

## Well 4-85

This project includes drilling and equipping a new drinking water well, demolishing an existing 2 million gallon reservoir and constructing a new freeboard detention basin at 1701 W. Ave. H-8 in Lancaster. This additional drinking well will provide additional ground water capacity and reliability for the District's 2555 pressure zone to meet the current domestic and fire protection water demands. This project was completed in May 2012.
