

Avenue K 36-Inch Transmission Main Phase II

This project is the second of four phases, and consists of constructing approximately 8,000 L.F. of 36-inch-diameter steel water transmission main along Avenue K between 5th Street East and 20th Street East in Lancaster. This new segment of transmission main will improve the water service reliability in the 2555 pressure zone of the Lancaster water distribution system. This project began construction in June 2013 and was completed in March 2014.
