

## MARINA DEL REY 18-INCH WATER LINE REPLACEMENT, PHASE III

The Los Angeles County Department of Public Works, on behalf of the Marina del Rey Water System, is proposing to install approximately 9,800 linear feet of new 18-inch diameter steel pipeline to replace the existing aged and undersized 10- and 14-inch-diameter water mains that currently form a loop around Marina del Rey. Numerous fire hydrant and water system laterals and appurtenances will be improved as well. This project is the third and last phase scheduled to replace the existing Marina del Rey Water System.

The purpose of the project is to improve the Marina del Rey Water System to meet domestic and fire protection water demands. As previously mentioned, Phase III will consist of installing approximately 9,800 linear feet of water main along both Via Marina and Fiji Way. Construction of the project is anticipated to begin Fall 2013.
