet (from topographic map).
The former Station F92-R was about 1000 feet downstream.

DRAINAGE AREA:

355 square miles.

CHANNEL AND CONTROL:

Channel-sand and gravel.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from upstream side of U.S. Highway 99 bridge.

RECORDER:

Installed January 18, 1930 at Station F92-R.
Removed September 21, 1938.
Installed at Station F92B-R September 30, 1938 over a 24 inch corrugated iron pipe stilling well.
An Au continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Partially regulated by Bouquet Canyon and Dry Canyon Reservoirs. Flows occasionally originate from Los Angeles City Aqueduct blowoff at Santa Clara River Crossing.

DIVERSIONS:

Some flow diverted for irrigation near Lang.

RECORDS AVAILABLE:

At station F92-R
Recorder records available from January 18, 1930 to March 28, 1938. Some weekly stream measurements were taken prior to January 18, 1930 and subsequent to March 28, 1938.
At station F92B-R
Recorder records available from October 1, 1938 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 22,200 second-feet, February 22.
Minimum 1.0 second-foot, October 5,6.
1930-1944 (Stations F92-R and F92B-R)
Maximum 24,000 second-feet, estimated, March 2, 1938.
Minimum no flow at various times.

ACCURACY:

Fair due to occasional loss of communication and extreme and undetermined control shift.

OPERATION:

Located and constructed by the Los Angeles County Flood Control District, in co-operation with the United States Geological Survey, Water Resources Branch.

STATION F278-R

SAWPIT CREEK below Sawpit Dam

LOCATION:

Water-stage recorder, lat. 34°10'32", long. 117°59'16", on the right (north) side of the stream, about 500 feet downstream from Sawpit Dam, and about 2.5 miles north of Monrovia. Elevation of gage, about 1,225 feet.

DRAINAGE AREA:

3.3 square miles.

CHANNEL AND CONTROL:

Channel-sand and gravel.
A broad-crested weir forms the control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from foot bridge at the station.

RECORDER:

Installed February 6, 1942. Removed August 31, and installed in the new location on September 4, 1943. An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow regulated by Sawpit Dam. Station F278-R measures outlet discharge, spillway discharge enters Sawpit Creek below the station.

DIVERSIONS:

City of Monrovia diverts flow above Sawpit Dam.

RECORDS AVAILABLE:

February 6, 1942 to September 30, 1944. Outflow records from Sawpit Dam are available commencing October 1, 1931.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 67 second-feet, February 22.
Minimum no flow most of year.
1942-1944
Maximum discharge not determined.
Maximum outlet discharge from Sawpit Dam, 284 second-feet, January 23, 1943.
Minimum no flow several days each year.

ACCURACY:

Fair.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

STATION U5-R

SAWPIT CREEK below Monrovia Canyon

LOCATION:

Water-stage recorder and broad-crested weir control, lat. 34°10'25", long. 117°59'20", in NE¼SW¼ sec. 13, T. 1 N., R. 11 W., 0.1 mile downstream from Monrovia Creek. Altitude of gage, about 1,100 feet (from topographic sheet).

DRAINAGE AREA:

5.3 square miles.

RECORDS AVAILABLE:

November 1916 to September 1944.

AVERAGE DISCHARGE:

27 years (1917-1944), 1.42 second-feet; including diversion by Monrovia pipe line, 27 years, 2.88 second-feet.

EXTREMES:

1943-1944
Maximum discharge during year, 124 second-feet, February 22 (gage height 2.22 feet); no flow during several periods.

1916-1944
Maximum discharge, about 2,000 second-feet Apr. 7, 1926, estimated from flow of Rogers Creek; no flow during parts of most years.

REMARKS:

Records fair. Regulation at Sawpit Dam above station and diversions by city of Monrovia.

COOPERATION:

Records furnished by the United States Geological Survey, with the exception of 25 measurements furnished by the Los Angeles County Flood Control District in cooperation with the United States Geological Survey.

Remarks:

YEAR OR PERIOD MEAN 1.44
ACRE-FEET 1,050.

STATION F185-R

SEPULVEDA CREEK at Charnock Road

LOCATION:

Water-stage recorder, lat. 34°00'48", long. 118°25'29", on the left (east) wing wall of the downstream side of the Charnock Road bridge, about 1200 feet west of Sawtelle Boulevard and approximately 2 miles northwest of Culver City. Elevation of zero gage height, 79.23 feet.

DRAINAGE AREA:

25.7 square miles.

CHANNEL AND CONTROL:

Channel-sand and adobe.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from footbridge 100 feet below the station.

RECORDER:

Installed September 15, 1932; removed March 3, 1937 due to bridge construction; reinstalled August 11, 1937; removed March 3, 1938 due to the stilling well being washed out; reinstalled July 7, 1938, over 20 inch corrugated iron pipe stilling well. An H.C.F. recorder was in operation from October 1, 1943 to September 30, 1944.

REGULATION AND/OR DIVERSIONS:

Stone Canyon Reservoir.

RECORDS AVAILABLE:

Discharge measurements only, January 1, 1932 to September 14, 1932.
Recorder records September 15, 1932 to March 3, 1937, August 11, 1937 to March 2, 1938, and July 7, 1938 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 1,940 second-feet, February 22.
Minimum no flow at various times.
1932-1943
Maximum 3,100 second-feet, estimated March 2, 1938.
Minimum no flow at times each year.

ACCURACY:

Fair.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

STATION F43-R

SYCAMORE UPPER STORM DRAIN above Solway Street

LOCATION:

Water-stage recorder, lat. 34°09'24", long. 118°13'17", on the right (north) side of concrete drain, approximately 80 feet above Solway Street and about 3 miles northeast of Glendale. Elevation of gage, about 700 feet.

DRAINAGE AREA:

2.7 square miles.

CHANNEL AND CONTROL:

Channel-rectangular concrete, 8.0 feet wide and 8.0 feet deep. Invert is 0.1 foot below bottom of vertical side walls.
Channel forms control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from footbridge about 80 feet below station.

RECORDER:

Installed January 30, 1928 in a 3.0 foot by 4.0 foot concrete house and stilling well combined.
Recorder reinstalled October 1, 1935.
Stevens type L recorder was in service from October 1, 1943 to September 30, 1944.

REGULATIONS:

None.

DIVERSIONS:

None.

RECORDS AVAILABLE:

From January 30, 1928 to April 6, 1932 and from October 1, 1935 to September 30, 1940. Not published from October 1, 1936 to September 30, 1938, but records are available at office of the Los Angeles County Flood Control District's Hydraulic Division. Records published from October 1, 1938 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 172 second-feet, February 22.
Minimum no flow at various times.
1928-1944
Maximum not determined.
Maximum discharge of record, 340 second-feet, February 22, 1944.
Minimum no flow at various times.

ACCURACY:

Fair.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

STATION F44-R

SYCAMORE LOWER STORM DRAIN at Adams Square

LOCATION:

Water-stage recorder, lat. 34°08'02", long. 118°14'30", in man-hole in yard of Union Oil Company Service Station at southwest corner of Adams Street and Chevy Chase Drive, on the left (south) side of the drain, about 30 feet west of west curb of Adams Street about one mile southeast of Glendale. Elevation of gage, about 495 feet.

DRAINAGE AREA:

6.2 square miles.

CHANNEL AND CONTROL:

Channel-closed rectangular concrete drain, 9.0 feet wide and 10.0 feet deep. Invert is 0.1 foot below bottom of vertical side walls.
Channel forms control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from footbridge in open channel below station.

RECORDER:

Installed December 15, 1928, underground in a 3.0 foot by 4.0 foot concrete house and stilling well combined. An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

None.

DIVERSIONS:

None.

RECORDS AVAILABLE:

December 15, 1927 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 782 second-feet, February 22.
Minimum no flow at various times.
1927-1944
Maximum 2,800 second-feet, estimated, March 2, 1938.
Minimum no flow at various times.

ACCURACY:

Fair.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

STATION F276-R

THOMPSON CREEK SPREADING GROUNDS INTAKE
at Thompson Creek Dam

LOCATION:

Water-stage recorder, lat. 34°08'22", long. 117°42'37", on the left (east) side and at the downstream side of the 3 foot x 3 foot diversion outlet through Thompson Creek Dam. Elevation of gage, about 1,625 feet.

DRAINAGE AREA:

3.7 square miles.

CHANNEL AND CONTROL:

Channel-3 foot x 3 foot concrete, covered outlet with a transition into a 5 foot diameter semi-circular flume.
Control-transition into semi-circular flume.

DISCHARGE MEASUREMENTS:

All flows measured by wading.

RECORDER:

Installed January 14, 1941 over a 24 inch diameter corrugated iron pipe. A Horizontal Rational recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION AND/OR DIVERSIONS:

Inflow to Thompson Creek Dam from Cobal and Palmer Canyons can be directed thru a 3 foot x 3 foot outlet tunnel to Thompson Creek Spreading Grounds. Flow thru the tunnel can be controlled by two slide gates so that any flow in excess of the capacity of gate opening is passed over a spillway back to the reservoir.

RECORDS AVAILABLE:

January 14, 1941 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 3.8 second-feet, February 26.
Minimum no flow most of year.
1940-1944
Maximum 21. second-feet, February 24, 1943.
Minimum no flow most of each year.

ACCURACY:

Good.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

3.7 square miles.

CHANNEL AND CONTROL:

All flows measured by wading.

RECORDER:

Installed December 21, 1943 over an 18 inch corrugated iron pipe stilling well. A Horizontal Rational recorder was in service from December 21, 1943 to September 30, 1944.

REGULATION AND/OR DIVERSION:

Inflow to Thompson Creek Dam from Cobal and Palmer Canyons can be directed thru a 3 foot by 3 foot outlet tunnel to Thompson Creek Spreading Grounds. Flow thru the diversion tunnel can be controlled by two slide gates so that any flow in excess of the capacity of gate openings is passed over a spillway back to the reservoir. Flow thru the 24 inch outlet valve passes the station. Discharges over the spillway of the dam are not recorded at this station.

RECORDS AVAILABLE:

Recorder records December 21, 1943 to September 30, 1944. For measurements prior to December 21, 1943 see Station F32-S. From March 1928 see records based on dam outflow.

EXTREMES OF DISCHARGE:

1943-1944
No flow.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District, for measuring outflow from Thompson Creek Dam.

STATION F54-R

TOPANGA CREEK above Mouth of Canyon

LOCATION:

Water-stage recorder, lat. 34°03'52", long. 118°35'12", on the right (west) downstream abutment of the concrete bridge 2 miles north of Topanga Beach and about 6 miles northwest of Santa Monica. Elevation of gage, about 260 feet (from topographic map).

DRAINAGE AREA:

18.0 square miles.

CHANNEL AND CONTROL:

Channel-rock and gravel.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cable car above station.

RECORDER:

Installed January 1, 1930 at Station F54-R. Removed June 4, 1940. Installed June 5, 1940 at Station F54B-R. Removed December 9, 1941. Reinstalled December 9, 1941 at the approximate former location in a concrete house and well constructed in the abutment of the concrete bridge.
An H.C.F. recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

None.

DIVERSIONS:

None.

RECORDS AVAILABLE:

January 1, 1930 to September 30, 1944.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 5,070 second-feet, February 22.
Minimum 0.1 second-feet several days.
1930-1944
Maximum 9,300 second-feet, estimated, March 2, 1938.
Minimum no flow at various times.

ACCURACY:

Fair.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District in co-operation with the United States Geological Survey, Water Resources Branch.

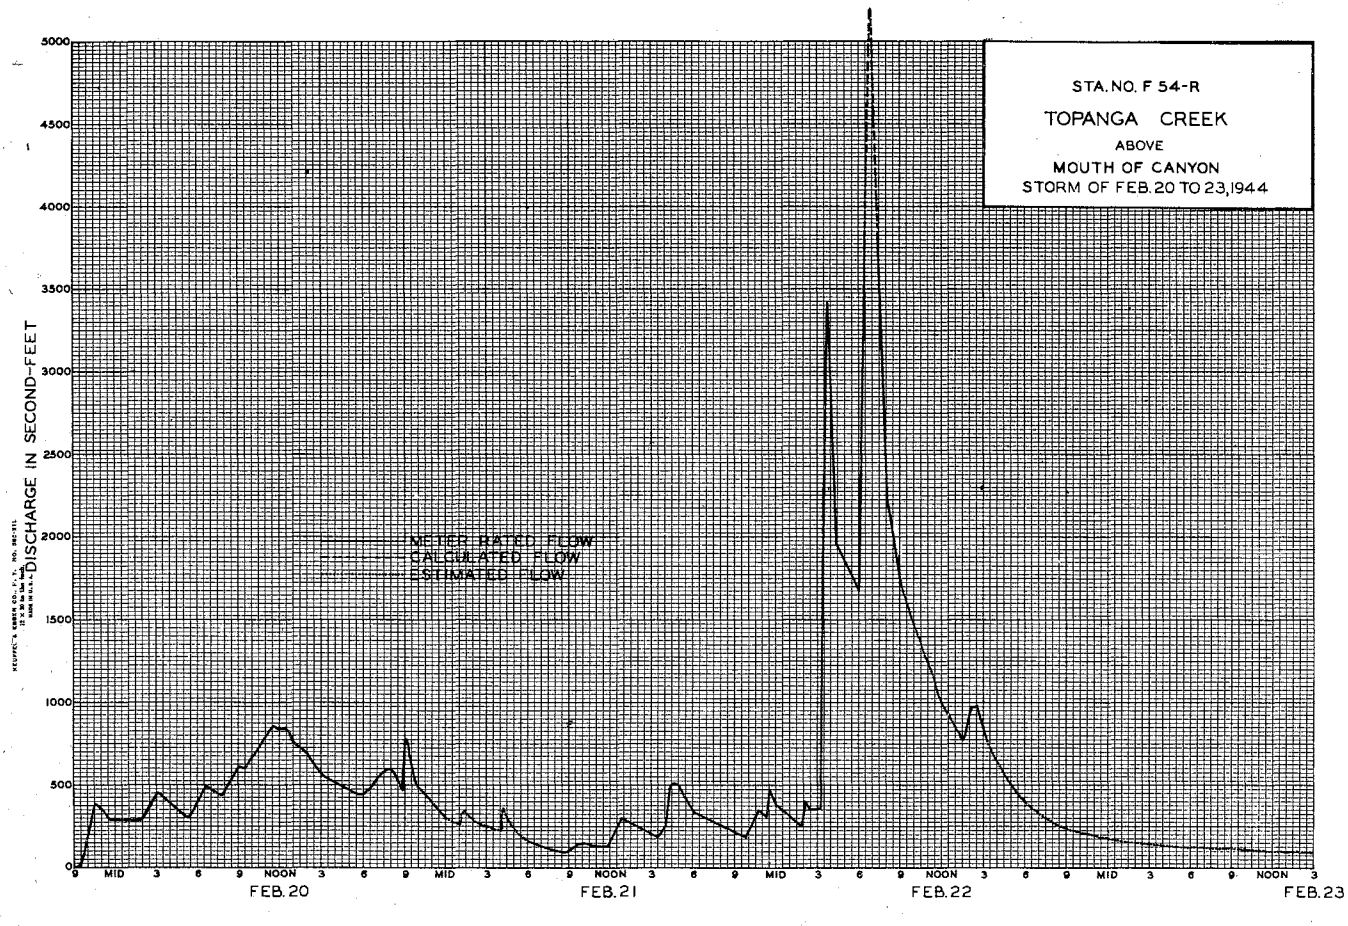
YEAR OR PERIOD — MEAN 9.60 — ACRE-FEET 6970.



STATION F252-R

VERDUGO CHANNEL at Estelle Avenue

LOCATION:

Water-stage recorder, lat. 34°09'23", long. 118°16'23", on the right (north) side of channel at Estelle Avenue, 800 feet east of San Fernando Road, and about 2 miles northwest of Glendale. Elevation of zero gage height, 464.78 feet.

DRAINAGE AREA:

22.4 square miles.

CHANNEL AND CONTROL:

Channel-rectangular concrete, 87 feet wide by 11 feet deep to bottom of invert. Invert is 1.0 foot below bottom of vertical side walls.
Channel forms control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from cable car 40 feet above station.

RECORDER:

Installed December 2, 1935 over a 20 inch x 30 inch concrete well. An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow partially regulated by Verdugo and other Debris Basins.

DIVERSIONS:

Several diversions for domestic water supply and irrigation.

RECORDS AVAILABLE:

December 2, 1935 to September 30, 1944. For earlier records see Stations F9-R, Verdugo at Glen Oaks Boulevard, and F244-R, Verdugo at Don Carlos Street.

EXTREMES OF DISCHARGE:

1943-1944
Maximum 3,160 second-feet, February 22.
Minimum 0.1 second-feet, several days during year.
1935-1944
Maximum 4,400 second-feet, estimated, March 2, 1938.
Minimum no flow at various times.

ACCURACY:

Fair.

OPERATION:

Located, and constructed by Corps of Engineers, U.S. Army, and operated by Los Angeles County Flood Control District in co-operation with Corps of Engineers, U.S. Army.

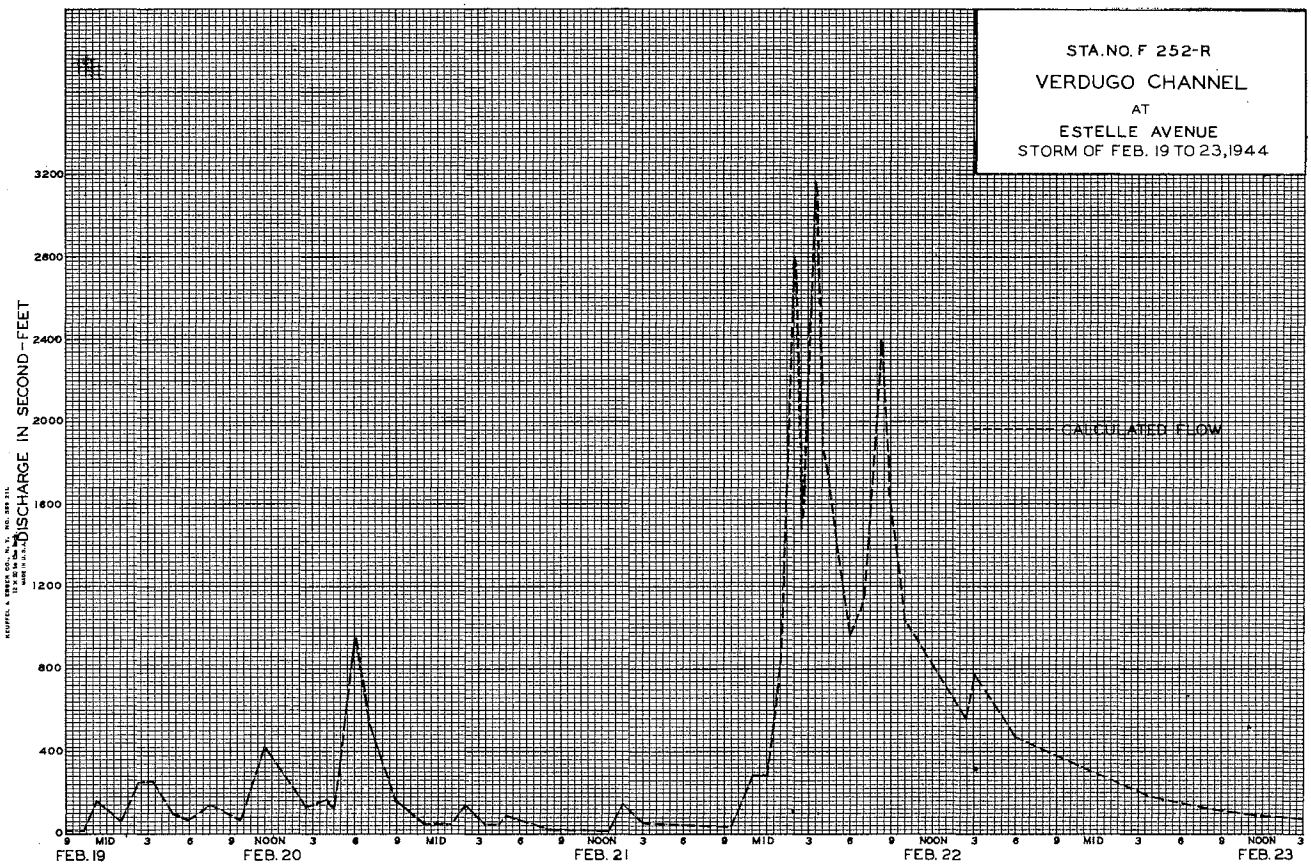
Remarks:

YEAR OR PERIOD MEAN 6.95 ACRE-FEET 5040.



STATION F47-R

WALNUT CREEK at Covina Boulevard

LOCATION:

Water-stage recorder, lat. 34°03'58", long. 117°59'00", on the downstream side of Covina Boulevard bridge, about 2 miles southwest of Baldwin Park. Elevation of gage, about 312 feet. This station is near the location of the station operated from 1923 to 1928 by the State Division of Water Rights.

DRAINAGE AREA:

99.0 square miles.

CHANNEL AND CONTROL:

Channel-sand and gravel.
No artificial control.

DISCHARGE MEASUREMENTS:

Low flows measured by wading.
High flows measured from upstream side of Covina Boulevard.

RECORDER:

Installed December 15, 1928 over an 18 inch diameter corrugated iron pipe stilling well.
An H.C.F. continuous recorder was in service from October 1, 1943 to September 30, 1944.

REGULATION:

Flow partially regulated by Big Dalton Dam, San Dimas Dam, Puddingstone Diversion Dam, Puddingstone Dam, and Live Oak Dam. Irrigation companies at times spread San Gabriel River Water from the Covina and Azusa Canals in Little Dalton Wash, and Big Dalton Wash, San Dimas Wash, and Walnut Creek.

DIVERSIONS:

Some water diverted for irrigation.

RECORDS AVAILABLE:

December 15, 1928 to September 30, 1944. (For records prior to December 15, 1928, see State Division of Water Rights Bulletins.)

EXTREMES OF DISCHARGE:

1943-1944
Maximum 4,220 second-feet, February 22.
Minimum no flow most of year.
1928-1944
Maximum 8,060 second-feet, January 1, 1934.
Minimum no flow most of each year.

ACCURACY:

Fair.

OPERATION:

Located, constructed, and operated by the Los Angeles County Flood Control District.

RISING WATER AT WHITTIER NARROWS

This is a computed discharge determined weekly, except when there is bank runoff during storms, from discharge measurements by the formula:

$$X = A + B - (D + E + F) + I + J + K + (L - M) + O + P - R$$ in which, in general,

X = the rising water at Whittier Narrows, in second-feet.

A = the measured discharge at Station F64R, Rio Hondo 1000 feet above Mission Bridge.

B = the measured discharge at Station F83R, Rio Hondo Slough at San Gabriel Boulevard.

D = the measured discharge of the Rio Hondo above Rising Water.

E = the measured discharge at Station F66S, Tri-City Outfall Sewer above Junction with Rio Hondo.

F = the measured discharge of the El Monte Sewer.

I = the measured discharge of Temple Ditch.

J = the measured discharge of Rincon Ditch.

K = the measured discharge of Durfee Ditch.

L = the measured discharge at Station F84S, Cate Ditch below sluice gate.

M = the measured, or estimated, discharge from the Cate Ditch Well.

O = the measured discharge at Station F85S, Standifer Ditch below headgate.

P = the measured discharge at Station F86S, San Gabriel River below Standifer Ditch.

R = the measured discharge of San Gabriel River above Rising Water.

For the purpose of determining the monthly and yearly runoff, straight line variation in flow between measurements has been assumed. Included herewith is the graph showing the mean monthly rising water since January, 1929. (See Page 204.)

DAM OPERATION RECORDS

DAMS, DEBRIS DAMS, AND DEBRIS BASINS

FOREWORD

The District operated and maintained fourteen dams, three debris dams, and seventeen debris basins during the 1943-44 water year. The Corps of Engineers, United States Army, operated and maintained Hansen Dam on Tujunga Wash, Sepulveda Dam on the Los Angeles River, the partially completed Santa Fe Dam on the San Gabriel River and Rio Hondo, together with Haines Debris Basin. Pertinent data relative to the District's flood control and water conservation dams, debris dams, and debris basins are presented in the three following tables.

Table I.
Flood Control and Water Conservation Dams

	Dam	Date of Completion	Date of Survey for Original Storage	Original Storage at Spwy. A.F.	Date of Latest Survey	Latest Storage at Spwy. A.F.	Drainage Area

PURPOSE

Dams in the Los Angeles County Flood Control District serve two purposes, the primary purpose being flood control, the secondary, conservation. Proper flood control operation precludes any appreciable conservation storage during the storm season as flood control demands that a maximum amount of storage capacity be kept in reserve. Conservation of flood waters by percolation in natural channels and off-channel spreading grounds is accomplished by regulated releases of storm waters.

Debris dams and debris basins serve the primary purpose of controlling detritus from their respective drainage areas.

OPERATION

The major portion of available storage is kept in reserve during the winter season to enable the District to store or detain peak flood flows until valley runoff has receded sufficiently to allow the discharging of the storm waters from the dams. The storage of inflows for conservation purposes is usually commenced when the threat of the winter flood season is passed. The stored water is then released in such a manner as to keep waste to the ocean at a minimum.

Reclaiming of valuable storage capacity is effected by sluicing the District reservoirs to the limit of available and safe channel capacity below the dams.

The following table shows the amount of reclaimed storage at Dams, Debris Dams, and Debris Basins, obtained by sluicing and excavation during the 1943-44 season.

Table IV

Dams	Cubic Yards

RECORDS

The daily storage and flow records at fourteen of the Dis-

trict dams are summarized on the Dam Operation Record sheets. The sheets show:

1. Reservoir water surface elevations based on the United States Geological Survey datum used for the design and construction of the dam. Water stage recorder graphs or interpolations from staff gage readings are obtained and recorded as of midnight of each day.

2. Storages in acre feet based on topographic surveys taken following important changes in reservoir beds. These changes consist primarily of debris inflow during large storms and debris removal by sluicing or mechanical means.

3. Inflows in cubic feet per second are usually determined from storage change and known outflow. When outflow is not determined, the inflow may be determined from gaging station records or interpolated between measurements.

4. Outflows in cubic feet per second as mean daily valve and/or spillway discharge. These are determined from gaging station records, known valve openings and rating curves, or from storage change and known inflow.

5. In some instances, total monthly and yearly evaporation and percolation losses have been computed and are indicated on the Dam Operation Records. Discrepancies between outflow and storage losses at certain dams were attributed to percolation and evaporation losses and are shown as total monthly and yearly losses. For San Gabriel Dams No. 1 and No. 2 reservoirs, total monthly evaporation losses are shown as determined from measurements made on floating evaporation pans. In those cases where no allowances were made for evaporation, the amounts are necessarily included in the flow values.

Accuracy of the flow records computed from storage records is dependent on the frequency with which storage data are revised to keep in step with physical change in reservoirs. Percentage of error is in direct proportion to the error in water surface areas through the range at which the flows were computed; normally the error is small.

YEARLY RESERVOIR OPERATION SUMMARY

A summary table showing total annual inflow, outflow, storages, and extremes for each of the fourteen District dams during the 1943-44 water year is included in this report on page 211.

Since risers have been installed on the outlets at six of the District dams following the 1938 storm and the general practice inaugurated of making no releases until the reservoirs have filled from 10 to 25 per cent, no difficulty was experienced with outlet operations due to debris encroachment.

RESPONSIBILITY

Preparation of the storage rating tables and operation records was under the supervision of R. E. Lindsay and Paul A. Haig and the direction of Walter J. Wood

Determination of storage and releases during both floods and normal or percolation flows for channels and spreading grounds, drawdown for sluicing operations, channel capacities and conditions, measuring inflows and outflows and notification of parties affected by releases was under the direction of Finley B. Laverty, Chief, Hydraulic Division.

The operation and maintenance, such as mechanical operation of valves, maintenance and construction of various structures for dams, debris basins, and spreading grounds and access thereto was under the supervision of R. D. Reeve, Chief, Operation and Maintenance Division.

GROUND WATER
&
CONSERVATION

GROUND WATER AND WATER CONSERVATION

FOREWORD

During the 1943-44 season, the increase in population and the expansion of industry resulting from the war very materially increased the draft upon the ground water supply and placed additional emphasis upon the necessity of unremitting study of changing conditions and of adapting conservation practices to such conditions.

The principles, practices, and objectives of conservation and the physical characteristics of the principal ground water basins of the county were discussed in considerable detail in the Annual Report on Hydrologic Data for 1941-42, and reference may be made to that report for such information.

SEASONAL DATA AND MAPS

In order to determine to what extent the ground water basins were replenished or depleted during the 1943-44 season numerous measurements of water table and pressure surface elevations were made or obtained from cooperating agencies. More than 1200 wells were measured in the Fall of 1943, and again in the Spring of 1944. Eighty-one of these (designated as Key Wells, see Map III, page 216) were also measured at monthly intervals. A smaller number were measured more frequently, and a few were equipped with automatic recorders to provide continuous records of fluctuations. The District also cooperated with the United States Geological Survey in measuring approximately 250 wells in Antelope Valley, 25 of which were tentatively designated as Key Wells.

Ground water maps were made from the fall and spring measurements. They show by contour lines the seasonal high and low positions of the water tables or pressure surfaces. See Maps IV to IX, pages 223 to 228 inclusive.

The more important key well measurements were reduced to hydrographs, ten of which are included herein to show the fluctuations in the more important basins. See pages 217 to 222 inclusive.

Tables I, II and III following show the amounts of surface water conserved in the channels and spreading grounds, and the amount that flowed into the ocean as waste. With the flood-control and conservation facilities now in operation, those under construction, and those contemplated in the Comprehensive Plan, it is to be expected that eventually the waste will be materially reduced. It never will be totally eliminated, however, because of the economic limits of conservation.

During the 1943-44 season the study of ground water pollution was continued. Samples of water for chemical analysis were taken from streams and from wells in industrial districts, oil fields, and the coastal area. In general, only partial analyses of samples were made; that is, only the carbonate, bicarbonate, and chloride content were determined. About 420 such analyses were made in the District's testing laboratory. Complete analyses were made upon samples of water from several San Gabriel Valley wells in order to establish a norm by which any future variations in the quality of the water may be determined.

COOPERATIVE INVESTIGATIONS

The United States Geological Survey, with which the District, the City of Long Beach Water Department, and the Orange County Flood Control and Water Districts have been cooperating in an investigation of the effectiveness of the structural barrier in the South Coastal Basin to prevent intrusion of sea water, issued a second progress report during the year.

The somewhat similar cooperative investigation of the intrusion of sea water into the West Coastal Basin continued.

West Coastal Basin differs from South Coastal Basin in that it lies entirely oceanward from the structural barrier. Its normal water table slope was toward the ocean, but heavy extractions during the past several years caused the slope to be reversed and started an intrusion of sea water. The purpose of the investigation is to determine the most feasible means of retarding the intrusion and possibly repelling it.

The cooperating agencies in this investigation are the United States Geological Survey; the Los Angeles County Flood Control District; the municipalities of Redondo Beach, Hermosa Beach, Manhattan Beach, El Segundo, Gardena, Hawthorne, Inglewood, Culver City, and the Palos Verdes Estates.

NEW FACILITIES

During the year the east side of Pacoima Spreading Grounds was converted from the ditch method of spreading to the basin method; and two new basins were constructed on the west side. A new spreading ground was also developed on Tujunga Wash below Hansen Dam.

RESPONSIBILITY

All the work relative to ground water and water conservation was done under the immediate supervision of L. W. Jordan, except the analysis of water samples, which was done under the direction of S. R. Mitchell, Chief of the Testing Division.

Notes

(1) Not determined. Absorptive capacity determined from difference in mean daily flows.
(2) Includes evaporation loss in reservoir.
(3) Includes rising water in vicinity of Whittier Narrows.
(4) To Surface Storage in Puddingstone Reservoir.
(5) No release during season. Total absorption and evaporation in reservoir shown.
