CrossRail System

ASSEMBLY INSTRUCTIONS
Quality tested – several certifications

K2 Systems stands for secure connections, highest quality and precision. Our customers and business partners have known that for a long time. Independent institutes have tested, confirmed and certified our capabilities and components.

Please find our quality and product certificates under:
Engineering strength is at our core

With sophisticated product innovations and a deep customer focus, K2 Systems is the engineering leader for all your mounting system needs. We are a market leader with more than 20 GW installed worldwide.

We offer proven product solutions and innovative designs. Wind tunnel testing along with advanced structural and electrical validation to facilitate permitting, design and installation. Our designs result in cost competitive racking systems with dedicated support that will position you to win more projects.

We partner with our customers and suppliers for the long-term. High quality materials and cutting edge designs provide a durable, yet functional system. Our product line is comprised of a few, coordinated components that lower the cost of materials, and simplify installation, saving you time and money. All backed by German engineering, a long track record of quality and a company that is here to stay.

Thank you for choosing K2 Systems for your Solar PV Project.
General Safety Information

Please note that our general mounting instructions must be followed at all times and can be viewed online at https://k2-systems.com/en-US/downloads/documentation

- The equipment may only be installed and operated by qualified and adequately trained installers.
- Prior to installation, ensure that the product complies with on-site static loading requirements. For roof-mounted systems, the roof load-bearing capacity must always be checked.
- National and local building regulations and environmental requirements must be adhered to.
- Compliance with health and safety regulations, accident prevention guidelines and applicable standards are required.
  - Protective equipment such as safety helmet, boots and gloves must be worn.
  - Roofing works must be in accordance with roofing regulations utilizing fall protection safeguards when eaves height exceeds 3 m.
  - At least two people must be present for the duration of the installation work in order to provide rapid assistance in the event of an emergency.
- K2 mounting systems are continuously developed and improved and the installation process may thereby change at any time. Prior to installation consult our website at: https://k2-systems.com/en-US/downloads/documentation for up-to-date instructions. We can send you the latest version on request.
- The assembly instructions of the module manufacturer must be adhered to.
- Equipotential bonding/grounding/earthing between individual parts is to be performed according to country specific standards, as well as national laws and regulations.
- At least one copy of the assembly instructions should be available on site throughout the duration of the installation.
- Failure to adhere to our general safety and assembly instructions and not using all system components, K2 is not liable for any resulting defects or damages. We do not accept liability for any damage resulting in the use of competitor’s parts. Warranty is excluded in such cases.
- If all safety instructions are adhered to and the system is correctly installed, there is a product warranty entitlement of 25 years! We strongly recommend reviewing our terms of guarantee, which can be viewed at https://k2-systems.com/en-US/downloads/documentation We will also send this information on request.
- Dismantling of the system is performed in reverse order to the assembly.
- K2 stainless steel components are available in different corrosion resistance classes. Each structure or component must be carefully checked for possible corrosion exposure.
The following guidelines apply

The CrossRail System can be installed as standard under the following conditions. Even if the system is capable of meeting higher demands through the integration of safety standards, please get in touch with your contact at K2 Systems if the specified values are exceeded.

Roof requirements

- The structural integrity of the roof must be reviewed on site and approved by a licensed structural engineer.
- Roof mean height: 0–60 ft
- For allowable roof pitch, refer to the CrossRail engineering letters on our website: https://k2-systems.com/en-US/technical-information/downloads

Structural requirements

- Wind speed: 95–200 mph
- Ground snow load: 0–100 psf
- Clearance: 2” to 10” clear from the top of the roof to the top of PV panel
- Maximum cantilever: L/3 where “L” is the span noted in the engineering span tables, provided there is at least 1 module length between maximum cantilevers.
Bonding and Grounding

Appropriate means of bonding and grounding are required by regulation. The information provided in this manual shall always be verified with local and national building codes.

Everest Solar Systems has obtained a UL 2703 system listing from Underwriter’s Laboratories (UL).

A sample bonding path diagram is shown in Figure 1 below. Your specific installation may vary, based upon site conditions and your AHJ’s requirements.

Each electrical connection has been evaluated to a maximum fuse rating of 30A. At least one ground lug per row of modules must be used to ground all strings within each sub-array, although additional may be used for redundancy. When installed per these installation instructions, all connections meet the requirements of NEC 690.43.

This racking system may be used to ground and/or mount a PV module complying with UL 1703 only when the specific module has been evaluated for grounding and/or mounting in compliance with the included instructions.
Fire Rating

The CrossRail System has undergone fire performance testing in accordance with UL 2703, Fire Performance. A System Class A fire rating is achieved when using CrossRail 44-X/48-X/48-XL under the following conditions:

- Roof slope of 2/12" rise per linear foot or greater
- Used in combination with a UL 1703 Listed module with a fire performance rating of Type 1, Type 2, or Type 3. Consult the module manufacturer for specific fire performance rating information.
- CrossRail may be mounted using any stand-off height to maintain the Class A fire rating. Always consult the module manufacturer’s installation instructions to ensure your installation is in compliance with their UL 1703 Listing.
- The results of the racking system do not improve a roof covering Class rating.

All documentation can be found on UL’s Online Database as well as K2 Systems’ website.
Compatible Modules

K2’s CrossRail System was tested with the following:

- **UL/NRTL Listed Aptos Solar Modules:**
  - DNA-120-MF26-XXXW

Important note for Yeti Clamp installs

The Yeti Clamp must be installed in an array. It cannot be installed on a single module that is not connected to the array by a mid clamp.

Frame Compatibility:
Flange Thickness = 1.2 - 2.5 mm
Flange Width = 15 - 40 mm
Assembly

Composition Shingle

1. Locate rafters, snap horizontal and vertical lines to mark the installation position for each roof attachment. Drill a 1/4” pilot hole for the lag bolt. Backfill with appropriate sealant. Always consult a professional roofer to ensure integrity is maintained.

2. Insert the flashing so the top part is under the next row of shingles and pushed far enough up slope to prevent water infiltration through vertical joint in shingles. The leading edge of flashing must butt against upper row of nails to prevent turning when torqued.
Line up pilot hole with the flashing hole. Insert the lag screw through EPDM bonded washer, L-Foot, gasketed hole in flashing and into rafter. The torque range is between 8.3 - 11.6 ft-lbs depending on type of wood and time of year.

Insert T-Bolt through L-Foot slot and into side channel of CrossRail. Turn the T-Bolt clockwise ensuring that the mark at the end of the shaft is vertical, indicating proper alignment. Tighten to 25.8 ft-lbs (35 Nm).

Due to thermal expansion, we recommend placing a gap of 1.25"-2" (3-5cm) every 65 ft (20m) between rails. Maximum allowable spacing between thermal expansion gaps shall not exceed 80 ft (24.4m). In areas that experience snow loads, install the rail on the roof-ridge side of the L-Foot.
5

Align the two rail ends next to each other. Slide rail connector from below the rails, centering the connector between the rail ends. Attach rail connector using two T-Bolts and Serrated Hex nuts per side (4 total).

6

Use the CrossRail Microinverter & Optimizer Mounting Kit hardware from K2 Systems. Attach your chosen device to the top channel of the CrossRail. Torque the 13mm Hex Bolt to 10.3 ft-lbs (14 Nm).
Insert MK3 slot nut of the preassembled end clamps into the top channel of the CrossRail. While slightly lifting the plastic tabs, rotate 90° clockwise to engage the MK3 into the channel. Torque the M8 bolt to 10.3 ft-lbs (14 Nm).

Push zip tie into leash channel located on bottom of Yeti Clamp. Slide clamp into the rail channel with bolt facing outward. Leave enough room for module to be place. Place module flush to end of rail. Pull leash toward you so that the clamp slides over module frame and tighten to 12 ft-lbs. Use your hand to check that the Yeti Clamp is fully engaged with the frame of the module, as shown in the image.

Note: The Yeti Clamp must be installed in an array. It can-not be installed on a single module that is not connected to the array by a mid clamp.
7c

Insert Base of clamp into top channel of rail, rotate clamp clockwise sandwiching top rail between flanges of clamp base. Torque to 12 ft-lbs using 13mm socket.

8

Insert MK3 Slot Nut of preassembled Mid Clamps into the top channel on CrossRail. While slightly lifting the plastic tabs, rotate 90° clockwise to engage into the channel. Attach Mid Clamps to the module at specified locations per PV module manufacturer. Torque to 12 ft-lbs.
9

Push pins of appropriate end cap into end of rail.

10a

Insert Mk3 Slot Nut of preassembled Everest Ground Lug into top channel of CrossRail. While slightly lifting plastic tabs, rotate 90° clockwise to engage into rail channel. Ensure bonding teeth are perpendicular to rail channel. Torque to 10 ft-lbs. Insert #6 or #8 AWG solid copper wire and tighten terminal screw to 35-60 in-lbs.
To attach WEEB Lug 10.3, insert T-Bolt into side slot on CrossRail and rotate clockwise 90°. Tighten the hex nut to 15 ft-lbs (20.3 Nm). Install a #6
Thank you for choosing a K2 mounting system.

Systems from K2 Systems are quick and easy to install. We hope these instructions have helped. Please contact us with any questions or suggestions for improvement.
