

Avenue J-4 & 15th St. West Booster Pump Station

The project consisted of constructing a new booster pump station at 44205 N. 15th St. West in Lancaster to replace an old existing pump station that was becoming less efficient. The project included the installation of four vertical turbine booster pumps, new electrical controls, and construction of a new concrete masonry block pump house. The project was completed in August 2009.
