**FLOODPROOFING CERTIFICATE  
 FOR NON-RESIDENTIAL STRUCTURES**

G.M.B. NO. 1660-0008  
 Expires March 31, 2012

The floodproofing of non-residential buildings may be permitted as an alternative to elevating to or above the Base Flood Elevation; however, a floodproofing design certification is required. This form is to be used for that certification. Floodproofing of a residential building does not alter a community's floodplain management elevation requirements or affect the insurance rating unless the community has been issued an exception by FEMA to allow floodproofed residential basements. The permitting of a floodproofed residential basement requires a separate certification specifying that the design complies with the local floodplain management ordinance.

COMMUNITY NUMBER	PANEL NUMBER	SUFFIX	DATE OF FIRM INDEX	FIRM ZONE	BASE FLOOD ELEVATION (If AD Zone, Use 0402)
<u>Los Angeles Co. Dist 5043</u>	<u>06037C1244</u>	<u>F</u>	<u>09-26-08</u>	<u>AE</u>	<u>803.0</u>

**SECTION II—FLOODPROOFING INFORMATION (By a Registered Professional Engineer or Architect)**

Floodproofing Design Elevation Information:

Building is floodproofed to an elevation of 812.5 feet NGVD. (Elevation datum used must be the same as that on the FIRM.)  
 Height of floodproofing on the building above the lowest adjacent grade is 812.50 feet.

(NOTE: For insurance rating purposes, the building's floodproofed design elevation must be at least one foot above the Base Flood Elevation to receive rating credit. If the building is floodproofed only to the Base Flood Elevation, then the building's insurance rating will result in a higher premium.)

**SECTION III—CERTIFICATION (By a Registered Professional Engineer or Architect)**

Non-Residential Floodproofed Construction Certification:

I certify that, based upon development and/or review of structural design, specifications, and plans for construction, the design and methods of construction are in accordance with accepted standards of practice for meeting the following provisions:

- The structure, together with attendant utilities and sanitary facilities, is watertight to the floodproofed design elevation indicated above and on walls that are substantially impermeable to the passage of water.
- All structural components are capable of resisting hydrostatic and hydrodynamic flood forces, including the effects of buoyancy, and anticipated debris impact forces.

I certify that the information on this certificate represents my best efforts to interpret the data available. I understand that any false statement made by me or imprisonment under 18 U.S. Code, Section 1001.
