4. Furnace Electrical Connection:

a. Volts: As directed.
b. Phase: As directed.
c. Hertz: As directed.
d. Full-Load Amperes: As directed.
e. Minimum Circuit Ampacity: As directed.
f. Maximum Overcurrent Protection: As directed.

2.4 THERMOSTATS AND HUMIDISTATS

A. Controls shall comply with requirements in ASHRAE/IES 90.1, "Controls."

B. Solid-State Thermostat: Programmable, microprocessor-based unit as directed with automatic or manual switching as directed from heating to cooling, preferential rate control, seven-day programmability with minimum of four temperature presets per day, vacation mode, and battery backup protection against power failure for program settings.

C. Single-Stage, Heating-Cooling Thermostat: Adjustable, heating-cooling, wall-mounted unit with fan on-automatic selector.

D. Two-Stage, Heating-Cooling Thermostat: Adjustable, heating-cooling, wall-mounted unit with fan on-automatic selector.

E. Single or Two-Stage, Heating-Only Thermostat as directed: Wall-mounted unit with fan on-automatic selector.

F. Solid-State, Combination Thermostat and Humidistat: Wall-mounted, Freestanding or Wireless as directed, programmable, microprocessor-based unit with automatic switching from heating to cooling and humidifying to dehumidifying, preferential rate control, seven-day programmability with minimum of four temperature presets per day, vacation mode, and battery backup protection against power failure for program settings.

G. Humidistat: Adjustable, wall or duct-mounted unit.

H. Control Wiring: Balanced twisted-pair cabling complying with requirements for Category 5e in Section 260523 "Control Voltage Cables for Electrical Equipment" or complying with requirements for Category 5e in Section 271513 "Communications Copper Horizontal Cabling" as directed.

I. Control Wiring: Balanced twisted pair cabling.
   1. Description: As directed, No. 24 AWG, 100 ohm, four pair.
   2. Cable Jacket Color: Blue.

2.5 AIR FILTERS

A. Washable Filters: 1-inch- (25-mm-) thick urethane pad.

B. Disposable Filters: 1-inch- (25-mm-) thick fiberglass media with ASHRAE 52.2 MERV rating of 6 or higher, in sheet metal frame.

C. Charged Media Air Filters: Sheet metal housing arranged to be ducted in return-air duct connection to furnace; generates electrostatic charge; MERV 10 rating.

D. HEPA Air-Filter Units: Sheet metal housing with fan arranged to be ducted to return-air duct connection to furnace, with activated carbon prefilter, carbon VOC, and high-efficiency particulate air (HEPA) disposable filter. HEPA shall be as follows:

   1. Standard: UL 586.
   2. Rating: ASHRAE 52.2, 99.97 percent efficiency to 0.30-micrometer particle size.

2.6 HUMIDIFIERS

A. Minimum capacity rating indicated according to AHRI 610.

B. Media-wheel bypass type with bypass damper and motor-driven media wheel in reservoir with float-valve level control; arranged for mounting on return duct or plenum with bypass connection to supply duct.

C. Wetted-pad, continuous-drain, bypass type with bypass damper and water-flow control orifice; arranged for mounting on return duct or plenum with bypass connection to supply duct.

D. Fan-powered, wetted-pad, continuous-drain type with water-flow control orifice and motor; arranged for mounting on duct or plenum.

E. Pumped, fan-powered, wetted-pad type with reservoir-level control and pump and fan motors; arranged for mounting on duct or plenum.

F. Comply with applicable requirements in ASHRAE 62.1.

G. Capacities and Characteristics:

1. Type: As directed.
2. Water Connection Size: As directed.
3. Drain Connection Size: As directed.
4. Volts: As directed.
5. Phase: As directed.
6. Hertz: As directed.
7. Minimum Circuit Ampacity: As directed.
8. Maximum Overcurrent Protection: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Suspended Units: Suspend from structure using threaded rods, spring hangers, and building attachments. Secure rods to unit hanger attachments. Adjust hangers so unit is level and plumb.

B. Base-Mounted Units: Secure units to substrate. Provide optional bottom closure base if required by installation conditions.

C. Controls: Install thermostats and humidistats at mounting height of 60 inches (1500 mm) above floor.

D. Wiring Method: Install control wiring in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Conceal control wiring except in unfinished spaces.

3.2 CONNECTIONS

A. Install piping adjacent to equipment to allow service and maintenance.

B. Water piping installation requirements are specified in Section 221116 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties. Connect water piping with union and ball valve.

C. Connect ducts to furnace with flexible connector. Comply with requirements in Section 233300 "Air Duct Accessories."

3.3 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:

1. Perform electrical test and visual and mechanical inspection.
2. Leak Test: After installation, charge systems with refrigerant and oil and test for leaks. Repair leaks replace lost refrigerant and oil, and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation, product capability, and compliance with requirements.
4. Verify that fan wheel is rotating in the correct direction and is not vibrating or binding.
5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Verify that vibration isolation and flexible connections properly dampen vibration transmission to structure.

END OF SECTION 235413

SECTION 235416.13 - GAS-FIRED FURNACES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Gas-fired, noncondensing or condensing furnaces and accessories complete with controls as directed.
2. Air filters.
3. Humidifiers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Shop Drawings:

1. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Include diagrams for power, signal, and control wiring.

1.3 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.4 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace the following components of furnaces that fail in materials or workmanship within specified warranty period:

1. Warranty Period, Commencing on Date of Substantial Completion:

a. Furnace Heat Exchanger: As directed.
b. Integrated Ignition and Blower Control Circuit Board: Five years.
c. Draft-Inducer Motor: Five years.

PART 2 - PRODUCTS

2.1 ASSEMBLY DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a qualified testing agency, and marked for intended location and application.

B. General Requirements for Noncondensing Gas-Fired Furnaces: Factory assembled, piped, wired, and tested; complying with ANSI Z21.47/CSA 2.3 and NFPA 54.

2.2 GAS-FIRED FURNACES, NONCONDENSING

A. Cabinet: Steel or Galvanized steel as directed.

1. Cabinet interior around heat exchanger shall be factory-installed insulation.
2. Lift-out panels shall expose burners and all other items requiring access for maintenance.
3. Factory paint external cabinets in manufacturer's standard color.
4. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Fan: Centrifugal, factory balanced, resilient mounted, as directed.

1. Fan Motors: Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
2. Special Motor Features: Single speed, premium efficiency, as defined in Section 230513 "Common Motor Requirements for HVAC Equipment," and with internal thermal protection and permanent lubrication.
3. Special Motor Features: Multitapped, multispeed with internal thermal protection and permanent lubrication.
4. Special Motor Features: Electronically controlled motor (ECM) controlled by integrated furnace/blower control.

C. Type of Gas: Natural or Propane as directed.

D. Heat Exchanger: Aluminized or Stainless steel as directed.

E. Burner:

1. Gas Valve: 100 percent safety two-stage or modulating main gas valve as directed, main shutoff valve, pressure regulator, safety pilot with electronic flame sensor, limit control, transformer, and combination ignition/fan timer control board.
2. Ignition: Electric pilot ignition, with hot-surface igniter or electric spark ignition.

F. Gas-Burner Safety Controls:

1. Electronic Flame Sensor: Prevents gas valve from opening until pilot flame is proven; stops gas flow on ignition failure.
2. Flame Rollout Switch: Installed on burner box; prevents burner operation.
3. Limit Control: Fixed stop at maximum permissible setting; de-energizes burner on excessive bonnet temperature; automatic reset.

G. Combustion-Air Inducer: Centrifugal fan with thermally protected motor and sleeve bearings prepurges heat exchanger and vents combustion products; pressure switch prevents furnace operation if combustion-air inlet or flue outlet is blocked.

H. Furnace Controls: Solid-state board integrates ignition, heat, cooling, and fan speeds; and adjustable fan-on and fan-off timing; terminals for connection to accessories.

I. Vent Materials: Comply with requirements in Section 235123 "Gas Vents" for Type B metal vents.

J. Capacities and Characteristics:

1. Airflow Configuration: As directed.
2. Gas:

    a. Type: Natural or Propane as directed.
    b. Venting Type: Power venter or with combustion-air intake as directed.
    c. Minimum Efficiency AFUE: Percent As directed.
    d. Minimum Thermal Efficiency: Percent As directed.
    e. Minimum Combustion Efficiency: Percent As directed.
    f. Input: As directed.
    g. Heat Output: As directed.
    h. Gas Connection Size: As directed.
    i. Draft-Inducer Motor:

        1) Size: As directed.
        2) Speed: As directed.

    j. Combustion-Air Inlet Size: As directed.
    k. Combustion-Air Inlet Material: As directed.
    l. Heat-Exchanger Condensate Drain Size: As directed.
    m. Vent Size: As directed.

3. Fan:

    a. Airflow: As directed.
    b. External Static Pressure: As directed.
    c. Motor:

        1) Size: As directed.
        2) Speed: As directed.

    d. Volts: As directed.
    e. Phase: As directed.
    f. Hertz: As directed.
    g. Full-Load Amperes: As directed.
    h. Minimum Circuit Ampacity: As directed.
    i. Maximum Overcurrent Protection: As directed.

4. Furnace Electrical Connection:

a. Volts: As directed.
b. Phase: As directed.
c. Hertz: As directed.
d. Full-Load Amperes: As directed.
e. Minimum Circuit Ampacity: As directed.
f. Maximum Overcurrent Protection: As directed.

2.3 GAS-FIRED FURNACES, CONDENSING

A. Cabinet: Steel or Galvanized steel as directed.

1. Cabinet interior around heat exchanger shall be factory-installed insulation.
2. Lift-out panels shall expose burners and all other items requiring access for maintenance.
3. Factory paint external cabinets in manufacturer's standard color.
4. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Fan: Centrifugal, factory balanced, resilient mounted, direct drive.

1. Fan Motors: Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
2. Special Motor Features: Single speed, premium efficiency, as defined in Section 230513 "Common Motor Requirements for HVAC Equipment," and with internal thermal protection and permanent lubrication.
3. Special Motor Features: Multitapped, multispeed with internal thermal protection and permanent lubrication.
4. Special Motor Features: Electronically controlled motor (ECM) controlled by integrated furnace/blower control.

C. Type of Gas: Natural or Propane as directed.

D. Heat Exchanger:

1. Primary: Aluminized or Stainless steel as directed.
2. Secondary: Polyethylene-coated or Stainless steel as directed.

E. Burner:

1. Gas Valve: 100 percent safety two-stage or modulating main gas valve, main shutoff valve, pressure regulator, safety pilot with electronic flame sensor, limit control, transformer, and combination ignition/fan timer control board as directed.
2. Ignition: Electric pilot ignition, with hot-surface igniter or electric spark ignition.

F. Gas-Burner Safety Controls:

1. Electronic Flame Sensor: Prevents gas valve from opening until pilot flame is proven; stops gas flow on ignition failure.
2. Flame Rollout Switch: Installed on burner box; prevents burner operation.
3. Limit Control: Fixed stop at maximum permissible setting; de-energizes burner on excessive bonnet temperature; automatic reset.

G. Combustion-Air Inducer: Centrifugal fan with thermally protected motor and sleeve bearings prepurges heat exchanger and vents combustion products; pressure switch prevents furnace operation if combustion-air inlet or flue outlet is blocked.

H. Furnace Controls: Solid-state board integrates ignition, heat, cooling, and fan speeds; adjustable fan-on and fan-off timing; terminals for connection to accessories; diagnostic light with viewport.

I. Accessories:

1. Combination Combustion-Air Intake and Vent: PVC plastic fitting to combine combustion-air inlet and vent through outside wall or roof as directed.
2. CPVC Plastic Vent Materials:

    a. CPVC Plastic Pipe: Schedule 40, complying with ASTM F441/F441M.
    b. CPVC Plastic Fittings: Schedule 40, complying with ASTM F438, socket type.
    c. CPVC Solvent Cement: ASTM F493.

3. PVC Plastic Vent Materials:

    a. PVC Plastic Pipe: Schedule 40, complying with ASTM D1785.
    b. PVC Plastic Fittings: Schedule 40, complying with ASTM D2466, socket type.
    c. PVC Solvent Cement: ASTM D2564.

J. Capacities and Characteristics:

1. Airflow Configuration: As directed.
2. Gas:

    a. Type: Natural or Propane as directed.
    b. Venting Type: Power venter or Power venter with combustion-air intake as directed.
    c. Minimum Efficiency AFUE: Percent As directed.
    d. Minimum Thermal Efficiency: Percent As directed.
    e. Minimum Combustion Efficiency: Percent As directed.
    f. Input: As directed.
    g. Heat Output: As directed.
    h. Gas Connection Size: As directed.
    i. Draft-Inducer Motor:

        1) Size: As directed.
        2) Speed: As directed.

    j. Combustion-Air Inlet Size: As directed.
    k. Combustion-Air Inlet Material: CPVC or PVC As directed.
    l. Heat-Exchanger Condensate Drain Size: As directed.
    m. Vent Size: As directed.
    n. Vent Material: CPVC or PVC as directed.

3. Fan:

a. Airflow: As directed.
b. External Static Pressure: As directed.
c. Motor:

1) Size: As directed.
2) Speed: As directed.

d. Volts: As directed.
e. Phase: As directed.
f. Hertz: As directed.
g. Full-Load Amperes: As directed.
h. Minimum Circuit Ampacity: As directed.
i. Maximum Overcurrent Protection: As directed.

4. Furnace Electrical Connection:

a. Volts: As directed.
b. Phase: As directed.
c. Hertz: As directed.
d. Full-Load Amperes: As directed.
e. Minimum Circuit Ampacity: As directed.
f. Maximum Overcurrent Protection: As directed.

2.4 THERMOSTATS AND HUMIDISTATS

A. Controls shall comply with requirements in ASHRAE/IES 90.1, "Controls."

B. Solid-State Thermostat: As directed Wall-mounted, Freestanding or Wireless, programmable, microprocessor-based unit with automatic or manual switching from heating to cooling, preferential rate control, seven-day programmability with minimum of four temperature presets per day, vacation mode, and battery backup protection against power failure for program settings.

C. Single-Stage, Heating-Cooling Thermostat: Adjustable, heating-cooling, wall-mounted unit with fan on-automatic selector.

D. Two-Stage, Heating-Cooling Thermostat: Adjustable, heating-cooling, wall-mounted unit with fan on-automatic selector.

E. Single or Two-Stage, Heating-Only Thermostat As directed: Wall-mounted unit with fan on-automatic selector.

F. Solid-State, Combination Thermostat and Humidistat: As directed Wall-mounted, Freestanding or Wireless, programmable, microprocessor-based unit with automatic switching from heating to cooling and humidifying to dehumidifying, preferential rate control, seven-day programmability with minimum of four temperature presets per day, vacation mode, and battery backup protection against power failure for program settings.

G. Humidistat: Adjustable, wall or duct-mounted unit As directed.

H. Control Wiring: Balanced twisted-pair cabling complying with requirements for Category 5e in Section 260523 "Control-Voltage Electrical Power Cables or Section 271513 Communications Copper Horizontal Cabling as directed.
   1. Description: As directed, No. 24 AWG, 100 ohm, four pair.
   2. Cable Jacket Color: Blue.

2.5 AIR FILTERS

A. Washable Filters: 1-inch- (25-mm-) thick urethane pad.

B. Disposable Filters: 1-inch- (25-mm-) thick fiberglass media with ASHRAE 52.2 MERV rating of 6 or higher, in sheet metal frame.

C. Charged Media Air Filters: Sheet metal housing arranged to be ducted in return-air duct connection to furnace; generates electrostatic charge; MERV 10 rating.

D. HEPA Air Filter Units: Sheet metal housing with fan arranged to be ducted to return-air duct connection to furnace, with activated carbon prefilter, carbon VOC, and high-efficiency particulate air (HEPA) disposable filter. HEPA shall be as follows:

   1. Standard: UL 586.
   2. Rating: ASHRAE 52.2, 99.97 percent efficiency to 0.30-micrometer particle size.

2.6 HUMIDIFIERS

A. Minimum capacity rating indicated according to AHRI 610.

B. Media-wheel bypass type with bypass damper and motor-driven media wheel in reservoir with float-valve level control; arranged for mounting on return duct or plenum with bypass connection to supply duct.

C. Wetted-pad, continuous-drain, bypass type with bypass damper and water-flow control orifice; arranged for mounting on return duct or plenum with bypass connection to supply duct.

D. Fan-powered, wetted-pad, continuous-drain type with water-flow control orifice and motor; arranged for mounting on duct or plenum.

E. Pumped, fan-powered, wetted-pad type with reservoir-level control and pump and fan motors; arranged for mounting on duct or plenum.

F. Comply with applicable requirements in ASHRAE 62.1.

G. Capacities and Characteristics:

   1. Type: As directed.
   2. Water Connection Size: As directed.
   3. Drain Connection Size: As directed.
   4. Volts: As directed.
   5. Phase: As directed.
   6. Hertz: As directed.

7. Minimum Circuit Ampacity: As directed.
8. Maximum Overcurrent Protection: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install gas-fired furnaces and associated fuel and vent features and systems according to NFPA 54.

B. Suspended Units: Suspend from structure using threaded rods, spring hangers, and building attachments. Secure rods to unit hanger attachments. Adjust hangers so unit is level and plumb.

C. Base-Mounted Units: Secure units to substrate. Provide optional bottom closure base if required by installation conditions.

D. Controls: Install thermostats and humidistats at mounting height of 60 inches (1500 mm) above floor.

E. Wiring Method: Install control wiring in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Conceal control wiring except in unfinished spaces.

3.2 CONNECTIONS

A. Gas piping installation requirements are specified in Section 231123 "Facility Natural-Gas Piping" or Section 231126 "Facility Liquefied-Petroleum Gas Piping" as directed. Drawings indicate general arrangement of piping, fittings, and specialties. Connect gas piping with union or flange and appliance connector valve.

B. Install piping adjacent to equipment to allow service and maintenance.

C. Water piping installation requirements are specified in Section 221116 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties. Connect water piping with union and ball valve.

D. Vent Connection, Noncondensing, Gas-Fired Furnaces: Connect Type B vents to furnace vent connection and extend outdoors. Type B vents and their installation requirements are specified in Section 235123 "Gas Vents."

E. Vent and Outside-Air Connection, Condensing, Gas-Fired Furnaces: Connect plastic piping vent material to furnace connections and extend outdoors. Terminate vent outdoors with a cap and in an arrangement that will protect against entry of birds, insects, and dirt.

1. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
2. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
3. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:

a. Comply with ASTM F402 for safe-handling practice of cleaners, primers, and solvent cements.
b. CPVC Piping: Join according to ASTM D2846/D2846M, Appendix.

c. PVC Pressure Piping: Join schedule number ASTM D1785 PVC pipe and PVC socket fittings according to ASTM D2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D2855.

4. Slope pipe vent back to furnace or to outside terminal.

F. Connect ducts to furnace with flexible connector. Comply with requirements in Section 233300 "Air Duct Accessories."

3.3 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:

1. Perform electrical test and visual and mechanical inspection.
2. Leak Test: After installation, charge systems with refrigerant and test for leaks. Repair leaks, replace lost refrigerant, and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation, product capability, and compliance with requirements.
4. Verify that fan wheel is rotating in the correct direction and is not vibrating or binding.
5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Verify that vibration isolation and flexible connections properly dampen vibration transmission to structure.

END OF SECTION 235416.13

SECTION 235416.16 - OIL-FIRED FURNACES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Oil-fired furnaces and accessories complete with controls.
2. Air filters.
3. Humidifiers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings:

1. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Include diagrams for power, signal, and control wiring.

1.3 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.4 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace the following components of furnaces that fail in materials or workmanship within specified warranty period:

1. Warranty Period, Commencing on Date of Substantial Completion:

a. Furnace Heat Exchanger: As directed.
b. Integrated Ignition and Blower Control Circuit Board: Five years.
c. Draft-Inducer Motor: Five years.
d. High-Efficiency Oil Furnace Burner: Three years.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 ASSEMBLY DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a qualified testing agency, and marked for intended location and application.

B. Manufactured Units: Factory assembled, piped, wired, and tested; complying with UL 727 and with NFPA 31.

2.3 FURNACES

A. Cabinet: Steel or Galvanized steel as directed.

1. Cabinet interior around heat exchanger shall be factory-installed insulation.
2. Lift-out panels shall expose burners and all other items requiring access for maintenance.
3. Factory paint external cabinets in manufacturer's standard color.
4. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Fan: Centrifugal, factory balanced, resilient mounted, as directed.

1. Fan Motors: Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
2. Special Motor Features: Single speed, premium efficiency, as defined in Section 230513 "Common Motor Requirements for HVAC Equipment," and with internal thermal protection and permanent lubrication.
3. Special Motor Features: Multi-tapped, multispeed with internal thermal protection and permanent lubrication.

C. Heat Exchanger: Welded steel with ceramic-fiber liner or refractory insert at the burner in the combustion chamber as directed. Minimum 2-inch- (50-mm-) diameter access ports in heat exchanger to permit access for cleaning.

D. Burner: High-pressure atomizing type, with rubber-mounted, adjustable, combustion-air blower; integrated fuel pump; hinged, flame-inspection port; cadmium-sulfide flame sensor; electrodes; ignition transformer; and oil nozzle.

1. Time-Delay Relay: Limits time for establishing main flame.
2. Flame Sensor: Monitors flame and stops burner on flame failure.
3. Limit Control: Fixed stop at maximum permissible setting; de-energizes burner on excessive bonnet temperature; automatic reset.

E. Barometric Draft Regulator: Match furnace; for mounting in flue.

F. Furnace Controls: Solid-state board integrates ignition, heat, cooling, and fan speeds; and adjustable fan-on and fan-off timing; terminals for connection to accessories.

G. Vent Materials: Comply with requirements in Section 235123 "Gas Vents" for Type B metal vents.

H. Capacities and Characteristics:

1. Airflow Configuration: As directed.
2. Minimum Efficiency AFUE: Percent As directed.
3. Minimum Thermal Efficiency: Percent As directed.
4. Oil:

a. Input: As directed.
b. Heat Output: As directed.
c. Burner Motor:

1) Size: As directed.
2) Speed: As directed.

d. Vent Size: As directed.

5. Fan:

a. Airflow: As directed.
b. External Static Pressure: As directed.
c. Motor:

1) Size: As directed.
2) Speed: As directed.

d. Volts: As directed.
e. Phase: As directed.
f. Hertz: As directed.
g. Full-Load Amperes: As directed.
h. Minimum Circuit Ampacity: As directed.
i. Maximum Overcurrent Protection: As directed.

6. Furnace Electrical Connection:

a. Volts: As directed.
b. Phase: As directed.
c. Hertz: As directed.
d. Full-Load Amperes: As directed.
e. Minimum Circuit Ampacity: As directed.
f. Maximum Overcurrent Protection: As directed.

2.4 THERMOSTATS AND HUMIDISTATS

A. Controls shall comply with requirements in ASHRAE/IES 90.1, "Controls."

B. Solid-State Thermostat: As directed, programmable, microprocessor-based unit with automatic or manual switching from heating to cooling, preferential rate control, seven-day

programmability with minimum of four temperature presets per day, vacation mode, and battery backup protection against power failure for program settings.

C. Single-Stage, Heating-Cooling Thermostat: Adjustable, heating-cooling, wall-mounted unit with fan on-automatic selector.

D. Two-Stage, Heating-Cooling Thermostat: Adjustable, heating-cooling, wall-mounted unit with fan on-automatic selector.

E. Single or Two-Stage, Heating-Only Thermostat as directed: Wall-mounted unit with fan on-automatic selector.

F. Solid-State, Combination Thermostat and Humidistat: Wall-mounted, Freestanding or Wireless, programmable, microprocessor-based unit with automatic switching from heating to cooling and humidifying to dehumidifying, preferential rate control, seven-day programmability with minimum of four temperature presets per day, vacation mode, and battery backup protection against power failure for program settings.

G. Humidistat: Adjustable, wall or duct-mounted unit or directed.

H. Control Wiring: Unshielded twisted-pair cabling.

1. No. 24 AWG, 100 ohm, four pair.
2. Cable Jacket Color: Blue.

2.5 AIR FILTERS

A. Washable Filters: 1-inch- (25-mm-) thick urethane pad.

B. Disposable Filters: 1-inch- (25-mm-) thick fiberglass media with ASHRAE 52.2 MERV rating of 6 or higher, in sheet metal frame.

C. Charged Media Air Filters: Sheet metal housing arranged to be ducted in return-air duct connection to furnace; generates electrostatic charge; MERV 10 rating.

D. HEPA Air Filter Units: Sheet metal housing with fan arranged to be ducted to return-air duct connection to furnace, with activated carbon prefilter, carbon VOC, and high-efficiency particulate air (HEPA) disposable filter. HEPA shall be as follows:

1. Standard: UL 586.
2. Rating: ASHRAE 52.2, 99.97 percent efficiency to 0.30-micrometer particle size.

2.6 HUMIDIFIERS

A. Minimum capacity rating indicated according to AHRI 610.

B. Media-wheel bypass type with bypass damper and motor-driven media wheel in reservoir with float-valve level control; arranged for mounting on return duct or plenum with bypass connection to supply duct.

C. Wetted-pad, continuous-drain, bypass type with bypass damper and water-flow control orifice; arranged for mounting on return duct or plenum with bypass connection to supply duct.

D. Fan-powered, wetted-pad, continuous-drain type with water-flow control orifice and motor; arranged for mounting on duct or plenum.

E. Pumped, fan-powered, wetted-pad type with reservoir-level control and pump and fan motors; arranged for mounting on duct or plenum.

F. Comply with applicable requirements in ASHRAE 62.1.

G. Capacities and Characteristics:

1. Type: As directed.
2. Water Connection Size: As directed.
3. Drain Connection Size: As directed.
4. Volts: As directed.
5. Phase: As directed.
6. Hertz: As directed.
7. Minimum Circuit Ampacity: As directed.
8. Maximum Overcurrent Protection: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install oil-fired furnaces and associated fuel and vent piping according to NFPA 31.

B. Suspended Units: Suspend from structure using threaded rods, spring hangers, and building attachments. Secure rods to unit hanger attachments. Adjust hangers so unit is level and plumb.

C. Base-Mounted Units: Secure units to substrate. Provide optional bottom closure base if required by installation conditions.

D. Controls: Install thermostats and humidistats at mounting height of 60 inches (1500 mm) above floor.

E. Wiring Method: Install control wiring in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Conceal control wiring except in unfinished spaces.

3.2 CONNECTIONS

A. Oil piping installation requirements are specified in Section 231113 "Facility Fuel-Oil Piping." Drawings indicate general arrangement of piping, fittings, and specialties. Connect oil piping with union or flange and ball or gate valve as directed.

B. Install piping adjacent to equipment to allow service and maintenance.

C. Water piping installation requirements are specified in Section 221116 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties. Connect water piping with union and ball valve.

D. Vent Connections: Connect Type L vents to furnace vent connection and extend outdoors. Type L vents and their installation requirements are specified in Section 235123 "Gas Vents."

E. Connect ducts to furnace with flexible connector. Comply with requirements in Section 233300 "Air Duct Accessories."

3.3 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:

1. Perform electrical test and visual and mechanical inspection.
2. Leak Test: After installation, charge systems with refrigerant and oil and test for leaks. Repair leaks replace lost refrigerant and oil, and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation, product capability, and compliance with requirements.
4. Verify that fan wheel is rotating in the correct direction and is not vibrating or binding.
5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Verify that vibration isolation and flexible connections properly dampen vibration transmission to structure.

END OF SECTION 235416.16

SECTION 235513.16 - GAS-FIRED DUCT HEATERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes gas-fired duct heaters.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of gas-fired duct heater.

1. Include rated capacities, operating characteristics, and accessories.

B. Shop Drawings: For gas-fired duct heaters; signed and sealed by a qualified professional engineer. Include plans, elevations, sections, and attachment details.

1. Prepare by or under the supervision of a qualified professional engineer detailing fabrication and assembly of gas-fired duct heaters, as well as procedures and diagrams.
2. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
3. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
4. Include diagrams for signal and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans, elevations, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Structural members to which equipment will be attached.
2. Items penetrating roof and the following:

a. Duct, vent, and gas piping rough-ins and connections.

B. Seismic Qualification Certificates: For gas-fired duct heaters, accessories, and components, from manufacturer.

C. Field quality-control reports.

D. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace heat exchanger of gas-fired duct heater that fails in materials or workmanship within specified warranty period.

1. Warranty Period: Two or Five years from date of Substantial Completion as directed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Gas-fired duct heaters shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. Seismic Fabrication Requirements: Fabricate and reinforce suspension attachments of gas-fired duct heaters, accessories mountings, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when gas-fired duct heater is anchored to building structure.
2. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
3. Insert requirements for Component Amplification Factor and Component Response Modification Factor.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Capacities and Characteristics:

1. Heat Exchanger: Aluminized or Stainless steel as directed.
2. Burner Material: Aluminized steel with stainless-steel inserts or Stainless steel as directed.
3. Venting: Gravity or Power vented.
4. Venting: Indoor, separated combustion, power vented.

a. Concentric, Terminal Vent Assembly: Combined combustion-air inlet and power-vent outlet with wall or roof caps. Include adapter assembly for connection to inlet and outlet pipes and flashing for wall or roof penetration.

5. Flue Outlet: As directed in diameter.
6. Gas Input: As directed.
7. Gas Output: As directed.
8. Gas Control Valve: As directed.
9. Annual Fuel Utilization Efficiency: 80 percent.
10. Minimum Airflow: As directed.
11. External Static Pressure: As directed.

2.3 MANUFACTURED UNITS

A. Description: Factory assembled, piped, and wired; and complying with ANSI Z83.8/CSA 2.6.

B. Fuel Type: Design burner for natural or propane gas having characteristics same as those of gas available at Project site as directed.

C. Indoor External Housing: Steel cabinet with integral support inserts and removable bottom arranged to serve as drain pan.

1. External Casings and Cabinets: Baked enamel or Powder coating over corrosion-resistant-treated surface as directed.

D. Outdoor External Housing: Weatherproof steel cabinet with integral support inserts and removable bottom arranged to serve as drain pan.

1. External Casings and Cabinets: Baked enamel or Powder coating over corrosion-resistant-treated surface as directed.

E. Internal Casing: Aluminized steel, arranged to contain airflow, with duct flanges at inlet and outlet.

F. Power Venter: Integral, motorized centrifugal fan interlocked with gas valve.

G. Controls: Regulated redundant gas valve containing pilot solenoid valve, electric gas valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff all in one body.

1. Ignition: Standing pilot or Electronically controlled electric spark with flame sensor as directed.
2. Fan Thermal Switch: Operates fan on heat-exchanger temperature.
3. Vent Flow Verification: Flame rollout switch or Differential pressure switch to verify open vent as directed.
4. Control transformer.
5. High Limit: Thermal switch or fuse to stop burner.
6. Thermostat: Devices and wiring are specified in Section 230923.27 "Temperature Instruments."

7. Thermostat: Single-stage, wall-mounted type with 50 to 90 deg F (10 to 32 deg C) operating range and fan on switch.
8. Thermostat: Two-stage, wall-mounted type with 50 to 90 deg F (10 to 32 deg C) operating range and fan on switch.
9. Thermostat: Single-stage type with duct-mounted sensor and 50 to 90 deg F (10 to 32 deg C) operating range.
10. Thermostat: Two-stage type with duct-mounted sensor and 50 to 90 deg F (10 to 32 deg C) operating range.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install and connect gas-fired duct heaters and associated fuel and vent features and systems according to NFPA 54 or CSA B149.1 as directed, applicable local codes and regulations, and manufacturer's written instructions.

B. Suspended Units: Suspend from substrate using threaded rods, spring hangers, and building attachments. Secure rods to unit hanger attachments. Adjust hangers so unit is level and plumb.

1. Spring hangers are specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
2. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC" for spring hangers and seismic restraints.
3. Restrain the unit to resist code-required horizontal acceleration.

3.2 CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to gas-fired duct heaters, allow space for service and maintenance.

C. Gas Piping: Comply with Section 231123 "Facility Natural-Gas Piping" or Section 231126 "Facility Liquefied-Petroleum Gas Piping" connect gas piping to gas train inlet; provide union with enough clearance for burner removal and service as directed.

D. Vent Connections: Comply with Section 235123 "Gas Vents."

E. Duct Connections: Comply with Section 233113 "Metal Ducts" or Section 233116 "Nonmetal Ducts" as directed.

F. Electrical Connections: Comply with applicable requirements in electrical Sections.

1. Install electrical devices furnished with heaters but not specified to be factory mounted.

3.3 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
2. Verify bearing lubrication.
3. Verify proper motor rotation.
4. Test Reports: Prepare a written report to record the following:

    a. Test procedures used.
    b. Test results that comply with requirements.
    c. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.

C. Gas-fired duct heater will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.4 ADJUSTING

A. Adjust initial temperature and humidity set points.

B. Adjust burner and other unit components for optimum heating performance and efficiency.

3.5 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain gas-fired duct heaters.

END OF SECTION 235513.16

SECTION 235523.13 - LOW-INTENSITY, GAS-FIRED, RADIANT HEATERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes low-intensity, gas-fired, forced-draft or draft-induced radiant heaters as directed.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings:

1. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace components of radiant heaters that fail in materials or workmanship within specified warranty period.

1. Warranty Period: All warranty periods listed below are from date of Substantial Completion.

a. Burner Assembly: Years as directed.
b. Combustion and Emitter Tubes: Years as directed.
c. Heater Controls: One Year(s) as directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. CSA certified, with CSA Seal and certification number clearly visible on units indicating compliance with ANSI Z83.20/CSA 2.34.

B. UL listed and labeled, with UL label clearly visible on units indicating compliance with ANSI Z83.20/CSA 2.34.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 FORCED-DRAFT HEATERS

A. Description: Factory-assembled, indoor or outdoor, overhead-mounted, electrically controlled, low-intensity, infrared radiant heating units using gas combustion. Heater to have all necessary factory-installed wiring and piping required prior to field installation and startup as directed.

B. Fuel Type: Design burner for natural or propane gas having characteristics same as those of gas available at Project site as directed.

C. Burner Assembly:

1. Combustion-Air Inlet: Non-ducted, unvented.
2. Combustion-Air Inlet: Ducted horizontal to outdoors through sidewall with vent caps.
3. Combustion-Air Inlet: Ducted vertical to outdoors through roof with vent caps.
4. Ignition System: As directed, with flame rod sensing capabilities and self-diagnostic control module.

D. Combustion Chamber: 4-inch- (100-mm-) diameter, 12 or 16-gage, as directed, tubing with high-emissivity, high-temperature, corrosion-resistant external finish.

E. Emitter Tube: 4-inch- (100-mm-) diameter, 12 or 16-gage, as directed, tubing with high-emissivity, high-temperature, corrosion-resistant external finish. Emitter tubing shall be equipped with baffles to maximize heating efficiency.

1. Tubing Connections: As directed.
2. 90 or 180-degree-bend emitter steel tubing with high-emissivity, high-temperature, corrosion-resistant external finish as directed.

F. Reflector: As directed with end caps. Shape to control radiation from tubing for uniform intensity at floor level with 100 percent cutoff above centerline of tubing. Reflectors or entire heater shall accommodate rotational adjustment from horizontal to a minimum 30-degree tilt from vertical.

G. Capacities and Characteristics:

1. Gas Input: As directed.
2. Gas Output: As directed.

3. Fuel-Supply Connection: As directed.
4. Power Requirements:

    a. Volts: As directed.
    b. Phase: Single or Three as directed.
    c. Hertz: 60.
    d. Full-Load Amperes: As directed.
    e. Minimum Circuit Ampacity: As directed.
    f. Maximum Overcurrent Protection: As directed.

2.3 DRAFT-INDUCED HEATERS

A. Description: Factory-assembled, indoor or outdoor, overhead-mounted, electrically controlled, low-intensity, infrared radiant heating units using gas combustion. Heater to have all necessary factory-installed wiring and piping required prior to field installation and startup as directed.

B. Fuel Type: Design burner for natural or propane gas having characteristics same as those of gas available at Project site as directed.

C. Burner Assembly:

1. Combustion-Air Inlet: Non-ducted, unvented.
2. Combustion-Air Inlet: Ducted horizontal to outdoors through sidewall with vent caps.
3. Combustion-Air Inlet: Ducted vertical to outdoors through roof with vent caps.
4. Ignition System: As directed, with flame rod sensing capabilities and self-diagnostic control module.

D. Combustion Chamber: 4-inch- (100-mm-) diameter, 12 or 16-gage, as directed, tubing with high-emissivity, high-temperature, corrosion-resistant external finish.

E. Emitter Tube: 4-inch- (100-mm-) or 3-inch- (76-mm-) diameter as directed, 12 or 16-gage, as directed, tubing with high-emissivity, high-temperature, corrosion-resistant external finish. Emitter tubing shall be equipped with baffles to maximize heating efficiency.

1. Tubing Connections: As directed.
2. 90 or 180-degree-bend emitter steel tubing with high-emissivity, high-temperature, corrosion-resistant external finish as directed.

F. Vacuum Exhaust Fan: Dynamically balanced, direct-driven, isolated from emitter tubing exhaust system by high-temperature flexible vibration isolation connector. Fan and connector to have a minimum temperature rating of 450 deg F (232 deg C).

1. Motors: General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
2. Balancing Dampers: Plate type, mounted in cast, double-flange fitting with vacuum test plug.
3. Filter: Cartridge type for mounting on burner housing.
4. Vent Termination: Vertical through roof or Horizontal though side-wall with vent caps as directed.

G. Reflector: As directed, with end caps. Shape to control radiation from tubing for uniform intensity at floor level with 100 percent cutoff above centerline of tubing. Reflectors or entire heater shall accommodate rotational adjustment from horizontal to a minimum 30-degree tilt from vertical.

H. Capacities and Characteristics:

1. Gas Input: As directed.
2. Gas Output: As directed.
3. Fuel-Supply Connection: As directed.
4. Power Requirements:

    a. Volts: As directed.
    b. Phase: Single or Three As directed.
    c. Hertz: 60.
    d. Full-Load Amperes: As directed.
    e. Minimum Circuit Ampacity: As directed.
    f. Maximum Overcurrent Protection: As directed.

5. Vacuum Exhaust Fan Motor Size: As directed.

    a. Volts: As directed.
    b. Phase: Single or Three as directed.
    c. Hertz: 60.
    d. Full-Load Amperes: As directed.
    e. Minimum Circuit Ampacity: As directed.
    f. Maximum Overcurrent Protection: As directed.

2.4 CONTROLS AND SAFETIES

A. Gas Control Valve: Single or Two-stage, regulated redundant 24-V ac gas valve that contains pilot solenoid valve, electric gas valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff all in one body as directed.

B. Failure Safeguards: 100 percent shutoff of gas flow in the event of flame or power failure.

C. Prepurge several seconds of air control system prior to burner ignition as directed.

D. Safety lockout of burner after three consecutive ignition failures or flame is not reestablished within trial ignition period as directed.

E. Blocked Vent Safety: Differential pressure switch in burner safety circuit to stop burner operation with high discharge or suction pressure.

F. Control Panel Interlock: Stops burner if panel is open.

G. Indicator Lights: "Airflow-on" and "burner-on" indicator lights.

H. Thermostat: Devices and wiring are specified in Section 230923.27 "Temperature Instruments."

I. Thermostat: Single-stage, wall-mounted type with 50 to 90 deg F (10 to 32 deg C) operating range and fan on switch.

1. Control Transformer: Integrally mounted.

J. Thermostat: Two-stage, wall-mounted type with 50 to 90 deg F (10 to 32 deg C) operating range and fan on switch.

1. Control Transformer: Integrally mounted.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Equipment Installation: Install gas-fired, radiant heaters and associated gas features and systems according to NFPA 54 or CSA B149.1.

B. Suspended Units: Suspend from substrate using chain hanger kits and building attachments or Mount to substrate using manufacturer's rigid mounting kits or custom fabricated brackets as directed.

1. Restrain the unit to resist seismic acceleration. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
2. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

C. Maintain manufacturers' recommended clearances for combustibles.

D. Gas Piping: Comply with Section 231123 "Facility Natural-Gas Piping" or Section 231126 "Facility Liquefied-Petroleum Gas Piping" as directed, connect gas piping to gas train inlet; provide union with enough clearance for burner removal and service.

1. Gas Connections: Connect gas piping to radiant heaters according to NFPA 54 or CSA B149.1 as directed.

E. Where installing piping adjacent to gas-fired, radiant heaters, allow space for service and maintenance.

F. Vent Connections: Comply with Section 233113 "Metal Ducts" and with Section 235123 "Gas Vents."

G. Electrical Connections: Comply with applicable requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

1. Install electrical devices furnished with heaters but not specified to be factory mounted.

3.2 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
2. Verify bearing lubrication.
3. Verify proper motor rotation.
4. Test Reports: Prepare a written report to record the following:

    a. Test procedures used.
    b. Test results that comply with requirements.
    c. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.

B. Gas-fired, radiant heaters will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

3.3 ADJUSTING

A. Adjust initial-temperature set points.

B. Adjust burner and other unit components for optimum heating performance and efficiency.

END OF SECTION 235523.13

SECTION 235523.16 - HIGH-INTENSITY, GAS-FIRED, RADIANT HEATERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. High-intensity, infrared, gas-fired, radiant heaters.
2. Gas-fired, outdoor, infrared patio heaters.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings:

1. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace components of radiant heaters that fail in materials or workmanship within specified warranty period.

1. Warranty Period: All warranty periods listed below are from date of Substantial Completion.

a. Ceramic Tiles: As directed.
b. Heater Components: As directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Comply with ANSI Z83.19A/CSA 2.35A or ANSI Z83.26/CSA 2.37 as directed.

1. CSA certified, with CSA Seal and certification number clearly visible on units.
2. UL listed and labeled, with UL label clearly visible on units.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 HIGH-INTENSITY, INFRARED, GAS-FIRED, RADIANT HEATERS

A. Factory-assembled, indoor or outdoor, overhead-mounted, electrically controlled, high-intensity, infrared, radiant heating units using gas combustion. Heater to have all necessary factory-installed wiring and piping required prior to field installation and startup as directed.

B. Fuel Type: Design burner for natural or propane gas having characteristics same as those of gas available at Project site as directed.

C. Burner Assembly: Modular, aluminized steel with powder-coat or similar finish or stainless-steel plenum chamber secured with stainless-steel retainers as directed.

D. Emitter: Perforated ceramic tiles.

E. Reflector: One-sided, bright-polished aluminum.

F. Ignition:

1. Manual Pilot: Self-energizing with no external power connection.
2. Direct Spark: 24/25 or 115/120-V ac, solid-state ignition module with spark electrode and flame sensor as directed.

G. Accessories:

1. Parabolic reflector or Reflector extensions as directed.
2. Wire grid or expanded metal secondary emitter for increased efficiency.
3. Protective screen and heat-deflector shield.
4. Stainless-steel flexible connector with manual valve for gas supply.
5. Hanger chain with "S" hooks.
6. Preassembled chain suspension kit.
7. Rigid mounting kits.
8. Clearance warning plaque.
9. Two-stage operation.

H. Capacities and Characteristics:

1. Gas Input: As directed.
2. Gas Output: As directed.

3. Electrical Characteristics:

    a. Volts: As directed.
    b. Phase: Single.
    c. Hertz: 60.
    d. Full-Load Amperes: As directed.
    e. Minimum Circuit Ampacity: As directed.
    f. Maximum Overcurrent Protection: As directed.

2.3 GAS-FIRED, OUTDOOR, INFRARED PATIO HEATERS

A. Factory-assembled, indoor or outdoor, overhead-mounted, electrically controlled, high-intensity, infrared, radiant heating units using gas combustion. Heater to have all necessary factory-installed wiring and piping required prior to field installation and startup as directed.

B. Fuel Type: Design burner for natural or propane gas having characteristics same as those of gas available at Project site as directed.

C. Burner Assembly: As directed Modular, aluminized steel with powder-coat, similar finish or stainless-steel plenum chamber secured with stainless-steel retainers.

D. Emitter: Perforated ceramic tiles.

E. Reflector: Polished stainless steel.

F. Ignition: Direct spark, 24/25 or 115/120-V ac, solid-state ignition module with spark electrode and flame sensor as directed.

G. Accessories:

    1. Wire grid or expanded metal secondary emitter for increased efficiency.
    2. Protective screen and heat-deflector shield.
    3. Stainless-steel flexible connector with manual valve for gas supply.
    4. Hanger chain with "S" hooks.
    5. Preassembled chain suspension kit.
    6. Rigid mounting kits.
    7. Clearance warning plaque.

H. Capacities and Characteristics:

    1. Gas Input: As directed.
    2. Gas Output: As directed.
    3. Electrical Characteristics:

        a. Volts: 24/25 or 115/120 as directed.
        b. Phase: Single.
        c. Hertz: 60.
        d. Full-Load Amperes: As directed.
        e. Minimum Circuit Ampacity: As directed.
        f. Maximum Overcurrent Protection: As directed.

2.4 CONTROLS AND SAFETIES

A. Failure Safeguards: 100 percent main gas shutoff on pilot or pilot or power failure as directed.

B. Thermostat: Devices and wiring are specified in Section 230923.27 "Temperature Instruments."

C. Thermostat: Single-stage, wall-mounted type with 50 to 90 deg F (10 to 32 deg C) operating range and fan on switch.

1. Control Transformer: Integrally mounted.

D. Thermostat: Two-stage, wall-mounted type with 50 to 90 deg F (10 to 32 deg C) operating range and fan on switch.

1. Control Transformer: Integrally mounted.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Equipment Installation: Install gas-fired, radiant heaters and associated gas features and systems according to NFPA 54 or CSA B149.1 as directed.

B. Suspended Units: Suspend from substrate using chain hanger kits and building attachments or Mount to substrate using rigid mounting kits or brackets, supplied by manufacturer or manufactured as directed.

1. Restrain the unit to resist seismic acceleration. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
2. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

C. Maintain manufacturers' recommended clearances for combustibles.

D. Gas Piping: Comply with Section 231123 "Facility Natural-Gas Piping" or Section 231126 "Facility Liquefied-Petroleum Gas Piping" connect gas piping to gas train inlet; provide union with enough clearance for burner removal and service as directed.

1. Gas Connections: Connect gas piping to radiant heaters according to NFPA 54 or CSA B149.1.

E. Where installing piping adjacent to gas-fired, radiant heaters, allow space for service and maintenance.

F. Electrical Connections: Comply with applicable requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

1. Install electrical devices furnished with heaters but not specified to be factory mounted.

G. Adjust initial-temperature set points.

H. Adjust burner and other unit components for optimum heating performance and efficiency.

3.2 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
2. Verify bearing lubrication.
3. Verify proper motor rotation.
4. Test Reports: Prepare a written report to record the following:

    a. Test procedures used.
    b. Test results that comply with requirements.
    c. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.

B. Gas-fired, radiant heaters will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 235523.16

SECTION 235533.13 - OIL-FIRED UNIT HEATERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes oil-fired unit heaters.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of oil-fired unit heater.

1. Include rated capacities, operating characteristics, and accessories.

B. Shop Drawings: For oil-fired unit heaters; signed and sealed by a qualified professional engineer. Include plans, elevations, sections, and attachment details.

1. Prepare by or under the supervision of a qualified professional engineer detailing fabrication and assembly of oil-fired unit heaters, as well as procedures and diagrams.
2. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
3. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
4. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans, elevations, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Structural members to which equipment will be attached.
2. Items penetrating roof and the following:

a. Vent and oil piping rough-ins and connections.

B. Seismic Qualification Certificates: For oil-fired unit heaters, accessories, and components, from manufacturer.

C. Field quality-control reports.

D. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace heat exchanger of oil-fired unit heater that fails in materials or workmanship within specified warranty period.

1. Warranty Period: Two or Five years from date of Substantial Completion as directed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Oil-fired unit heaters shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. Seismic Fabrication Requirements: Fabricate and reinforce suspension attachments of oil-fired unit heaters, accessories mountings, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when oil-fired unit heater is anchored to building structure.
2. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Capacities and Characteristics:

1. Oil Input: As directed.
2. Heat Output: As directed.
3. Annual Fuel Utilization Efficiency: 80 percent.
4. Minimum Airflow: As directed.
5. External Static Pressure: As directed.
6. Motor Enclosure: Totally enclosed, fan cooled.
7. Electrical Characteristics:

a. Motor Size: As directed.

b. Motor Speed: As directed.
c. Volts: As directed.
d. Phase: Single or Poly as directed.
e. Hertz: 60.
f. Full-Load Amperes: As directed.
g. Minimum Circuit Ampacity: As directed.
h. Maximum Overcurrent Protection: As directed.

2.3 MANUFACTURED UNITS

A. Description: Factory assembled, piped, and wired, and complying with UL 731.

B. Housing: Steel, with inserts for suspension mounting rods.

1. External Casings and Cabinets: Baked enamel or Powder coating over corrosion-resistant-treated surface as directed.
2. Discharge Louvers: Independently adjustable, horizontal or vertical blades as directed.
3. Discharge Nozzle: Discharge at 25 to 65 degrees (0.44 to 1.13 radians) or 50 to 90 degrees (0.87 to 1.57 radians) from horizontal as directed.

C. Accessories:

1. Oil Booster Pump: 30-gph (108-L/h) or 70-gph (252-L/h) capacity; motor and two-stage fuel unit with pressure-regulating valve and strainer.
2. Oil safety valve.
3. Outdoor Combustion-Air Adapter: Sealed to housing and fitted with quick access cover or door and fitting for terminating outdoor-air duct.

D. Heat Exchanger: Minimum 0.09-inch (2.2-mm) steel.

E. Burners: Flame-retention, pressure-atomizing, forced-draft, gun type; with integral fuel pump and electronic spark ignition and flame safety.

1. Safety Device: Oil-pressure switch.

F. Propeller Unit Fan:

1. Aluminum blades dynamically balanced and resiliently mounted.
2. Steel fan-blade guard.

G. Centrifugal Unit Fan:

1. Steel, centrifugal fan dynamically balanced and resiliently mounted.
2. Belt driven with adjustable-pitch motor sheave.

H. Motors:

1. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
2. Enclosure Materials: Rolled steel.

3. Motor Bearings: As directed.
4. Unusual Service Conditions:

    a. Ambient Temperature: As directed.
    b. Altitude: Above sea level as directed.
    c. High humidity.

5. Efficiency: Premium efficient.
6. NEMA Design: As directed.
7. Service Factor: As directed.

I. Controls: Factory piped and prewired to electrical junction box mounted on unit, including the following:

1. Control Transformer: Integrally mounted, 120- to 24-V ac.
2. Cad-cell safety system.
3. Manual reset safety.
4. Automatic Fan Thermal Switch: Fan operates with heat-exchanger temperature more than 135 deg F (58 deg C).
5. Thermostat: Devices and wiring are specified in Section 230923.27 "Temperature Instruments."
6. Wall or Unit-Mounted Thermostat as directed:

    a. Single or Two stage as directed.
    b. Fan on-off-automatic switch.
    c. 24-V ac.
    d. 50 to 90 deg F (10 to 32 deg C) operating range.

J. Electrical Connection: Factory wire motors and controls for a single electrical connection.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install and connect oil-fired unit heaters and associated fuel and vent piping according to NFPA 31 or CSA B139 as directed, applicable local codes and regulations, and manufacturer's written instructions.

3.2 EQUIPMENT MOUNTING

A. Suspended Units: Suspend from substrate using threaded rods, spring hangers, and building attachments. Secure rods to unit hanger attachments. Adjust hangers so unit is level and plumb.

1. Threaded Rods, Spring Hangers, and Building Attachments: Comply with requirements in Section 230529 "Hangers and Supports for HVAC Piping and Equipment" and Section 230548 "Vibration and Seismic Controls for HVAC."

2. Threaded Rods, Spring Hangers, Building Attachments, and Seismic Restraints: Comply with requirements in Section 230529 "Hangers and Supports for HVAC Piping and Equipment." and Section 230548 "Vibration and Seismic Controls for HVAC"
3. Anchor the unit to resist code-required horizontal acceleration.

3.3 CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to oil-fired unit heater, allow space for service and maintenance.

C. Fuel Oil Piping: Comply with Section 231113 "Facility Fuel-Oil Piping." Connect to fuel oil supply and return piping with shutoff valve and union at each connection.

D. Vent Connections: Comply with Section 235123 "Gas Vents."

E. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

F. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
2. Verify bearing lubrication.
3. Verify proper motor rotation.
4. Test Reports: Prepare a written report to record the following:

    a. Test procedures used.
    b. Test results that comply with requirements.
    c. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.

C. Oil-fired unit heater will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.5 ADJUSTING

A. Adjust initial temperature and humidity set points.

B. Adjust burner and other unit components for optimum heating performance and efficiency.

3.6 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain oil-fired unit heaters.

END OF SECTION 235533.13

SECTION 235533.16 - GAS-FIRED UNIT HEATERS

1.1 SUMMARY

A. Section includes gas-fired unit heaters.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of gas-fired unit heater.

1. Include rated capacities, operating characteristics, and accessories.

B. Shop Drawings: For gas-fired unit heaters; signed and sealed by a qualified professional engineer. Include plans, elevations, sections, and attachment details.

1. Prepare by or under the supervision of a qualified professional engineer detailing fabrication and assembly of gas-fired unit heaters, as well as procedures and diagrams.
2. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
3. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
4. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans, elevations, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Structural members to which equipment will be attached.
2. Items penetrating roof and the following:

a. Vent and gas piping rough-ins and connections.

B. Seismic Qualification Certificates: For gas-fired unit heaters, accessories, and components, from manufacturer.

C. Field quality-control reports.

D. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace heat exchanger of gas-fired unit heater that fails in materials or workmanship within specified warranty period.

1. Warranty Period: Two or Five years as directed from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Gas-fired unit heaters shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. Seismic Fabrication Requirements: Fabricate and reinforce suspension attachments of gas-fired unit heaters, accessories mountings, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" Section 15074 "Vibration and Seismic Controls for HVAC" when gas-fired unit heater is anchored to building structure.
2. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Capacities and Characteristics:

1. Gas Input: As directed.
2. Gas Output: As directed.
3. Annual Gas Utilization Efficiency: 80 percent.
4. Minimum Airflow: As directed.
5. External Static Pressure: As directed.
6. Motor Enclosure: Totally enclosed, fan cooled.
7. Electrical Characteristics:

a. Motor Size: As directed.
b. Motor Speed: Rpm as directed.
c. Volts: As directed.
d. Phase: Single or Poly as directed.
e. Hertz: 60.

f. Full-Load Amperes: As directed.
g. Minimum Circuit Ampacity: As directed.
h. Maximum Overcurrent Protection: As directed.

2.3 MANUFACTURED UNITS

A. Description: Factory assembled, piped, and wired, and complying with ANSI Z83.8/CSA 2.6.

B. Gas Type: Design burner for natural or propane gas as directed having characteristics same as those of gas available at Project site.

C. Type of Venting: Vented as directed.

D. Housing: Steel, with integral draft hood and inserts for suspension mounting rods.

1. External Casings and Cabinets: Baked enamel or Powder coating as directed over corrosion-resistant-treated surface.
2. Discharge Louvers: Independently adjustable, horizontal or vertical blades as directed.
3. Discharge Nozzle: Discharge at 25 to 65 degrees (0.44 to 1.13 radians) or 50 to 90 degrees (0.87 to 1.57 radians) from horizontal as directed.

E. Accessories:

1. Four-point suspension kit.
2. Power Venter: Centrifugal aluminized-steel fan, with stainless-steel shaft; 120-V ac motor.
3. Concentric, Terminal Vent Assembly: Combined combustion-air inlet and power-vent outlet with wall or roof caps. Include adapter assembly for connection to inlet and outlet pipes, and flashing for wall or roof penetration.

F. Heat Exchanger: Aluminized or Stainless steel as directed.

G. Burner Material: Aluminized steel with stainless-steel inserts or Stainless steel as directed.

H. Propeller Unit Fan:

1. As directed, Formed-steel or Aluminum propeller blades riveted to heavy-gage steel spider bolted to cast-iron hub, dynamically balanced, and resiliently mounted.
2. Fan-Blade Guard: Galvanized steel, complying with OSHA specifications, removable for maintenance.

I. Centrifugal Unit Fan:

1. Steel, centrifugal fan dynamically balanced and resiliently mounted.
2. Belt-Driven Drive Assembly:

a. Resiliently mounted to housing, with the following features:

1) Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
2) Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.

3) Pulleys: Cast-iron, adjustable-pitch motor pulley.

J. Motors:

1. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
2. Enclosure Materials: Rolled steel.
3. Motor Bearings: As directed.
4. Unusual Service Conditions:

    a. Ambient Temperature: As directed.
    b. Altitude: Above sea level as directed.
    c. High humidity.

5. Efficiency: Premium efficient.
6. NEMA Design: As directed.
7. Service Factor: As directed.

K. Controls: Regulated redundant gas valve containing pilot solenoid valve, electric gas valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff all in one body.

1. Gas Control Valve: As directed.
2. Ignition: Standing pilot or Electronically controlled electric spark with flame sensor as directed.
3. Fan Thermal Switch: Operates fan on heat-exchanger temperature.
4. Vent Flow Verification: Flame rollout switch or Differential pressure switch to verify open vent as directed.
5. Control transformer.
6. High Limit: Thermal switch or fuse to stop burner.
7. Thermostat: Devices and wiring are specified in Section 230923.27 "Temperature Instruments."
8. Wall or Unit-Mounted Thermostat as directed:

    a. Single or Two stage as directed.
    b. Fan on-off-automatic switch.
    c. 24-V ac.
    d. 50 to 90 deg F (10 to 32 deg C) operating range.

L. Electrical Connection: Factory wire motors and controls for a single electrical connection.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install and connect gas-fired unit heaters and associated gas and vent features and systems according to NFPA 54 or CSA B149.1 as directed, applicable local codes and regulations, and manufacturer's written instructions.

3.2 EQUIPMENT MOUNTING

A. Suspended Units: Suspend from substrate using threaded rods, spring hangers, and building attachments. Secure rods to unit hanger attachments. Adjust hangers so unit is level and plumb.

B. Substrate-Mounted Units: Provide supports connected to substrate. Secure units to supports.

1. Spring hangers and seismic restraints as directed.
2. Threaded Rods, Spring Hangers, and Building Attachments: Comply with requirements in Section 230529 "Hangers and Supports for HVAC Piping and Equipment" and Section 230548 "Vibration and Seismic Controls for HVAC."
3. Threaded Rods, Spring Hangers, Building Attachments, and Seismic Restraints: Comply with requirements in Section 230529 "Hangers and Supports for HVAC Piping and Equipment." and Section 230548 "Vibration and Seismic Controls for HVAC."
4. Anchor the unit to resist code-required horizontal acceleration.

3.3 CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to gas-fired unit heater, allow space for service and maintenance.

C. Gas Piping: Comply with Section 231123 "Facility Natural-Gas Piping" or Section 231126 "Facility Liquefied-Petroleum Gas Piping" as directed. Connect gas piping to gas train inlet; provide union with enough clearance for burner removal and service.

D. Vent Connections: Comply with Section 235123 "Gas Vents."

E. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

F. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
2. Verify bearing lubrication.
3. Verify proper motor rotation.
4. Test Reports: Prepare a written report to record the following:

a. Test procedures used.
b. Test results that comply with requirements.
c. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.

C. Gas-fired unit heater will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.5 ADJUSTING

A. Adjust initial temperature and humidity set points.

B. Adjust burner and other unit components for optimum heating performance and efficiency.

3.6 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain gas-fired unit heaters.

END OF SECTION 235533.16

SECTION 235613.13 - HEATING, FLAT-PLATE, SOLAR COLLECTORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Liquid-type, medium-temperature, glazed, heating, flat-plate, solar collectors, accessories, and mountings.

1.2 DEFINITIONS

A. FSEC: Florida Solar Energy Center.

B. SRCC: Solar Rating and Certification Corporation.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For solar collectors.

1. Include plans, elevations, sections, and mounting and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1.4 QUALITY ASSURANCE

A. Collector Certification: Certified by FSEC and SRCC.

B. Manufacturer and collector model shall be listed in "Directory of SRCC Certified Solar Collector Ratings."

1.5 WARRANTY

A. Manufacturer's Warranty: Manufacturer and Installer agree to repair or replace solar collectors that fail in materials or workmanship within specified warranty period.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Hail Resistance: Able to withstand 1-inch- (25-mm-) diameter hail.

2.2 MANUFACTURERS

2.3 COLLECTORS

A. Enclosure: Extruded aluminum.

1. Finish: As directed.

B. Back Sheet: Aluminum sheet or galvanized sheet steel.

C. Insulation: As directed.

1. Minimum Thermal Resistance (R-value): R-7.5 on the back and R-5 on the sidewalls.

D. Absorber Plate: Copper fins and tubes or aluminum fins and copper tubes or copper sheet as directed.

E. Header and Absorber Tubes: Copper, NPS 3/4 (DN 65).

F. Glazing:

1. Glazing Materials: Single-sheet, low-iron, tempered glass with textured finish on outside surface.
2. Gaskets and Grommets: UV-resistant EPDM gaskets with molded corners and extruded silicone grommets.
3. Continuous secondary silicone seal between the glass and enclosure.

G. Mounting Frame:

1. Fabricated to withstand wind loads of up to 130 mph (210 km/h) with no separation of the collector from the frame or the frame from the structure.
2. Material: Stainless steel or Extruded aluminum as directed.
3. Profile: As directed
4. Fasteners: Stainless steel.

H. Collector Certification: Certified by FSEC and SRCC.

2.4 CONTROLS

A. Comply with requirements in Section 230993.11 "Sequence of Operations for HVAC DDC."

2.5 CAPACITIES AND CHARACTERISTICS

A. Area:

1. Gross: As directed.
2. Net Aperture: As directed.

B. Dry Weight: As directed.

C. Fluid Type: Water.

D. Fluid Capacity: As directed.

E. Test Pressure: As directed.

F. Maximum Operating Temperature: As directed.

G. SRCC Certified Performance Rating:

1. Clear Day at 2000 Btu/sq. ft. per Day (23 MJ/sq. m per Day): As directed.
2. Mildly Cloudy Day at 1500 Btu/sq. ft. per Day (17 MJ/sq. m per Day): As directed.
3. Cloudy Day at 1000 Btu/sq. ft. per Day (11 MJ/sq. m per Day): As directed.

PART 3 - EXECUTION

3.1 SOLAR-COLLECTOR INSTALLATION

A. Comply with manufacturer's written instructions for collector mounting and installation.

B. Install the collector according to ASHRAE's "Active Solar Heating Systems Installation Manual."

C. Install low-voltage wiring from the sensor to the energy-management panel.

D. Mount the collector frame support feet to the structural support steel using stainless-steel bolts. Attach each pair of legs using two bolts for each.

E. Place high-temperature-resistant covers over the header to prevent contaminants from entering the headers.

F. Coat the controller's sensor with a layer of thermal paste and insert into the collector sensor port to full depth. Apply a silicone sealant around the entire perimeter of the sensor where it enters the collector. Completely cover the opening with insulation to prevent water ingress. Only use high-temperature-rated (minimum 395 deg F (202 deg C) sensors and cabling.

G. After connecting the inlet and outlet of the collectors to the system, purge the system of all air.

H. Install collectors with not less than minimum space for access and service as recommended by solar-collector manufacturer.

3.2 CONNECTIONS

A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties. "Section 15179 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to solar collectors, allow space for service and maintenance.

C. Install flexible connections on piping between collectors installed in series.

D. Install ball valve and union at inlet and outlet of solar collectors. Comply with requirements in Section 230523.12 "Ball Valves for HVAC Piping" for materials and installation requirements for ball valves and unions.

E. Connect solar collectors to lightning protection system. Comply with requirements in Section 264113 "Lightning Protection for Structures."

3.3 ADJUSTING

A. Adjust tilt angle per design requirement and adjust the collector balance valve to provide the design flow.

END OF SECTION 235613.13

SECTION 235613.19 - HEATING, SOLAR, VACUUM-TUBE COLLECTORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes liquid-type, heating, solar, vacuum-tube collectors.

1.2 DEFINITIONS

A. FSEC: Florida Solar Energy Center.

B. SRCC: Solar Rating and Certification Corporation.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For solar collectors.

1. Include plans, elevations, sections, and mounting and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Detail fabrication and assembly of heating, solar, vacuum-tube collectors.
4. Include diagrams for control wiring.

1.4 QUALITY ASSURANCE

A. Collector Certification: Certified by FSEC and SRCC.

B. Manufacturer and collector model shall be listed in SRCC's "Directory of SRCC Certified Solar Collector Ratings."

1.5 WARRANTY

A. Manufacturer's Warranty: Manufacturer and Installer agree to repair or replace solar collectors that fail in materials or workmanship within specified warranty period.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Hail Resistance: Able to withstand 1-inch- (25-mm-) diameter hail.

2.2 MANUFACTURERS

2.3 COLLECTORS

A. Enclosure: Extruded aluminum.

1. Finish: As directed.

B. Header:

1. Tubing: Aluminum-covered copper.
2. Header Assembly: Brazed with BAg45CnZn brazing material.
3. Test Pressure: Each header factory tested to 145 psig (1000 kPa).

C. Heat Pipes: Oxygen-free copper, with a minimum wall thickness of 0.027 inch (0.685 mm), Grade C10200.

D. Vacuum Tubes: Twin tubes or double wall, tempered Borosilicate glass.

1. Outer Tube: Clear, with wall thickness not less than 0.07 inch (1.8 mm) and outside diameter of 2.28 inches (57.9 mm).
2. Inside Wall Coating: Selective coating to act as the absorber.
3. Interstitial Space: Evacuated and the bottom coated with silver barium.
4. Seal: Vacuum tubes sealed to the header with UV-stabilized, high-temperature vulcanized (HTV), silicone rubber seals and rings.

E. Absorber Coating: Minimum absorptance of 0.92 percent and maximum emissivity of 8 percent.

F. Mounting Frame:

1. Fabricated to withstand wind loads of up to 130 mph (210 km/h) with no separation of the collector from the frame or the frame from the structure.
2. Material: Stainless steel or Extruded aluminum as directed.
3. Profile: As directed.
4. Fasteners: Stainless steel.

G. Flow Interruption: Panel design shall allow uninterrupted heated-fluid flow during damage and repair of absorber element.

2.4 CONTROLS

A. Comply with requirements in Section 230993.11 "Sequence of Operations for HVAC DDC."

2.5 CAPACITIES AND CHARACTERISTICS

A. Area:

1. Gross: As directed.
2. Net Aperture: As directed.

B. Dry Weight: As directed.

C. Fluid Type: Treated purified water or Evaporative fluid as directed.

D. Fluid Capacity: As directed.

E. Test Pressure: As directed.

F. Maximum Operating Temperature: As directed.

G. SRCC Certified Thermal Performance Rating:

1. Clear Day at 2000 Btu/sq. ft. (23 MJ/sq. m) per Day: As directed.
2. Mildly Cloudy Day at 1500 Btu/sq. ft. (17 MJ/sq. m) per Day: As directed.
3. Cloudy Day at 1000 Btu/sq. ft. (11 MJ/sq. m) per Day: As directed.

PART 3 - EXECUTION

3.1 SOLAR COLLECTOR INSTALLATION

A. Comply with manufacturer's written instructions for collector mounting and installation.

B. Install the collector according to ASHRAE's "Active Solar Heating Systems Installation Manual."

C. Install low-voltage wiring from the sensor to the energy-management panel.

D. Mount the collector frame support feet to the structural support steel using stainless-steel bolts. Attach each pair of legs using two bolts for each.

E. Place high-temperature-resistant covers over the header to prevent contaminants from entering the headers.

F. Coat the controller's sensor with a layer of thermal paste and insert into the collector sensor port to full depth. Apply a silicone sealant around the entire perimeter of the sensor where it enters the collector. Completely cover the opening with insulation to prevent water ingress. Only use high-temperature-rated, minimum 395 deg F (202 deg C), sensors and cabling.

G. After connecting the inlet and outlet of the collectors to the system, purge the system of all air.

H. Install collectors with not less than minimum space for access and service as recommended by solar collector manufacturer.

I. Once piping is installed and confirmed leak free and the air is purged, install the heat pipes and vacuum tubes.

3.2 CONNECTIONS

A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties. "Section 15179 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to solar collectors, allow space for service and maintenance.

C. Install flexible connections on piping between collectors installed in series.

D. Install ball valve and union at inlet and outlet of solar collectors. Comply with requirements in Section 230523.12 "Ball Valves for HVAC Piping"for materials and installation requirements for ball valves and unions.

E. Connect solar collectors to lightning protection system. Comply with requirements in Section 264113 "Lightning Protection for Structures."

3.3 ADJUSTING

A. Adjust tilt angle per design requirement and adjust the collector balance valve to provide the design flow.

END OF SECTION 235613.19

SECTION 235700 - HEAT EXCHANGERS FOR HVAC

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes shell-and-tube and plate heat exchangers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, and furnished specialties and accessories.

B. Shop Drawings: Signed and sealed by a qualified professional engineer. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Design Calculations: Calculate requirements for selecting seismic restraints and for designing bases.
2. Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment.

C. Delegated-Design Submittal: Details and design calculations for seismic restraints for heat exchangers.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Equipment room, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Tube-removal space.
2. Structural members to which heat exchangers will be attached.

B. Seismic Qualification Data: Certificates, for heat exchanger, accessories, and components, from manufacturer.

C. Source quality-control reports.

D. Field quality-control reports.

E. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of domestic-water heat exchangers that fail in materials or workmanship within specified warranty period.

1. Warranty Periods: From date of Substantial Completion.

a. Shell-and-Tube, Domestic-Water Heat Exchangers:

1) Tube Coil: One year.
2) Other Components: One year.

b. Plate, Domestic-Water Heat Exchangers:

1) Brazed-Plate Type: One year.
2) Plate-and-Frame Type: One year.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design seismic restraints for heat exchangers.

B. Seismic Performance: Heat exchangers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor is 1.5 - 1.0, as directed.

2.2 SHELL-AND-TUBE HEAT EXCHANGERS

A. Description: Packaged assembly of tank, heat-exchanger coils, and specialties.

B. Construction: Fabricate and label heat exchangers to comply with ASME Boiler and Pressure Vessel Code, Section VIII, "Pressure Vessels," Division 1.

C. Configuration: U-tube with removable bundle.

D. Shell Materials: Steel.

E. Head:

1. Materials: Cast iron.
2. Flanged and bolted to shell.

F. Tube:

1. Seamless copper tubes.
2. Tube diameter is determined by manufacturer based on service.

G. Tubesheet Materials: Steel.

H. Baffles: Steel.

I. Piping Connections:

1. NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.
2. NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.

J. Support Saddles:

1. Fabricated of material similar to shell.
2. Fabricate foot mount with provision for anchoring to support.
3. Fabricate attachment of saddle supports to pressure vessel with reinforcement strong enough to resist heat-exchanger movement during seismic event when heat-exchanger saddles are anchored to building structure.

K. Capacities and Characteristics:

1. General:

   a. Shell Diameter: As directed.
   b. Heat-Exchanger Length: As directed.
   c. Heat-Exchanger Surface Area: As directed.
   d. Number of Passes: As directed.
   e. Heat Exchanged: As directed.
   f. Operating Weight: As directed.

2. Shell Side:

   a. Fluid: Water or Steam, as directed.
   b. Working Pressure: As directed, psig (kPa).
   c. Supply Pressure: As directed, psig (kPa).
   d. Steam Flow Rate: As directed, lb/h (kg/h).
   e. Water Flow Rate: As directed, gpm (L/s).
   f. Pressure Drop: As directed, psig (kPa).
   g. Inlet Temperature: As directed, deg F (deg C).
   h. Outlet Temperature: As directed, deg F (deg C).
   i. Fouling Factor: As directed.

j. Inlet Size: As directed, NPS (DN).
k. Outlet Size: As directed, NPS (DN).

3. Tube Side:

a. Fluid: Water or Steam, as directed.
b. Working Pressure: As directed, psig (kPa).
c. Supply Pressure: As directed, psig (kPa).
d. Steam Flow Rate: As directed, lb/h (kg/h).
e. Water Flow Rate: As directed, gpm (L/s).
f. Pressure Drop: As directed, psig (kPa).
g. Inlet Temperature: As directed, deg F (deg C).
h. Outlet Temperature: As directed, deg F (deg C).
i. Fouling Factor: As directed.
j. Inlet Size: As directed, NPS (DN).
k. Outlet Size: As directed NPS (DN).

2.3 GASKETED-PLATE HEAT EXCHANGERS

A. Configuration: Freestanding assembly consisting of frame support, top and bottom carrying and guide bars, fixed and movable end plates, tie rods, individually removable plates, and one-piece gaskets.

B. Construction: Fabricate and label heat exchangers to comply with ASME Boiler and Pressure Vessel Code, Section VIII, "Pressure Vessels," Division 1.

C. Frame:

1. Capacity to accommodate 20 percent additional plates.
2. Painted carbon steel with provisions for anchoring to support.

D. Top and Bottom Carrying and Guide Bars: Painted carbon steel, aluminum, or stainless steel.

1. Fabricate attachment of heat-exchanger carrying and guide bars with reinforcement strong enough to resist heat-exchanger movement during seismic event when heat-exchanger carrying and guide bars are anchored to building structure.

E. End-Plate Material: Painted carbon steel.

F. Tie Rods and Nuts: Steel or stainless steel.

G. Plate Material: 0.024 inch (0.6 mm) thick before stamping; Type 304 stainless steel.

H. Gasket Materials: Nitrile rubber.

I. Piping Connections:

1. NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.
2. NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.

J. Enclose plates in solid aluminum removable shroud.

K. Capacities and Characteristics:

1. General:

a. Heat-Exchanger Surface Area: As directed, sq. ft. (sq. m).
b. Number of Plates: As directed.
c. Number of Passes: One.
d. Heat Exchanged: As directed, Btu/h (kW).
e. Operating Weight: As directed, lb (kg).

2. Hot Side:

a. Fluid: Water or Steam, as directed.
b. Working Pressure: As directed, psig (kPa).
c. Supply Pressure: As directed, psig (kPa).
d. Steam Flow Rate: As directed, lb/h (kg/h).
e. Water Flow Rate: As directed, gpm (L/s).
f. Pressure Drop: As directed, psig (kPa).
g. Inlet Temperature: As directed, deg F (deg C).
h. Outlet Temperature: As directed, deg F (deg C).
i. Fouling Factor: As directed.
j. Inlet Size: As directed, NPS (DN).
k. Outlet Size: As directed, NPS (DN).

3. Cold Side:

a. Fluid: Water or Steam, as directed.
b. Working Pressure: As directed, psig (kPa).
c. Supply Pressure: As directed, psig (kPa).
d. Steam Flow Rate: As directed, lb/h (kg/h).
e. Water Flow Rate: As directed, gpm (L/s).
f. Pressure Drop: As directed, psig (kPa).
g. Inlet Temperature: As directed, deg F (deg C).
h. Outlet Temperature: As directed, deg F (deg C).
i. Fouling Factor: As directed.
j. Inlet Size: As directed, NPS (DN).
k. Outlet Size: As directed, NPS (DN).

2.4 BRAZED-PLATE HEAT EXCHANGERS

A. Configuration: Brazed assembly consisting of embossed or pressed stainless-steel plates brazed together and two end plates, one with threaded nozzles and one with pattern-embossed plates.

B. Construction: Fabricate and label heat exchangers to comply with ASME Boiler and Pressure Vessel Code, Section VIII, "Pressure Vessels," Division 1.

C. End-Plate Material: Type 316 stainless steel.

D. Threaded Nozzles: Type 316 stainless steel.

E. Plate Material: Type 316 stainless steel.

F. Brazing Material: Copper.

G. Capacities and Characteristics:

1. General:

a. Heat-Exchanger Surface Area: As directed, sq. ft. (sq. m).
b. Heat Exchanged: As directed, Btu/h (kW).
c. Operating Weight: As directed lb (kg).

2. Hot Side:

a. Fluid: Water or Steam, as directed.
b. Working Pressure: As directed, psig (kPa).
c. Supply Pressure: As directed, psig (kPa).
d. Steam Flow Rate: As directed, lb/h (kg/h).
e. Water Flow Rate: As directed, gpm (L/s).
f. Pressure Drop: As directed, psig (kPa).
g. Inlet Temperature: As directed, deg F (deg C).
h. Outlet Temperature: As directed, deg F (deg C).
i. Fouling Factor: As directed.
j. Inlet Size: As directed, NPS (DN).
k. Outlet Size: As directed, NPS (DN).

3. Cold Side:

a. Fluid: Water or Steam, as directed.
b. Working Pressure: As directed, psig (kPa).
c. Supply Pressure: As directed, psig (kPa).
d. Steam Flow Rate: As directed, lb/h (kg/h).
e. Water Flow Rate: As directed, gpm (L/s).
f. Pressure Drop: As directed, psig (kPa).
g. Inlet Temperature: As directed, deg F (deg C).
h. Outlet Temperature: As directed, deg F (deg C).
i. Fouling Factor: As directed.
j. Inlet Size: As directed, NPS (DN).
k. Outlet Size: As directed, NPS (DN).

2.5 SOURCE QUALITY CONTROL

A. Factory Tests: Test and inspect heat exchangers according to ASME Boiler and Pressure Vessel Code, Section VIII, "Pressure Vessels," Division 1. Affix ASME label.

B. Hydrostatically test heat exchangers to minimum of one and one-half times pressure rating before shipment.

C. Heat exchangers will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Equipment Mounting:

1. Install heat exchangers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

B. Install shell-and-tube heat exchangers on saddle supports.

C. Install gasketed-plate heat exchanger on custom-designed wall supports anchored to structure as indicated on Drawings.

D. Install metal shroud over installed gasketed-plate heat exchanger according to manufacturer's written instructions.

E. Install brazed-plate heat exchanger on custom-designed wall supports anchored to structure as indicated on Drawings.

F. Comply with requirements for piping specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

G. Comply with requirements for steam and condensate piping specified in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 "Steam and Condensate Heating Piping Specialties."

H. Maintain manufacturer's recommended clearances for tube removal, service, and maintenance.

I. Install piping adjacent to heat exchangers to allow space for service and maintenance of heat exchangers. Arrange piping for easy removal of heat exchangers.

J. Install shutoff valves at heat-exchanger inlet and outlet connections.

K. Install relief valves on heat-exchanger heated-fluid connection and install pipe relief valves, full size of valve connection, to floor drain.

L. Install vacuum breaker at heat-exchanger steam inlet connection.

M. Install hose end valve to drain shell.

N. Install thermometer on heat-exchanger and inlet and outlet piping and install thermometer on heating-fluid inlet and outlet piping. Comply with requirements for thermometers specified in Section 230519 "Meters and Gages for HVAC Piping."

O. Install pressure gages on heat-exchanger and heating-fluid piping. Comply with requirements for pressure gages specified in Section 230519 "Meters and Gages for HVAC Piping."

3.2 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Heat exchanger will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.3 CLEANING

A. After completing system installation, including outlet fitting and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.

END OF SECTION 235700

SECTION 236200 - PACKAGED COMPRESSOR AND CONDENSER UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes packaged, air-cooled, refrigerant compressor and condenser units.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For compressor and condenser units. Include plans, elevations, sections, details, and attachments to other work.

1. Wiring Diagrams: For power, signal, and control wiring.

1.3 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Fabricate and label refrigeration system according to ASHRAE 15, "Safety Standard for Refrigeration Systems."

C. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6, "Heating, Ventilating, and Air-Conditioning."

1.4 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of compressor and condenser units that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Compressor failure.
b. Condenser coil leak.

2. Warranty Period: Five - Ten years from date of Substantial Completion, as directed.
3. Warranty Period (Compressor Only): Five, Seven or Ten, as directed, years from date of Substantial Completion.
4. Warranty Period (Components Other Than Compressor): Five - Ten years from date of Substantial Completion, as directed.

5. Warranty Period (Condenser Coil Only): Five years from date of Substantial Completion, as completion.

PART 2 - PRODUCTS

2.1 COMPRESSOR AND CONDENSER UNITS, AIR COOLED, 1 TO 5 TONS (3.5 TO 17.6 kW)

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following or available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Description: Factory assembled and tested; consisting of compressor, condenser coil, fan, motors, refrigerant reservoir, and operating controls.

C. Compressor: Scroll, hermetically sealed, with rubber vibration isolators.

1. Motor: Single or two speed and includes thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
2. Two-Speed Compressor: Include manual-reset, high-pressure switch and automatic-reset, low-pressure switch.
3. Accumulator: Suction tube.

D. Refrigerant: R-22, R-407C or R-410A, as directed.

E. Refrigerant: R-407C or R-410A.

F. Condenser Coil: Seamless copper-tube, aluminum-fin coil; circuited for integral liquid subcooler, with removable drain pan and brass service valves with service ports.

G. Condenser Fan: Direct-drive, aluminum propeller fan; with permanently lubricated, totally enclosed fan motor with thermal-overload protection and ball bearings.

H. Accessories:

1. Coastal Filter: Mesh screen to protect condenser coil from salt damage.
2. Crankcase heater.
3. Cycle Protector: Automatic-reset timer to prevent rapid compressor cycling.
4. Electronic programmable thermostat or Low-voltage thermostat and subbase to control compressor and condenser unit and evaporator fan.
5. Evaporator Freeze Thermostat: Temperature-actuated switch that stops unit when evaporator reaches freezing temperature.
6. Filter-dryer.
7. High-Pressure Switch: Automatic-reset switch cycles compressor off on high refrigerant pressure.
8. Liquid-line solenoid.
9. Low-Ambient Controller: Cycles condenser fan to permit operation down to 30 deg F (minus 1 deg C), 0 deg F (minus 18 deg C) with time-delay relay to bypass low-pressure switch.

10. Low-Ambient Controller: Controls condenser fan speed to permit operation down to minus 20 deg F (minus 29 deg C) with time-delay relay to bypass low-pressure switch.
11. Low-Pressure Switch: Automatic-reset switch cycles compressor off on low refrigerant pressure.
12. PE mounting base.
13. Precharged and insulated suction and liquid tubing.
14. Sound Hood: Wraps around sound attenuation cover for compressor.
15. Thermostatic expansion valve.
16. Time-Delay Relay: Continues operation of evaporator fan after compressor shuts off.
17. Reversing valve.

I. Unit Casing: Galvanized steel, finished with baked enamel; with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Mount service valves, fittings, and gage ports on exterior of casing.

J. Capacities and Characteristics:

1. Compressor and Condenser Unit:

    a. Full-Load Cooling Capacity: As directed, MBh (kW).
    b. Energy-Efficiency Ratio (EER): As directed.
    c. Seasonal Energy-Efficiency Ratio (SEER): As directed.
    d. Coefficient of Performance (COP): As directed.
    e. Compressor Suction Temperature: As directed, deg F (deg C).
    f. Capacity Steps: As directed.

2. Refrigerant Connections:

    a. Liquid Pipe Size: As directed, NPS (DN).
    b. Suction Pipe Size: As directed, NPS (DN).

3. Compressor:

    a. Rated-Load Amperes: As directed.
    b. Locked-Rotor Amperes: As directed.
    c. Power Input: As directed.

4. Air-Cooled Condenser:

    a. Ambient-Air Temperature: As directed, deg F (deg C).
    b. Airflow: As directed, cfm (L/s).
    c. Number of Condenser Fans: As directed.
    d. Condenser Fan Motor Size: As directed.

5. Electrical Characteristics:

    a. Kilowatt Input: As directed.
    b. Volts: As directed.
    c. Phase: As directed.
    d. Hertz: As directed.

e. Maximum Circuit Ampacity: As directed.
f. Maximum Instantaneous Current Flow during Startup: As directed.
g. Maximum Overcurrent Protection: As directed.

2.2 COMPRESSOR AND CONDENSER UNITS, AIR COOLED, 6 TO 120 TONS (21 TO 422 kW)

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following or available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Description: Factory assembled and tested, air cooled; consisting of casing, compressors, condenser coils, condenser fans and motors, and unit controls.

C. Compressor: Hermetic scroll compressor designed for service with crankcase sight glass, crankcase heater, and backseating service access valves on suction and discharge ports.

1. Capacity Control: On-off compressor cycling or Hot-gas bypass.

D. Compressor: Hermetic or semihermetic rotary screw compressor designed for service with crankcase sight glass, crankcase heater, and backseating service access valves on suction and discharge ports.

1. Capacity Control: As directed.

E. Refrigerant: R-22, R-407C, R-410A or R-134a, as directed.

F. Refrigerant: R-407C, R-410A, or R-134a.

G. Condenser Coil: Seamless copper-tube, aluminum-fin coil, including subcooling circuit and backseating liquid-line service access valve. Factory pressure test coils, then dehydrate by drawing a vacuum and fill with a holding charge of nitrogen or refrigerant.

H. Condenser Fan: Propeller-type vertical discharge; either directly or belt driven. Include the following:

1. Permanently lubricated, ball-bearing totally enclosed motors.
2. Separate motor for each fan.
3. Dynamically and statically balanced fan assemblies.

I. Operating and safety controls include the following:

1. Manual-reset, high-pressure cutout switches.
2. Automatic-reset, low-pressure cutout switches.
3. Low-oil-pressure cutout switch.
4. Compressor-winding thermostat cutout switch.
5. Three-leg, compressor-overload protection.
6. Control transformer.
7. Magnetic contactors for compressor and condenser fan motors.
8. Timer to prevent excessive compressor cycling.

J. Accessories:

1. Electronic programmable thermostat or Low-voltage thermostat and subbase to control compressor and condenser unit and evaporator fan.
2. Low-Ambient Controller: Cycles condenser fan to permit operation down to 0 deg F (minus 18 deg C) with time-delay relay to bypass low-pressure switch.
3. Low-Ambient Controller: Controls condenser fan speed to permit operation down to minus 20 deg F (minus 29 deg C) with time-delay relay to bypass low-pressure switch.
4. Gage Panel: Package with refrigerant circuit suction and discharge gages.
5. Hot-gas bypass kit.
6. Part-winding-start timing relay, circuit breakers, and contactors.
7. Reversing valve.

K. Unit Casings: Designed for outdoor installation with weather protection for components and controls and with removable panels for required access to compressors, controls, condenser fans, motors, and drives. Additional features include the following:

1. Steel, galvanized or zinc coated, for exposed casing surfaces; treated and finished with manufacturer's standard paint coating.
2. Perimeter base rail with forklift slots and lifting holes to facilitate rigging.
3. Gasketed control panel door.
4. Nonfused disconnect switch, factory mounted and wired, for single external electrical power connection.
5. Condenser coil hail guard or grille.

L. Capacities and Characteristics:

1. Compressor and Condenser Unit:

    a. Full-Load Cooling Capacity: As directed, MBh (kW).
    b. Energy-Efficiency Ratio (EER): As directed.
    c. Seasonal Energy-Efficiency Ratio (SEER): As directed.
    d. Coefficient of Performance (COP): As directed.
    e. Compressor Suction Temperature: As directed, deg F (deg C).
    f. Capacity Steps: As directed.

2. Refrigerant Connections:

    a. Liquid Pipe Size: As directed, NPS (DN).
    b. Suction Pipe Size: As directed, NPS (DN).

3. Compressors:

    a. Number of Compressors: As directed.
    b. Rated-Load Amperes: As directed.
    c. Locked-Rotor Amperes: As directed.
    d. Power Input: As directed.

4. Air-Cooled Condenser:

    a. Ambient-Air Temperature: As directed deg F (deg C).

b. Airflow: As directed cfm (L/s).
c. Number of Condenser Fans: As directed
d. Condenser Fan Motor Size: As directed.

5. Electrical Characteristics:

a. Kilowatt Input: As directed.
b. Volts: As directed.
c. Phase: As directed.
d. Hertz: As directed.
e. Maximum Circuit Amperes: As directed.
f. Maximum Instantaneous Current Flow during Startup: As directed.
g. Maximum Overcurrent Protection: As directed.

2.3 SOURCE QUALITY CONTROL

A. Energy Efficiency: Equal to or greater than prescribed by ASHRAE/IESNA 90.1, "Energy Efficient Design of New Buildings except Low-Rise Residential Buildings," Section 6, "Heating, Ventilating, and Air-Conditioning."

B. Testing Requirements: Factory test sound-power-level ratings according to ARI 270 - ARI 370.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install unit level and plumb, firmly anchored in locations indicated.

B. Install roof-mounting units on equipment supports specified in Section 077200 "Roof Accessories."

C. Equipment Mounting:

1. Install compressor and condenser units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

D. Maintain manufacturer's recommended clearances for service and maintenance.

E. Loose Components: Install electrical components, devices, and accessories that are not factory mounted.

3.2 CONNECTIONS

A. Comply with requirements for piping in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.

C. Connect precharged refrigerant tubing to unit's quick-connect fittings. Install tubing so it does not interfere with access to unit. Install furnished accessories.

D. Connect refrigerant piping to air-cooled compressor and condenser units; maintain required access to unit. Install furnished field-mounted accessories. Refrigerant piping and specialties are specified in Section 232300 "Refrigerant Piping."

3.3 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test. Certify compliance with test parameters.
2. Leak Test: After installation, charge system with refrigerant and oil and test for leaks. Repair leaks replace lost refrigerant and oil, and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor operation and unit operation, product capability, and compliance with requirements.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
5. Verify proper airflow over coils.

C. Verify that vibration isolation and flexible connections properly dampen vibration transmission to structure.

END OF SECTION 236200

SECTION 236313 - AIR-COOLED REFRIGERANT CONDENSERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes packaged, air-cooled refrigerant condensers for outdoor or indoor installation.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For air-cooled refrigerant condensers. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: For power, signal, and control wiring.

1.3 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.4 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 MANUFACTURED UNITS

A. Description: Factory assembled and tested; consisting of casing, condenser coils, condenser fans and motors, and unit controls.

B. Refrigerant: R-22, R-407C or R-410A, as directed.

C. Refrigerant: R-407C or R-410A.

D. Condenser Coil: Factory tested at 425 psig (2930 kPa).

1. Tube: As directed.
2. Coil Fin: Aluminum or Steel.
3. Coating: As directed.
4. Circuit: To match compressors with liquid subcooling coil.

E. Condenser Fans and Drives: Propeller fans with aluminum or galvanized-steel, galvanized-steel or stainless-steel fan blades, as directed, for vertical or horizontal air discharge; directly driven with permanently lubricated or grease-lubricated ball-bearing motors with integral current- and thermal-overload protection.

1. Weather-proof motors with rain shield and shaft slinger.
2. Extend grease lines to outside of casing.

F. Condenser Fans and Drives: Forward-curved centrifugal fans for vertical or horizontal air discharge.

1. Fan on steel shaft with self-aligning ball bearings.
2. V-belt drive with minimum of two belts; variable pitch drive pulley.
3. Motor mounted on adjustable slide base.

G. Operating and Safety Controls: Include condenser fan motor thermal and overload cutouts; 115-V control transformer, if required; magnetic contactors for condenser fan motors and a non-fused factory-mounted and -wired disconnect switch for single external electrical power connection.

1. Fan Cycling Control: Head pressure switches or Ambient thermostats.

H. Casings: Galvanized or zinc-coated steel treated and finished with manufacturer's standard paint coating, Aluminum or Stainless steel, as directed, designed for outdoor installation with weather protection for components and controls, and with the following:

1. Removable panels for access to controls, condenser fans, motors, and drives.
2. Plated or Stainless steel fan guards.
3. Lifting eyes.
4. Removable legs, Height as directed.

2.3 CAPACITIES AND CHARACTERISTICS

A. Heat-Rejection Capacity: As directed, MBh (kW).

B. Condensing Temperature:

1. Saturated Discharge Temperature: As directed, deg F (deg C).
2. Saturated Suction Temperature: As directed, deg F (deg C).
3. Subcooling Temperature: As directed, deg F (deg C).

C. Ambient-Air Temperature: As directed, deg F (deg C).

D. Refrigerant Pipe Connections:

1. Number of Connections: As directed.
2. Liquid Pipe Size: As directed, NPS (DN).
3. Suction Pipe Size: As directed, NPS (DN).

E. Coils:

1. Arrangement: As directed.
2. Number of Rows: As directed.
3. Fin Spacing: 12 fins/inch (2 mm), as directed.
4. Total Face Area: As directed, sq. ft. (sq. m).

F. Fans:

1. Number of Condenser Fans: As directed.
2. Diameter: As directed (mm).
3. RPM: As directed.
4. Total Airflow: As directed cfm (L/s).
5. Condenser Fan Motor Size: As directed.

G. Electrical Characteristics:

1. Kilowatts: As directed.
2. Volts: As directed.
3. Phase: As directed.
4. Hertz: As directed.
5. Maximum Circuit Ampacity: As directed.
6. Maximum Instantaneous Current Flow during Startup: As directed.
7. Maximum Overcurrent Protection: As directed.

2.4 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Enclosure Type: Totally enclosed, fan cooled.
2. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
3. Mount unit-mounted disconnect switches on exterior or interior of unit.

2.5 SOURCE QUALITY CONTROL

A. Testing Requirements: Factory test sound-power-level ratings according to ARI 270.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install unit level and plumb, firmly anchored in locations indicated; maintain manufacturer's recommended clearances.

B. Equipment Mounting:

1. Install air-cooled condenser refrigerant condensers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

C. Maintain manufacturer's recommended clearances for service and maintenance.

D. Loose Components: Install electrical components, devices, and accessories that are not factory mounted.

3.2 CONNECTIONS

A. Piping installation requirements are specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to machine to allow service and maintenance.

C. Refrigerant Piping: Connect piping to unit with pressure relief, service valve, filter-dryer, and moisture indicator on each refrigerant-circuit liquid line. Refrigerant piping and specialties are specified in Section 232300 "Refrigerant Piping."

3.3 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:

1. Perform electrical test and visual and mechanical inspection.
2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation. Complete manufacturer's starting checklist.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
5. Verify proper airflow over coils.

C. Verify that vibration isolation and flexible connections properly dampen vibration transmission to structure.

D. Air-cooled refrigerant condensers will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

END OF SECTION 236313

SECTION 236333 - EVAPORATIVE REFRIGERANT CONDENSERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes factory-assembled and -tested, forced or induced draft evaporative refrigerant condensers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For evaporative refrigerant condensers.

1. Include plans, elevations, sections, and mounting or attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

D. Delegated-Design Submittal: For evaporative refrigerant condensers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail mounting, securing, and flashing of roof curb to roof structure. Indicate coordinating requirements with roof membrane system.
2. Wind and Seismic Restraint Details: Detail fabrication and attachment of restraints and snubbers. Show anchorage details and indicate quantity, diameter, and depth of penetration of anchors.
3. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include handrails, ladders, and equipment mounting frame.
4. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans, elevations, and other details, drawn to scale, using input from Installers of the items involved.

B. Seismic Qualification Data: Certificates for evaporative refrigerant condensers, accessories, and components, from manufacturer.

C. Field quality-control reports.

D. Sample warranties.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.

B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.

C. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of evaporative refrigerant condensers that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five year(s) from date of Substantial Completion, as directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. ASME Compliance: Fabricate and label heat-exchanger coils to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

C. Comply with NFPA 70.

D. ASHRAE Compliance:

1. Fabricate and label refrigeration system to comply with ASHRAE 15.
2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1.

E. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.

F. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design evaporative refrigerant condenser support structure and seismic restraints and wind restraints.

G. Structural Performance: Evaporative refrigerant condenser support structure shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.

1. Dead Loads: As directed.
2. Live Loads: As directed.
3. Roof Loads: As directed.
4. Snow Loads: As directed.
5. Seismic Loads: As directed.
6. Wind Loads: As directed.
7. Deflection Limits: Design system to withstand design loads without deflections greater than the following:

    a. As directed.

H. Wind-Restraint Performance:

1. Basic Wind Speed: As directed.
2. Building Classification Category: I, II, III, IV or as directed.
3. Minimum 10 lb/sq. ft. (48.8 kg/sq. m) multiplied by the maximum area of the mechanical component projected on a vertical plane that is normal to the wind direction, and 45 degrees either side of normal.

I. Seismic Performance: Evaporative refrigerant condenser shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: 1.5 - 1.0.

2.2 FORCED-DRAFT EVAPORATIVE REFRIGERANT CONDENSERS

A. Casing and Frame:

1. Casing and Frame Material: As directed.
2. Frame Material: As directed.
3. Fasteners: Galvanized or Stainless steel.
4. Joints and Seams: Sealed watertight.
5. Welded Connections: Continuous and watertight.

B. Collection Basin: Configure evaporative refrigerant condenser for installation with a field-constructed collection basin.

C. Collection Basin:

1. Material: FRP with UV inhibitors, Galvanized steel, ASTM A653/A653M, G210 (Z600) coating or Galvanized steel, ASTM A653/A653M, G235 (Z700) coating, as directed.
2. Strainer: Removable stainless steel strainer with openings smaller than nozzle orifices.

3. Overflow and drain connections.
4. Makeup water connection.

D. Mechanically Operated, Collection Basin Water-Level Control: Manufacturer's standard adjustable, mechanical float assembly and valve.

E. Electric Basin Heater:

1. Stainless Steel Electric Immersion Heaters: Installed in a threaded coupling on the side of the collection basin.
2. Heater Control Panel: Mounted on the side of each evaporative refrigerant condenser cell.
3. Enclosure: NEMA 250, Type 3R, Type 4 or Type 4X, as directed.
4. Magnetic contactors controlled by a temperature sensor/controller to maintain collection basin water-temperature set point. Water-level probe shall monitor evaporative refrigerant condenser water level and de-energize the heater when the water reaches low-level set point.
5. Control-circuit transformer with primary and secondary side fuses.
6. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
7. Single-point, field-power connection to a fused disconnect switch, non-fused disconnect switch or circuit breaker, as directed and heater branch circuiting complying with NFPA 70.
8. Factory Wiring Method: Metal raceway for factory-installed wiring outside of enclosures, except make connections to each electric basin heater with liquid tight conduit.

F. Water Distribution Piping: Main header and lateral branch piping designed for even distribution over heat exchanger coil throughout the flow range, without the need for balancing valves and for connecting individual, removable, non-clogging spray nozzles.

1. Pipe Material: Fiberglass, PVC or Galvanized steel, as directed.
2. Spray Nozzle Material: Plastic, Polypropylene or PVC, as directed.
3. Piping Supports: Corrosion-resistant hangers and supports designed to resist movement during operation and shipment.

G. Recirculating Piping: PVC, with connections for separately provided, remote spray pump.

H. Spray Pump: Close-coupled, end-suction, single-stage, bronze-fitted centrifugal pump; with suction strainer, flow balancing valve, and mechanical seal suitable for outdoor service.

1. General Requirements for Spray Pump Motor: Comply with NEMA designation and temperature-rating requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment" and not indicated below.
2. Motor Enclosure: As directed.
3. Energy Efficiency: Comply with ASHRAE/IES 90.1 or NEMA Premium Efficient.
4. Service Factor: 1.0 - 1.15, as directed.

I. Heat-Exchanger Coils:

1. Tube and Tube Sheet Materials: Copper tube with stainless steel sheet.
2. Heat-Exchanger Arrangement: Serpentine tubes, Serpentine tubes with removable cover plate on inlet and outlet headers or Straight tubes with removable header cover plate on

both ends of heat exchanger for straight-through access to each tube, as directed; and sloped for complete drainage of fluid by gravity.

3. ASME Compliance: Designed, manufactured, and tested according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, and bearing ASME "U" stamp; and sloped for complete drainage of fluid by gravity.
4. Field Piping Connections: Vent, supply, and return suitable for mating to ASME B16.5, Class 150 flange.

J. Removable Drift Eliminator:

1. Material: FRP or PVC; with maximum flame-spread index of 5 – 25, as directed, according to ASTM E84.
2. UV Treatment: Inhibitors to protect against damage caused by UV radiation.
3. Configuration: Multipass, designed and tested to reduce water carryover to achieve performance indicated.

K. Removable Air-Intake Screens: Galvanized steel wire mesh.

L. Centrifugal Fan: Double-width, double-inlet fan with forward-curved blades, statically and dynamically balanced at the factory after assembly.

1. Number of Fans: Each evaporative refrigerant condenser cell shall have a single fan or multiple fans connected to a common shaft.
2. Fan Wheel and Housing Materials: Galvanized steel.
3. Fan Shaft: Steel, coated to resist corrosion.
4. Protective Enclosure: Removable, galvanized-steel, wire-mesh screens complying with OSHA regulations.
5. Fan Shaft Bearings: Self-aligning, grease-lubricated ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of 40,000 - 50,000 hours.
6. Grease Fittings for Bearings: Extended lubrication lines to an easily accessible location.

M. Belt Drive:

1. Service Factor: 1.5 based on motor nameplate horsepower.
2. Sheaves: Fan and motor shafts shall have taper-lock sheaves fabricated from corrosion-resistant materials.
3. Belt: Multiple V-belt design with a matched set of cogged belts.
4. Belt: One-piece, multigrooved, solid-back belt.
5. Belt Material: Oil resistant, nonstatic conducting, and constructed of neoprene polyester cord.
6. Belt-Drive Guard: Comply with OSHA regulations.

N. Fan Motor:

1. General Requirements for Fan Motors: Comply with NEMA designation and temperature-rating requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment" and not indicated below.
2. Motor Enclosure: As directed.
3. Energy Efficiency: Comply with ASHRAE/IES 90.1 or NEMA Premium Efficient.

4. Service Factor: 1.15.
5. Insulation: Class F or Class H.
6. Variable-Speed Motors: Inverter-duty rated according to NEMA MG-1.
7. Dual-Fan Motors: Two single-speed motors, one sized for full-load operating conditions and one sized for part-load operating conditions, with two sets of drives and belts.
8. Severe-duty rating with the following features:

    a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
    b. Double-shielded, vacuum-degassed bearings lubricated with premium moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C).
    c. Internal heater automatically energized when motor is de-energized.

9. Motor Base: Adjustable, or other suitable provision for adjusting belt tension.
10. Discharge Dampers: Positive-closure, automatic, isolation dampers with electric actuators.

    a. Provide field power and controls to open dampers when pump is energized, and close dampers when pump is de-energized.

O. Capacity-Control Dampers: Galvanized-steel or Stainless steel dampers, with linkages, electric operator, controller, limit switches, transformer, and weatherproof enclosure.

P. Vibration Switch: For each fan drive.

1. Enclosure: NEMA 250, Type 4 or Type 4X.
2. Vibration Detection: Sensor with a field-adjustable acceleration sensitivity set point in a range of 0 to 1 g and frequency range of 0 to 3000 cycles per minute. Evaporative refrigerant condenser manufacturer shall recommend switch set point for proper operation and protection.
3. Provide switch with manual-reset button for field connection to a DDC system for HVAC and hardwired connection to fan motor electrical circuit.
4. Switch shall, on sensing excessive vibration, signal an alarm through the DDC system for HVAC and shut down the fan.

Q. Controls: Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."

R. Control Package: Factory installed and wired, and functionally tested at factory before shipment.

1. NEMA 250, Type 3R, Type 4 or Type 4X enclosure with removable internally mounted backplate.
2. Control-circuit transformer with primary and secondary side fuses.
3. Terminal blocks with numbered and color-coded wiring to match wiring diagram. Spare wiring terminal block for connection to external controls or equipment.
4. Microprocessor-based controller for automatic control of fan and spray pump based on evaporative refrigerant condenser leaving-water temperature with control features to improve operating efficiency based on outdoor ambient wet-bulb temperature by using adaptive logic.

5. Fan motor sequencer for multiple-cell, two-speed, and two-motor applications with automatic lead-stage rotation.
6. Collection basin, electric/electronic level controller, complying with requirements in "Electric/Electronic, Collection Basin Water-Level Controller with Solenoid Valve" Paragraph above.
7. Electric basin heaters with temperature-control and low-water-level safety switch for each cell, complying with requirements in "Electric Basin Heater" Paragraph above.
8. Vibration switch for each fan, complying with requirements in "Vibration Switch" Paragraph above.
9. Controls and wiring for two-motor, single-fan drives shall be same as that for two-speed, two-winding motors.
10. Power and controls to open discharge hood dampers when pump is energized and close dampers when pump is de-energized.
11. Single-point, field-power connection to a fused disconnect switch, nonfused disconnect switch, circuit breaker for each evaporative refrigerant condenser cell, as directed.

    a. Branch power circuit to each motor and electric basin heater and to controls with a disconnect switch or circuit breaker.
    b. NEMA-rated motor controller, hand-off-auto switch, and overcurrent protection for each motor. Provide variable-frequency controller with manual bypass and line reactors for each variable-speed motor indicated.

12. Factory-installed wiring outside of enclosures shall be in metal raceway, except make connections to each motor and electric basin heater with liquid tight conduit.
13. Visual indication of status and alarm with momentary test push button for each motor.
14. Audible alarm and silence switch.
15. Visual indication of elapsed run time graduated in hours for each motor.
16. Evaporative refrigerant condenser shall have hardware to enable DDC system for HVAC to remotely monitor and display the following:

    a. Operational status of each motor.
    b. Position of dampers.
    c. Evaporative refrigerant condenser leaving-fluid temperature.
    d. Fan vibration alarm.
    e. Collection basin high, low or high- and low, water-level alarms, as directed.

S. Personnel Access Components:

1. Doors: Large enough for personnel to access evaporative refrigerant condenser internal components from both evaporative refrigerant condenser end walls. Doors shall be operable from both sides of the door.
2. External Ladders with Safety Cages: Aluminum, galvanized- or stainless steel, fixed ladders with ladder extensions to access external platforms and top of evaporative refrigerant condenser from adjacent grade without the need for portable ladders. Comply with 29 CFR 1910.27.
3. External Platforms with Handrails: Aluminum, FRP, or galvanized-steel bar grating at evaporative refrigerant condenser access doors when evaporative refrigerant condensers are elevated and not accessible from grade.

4. Handrail: Aluminum, galvanized steel, or stainless steel complete with kneerail and toeboard at platforms and around top of evaporative refrigerant condenser. Comply with 29 CFR 1910.23.
5. Internal Platforms: Aluminum, FRP, or galvanized-steel bar grating.

    a. Spanning the collection basin from one end of evaporative refrigerant condenser to the other and positioned to form a path between the access doors. Platform shall be elevated, so that all parts are above the high-water level of the collection basin.

T. Capacities and Characteristics:

1. Number of Cells: As directed.
2. Maximum Drift Loss: 0.005 percent of design water flow, as directed.
3. Heat-Exchanger Coil(s):

    a. Refrigerant Type: R-407C, R-410A or HFC-134a.
    b. Minimum Heat Rejection: As directed, Btu/h (kW).
    c. Condensing Temperature: As directed, deg F (deg C).
    d. Entering-Air Wet-Bulb Temperature: As directed, deg F (deg C).

4. Fan Location: Bottom or Side.
5. Fan Motor:

    a. Type: As directed.
    b. Horsepower/Cell: As directed.
    c. Full-Load Ampacity: As directed.
    d. Minimum Circuit Ampacity: As directed.
    e. Maximum Overcurrent Protection Device: As directed.
    f. Electrical Characteristics: 208, 240, 480 V, as directed ac, three phase, 60 Hz.

6. Spray Pump and Motor:

    a. Water Flow/Cell: As directed, gpm (L/s).
    b. Horsepower/Cell: As directed.
    c. Full-Load Ampacity: As directed.
    d. Minimum Circuit Ampacity: As directed.
    e. Maximum Overcurrent Protection Device: As directed.
    f. Electrical Characteristics: 120, 208, 240, 277, 480, V ac, single or three phase, 60 Hz, as directed.

7. Sound Pressure Level: As directed at distance in feet (m) when measured according to CTI ATC 128.
8. Basin Heater:

    a. Basin Water Temperature: 40 deg F (5 deg C), as directed.
    b. Outdoor Ambient Temperature: 0 deg F (Minus 18 deg C) or Minus 20 deg F (Minus 29 deg C).
    c. Capacity/Cell: As directed, kW.
    d. Full-Load Ampacity: As directed, A.
    e. Minimum Circuit Ampacity: As directed, A.
    f. Maximum Overcurrent Protection Device: As directed, A.

g. Electrical Characteristics: 208, 240, 480V ac, three phase, 60 Hz, as directed.
h. Capacity/Cell: As directed, MBtu/h (kW).
i. Entering-Fluid Temperature: As directed, deg F (deg C).
j. Fluid Flow Rate: As directed, gpm (L/s).
k. Fluid Pressure Drop: As directed, psig (kPa).
l. Capacity/Cell: As directed. MBtu/h (kW).
m. Steam Flow: As directed, lb/h (L/s).
n. Steam Pressure: As directed, psig (kPa).

2.3 INDUCED-DRAFT EVAPORATIVE REFRIGERANT CONDENSERS

A. Casing and Frame:

1. Casing and Frame Material: As directed.
2. Frame Material: As directed.
3. Fasteners: Galvanized or Stainless steel.
4. Joints and Seams: Sealed watertight.
5. Welded Connections: Continuous and watertight.

B. Collection Basin: Configure evaporative refrigerant condenser for installation with a field-constructed collection basin.

C. Collection Basin:

1. Material: Galvanized steel, ASTM A653/A653M, G210 (Z600) coating or Galvanized steel, ASTM A653/A653M, G235 (Z700) coating.
2. Overflow and drain connections.
3. Makeup water connection.

D. Mechanically Operated, Collection Basin Water-Level Control: Manufacturer's standard adjustable, mechanical float assembly and valve.

E. Electric Basin Heater:

1. Stainless Steel Electric Immersion Heaters: Installed in a threaded coupling on the side of the collection basin.
2. Heater Control Panel: Mounted on the side of each evaporative refrigerant condenser cell.
3. Enclosure: NEMA 250, Type 3R, Type 4 or Type 4X, as directed.
4. Magnetic contactors controlled by a temperature sensor/controller to maintain collection basin water-temperature set point. Water-level probe shall monitor evaporative refrigerant condenser water level and de-energize the heater when the water reaches low-level set point.
5. Control-circuit transformer with primary and secondary side fuses.
6. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
7. Single-point, field-power connection to a fused disconnect switch or non-fused disconnect switch or circuit breaker, as directed, and heater branch circuiting, complying with NFPA 70.
8. Factory Wiring Method: Metal raceway for factory-installed wiring outside of enclosures, except make connections to each electric basin heater with liquid tight conduit.

F. Pressurized Water Distribution Piping: Main header and lateral branch piping designed for even distribution over heat-exchanger coil throughout the flow range without the need for balancing valves and for connecting individual, removable, non-clogging spray nozzles.

1. Pipe Material: Fiberglass, PVC or Galvanized steel, as directed.
2. Spray Nozzle Material: Plastic, Polypropylene or PVC, as directed.
3. Piping Supports: Corrosion-resistant hangers and supports to resist movement during operation and shipment.

G. Recirculating Piping: PVC, with connections for separately provided, remote spray pump.

H. Spray Pump: Close-coupled, end-suction, single-stage, bronze-fitted centrifugal pump; with suction strainer, flow balancing valve, and mechanical seal suitable for outdoor service.

1. General Requirements for Spray Pump Motor: Comply with NEMA designation and temperature-rating requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment" and not indicated below.
2. Motor Enclosure: As directed.
3. Energy Efficiency: Comply with ASHRAE/IES 90.1 or NEMA Premium Efficient.
4. Service Factor: 1.0 - 1.15.

I. Heat-Exchanger Coils:

1. Tube and Tube Sheet Materials: Copper tube with stainless steel sheet.
2. Heat-Exchanger Arrangement: Serpentine tubes, Serpentine tubes with removable cover plate on inlet and outlet headers or Straight tubes with removable header cover plate on both ends of heat exchanger for straight-through access to each tube; and sloped for complete drainage of fluid by gravity.
3. ASME Compliance: Designed, manufactured, and tested according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, and bearing ASME "U" stamp; and sloped for complete drainage of fluid by gravity.
4. Field Piping Connections: Vent, supply, and return suitable for mating to ASME B16.5, Class 150 flange.

J. Removable Drift Eliminator:

1. Material: FRP or PVC with maximum flame-spread index of 5 - 25 according to ASTM E84.
2. UV Treatment: Inhibitors to protect against damage caused by UV radiation.
3. Configuration: Multipass, designed and tested to reduce water carryover to achieve performance indicated.

K. Air-Intake Louvers:

1. Material: FRP, PVC or Matching casing, as directed.
2. UV Treatment: Treat louvers with inhibitors to protect against damage caused by UV radiation.
3. Louver Blades: Arranged to uniformly direct air into evaporative refrigerant condenser, to minimize air resistance, and to prevent water from splashing out during all modes of operation including operation with fans off.

L. Axial Fan: Balanced at the factory after assembly.

1. Blade Material: Aluminum, FRP or Galvanized steel, as directed.
2. Hub Material: Aluminum, FRP, Galvanized steel, as directed.
3. Blade Pitch: Field adjustable.
4. Protective Enclosure: Removable, galvanized-steel, wire-mesh screens, complying with OSHA regulations.
5. Fan Shaft Bearings: Self-aligning, grease-lubricated ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of 40,000 - 50,000 hours.
6. Grease Fittings for Bearings: Extended lubrication lines to an easily accessible location.

M. Belt Drive:

1. Service Factor: 1.5 based on motor nameplate horsepower.
2. Sheaves: Fan and motor shafts shall have taper-lock sheaves fabricated from corrosion-resistant materials.
3. Belt: Multiple V-belt design with a matched set of cogged belts.
4. Belt: One-piece, multigrooved, solid-back belt.
5. Belt Material: Oil resistant, nonstatic conducting, and constructed of neoprene polyester cord.
6. Belt-Drive Guard: Comply with OSHA regulations.

N. Fan Motor:

1. General Requirements for Fan Motors: Comply with NEMA designation and temperature-rating requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment" and not indicated below.
2. Motor Enclosure: As directed.
3. Energy Efficiency: Comply with ASHRAE/IES 90.1 or NEMA Premium Efficient.
4. Service Factor: 1.15.
5. Insulation: Class F or Class H.
6. Variable-Speed Motors: Inverter-duty rated according to NEMA MG-1.
7. Severe-duty rating with the following features:

    a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
    b. Double-shielded, vacuum-degassed bearings lubricated with premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C).
    c. Internal heater automatically energized when motor is de-energized.

8. Motor Base: Adjustable, or other suitable provision for adjusting belt tension.

O. Fan Discharge Stack: Material shall match casing, manufacturer's standard or velocity recovery design.

1. Stack Extension: Fabricated to extend above fan deck unless otherwise indicated.
2. Stack Termination: Wire-mesh, galvanized-steel screens, complying with OSHA regulations.

P. Vibration Switch: For each fan drive.

1. Enclosure: NEMA 250, Type 4 or Type 4X.
2. Vibration Detection: Sensor with a field-adjustable, acceleration-sensitivity set point in a range of 0 to 1 g and frequency range of 0 to 3000 cycles per minute. Evaporative refrigerant condenser manufacturer shall recommend switch set point for proper operation and protection.
3. Provide switch with manual-reset button for field connection to a DDC system for HVAC and hardwired connection to fan motor electrical circuit.
4. Switch shall, on sensing excessive vibration, signal an alarm through the DDC system for HVAC and shut down the fan.

Q. Controls: Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."

R. Control Package: Factory installed and wired, and functionally tested at factory before shipment.

1. NEMA 250, Type 3R, Type 4, Type 4X or as directed, enclosure with removable internally mount backplate.
2. Control-circuit transformer with primary and secondary side fuses.
3. Terminal blocks with numbered and color-coded wiring to match wiring diagram. Spare wiring terminal block for connection to external controls or equipment.
4. Microprocessor-based controller for automatic control of fan and spray pump based on evaporative refrigerant condenser leaving-water temperature, with control features to improve operating efficiency based on outdoor ambient wet-bulb temperature by using adaptive logic.
5. Fan motor sequencer for multiple-cell and two-speed applications with automatic lead-stage rotation.
6. Electric basin heaters with temperature-control and low-water-level safety switch for each cell, complying with requirements in "Electric Basin Heater" Paragraph above.
7. Vibration switch for each fan, complying with requirements in "Vibration Switch" Paragraph above.
8. Single-point, field-power connection to a fused disconnect switch, nonfused disconnect switch, circuit breaker or for each evaporative refrigerant condenser cell, as directed.

    a. Branch power circuit to each motor and electric basin heater and to controls with a disconnect switch or circuit breaker.
    b. NEMA-rated motor controller, hand-off-auto switch, and overcurrent protection for each motor. Provide variable-frequency controller with manual bypass and line reactors for each variable-speed motor indicated.

9. Factory-installed wiring outside of enclosures shall be in metal raceway, except make connections to each motor and electric basin heater with liquidtight conduit.
10. Visual indication of status and alarm with momentary test push button for each motor.
11. Audible alarm and silence switch.
12. Visual indication of elapsed run time, graduated in hours for each motor.
13. Evaporative refrigerant condenser shall have hardware to enable DDC system for HVAC to remotely monitor and display the following:

    a. Operational status of each motor.

b. Evaporative refrigerant condenser leaving-fluid temperature.
c. Fan vibration alarm.
d. Collection basin high, low or high and low water-level alarms, as directed.

S. Personnel Access Components:

1. Doors: Large enough for personnel to access evaporative refrigerant condenser internal components from both evaporative refrigerant condenser end walls. Doors shall be operable from both sides of the door.
2. External Ladders with Safety Cages: Aluminum, galvanized- or stainless steel, fixed ladders with ladder extensions to access external platforms and top of evaporative refrigerant condenser from adjacent grade without the need for portable ladders. Comply with 29 CFR 1910.27.
3. External Platforms with Handrails: Aluminum, FRP, or galvanized-steel bar grating at evaporative refrigerant condenser access doors when evaporative refrigerant condensers are elevated and not accessible from grade.
4. Handrail: Aluminum, galvanized steel, or stainless steel, complete with kneerail and toeboard at platforms, and around top of evaporative refrigerant condenser. Comply with 29 CFR 1910.23.
5. Internal Platforms: Aluminum, FRP, or galvanized-steel bar grating.

    a. Spanning the collection basin from one end of evaporative refrigerant condenser to the other and positioned to form a path between the access doors. Platform shall be elevated, so that all parts are above the high-water level of the collection basin.
    b. Elevated internal platforms with handrails accessible from fixed vertical ladders to access the fan drive assembly when out of reach from collection basin platform.

T. Capacities and Characteristics:

1. Number of Cells: As directed.
2. Maximum Drift Loss: 0.005 percent of design water flow, as directed.
3. Heat-Exchanger Coil:

    a. Refrigerant Type: R-407C, R-410A or HFC-134a, as directed.
    b. Minimum Heat Rejection: As directed, Btu/h (kW).
    c. Condensing Temperature: As directed, deg F (deg C).
    d. Entering-Air Wet-Bulb Temperature: As directed deg F (deg C).

4. Fan Motor:

    a. Type: Single speed, Two speed, single winding, Two speed, two winding or Variable speed, as directed.
    b. Horsepower/Cell: As directed, hp.
    c. Full-Load Ampacity: As directed, A.
    d. Minimum Circuit Ampacity: As directed, A.
    e. Maximum Overcurrent Protection Device: As directed, A.
    f. Electrical Characteristics: 208, 240 or 480 V ac, three phase, 60 Hz, as directed.

5. Spray Pump and Motor:

    a. Water Flow/Cell: As directed, gpm (L/s).

b. Horsepower/Cell: As directed, hp.
c. Full-Load Ampacity: As directed A.
d. Minimum Circuit Ampacity: As directed, A.
e. Maximum Overcurrent Protection Device: As directed, A.
f. Electrical Characteristics: 120, 208, 240, 277 or 480 V ac; single or three phase, 60 Hz, as directed.

6. Sound Pressure Level: As directed, when measured according to CTI ATC 128.
7. Basin Heater:

a. Basin Water Temperature: 40 deg F (5 deg C).
b. Outdoor Ambient Temperature: 0 deg F (Minus 18 deg C) or Minus 20 deg F (Minus 29 deg C).
c. Capacity/Cell: As directed. kW.
d. Full-Load Ampacity: As directed, A.
e. Minimum Circuit Ampacity: As directed, A.
f. Maximum Overcurrent Protection Device: As directed, A.
g. Electrical Characteristics: 208, 240, 480 V ac, three phase, 60 Hz, as directed.
h. Capacity/Cell: As directed, MBtu/h (kW).
i. Entering-Fluid Temperature: As directed, deg F (deg C).
j. Fluid Flow Rate: As directed, gpm (L/s).
k. Fluid Pressure Drop: As directed, psig (kPa).
l. Capacity/Cell: As directed, MBtu/h (kW).
m. Steam Flow: As directed, lb/h (L/s).
n. Steam Pressure: As directed, psig (kPa).

PART 3 - EXECUTION

3.1 INSTALLATION

A. Equipment Mounting:

1. Install evaporative refrigerant condensers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

B. Maintain manufacturer's recommended clearances for service and maintenance.

C. Loose Equipment: Install electrical components, devices, and accessories that are not factory mounted.

D. Adjust water-level control for proper operating level.

3.2 PIPING CONNECTIONS

A. Install piping adjacent to evaporative refrigerant condensers to allow service and maintenance.

B. Install flexible pipe connectors at final connection of evaporative refrigerant condensers mounted on vibration isolators.

C. Run overflow, drain, and bleed lines to sanitary sewage system.

D. Domestic Water Piping: Comply with requirements in Section 221116 "Domestic Water Piping." Connect to water-level control with shutoff valve and union or flange at each connection.

E. Refrigerant Piping: Comply with requirements in Section 232300 "Refrigerant Piping." Connect to evaporative refrigerant condenser coil with isolation valves at each connection.

F. Ducts: Comply with requirements in Section 233113 "Metal Ducts." Connect ducts to evaporative refrigerant condenser inlet and outlet, full size of outlet, with flexible duct connection.

3.3 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.
3. Locate nameplate where easily visible.

3.4 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between control devices.

C. Connect control wiring according to Section 260523 "Control Voltage Electrical Power Cables."

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Leak Test: After installation, fill water coils with water, and test coils and connections for leaks. Repair leaks and retest until no leaks exist.
2. Charge refrigerant coils with refrigerant and test for leaks. Repair leaks and retest until no leaks exist.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Evaporative refrigerant condenser will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.6 STARTUP SERVICE

A. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assemblies, installations, and connections.

B. Obtain performance tables from manufacturer.

C. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing of evaporative refrigerant condensers.

3.7 DEMONSTRATION

A. Engage a factory-authorized service representative to train or train Owner's maintenance personnel to adjust, operate, and maintain evaporative refrigerant condensers.

END OF SECTION 236333

SECTION 236413.13 - DIRECT-FIRED ABSORPTION WATER CHILLERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Packaged, water-cooled, direct-fired absorption water chillers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings:

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.
4. Insulated Surface Diagrams: Indicating cold and hot surfaces requiring field-applied insulation with surface area tabulated for each.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, or BIM model, drawn to scale and coordinated with all building trades.

B. Seismic Qualification Data: Certificates, for chillers, accessories, and components, from manufacturer.

C. Source quality-control reports.

D. Startup service reports.

E. Test and inspection startup reports.

F. Field quality-control reports.

G. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.

B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of chillers that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Year(s) from date of Substantial Completion, as directed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. AHRI Rating: Rate chiller performance in accordance with requirements in AHRI 560.

B. ASHRAE Compliance:

1. ASHRAE 15 and ASHRAE 34 for safety code for mechanical refrigeration.
2. ASHRAE/IES 90.1.

C. ASME Compliance: Fabricate and label chiller pressure vessels to comply with applicable portions of ASME Boiler and Pressure Vessel Code.

D. Comply with NFPA 70.

E. UL Compliance:

1. Comply with requirements of UL and UL Canada and include label by qualified testing agency showing compliance.
2. UL 726, "Oil-Fired Boiler Assemblies.", UL 795, "Commercial-Industrial Gas Heating Equipment.", UL 726, "Oil-Fired Boiler Assemblies"; and UL 795, "Commercial-Industrial Gas Heating Equipment.", as directed.

F. Seismic Performance: Direct-fired absorption water chillers shall withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7, as directed.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

G. Condenser-Liquid Temperature Performance:

1. Startup Condenser-Liquid Temperature: Provide chiller capable of starting with entering condenser-liquid temperature of 60 deg F (16 deg C) and providing stable operation until system temperature is elevated to manufacturer's recommended minimum operating entering condenser-liquid temperature.
2. Minimum Operating Condenser-Liquid Temperature: Provide chiller capable of continuous operation over entire capacity range indicated with entering condenser-liquid temperature of 70 deg F (21 deg C).
3. Make factory modifications to standard chiller design if necessary to comply with performance indicated.

H. Site Altitude: Provide chiller suitable for altitude at which it is installed without affecting performance indicated. Make adjustments to affected chiller components to account for site altitude.

I. Performance Tolerance: Comply with the following in lieu of AHRI 560:

1. Allowable Capacity Tolerance: Zero percent, as directed
2. Allowable IPLV/NPLV Performance Tolerance: Zero percent, as directed

2.3 CAPACITIES AND CHARACTERISTICS

A. Capacity: As directed, tons (kW).

B. Full-Load Efficiency (COP): As directed.

C. Part-Load Efficiency (IPLV) or (NPLV): As directed

D. Evaporator:

1. Pressure Rating: 150 psig (1035 kPa) or 300 psig (2070 kPa), as directed.
2. Number of Passes: Two, Three or Four, as directed.
3. Liquid Type: Water.
4. Design Liquid Flow Rate: As directed, gpm (L/s).
5. Minimum Liquid Flow Rate: As directed, gpm (L/s).
6. Entering-Liquid Temperature: As directed, deg F (deg C).
7. Leaving-Liquid Temperature: As directed, deg F (deg C).
8. Liquid Pressure Drop: As directed, feet of head (kPa).
9. Liquid Velocity: As directed, fps (m/s).

10. Fouling Factor: 0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W), 0.00025 sq. ft. x h x deg F/Btu (0.000045 sq. m x deg C/W) or 0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W), as directed.

E. Absorber/Condenser:

1. Pressure Rating: 150 psig (1035 kPa) or 300 psig (2070 kPa), as directed.
2. Number of Passes: One, Two or Three, as directed.
3. Liquid Type: Water.
4. Design Liquid Flow Rate: As directed, gpm (L/s).
5. Entering-Liquid Temperature: As directed, deg F (deg C).
6. Leaving-Liquid Temperature: As directed, deg F (deg C).
7. Liquid Pressure Drop: As directed, feet of head (kPa).
8. Liquid Velocity: As directed, fps (m/s).
9. Fouling Factor: 0.00025 sq. ft. x h x deg F/Btu (0.000045 sq. m x deg C/W), 0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W) or 0.001 sq. ft. x h x deg F/Btu (0.00022 sq. m x deg C/W), as directed.

F. Dedicated Hot-Water Heat Exchanger:

1. Capacity: As directed, MBtu/h (kW).
2. Pressure Rating: 150 psig (1035 kPa) or 300 psig (2070 kPa), as directed.
3. Number of Passes: One, Two, Three or Four, as directed.
4. Liquid Type: Water.
5. Design Liquid Flow Rate: As directed, gpm (L/s).
6. Entering-Liquid Temperature: As directed, deg F (deg C).
7. Leaving-Liquid Temperature: As directed, deg F (deg C).
8. Liquid Pressure Drop: As directed, feet of head (kPa).
9. Liquid Velocity: As directed, fps (m/s).
10. Fouling Factor: 0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W), 0.00025 sq. ft. x h x deg F/Btu (0.000045 sq. m x deg C/W) or 0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W), as directed.

G. Burner Blower:

1. Motor Horsepower: As directed.
2. RPM: As directed.

H. Pump Horsepower:

1. Purge: As directed.
2. Refrigerant: As directed.
3. Solution: As directed.

I. Chiller Control Electrical Requirements:

1. Power Input: As directed.
2. Minimum Circuit Ampacity: As directed, A.

3. Maximum Overcurrent Protection Device: As directed, A.
4. Characteristics: 120 V ac, single phase, 60 Hz, as directed.

J. Chiller Electrical Requirements:

1. Power Input: As directed.
2. Minimum Circuit Ampacity: As directed.
3. Maximum Overcurrent Protection Device: As directed.
4. Characteristics: 208, 240 or 480 V ac, three phase, 60 Hz, as directed.

K. Natural-Gas Heating Value: As directed, Btu/cu. ft. (kJ/L).

L. Natural Gas Input, Full-Fire: As directed, cfh (mL/s).

M. Fuel-Oil Heating Value: As directed, Btu/gal. (MJ/L).

N. Fuel-Oil Input, Full Fire: As directed, gph (mL/s).

O. Sound Power Level Rating: 80 – 85 dBA sound power level when measured in accordance with AHRI 575. Provide factory-installed sound attenuation treatment if necessary to achieve performance indicated.

2.4 MANUFACTURED UNIT

A. Description: Factory-assembled and -tested, hermetic-design chiller, complete with absorber, evaporator, condenser, generator, solution heat exchanger, controls, absorbent solution pump with motor, refrigerant pump with motor, purge unit with motor, burner assembly, motor controllers, rupture disk, interconnecting unit piping and wiring, indicated accessories, and mounting frame.

1. Disassemble chiller into major assemblies, as required for installation, after factory testing and before packaging for shipment.

B. Absorbent and Refrigerant:

1. Absorbent: Lithium bromide solution with corrosion inhibitor.
2. Refrigerant: Deionized or distilled water.
3. Performance Enhancer: Heat and mass transfer enhancer to improve performance.

C. Seismic Fabrication Requirements: Fabricate mounting base and attachment to chiller, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when mounting base is anchored to building structure.

2.5 PUMPS

A. Hermetically sealed, self-lubricating, and fitted with self-adjusting, spring-loaded, wear-compensating, tapered carbon bearings.

B. Pump motor assembly shall be designed to operate for not less than 50,000 hours between inspections.

C. Pump motors shall be cooled and bearings lubricated, by fluid being pumped.

D. Provide isolation valves at pump suction and discharge.

E. Provide separate pumps for absorbent solution and refrigerant.

1. Provide chiller manufacturer's recommended absorbent solution and refrigerant flow-control method, to comply with operating requirements indicated.

F. Purge System: Unit mounted and factory wired, equipped with controls and pump to automatically remove noncondensable vapors.

1. Purge Pump Motor: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

a. Enclosure: Open dripproof or totally enclosed.

2.6 HEAT-EXCHANGER SHELLS

A. Configuration: Two shells; one shell consists of absorber/evaporator, low-stage generator/condenser; and one shell consists of high-stage generator. Where indicated, equip chiller with dedicated hot-water heat exchanger.

B. Construction: Fabricated from continuously welded carbon-steel sheet or plate, or from seamless pipe.

C. Design Pressure and Temperature Rating: Comply with applicable requirements in ASME Boiler and Pressure Vessel Code.

D. End Tube Sheets: Carbon-steel plates continuously welded to each end of shell; drilled and reamed to accommodate tubes, with positive seal between liquid in tubes and refrigerant in shell.

E. Intermediate Tube Sheets: Carbon-steel plates installed in shell and spaced along length of tube at intervals required to eliminate vibration and to avoid tube contact resulting in abrasion and wear.

F. Generator/Condenser Shell Pressure Relief Device: Manufacturer's standard rupture disk complying with requirements in ASHRAE 15 and ASHRAE 34, and in applicable portions of ASME Boiler and Pressure Vessel Code.

2.7 ABSORBER

A. Nozzle or Dispersion Trays: Designed to evenly distribute absorbent solution over tubes; constructed of brass, stainless steel, or another material that will not corrode.

B. Tubes:

1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end without damage to tube sheets and other tubes.
2. Material: Copper or copper-nickel alloy.
3. Minimum Wall Thickness: Manufacturer's choice, 0.025 inch (0.6 mm), 0.028 inch (0.7 mm) or 0.035 inch (0.9 mm), as directed.
4. External Finish: Manufacturer's standard.
5. Internal Finish: Enhanced or smooth.

C. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from each end without disturbing refrigerant in shell.
2. Standard or Marine-type water box with piping connections.

    a. Water boxes and marine-type water-box covers with lifting lugs or eyebolts.
    b. Hinged water boxes.
    c. Hinged marine-type water-box covers.

3. Standard water box without piping connections.

    a. Water boxes with lifting lugs or eyebolts.
    b. Hinged water boxes.

4. Nozzle Pipe Connections: Welded, ASME B16.5, flat-face flange, Welded, ASME B16.5, raised-face flange, grooved for mechanical-joint coupling or Grooved with mechanical-joint coupling and flange adapter, as directed.
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with 3/4-inch (19-mm) or 1-inch (25-mm)drain connection at low point and vent connection at high point, each with threaded plug.

D. Additional Corrosion Protection:

1. Electrolytic corrosion-inhibitor anode.
2. Coat wetted surfaces with corrosion-resistant finish.
3. Using same material as tubes, clad surfaces of end tube sheets in contact with liquid. Coat other wetted surfaces, including water boxes, with corrosion-resistant finish.

E. Absorber/Condenser Crossover Piping: Factory-furnished and -installed piping connecting liquid connection of absorber discharge to inlet connection of condenser.

2.8 EVAPORATOR

A. Nozzle or Dispersion Trays: Designed to evenly distribute refrigerant over tubes; constructed of brass, stainless steel, or another material that will not corrode when exposed to absorbent.

B. Refrigerant Holding Pan: Steel or stainless steel.

C. Tubes:

1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end without damage to tube sheets, other tubes, and integrity of tube-tube sheet connections.
2. Material: Copper or copper-nickel alloy.
3. Minimum Wall Thickness: Manufacturer's choice, 0.025 inch (0.6 mm), 0.028 inch (0.7 mm) or 0.035 inch (0.9 mm), as directed.
4. External Finish: Manufacturer's standard.
5. Internal Finish: Enhanced or smooth.

D. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. Standard or Marine-type water box with piping connections.

    a. Water boxes and marine-type water-box covers with lifting lugs or eyebolts.
    b. Hinged water boxes.
    c. Hinged marine-type water-box covers.

3. Standard water box without piping connections.

    a. Water boxes with lifting lugs or eyebolts.
    b. Hinged water boxes.
    c. Hinged marine water-box covers.

4. Nozzle Pipe Connections: Welded, ASME B16.5, flat-face flange, Welded, ASME B16.5, raised-face flange, grooved for mechanical-joint coupling or Grooved with mechanical-joint coupling and flange adapter, as directed.
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with 3/4-inch (19-mm) or 1-inch (25-mm) drain connection at low point and vent connection at high point, each with threaded plug.

2.9 CONDENSER

A. Refrigerant Holding Pan: Steel or stainless steel.

B. Tubes:

1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end without damage to tube sheets and other tubes.
2. Material: Copper or copper-nickel alloy.
3. Minimum Wall Thickness: Manufacturer's choice, 0.025 inch (0.6 mm), 0.028 inch (0.7 mm) or 0.035 inch (0.9 mm), as directed.
4. External Finish: Manufacturer's standard.
5. Internal Finish: Enhanced or smooth.

C. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. Standard or Marine-type water box with piping connections.
    a. Water boxes and marine-type water-box covers with lifting lugs or eyebolts.
    b. Hinged water boxes.
    c. Hinged marine-type water-box covers.
3. Standard water box without piping connections.
    a. Water boxes with lifting lugs or eyebolts.
    b. Hinged water boxes.
    c. Hinged marine water-box covers.
4. Nozzle Pipe Connections: Welded, ASME B16.5, flat-face flange, Welded, ASME B16.5, raised-face flange, grooved for mechanical-joint coupling or Grooved with mechanical-joint coupling and flange adapter, as directed.
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with 3/4-inch (19-mm) or 1-inch (25-mm) drain connection at low point and vent connection at high point, each with threaded plug.

D. Additional Corrosion Protection:

1. Electrolytic corrosion-inhibitor anode.
2. Coat wetted surfaces with corrosion-resistant finish.
3. Using same material as tubes, clad surfaces of end tube sheets in contact with liquid. Coat other wetted surfaces, including water boxes, with corrosion-resistant finish.

2.10 FIRST-STAGE GENERATOR

A. Tubes:

1. Replaceable, straight, or U tubes expanded into tube sheets.
2. Material: Manufacturer's standard or steel, as directed.
3. Minimum Wall Thickness: Manufacturer's choice.
4. External Finish: Manufacturer's standard.
5. Internal Finish: Manufacturer's choice; enhanced or smooth.

B. Water Boxes:

1. Carbon-steel construction; arranged to allow visual inspection and cleaning of tubes from each end without disturbing refrigerant in shell.
2. Standard water box.
3. Water boxes with lifting lugs or eyebolts.
4. Nozzle Pipe Connections: Welded, ASME B16.5, flat-face flange, Welded, ASME B16.5, raised-face flange, grooved for mechanical-joint coupling or Grooved with mechanical-joint coupling and flange adapter.
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with 3/4-inch (19-mm) or 1-inch (25-mm) drain connection at low point and vent connection at high point, each with threaded plug.

2.11 SECOND-STAGE GENERATOR

A. Tubes:

1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from each end without damage to tube sheets and other tubes.
2. Material: Copper or copper-nickel alloy.
3. Minimum Wall Thickness: Manufacturer's choice, 0.025 inch (0.6 mm), 0.028 inch (0.7 mm) or 0.035 inch (0.9 mm).
4. External Finish: Manufacturer's standard.
5. Internal Finish: Manufacturer's standard.

B. Water Boxes:

1. Carbon-steel construction; arranged to allow visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. Standard type.
3. Water boxes with lifting lugs or eyebolts.
4. Nozzle Pipe Connections: Welded, ASME B16.5, flat-face flange, Welded, ASME B16.5, raised-face flange, grooved for mechanical-joint coupling or Grooved with mechanical-joint coupling and flange adapter.
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with 3/4-inch (19-mm) or 1-inch (25-mm) drain connection at low point and vent connection at high point, each with threaded plug.

2.12 DEDICATED HOT-WATER HEAT EXCHANGER

A. Tubes:

1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from each end without damage to tube sheets and other tubes.
2. Material: Copper or copper-nickel alloy.
3. Minimum Wall Thickness: Manufacturer's choice.
4. External Finish: Manufacturer's standard.
5. Internal Finish: Manufacturer's standard.

B. Water Boxes:

1. Carbon-steel construction; arranged to allow visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. Standard type.
3. Water boxes with lifting lugs or eyebolts.
4. Nozzle Pipe Connections: Welded, ASME B16.5, flat-face flange, Welded, ASME B16.5, raised-face flange, Grooved for mechanical-joint coupling or Grooved with mechanical-joint coupling and flange adapter, as directed.
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with 3/4-inch (19-mm) or 1-inch (25-mm) drain connection at low point and vent connection at high point, each with threaded plug.

2.13 SOLUTION HEAT EXCHANGER

A. Description: Shell-and-tube or brazed-plate heat exchanger, integral to chiller, to increase cycle efficiency by preheating diluted solution on its way to generator while precooling concentrated solution returning from generator.

2.14 BURNER ASSEMBLY

A. Burner: Welded construction with multivane, stainless steel, flame-retention diffuser suitable for natural gas, propane and No. 2 fuel oil. Mount burner on hinged access door to permit access to combustion chamber.

B. Combustion-Air Blower: Centrifugal fan integral to burner, directly driven by motor; with adjustable damper assembly and locking quadrant to set air-fuel ratio.

1. Motors: Comply with requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

a. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

C. Fuel-Oil Supply: Control devices and modulating control sequence suitable to comply with requirements of ASME CSD-1, FM Global or UL.

1. Fuel-Oil Pump: Two-stage, gear-type oil pump capable of producing 300-psig (2070-kPa) discharge pressure and 15-in. Hg (50.7-kPa) vacuum.
2. Fuel-Oil Piping Specialties:

a. Suction-line, manual, gate valve.
b. Removable-mesh oil strainer.
c. 0- to 30-in. Hg (0- to 101.3-kPa) vacuum; 0- to 30-psig (0- to 207-kPa) vacuum-pressure gauge.
d. 0- to 300-psig (0- to 2070-kPa) oil-nozzle pressure gauge.
e. Nozzle-line, solenoid-safety-shutoff oil valve.

D. Fuel-Oil Pilot: Intermittent or Interrupted electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff solenoid with cadmium sulfide, UV scanner or Optical flame-safety control.

E. Gas Train: Control devices and modulating control sequence to comply with requirements of ASME CSD-1, FM Global or UL.

F. Gas Pilot: Intermittent or Interrupted electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff with electronic supervision of burner flame.

G. Equip burner assembly to limit nitrogen oxide emissions to 20 – 30 ppm.

2.15 ELECTRICAL

A. Factory installed and wired, and functionally tested at factory before shipment.

B. Single-point, field-power connection to fused disconnect switch, nonfused disconnect switch or circuit breaker, as directed. Provide electrical devices with minimum withstand rating as required by electrical power distribution system, but not less than 42,000 - 65,000 A.

1. Branch power circuit to each motor, dedicated electrical load, and to controls with disconnect switch or circuit breaker.

a. NEMA KS 1, heavy-duty fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection in accordance with IEC 60947-4-1.
b. NEMA AB 1, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit-trip set point.

2. NEMA ICS 2, Class A, full-voltage, non-reversing motor controller, with hand-off-auto switch, and overcurrent protection for each motor.
3. Control-circuit transformer with primary and secondary side fuses.

C. Terminal blocks with numbered and color-coded wiring to match wiring diagram. Include spare wiring terminal block for connection to external controls or equipment.

D. Wiring Outside of Enclosures: Factory installed in metal raceway except make terminal connections with not more than 24-inch (610-mm) length of liquidtight or flexible metallic conduit. Coordinate conduit requirements with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

2.16 CONTROLS

A. Provide chiller control panel separate from burner control panel.

B. Burner Control Panel: Factory or field mounted. Maintains safe operating conditions, burner safety limits, burner operation, and interface with chiller controls; include following components:

1. On-off switch.
2. Flame safeguard.
3. Contacts for remote monitoring of flame failure.
4. Contacts for proof of combustion-air flow.
5. Exhaust gas temperature limit switch.
6. Control-circuit transformer.
7. Burner motor controls.
8. Fuel-oil pump controls, if chiller is equipped with fuel-oil pump.
9. Visual indication of on/off status of ignition, blower, and main fuel.
10. Alarm bell.

C. Control: Standalone and microprocessor based, with programs and configuration settings stored in nonvolatile memory so that reprogramming is not required on loss of electrical power.

D. Enclosure: Unit mounted, NEMA 250, Type 1, Type 3R, Type 4 or Type 4x, with hinged or lockable cover.

E. Operator Interface: Multiple-character digital or graphic display with dynamic update of information and with keypad or touch-sensitive display located on front of control enclosure. Display following information in either imperial or metric units selectable through interface:

1. Date and time.
2. Operating or alarm status.
3. Cumulative operating hours.
4. Outdoor-air temperature if required for chilled-water temperature reset.
5. Operating set points for temperature and pressure.
6. Entering and leaving temperatures of chilled and condenser water.
7. Refrigerant temperature.
8. Solution concentration and temperature.
9. Indication of solution and purge-pump operation.
10. Generator shell pressure.

11. Number of starts.
12. Number of purge cycles.
13. Entering and leaving hot-water temperatures.
14. Burner firing rate displayed in percent.

F. Control Functions:

1. Manual or automatic startup and shutdown time schedule.
2. Automatic cycle to prevent crystallization.
3. Entering and leaving chilled-water temperatures and control set points. Reset chilled-water temperature set point based on return-water, outdoor-air or space temperature, as directed.
4. Entering and leaving hot-water temperatures and control set points. Reset hot-water temperature based on return-water, outdoor-air or space temperature, as directed
5. Condenser-liquid temperature.
6. Measure and record cooling provided and heating energy consumed within programmable time periods, minimum monthly.
7. Measure and record heating provided and heating energy consumed within programmable time periods, minimum monthly.

G. Capacity Control: Automatically controls burner firing rate to maintain chilled-water temperature set point for cooling loads and heating-water temperature set point for heating loads ranging from 30 to 100 percent.

H. Safety Shutdowns: To automatically shut down chiller and require manual reset before restart. Display message following each safety shutdown.

1. Crystallization.
2. Low refrigerant temperature.
3. Loss of chilled- or condenser-water flow.
4. Low leaving chilled-water temperature, 2 deg F (1 deg C) below set point.
5. First-stage generator low-solution level.
6. First-stage generator high temperature or pressure.
7. Burner alarm or control malfunction.
8. Power failure.
9. Solution pump overloads.
10. External auxiliary safety shutdown.
11. High solution concentration.
12. Incomplete dilution cycle.

I. Warning Conditions: Provide controls to keep chiller operational, but inhibit burner firing rate to prevent safety shutdown. Provide control panel with warning alarm contacts and display message when any of following operating conditions are detected:

1. Low refrigerant temperature.
2. High generator temperature or pressure.
3. High or low entering condenser-water temperature.
4. Solution temperature sensor failure.

5. Low chilled-water flow.
6. Purge-pump current overload.

J. Cycling Shutdowns: Permit automatic restart when preprogrammed limits are reached. Display message following each cycle shutdown.

1. Cooling Mode:

a. Loss of condenser-water flow.
b. Low leaving chilled-water temperature.
c. Power failure.

2. Heating Mode:

a. Loss of hot-water flow.
b. High leaving hot-water temperature.
c. Power failure.

K. Trending: Capability to trend analog data up to five parameters simultaneously over adjustable period and frequency of polling.

L. Security Access: Provide electronic security access to controls through identification and password with at least three levels of security: view only; view and operate; and view, operate, and service.

M. Control Authority: At least four conditions: off, local manual control at chiller, local automatic control at chiller, and automatic control through remote source.

N. Communication Port: RS-232 port, USB 2.0 port, or equivalent connection capable of connecting printer or electronic monitoring device.

O. BAS Interface: Factory-installed hardware and software to enable BAS to monitor, control, and display chiller status and alarms.

1. Hardwired Points:

a. Monitoring: On-off status, common trouble alarm.
b. Control: On-off operation, chilled-water, discharge temperature set-point adjustment or hot-water, discharge temperature set-point adjustment.

2. Provide ASHRAE 135 (BACnet), LonTalk or Modbus, as directed for communication interface with BAS to enable BAS operator to control and monitor chiller from remote operator workstation. Provide for control features and monitoring points displayed locally at chiller control panel to be available through BAS.

2.17 FINISH

A. Paint chiller, using manufacturer's standard procedures, except comply with the following minimum requirements:

1. Provide at least one coat of primer with total dry film thickness of at least 2 mils (0.05 mm).
2. Provide at least two coats of alkyd-modified, vinyl enamel, epoxy or polyurethane, as directed to finish with total dry film thickness of at least 4 mils (0.10 mm).
3. Paint surfaces that are to be insulated before applying insulation.
4. Paint installed insulation to match adjacent uninsulated surfaces.
5. Color of finish coat to be manufacturer's standard or as directed.

B. Furnish Owner with quart container of paint used in application of topcoat to use in touchup applications after Project closeout.

2.18 ACCESSORIES

A. Sight Glasses: Equip unit with sight glasses for visual inspection of absorbent solution and refrigerant levels. Provide at least one sight glass in absorber and evaporator sections.

B. Flow Switches:

1. Furnish chiller manufacturer-supplied flow switch for each condenser or evaporator and condenser and verify field-mounting location before installation.
2. Paddle Flow Switches:

    a. Vane operated to actuate double-pole, double-throw switch with one pole field wired to chiller control panel and other pole field wired to BAS.
    b. Contacts: Platinum alloy, silver alloy, or gold-plated switch contacts with 10 A rating at 120 V ac.
    c. Pressure rating equal to pressure rating of heat exchanger.
    d. Construct body and wetted parts of Type 316 stainless steel.
    e. House switch in NEMA 250, Type 4 enclosure constructed of die-cast aluminum.
    f. Vane length to suit installation.

3. Pressure Differential Switches:

    a. Construction: Wetted parts of body and trim constructed of Type 316 stainless steel.
    b. Performance: Switch suitable to withstand, without damage, full-pressure rating of heat exchanger applied to either port and exhibit no set point shift due to variation in working pressure.
    c. Set Point: Screw type, field adjustable.
    d. Electrical Connections: Internally mounted, screw-type terminal blocks.
    e. Switch Enclosure: NEMA 250, Type 4.

f. Switch Action: Double-pole, double-throw switch with one pole field wired to chiller control panel and other pole field wired to BAS.

C. Vibration Isolation:

1. Chiller-manufacturer-furnished, neoprene-pad vibration isolation for each chiller.

a. Two layers of 0.375-inch- (10-mm-) thick, ribbed- or waffle-pattern neoprene pads separated by 16-gauge, stainless steel plate.
b. Fabricate pads from 40- to 50-durometer neoprene.
c. Provide stainless steel square bearing plate to load pad uniformly between 20 and 40 psi (138 and 276 kPa) with 0.12- to 0.16-inch (3- to 4-mm) deflection.

2.19 SOURCE QUALITY CONTROL

A. Perform functional run tests of chillers before shipping.

B. Factory test and inspect absorber, generator, evaporator, and condenser in accordance with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1. Pressure test tube-side of heat exchangers, including water boxes, to 1.5 times rated pressure. Vacuum and pressure test shells for leaks.

C. Burner Test: Factory adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas and to achieve combustion requirements indicated.

D. Allow Owner access to place where chillers are being tested. Notify Architect 14 days in advance of testing.

E. Prepare and submit test report indicating test procedures, instrumentation, test conditions, and results. Submit copy of results within one week of test date.

PART 3 - EXECUTION

3.1 INSTALLATION OF CHILLER

A. Examine chillers before installation. Reject chillers that are physically damaged.

B. Install chillers on support structure indicated.

C. Equipment Mounting:

1. Install chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."

2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

D. Maintain manufacturer's recommended clearances for service and maintenance.

E. Charge chiller with absorbent and refrigerant if not factory charged.

F. Install separate devices furnished by manufacturer and not factory installed.

G. Insulate hot and cold chiller surfaces that are recommended by chiller manufacturer to be insulated, and are not factory insulated. Comply with requirements in Section 230716 "HVAC Equipment Insulation."

3.2 PIPING CONNECTIONS

A. Comply with requirements for hydronic piping in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Comply with requirements for gas piping in Section 231123 "Facility Natural-Gas Piping" or Section 231126 "Facility Liquefied-Petroleum Gas Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

C. Connect fuel gas piping full size to gas-train inlet with shutoff valve and union.

D. Extend burner fuel train vent to suitable outdoor location, away from operable windows and air intakes.

E. Install gas-fired boilers in accordance with NFPA 54.

F. Comply with requirements for fuel-oil piping in Section 231113 "Facility Fuel-Oil Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

G. Connect oil piping full size to burner inlet with shutoff valve and union.

H. Install oil-fired chillers in accordance with NFPA 31.

I. Where installing piping adjacent to chiller, allow space for service and maintenance.

J. Hot-Water Heat-Exchanger Connections: Connect to heat-exchanger inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with shutoff valve and pressure gauge. Connect to heat-exchanger outlet with shutoff valve, check valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with shutoff valve and pressure gauge, flow meter, and drain connection with valve. Make connections to chiller with flange or mechanical coupling.

K. Evaporator-Liquid Connections: Connect to evaporator inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with shutoff valve and pressure gauge. Connect to evaporator outlet with shutoff valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with shutoff valve and pressure gauge, flow meter, and drain connection with valve. Make connections to chiller with flange or mechanical coupling.

L. Absorber/Condenser-Liquid Connections: Connect to inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with shutoff valve and pressure gauge. Connect to outlet with shutoff valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with shutoff valve and pressure gauge, flow meter, and drain connection with valve. Make connections to chiller with flange or mechanical coupling.

1. If not factory furnished or installed, provide pipe connecting liquid connection of absorber discharge and condenser inlet.

M. Refrigerant Pressure Relief Device Connections: Extend vent piping or separate vent piping for each chiller without valves or restrictions to outdoor location. Comply with ASHRAE 15 and ASHRAE 34. Connect to chiller pressure relief device with flexible connector and dirt leg with drain valve.

N. Extend purge vent piping or separate purge vent piping for each chiller to outdoor location. Comply with ASHRAE 15 and ASHRAE 34.

O. Connect each chiller drain connection with union and drain pipe, and extend pipe, full size of connection, to floor drain. Provide a shutoff valve at each connection.

P. Comply with requirements for chimney system in Section 235133 "Insulated Sectional Chimneys" and Section 235116 "Fabricated Breechings and Accessories." Drawings indicate general arrangement of pipe, fittings, and specialties. Connect chimney system to chiller burner outlet and extend to outdoor location.

Q. Connect fuel-fired burner assembly and blower and associated damper for combustion air.

3.3 ELECTRICAL CONNECTIONS

A. Install electrical devices furnished with chiller but not factory mounted.

B. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

C. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

D. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.

E. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.4 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between control devices.

C. Connect control wiring in accordance with Section 260523 "Control Voltage Electrical Power Cables."

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform tests and inspections with the assistance of a factory-authorized service representative.

D. Tests and Inspections:

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
2. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Absorption water chillers will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports.

3.6 STARTUP SERVICE

A. Engage factory-authorized service representative to perform or Perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's written instructions.
2. Verify that absorbent and refrigerant charge is sufficient and chiller has been leak tested.

3. Verify that pumps are installed and functional.
4. Verify that thermometers and gauges are installed.
5. Verify that refrigerant pressure relief device is vented to outdoors.
6. Verify proper motor rotation.
7. Operate chiller for run-in period.
8. Verify proper fuel supply. Adjust air-fuel ratio and combustion.
9. Verify proper combustion-air source.
10. Verify proper exhaust emissions.
11. Verify static deflection of vibration isolators including deflection during chiller startup and shutdown.
12. Verify and record performance of liquid flow and low-temperature interlocks for evaporator and condenser.
13. Verify and record performance of chiller protection devices.
14. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.
15. Burner Test: Adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas.

B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assembly, installation, and connection.

C. Prepare test and inspection startup reports.

3.7 DEMONSTRATION

A. Engage a factory-authorized service representative to train or train Owner's maintenance personnel to adjust, operate, and maintain chillers. Video record training sessions.

END OF SECTION 236413.13

SECTION 236413.16 - INDIRECT-FIRED ABSORPTION WATER CHILLERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Packaged, water-cooled, single- and double-effect absorption water chillers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings:

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.
4. Insulated Surface Diagrams: Indicating cold and hot surfaces requiring field-applied insulation with area tabulated for each.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, or BIM model, drawn to scale and coordinated with all building trades.

B. Seismic Qualification Data: Certificates, for chillers, accessories, and components, from manufacturer.

C. Source quality-control reports.

D. Startup service reports.

E. Test and inspection startup reports.

F. Field quality-control reports.

G. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.

B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of chillers that fail in materials or workmanship within specified warranty period.

1. Warranty Period: As directed One, Two, Three, Four or Five year(s) from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. AHRI Rating: Rate chiller performance in accordance with requirements in AHRI 560.

B. ASHRAE Compliance:

1. ASHRAE 15 and ASHRAE 34 for safety code for mechanical refrigeration.
2. ASHRAE/IES 90.1.

C. ASME Compliance: Fabricate and label chiller pressure vessels to comply with applicable portions of ASME Boiler and Pressure Vessel Code.

D. Comply with NFPA 70.

E. UL Compliance:

1. Comply with requirements of UL and UL Canada and include label by a qualified testing agency showing compliance.

F. Seismic Performance: Indirect-fired absorption water chillers shall withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

G. Condenser-Liquid Temperature Performance:

1. Startup Condenser-Liquid Temperature: Provide chiller capable of starting with entering condenser-liquid temperature of 64 deg F (17.7 deg C) or 45 deg F (7.2 deg C) as directed and providing stable operation until system temperature is elevated to minimum operating entering condenser-liquid temperature.
2. Minimum Operating Condenser-Liquid Temperature: Provide chiller capable of continuous operation over entire capacity range indicated with an entering condenser-liquid temperature of 65 deg F (18 deg C), 60 deg F (16 deg C) or 55 deg F (13 deg C) as directed.
3. Make factory modifications to standard chiller design if necessary to comply with performance indicated.

H. Site Altitude: Provide chiller suitable for altitude at which installed without affecting performance indicated. Make adjustments to affected chiller components to account for site altitude.

I. Performance Tolerance: Comply with following in lieu of AHRI 560:

1. Allowable Capacity Tolerance: Zero percent.
2. Allowable IPLV/NPLV Performance Tolerance: Zero percent.

2.3 CAPACITIES AND CHARACTERISTICS

A. Capacity: As directed tons (kW).

B. Full-Load Efficiency (COP): As directed.

C. Part-Load Efficiency (IPLV) or (NPLV): As directed.

D. Evaporator:

1. Pressure Rating: 150 psig (1035 kPa) or 300 psig (2070 kPa) As directed.
2. Number of Passes: One, Two or Three as directed.
3. Liquid Type: Water.
4. Design Liquid Flow Rate: As directed gpm (L/s).
5. Minimum Liquid Flow Rate: As directed gpm (L/s).
6. Entering-Liquid Temperature: As directed deg F (deg C).
7. Leaving-Liquid Temperature: As directed deg F (deg C).
8. Liquid Pressure Drop: As directed feet of head (kPa).
9. Liquid Velocity: As directed fps (m/s).
10. Fouling Factor: 0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W), 0.00025 sq. ft. x h x deg F/Btu (0.000045 sq. m x deg C/W) or 0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W) as directed.

E. Absorber/Condenser:

1. Pressure Rating: 150 psig (1035) or 300 psig (2070) as directed.
2. Number of Passes: One, Two or Three as directed.
3. Liquid Type: Water.
4. Design Liquid Flow Rate: As directed gpm (L/s).
5. Entering-Liquid Temperature: As directed deg F (deg C).
6. Leaving-Liquid Temperature: As directed deg F (deg C).
7. Liquid Pressure Drop: As directed feet of head (kPa).
8. Liquid Velocity: As directed fps (m/s).
9. Fouling Factor: As directed 0.00025 sq. ft. x h x deg F/Btu (0.000045 sq. m x deg C/W), 0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W) or 0.001 sq. ft. x h x deg F/Btu (0.00022 sq. m x deg C/W).

F. Pump Horsepower:

1. Purge: As directed.
2. Refrigerant: As directed.
3. Solution: As directed.

G. Chiller Control Electrical Requirements:

1. Power Input: As directed kilowatts.
2. Minimum Circuit Ampacity: As directed A.
3. Maximum Overcurrent Protection Device: As directed A.
4. Characteristics: 120 V ac, single phase, 60 Hz.

H. Chiller Electrical Requirements:

1. Power Input: As directed kilowatts.
2. Minimum Circuit Ampacity: As directed A.
3. Maximum Overcurrent Protection Device: As directed A.
4. Characteristics: As directed 208, 240 or 480 V ac, three phase, 60 Hz.

I. Noise Rating: As directed 38, 51 or 80 dBA sound power level when measured in accordance with AHRI 575. Provide factory-installed sound treatment if necessary to achieve performance indicated.

2.4 MANUFACTURED UNIT

A. Description: Factory-assembled and -tested, hermetic-design chiller complete with absorber, evaporator, condenser, generator, solution heat exchanger, controls, absorbent solution pump with motor, refrigerant pump with motor, purge unit with motor, motor controllers, rupture disk, interconnecting unit piping and wiring, indicated accessories, and mounting frame.

1. Disassemble chiller into major assemblies as required for installation, after factory testing and before packaging for shipment.

B. Absorbent and Refrigerant:

1. Absorbent: Lithium bromide solution with corrosion inhibitor.
2. Refrigerant: Deionized or distilled water.

3. Performance Enhancer: Heat and mass transfer enhancer to improve performance.

C. Seismic Fabrication Requirements: Fabricate mounting base and attachment to chiller, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when mounting base is anchored to building structure.

2.5 PUMPS

A. Hermetically sealed, self-lubricating, and fitted with self-adjusting, spring-loaded, wear-compensating tapered carbon bearings.

B. Provide pump motor assembly designed to operate for not less than 25,000 or 50,000 hours between inspections.

C. Pump motors cooled, and bearings lubricated, either by liquid being pumped.

D. Provide isolation valves at pump suction and discharge.

E. Provide separate and dedicated pumps for absorbent solution and refrigerant.

1. Provide chiller manufacturer's recommended absorbent solution and refrigerant flow-control method, to comply with operating requirements indicated.

F. Purge System: Unit mounted and factory wired, equipped with controls and pump to automatically remove noncondensable vapors.

1. Purge Pump Motor: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

a. Enclosure: Open dripproof or totally enclosed.

2.6 HEAT-EXCHANGER SHELLS

A. Configuration for Single-Effect Chillers: Two shells; one shell consists of absorber/evaporator and other shell consists of condenser/generator.

B. Configuration for Double-Effect Chillers: Two shells; one shell consists of absorber/evaporator, low-stage generator/condenser and other shell consists of high-stage generator.

C. Construction: Fabricated from continuously welded carbon-steel sheet or plate, or from seamless pipe.

D. Design Pressure and Temperature Rating: Comply with applicable requirements in ASME Boiler and Pressure Vessel Code.

E. End Tube Sheets: Carbon-steel plates continuously welded to each end of shell; drilled and reamed to accommodate tubes with positive seal between liquid in tubes and refrigerant in shell.

F. Intermediate Tube Sheets: Carbon-steel plates installed in shell and spaced along length of tube at intervals required to eliminate vibration and to avoid contact of tubes resulting in abrasion and wear.

G. Generator/Condenser Shell Pressure Relief Device: Manufacturers standard rupture disk complying with requirements in ASHRAE 15 and ASHRAE 34 and in applicable portions of ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

2.7 ABSORBER

A. Nozzle or Dispersion Trays: Designed to evenly distribute absorbent solution over tubes. Constructed of brass, stainless steel, or another material that will not corrode.

B. Tubes:

1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end and without damage to tube sheets and other tubes.
2. Material: Copper or Copper-nickel alloy as directed.
3. Minimum Wall Thickness: As directed 0.025 inch (0.6 mm), 0.028 inch (0.7 mm) or 0.035 inch (0.9 mm).
4. External Finish: Manufacturer's standard.
5. Internal Finish: Enhanced or smooth as directed.

C. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. Standard or Marine-type for water box with piping connections as directed.

    a. Water boxes and marine water-box covers with lifting lugs or eyebolts.
    b. Hinged water boxes.
    c. Hinged marine water-box covers.

3. Standard water box without piping connections.

    a. Water boxes with lifting lugs or eyebolts.
    b. Hinged water boxes.

4. Nozzle Pipe Connections: As directed Welded, ASME B16.5, flat-face flange, Welded, ASME B16.5, raised-face flange, grooved for mechanical-joint coupling or Grooved with mechanical-joint coupling and flange adapter.
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with 3/4-inch (19-mm) or 1-inch (25-mm) drain connection at low point and vent connection at high point, each with threaded plug.

D. Additional Corrosion Protection:

1. Electrolytic corrosion-inhibitor anode.
2. Coat wetted surfaces with a corrosion-resistant finish.

3. Using same material as tubes, clad surfaces of end tube sheets in contact with liquid. Coat other wetted surfaces, including water boxes, with corrosion-resistant finish.

E. Absorber/Condenser Crossover Piping: Factory furnished and installed piping connecting liquid connection of absorber discharge to condenser inlet.

2.8 EVAPORATOR

A. Nozzle or Dispersion Trays: Designed to evenly distribute refrigerant over tubes; constructed of brass, stainless steel, or another material that will not corrode when exposed to absorbent.

B. Refrigerant Holding Pan: Steel or stainless steel.

C. Tubes:

1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end and without damage to tube sheets and other tubes, and integrity of tube-tube sheet connections.
2. Material: As directed Copper or Copper-nickel alloy.
3. Minimum Wall Thickness: As directed 0.025 inch (0.6 mm), 0.028 inch (0.7 mm) or 0.035 inch (0.9 mm).
4. External Finish: Manufacturer's standard.
5. Internal Finish: Enhanced or smooth.

D. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. As directed Standard or Marine-type for water box with piping connections.

    a. Water boxes and marine water-box covers with lifting lugs or eyebolts.
    b. Hinged water boxes.
    c. Hinged marine water-box covers.

3. Standard type for water box without piping connections.

    a. Water boxes with lifting lugs or eyebolts.
    b. Hinged water boxes.
    c. Hinged marine water-box covers.

4. Nozzle Pipe Connections: As directed Welded, ASME B16.5, flat-face flange, Welded, ASME B16.5, raised-face flange, grooved for mechanical-joint coupling or Grooved with mechanical-joint coupling and flange adapter.
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with 3/4-inch (19-mm) or 1-inch (25-mm) drain connection at low point and vent connection at high point, each with threaded plug.

2.9 CONDENSER

A. Refrigerant Holding Pan: Steel or stainless steel.

B. Tubes:

1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end and without damage to tube sheets and other tubes.
2. Material: As directed Copper or Copper-nickel alloy.
3. Minimum Wall Thickness: Manufacturer's choice.
4. External Finish: Manufacturer's standard.
5. Internal Finish: Enhanced or smooth.

C. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. As directed Standard or Marine-type for water box with piping connections.
    a. Water boxes and marine water-box covers with lifting lugs or eyebolts.
    b. Hinged water boxes.
    c. Hinged marine water-box covers.
3. Standard type for water box without piping connections.
    a. Water boxes with lifting lugs or eyebolts.
    b. Hinged water boxes.
    c. Hinged marine water-box covers.
4. Nozzle Pipe Connections: As directed Welded, ASME B16.5, flat-face flange, Welded, ASME B16.5, raised-face flange, grooved for mechanical-joint coupling or Grooved with mechanical-joint coupling and flange adapter.
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with 3/4-inch (19-mm) or 1-inch (25-mm) drain connection at low point and vent connection at high point, each with threaded plug.

D. Additional Corrosion Protection:

1. Electrolytic corrosion-inhibitor anode.
2. Coat wetted surfaces with a corrosion-resistant finish.
3. Using same material as tubes, clad surfaces of end tube sheets in contact with liquid. Coat other wetted surfaces, including water boxes, with corrosion-resistant finish.

2.10 GENERATOR FOR SINGLE-EFFECT CHILLERS

A. Tubes:

1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end and without damage to tube sheets and other tubes.
2. Material: 06/11 copper-nickel alloy.

3. Minimum Wall Thickness: As directed 0.035 inch (0.9 mm).
4. External Finish: Manufacturer's standard.
5. Internal Finish: Enhanced or smooth.

B. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. Standard type.
3. Provide water boxes with lifting lugs or eyebolts.
4. Nozzle Pipe Connections: As directed Welded, ASME B16.5, flat-face flange, Welded, ASME B16.5, raised-face flange, grooved for mechanical-joint coupling or Grooved with mechanical-joint coupling and flange adapter.
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with 3/4-inch (19-mm) or 1-inch (25-mm) drain connection at low point and vent connection at high point, each with threaded plug.

C. Additional Corrosion Protection:

1. Electrolytic corrosion-inhibitor anode.
2. Coat wetted surfaces with a corrosion-resistant finish.
3. Using same material as tubes, clad surfaces of end tube sheets in contact with liquid. Coat other wetted surfaces, including water boxes, with a corrosion-resistant finish.

2.11 FIRST-STAGE GENERATOR FOR DOUBLE-EFFECT CHILLERS

A. Tubes:

1. Replaceable, straight, or U tubes expanded into tube sheets.
2. Material: As directed or 06/11 copper-nickel alloy .
3. Minimum Wall Thickness: As directed 0.028 inch (0.7 mm), 0.035 inch (0.9 mm).
4. External Finish: Manufacturer's standard.
5. Internal Finish: Enhanced or smooth.

B. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. Standard type.
3. Provide water boxes with lifting lugs or eyebolts.
4. Nozzle Pipe Connections: Welded, ASME B16.5, flat-face flange, Welded, ASME B16.5, raised-face flange, Grooved for mechanical-joint coupling or Grooved with mechanical-joint coupling and flange adapter.
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with 3/4-inch (19-mm), 1-inch (25-mm) or 3/4- or 1-inch (19- or 25-mm) drain connection as directed at low point and vent connection at high point, each with threaded plug.

C. Additional Corrosion Protection:

1. Electrolytic corrosion-inhibitor anode.
2. Coat wetted surfaces with a corrosion-resistant finish.
3. Using same material as tubes, clad surfaces of end tube sheets in contact with liquid. Coat other wetted surfaces, including water boxes, with a corrosion-resistant finish.

2.12 SECOND-STAGE GENERATOR FOR DOUBLE-EFFECT CHILLERS

A. Tubes:

1. Individually replaceable, straight tubes expanded into tube sheets. Replaceable from either end and without damage to tube sheets and other tubes.
2. Material: Copper, Copper-nickel alloy or Copper or copper-nickel alloy as directed.
3. Minimum Wall Thickness: As directed 0.025 inch (0.6 mm), 0.028 inch (0.7 mm) or 0.035 inch (0.9 mm).
4. External Finish: Manufacturer's standard.
5. Internal Finish: Enhanced or smooth.

B. Water Boxes:

1. Carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. Standard type.
3. Provide water boxes with lifting lugs or eyebolts.
4. Nozzle Pipe Connections: Welded, ASME B16.5, flat-face flange, Welded, ASME B16.5, raised-face flange, grooved for mechanical-joint coupling or Grooved with mechanical-joint coupling and flange adapter as directed.
5. Thermistor or RTD temperature sensor factory installed in each nozzle.
6. Fit each water box with 3/4-inch (19-mm) or 1-inch (25-mm) drain connection at low point and vent connection at high point, each with threaded plug.

C. Additional Corrosion Protection:

1. Electrolytic corrosion-inhibitor anode.
2. Coat wetted surfaces with a corrosion-resistant finish.
3. Using same material as tubes, clad surfaces of end tube sheets in contact with liquid. Coat other wetted surfaces, including water boxes, with a corrosion-resistant finish.

2.13 SOLUTION HEAT EXCHANGER

A. Description: Shell-and-tube or brazed-plate heat exchanger; integral part of chiller to increase cycle efficiency by preheating weak solution on its way to generator while precooling strong solution returning from generator.

2.14 STEAM CONDENSATE DRAIN COOLER

A. Description: Shell-and-tube heat exchanger constructed of carbon-steel shell and copper-nickel-alloy or stainless steel tubes.

2.15 FACTORY-APPLIED INSULATION

A. Factory-Applied Insulation on Cold Surfaces:

1. Closed-cell, flexible elastomeric thermal insulation complying with ASTM C534/C534M, Type I for tube and Type II for sheet materials.

    a. Thickness: 3/4 inch (19 mm) or 1-1/2 inches (38mm) as directed.

2. Adhesive: As recommended by insulation manufacturer.
3. Factory apply insulation over all cold surfaces of chiller capable of forming condensation. Insulated components include, but are not limited to, evaporator shell and end tube sheets; evaporator water boxes including nozzles; refrigerant pump; cold surfaces of motor; and cold piping.

    a. Apply adhesive to 100 percent of insulation contact surface.
    b. Before insulating steel surfaces, prepare surfaces for paint, and prime and paint as indicated for other painted components. Do not insulate unpainted steel surfaces.
    c. Seal seams and joints to provide a vapor barrier.
    d. After adhesive has fully cured, paint exposed surfaces of insulation to match other painted parts.

B. Factory-Applied Insulation on Hot Surfaces:

1. Mineral-fiber board, pipe, or tank insulation complying with one of the following:

    a. ASTM C547, Type I or Type II, Grade A.
    b. ASTM C612, Type IB.
    c. ASTM C1393, Type II or Type IIIA, Category 2.
    d. Thickness: 1-1/2 inches (38 mm) or 2 inches (50mm) as directed.

2. Adhesive: As recommended by insulation manufacturer.
3. Factory apply materials over all hot surfaces to provide smooth, straight, and even surfaces; free of voids.

    a. Apply adhesive to insulation contact surface as recommended by insulation manufacturer.
    b. Install insulation anchor pins and washers if required by insulation manufacturer to secure insulation to surfaces to be insulated.
    c. Completely encapsulate insulation with metal jacket, leaving no exposed insulation. Provide removable jacket on components requiring access for service and inspection.
    d. Paint exposed surfaces of metal jacket to match other painted parts unless jacket material is aluminum or stainless steel.

2.16 ELECTRICAL

A. Factory installed and wired, and functionally tested at factory before shipment.

B. Single-point, field-power connection to fused disconnect switch, nonfused disconnect switch or circuit breaker as directed. Provide devices with minimum withstand rating as required by electrical power distribution system, but not less than 42,000 or 65,000 A as directed.

1. Branch power circuit to each motor, dedicated electrical load, and controls with disconnect switch or circuit breaker.

    a. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection in accordance with IEC 60947-4-1.
    b. NEMA AB 1, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit-trip set point.

2. NEMA ICS 2, Class A, full-voltage, nonreversing motor controller, hand-off-auto switch, and overcurrent protection for each motor.
3. Control-circuit transformer with primary and secondary side fuses.

C. Terminal blocks with numbered and color-coded wiring to match wiring diagram. Include spare wiring terminal block for connection to external controls or equipment.

D. Wiring Outside of Enclosures: Factory installed in metal raceway except make terminal connections with not more than a 24-inch (610-mm) length of liquidtight or flexible metallic conduit. Coordinate conduit requirements with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

2.17 CONTROLS

A. Control: Standalone and microprocessor based, with programs and configuration settings stored in nonvolatile memory so that reprogramming is not required on loss of electrical power.

B. Enclosure: Unit mounted, NEMA 250, Type 1, Type 3R, Type 4 or Type 4x as directed, hinged or lockable.

C. Operator Interface: Multiple-character digital or graphic display with dynamic update of information and with keypad or touch-sensitive display located on front of control enclosure. Display following information in either imperial or metric units selectable through interface.

1. Date and time.
2. Operating or alarm status.
3. Operating hours.
4. Outdoor-air temperature if required for chilled-water reset.
5. Temperature and pressure of operating set points.
6. Entering and leaving temperatures of chilled and condenser water.
7. Refrigerant temperature.
8. Solution concentration and temperature.
9. Indication of solution and purge-pump operation.
10. Generator shell pressure.
11. Number of starts.
12. Number of purge cycles.

13. Hot-water valve actuator potentiometer position (percentage).
14. Entering and leaving hot-water temperatures.
15. Steam demand limit.
16. Inlet steam pressure and temperature.
17. Steam valve actuator potentiometer position (percentage).
18. First-stage generator pressure and temperature.
19. As directed status display items.

D. Control Functions:

1. Manual or automatic startup and shutdown time schedule.
2. Automatic cycle to prevent crystallization.
3. Entering and leaving chilled-water temperatures and control set points. Reset chilled-water temperature based on return-water, outdoor-air or space temperature as directed.
4. Condenser-liquid temperature.
5. Measure and record cooling provided and heating energy used within programmable time periods, minimum monthly.
6. As directed control functions.

E. Capacity Control: Automatically controls input flow rate of heat source to maintain chilled-water temperature set point for cooling loads ranging from 10 to 100 percent.

F. Control Valve Package: As directed Factory-furnished, for field installation, or Factory-installed control valve package suitable for energy source indicated.

1. Body: Cast-iron, carbon-steel, or stainless steel body with flanged connections.
2. Type: As directed V-notch ball, Butterfly or Globe style with cage-guide plug constructed of stainless steel.
3. Rating: Pressure and temperature rating to match heat exchanger.
4. Shutoff: Capable of bubble-tight shutoff against maximum system pressure.
5. Size: Determined by chiller manufacturer.
6. Modulation: As directed Two or Three way.
7. Turndown: As required to achieve stable control through indicated operating range.
8. Actuator: Electric powered from chiller control panel and installed on valve.

G. Safety Shutdowns: To automatically shut down chiller and require manual reset before restart. Display message following each safety shutdown.

1. Crystallization.
2. Low refrigerant temperature.
3. Loss of chilled- or condenser-water flow.
4. Low leaving chilled-water temperature, 2 deg F (1 deg C) below set point.
5. First-stage generator low-solution level.
6. First-stage generator high temperature or pressure.
7. Power failure.
8. Solution pump overloads.
9. External auxiliary safety shutdown.
10. High solution concentration.
11. Incomplete dilution cycle.
12. High entering-water temperature.
13. High inlet steam pressure and temperature.

H. Warning Conditions: Provide control panel that closes warning contacts and generates message when one of the following operating conditions is detected:

1. Low refrigerant temperature.
2. High generator temperature or pressure.
3. High entering generator-water temperature (single-stage generator only).
4. High or low entering condenser-water temperature.
5. Solution temperature sensor failure.
6. Low chilled-water flow.
7. As directed warning conditions.

I. Trending: Capability to trend analog data up to five parameters simultaneously over adjustable period and frequency of polling.

J. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: view only; view and operate; and view, operate, and service.

K. Control Authority: At least four conditions: off, local manual control at chiller, local automatic control at chiller, and automatic control through a remote source.

L. Communication Port: RS-232 port, USB 2.0 port, or equivalent connection capable of connecting printer or electronic monitoring device.

M. BAS Interface: Factory-installed hardware and software to enable BAS to monitor, control, and display chiller status and alarms.

1. Hardwired Points:

a. Monitoring: On-off status or common trouble alarm.
b. Control: On-off operation, chilled-water, discharge temperature set-point adjustment or generator heat source capacity limiting.

2. Provide As directed ASHRAE 135 (BACnet), LonTalk or Modbus of interface communication interface with BAS to enable BAS operator to control and monitor chiller from remote operator workstation. Provide for control features and monitoring points displayed locally at chiller control panel to be available through BAS.

2.18 FINISH

A. Paint chiller, using manufacturer's standard procedures, except comply with the following minimum requirements:

1. Provide at least one coat of primer with a total dry film thickness of at least 2 mils (0.05 mm).
2. Provide at least two coats of alkyd-modified, vinyl enamel, epoxy or polyurethane finish as directed with a total dry film thickness of at least 4 mils (0.10 mm).
3. Paint surfaces that are to be insulated before applying insulation.
4. Paint installed insulation to match adjacent uninsulated surfaces.
5. Color of finish coat as directed or custom color selected by Architect.

B. Furnish Owner with quart container of paint used in application of topcoat to use in touchup applications after Project closeout.

2.19 ACCESSORIES

A. Sight Glasses: Equip unit with sight glasses for visual inspection of absorbent solution and refrigerant levels. Provide at least one sight glass in absorber and evaporator sections.

B. Flow Switches:

1. Furnish chiller-manufacturer-supplied hall flow switch for each condenser, evaporator and condenser as directed and verify field-mounting location before installation.
2. Paddle Flow Switches:

    a. Vane operated to actuate double-pole, double-throw switch with one pole field wired to chiller control panel and other pole field wired to BAS.
    b. Contacts: Platinum alloy, silver alloy, or gold-plated switch contacts with a rating of 10 A at 120 V ac.
    c. Pressure rating equal to pressure rating of heat exchanger.
    d. Construct body and wetted parts of Type 316 stainless steel.
    e. House switch in a NEMA 250, Type 4 enclosure constructed of die-cast aluminum.
    f. Vane length to suit installation.

3. Pressure Differential Switches:

    a. Construction: Wetted parts of body and trim constructed of Type 316 stainless steel.
    b. Performance: Switch suitable to withstand, without damage, full-pressure rating of heat exchanger applied to either port and exhibit no set-point shift due to variation in working pressure.
    c. Set Point: Screw type, field adjustable.
    d. Electrical Connections: Internally mounted screw-type terminal blocks.
    e. Switch Enclosure: NEMA 250, Type 4.
    f. Switch Action: Double-pole, double-throw switch with one pole field wired to chiller control panel and other pole field wired to BAS.

C. Vibration Isolation:

1. Chiller-manufacturer-furnished, neoprene-pad vibration isolation for each chiller.

    a. Two layers of 0.375-inch- (10-mm-) thick, ribbed- or waffle-pattern neoprene pads separated by 16-gauge, stainless steel plate.
    b. Fabricate pads from 40- to 50-durometer neoprene.
    c. Provide stainless steel square bearing plate to load pad uniformly between 20 and 40 psi (138 and 276 kPa) with 0.12- to 0.16-inch (3- to 4-mm) deflection.

2.20 SOURCE QUALITY CONTROL

A. Perform functional run tests of chillers before shipping.

B. Factory test and inspect absorber, generator, evaporator, and condenser in accordance with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1. Pressure test tube-side of heat exchangers, including water boxes, to 1.5 times rated pressure. Vacuum and pressure test shells for leaks.

C. Allow Owner access to place where chillers are being tested. Notify Architect 14 days in advance of testing.

D. Prepare test report indicating test procedures, instrumentation, test conditions, and results. Submit copy of results within one week of test date.

PART 3 - EXECUTION

3.1 INSTALLATION OF CHILLER

A. Examine chillers before installation. Reject chillers that are damaged.

B. Install chillers on support structure indicated.

C. Equipment Mounting:

1. Install chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" as directed.
2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

D. Maintain manufacturer's recommended clearances for service and maintenance.

E. Charge chiller with absorbent and refrigerant if not factory charged.

F. Install separate devices furnished by manufacturer and not factory installed.

G. Insulate hot and cold chiller surfaces that are recommended by chiller manufacturer to be insulated, and are not factory insulated. Comply with requirements in Section 230716 "HVAC Equipment Insulation."

3.2 PIPING CONNECTIONS

A. Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties" for hydronic piping. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Comply with requirements in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 "Steam and Condensate Heating Piping Specialties" for steam and condensate piping. Drawings indicate general arrangement of piping, fittings, and specialties.

C. Where installing piping adjacent to chiller, allow space for service and maintenance.

D. Generator Steam Piping Connections:

1. Connect steam piping with trapped drip leg, gate valve, strainer, control valve, and pressure gauge. Install pressure reducing valve and safety relief valve upstream from steam-control valve to protect control valve from excessive steam pressure. Make connections to chiller with flange or union.
2. Connect steam condensate piping with vacuum breaker, trapped drip leg, gate valve, strainer, float and thermostatic trap(s), condensate cooler, condensate receiver, or condensate receiver and pump, and check valve. Make connections to chiller with flange or union.

E. Generator Hot-Water Connections: Connect to generator inlet with shutoff valve, strainer, flexible connector, control valve, thermometer, and plugged tee with shutoff valve and pressure gauge. Connect to generator outlet with shutoff valve, check valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with shutoff valve and pressure gauge, flow meter, and drain connection with valve. Make connections to chiller with a flange or mechanical coupling.

F. Evaporator-Liquid Connections: Connect to evaporator inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with shutoff valve and pressure gauge. Connect to evaporator outlet with shutoff valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with shutoff valve and pressure gauge, flow meter, and drain connection with valve. Make connections to chiller with a flange or mechanical coupling.

G. Absorber/Condenser-Liquid Connections: Connect to inlet with shutoff valve, strainer, or flexible connector, thermometer, and plugged tee with shutoff valve and pressure gauge. Connect to outlet with shutoff valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with shutoff valve and pressure gauge, flow meter, and drain connection with valve. Make connections to chiller with a flange or mechanical coupling.

1. If not factory furnished or installed, provide pipe connecting liquid connection of absorber discharge and condenser inlet.

H. Refrigerant Pressure Relief Device Connections: As directed Extend vent piping or separate vent piping for each chiller to outdoors without valves or restrictions. Comply with ASHRAE 15. Connect to chiller pressure relief device with flexible connector and dirt leg with drain valve.

I. As directed Extend purge vent piping or separate purge vent piping for each chiller to outdoors. Comply with ASHRAE 15.

J. Connect each chiller drain connection with a union and drain pipe, and extend pipe, full size of connection, to floor drain. Provide a shutoff valve at each connection.

3.3 ELECTRICAL CONNECTIONS

A. Install electrical devices furnished with chiller but not factory mounted.

B. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

C. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

D. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.

E. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.4 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between control devices.

C. Connect control wiring in accordance with Section 260523 "Control-Voltage Electrical Power Cables."

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

D. Perform tests and inspections with the assistance of a factory-authorized service representative.

E. Tests and Inspections:

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
2. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

F. Absorption water chillers will be considered defective if they do not pass tests and inspections.

G. Prepare test and inspection reports.

3.6 STARTUP SERVICE

A. As directed Engage a factory-authorized service representative to perform or Perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's written instructions.
2. Operate chiller for run-in period.
3. Verify that absorbent and refrigerant charge is sufficient and chiller has been leak tested.
4. Verify that pumps are installed and functional.
5. Verify that thermometers and gauges are installed.
6. Operate chiller for run-in period.
7. Verify that refrigerant pressure relief device is vented outside.
8. Verify proper motor rotation.
9. Verify static deflection of vibration isolators including deflection during chiller startup and shutdown.
10. Verify and record performance of liquid flow and low-temperature interlocks for evaporator and condenser.
11. Verify and record performance of chiller protection devices.
12. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.
13. Startup steps if any as directed.

B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assembly, installation, and connection.

C. Prepare test and inspection startup reports.

3.7 DEMONSTRATION

A. As directed Engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain chillers. Video record training sessions.

END OF SECTION 236413.16

SECTION 236416 - CENTRIFUGAL WATER CHILLERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Packaged, water-cooled, electric-motor-driven centrifugal chillers.

B. Related Requirements:

1. Section 284400 "Refrigerant Detection and Alarm" for refrigerant monitors, alarms, supplemental breathing apparatus, and ventilation equipment interlocks.

1.2 DEFINITIONS

A. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input, using consistent units for any given set of rating conditions.

B. DDC: Direct digital control.

C. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in terms of Btu/h to the total power input given in terms of watts at any given set of rating conditions.

D. IPLV: Integrated part-load value. A single-number part-load efficiency figure of merit for a single chiller calculated according to the method defined by AHRI 550/590 and referenced to AHRI standard rating conditions.

E. kVAR: Kilovolt-ampere reactive.

F. kW/Ton (kW/kW): The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons (kW) at any given set of rating conditions.

G. NPLV: Nonstandard part-load value. A single-number part-load efficiency figure of merit for a single chiller calculated according to the method defined by AHRI 550/590 and intended for operating conditions other than the AHRI standard rating conditions.

H. SCCR: Short-circuit current rating.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As submitted.

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, load distribution, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: For power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings:

1. Drawings, drawn to scale:

B. Certificates: For certification required in "Quality Assurance" Article.

C. Seismic Qualification Data: Certificates, for chillers, accessories, and components, from manufacturer.

D. Source quality-control reports.

E. Field Quality-Control Reports: Startup service reports.

F. Sample warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.6 QUALITY ASSURANCE

A. AHRI Certification: Certify chiller according to AHRI 550 certification program.

B. Green Seal Compliance: Signed by manufacturer or Green Seal, certifying compliance with GS-31.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of chillers that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Two, Three, Four, Five or 10 years from date of Substantial Completion, as directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Centrifugal chillers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: 1.5 - 1.0.

B. Condenser-Fluid Temperature Performance:

1. Startup Condenser-Fluid Temperature: Chiller shall be capable of starting with an entering condenser-fluid temperature of 60 deg F (16 deg C), 55 deg F (13 deg C) or 40 deg F (4 deg C), as directed and providing stable operation until the system temperature is elevated to the minimum operating entering condenser-fluid temperature.
2. Minimum Operating Condenser-Fluid Temperature: Chiller shall be capable of continuous operation over the entire capacity range indicated with an entering condenser-fluid temperature of 65 deg F (18 deg C), 60 deg F (16 deg C) or 55 deg F (13 deg C), as directed.
3. Make factory modifications to standard chiller design if necessary to comply with performance indicated.

C. Site Altitude: Chiller shall be suitable for altitude at which installed without affecting performance indicated. Make adjustments to affected chiller components to account for site altitude.

D. Performance Tolerance: Comply with the following in lieu of AHRI 550/590:

1. Allowable Capacity Tolerance: Zero percent.
2. Allowable Full-Load Energy Efficiency Tolerance: Zero percent.
3. Allowable Part-Load Energy Efficiency Tolerance: Zero percent.

E. ASHRAE Compliance:

1. ASHRAE 15 for safety code for mechanical refrigeration.
2. ASHRAE 147 for refrigerant leaks, recovery, and handling and storage requirements.

F. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.

G. ASME Compliance: Fabricate and label chillers to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, as applicable to chiller design. For chillers charged with R-134a refrigerant, include an ASME U-stamp and nameplate certifying compliance.

H. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

I. Comply with requirements of Underwriters Laboratories Inc. and include label by a qualified testing agency showing compliance.

J. Operation Following Loss of Normal Power:

1. Equipment, associated factory- and field-installed controls, and associated electrical equipment and power supply connected to backup power system shall automatically return equipment and associated controls to the operating state occurring immediately before loss of normal power without need for manual intervention by an operator when power is restored either through a backup power source, or through normal power if restored before backup power is brought online.
2. Refer to Drawings for equipment served by back-up power systems.
3. Provide means and methods required to satisfy requirement, even if not explicitly indicated.

K. Outdoor Installations:

1. Chiller shall be suitable for outdoor installation indicated. Provide adequate weather protection to ensure reliable service life over a 25-year period, with minimal degradation due to exposure to outdoor ambient conditions.
2. Chillers are equipped to provide safe and stable operation while achieving performance indicated when operating at extreme outdoor temperatures. Review historical weather database and provide equipment that can operate at extreme outdoor temperatures recorded over past 30-year period.

2.2 MANUFACTURERS

2.3 MANUFACTURED UNIT

A. Description: Factory-assembled and -tested chiller complete with compressor, compressor motor, compressor motor controller, lubrication system evaporator, condenser, controls, interconnecting unit piping and wiring, and indicated accessories.

1. Multi-Piece Assembly: Disassemble chiller into major assemblies as required by the installation after factory testing and before packaging for shipment.
2. Dual-Compressor Chillers: For chillers with dual compressors, provide each compressor with a dedicated motor and motor controller, and provide for continued operation when either compressor-drive assembly fails.

B. Fabricate chiller mounting base with reinforcement strong enough to resist chiller movement during a seismic event when chiller is anchored to field support structure.

2.4 COMPRESSOR-DRIVE ASSEMBLY

A. Description: Single-stage or multistage, variable- or dynamic-displacement, centrifugal-type compressor driven by an electric motor.

B. Oil-Free Technology:

1. Compressors shall have oil-free technology.

C. Compressor:

1. Casing: Cast iron, precision ground.
2. Impeller: High-strength cast-aluminum or cast-aluminum alloy on carbon- or alloy-steel shaft.

D. Drive: Direct-drive, hermetic, Gear-drive, hermetic, Gear-drive, open, Direct- or gear-drive, hermetic or Direct- or gear-drive, open or hermetic, as directed, design, using an electric motor as the driver.

1. Gear Drives:

   a. For chillers with oil-lubricated gear drives, provide single- or double-helical gear design continuously coated with oil while chiller is operating.
   b. For chillers with oil-free technology, gear drives shall be of single- or double-helical gear design without the need for oil while chiller is operating, starting, and stopping.
   c. Gears shall comply with American Gear Manufacturer Association standards.

2. Drive Coupling: For chillers with open drives, provide flexible disc with all-metal construction and no wearing parts to ensure long life without the need for lubrication.
3. Seals: Seal drive assembly to prevent refrigerant leakage.

E. Compressor Motor:

1. Continuous-duty, squirrel-cage, induction-type, two-pole motor with energy efficiency required to suit chiller energy efficiency indicated.
2. Factory mounted, aligned, and balanced as part of compressor assembly before shipping.
3. Motor shall be of sufficient capacity to drive compressor throughout entire operating range without overload and with sufficient capacity to start and accelerate compressor without damage.
4. For chillers with open drives, provide motor with open-dripproof, weather-protected, Type I, weather-protected, Type II or totally enclosed enclosure.
5. Provide motor with thermistor or RTD in single motor winding or each of three-phase motor windings to monitor temperature and report information to chiller control panel.
6. Provide motor with thermistor or RTD to monitor bearing temperature and report information to chiller control panel.
7. Provide open-drive motor with internal electric heater, internally powered from chiller power supply.

F. Vibration Balance: Balance chiller compressor and drive assembly to provide a precision balance that is free of noticeable vibration over the entire operating range.

1. Overspeed Test: At least 20 - 25 percent above design operating speed.
2. Vibration Limits: Velocities not to exceed 0.15 inches/s (3.8 mm/s) and 0.8 mils (0.02 mm) peak to peak on all axes.

G. Service: Easily accessible for inspection and service.

1. Compressor's internal components shall be accessible without having to remove compressor-drive assembly from chiller.
2. Provide lifting lugs or eyebolts attached to casing.

H. Economizers: For multistage chillers, provide interstage economizers.

I. Capacity Control: Modulating, variable-inlet, guide-vane assembly combined with hot-gas bypass, if necessary, to achieve performance indicated.

1. Maintain stable operation that is free of surge, cavitation, and vibration throughout range of operation. Configure to achieve most energy-efficient operation possible.
2. Operating Range: From 100 to 15, 10, 5 or zero percent of design capacity, as directed.
3. Condenser-Fluid Unloading Requirements over Operating Range: Constant-design of entering condenser-fluid temperature or Drop-in entering condenser-fluid temperature of 2.5 deg F (1.4 deg C) for each 10 percent in capacity reduction.
4. Chillers with variable-frequency controllers shall modulate compressor speed with variable-inlet, guide-vane control to achieve optimum energy efficiency.
5. Avoid use of hot-gas bypass if other options are available to achieve performance indicated. Apply hot-gas bypass according to ASHRAE/IES 90.1 and governing codes.

J. Oil Lubrication System: Consisting of pump, filtration, heater, cooler, factory-wired power connection, and controls.

1. Bearings, gears, and other rotating surfaces shall be lubricated at all operating, startup, coast down, and standby conditions, including power failure.
2. Manufacturer's standard method or Thermostatically controlled oil heater properly sized to remove refrigerant from oil.
3. Oil filter, Dual oil filters, one redundant, shall be the easily replaceable cartridge type, minimum 0.3 - 0.5-micron efficiency, with means of positive isolation while servicing.
4. Refrigerant, Water or Refrigerant- or watercooled oil cooler, as directed
5. Factory-installed and pressure-tested piping with isolation valves and accessories.
6. Oil compatible with refrigerant and chiller components.
7. Positive visual indication of oil level.

2.5 REFRIGERATION

A. Refrigerant:

1. Type: R-123; ASHRAE 34, Class B1 or R-134a; ASHRAE 34, Class A1.
2. Compatibility: Chiller parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.

B. Refrigerant Flow Control: Manufacturer's standard refrigerant flow-control device satisfying performance requirements indicated.

C. Pressure Relief Device:

1. Comply with requirements in ASHRAE 15, ASHRAE 147, and applicable portions of ASME Boiler and Pressure Vessel Code, Section VIII, Division 1.

2. Select and configure pressure relief devices to protect against corrosion and inadvertent release of refrigerant.
3. Where dual pressure relief devices are installed in series, provide a sensor with indicator between devices to indicate refrigerant release past first device.
4. For Chillers Using R-123: Manufacturer's standard offering complying with ASHRAE 15 and ASHRAE 147, Rupture disc constructed of frangible carbon or spring-loaded, pressure relief valve; single- or multiple-reseating type.
5. For Chillers Using R-134a: ASME-rated, spring-loaded, pressure relief valve; single- or multiple-reseating type. Pressure relief valve(s) shall be provided for each heat exchanger. Condenser shall have dual valves with one being redundant and configured to allow either valve to be replaced without loss of refrigerant.

D. Refrigeration Transfer: Provide service valves and other factory-installed accessories required to facilitate transfer of refrigerant from chiller to a remote refrigerant storage and recycling system. Comply with requirements in ASHRAE 15 and ASHRAE 147.

E. Refrigerant Isolation for Chillers Using R-134a:

1. Factory install positive shutoff, manual isolation valves in the compressor discharge line to the condenser and the refrigerant liquid line leaving the condenser to allow for isolation and storage of full refrigerant charge in the chiller condenser shell.
2. Suction side of compressor from evaporator shall have an isolation valve to allow for isolation and storage of full refrigerant charge in the chiller evaporator shell.

F. Purge System:

1. For chillers operating at subatmospheric pressures (using R-123 refrigerant), factory install an automatic purge system for collection and return of refrigerant and lubricating oil and for removal of noncondensables, including, but not limited to, water, water vapor, and noncondensable gases.
2. System shall be of thermal purge design, refrigerant or air cooled, and equipped with a carbon filter that includes an automatic regeneration cycle.
3. Factory wire to chiller's main power supply and system complete with controls, piping, and refrigerant valves to isolate the purge system from the chiller.
4. Construct components of noncorrodible materials.
5. Controls shall interface with chiller control panel to indicate modes of operation, set points, data reports, diagnostics, and alarms.
6. Efficiency of not more than 0.02 lb of refrigerant per pound of air (9 g of refrigerant per gram of air) when rated according to AHRI 580.
7. Operation independent of chiller according to ASHRAE 147.

G. Positive-Pressure System:

1. For chillers operating at subatmospheric pressures (using R-123 refrigerant), factory install an automatic positive-pressure system.
2. During nonoperational periods, positive-pressure system shall automatically maintain a positive pressure for atmosphere in the refrigerant-pressure vessel of not less than 0.5 psig (3 kPa) adjustable up to a pressure that remains within the vessel design pressure limits.
3. System shall be factory wired and include controller, electric heat, pressure transmitter, or switch.

2.6 EVAPORATOR

A. Description: Shell-and-tube design, with water in tubes and refrigerant surrounding tubes within shell. Shell is separate from condenser.

B. Shell Material: Carbon-steel rolled plates with continuously welded seams or seamless pipe.

C. Designed to prevent liquid refrigerant carryover from entering compressor.

D. Evaporator shall have sight glass or other form of positive visual verification of liquid-refrigerant level.

E. Tubes:

1. Individually replaceable from either end and without damage to tube sheets and other tubes.
2. Mechanically expanded into end sheets and physically attached to intermediate tube sheets.
3. Material: Copper, Copper-nickel alloy, Stainless steel, Titanium, Copper, copper-nickel alloy, stainless steel, or titanium, as directed.
4. Nominal OD: Manufacturer's choice, 3/4 inch (19 mm), 1 inch (25 mm) or 3/4 or 1 inch (19 or 25 mm), as directed.
5. Minimum Wall Thickness: Manufacturer's choice, 0.025 inch (0.6 mm), 0.028 inch (0.7 mm) or 0.035 inch (0.9 mm), as directed.
6. External Finish: Manufacturer's standard.
7. Internal Finish: Enhanced, Smooth or Enhanced or smooth.

F. End Tube Sheets: Continuously welded to each end of shell; drilled and reamed to accommodate tubes, with positive seal between fluid in tubes and refrigerant in shell.

G. Intermediate Tube Sheets: Installed in shell and spaced along length of tube at intervals required to eliminate vibration and to avoid contact of tubes resulting in abrasion and wear, but not more than 4 feet (1.2 m) apart.

H. Water Box:

1. Cast-iron or carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. Standard or Marine type for water box with piping connections; standard type for water box without piping connections.
3. Provide water boxes and marine water-box covers with lifting lugs or eyebolts.
4. Hinged, Davited or Hinged or davited water boxes, as directed.
5. Hinged, Davited or Hinged or davited marine water-box covers, as directed
6. Nozzle Pipe Connections: Welded, ASME B16.5, flat-face flange, Welded, ASME B16.5, raised-face flange, grooved for mechanical-joint coupling or Grooved with mechanical-joint coupling and flange adapter, as directed.
7. Thermistor or RTD temperature sensor factory installed in each nozzle.
8. Fit each water box with 3/4-inch (19-mm), 1-inch (25-mm) or 3/4- or 1-inch (19- or 25-mm), as directed, drain connection at low point and vent connection at high point, each with threaded plug.

I. Additional Corrosion Protection:

1. Electrolytic corrosion-inhibitor anode, zinc or magnesium.
2. Coat wetted surfaces with a corrosion-resistant finish.
3. Using same material as tubes, clad surfaces of end tube sheets in contact with fluid. Coat other wetted surfaces, including water boxes, with a corrosion-resistant finish.

J. Flow Sensor: Thermal dispersion type, factory calibrated for project-specific application.

2.7 CONDENSER

A. Description: Shell-and-tube design, with water in tubes and refrigerant surrounding tubes within shell. Shell is separate from evaporator.

B. Shell Material: Carbon-steel rolled plates with continuously welded seams or seamless pipe.

C. Designed to prevent direct impingement of high-velocity hot gas from compressor discharge on tubes.

D. Condenser shall have sight glass or other form of positive visual verification of refrigerant charge and condition.

E. Tubes:

1. Individually replaceable from either end and without damage to tube sheets and other tubes.
2. Mechanically expanded into end sheets and physically attached to intermediate tube sheets.
3. Material: Copper, Copper-nickel alloy, Stainless steel, Titanium, Copper, copper-nickel alloy, stainless steel, or titanium, as directed.
4. Nominal OD: Manufacturer's choice, 3/4 inch (19 mm), 1 inch (25 mm) or 3/4 or 1 inch (19 or 25 mm).
5. Minimum Wall Thickness: Manufacturer's choice, 0.025 inch (0.6 mm), 0.028 inch (0.7 mm) or 0.035 inch (0.9 mm), as directed.
6. External Finish: Manufacturer's standard.
7. Internal Finish: Enhanced, Smooth or Enhanced or smooth.

F. End Tube Sheets: Continuously welded to each end of shell; drilled and reamed to accommodate tubes, with positive seal between fluid in tubes and refrigerant in shell.

G. Intermediate Tube Sheets: Installed in shell and spaced along length of tube at intervals required to eliminate vibration and to avoid contact of tubes resulting in abrasion and wear, but not more than 4 feet (1.2 m) apart.

H. Water Box:

1. Cast-iron or carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
2. Standard or Marine type for water box with piping connections. Standard type for water box without piping connections.

3. Water boxes and marine water-box covers shall have lifting lugs or eyebolts.
4. Hinged, Davited, Hinged or davited water boxes, as directed.
5. Hinged, Davited, Hinged or davited marine water-box covers, as directed.
6. Nozzle Pipe Connections: Welded, ASME B16.5, flat-face flange, Welded, ASME B16.5, raised-face flange, grooved for mechanical-joint coupling or Grooved with mechanical-joint coupling and flange adapter, as directed.
7. Thermistor or RTD temperature sensor factory installed in each nozzle.
8. Fit each water box with 3/4-inch (19-mm), 1-inch (25-mm) or 3/4- or 1-inch (19- or 25-mm) drain connection at low point and vent connection at high point, each with threaded plug.

I. Additional Corrosion Protection:

1. Electrolytic corrosion-inhibitor anode, zinc or magnesium.
2. Coat wetted surfaces with a corrosion-resistant finish.
3. Using same material as tubes, clad surfaces of end tube sheets in contact with fluid. Coat other wetted surfaces, including water boxes, with a corrosion-resistant finish.

J. Flow Sensor: Thermal dispersion type, factory calibrated for project-specific application.

2.8 INSULATION

A. Closed-cell, flexible elastomeric thermal insulation complying with ASTM C534, Type I for tubular materials and Type II for sheet materials.

1. Thickness: 3/4 inch (19 mm) or 1-1/2 inches (38 mm), as directed.

B. Adhesive: As recommended by insulation manufacturer.

C. Factory-applied insulation over all cold surfaces of chiller capable of forming condensation. Components shall include, but not be limited to, evaporator shell and end tube sheets, evaporator water boxes including nozzles, refrigerant suction pipe from evaporator to compressor, cold surfaces of compressor, refrigerant-cooled motor, and auxiliary piping.

1. Apply adhesive to 100 percent of insulation contact surface.
2. Before insulating steel surfaces, prepare surfaces for paint, and prime and paint as indicated for other painted components. Do not insulate unpainted steel surfaces.
3. Seal seams and joints to provide a vapor barrier.
4. After adhesive has fully cured, paint exposed surfaces of insulation to match other painted parts.
5. Manufacturer has option to factory or field insulate chiller components installed in multiple pieces to reduce potential for damage during installation.
6. Manufacturer has option to factory or field insulate water boxes and nozzles to reduce potential for damage during installation.

D. Field-Applied Insulation:

1. Components that are not factory insulated shall be field insulated to comply with requirements indicated.

2. Manufacturer shall be responsible for chiller insulation whether factory or field installed, to ensure manufacturer is the single point of responsibility for chillers.
3. Manufacturer factory-authorized service representative shall instruct and supervise installation of field-applied insulation.
4. After field-applied insulation is complete, paint insulation to match factory-applied finish.

2.9 ELECTRICAL

A. Factory installed and wired, and functionally tested at factory before shipment.

B. Single-point, field-power connection to fused disconnect switch, nonfused disconnect switch or circuit breaker. Minimum short circuit current rating (SCCR) according to UL 508 shall be as required by electrical power distribution system, but not less than 42,000, 65,000 or 100,000 A, as directed.

1. Branch power circuit to each motor, electric heater, dedicated electrical load, and control, with circuit breaker or disconnect switch having SCCR to match main disconnecting means.

    a. NEMA KS 1, heavy-duty fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
    b. NEMA AB 1, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit-trip set point.

2. NEMA ICS 2-rated motor controller for auxiliary motors, hand-off-auto switch, and overcurrent protection for each motor. Provide variable-frequency controller for each variable-speed motor furnished.
3. Control-circuit transformer with primary and secondary side fuses.

C. Terminal blocks with numbered and color-coded wiring to match wiring diagram. Spare wiring terminal block for connection to external controls or equipment.

D. Factory-installed wiring located outside of enclosures shall be installed in metal raceway, and terminal connections shall be made with not more than a 24-inch (610-mm) length of liquidtight, flexible metallic or liquidtight or flexible metallic conduit.

E. Factory install and wire capacitor bank for the purpose of power factor correction to 0.95 at full load or all operating conditions.

1. If capacitors are mounted in a dedicated enclosure, use same NEMA enclosure type as that for motor controller. Provide enclosure with service entrance knockouts and bushings for conduit.
2. Capacitors shall be of non-PCB dielectric fluid, metallized electrode design, with low loss with low-temperature rise. The kVAR ratings shall be indicated and shall not exceed the maximum limitations set by NFPA 70. Provide individual cells as required.

3. Provide each cell with current-limiting replaceable fuses and carbon-film discharge resistors to reduce residual voltage to less than 50 V within one minute after de-energizing.
4. Provide a ground terminal and a terminal block or individual connectors for phase connection.

2.10 MOTOR CONTROLLER

A. Enclosure: Factory installed, unit mounted, Factory furnished, field mounted, NEMA 250, NEMA ICS 6, Type 1, Type 4, Type 4X or Type 12, as directed, with hinged full-front access door with lock and key or padlock and key.

B. Control Circuit: Obtained from integral control power transformer with a control power transformer or source of enough capacity to operate connected control devices.

C. Overload Relay shall be sized according to UL 1995 or shall be an integral component of chiller control microprocessor.

D. Across-the-Line Controller: NEMA ICS 2, Class A, full voltage, nonreversing; include isolation switch and current-limiting fuses.

E. Star-Delta, Reduced-Voltage Controller: NEMA ICS 2, closed transition.

F. Autotransformer Reduced-Voltage Controller: NEMA ICS 2, closed transition; include isolation switch and current-limiting fuses.

G. Solid-State, Reduced-Voltage Controller: NEMA ICS 2.

1. Include surge suppressor in solid-state power circuits to provide three-phase protection against damage from supply voltage surges 10 percent or more above nominal line voltage.
2. Visual indication of motor and control status, including the following conditions:

    a. Controller on.
    b. Overload trip.
    c. Loss of phase.
    d. Starter fault.

H. Accessories: Devices shall be factory installed in controller enclosure unless otherwise indicated.

1. Externally Operated, Door-Interlocked Disconnect: Fused disconnect switch, Nonfused disconnect switch or Circuit breaker, as directed. Short circuit current rating (SCCR) according to UL 508 shall be as required by electrical power distribution system, but not less than 42,000, 65,000 or 100,000 A, as directed.
2. Push-Button Stations, Pilot Lights, and Selector Switches: NEMA ICS 2, heavy-duty type.
3. Stop and Lockout Push-Button Station: Momentary-break, push-button station with a factory-applied hasp arranged so padlock can be used to lock push button in depressed position with control circuit open.

4. Control Relays: Time-delay relays.
5. Elapsed-Time Meters: Numerical readout in hours on face of enclosure.
6. Number-of-Starts Counter: Numerical readout on face of enclosure.
7. Meters: Panel type, 2-1/2 inches (64 mm) or 4-1/4 inches (108 mm) with 90, 120 or 270-degree scale and 1 - 2 percent accuracy, as directed. Where indicated, provide transfer device with an off position. Meters shall indicate the following:

    a. Ammeter: Output current for each phase, with current sensors rated to suit application.
    b. Voltmeter: Output voltage for each phase.
    c. Frequency Meter: Output frequency.
    d. Real-time clock with current time and date.
    e. Total run time.

8. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems and with the following features:

    a. Selectable, digital display of the following:

        1) Phase Currents, Each Phase: Plus or minus 1 percent.
        2) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
        3) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
        4) Three-Phase Real Power: Plus or minus 2 percent.
        5) Three-Phase Reactive Power: Plus or minus 2 percent.
        6) Power Factor: Plus or minus 2 percent.
        7) Frequency: Plus or minus 0.5 percent.
        8) Integrated Demand with Demand Interval Selectable from Five to 60 Minutes: Plus or minus 2 percent.
        9) Accumulated energy, in megawatt hours (joules), plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.

    b. Mounting: Display and control unit flush or semirecessed in instrument compartment door.

9. Phase-Failure, Phase-Reversal, Undervoltage Relays: Solid-state sensing circuit with adjustable undervoltage setting and isolated output contacts for hardwired connection.
10. Power Protection: Chiller shall shut down within six cycles of power interruption.

2.11 VARIABLE-FREQUENCY CONTROLLER

A. Motor controller shall be factory mounted and wired on the chiller to provide a single-point, field-power termination to the chiller and its auxiliaries.

B. Description: NEMA ICS 2; listed and labeled according to UL 508 as a complete unit and arranged to provide variable speed by adjusting output voltage and frequency.

C. Enclosure: Unit mounted, NEMA 250, Type 1, Type 4, Type 4x or Type 12, as directed, with hinged full-front access door with lock and key.

D. Integral Disconnecting Means: Door-interlocked, NEMA AB 1, instantaneous-trip circuit breaker with lockable handle. Minimum short circuit current rating (SCCR) according to UL 508 shall be as required by electrical power distribution system, but not less than 42,000 65,000, 100,000 A, as directed.

E. Technology: Pulse width modulated (PWM) output with insulated gate bipolar transistors; suitable for variable torque loads.

F. Controller shall consist of a rectifier converter section, a digital/analog driver regulator section, and an inverter output section.

1. Rectifier section shall be a full-wave diode bridge that changes fixed-voltage, fixed-frequency, ac line power to a fixed dc voltage. Silicon controller rectifiers, current source inverters, and paralleling of devices are unacceptable. Rectifier shall be insensitive to phase rotation of the ac line.
2. Regulator shall provide full digital control of frequency and voltage.
3. Inverter section shall change fixed dc voltage to variable-frequency, variable ac voltage for application to a squirrel-cage motor. Inverter shall produce a sine-coded, PWM output waveform and shall conduct no RFI back to the input power supply.

G. Output Rating: Three phase, with voltage proportional to frequency throughout voltage range.

H. Operating Requirements:

1. Input AC Voltage Tolerance: 460-V ac, plus 10 percent or 506 V maximum.
2. Input frequency tolerance of 60 Hz, plus or minus 2 Hz.
3. Capable of driving full load, without derating, under the following conditions:

    a. Ambient Temperature: Zero to 40 - 50 deg C.
    b. Relative Humidity: Up to 90 -95 percent (noncondensing).
    c. Altitude: Up to 3300 feet (1005 m) or 6600 feet (2010 m).

4. Minimum Efficiency: 96 percent at 60 Hz, full load.
5. Minimum Displacement Primary-Side Power Factor: 95 percent without harmonic filter; 98 percent with harmonic filter.
6. Overload Capability: 1.05 times the full-load current for seven seconds.
7. Starting Torque: As required by compressor-drive assembly.
8. Speed Regulation: Plus or minus 1 percent.
9. Isolated control interface to allow controller to follow control signal over a 10:1 speed range.
10. To avoid equipment resonant vibrations, provide critical speed lockout circuitry to allow bands of operating frequency at which controller shall not operate continuously.
11. Capable of being restarted into a motor coasting in either the forward or reverse direction without tripping.

I. Internal Adjustability Capabilities: Integral to controller or through chiller control panel.

1. Minimum Output Frequency: 6 Hz.
2. Maximum Output Frequency: 60 Hz.
3. Acceleration: Two seconds to a minimum of 60 seconds.
4. Deceleration: Two seconds to a minimum of 60 seconds.

5. Current Limit: 30 percent to a minimum of 100 percent of maximum rating.

J. Self-Protection and Reliability Features: Subjecting the controller to any of the following conditions shall not result in component failure or the need for replacement:

1. Overtemperature.
2. Short circuit at controller output.
3. Ground fault at controller output. Variable-frequency controller shall be able to start a grounded motor.
4. Open circuit at controller output.
5. Input undervoltage.
6. Input overvoltage.
7. Loss of input phase.
8. Reverse phase.
9. AC line switching transients.
10. Instantaneous overload, line to line or line to ground.
11. Sustained overload exceeding 100 percent of controller-rated current.
12. Starting a rotating motor.

K. Motor Protection: Controller shall protect motor against overvoltage and undervoltage, phase loss, reverse phase, overcurrent, overtemperature, and ground fault.

L. Automatic Reset and Restart:

1. Capable of three - five restarts after controller fault or on return of power after an interruption and before shutting down for manual reset or fault correction.
2. Controller shall be capable of automatic restart on phase-loss and overvoltage and undervoltage trips.

M. Visual Indication: On face of controller enclosure or chiller control enclosure. indicating the following conditions:

1. Power on.
2. Run.
3. Overvoltage.
4. Line fault.
5. Overcurrent.
6. External fault.
7. Motor speed (percent).
8. Fault or alarm status (code).
9. DC-link voltage.
10. Motor output voltage.
11. Input kilovolt amperes.
12. Total power factor.
13. Input kilowatts.
14. Input kilowatt-hours.
15. Three-phase input voltage.
16. Three-phase output voltage.
17. Three-phase input current.
18. Three-phase output current.

19. Three-phase input voltage THD.
20. Three-phase input current THD.
21. Output frequency (Hertz).
22. Elapsed operating time (hours).
23. Diagnostic and service parameters.

N. Operator Interface: At controller or chiller control panel; with start-stop and auto-manual selector with manual-speed-control potentiometer.

O. Control Signal Interface:

1. Electric Input Signal Interface: A minimum of two analog inputs (0 to 10 V or 0/4-20 mA) and six programmable digital inputs.
2. Manufacturer has option to incorporate control signal interface into chiller control panel.

P. Active Harmonic Distortion Filter:

1. Factory mounted and wired to limit total voltage and current distortion to 5 percent.
2. Factory mounted and wired to limit total demand distortion (TDD) to 5 percent of unit input.

Q. Input Line Conditioning: As directed.

R. Cooling: Air, Refrigerant, Water or Air, refrigerant, or water cooled, as directed.

S. Accessories: Devices shall be factory installed in controller enclosure unless otherwise indicated.

1. Control Relays: Auxiliary and adjustable time-delay relays.

T. Chiller Capacity Control Interface: Equip chiller with adaptive control logic to automatically adjust the compressor motor speed and the compressor pre-rotation inlet vane position independently to achieve maximum part-load efficiency in response to sensor inputs that are integral to the chiller controls.

2.12 CONTROLS

A. Control: Standalone and microprocessor based, with all memory stored in nonvolatile memory, so that reprogramming is not required on loss of electrical power.

B. Enclosure: Unit mounted, NEMA 250, Type 1, Type 4, Type 4x or Type 12, as directed, hinged or lockable, factory wired with a single-point, with field-power connection and a separate control circuit.

C. Factory-installed wiring outside of enclosures shall be in a NFPA 70-approved raceway. Make terminal connections with liquidtight or flexible metallic conduit.

D. Operator Interface: Multiple-character digital or graphic display with dynamic update of information and with keypad or touch-sensitive display located on front of control enclosure. In either imperial or metric units selectable through the interface, display the following information:

1. Date and time.
2. Operating or alarm status.
3. Fault history with not less than last 10 faults displayed.
4. Set points of controllable parameters.
5. Trend data.
6. Operating hours.
7. Number of chiller starts.
8. Outdoor-air temperature or space temperature if required for chilled-water reset.
9. Entering- and leaving-fluid temperatures of evaporator and condenser.
10. Difference in fluid temperatures of evaporator and condenser.
11. Fluid flow of evaporator and condenser.
12. Fluid-pressure drop of evaporator and condenser.
13. Refrigerant pressures in evaporator and condenser.
14. Refrigerant saturation temperature in evaporator and condenser shell.
15. Compressor refrigerant suction and discharge temperature.
16. Compressor bearing temperature.
17. Motor bearing temperature.
18. Motor winding temperature.
19. Oil temperature.
20. Oil discharge pressure.
21. Phase current.
22. Percentage of motor-rated load amperage.
23. Phase voltage.
24. Demand power (kilowatts).
25. Energy use (kilowatt-hours).
26. Power factor.
27. For chillers equipped with variable-frequency controllers and harmonic filters, include the following:

    a. Output voltage and frequency.
    b. Voltage THD for each phase.
    c. Supply current TDD for each phase.
    d. Inlet vane position.
    e. Controller internal ambient temperature.
    f. Heatsink temperature.

28. Purge suction temperature if purge system is provided.
29. Purge elapsed time if purge system is provided.

E. Control Functions:

1. Manual or automatic startup and shutdown time schedule.
2. Entering and leaving chilled-water temperatures, control set points, and motor load limits. Evaporator-fluid temperature shall be reset based on return-water, outdoor-air or space temperature, as directed.
3. Current limit and demand limit.
4. Condenser-fluid temperature.
5. External chiller emergency stop.
6. Variable evaporator flow.
7. Thermal storage.
8. Heat reclaim.

F. Manually Reset Safety Controls: The following conditions shall shut down chiller and require manual reset:

1. Low evaporator pressure, temperature or pressure or temperature; high condenser pressure.
2. Low evaporator-fluid temperature.
3. Low oil differential pressure.
4. High or low oil pressure.
5. High oil temperature.
6. High compressor-discharge temperature.
7. Loss of condenser-fluid flow.
8. Loss of evaporator-fluid flow.
9. Motor overcurrent.
10. Motor overvoltage.
11. Motor undervoltage.
12. Motor phase reversal.
13. Motor phase failure.
14. Sensor- or detection-circuit fault.
15. Processor communication loss.
16. Motor controller fault.
17. Extended compressor surge.
18. Excessive air-leakage detection for chillers using R-123 refrigerant.

G. Trending: Capability to trend analog data of up to five parameters simultaneously over an adjustable period and frequency of polling.

H. Security Access: Provide electronic security access to controls through identification and password, with at least three levels of access: view only; view and operate; and view, operate, and service.

I. Control Authority: At least four conditions: Off, local manual control at chiller, local automatic control at chiller, and automatic control through a remote source.

J. Communication Port: RS-232 port, USB 2.0 port or higher, or equivalent connection capable of connecting a printer and a notebook computer.

K. BAS or DDC System Interface: Factory install hardware and software to enable system to monitor, control, and display chiller status and alarms.

1. Hardwired I/O Points:

a. Monitoring: On-off status, common trouble alarm, electrical power demand (kilowatts), electrical power consumption (kilowatt-hours) or power factor, directed.
b. Control: On-off operation, chilled-water, discharge temperature set-point adjustment or electrical power demand limit, as directed.

2. Communication Interface: ASHRAE 135 (BACnet), LonTalk, Modbus or Industry-accepted, open-protocol, as directed communication interface shall enable control system operator to remotely control and monitor the chiller from an operator workstation.

a. Control features and monitoring points displayed locally at chiller control panel shall be available through the control system, including, as a minimum, the following:

1) Start-stop command from remote source.
2) Unit control source, local, analog, digital or modem.
3) Chiller control panel start-stop.
4) Accumulated operating hours.
5) Accumulated starts.
6) Compressor motor status.
7) Unit operation code.
8) Unit safety fault code.
9) Unit cycling fault code.
10) Chilled-water pump status.
11) Chilled-water flow proof.
12) Chilled-water entering temperature.
13) Chilled-water leaving temperature.
14) Chilled-water leaving temperature set-point adjustment from remote source.
15) Condenser(s) water entering temperature.
16) Condenser(s) water leaving temperature.
17) Evaporator refrigerant pressure.
18) Condenser(s) refrigerant pressure.
19) Evaporator refrigerant saturation temperature.
20) Condenser(s) refrigerant saturation temperature.
21) Refrigerant discharge temperature.
22) Refrigerant level.
23) Refrigerant liquid level set point.
24) Oil pressure differential.
25) Oil sump pressure.
26) Oil pump pressure.
27) Oil sump temperature.
28) High-speed thrust bearing proximity position.
29) High-speed thrust bearing proximity reference.
30) Motor current percent of full-load amps.
31) Motor current phase A.
32) Motor current phase B.
33) Motor current phase C.
34) Motor current set-point adjustment from remote source.
35) Motor bearing shaft end vibration.
36) Motor bearing opposite shaft end vibration.
37) Motor bearing shaft end temperature.
38) Motor bearing opposite shaft end temperature.
39) Motor average winding temperature.
40) Variable-frequency controller selection, auto or fixed.
41) Variable-frequency controller output voltage.
42) Variable-frequency controller input power, rate.
43) Variable-frequency controller input power, consumption.
44) Variable-frequency controller DC bus voltage.
45) Variable-frequency controller inverter link current.
46) Variable-frequency controller output frequency.
47) Variable-frequency controller internal ambient temperature.

48) Variable-frequency controller converter heatsink temperature.
49) Variable-frequency controller harmonic filter installed, true or false.
50) Harmonic Filter THD at maximum voltage, percent.
51) Harmonic filter total demand distortion at maximum current, percent.
52) Harmonic filter total supply kVA.
53) Anti-recycle time remaining.
54) Liquid line solenoid.
55) Pre-rotation vanes position.
56) Adaptive capacity control valve surge map installed, true or false.
57) Adaptive capacity control new surge point, true or false.
58) Adaptive capacity control surge type, pressure differential or current.
59) Adaptive capacity control surge count.
60) Adaptive capacity control PRV position.
61) Adaptive capacity control output frequency.

L. Quick-Start Feature:

1. Automatically restore chiller operation up to 100 percent capacity within three - five minutes after a 15-second power interruption.
2. Quick-start feature shall ensure guide vanes remain open following a power interruption event and quick ramp-up speed logic is employed to facilitate shortest time to deliver chilled water at set-point temperature.
3. Chiller manufacturer shall provide integral UPS unit(s) with chiller controls if required to keep chiller integral controls operational to comply with requirement.
4. Chiller manufacturer shall demonstrate chiller start time with the quick-start feature enabled while simulating power fault, power service return, restart time, and capacity control, to produce desired chilled-water temperature at load indicated.

2.13 ACCESSORIES

A. Flow Switches:

1. Chiller manufacturer shall furnish a switch for each evaporator and condenser and verify field-mounting location before installation.
2. Paddle Flow Switches:

    a. Vane operated to actuate a double-pole, double-throw switch, with one pole field wired to the chiller control panel and the other pole field wired to the DDC system for HVAC.
    b. Contacts: Platinum alloy, silver alloy, or gold-plated switch contacts with a rating of 10 A at 120-V ac.
    c. Pressure rating equal to pressure rating of heat exchanger.
    d. Construct body and wetted parts of Type 316 stainless steel.
    e. House switch in a NEMA 250, Type 4 enclosure constructed of die-cast aluminum.
    f. Vane length to suit installation.

3. Pressure-Differential Switches:

a. Construction: Wetted parts of body and trim constructed of Type 316 stainless steel.
b. Performance: Switch shall withstand, without damage, the full-pressure rating of the heat exchanger applied to either port and exhibit zero set-point shift due to variation in working pressure.
c. Set Point: Screw type, field adjustable.
d. Electrical Connections: Internally mounted screw-type terminal blocks.
e. Switch Enclosure: NEMA 250, Type 4.
f. Switch Action: Double-pole, double-throw switch, with one pole field wired to the chiller control panel and the other pole field wired to the DDC system for HVAC.

B. Vibration Isolation:

1. Chiller manufacturer shall furnish vibration isolation for each chiller.
2. Neoprene Pad:

a. Two layers of 0.375-inch- (10-mm-) thick, ribbed- or waffle-pattern neoprene pads separated by a 16-gage, stainless-steel plate.
b. Fabricate pads from 40- to 50 – 60 durometer neoprene.
c. Provide stainless-steel square bearing plate to load the pad uniformly between 20 and 40 psig (138 and 276 kPa) with a 0.12- to 0.16-inch (3- to 4-mm) deflection.

3. Spring Isolator:

a. Stable in operation and designed for not less than 30 percent reserve deflection beyond actual operating conditions.
b. Isolators shall be designed so that the Kx/Ky ratio shall be 1.0 or more for stability.
c. Provide PVC or neoprene-coated springs and hot-dip, galvanized-steel components. Aluminum components shall be etched and painted. Nuts, bolts, and washers shall be zinc electroplated.
d. Isolators shall be adjustable and with an open spring, having one or more coil springs attached to a top compression plate and a baseplate.
e. An elastomeric pad with a minimum thickness of 0.25 inch (6 mm) shall be bonded to the baseplate.
f. Spring assembly shall be removable and fit within a welded-steel enclosure consisting of a top plate and rigid lower housing, which serves as a blocking device during installation.
g. Isolated restraining bolts shall not be engaged during normal operation and shall connect the top plate and lower housing to prevent the isolated equipment from rising when drained of fluid.
h. Isolators shall be selected for a nominal 1-inch (25-mm) or 2-inch (50-mm) deflection.
i. Integrate seismic restraints in applications that require seismic requirements.

C. Sound Barrier:

1. Provide sound barrier only if required to comply with sound requirements indicated.
2. Furnish removable and reusable sound-barrier covers over the compressor housing, hermetic motor, compressor suction and discharge piping, and condenser shell.
3. Provide for repeated installation and removal without use of tape or calk.

4. Inner and outer cover shall consist of a PTFE-impregnated fiberglass cloth enclosing heavy-density, needled fiberglass insulation material with a mass-loaded vinyl acoustic barrier.
5. Covers shall be double sewn and lock stitched, with edges folded and sewn so no raw cut edges are exposed.
6. Form covers around control devices, gages, conduit, piping, and supports without degrading sound-barrier performance.
7. Continuously lap all exposed seams at least 2 inches (50 mm) for better sound containment.
8. Permanently label each section of cover to indicate its location, description, size, and number sequence.
9. Randomly place stainless-steel quilting pins to prevent covers from shifting and sagging.

2.14 CAPACITIES AND CHARACTERISTICS

A. Capacity: As directed, tons (kW).

B. Full-Load Efficiency:

1. COP: As directed.
2. EER: As directed.
3. Power Input/Cooling Output: As directed, kW/ton.
4. Comply with GS-31.
5. Comply with FEMP.

C. Part-Load Efficiency:

1. IPLV: As directed.
2. NPLV: As directed.
3. Comply with GS-31.
4. Comply with FEMP.

D. Evaporator:

1. Pressure Rating: As directed, psig (kPa).
2. Number of Passes: One, Two or Three, as directed.
3. Fluid Type: Water.
4. Design Fluid Flow Rate: As directed, gpm.
5. Minimum Fluid Flow Rate: As directed, gpm (L/s).
6. Entering-Fluid Temperature: As directed, deg F (deg C).
7. Leaving-Fluid Temperature: As directed, deg F (deg C).
8. Fluid-Pressure Drop: As directed, feet of head (kPa).
9. Fluid Velocity: As directed, fps (m/s).
10. Fouling Factor: 0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W), 0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W) or 0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W), as directed.

E. Condenser:

1. Pressure Rating: As directed, psig (kPa).

2. Number of Passes: One, Two or Three, as directed.
3. Fluid Type: Water.
4. Design Fluid Flow Rate: As directed, gpm (L/s).
5. Minimum Fluid Flow Rate: As directed, gpm (L/s).
6. Entering-Fluid Temperature: As directed, deg F (deg C).
7. Leaving-Fluid Temperature: As directed, deg F (deg C).
8. Fluid-Pressure Drop: As directed, feet of head (kPa).
9. Fluid Velocity: As directed, fps (m/s).
10. Fouling Factor: 0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W), 0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W) or 0.001 sq. ft. x h x deg F/Btu (0.00022 sq. m x deg C/W).

F. Compressor:

1. Number of Compressors: One – Two, as directed.
2. First Compressor Rated-Load Amperes: As directed, A.
3. First Compressor Locked-Rotor Amperes: As directed, A.
4. Second Compressor Rated-Load Amperes: As directed, A.
5. Second Compressor Locked-Rotor Amperes: As directed, A.

G. Chiller Control Electrical Requirements:

1. Power Connections: Integral or Field.
2. Power Input: As directed, kW.
3. Minimum Circuit Ampacity: As directed, A.
4. Maximum Overcurrent Protection Device: As directed, A.
5. Volts: 120-V ac.
6. Phase: Single or Three
7. Hertz: 60.

H. Chiller Electrical Requirements:

1. Power Input: As directed, kW.
2. Power Factor: 0.90 - 0.95, as directed.
3. Minimum Circuit Ampacity: As directed, A.
4. Maximum Overcurrent Protection Device: As directed, A.
5. Volts: 208, 240, 480, 600, 2300 or 4160-V ac., as directed.
6. Phase: Three.
7. Hertz: 60.

I. Noise Rating: 85-dBA sound power level when measured according to AHRI 575. Provide factory-installed sound treatment if necessary to achieve performance indicated.

2.15 SOURCE QUALITY CONTROL

A. Perform functional run tests of chillers before shipping.

B. Factory Performance Testing:

1. Factory performance test chillers, before shipping, according to AHRI 550/590.

2. Test the following conditions:

    a. Design conditions indicated.
    b. Reduction in capacity from design to minimum load in steps of 10, 25 or 33, as directed with condenser fluid at design conditions.
    c. Reduction in capacity from design to minimum load in steps of 10, 25 or 33, as directed with varying entering condenser-fluid temperature from design to minimum conditions in 5 deg F (3 deg C) increments.
    d. At one, two, three, four, five or 10, as directed, point(s) of varying part-load performance to be selected by Owner at time of test.

3. Allow Owner access to place where chillers are being tested. Notify Owner in writing at least 30 days in advance of testing.
4. Prepare test report indicating test procedures, instrumentation, test conditions, and results. Submit copy of results within one week of test date.

C. Factory Sound Testing:

1. For chillers located indoors, rate sound power level according to AHRI 575.
2. Factory sound test chillers, before shipping, according to AHRI 575.
3. Test the following conditions:

    a. Design conditions indicated.
    b. Chiller operating at calculated worst-case sound condition.
    c. At one, two, three, four or five, as directed, point(s) of varying part-load performance to be selected by Owner at time of test.

4. Allow Owner access to place where chillers are being tested. Notify Owner in writing at least 30 days in advance of testing.
5. Prepare test report indicating test procedures, instrumentation, test conditions, and results. Submit copy of results within one week of test date.

D. Factory test and inspect evaporator and condenser according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

E. Factory test and inspect evaporator and condenser according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1. Pressure test fluid side of heat exchangers, including water boxes, to 1.5 times the rated pressure. Pressure proof test refrigerant side of heat exchangers to a minimum of 45 psig (310 kPa). Vacuum and pressure test for leaks.

F. Eddy Current Testing:

1. Perform factory testing of evaporator and condenser tubes of each chiller to ensure tube quality and longevity.
2. Submit test report, including, as a minimum:

    a. List of equipment used and equipment settings.
    b. Test data reports and accompanying strip charts of calibrations.
    c. Identify tubes with significant defects and typical indications.
    d. Statistical summary of defect indications.

e. Recommendations concerning tube condition, tube replacement, tube removal for evaluation, and future frequency of testing.
f. Approval by an American Society for Nondestructive Testing, Level III eddy current technician.

PART 3 - EXECUTION

3.1 CHILLER INSTALLATION

A. Equipment Mounting:

1. Install chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

B. Maintain manufacturer's recommended clearances for service and maintenance.

C. Maintain clearances required by governing code.

D. Chiller manufacturer's factory-trained service personnel shall charge chiller with refrigerant and fill with oil if not factory installed.

E. Install separate devices furnished by manufacturer and not factory installed.

1. Chillers shipped in multiple major assemblies shall be field assembled by chiller manufacturer's factory-trained service personnel.

3.2 PIPING CONNECTIONS

A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping," Section 232116 Hydronic Piping Specialties," and Section 232300 "Refrigerant Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to chillers, allow space for service and maintenance.

C. Evaporator-Fluid Connections:

1. Connect to evaporator inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with pressure gage.
2. Connect to evaporator outlet with shutoff valve, balancing valve, flexible connector, thermometer, plugged tee with shutoff valve and pressure gage, flow meter, and drain connection with valve.
3. Make connections to chiller with a flange, mechanical coupling or flange or mechanical coupling.

D. Condenser-Fluid Connections:

1. Connect to condenser inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with pressure gage.
2. Connect to condenser outlet with shutoff valve, balancing valve, flexible connector, thermometer, plugged tee with shutoff valve and pressure gage, low meter, and drain connection with valve.
3. Make connections to chiller with a flange, mechanical coupling or flange or mechanical coupling.

E. Refrigerant-Pressure Relief Device Connections:

1. For chillers installed indoors, extend vent piping or separate vent piping for each chiller to the outdoors without valves or restrictions.
2. Comply with ASHRAE 15.
3. Connect to chiller pressure relief device with flexible connector and dirt leg with drain valve.

F. For chillers equipped with a purge system, extend purge vent piping or separate purge vent piping for each chiller to the outdoors. Comply with ASHRAE 15 and ASHRAE 147.

G. Connect each chiller drain connection with a drain valve, which is full size of drain connection. Connect drain pipe to drain valve with union, and extend drain pipe to terminate over floor drain.

H. Connect each chiller water box vent connection with an automatic or manual vent, which is full size of vent connection.

3.3 ELECTRICAL POWER CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 1/2 inch (13 mm) high. Locate nameplate where easily visible.

3.4 CONTROLS CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between chillers and other equipment to interlock operation as required to provide a complete and functioning system.

C. Connect control wiring between chiller control interface and DDC control system for remote monitoring and control of chillers. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC" .

D. Install nameplate on face of chiller control panel indicating the control equipment designation serving chiller and the I/O point designation for each control connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 0.5 inches high.

3.5 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain chillers.

END OF SECTION 236416

SECTION 236423.13 - AIR-COOLED, SCROLL WATER CHILLERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes packaged, air-cooled, electric-motor-driven, scroll water chillers.

1.2 DEFINITIONS

A. BAS: Building automation system.

B. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.

C. DDC: Direct digital control.

D. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in Btu/h to the total power input given in watts at any given set of rating conditions.

E. GFI: Ground fault interrupt.

F. IPLV: Integrated part-load value. A single-number part-load efficiency figure of merit for a single chiller calculated per the method defined by AHRI 550/590 and referenced to AHRI standard rating conditions.

G. I/O: Input/output.

H. kW/Ton: The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons at any given set of rating conditions.

I. NPLV: Nonstandard part-load value. A single number part-load efficiency figure of merit for a single chiller calculated per the method defined by AHRI 550/590 and intended for operating conditions other than the AHRI standard rating conditions.

J. SCCR: Short-circuit current rating.

K. TEAO: Totally enclosed air over.

L. TENV: Totally enclosed nonventilating.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: Complete set of manufacturer's prints of water chiller assemblies, control panels, sections and elevations, and unit isolation. Include the following:

1. Assembled unit dimensions.
2. Weight and load distribution.
3. Required clearances for maintenance and operation.
4. Size and location of piping and wiring connections.
5. Diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

A. Certificates: For certification required in "Quality Assurance" Article.

B. Seismic Qualification Data: Certificates, for water chillers, accessories, and components, from manufacturers.

C. Installation instructions.

D. Source quality-control reports.

E. Startup service reports.

F. Sample warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.6 QUALITY ASSURANCE

A. AHRI Certification: Certify chiller according to AHRI 590 certification program.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of water chillers that fail in materials or workmanship within specified warranty period.

1. Extended warranties include, but are not limited to, the following:

a. Complete chiller including refrigerant and oil charge.
b. Complete compressor and drive assembly including refrigerant and oil charge.
c. Refrigerant and oil charge.

1) Loss of refrigerant charge for any reason due to manufacturer's product defect and product installation.

d. Parts only or and labor, as directed.

2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Scroll water chillers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: 1.5 - 1.0.

B. Site Altitude: Chiller shall be suitable for altitude at which installed without affecting performance indicated. Make adjustments to affected chiller components to account for site altitude.

C. Performance Tolerance: Comply with the following in lieu of AHRI 550/590:

1. Allowable Capacity Tolerance: Zero percent.
2. Allowable Full-Load Energy Efficiency Tolerance: Zero percent.
3. Allowable Part-Load Energy Efficiency Tolerance: Zero percent.

D. AHRI Rating: Rate water chiller performance according to requirements in AHRI 550/590.

E. ASHRAE Compliance: ASHRAE 15 for safety code for mechanical refrigeration.

F. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

G. ASME Compliance: Fabricate and stamp water chiller heat exchangers to comply with ASME Boiler and Pressure Vessel Code.

H. Comply with NFPA 70.

I. Comply with requirements of UL 1995, "Heating and Cooling Equipment," and include label by a qualified testing agency showing compliance.

J. Operation Following Loss of Normal Power:

1. Equipment, associated factory- and field-installed controls, and associated electrical equipment and power supply connected to backup power system shall automatically return equipment and associated controls to the operating state occurring immediately before loss of normal power without need for manual intervention by an operator when power is restored either through a backup power source, or through normal power if restored before backup power is brought on-line.
2. See drawings for equipment served by backup power systems.
3. Provide means and methods required to satisfy requirement even if not explicitly indicated.

K. Outdoor Installations:

1. Chiller shall be suitable for outdoor installation indicated. Provide adequate weather protection to ensure reliable service life over a 25-year period with minimal degradation due to exposure to outdoor ambient conditions.
2. Chillers equipped to provide safe and stable operation while achieving performance indicated when operating at extreme outdoor temperatures encountered by the installation. Review historical weather database and provide equipment that can operate at extreme outdoor temperatures recorded over past 30-year period.

2.2 MANUFACTURERS

2.3 MANUFACTURED UNITS

A. Description: Factory-assembled and run-tested water chiller complete with compressor(s), compressor motors and motor controllers, evaporator, condenser with fans, electrical power, controls, and indicated accessories.

B. Fabricate water chiller mounting base with reinforcement strong enough to resist water chiller movement during a seismic event when water chiller is anchored to field support structure.

2.4 CABINET

A. Base: Galvanized-steel base extending the perimeter of water chiller. Secure frame, compressors, and evaporator to base to provide a single-piece unit.

B. Frame: Rigid galvanized-steel frame secured to base and designed to support cabinet, condenser, control panel, and other chiller components not directly supported from base.

C. Casing: Galvanized steel.

D. Finish: Coat base, frame, and casing with a corrosion-resistant coating capable of withstanding a 500-hour salt-spray test according to ASTM B117.

2.5 COMPRESSOR-DRIVE ASSEMBLIES

A. Compressors:

1. Description: Positive-displacement direct drive with hermetically sealed casing.
2. Operating Speed: Nominal 3600 rpm for 60-Hz applications.
3. Capacity Control: On-off compressor cycling, plus hot-gas bypass.

    a. Digital compressor unloading is an acceptable alternative to achieve capacity control.

4. Oil Lubrication System: Automatic pump with strainer, sight glass, filling connection, filter with magnetic plug or removable magnet in sump, and initial oil charge.

a. Manufacturer's other standard methods of providing positive lubrication are acceptable in lieu of an automatic pump.

5. Vibration Isolation: Mount individual compressors on vibration isolators.

a. For multiple compressor assemblies, it is acceptable to isolate each compressor assembly in lieu of each compressor.

B. Compressor Motors:

1. Hermetically sealed and cooled by refrigerant suction gas.
2. High-torque, two-pole induction type with inherent thermal-overload protection on each phase.

C. Compressor Motor Controllers:

1. Across the Line: NEMA ICS 2, Class A, full voltage, nonreversing.

2.6 REFRIGERATION

A. Refrigerant: R-410A. Classified as Safety Group A1 according to ASHRAE 34.

B. Refrigerant Compatibility: Parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.

C. Refrigerant Circuit: Each circuit shall include an electronic or a thermal-expansion valve, refrigerant charging connections, a hot-gas muffler, compressor suction and discharge shutoff valves, a liquid-line shutoff valve, a replaceable-core filter-dryer, a sight glass with moisture indicator, a liquid-line solenoid valve, and an insulated suction line.

D. Pressure Relief Device:

1. Comply with requirements in ASHRAE 15, ASHRAE 147, and applicable portions of ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
2. Select and configure pressure relief devices to protect against corrosion and inadvertent release of refrigerant.
3. ASME-rated, spring-loaded, pressure relief valve; single- or multiple-reseating type. Pressure relief valve(s) shall be provided for each heat exchanger.

2.7 EVAPORATOR

A. Shell and Tube:

1. Description: Direct-expansion, shell-and-tube design with fluid flowing through the shell and refrigerant flowing through the tubes within the shell.
2. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code.
3. Shell Material: Carbon steel.
4. Shell Heads: Removable carbon-steel heads with multipass baffles designed to ensure positive oil return and located at each end of the tube bundle.

5. Shell Nozzles: Fluid nozzles located along the side of the shell and terminated with mechanical-coupling end connections for connection to field piping. Furnish flange adapters to mate to flanged piping.
6. Tube Construction: Individually replaceable copper tubes with enhanced fin design, expanded into tube sheets.

B. Brazed Plate:

1. Direct-expansion, single-pass, brazed-plate design.
2. Type 304 or 316 stainless-steel construction.
3. Code Compliance: Tested according to ASME Boiler and Pressure Vessel Code.
4. Fluid Nozzles: Terminate with mechanical-coupling end connections for connection to field piping. Furnish flange adapters to mate to flanged piping.
5. Inlet Strainer: Factory-furnished, 20 or 40-mesh strainer for field installation in supply piping to evaporator. Manufacturer has option to factory install strainer.

C. Flow Switch: Factory-furnished and -installed, thermal-type flow switch wired to chiller operating controls.

D. Heater: Factory-installed and -wired electric heater with integral controls designed to protect the evaporator to minus 20 deg F (minus 29 deg C).

E. Remote-Mounting Kit: Designed for remote field mounting where indicated. Provide kit for field installation.

2.8 AIR-COOLED CONDENSER

A. Coil(s) with integral subcooling on each circuit.

B. Copper Tube with Plate Fin Coils:

1. Construct coils of copper tubes mechanically bonded to aluminum, aluminum with precoated epoxy-phenolic or copper fins.

C. Aluminum Microchannel Coils:

1. Series of flat tubes containing a series of multiple, parallel-flow microchannels layered between refrigerant header manifolds.
2. Single- or multiple-pass arrangement.
3. Construct fins, tubes, and header manifolds of aluminum alloy treated with a corrosion-resistant coating.

D. Corrosion-Resistant Coating: Coat coils with an epoxy or a phenolic corrosion-resistant coating after fabrication.

E. Hail Protection: Provide condenser coils with louvers, baffles, or hoods to protect against hail damage.

F. Fans: Direct-drive propeller type with statically and dynamically balanced fan blades, arranged for vertical air discharge.

G. Fan Motors: TENV or TEAO enclosure, with sealed and permanently lubricated bearings, and having built-in overcurrent- and thermal-overload protection.

1. Overcurrent- and thermal-overload protection not integral to motor is acceptable if provided with chiller electrical power package.

H. Fan Guards: Removable steel safety guards with corrosion-resistant PVC coating.

2.9 INSULATION

A. Factory-applied insulation over all cold surfaces of chiller capable of forming condensation. Components shall include, but not be limited to, evaporator, evaporator water boxes including nozzles, refrigerant suction pipe from evaporator to compressor, cold surfaces of compressor, refrigerant-cooled motor, and auxiliary piping.

2.10 ELECTRICAL

A. Factory installed and wired, and functionally tested at factory before shipment.

B. Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to water chiller.

C. House in a unit-mounted, NEMA 250, Type 3R enclosure with hinged access door with lock and key or padlock and key.

D. Wiring shall be numbered and color-coded to match wiring diagram.

E. Factory wiring shall be located outside of an enclosure in a metal raceway. Terminal connections shall be made with not more than a 24-inch (610-mm) length of liquidtight or flexible metallic conduit.

F. Field power interface shall be to wire lugs, NEMA KS 1, heavy-duty, nonfused disconnect switch or circuit breaker. Minimum SCCR according to UL 508 shall be as required by electrical power distribution system, but not less than 42,000, 65,000 or 100,000 A, as directed.

G. Each motor shall have branch power circuit and controls with one of the following disconnecting means having SCCR to match main disconnecting means:

1. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
2. NEMA KS 1, heavy-duty, nonfusible switch.
3. UL 489, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.

H. Each motor shall have overcurrent protection.

I. Overload relay sized according to UL 1995, or an integral component of water chiller control microprocessor.

J. Phase-Failure and Undervoltage: Solid-state sensing with adjustable settings.

K. Power Factor Correction: Capacitors to correct power factor to 0.90 - 0.95, as directed at full load.

L. Controls Transformer: Unit-mounted transformer with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.

M. Control Relays: Auxiliary and adjustable time-delay relays, or an integral to water chiller microprocessor.

N. Service Receptacle:

1. Unit-mounted, 120-V GFI duplex receptacle.
2. Power receptacle from chiller internal electrical power wiring.

O. Indicate the following for water chiller electrical power supply:

1. Current, phase to phase, for all three phases.
2. Voltage, phase to phase and phase to neutral for all three phases.
3. Three-phase real power (kilowatts).
4. Three-phase reactive power (kilovolt amperes reactive).
5. Power factor.
6. Running log of total power versus time (kilowatt hours).
7. Fault log, with time and date of each.

2.11 CONTROLS

A. Factory installed and wired, and functionally tested at factory before shipment.

B. Standalone, microprocessor based, with all memory stored in nonvolatile memory so that reprogramming is not required on loss of electrical power.

C. Enclosure: Share enclosure with electrical power devices or provide a separate enclosure of matching construction.

D. Operator Interface: Keypad or pressure-sensitive touch screen. Multiple-character, digital display. Display the following:

1. Date and time.
2. Operating or alarm status.
3. Operating hours.
4. Outside-air temperature if required for chilled-water reset.
5. Temperature and pressure of operating set points.
6. Chilled-water entering and leaving temperatures.
7. Refrigerant pressures in evaporator and condenser.
8. Saturation temperature in evaporator and condenser.
9. No cooling load condition.
10. Elapsed time meter (compressor run status).
11. Pump status.
12. Antirecycling timer status.

13. Percent of maximum motor amperage.
14. Current-limit set point.
15. Number of compressor starts.
16. Alarm history with retention of operational data before unit shutdown.
17. Superheat.

E. Control Functions:

1. Manual or automatic startup and shutdown time schedule.
2. Capacity control based on evaporator leaving-fluid temperature.
3. Capacity control compensated by rate of change of evaporator entering-fluid temperature.
4. Chilled-water entering and leaving temperatures, control set points, and motor load limit. Chilled-water leaving temperature shall be reset based on return-water, outside-air or space temperature, as directed.
5. Current limit and demand limit.
6. Condenser-water temperature.
7. External water chiller emergency stop.
8. Antirecycling timer.
9. Automatic lead-lag switching.
10. Ice-building mode.

F. Manual-Reset Safety Controls: The following conditions shall shut down water chiller and require manual reset:

1. Low evaporator pressure or high condenser pressure.
2. Low chilled-water temperature.
3. Refrigerant high pressure.
4. High or low oil pressure.
5. High oil temperature.
6. Loss of chilled-water flow.
7. Loss of condenser-water flow.
8. Control device failure.

G. BAS or DDC System Interface: Factory-install hardware and software to enable system to monitor, control, and display chiller status and alarms.

1. Hardwired I/O Points:

   a. Monitoring: On/off status, common trouble alarm, electrical power demand (kilowatts) or electrical power consumption (kilowatt hours), as directed.
   b. Control: On/off operation, chilled-water discharge temperature set-point adjustment or electrical power demand limit, as directed.

2. Communication Interface: ASHRAE 135 (BACnet), LonTalk, Modbus or Industry-accepted open-protocol, as directed, communication interface shall enable control system operator to remotely control and monitor the water chiller from an operator workstation. Control features and monitoring points displayed locally at water chiller control panel shall be available through DDC system for HVAC.

H. Factory-installed wiring outside of enclosures shall be in NFPA 70-complaint raceway. Make terminal connections with liquid tight or flexible metallic conduit.

2.12 ACCESSORIES

A. Factory-furnished neoprene or spring isolators with seismic restraints for field installation.

1. Spring Deflection: 1 inch (25 mm) or 2 inches (50 mm), as directed.

2.13 CAPACITIES AND CHARACTERISTICS

A. Capacity: As directed, tons (kW).

B. Full-Load Efficiency:

1. COP: As directed.
2. EER: As directed.
3. Power Input/Cooling Output, kW/Ton (kW/kW).

C. Part-Load Efficiency:

1. IPLV: As directed.
2. NPLV: As directed.

D. Low Ambient Operation: Chiller designed for operation to 0 deg F (minus 18 deg C) or minus 20 deg F (minus 29 deg C), as directed.

E. High Ambient Operation: Chiller designed for operation to 115 deg F (46 deg C) or 120 deg F (50 deg C), as directed.

F. Evaporator:

1. Type: Brazed plate or shell and tube.
2. Pressure Rating: As directed, psig (kPa).
3. Fluid Type: Water.
4. Design Fluid Flow Rate: As directed, gpm (L/s).
5. Minimum Fluid Flow Rate: As directed, gpm (L/s).
6. Entering-Fluid Temperature: As directed, deg F (deg C).
7. Leaving-Fluid Temperature: As directed, deg F (deg C).
8. Fluid Pressure Drop: As directed, feet of head (kPa).
9. Fouling Factor: 0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W), 0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W) or 0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W).

G. Condenser Entering-Air Temperature: As directed, deg F (deg C).

H. Site Altitude: As directed, feet (m).

I. Number of Refrigeration Circuits: One – Two, as directed.

J. Compressor Rated Load Amperes: As directed.

K. Compressor Locked-Rotor Amperes: As directed.

L. Controls Power Connection: Fed through integral transformer.

M. Chiller Power Input: As directed, kilowatts.

N. Chiller Minimum Circuit Ampacity: As directed.

O. Chiller Maximum Overcurrent Protection Device: As directed.

P. Chiller Electrical Characteristics: 208, 240, 480 or 600V ac, three phase, 60 Hz, as directed.

Q. Noise Rating: As directed, dBA at as directed, distance in feet (m) when measured according to AHRI 370.

2.14 SOURCE QUALITY CONTROL

A. Perform functional test of water chillers before shipping.

B. Factory performance test water chillers, before shipping, according to AHRI 550/590.

1. Test the following conditions:

a. Design conditions indicated.
b. AHRI 550/590 part-load points.

2. Allow Owner access to place where water chillers are being tested. Notify Owner 14 - 30 days in advance of testing.

C. Factory test and inspect evaporator and water-cooled condenser according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1. Stamp with ASME label.

D. For water chillers located outdoors, rate sound power level according to AHRI 370 procedure.

PART 3 - EXECUTION

3.1 WATER CHILLER INSTALLATION

A. Coordinate sizes and locations of bases with actual equipment provided. Cast anchor-bolt inserts into concrete bases.

B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures with actual equipment provided.

C. Install water chillers on support structure indicated.

D. Equipment Mounting:

1. Install water chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete.", as directed.
2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

E. Maintain manufacturer's recommended clearances for service and maintenance.

F. Maintain clearances required by governing code.

G. Chiller manufacturer's factory-trained service personnel shall charge water chiller with refrigerant if not factory charged and fill with oil if not factory installed.

H. Install separate devices furnished by manufacturer and not factory installed.

1. Chillers shipped in multiple major assemblies shall be field assembled by chiller manufacturer's factory-trained service personnel.

3.2 PIPING CONNECTIONS

A. Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Comply with requirements in Section 232300 "Refrigerant Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

C. Where installing piping adjacent to chillers, allow space for service and maintenance.

D. Connect each drain connection with a drain valve, full size of drain connection. Connect drain pipe to drain valve with union and extend drain pipe to terminate over floor drain.

E. Connect each chiller vent connection with an automatic or a manual vent, full size of vent connection.

3.3 ELECTRICAL POWER CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Provide nameplate for each electrical connection indicating electrical equipment designation and circuit number feeding connection. Nameplate shall be laminated phenolic layers of black

with engraved white letters at least 1/2 inch (13 mm) high. Locate nameplate where easily visible.

3.4 CONTROLS CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between chillers and other equipment to interlock operation as required to provide a complete and functioning system.

C. Connect control wiring between chiller control interface and DDC system for remote monitoring and control of chillers. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."

D. Provide nameplate on face of chiller control panel indicating control equipment designation serving chiller and the I/O point designation for each control connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 1/2 inch (13 mm) high.

3.5 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform or Perform startup service.

B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assemblies, installations, and connections.

C. Complete installation and startup checks according to manufacturer's written instructions and perform the following:

1. Verify that refrigerant charge is sufficient and water chiller has been leak tested.
2. Verify that pumps are installed and functional.
3. Verify that thermometers and gages are installed.
4. Operate water chiller for run-in period.
5. Check bearing lubrication and oil levels.
6. Verify that refrigerant pressure relief device for chillers installed indoors is vented outside.
7. Verify proper motor rotation.
8. Verify static deflection of vibration isolators, including deflection during water chiller startup and shutdown.
9. Verify and record performance of chilled-water flow and low-temperature interlocks.
10. Verify and record performance of water chiller protection devices.
11. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.

D. Visually inspect chiller for damage before starting. Repair or replace damaged components, including insulation. Do not start chiller until damage that is detrimental to operation has been corrected.

E. Prepare a written startup report that records results of tests and inspections.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain water chillers. Video record the training sessions and provide electronic copy to Owner.

1. Instructor shall be factory trained and certified.
2. Provide not less than eight hours of training.
3. Train personnel in operation and maintenance and to obtain maximum efficiency in plant operation.
4. Provide instructional videos showing general operation and maintenance that are coordinated with operation and maintenance manuals.
5. Obtain Owner sign-off that training is complete.
6. Owner training shall be held at Project site.

END OF SECTION 236423.13

SECTION 236423.16 - WATER-COOLED, SCROLL WATER CHILLERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes packaged, water-cooled, electric-motor-driven, scroll water chillers.

1.2 DEFINITIONS

A. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.

B. DDC: Direct digital control.

C. EER: Energy efficiency ratio. The ratio of the cooling capacity given in terms of Btu/h to the total power input given in terms of watts at any given set of rating conditions.

D. IPLV: Integrated Part-Load Value. A single number part-load efficiency figure of merit for a single chiller calculated per the method defined by AHRI 550/590 and referenced to AHRI standard rating conditions.

E. kW/Ton: The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons at any given set of rating conditions.

F. NPLV: Nonstandard Part-Load Value. A single number part-load efficiency figure of merit for a single chiller calculated per the method defined by AHRI 550/590 and intended for operating conditions other than the AHRI standard rating conditions.

1.3 ACTION SUBMITTALS

A. Product Data: Include refrigerant, rated capacities, operating characteristics, furnished specialties, and accessories.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: Complete set of manufacturer's prints of water chiller assemblies, control panels, sections and elevations, and unit isolation. Include the following:

1. Assembled unit dimensions.
2. Weight and load distribution.
3. Required clearances for maintenance and operation.
4. Size and location of piping and wiring connections.
5. Wiring Diagrams: For power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

A. Certificates: For certification required in "Quality Assurance" Article.

B. Seismic Qualification Data: Certificates, for water chillers, accessories, and components, from manufacturer.

C. Source quality-control test reports.

D. Startup service reports.

E. Sample warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.6 QUALITY ASSURANCE

A. AHRI Certification: Certify chiller according to AHRI 590 certification program.

1.7 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of water chillers that fail in materials or workmanship within specified warranty period.

1. Extended warranties include, but are not limited to, the following:

a. Complete chiller including refrigerant and oil charge.
b. Complete compressor and drive assembly including refrigerant and oil charge.
c. Refrigerant and oil charge.

1) Loss of refrigerant charge for any reason due to manufacturer product defect and product installation.

d. Parts only, and/or labor, as directed.

2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Scroll water chillers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: 1.5 - 1.0, as directed.

B. Condenser-Fluid Temperature Performance:

1. Startup Condenser-Fluid Temperature: Chiller shall be capable of starting with an entering condenser-fluid temperature of 60 deg F (16 deg C), 55 deg F (13 deg C) or 40 deg F (4 deg C), as directed and providing stable operation until the system temperature is elevated to the minimum operating entering condenser-fluid temperature.
2. Minimum Operating Condenser-Fluid Temperature: Chiller shall be capable of continuous operation over the entire capacity range indicated with an entering condenser-fluid temperature of 65 deg F (18 deg C), 60 deg F (16 deg C) or 55 deg F (13 deg C), as directed.
3. Make factory modifications to standard chiller design if necessary to comply with performance indicated.

C. Site Altitude: Chiller shall be suitable for altitude at which installed without affecting performance indicated. Make adjustments to affected chiller components to account for site altitude.

D. Performance Tolerance: Comply with the following in lieu of AHRI 550/590:

1. Allowable Capacity Tolerance: Zero percent.
2. Allowable Full-Load Energy Efficiency Tolerance: Zero percent.
3. Allowable Part-Load Energy Efficiency Tolerance: Zero percent.

E. AHRI Rating: Rate water chiller performance according to requirements in AHRI 550/590, "Water Chilling Packages Using the Vapor Compression Cycle."

F. ASHRAE Compliance: ASHRAE 15 for safety code for mechanical refrigeration.

G. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

H. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

I. Comply with requirements of UL 1995 "Heating and Cooling Equipment," and include label by a qualified testing agency showing compliance.

J. ASME Compliance: Fabricate and label water chiller heat exchangers to comply with ASME Boiler and Pressure Vessel Code.

K. Operation Following Loss of Normal Power:

1. Equipment, associated factory- and field-installed controls, and associated electrical equipment and power supply connected to backup power system shall automatically return equipment and associated controls to the operating state occurring immediately before loss of normal power without need for manual intervention by an operator when power is restored, either through a backup power source or through normal power if restored before backup power is brought on-line.
2. See Drawings for equipment served by backup power systems.
3. Provide means and methods required to satisfy requirement even if not explicitly indicated.

L. Outdoor Installations:

1. Chiller shall be suitable for outdoor installation indicated with adequate weather protection to ensure reliable service life over a 25-year period with minimal degradation due to exposure to outdoor ambient conditions.
2. Chillers shall be equipped for safe and stable operation while achieving performance indicated when operating at extreme outdoor temperatures encountered by the installation. Review historical weather database. Equipment shall be capable of operating at extreme outdoor temperatures recorded over past 30-year period.

2.3 MANUFACTURED UNITS

A. Description: Factory-assembled and run-tested water chiller complete with compressor(s), compressor motors and motor controllers, evaporator, condenser where indicated, electrical power, controls, and indicated accessories.

B. Fabricate water chiller mounting base with reinforcement strong enough to resist water chiller movement during a seismic event when water chiller is anchored to field support structure.

2.4 COMPRESSOR-DRIVE ASSEMBLIES

A. Compressors:

1. Description: Positive-displacement direct drive with hermetically sealed casing.
2. Operating Speed: Nominal 3600 rpm for 60-Hz applications.
3. Capacity Control: On-off compressor cycling, plus hot-gas bypass.

    a. Digital compressor unloading is an acceptable alternative to achieve capacity control.

4. Oil Lubrication System: Automatic pump with strainer, sight glass, filling connection, filter with magnetic plug or removable magnet in sump, and initial oil charge.

a. Manufacturer's other standard methods of providing positive lubrication are acceptable in lieu of an automatic pump.

5. Vibration Isolation: Mount individual compressors on vibration isolators.

a. For multiple compressor assemblies, it is acceptable to isolate each compressor assembly in lieu of each compressor.

6. Sound-reduction package shall consist of acoustic enclosures around the compressors that are designed to reduce sound level without affecting performance.

B. Compressor Motors:

1. Hermetically sealed and cooled by refrigerant suction gas.
2. High-torque, two-pole induction type with inherent thermal-overload protection on each phase.

C. Compressor Motor Controllers:

1. Across the Line: NEMA ICS 2, Class A, full voltage, nonreversing.

2.5 REFRIGERATION SYSTEM

A. Refrigerant Type: R-410A. Classified as Safety Group A1 according to ASHRAE 34.

B. Refrigerant Compatibility: Parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.

C. Refrigerant Circuit: Each circuit shall include an electronic or a thermal-expansion valve, refrigerant charging connections, a hot-gas muffler, compressor suction and discharge shutoff valves, a liquid-line shutoff valve, a replaceable-core filter-dryer, a sight glass with moisture indicator, a liquid-line solenoid valve, and an insulated suction line.

D. Pressure Relief Device:

1. Comply with requirements in ASHRAE 15, ASHRAE 147, and applicable portions of ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
2. Select and configure pressure relief devices to protect against corrosion and inadvertent release of refrigerant.
3. Device shall be ASME-rated, spring-loaded, pressure relief valve; single- or multiple-reseating type. Each heat exchanger shall be equipped with pressure relief valve(s).

2.6 EVAPORATOR

A. Shell and Tube:

1. Description: Direct-expansion, shell-and-tube design with fluid flowing through the shell and refrigerant flowing through the tubes within the shell.
2. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code.

3. Shell Material: Carbon steel.
4. Shell Heads: Removable carbon-steel heads with multipass baffles designed to ensure positive oil return and located at each end of the tube bundle.
5. Shell Nozzles: Fluid nozzles located along the side of the shell and terminated with mechanical-coupling end connections for connection to field piping. Furnish flange adapters to mate to flanged piping.
6. Tube Construction: Individually replaceable copper tubes with enhanced fin design, expanded into tube sheets.

B. Brazed Plate:

1. Direct-expansion, single-pass, brazed-plate design.
2. Type 304 or Type 316 stainless-steel construction.
3. Code Compliance: Tested according to ASME Boiler and Pressure Vessel Code.
4. Fluid Nozzles: Terminate with mechanical-coupling end connections for connection to field piping.
5. Inlet Strainer: Factory-furnished 20 or 40 mesh strainer for field installation in supply piping to evaporator. Manufacturer has option to factory install strainer.

2.7 CONDENSER

A. Shell and Tube:

1. Description: Shell-and-tube design with refrigerant flowing through the shell and fluid flowing through the tubes within the shell.
2. Positive subcooling of liquid refrigerant.
3. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code.
4. Shell Material: Carbon steel.
5. Water Boxes: Removable, of carbon-steel construction, located at each end of the tube bundle with fluid nozzles terminated with mechanical-coupling end connections for connection to field piping. Furnish flange adapters to mate to flanged piping.
6. Tube Construction: Individually replaceable copper tubes with enhanced fin design, expanded into tube sheets.
7. Each condenser shall have a pressure relief device, purge cock, and liquid-line shutoff valve.

B. Brazed Plate:

1. Direct-expansion, single-pass, brazed-plate design for positive subcooling of liquid refrigerant.
2. Type 316 stainless-steel construction.
3. Code Compliance: Tested according to ASME Boiler and Pressure Vessel Code.
4. Fluid Nozzles: Terminate with mechanical-coupling end connections for connection to field piping.
5. Inlet Strainer: Factory-furnished 20 or 40 mesh strainer for field installation in supply piping to condenser. Manufacturer has option to factory install strainer.

2.8 INSULATION

A. Factory-applied insulation over all cold surfaces of chiller capable of forming condensation. Components shall include, but not be limited to, evaporator, evaporator water boxes including nozzles, refrigerant suction pipe from evaporator to compressor, cold surfaces of compressor, refrigerant-cooled motor, and auxiliary piping.

2.9 ELECTRICAL

A. Factory installed and wired, and functionally tested at factory before shipment.

B. Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to water chiller.

C. House in a unit-mounted, NEMA 250, Type 1 enclosure with hinged access door with lock and key or padlock and key.

D. Wiring shall be numbered and color-coded to match wiring diagram.

E. Install factory wiring located outside of an enclosure in a metal raceway. Make terminal connections with not more than a 24-inch (610-mm) length of liquidtight or flexible metallic conduit.

F. Field power interface shall be to wire lugs, NEMA KS 1, heavy-duty, nonfused disconnect switch or circuit breaker. Minimum short circuit current rating (SCCR) according to UL 508 shall be as required by electrical power distribution system, but not less than 42,000, 65,000 or 100,000 A, as directed.

G. Each motor shall have branch power circuit and controls with one of the following disconnecting means having SCCR to match main disconnecting means:

1. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses for Type 2 protection according to IEC 60947-4-1.
2. NEMA KS 1, heavy-duty, nonfusible switch.
3. NEMA AB 1, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.

H. Each motor shall have overcurrent protection.

I. Overload relay sized according to UL 1995, or an integral component of water chiller control microprocessor.

J. Phase Failure and Undervoltage: Solid-state sensing with adjustable settings.

K. Controls Transformer: Unit-mounted transformer with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.

L. Control Relays: Auxiliary and adjustable time-delay relays, or an integral component to water chiller microprocessor.

M. Indicate the following for water chiller electrical power supply:

1. Current, phase to phase, for all three phases.
2. Voltage, phase to phase and phase to neutral for all three phases.
3. Three-phase real power (kilowatts).
4. Three-phase reactive power (kilovolt amperes reactive).
5. Power factor.
6. Running log of total power versus time (kilowatt hours).
7. Fault log, with time and date of each.

2.10 CONTROLS

A. Factory installed and wired, and functionally tested at factory before shipment.

B. Standalone, microprocessor based, with all memory stored in nonvolatile memory so that reprogramming is not required on loss of electrical power.

C. Enclosure: Share enclosure with electrical power devices or include a separate enclosure of matching construction.

D. Operator Interface: Keypad or pressure-sensitive touch screen. Multiple-character, backlit, liquid-crystal display or light-emitting diodes. Display the following:

1. Date and time.
2. Operating or alarm status.
3. Operating hours.
4. Outside-air temperature if required for chilled-water reset.
5. Temperature and pressure of operating set points.
6. Entering and leaving temperatures of chilled water.
7. Entering and leaving temperatures of condenser water.
8. Refrigerant pressures in evaporator and condenser.
9. Saturation temperature in evaporator and condenser.
10. No cooling load condition.
11. Elapsed time meter (compressor run status).
12. Pump status.
13. Antirecycling timer status.
14. Percentage of maximum motor amperage.
15. Current-limit set point.
16. Number of compressor starts.
17. Alarm history with retention of operational data before unit shutdown.
18. Superheat.

E. Control Functions:

1. Manual or automatic startup and shutdown time schedule.
2. Capacity control based on evaporator leaving-fluid temperature.
3. Capacity control compensated by rate of change of evaporator entering-fluid temperature.
4. Entering and leaving chilled-water temperatures, control set points, and motor load limit. Chilled-water leaving temperature shall be reset based on return-water, outside-air or space temperature, as directed.
5. Current limit and demand limit.
6. Condenser-water temperature.

7. External water chiller emergency stop.
8. Antirecycling timer.
9. Automatic lead-lag switching.
10. Ice-building mode.

F. Manual-Reset Safety Controls: The following conditions shall shut down water chiller and require manual reset:

1. Low evaporator pressure or high condenser pressure.
2. Low chilled-water temperature.
3. Refrigerant high pressure.
4. High or low oil pressure.
5. High oil temperature.
6. Loss of chilled-water flow.
7. Loss of condenser-water flow.
8. Control device failure.

G. Building Automation or DDC System Interface: Factory install hardware and software to enable system to monitor, control, and display chiller status and alarms.

1. Hardwired I/O Points:

a. Monitoring: On/off status, common trouble alarm, electrical power demand (kilowatts) or electrical power consumption (kilowatt hours), as directed.
b. Control: On/off operation, chilled-water discharge temperature set-point adjustment or electrical power demand limit, as directed.

2. Communication Interface: ASHRAE 135 (BACnet), LonTalk, Modbus or Industry-accepted open-protocol, communication interface shall enable control system operator to remotely control and monitor the water chiller from an operator workstation, as directed. Control features and monitoring points displayed locally at water chiller control panel shall be available through DDC system for HVAC.

H. Factory-installed wiring outside of enclosures shall be in an NFPA 70 complaint raceway. Make terminal connections with liquidtight or flexible metallic conduit.

2.11 ACCESSORIES

A. Factory-furnished, chilled and condenser water paddle or pressures differential type flow switches for field installation.

1. Manufacturer has option to factory install switches.

B. Individual compressor suction and discharge pressure gages with shutoff valves for each refrigeration circuit.

1. Pressure measurement and display through chiller integral controls is an acceptable alternative.

C. Factory-furnished neoprene or spring isolators with seismic restraints for field installation.

2.12 CAPACITIES AND CHARACTERISTICS

A. Capacity: As directed, tons (kW).

B. Full-Load Efficiency:

1. COP: As directed.
2. EER: As directed.
3. Power Input/Cooling Output, kW/Ton (kW/kW): As directed.

C. Part-Load Efficiency:

1. IPLV: As directed.
2. NPLV: As directed.

D. Evaporator:

1. Type: Brazed plate, Shell and tube or Brazed plate or shell and tube.
2. Pressure Rating: As directed, psig (kPa).
3. Fluid Type: Water.
4. Design Fluid Flow Rate: As directed, gpm (L/s).
5. Minimum Fluid Flow Rate: As directed, gpm (L/s).
6. Entering-Fluid Temperature: As directed, deg F (deg C).
7. Leaving-Fluid Temperature: As directed, deg F (deg C).
8. Fluid Pressure Drop: As directed, feet of head (kPa).
9. Fouling Factor: 0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W), 0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W) or 0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W), as directed.

E. Condenser:

1. Type: Brazed plate, Shell and tube or Chiller without integral condenser.
2. Pressure Rating: As directed, psig (kPa).
3. Fluid Type: Water.
4. Design Fluid Flow Rate: As directed, gpm (L/s).
5. Minimum Fluid Flow Rate: As directed, gpm (L/s).
6. Entering-Fluid Temperature: As directed, deg F (deg C).
7. Leaving-Fluid Temperature: As directed, deg F (deg C).
8. Fluid Pressure Drop: As directed, feet of head (kPa).
9. Fouling Factor: 0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W), 0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W) or 0.001 sq. ft. x h x deg F/Btu (0.00022 sq. m x deg C/W), as directed.

F. Number of Refrigeration Circuits: One – Two, as directed.

G. Compressor Rated Load Amperes: As directed.

H. Compressor Locked-Rotor Amperes: As directed.

I. Controls Power Connection: Fed through integral transformer.

J. Chiller Power Input: As directed.

K. Chiller Minimum Circuit Ampacity: As directed.

L. Chiller Maximum Overcurrent Protection Device: As directed.

M. Chiller Electrical Characteristics: 208, 240, 480 or 600-V ac, three phase, 60 Hz, as directed.

N. Noise Rating: As directed, dBA at as directed distance in feet (m) when measured according to AHRI 575.

2.13 SOURCE QUALITY CONTROL

A. Perform functional test of water chillers before shipping.

B. Factory performance test water chillers, before shipping, according to AHRI 550/590, "Water Chilling Packages Using the Vapor Compression Cycle."

1. Test the following conditions:

a. Design conditions indicated.
b. AHRI 550/590 part-load points.

2. Allow Owner access to place where water chillers are being tested. Notify Owner 14 -30 days in advance of testing.

C. Factory test and inspect evaporator and water-cooled condenser according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1. Stamp with ASME label.

D. For water chillers located indoors, rate sound power level according to AHRI 575 procedure.

PART 3 - EXECUTION

3.1 WATER CHILLER INSTALLATION

A. Coordinate sizes and locations of bases with actual equipment to be installed. Cast anchor-bolt inserts into concrete bases.

B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures with actual equipment to be installed.

C. Install water chillers on support structure indicated.

D. Equipment Mounting:

1. Install water chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."

2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

E. Maintain manufacturer's recommended clearances for service and maintenance.

F. Maintain clearances required by governing code.

G. Chiller manufacturer's factory-trained service personnel shall charge water chiller with refrigerant if not factory charged and fill with oil if not factory installed.

H. Install separate devices furnished by manufacturer and not factory installed.

1. Chillers shipped in multiple major assemblies shall be field assembled by chiller manufacturer's factory-trained service personnel.

3.2 PIPING CONNECTIONS

A. Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Comply with requirements in Section 232300 "Refrigerant Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

C. Where installing piping adjacent to chillers, allow space for service and maintenance.

D. Evaporator Fluid Connections:

1. Connect to evaporator inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with pressure gage, as directed.
2. Connect to evaporator outlet with shutoff valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve, as directed.
3. Make connections to water chiller with a union, flange, mechanical coupling, union, flange, or mechanical coupling, as directed.

E. Condenser Fluid Connections:

1. Connect to condenser inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with pressure gage, as directed.
2. Connect to condenser outlet with shutoff valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with pressure gage, flow meter and drain connection with valve.
3. Make connections to water chiller with a union, flange, mechanical coupling, union, flange, or mechanical coupling, as directed.

F. Refrigerant Pressure Relief Valve Connections: For water chillers installed indoors, extend vent piping to the outside without valves or restrictions. Comply with ASHRAE 15.

G. Connect each drain connection with a drain valve, full size of drain connection. Connect drain pipe to drain valve with union and extend drain pipe to terminate over floor drain.

H. Connect each chiller vent connection with an automatic or a manual vent, full size of vent connection.

3.3 ELECTRICAL POWER CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install nameplate for each electrical connection indicating electrical equipment designation and circuit number feeding connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 0.5 inch high. Locate nameplate where easily visible.

3.4 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between chillers and other equipment to interlock operation as required for a complete and functioning system.

C. Connect control wiring between chiller control interface and DDC System for remote monitoring and control of chillers. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."

D. Install nameplate on face of chiller control panel indicating control equipment designation serving chiller and the I/O point designation for each control connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 0.5 inch high.

3.5 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform or Perform startup service.

B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assemblies, installations, and connections.

C. Complete installation and startup checks according to manufacturer's written instructions and perform the following:

1. Verify that refrigerant charge is sufficient and water chiller has been leak tested.
2. Verify that pumps are installed and functional.
3. Verify that thermometers and gages are installed.
4. Operate water chiller for run-in period.
5. Check bearing lubrication and oil levels.

6. Verify that refrigerant pressure relief device for chillers installed indoors is vented outside.
7. Verify proper motor rotation.
8. Verify static deflection of vibration isolators, including deflection during water chiller startup and shutdown.
9. Verify and record performance of chilled- and condenser-water flow and low-temperature interlocks.
10. Verify and record performance of water chiller protection devices.
11. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.

D. Inspect field-assembled components; equipment installation; and piping, controls, and electrical connections for proper assembly, installation, and connection.

E. Visually inspect chiller for damage before starting. Repair or replace damaged components, including insulation. Do not start chiller until damage that is detrimental to operation has been corrected.

F. Prepare a written startup report that records results of tests and inspections.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain water chillers. Video record the training sessions and provide electronic copy to Owner.

1. Instructor shall be factory trained and certified.
2. Provide not less than eight hours of training.
3. Train personnel in operation and maintenance and to obtain maximum efficiency in plant operation.
4. Provide instructional videos showing general operation and maintenance that are coordinated with operation and maintenance manuals.
5. Obtain Owner sign-off that training is complete.
6. Owner training shall be held at Project site.

END OF SECTION 236423.16

SECTION 236426.13 - AIR-COOLED, ROTARY-SCREW WATER CHILLERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes packaged, air-cooled chillers.

1.2 DEFINITIONS

A. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.

B. DDC: Direct digital control.

C. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in terms of Btu/h to the total power input given in terms of watts at any given set of rating conditions.

D. IPLV: Integrated part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by AHRI 550/590 and referenced to AHRI standard rating conditions.

E. kW/Ton (kW/kW): The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons (kW) at any given set of rating conditions.

F. NPLV: Nonstandard part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by AHRI 550/590 and intended for operating conditions other than AHRI standard rating conditions.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings:

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, drawn to scale, and coordinated with each other, using input from installers of the items involved.

B. Seismic Qualification Data: Certificates, for chillers, accessories, and components, from manufacturer.

C. Source quality-control reports.

D. Field Test Reports: Startup service reports.

E. Sample warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.6 QUALITY ASSURANCE

A. AHRI Certification: Certify chiller according to AHRI 590 certification program(s).

B. AHRI Rating: Rate chiller performance according to requirements in AHRI 550/590.

C. ASHRAE Compliance:

1. ASHRAE 15 for safety code for mechanical refrigeration.
2. ASHRAE 147 for refrigerant leaks, recovery, and handling and storage requirements.

D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1.

E. ASME Compliance: Fabricate and label chiller to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, and include an ASME U-stamp and nameplate certifying compliance.

F. Comply with NFPA 70.

G. Comply with requirements of UL and UL Canada and include label by a qualified testing agency showing compliance.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of chillers that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Two, Three, Four or Five years from date of Substantial Completion, as directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Chillers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

B. Site Altitude: Chiller shall be suitable for altitude in which installed without affecting performance indicated. Make adjustments to affected chiller components to account for site altitude.

C. Performance Tolerance: Comply with the following in lieu of AHRI 550/590:

1. Allowable Capacity Tolerance: Zero percent.
2. Allowable IPLV/NPLV Performance Tolerance: Zero percent.

2.2 PACKAGED, AIR-COOLED CHILLERS

A. Description: Factory-assembled and run-tested chiller complete with base and frame, condenser casing, compressors, compressor motors and motor controllers, evaporator, condenser coils, condenser fans and motors, electrical power, controls, and accessories.

B. Fabricate base, frame, and attachment to chiller components strong enough to resist chiller movement during a seismic event when chiller base is anchored to field support structure.

C. Cabinet:

1. Base: Galvanized-steel base extending the perimeter of chiller. Secure frame, compressors, and evaporator to base to provide a single-piece unit.
2. Frame: Rigid galvanized-steel frame secured to base and designed to support cabinet, condenser, control panel, and other chiller components not directly supported by base.
3. Casing: Galvanized steel.

D. Compressors:

1. Description: Positive displacement, hermetically sealed.
2. Casing: Cast iron, precision machined for minimum clearance about periphery of rotors.
3. Rotors: Manufacturer's standard one- or two-rotor design.
4. Each compressor provided with suction and discharge shutoff valves, crankcase oil heater, and suction strainer.

E. Service: Easily accessible for inspection and service.

F. Capacity Control: On-off compressor cycling and modulating slide-valve assembly or port unloaders combined with hot-gas bypass, if necessary, to achieve performance indicated.

1. Maintain stable operation throughout range of operation. Configure to achieve most energy-efficient operation possible.
2. Operating Range: From 100 to 20, 15, 10, 5 or zero percent of design capacity, as directed.
3. Condenser-Air Unloading Requirements over Operating Range: Constant-design, entering condenser-air temperature or Drop-in, entering condenser-air temperature of 5 deg F (3 deg C) drop for each 10 percent in capacity reduction.

G. Oil Lubrication System: Consisting of pump if required, filtration, heater, cooler, factory-wired power connection, and controls.

1. Provide lubrication to bearings, gears, and other rotating surfaces at all operating, startup, shutdown, and standby conditions including power failure.
2. Thermostatically controlled oil heater properly sized to remove refrigerant from oil.
3. Factory-installed and pressure-tested piping with isolation valves and accessories.
4. Oil compatible with refrigerant and chiller components.
5. Positive visual indication of oil level.

H. Vibration Control:

1. Vibration Balance: Balance chiller compressors and drive assemblies to provide a precision balance that is free of noticeable vibration over the entire operating range.

    a. Overspeed Test: 25 percent above design operating speed.

2. Isolation: Mount individual compressors on vibration isolators.

I. Compressor Motors:

1. Hermetically sealed and cooled by refrigerant suction gas.
2. High-torque, induction type with inherent thermal-overload protection on each phase.

J. Compressor Motor Controllers:

1. Across the Line: NEMA ICS 2, Class A, full voltage, nonreversing.
2. Star-Delta, Reduced-Voltage Controller: NEMA ICS 2, closed transition.
3. Solid-state controller.
4. Variable-Frequency Controller:

    a. Motor controller shall be factory mounted and wired on the chiller to provide a single-point, field-power termination to the chiller and its auxiliaries.
    b. Description: NEMA ICS 2; listed and labeled as a complete unit and arranged to provide variable speed by adjusting output voltage and frequency.
    c. Enclosure: Unit mounted, NEMA 250, Type 3R with hinged full-front access door with lock and key.
    d. Integral Disconnecting Means: Door-interlocked, UL 489, instantaneous-trip circuit breaker with lockable handle. Minimum withstand rating shall be as required by electrical power distribution system, but not less than 42,000, 65,000 or 100,000A.
    e. Technology: Pulse-width-modulated output suitable for constant or variable torque loads.

f. Motor current at start shall not exceed the rated load amperes, providing no electrical inrush.

K. Refrigerant Circuits:

1. Refrigerant: Type as indicated on Drawings.
2. Refrigerant Type: R-134a, R-407c or any HFC, as directed. Classified as Safety Group A1 according to ASHRAE 34.
3. Refrigerant Compatibility: Chiller parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.
4. Refrigerant Circuit: Each shall include a thermal- or electronic-expansion valve, refrigerant charging connections, a hot-gas muffler, compressor suction and discharge shutoff valves, a liquid-line shutoff valve, a replaceable-core filter-dryer, a sight glass with moisture indicator, a liquid-line solenoid valve, and an insulated suction line.
5. Pressure Relief Device:

    a. Comply with requirements in ASHRAE 15 and in applicable portions of ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
    b. ASME-rated, spring-loaded pressure relief valve; single- or multiple-reseating type.

L. Evaporator:

1. Description: Shell-and-tube design.

    a. Direct-expansion type with fluid flowing through the shell, and refrigerant flowing through the tubes within the shell.
    b. Flooded type with fluid flowing through tubes and refrigerant flowing around tubes within the shell.

2. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
3. Shell Material: Carbon steel.
4. Shell Heads: Removable carbon-steel heads located at each end of the tube bundle.
5. Fluid Nozzles: Terminated with mechanical-coupling or flanged end connections for connection to field piping.
6. Tube Construction: Individually replaceable copper tubes with enhanced fin design, expanded into tube sheets.

M. Air-Cooled Condenser:

1. Plate-fin coil with integral subcooling on each circuit, rated at 450 psig (3103 kPa).

    a. Construct coil casing of galvanized or stainless steel.
    b. Construct coils of copper tubes mechanically bonded to aluminum, aluminum with precoated epoxy-phenolic or copper fins.
    c. Coat coils with a corrosion-resistant coating after fabrication.
    d. Hail Protection: Provide condenser coils with louvers, baffles, or hoods to protect against hail damage.

2. Fans: Direct-drive propeller type with statically and dynamically balanced fan blades, arranged for vertical air discharge.
3. Fan Motors: Totally enclosed nonventilating or totally enclosed air over enclosure, with permanently lubricated bearings. Equip each motor with overload protection integral to either the motor or chiller controls.
4. Fan Guards: Steel safety guards with PVC or corrosion-resistant coating.

N. Corrosion-Resistant Coating: Apply a corrosion-resistant coating capable of withstanding a 3,000-hour salt-spray test according to ASTM B117 to base, frame, and casing.

1. Standards:

   a. ASTM B117 for salt spray.
   b. ASTM D2794 for minimum impact resistance of 100 in-lb (11.3 N-m).
   c. ASTM B3359 for cross-hatch adhesion of 5B.

2. Application: Immersion or Spray.
3. Thickness: 1 mil.
4. Gloss: Minimum of 50 gloss units on a single-angle, 60-degree meter.
5. UV Protection: Spray-applied topcoat.

O. Electrical Power:

1. Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a multipoint or single-point, field-power connection to chiller.
2. House in a unit-mounted, NEMA 250, Type 3R enclosure with hinged access door with lock and key or padlock and key.
3. Wiring shall be numbered and color-coded to match wiring diagram.
4. Install factory wiring outside of an enclosure in a raceway.
5. Field-power interface shall be to wire lugs, NEMA KS 1, heavy-duty, nonfused disconnect switch, UL 489, instantaneous-trip circuit breaker with lockable handle.

   a. Disconnect means shall be interlocked with door operation.
   b. Minimum withstand rating shall be as required by electrical power distribution system, but not less than 42,000, 65,000 or 100,000 A, as directed.

6. Provide branch power circuit to each motor and to controls with one of the following disconnecting means:

   a. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
   b. UL 489, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit-trip set point.

7. Provide each motor with overcurrent protection.
8. Overload relay sized according to UL 1995 or an integral component of chiller control microprocessor.
9. Phase-Failure and Undervoltage Relays: Solid-state sensing with adjustable settings.

10. Provide power factor correction capacitors to correct power factor to 0.90 - 0.95 at full load.
11. Control Transformer: Unit-mounted transformer with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.

    a. Power unit-mounted controls where indicated.
    b. Power unit-mounted, ground fault interrupt duplex receptacle.

12. Control Relays: Auxiliary and adjustable time-delay relays.
13. For chiller electrical power supply, indicate the following:

    a. Current and phase to phase for all three phases.
    b. Voltage, phase to phase, and phase to neutral for all three phases.
    c. Three-phase real power (kilowatts).
    d. Three-phase reactive power (kilovolt amperes reactive).
    e. Power factor.
    f. Running log of total power versus time (kilowatt-hours).
    g. Fault log, with time and date of each.

P. Controls:

1. Standalone and microprocessor based.
2. Enclosure: Share enclosure with electrical power devices or provide a separate enclosure for remote mounting in the field.
3. Operator Interface: Multiple-character digital or graphic display with dynamic update of information and with keypad or touch-sensitive display located on front of control enclosure. In either imperial or metric units, display the following information:

    a. Date and time.
    b. Operating or alarm status.
    c. Operating hours.
    d. Outdoor-air temperature if required for chilled-water reset.
    e. Temperature and pressure of operating set points.
    f. Entering and leaving temperatures of chilled water.
    g. Refrigerant pressures in evaporator and condenser.
    h. Saturation temperature in evaporator and condenser.
    i. No cooling load condition.
    j. Elapsed time meter (compressor run status).
    k. Pump status.
    l. Antirecycling timer status.
    m. Percent of maximum motor amperage.
    n. Current-limit set point.
    o. Number of compressor starts.

4. Control Functions:

    a. Manual or automatic startup and shutdown time schedule.
    b. Entering and leaving chilled-water temperatures, control set points, and motor load limits. Chilled-water leaving temperature shall be reset based on return-water, outdoor-air or space temperature, as directed.
    c. Current limit and demand limit.

d. External chiller emergency stop.
e. Antirecycling timer.
f. Automatic lead-lag switching.
g. Variable evaporator flow.
h. Thermal storage.

5. Manually Reset Safety Controls: The following conditions shall shut down chiller and require manual reset:

a. Low evaporator pressure or high condenser pressure.
b. Low chilled-water temperature.
c. Refrigerant high pressure.
d. High or low oil pressure.
e. High oil temperature.
f. Loss of chilled-water flow.
g. Control device failure.

6. Trending: Capability to trend analog data of up to five parameters simultaneously over an adjustable period and frequency of polling.
7. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: view only; view and operate; and view, operate, and service.
8. Control Authority: At least four conditions: Off, local manual control at chiller, local automatic control at chiller, and automatic control through a remote source.
9. Interface with DDC System for HVAC: Factory-installed hardware and software to enable the DDC system for HVAC to monitor, control, and display chiller status and alarms.

a. Hardwired Points:

1) Monitoring: On-off status, common trouble alarm, electrical power demand (kilowatts) or electrical power consumption (kilowatt-hours), as directed.
2) Control: On-off operation, chilled-water, discharge temperature set-point adjustment or electrical power demand limit, as directed.

b. ASHRAE 135 (BACnet), LonTalk, Modbus or Industry-accepted, open-protocol communication interface with the DDC system for HVAC shall enable the DDC system for HVAC operator to remotely control and monitor the chiller from an operator workstation, as directed. Control features and monitoring points displayed locally at chiller control panel shall be available through the DDC system for HVAC.

Q. Insulation: Closed-cell, flexible elastomeric, thermal insulation complying with ASTM C534, Type I for tubular materials and Type II for sheet materials.

R. Accessories:

1. Factory-furnished, chilled-water flow switches for field installation.
2. Individual compressor suction and discharge pressure gages with shutoff valves for each refrigerant circuit.
3. Factory-furnished neoprene or spring isolators for field installation.

S. Capacities and Characteristics:

1. Capacity: As directed, tons (kW).
2. Full-Load Efficiency (COP): As directed.
3. Full-Load Efficiency (EER): As directed.
4. Full-Load Efficiency (Power Input/Cooling Output): As directed, kW/ton (kW/kW).
5. Part-Load Efficiency (IPLV): As directed.
6. Part-Load Efficiency (NPLV): As directed.
7. Low Ambient Operation: Chiller designed for operation to 0 deg F (minus 18 deg C).
8. High Ambient Operation: Chiller designed for operation to 115 deg F (46 deg C).
9. Evaporator:

    a. Configuration: Integral to chiller or Shipped loose for field installation.
    b. Pressure Rating: 150 psig (1034 kPa) - 300 psig (2068 kPa).
    c. Fluid Type: Water.
    d. Design Fluid Flow Rate: As directed, gpm (L/s).
    e. Minimum Fluid Flow Rate: As directed, gpm (L/s).
    f. Entering-Fluid Temperature: As directed, deg F (deg C).
    g. Leaving-Fluid Temperature: As directed, deg F (deg C).
    h. Fluid Pressure Drop: As directed, feet of head (kPa).
    i. Fluid Velocity: As directed, fps (m/s).
    j. Fouling Factor: 0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W), 0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W) or 0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W), as directed.

10. Condenser Entering-Air Temperature: As directed, deg F (deg C).
11. Condenser Fan External Static Pressure: As directed, wg (Pa).
12. Site Altitude: As directed, feet (m).
13. Number of Refrigerant Circuits: Two or Each compressor on an independent circuit, as directed.
14. Compressor:

    a. Number of Compressors: As directed.
    b. Rated Load Amperes: As directed.
    c. Locked-Rotor Amperes: As directed.

15. Control Electrical Requirements:

    a. Power Connection: Fed through integral transformer or Separate field-power connection, as directed.
    b. Power Input: As directed.
    c. Minimum Circuit Ampacity: As directed.
    d. Maximum Overcurrent Protection Device: As directed.
    e. Volts: 120-V ac.
    f. Phase: Single.
    g. Hertz: 60.

16. Chiller Electrical Requirements:

    a. Power Input: As directed.
    b. Power Factor: As directed.

c. Minimum Circuit Ampacity: As directed.
d. Maximum Overcurrent Protection Device: As directed.
e. Volts: 208, 240, 480 or 600, as directed.
f. Phase: Three.
g. Hertz: 60.

17. Noise Rating: As directed, dBA sound power level when measured according to AHRI 370. Provide factory-installed sound treatment if necessary to achieve the performance indicated.

2.3 SOURCE QUALITY CONTROL

A. Perform functional tests of chillers before shipping.

B. Factory run test each air-cooled chiller with water flowing through evaporator.

C. Factory performance test air-cooled chillers, before shipping, according to AHRI 550/590.

1. Test the following conditions:

a. Design conditions indicated.
b. Reduction in capacity from design to minimum load in steps of 10, 25 or 33 with condenser air at design conditions, as directed.
c. At one, two, three, four or five point(s) of varying part-load performance to be selected by Owner at time of test.

2. Prepare test report indicating test procedures, instrumentation, test conditions, and results. Submit copy of results within one week of test date.

D. Factory sound test air-cooled chillers, before shipping, according to AHRI 370.

1. Test the following conditions:

a. Design conditions indicated.
b. Chiller operating at calculated worst-case sound condition.
c. At one, two, three, four or five point(s) of varying part-load performance to be selected by Owner at time of test.

2. Prepare test report indicating test procedures, instrumentation, test conditions, and results. Submit copy of results within one week of test date.

E. Factory test and inspect evaporator and condenser according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

F. For chillers located indoors, rate sound power level according to AHRI 575.

G. For chillers located outdoors, rate sound power level according to AHRI 370.

PART 3 - EXECUTION

3.1 CHILLER INSTALLATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.

B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.

C. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

D. Install chillers on support structure indicated.

E. Equipment Mounting:

1. Install chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

F. Maintain manufacturer's recommended clearances for service and maintenance.

G. Charge chiller with refrigerant and fill with oil if not factory installed.

H. Install separate devices furnished by manufacturer and not factory installed.

3.2 CONNECTIONS

A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping," Section 232116 Hydronic Piping Specialties," and Section 232300 "Refrigerant Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to chiller to allow service and maintenance.

C. Evaporator Fluid Connections: Connect to evaporator inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with pressure gage. Connect to evaporator outlet with shutoff valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with shutoff valve and pressure gage, flow meter, and drain connection with valve. Make connections to chiller with a flange or mechanical coupling.

D. Condenser Fluid Connections: Connect to condenser inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with pressure gage. Connect to condenser outlet with shutoff valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with shutoff valve and pressure gage, flow meter, and drain connection with valve. Make connections to chiller with a flange or mechanical coupling.

E. Refrigerant Pressure Relief Device Connections: For chillers installed indoors, extend vent piping or separate vent piping for each chiller to the outdoors without valves or restrictions. Comply with ASHRAE 15. Connect vent to chiller pressure relief device with flexible connector and dirt leg with drain valve.

F. Connect each chiller drain connection with a union and drain pipe, and extend pipe, full size of connection, to floor drain. Provide a shutoff valve at each connection.

3.3 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. Verify that refrigerant charge is sufficient and chiller has been leak tested.
3. Verify that pumps are installed and functional.
4. Verify that thermometers and gages are installed.
5. Operate chiller for run-in period.
6. Check bearing lubrication and oil levels.
7. For chillers installed indoors, verify that refrigerant pressure relief device is vented outdoors.
8. Verify proper motor rotation.
9. Verify static deflection of vibration isolators, including deflection during chiller startup and shutdown.
10. Verify and record performance of fluid flow and low-temperature interlocks for evaporator and condenser.
11. Verify and record performance of chiller protection devices.
12. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.

B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assembly, installation, and connection.

C. Prepare test and inspection startup reports.

3.4 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain chillers.

END OF SECTION 236426.13

SECTION 236426.16 - WATER-COOLED, ROTARY-SCREW WATER CHILLERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes packaged, water-cooled, single or multiple compressor chillers.

B. Related Requirements:

1. Section 284400 "Refrigerant Detection and Alarm" for refrigerant monitors, alarms, supplemental breathing apparatus, and ventilation equipment interlocks.

1.2 DEFINITIONS

A. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.

B. DDC: Direct digital control.

C. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in terms of Btu/h to the total power input given in terms of watts at any given set of rating conditions.

D. IPLV: Integrated part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by AHRI 550/590 and referenced to AHRI standard rating conditions.

E. kVAr: Kilovolt amperes reactive.

F. kW/Ton (kW/kW): The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons (kW) at any given set of rating conditions.

G. NPLV: Nonstandard part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by AHRI 550/590 and intended for operating conditions other than AHRI standard rating conditions.

H. RTD: Resistance temperature detector.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings:

1. Include plans, elevations, sections, and attachment details.

2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, drawn to scale, and coordinated with each other, using input from installers of the items involved.

B. Seismic Qualification Data: Certificates, for chillers, accessories, and components, from manufacturer.

C. Source quality-control reports.

D. Field Quality-Control: Startup service reports.

E. Sample warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.6 QUALITY ASSURANCE

A. AHRI Certification: Certify chiller according to AHRI 550 certification program.

B. AHRI Rating: Rate chiller performance according to requirements in AHRI 550/590.

C. ASHRAE Compliance:

1. ASHRAE 15 for safety code for mechanical refrigeration.
2. ASHRAE 147 for refrigerant leaks, recovery, and handling and storage requirements.

D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1.

E. ASME Compliance: Fabricate and label chiller to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, and include an ASME U-stamp and nameplate certifying compliance.

F. Comply with NFPA 70.

G. Comply with requirements of UL and UL Canada and include label by a qualified testing agency showing compliance.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of chillers that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Two, Three, Four or Five years from date of Substantial Completion, as directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Chillers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

B. Condenser-Fluid Temperature Performance:

1. Startup Condenser-Fluid Temperature: Chiller shall be capable of starting with an entering condenser-fluid temperature of 60 deg F (16 deg C), 55 deg F (13 deg C) or 40 deg F (4 deg C) and providing stable operation until the system temperature is elevated to the minimum operating entering condenser-fluid temperature, as directed.
2. Minimum Operating Condenser-Fluid Temperature: Chiller shall be capable of continuous operation over the entire capacity range indicated with an entering condenser-fluid temperature of 65 deg F (18 deg C), 60 deg F (16 deg C) or 55 deg F (13 deg C), as directed.
3. Make factory modifications to standard chiller design if necessary to comply with performance indicated.

C. Site Altitude: Chiller shall be suitable for altitude in which installed without affecting performance indicated. Make adjustments to affected chiller components to account for site altitude.

D. Performance Tolerance: Comply with the following in lieu of AHRI 550/590:

1. Allowable Capacity Tolerance: Zero percent.
2. Allowable IPLV/NPLV Performance Tolerance: Zero percent.

2.2 PACKAGED, WATER-COOLED, SINGLE-COMPRESSOR CHILLERS

A. Description: Factory-assembled and run-tested chiller with compressor, compressor motor, compressor motor controller, lubrication system, evaporator, condenser, controls, interconnecting unit piping and wiring, and indicated accessories.

B. Fabricate chiller mounting base with reinforcement strong enough to resist chiller movement during a seismic event when chiller is anchored to field support structure.

C. Compressor:

1. Description: Hermetic or open, positive displacement, and oil lubricated.
2. Casing: Cast iron, precision machined for minimum clearance about periphery of rotors.
3. Rotors: Manufacturer's standard one-, two-, or three-rotor design.
4. Drive Coupling: For chillers with open drives, provide flexible disc with all-metal construction and no wearing parts to ensure long life without the need for lubrication.
5. Seals: Seal drive assembly to prevent refrigerant leakage.

D. Compressor Motor:

1. Continuous-duty, squirrel-cage, induction-type motor with energy efficiency required to suit chiller energy efficiency indicated.
2. Factory mounted, aligned, and balanced as part of compressor assembly before shipping.
3. Motor shall be of sufficient capacity to drive compressor throughout entire operating range without overload and with sufficient capacity to start and accelerate compressor without damage.
4. For chillers with open drives, provide motor with open-drip proof, weather-protected, Type I, weather-protected, Type II or totally enclosed] enclosure.
5. Provide motor with thermistor or RTD in single motor winding or each of three-phase motor windings to monitor temperature and report information to chiller control panel.
6. Provide motor with thermistor or RTD to monitor bearing temperature and report information to chiller control panel.
7. Provide open-drive motor with internal electric heater, internally powered from chiller power supply.

E. Vibration Balance: Balance chiller compressor and drive assembly to provide a precision balance that is free of noticeable vibration over the entire operating range.

1. Overspeed Test: 25 percent above design operating speed.

F. Service: Easily accessible for inspection and service.

G. Capacity Control: Modulating slide-valve assembly or port unloaders combined with a variable-frequency controller, if applicable, and hot-gas bypass, if necessary, to achieve performance indicated.

1. Maintain stable operation throughout range of operation. Configure to achieve most energy-efficient operation possible.
2. Operating Range: From 100 to 20, 15, 10, 5 or zero percent of design capacity.
3. Condenser-Fluid Unloading Requirements over Operating Range: Constant-design, entering condenser-fluid temperature or Drop-in, entering condenser-fluid temperature of 2.5 deg F (1.4 deg C) drop for each 10 percent in capacity reduction

H. Oil Lubrication System: Consisting of pump if required, filtration, heater, cooler, factory-wired power connection, and controls.

1. Provide lubrication to bearings, gears, and other rotating surfaces at all operating, startup, shutdown, and standby conditions including power failure.
2. Thermostatically controlled oil heater properly sized to remove refrigerant from oil.

3. Oil filter or Dual oil filters, one redundant, shall be the easily replaceable cartridge type, minimum 0.5-micron efficiency, with means of positive isolation while servicing, as directed.
4. Refrigerant, Water or Refrigerant or water cooled oil cooler, as directed.
5. Factory-installed and pressure-tested piping with isolation valves and accessories.
6. Oil compatible with refrigerant and chiller components.
7. Positive visual indication of oil level.

I. Refrigerant Circuit:

1. Refrigerant Type: R-134a or any HFC Classified as Safety Group A1 according to ASHRAE 34.
2. Refrigerant Compatibility: Chiller parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.
3. Refrigerant Flow Control: Manufacturer's standard refrigerant flow-control device satisfying performance requirements indicated.
4. Pressure Relief Device:

    a. Comply with requirements in ASHRAE 15 and in applicable portions of ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
    b. ASME-rated, spring-loaded pressure relief valve; single- or multiple-reseating type. Pressure relief valve(s) shall be provided for each heat exchanger. Condenser shall have dual valves with one being redundant and configured to allow either valve to be replaced without loss of refrigerant.

5. Refrigeration Transfer: Provide service valves and other factory-installed accessories required to facilitate transfer of refrigerant from chiller to a remote refrigerant storage and recycling system. Comply with requirements in ASHRAE 15 and ASHRAE 147.

J. Evaporator:

1. Description: Shell-and-tube design with water in tubes and refrigerant surrounding tubes within shell. Shell is separate from condenser.
2. Shell Material: Carbon-steel rolled plates with continuously welded seams or seamless pipe.
3. Designed to prevent liquid refrigerant carryover from entering compressor.
4. Provide evaporator with sight glass or other form of positive visual verification of liquid-refrigerant level.
5. Tubes:

    a. Individually replaceable from either end and without damage to tube sheets and other tubes.
    b. Mechanically expanded into end sheets and physically attached to intermediate tube sheets.
    c. Material: Copper, Copper-nickel alloy or Copper or copper-nickel alloy, as directed.
    d. External Finish: Manufacturer's standard.
    e. Internal Finish: Enhanced or smooth.

6. End Tube Sheets: Continuously welded to each end of shell; drilled and reamed to accommodate tubes with positive seal between fluid in tubes and refrigerant in shell.

7. Intermediate Tube Sheets: Installed in shell and spaced along length of tube at intervals required to eliminate vibration and to avoid contact of tubes resulting in abrasion and wear.
8. Water Box:

    a. Cast-iron or carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
    b. Standard or Marine type for water box with piping connections. Standard type for water box without piping connections.
    c. Provide water boxes and marine water-box covers with lifting lugs or eyebolts.
    d. Nozzle Pipe Connections: Welded, ASME B16.5, flat-face flange, Welded, ASME B16.5, raised-face flange, grooved for mechanical-joint coupling or Grooved with mechanical-joint coupling and flange adapter, as directed.
    e. Thermistor or RTD temperature sensor factory installed in each nozzle.
    f. Fit each water box with 3/4-inch (19-mm), 1-inch (25-mm) or 3/4- or 1-inch (19- or 25-mm) drain connection at low point and vent connection at high point, each with threaded plug, as directed.

K. Condenser:

1. Description: Shell-and-tube design with water in tubes and refrigerant surrounding tubes within shell. Shell is separate from evaporator.
2. Shell Material: Carbon-steel rolled plates with continuously welded seams or seamless pipe.
3. Designed to prevent direct impingement of high-velocity hot gas from compressor discharge on tubes.
4. Tubes:

    a. Individually replaceable from either end and without damage to tube sheets and other tubes.
    b. Mechanically expanded into end sheets and physically attached to intermediate tube sheets.
    c. Material: Copper, Copper-nickel alloy or Copper or copper-nickel alloy, as directed.
    d. External Finish: Manufacturer's standard.
    e. Internal Finish: Enhanced or smooth.

5. End Tube Sheets: Continuously welded to each end of shell; drilled and reamed to accommodate tubes with positive seal between fluid in tubes and refrigerant in shell.
6. Intermediate Tube Sheets: Installed in shell and spaced along length of tube at intervals required to eliminate vibration and to avoid contact of tubes resulting in abrasion and wear.
7. Water Box:

    a. Cast-iron or carbon-steel construction; arranged to provide visual inspection and cleaning of tubes from either end without disturbing refrigerant in shell.
    b. Standard or Marine type for water box with piping connections. Standard type for water box without piping connections.
    c. Provide water boxes and marine water-box covers with lifting lugs or eyebolts.

d. Nozzle Pipe Connections: Welded, ASME B16.5, flat-face flange, Welded, ASME B16.5, raised-face flange, Grooved for mechanical-joint coupling or Grooved with mechanical-joint coupling and flange adapter.
e. Thermistor or RTD temperature sensor factory installed in each nozzle.
f. Fit each water box with 3/4-inch (19-mm), 1-inch (25-mm) or 3/4- or 1-inch (19- or 25-mm) drain connection at low point and vent connection at high point, each with threaded plug, as directed.

L. Electrical Power:

1. Factory installed and wired, and functionally tested at factory before shipment.
2. Single-point, field-power connection to fused disconnect switch, nonfused disconnect switch or circuit breaker, as directed. Minimum withstand rating shall be as required by electrical power distribution system, but not less than 42,000 - 65,000A, as directed.

    a. Provide branch power circuit to each motor, electric heater, dedicated electrical load, and controls with disconnect switch or circuit breaker.
    b. NEMA ICS 2-rated motor controller for auxiliary motors, hand-off-auto switch, and overcurrent protection for each motor. Provide variable-frequency controller for each variable-speed motor furnished.
    c. Control-circuit transformer with primary and secondary side fuses.

3. Terminal blocks with numbered and color-coded wiring to match wiring diagram. Spare wiring terminal block for connection to external controls or equipment.
4. Factory-installed wiring outside of enclosures shall be in metal raceway except make connections to each motor and heater with not more than a 24-inch (610-mm) length of liquid tight conduit.
5. Factory install and wire capacitor bank for the purpose of power factor correction to 0.95 at all operating conditions.

    a. If capacitors are mounted in a dedicated enclosure, use same NEMA enclosure type as motor controller. Provide enclosure with service entrance knockouts and bushings for conduit.
    b. Capacitors shall be non-PCB dielectric fluid, metallized electrode design, low loss with low-temperature rise. The kVAr ratings shall be indicated and shall not exceed the maximum limitations set by NFPA 70. Provide individual cells as required.
    c. Provide each cell with current-limiting replaceable fuses and carbon-film discharge resistors to reduce residual voltage to less than 50 V within one minute after de-energizing.
    d. Provide a ground terminal and a terminal block or individual connectors for phase connection.

M. Motor Controller:

1. Enclosure: Factory installed, unit mounted, Factory furnished, field mounted, NEMA 250 or NEMA ICS 6, Type 1, Type 4, Type 4X or Type 12 with hinged full-front access door with lock and key or padlock and key, as directed.
2. Control Circuit: Obtained from integral control power transformer with a control power transformer or source of enough capacity to operate connected control devices.

3. Overload Relay: Shall be sized according to UL 1995 or shall be an integral component of chiller control microprocessor.
4. Across-the-Line Controller: NEMA ICS 2, Class A, full voltage, nonreversing; include isolation switch and current-limiting fuses.
5. Star-Delta, Reduced-Voltage Controller: NEMA ICS 2, closed transition.
6. Autotransformer Reduced-Voltage Controller: NEMA ICS 2, closed transition; include isolation switch and current-limiting fuses.
7. Solid-State, Reduced-Voltage Controller: NEMA ICS 2.

    a. Surge suppressor in solid-state power circuits providing three-phase protection against damage from supply voltage surges 10 percent or more above nominal line voltage.
    b. Visual indication of motor and control status, including the following conditions:

        1) Controller on.
        2) Overload trip.
        3) Loss of phase.
        4) Starter fault.

8. Accessories: Devices shall be factory installed in controller enclosure unless otherwise indicated.

    a. Externally Operated, Door-Interlocked Disconnect: Fused disconnect switch, Nonfused disconnect switch or Circuit breaker. Minimum withstand rating shall be as required by electrical power distribution system, but not less than 42,000 - 65,000A, as directed.
    b. Push-Button Stations, Pilot Lights, and Selector Switches: NEMA ICS 2, heavy-duty type.
    c. Stop and Lockout Push-Button Station: Momentary-break, push-button station with a factory-applied hasp arranged so padlock can be used to lock push button in depressed position with control circuit open.
    d. Control Relays: Time-delay relays.
    e. Elapsed-Time Meters: Numerical readout in hours on face of enclosure.
    f. Number-of-Starts Counter: Numerical readout on face of enclosure.
    g. Meters: Panel type, 2-1/2 inches (64 mm) or 4-1/4 inches (108 mm)] with 90, 120 or 270 degree scale and 1 – 2 percent accuracy. Where indicated, provide transfer device with an off position. Meters shall indicate the following:

        1) Ammeter: Output current for each phase, with current sensors rated to suit application.
        2) Voltmeter: Output voltage for each phase.
        3) Frequency Meter: Output frequency.
        4) Real-time clock with current time and date.
        5) Total run time.

    h. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems and with the following features:

        1) Selectable, digital display of the following:

a) Phase Currents, Each Phase: Plus or minus 1 percent.
b) Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
c) Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
d) Three-Phase Real Power: Plus or minus 2 percent.
e) Three-Phase Reactive Power: Plus or minus 2 percent.
f) Power Factor: Plus or minus 2 percent.
g) Frequency: Plus or minus 0.5 percent.
h) Integrated Demand with Demand Interval Selectable from 5 to 60 Minutes: Plus or minus 2 percent.
i) Accumulated energy, in megawatt hours (joules), plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.

2) Mounting: Display and control unit flush or semirecessed in instrument compartment door.

i. Phase-Failure, Phase-Reversal, Undervoltage Relays: Solid-state sensing circuit with adjustable undervoltage setting and isolated output contacts for hardwired connection.
j. Power Protection: Chiller shall shut down within six cycles of power interruption.

N. Variable-Frequency Controller:

1. Motor controller shall be factory mounted and wired on the chiller to provide a single-point, field-power termination to the chiller and its auxiliaries.
2. Description: NEMA ICS 2; listed and labeled as a complete unit and arranged to provide variable speed by adjusting output voltage and frequency.
3. Enclosure: Unit mounted, NEMA 250, Type 1 with hinged full-front access door with lock and key.
4. Integral Disconnecting Means: Door-interlocked, UL 489, instantaneous-trip circuit breaker with lockable handle. Minimum withstand rating shall be as required by electrical power distribution system, but not less than 42,000, 65,000 or 100,000A, as directed.
5. Technology: Pulse-width-modulated output suitable for constant or variable torque loads.
6. Output Rating: Three phase; with voltage proportional to frequency throughout voltage range.
7. Operating Requirements:

a. Input AC Voltage Tolerance: 460-V ac, plus 10 percent or 506 V maximum.
b. Input frequency tolerance of 60 Hz, plus or minus 2 Hz.
c. Capable of driving full load, without derating, under the following conditions:

1) Ambient Temperature: 0 to 40 deg C.
2) Relative Humidity: Up to 90 - 95 percent (noncondensing).
3) Altitude: 3300 feet (1005 m) - 6600 feet (2010 m).

d. Minimum Efficiency: 96 percent at 60 Hz, full load.
e. Minimum Displacement Primary-Side Power Factor: 98 percent.
f. Overload Capability: 1.05 times the full-load current for seven seconds.
g. Starting Torque: As required by compressor-drive assembly.
h. Speed Regulation: Plus or minus 1 percent.

i. Isolated control interface to allow controller to follow control signal over a 10:1 speed range.
j. To avoid equipment resonant vibrations, provide critical speed lockout circuitry to allow bands of operating frequency at which controller shall not operate continuously.
k. Capable of being restarted into a motor coasting in either the forward or reverse direction without tripping.

8. Internal Adjustability Capabilities:

a. Minimum Output Frequency: 6 Hz.
b. Maximum Output Frequency: 60 Hz.
c. Acceleration: 2 to 60 seconds.
d. Deceleration: Zero to 60 seconds.
e. Current Limit: 30 to a minimum of 100 percent of maximum rating.

9. Self-Protection and Reliability Features: Subjecting the controller to any of the following conditions shall not result in component failure or the need for replacement:

a. Overtemperature.
b. Short circuit at controller output.
c. Ground fault at controller output. Variable-frequency controller shall be able to start a grounded motor.
d. Open circuit at controller output.
e. Input undervoltage.
f. Input overvoltage.
g. Loss of input-phase.
h. Reverse phase.
i. AC line switching transients.
j. Instantaneous overload, line to line or line to ground.
k. Sustained overload exceeding 100 percent of controller rated current.
l. Starting a rotating motor.

10. Motor Protection: Controller shall protect motor against overvoltage and undervoltage, phase loss, reverse phase, overcurrent, overtemperature, and ground fault.
11. Automatic Reset and Restart: Capable of three restarts after controller fault or on return of power after an interruption and before shutting down for manual reset or fault correction. Controller shall be capable of automatic restart on phase-loss, and overvoltage and undervoltage trips.
12. Visual Indication: On face of controller enclosure or chiller control enclosure; indicating the following conditions:

a. Power on.
b. Run.
c. Overvoltage.
d. Line fault.
e. Overcurrent.
f. External fault.
g. Motor speed (percent).
h. Fault or alarm status (code).
i. Motor output voltage.

j. Input kilovolt amperes.
k. Total power factor.
l. Input kilowatts.
m. Input kilowatt-hours.
n. Three-phase input voltage.
o. Three-phase output voltage.
p. Three-phase input current.
q. Three-phase output current.
r. Output frequency (Hertz).
s. Elapsed operating time (hours).
t. Diagnostic and service parameters.

13. Operator Interface: At controller or chiller control panel; with start-stop and auto-manual selector with manual-speed-control potentiometer.
14. Harmonic Distortion Filter: Factory mounted and wired to limit total voltage and current distortion to 5 percent.

O. Controls:

1. Standalone and microprocessor based with all memory stored in nonvolatile memory so that reprogramming is not required on loss of electrical power.
2. Enclosure: Unit mounted, NEMA 250, Type 1, Type 4, Type 4x or Type 12, hinged or lockable; factory wired with a single-point, field-power connection and a separate control circuit.
3. Operator Interface: Multiple-character digital or graphic display with dynamic update of information and with keypad or touch-sensitive display located on front of control enclosure. In either imperial or metric units, display the following information:

a. Date and time.
b. Operating or alarm status.
c. Fault history with not less than last 10 faults displayed.
d. Set points of controllable parameters.
e. Trend data.
f. Operating hours.
g. Number of chiller starts.
h. Outdoor-air temperature or space temperature if required for chilled-water reset.
i. Temperature and pressure of operating set points.
j. Entering- and leaving-fluid temperatures of evaporator and condenser.
k. Difference in fluid temperatures of evaporator and condenser.
l. Fluid flow of evaporator and condenser.
m. Fluid pressure drop of evaporator and condenser.
n. Refrigerant pressures in evaporator and condenser.
o. Refrigerant saturation temperature in evaporator and condenser.
p. Pump status.
q. Antirecycling timer status.
r. Percent of maximum motor amperage.
s. Current-limit set point.
t. Compressor bearing temperature.
u. Motor bearing temperature.
v. Motor winding temperature.
w. Oil temperature.

x. Oil discharge pressure.
y. Phase current.
z. Percent of motor rated load amperes.
aa. Phase voltage.
bb. Demand power (kilowatts).
cc. Energy use (kilowatt-hours).
dd. Power factor.

4. Control Functions:

   a. Manual or automatic startup and shutdown time schedule.
   b. Entering and leaving chilled-water temperatures, control set points, and motor load limits. Evaporator fluid temperature shall be reset based on return-water, outdoor-air or space temperature, as directed.
   c. Current limit and demand limit.
   d. Condenser-fluid temperature.
   e. External chiller emergency stop.
   f. Antirecycling timer.
   g. Variable evaporator flow.
   h. Thermal storage.

5. Manually Reset Safety Controls: The following conditions shall shut down chiller and require manual reset:

   a. Low evaporator pressure or temperature; high condenser pressure.
   b. Low evaporator fluid temperature.
   c. Low oil differential pressure.
   d. High or low oil pressure.
   e. High oil temperature.
   f. High compressor-discharge temperature.
   g. Loss of condenser-fluid flow.
   h. Loss of evaporator-fluid flow.
   i. Motor overcurrent.
   j. Motor overvoltage.
   k. Motor undervoltage.
   l. Motor phase reversal.
   m. Motor phase failure.
   n. Sensor- or detection-circuit fault.
   o. Processor communication loss.
   p. Motor controller fault.
   q. Extended compressor surge.

6. Trending: Capability to trend analog data of up to five parameters simultaneously over an adjustable period and frequency of polling.
7. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: view only; view and operate; and view, operate, and service.
8. Control Authority: At least four conditions: Off, local manual control at chiller, local automatic control at chiller, and automatic control through a remote source.
9. Communication Port: RS-232 port or equivalent connection capable of connecting a printer and a notebook computer.

10. Interface with the DDC System for HVAC: Factory-installed hardware and software to enable the DDC system for HVAC to monitor, control, and display chiller status and alarms.

    a. Hardwired Points:

        1) Monitoring: On-off status, common trouble alarm, electrical power demand (kilowatts), electrical power consumption (kilowatt-hours) or power factor, as directed.
        2) Control: On-off operation, chilled-water, discharge temperature set-point adjustment or electrical power demand limit.

    b. ASHRAE 135 (BACnet), LonTalk, Modbus or Industry-accepted, open-protocol communication interface with the DDC system for HVAC shall enable the DDC system for HVAC operator to remotely control and monitor the chiller from an operator workstation, as directed. Control features and monitoring points displayed locally at chiller control panel shall be available through the DDC system for HVAC.

P. Insulation: Closed-cell, flexible elastomeric, thermal insulation complying with ASTM C534, Type I for tubular materials and Type II for sheet materials.

Q. Finish: Paint chiller, using manufacturer's standard procedures.

R. Accessories:

1. Flow Switches:

    a. If required and not factory installed, chiller manufacturer shall furnish a switch for each condenser or evaporator and condenser and verify field-mounting location before installation.
    b. Paddle Flow Switches:

        1) Vane operated to actuate a double-pole, double-throw switch with one pole field wired to the chiller control panel and the other pole field wired to the DDC system for HVAC.
        2) Contacts: Platinum alloy, silver alloy, or gold-plated switch contacts with a rating of 10 A at 120-V ac.
        3) Pressure rating equal to pressure rating of heat exchanger.
        4) Construct body and wetted parts of Type 316 stainless steel.
        5) House switch in a NEMA 250, Type 4 enclosure constructed of die-cast aluminum.
        6) Vane length to suit installation.

    c. Pressure Differential Switches:

        1) Construction: Wetted parts of body and trim constructed of Type 316 stainless steel.
        2) Performance: Switch shall withstand, without damage, the full-pressure rating of the heat exchanger applied to either port and exhibit zero set-point shift due to variation in working pressure.

3) Set Point: Screw type, field adjustable.
4) Electrical Connections: Internally mounted screw-type terminal blocks.
5) Switch Enclosure: NEMA 250, Type 4.
6) Switch Action: Double-pole, double-throw switch with one pole field wired to the chiller control panel and the other pole field wired to the DDC system for HVAC.

2. Vibration Isolation:

a. Chiller manufacturer shall furnish vibration isolation for each chiller.
b. Neoprene Pad:

1) Two layers of 0.375-inch- (10-mm-) thick, ribbed- or waffle-pattern neoprene pads separated by a 16-gage, stainless-steel plate.
2) Fabricate pads from 40- to 50-durometer neoprene.
3) Provide stainless-steel square bearing plate to load the pad uniformly between 20 and 40 psig (138 and 276 kPa) with a 0.12- to 0.16-inch (3- to 4-mm) deflection.

c. Spring Isolator:

1) Stable in operation and designed for not less than 30 percent reserve deflection beyond actual operating conditions. Isolators shall be designed such that the Kx/Ky ratio shall be 1.0 or more for stability.
2) Provide PVC or neoprene-coated springs and hot-dip, galvanized-steel components. Aluminum components shall be etched and painted. Nuts, bolts, and washers shall be zinc electroplated.
3) Isolators shall be adjustable and with an open spring, having one or more coil springs attached to a top compression plate and a baseplate. An elastomeric pad with a minimum thickness of shall be bonded to the baseplate.
4) Spring assembly shall be removable and shall fit within a welded steel enclosure consisting of a top plate and rigid lower housing, which serves as a blocking device during installation. Isolated restraining bolts shall not be engaged during normal operation and shall connect the top plate and lower housing to prevent the isolated equipment from rising when drained of fluid.
5) Isolators shall be selected for a nominal 1-inch (25-mm) or 2-inch (50-mm) deflection.

S. Capacities and Characteristics:

1. Capacity: As directed, tons (kW).
2. Full-Load Efficiency (COP): As directed.
3. Full-Load Efficiency (EER): As directed.
4. Full-Load Efficiency (Power Input/Cooling Output): As directed, kW/ton (kW/kW).
5. Part-Load Efficiency (IPLV): As directed.
6. Part-Load Efficiency (NPLV): As directed.
7. Evaporator:

a. Pressure Rating: As directed, psig (kPa).

b. Number of Passes: One, Two or Three, as directed.
c. Fluid Type: Water
d. Design Fluid Flow Rate: As directed, gpm (L/s).
e. Minimum Fluid Flow Rate: As directed, gpm (L/s).
f. Entering-Fluid Temperature: As directed, deg F (deg C).
g. Leaving-Fluid Temperature: As directed, deg F (deg C).
h. Fluid Pressure Drop: As directed, feet of head (kPa).
i. Fluid Velocity: As directed, fps (m/s).
j. Fouling Factor: 0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W), 0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W) or 0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W), as directed.

8. Condenser:

a. Pressure Rating: As directed, psig (kPa).
b. Number of Passes: One, Two or Three.
c. Fluid Type: Water.
d. Design Fluid Flow Rate: As directed, gpm (L/s).
e. Entering-Fluid Temperature: As directed, deg F (deg C).
f. Leaving-Fluid Temperature: As directed, deg F (deg C).
g. Fluid Pressure Drop: As directed, feet of head (kPa).
h. Fluid Velocity: As directed, fps (m/s).
i. Fouling Factor: 0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W), 0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W) or 0.001 sq. ft. x h x deg F/Btu (0.00022 sq. m x deg C/W), as directed.

9. Compressor:

a. Rated Load Amperes: As directed.
b. Locked-Rotor Amperes: As directed.

10. Chiller Electrical Requirements:

a. Power Input: As directed.
b. Power Factor: 0.90 - 0.95.
c. Minimum Circuit Ampacity: As directed.
d. Maximum Overcurrent Protection Device: As directed.
e. Volts: 208, 240, 480, 600, 2300 or 4160.
f. Phase: Three.
g. Hertz: 60.

11. Noise Rating: 85 dBA sound power level when measured according to AHRI 575. Provide factory-installed sound treatment if necessary to achieve the performance indicated.

2.3 PACKAGED, WATER-COOLED, MULTIPLE-COMPRESSOR CHILLERS

A. Description: Factory-assembled and run-tested chiller with compressor(s), compressor motors and motor controllers, evaporator, condenser where indicated, electrical power, controls, and indicated accessories.

B. Fabricate chiller mounting base with reinforcement strong enough to resist chiller movement during a seismic event when chiller is anchored to field support structure.

C. Compressors:

1. Description: Positive displacement, hermetically sealed.
2. Casing: Cast iron, precision machined for minimum clearance about periphery of rotors.
3. Rotors: Manufacturer's standard one- or two-rotor design.

D. Service: Easily accessible for inspection and service.

E. Capacity Control: On-off compressor cycling and modulating slide-valve assembly or port unloaders combined with hot-gas bypass, if necessary, to achieve performance indicated.

1. Maintain stable operation throughout range of operation. Configure to achieve most energy-efficient operation possible.
2. Operating Range: From 100 to 20, 15, 10, 5 or zero percent of design capacity.
3. Condenser-Fluid Unloading Requirements over Operating Range: Constant-design, entering condenser-fluid temperature or Drop-in, entering condenser-fluid temperature of 2.5 deg F (1.4 deg C) drop for each 10 percent in capacity reduction, as directed.

F. Oil Lubrication System: Consisting of pump if required, filtration, heater, cooler, factory-wired power connection, and controls.

1. Provide lubrication to bearings, gears, and other rotating surfaces at all operating, startup, shutdown, and standby conditions including power failure.
2. Thermostatically controlled oil heater properly sized to remove refrigerant from oil.
3. Factory-installed and pressure-tested piping with isolation valves and accessories.
4. Oil compatible with refrigerant and chiller components.
5. Positive visual indication of oil level.

G. Vibration Control:

1. Vibration Balance: Balance chiller compressor and drive assembly to provide a precision balance that is free of noticeable vibration over the entire operating range.

    a. Overspeed Test: 25 percent above design operating speed.

2. Isolation: Mount individual compressors on vibration isolators.

H. Compressor Motors:

1. Hermetically sealed and cooled by refrigerant suction gas.
2. High-torque, induction type with inherent thermal-overload protection on each phase.

I. Refrigerant Circuits:

1. Refrigerant Type: R-134a or any HFC Classified as Safety Group A1 according to ASHRAE 34.

2. Refrigerant Compatibility: Chiller parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.
3. Refrigerant Circuit: Each shall include a thermal- or electronic-expansion valve, refrigerant charging connections, a hot-gas muffler, compressor suction and discharge shutoff valves, a liquid-line shutoff valve, a replaceable-core filter-dryer, a sight glass with moisture indicator, a liquid-line solenoid valve, and an insulated suction line.
4. Pressure Relief Device:

    a. Comply with requirements in ASHRAE 15 and in applicable portions of ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
    b. ASME-rated, spring-loaded pressure relief valve; single- or multiple-reseating type.

J. Evaporator:

1. Description: Shell-and-tube design.

    a. Direct-expansion type with fluid flowing through the shell, and refrigerant flowing through the tubes within the shell.
    b. Flooded type with fluid flowing through tubes and refrigerant flowing around tubes within the shell.

2. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
3. Shell Material: Carbon steel.
4. Shell Heads: Removable carbon-steel heads with multipass baffles, and located at each end of the tube bundle.
5. Fluid Nozzles: Terminated with mechanical-coupling or flanged end connections for connection to field piping.
6. Tube Construction: Individually replaceable copper tubes with enhanced fin design, expanded into tube sheets.

K. Condenser:

1. Shell and tube, or without integral condenser; as indicated.
2. Shell and Tube:

    a. Description: Shell-and-tube design with refrigerant flowing through shell, and fluid flowing through tubes within shell.
    b. Provides positive subcooling of liquid refrigerant.
    c. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
    d. Shell Material: Carbon steel.
    e. Water Boxes: Removable, of carbon-steel construction, located at each end of the tube bundle with fluid nozzles terminated with mechanical-coupling end connections for connection to field piping.
    f. Tube Construction: Individually replaceable copper tubes with enhanced fin design, expanded into tube sheets.
    g. Provide each condenser with a pressure relief device, purge cock, and liquid-line shutoff valve.

3. Provide chiller without an integral condenser and design chiller for field connection to remote condenser. Coordinate requirements with Section 236313 "Air-Cooled Refrigerant Condensers."

L. Electrical Power:

1. Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a multipoint or single-point, field-power connection to chiller.
2. House in a unit-mounted, NEMA 250, Type 1 enclosure with hinged access door with lock and key or padlock and key.
3. Wiring shall be numbered and color-coded to match wiring diagram.
4. Install factory wiring outside of an enclosure in a raceway.
5. Field-power interface shall be to wire lugs, NEMA KS 1, heavy-duty, nonfused disconnect switch or UL 489, instantaneous-trip circuit breaker with lockable handle.

    a. Disconnect means shall be interlocked with door operation.
    b. Minimum withstand rating shall be as required by electrical power distribution system, but not less than 42,000, 65,000, 100,000 A, as directed.

6. Provide branch power circuit to each motor and to controls with one of the following disconnecting means:

    a. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
    b. UL 489, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit-trip set point.

7. Provide each motor with overcurrent protection.
8. Overload relay sized according to UL 1995 or an integral component of chiller control microprocessor.
9. Phase-Failure and Undervoltage Relays: Solid-state sensing with adjustable settings.
10. Control Transformer: Unit-mounted transformer with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.
11. Control Relays: Auxiliary and adjustable time-delay relays.
12. For chiller electrical power supply, indicate the following:

    a. Current and phase to phase for all three phases.
    b. Voltage, phase to phase, and phase to neutral for all three phases.
    c. Three-phase real power (kilowatts).
    d. Three-phase reactive power (kVAr).
    e. Power factor.
    f. Running log of total power versus time (kilowatt-hours).
    g. Fault log, with time and date of each.

M. Compressor Motor Controllers:

1. Across the Line: NEMA ICS 2, Class A, full voltage, nonreversing, or solid state.
2. Star-Delta, Reduced-Voltage Controller: NEMA ICS 2, closed or open transition, or solid state.

N. Controls:

1. Standalone and microprocessor based.
2. Enclosure: Share enclosure with electrical-power devices or provide a separate enclosure of matching construction.
3. Operator Interface: Multiple-character digital or graphic display with dynamic update of information and with keypad or touch-sensitive display located on front of control enclosure. In either imperial or metric units, display the following information:

    a. Date and time.
    b. Operating or alarm status.
    c. Fault history with not less than last 10 faults displayed.
    d. Set points of controllable parameters.
    e. Trend data.
    f. Operating hours.
    g. Number of chiller starts.
    h. Outdoor-air temperature or space temperature if required for chilled-water reset.
    i. Temperature and pressure of operating set points.
    j. Entering- and leaving-fluid temperatures of evaporator and condenser.
    k. Difference in fluid temperatures of evaporator and condenser.
    l. Refrigerant pressures in evaporator and condenser.
    m. Refrigerant saturation temperature in evaporator and condenser.
    n. No cooling load condition.
    o. Elapsed time meter (compressor run status).
    p. Pump status.
    q. Antirecycling timer status.
    r. Percent of maximum motor amperage.
    s. Current-limit set point.
    t. Number of compressor starts.
    u. Compressor refrigerant suction and discharge temperature.
    v. Oil temperature.
    w. Oil discharge pressure.
    x. Phase current.
    y. Percent of motor rated load amperes.
    z. Phase voltage.

4. Control Functions:

    a. Manual or automatic startup and shutdown time schedule.
    b. Entering and leaving chilled-water temperatures, control set points, and motor load limits. Chilled-water leaving temperature shall be reset based on return-water, outdoor-air or space temperature, as directed.
    c. Current limit and demand limit.
    d. Condenser-fluid temperature.
    e. External chiller emergency stop.
    f. Antirecycling timer.
    g. Automatic lead-lag switching.
    h. Variable evaporator flow.
    i. Thermal storage.

5. Manually Reset Safety Controls: The following conditions shall shut down chiller and require manual reset:

    a. Low evaporator pressure or high condenser pressure.
    b. Low chilled-water temperature.
    c. Refrigerant high pressure.
    d. High or low oil pressure.
    e. High oil temperature.
    f. Loss of chilled-water flow.
    g. Loss of condenser-fluid flow.
    h. Control device failure.

6. Trending: Capability to trend analog data of up to five parameters simultaneously over an adjustable period and frequency of polling.
7. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: view only; view and operate; and view, operate, and service.
8. Control Authority: At least four conditions: Off, local manual control at chiller, local automatic control at chiller, and automatic control through a remote source.
9. Interface with DDC System for HVAC: Factory-installed hardware and software to enable the DDC system for HVAC to monitor, control, and display chiller status and alarms.

    a. Hardwired Points:

        1) Monitoring: On-off status, common trouble alarm, electrical power demand (kilowatts) or electrical power consumption (kilowatt-hours), as directed.
        2) Control: On-off operation, chilled-water, discharge temperature set-point adjustment or electrical power demand limit.

    b. ASHRAE 135 (BACnet), LonTalk, Modbus or Industry-accepted, open-protocol communication interface with the DDC system for HVAC shall enable the DDC system for HVAC operator to remotely control and monitor the chiller from an operator workstation, as directed. Control features and monitoring points displayed locally at chiller control panel shall be available through the DDC system for HVAC.

O. Insulation: Closed-cell, flexible elastomeric, thermal insulation complying with ASTM C534, Type I for tubular materials and Type II for sheet materials.

P. Finish: Paint chiller, using manufacturer's standard procedures.

Q. Accessories:

1. Factory-furnished, chilled and condenser water flow switches for field installation.
2. Individual compressor suction and discharge pressure gages with shutoff valves for each refrigerant circuit.
3. Factory-furnished neoprene or spring isolators for field installation.

R. Capacities and Characteristics:

1. Capacity: As directed, tons (kW).
2. Full-Load Efficiency (COP): As directed.
3. Full-Load Efficiency (EER): As directed.
4. Full-Load Efficiency (Power Input/Cooling Output): As directed, kW/ton (kW/kW).
5. Part-Load Efficiency (IPLV): As directed.
6. Part-Load Efficiency (NPLV): As directed.
7. Evaporator:

    a. Pressure Rating: As directed, psig (kPa).
    b. Number of Passes: One, Two or Three, as directed.
    c. Fluid Type: Water.
    d. Design Fluid Flow Rate: As directed, gpm (L/s).
    e. Minimum Fluid Flow Rate: As directed, gpm (L/s).
    f. Entering-Fluid Temperature: As directed, deg F (deg C).
    g. Leaving-Fluid Temperature: As directed, deg F (deg C).
    h. Fluid Pressure Drop: As directed, feet of head (kPa).
    i. Fluid Velocity: As directed, fps (m/s).
    j. Fouling Factor: 0.0001 sq. ft. x h x deg F/Btu (0.000018 sq. m x deg C/W), 0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W) or 0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W), as directed.

8. Condenser:

    a. Pressure Rating: As directed, psig (kPa).
    b. Fluid Type: Water.
    c. Design Fluid Flow Rate: As directed, gpm (L/s).
    d. Entering-Fluid Temperature: As directed, deg F (deg C).
    e. Leaving-Fluid Temperature: As directed, deg F (deg C).
    f. Fluid Pressure Drop: As directed, feet of head (kPa).
    g. Fluid Velocity: As directed, fps (m/s).
    h. Fouling Factor: 0.00025 sq. ft. x h x deg F/Btu (0.000044 sq. m x deg C/W), 0.0005 sq. ft. x h x deg F/Btu (0.00011 sq. m x deg C/W) or 0.001 sq. ft. x h x deg F/Btu (0.00022 sq. m x deg C/W), as directed.

9. Number of Refrigerant Circuits: One – Two, as directed.
10. Compressors:

    a. Number of Compressors: As directed.
    b. Rated Load Amperes: As directed.
    c. Locked-Rotor Amperes: As directed.

11. Control Electrical Requirements:

    a. Power Connection: Fed through integral transformer or Separate field-power connection.
    b. Power Input: As directed.
    c. Minimum Circuit Ampacity: As directed.
    d. Maximum Overcurrent Protection Device: As directed.
    e. Volts:120V ac.
    f. Phase: Single or Three.
    g. Hertz: 60.

12. Chiller Electrical Requirements:

    a. Power Input: As directed.
    b. Power Factor: As directed
    c. Minimum Circuit Ampacity: As directed.
    d. Maximum Overcurrent Protection Device: As directed.
    e. Volts: 208, 240, 480 or 600, as directed
    f. Phase: Three.
    g. Hertz: 60.

13. Noise Rating: As directed, dBA sound power level when measured according to AHRI 575. Provide factory-installed sound treatment if necessary to achieve the performance indicated.

2.4 SOURCE QUALITY CONTROL

A. Perform functional tests of chillers before shipping.

B. Factory performance test water-cooled chillers, before shipping, according to AHRI 550/590.

1. Test the following conditions:

    a. Design conditions indicated.
    b. Reduction in capacity from design to minimum load in steps of 10, 25 or 33 with condenser fluid at design conditions, as directed.
    c. Reduction in capacity from design to minimum load in steps of 10, 25 or 33 with varying entering condenser-fluid temperature from design to minimum conditions in 5 deg F (3 deg C) increments, as directed.
    d. At one, two, three, four, five or 10 point(s) of varying part-load performance to be selected by Owner at time of test.

2. Prepare test report indicating test procedures, instrumentation, test conditions, and results. Submit copy of results within one week of test date.

C. Factory sound test water-cooled chillers, before shipping, according to AHRI 575.

1. Test the following conditions:

    a. Design conditions indicated.
    b. Chiller operating at calculated worst-case sound condition.
    c. At one, two, three, four or five point(s) of varying part-load performance to be selected by Owner at time of test.

2. Prepare test report indicating test procedures, instrumentation, test conditions, and results. Submit copy of results within one week of test date.

D. Factory test and inspect evaporator and condenser according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

E. For chillers located indoors, rate sound power level according to AHRI 575.

F. For chillers located outdoors, rate sound power level according to AHRI 370.

PART 3 - EXECUTION

3.1 CHILLER INSTALLATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.

B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.

C. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

D. Install chillers on support structure indicated.

E. Equipment Mounting:

1. Install chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

F. Maintain manufacturer's recommended clearances for service and maintenance.

G. Charge chiller with refrigerant and fill with oil if not factory installed.

H. Install separate devices furnished by manufacturer and not factory installed.

3.2 CONNECTIONS

A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping," Section 232116 "Hydronic Piping Specialties," and Section 232300 "Refrigerant Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to chiller to allow service and maintenance.

C. Evaporator Fluid Connections: Connect to evaporator inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with pressure gage, as directed. Connect to evaporator outlet with shutoff valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with shutoff valve and pressure gage, flow meter, and drain connection with valve. Make connections to chiller with a flange or mechanical coupling.

D. Condenser Fluid Connections: Connect to condenser inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with pressure gage, as directed. Connect to condenser outlet with shutoff valve, balancing valve, flexible connector, flow switch, thermometer,

plugged tee with shutoff valve and pressure gage, flow meter, and drain connection with valve. Make connections to chiller with a flange or mechanical coupling.

E. Refrigerant Pressure Relief Device Connections: For chillers installed indoors, extend vent piping or separate vent piping for each chiller to the outdoors without valves or restrictions. Comply with ASHRAE 15. Connect vent to chiller pressure relief device with flexible connector and dirt leg with drain valve.

F. Connect each chiller drain connection with a union and drain pipe, and extend pipe, full size of connection, to floor drain. Provide a shutoff valve at each connection.

3.3 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. Verify that refrigerant charge is sufficient and chiller has been leak tested.
3. Verify that pumps are installed and functional.
4. Verify that thermometers and gages are installed.
5. Operate chiller for run-in period.
6. Check bearing lubrication and oil levels.
7. For chillers installed indoors, verify that refrigerant pressure relief device is vented outdoors.
8. Verify proper motor rotation.
9. Verify static deflection of vibration isolators, including deflection during chiller startup and shutdown.
10. Verify and record performance of fluid flow and low-temperature interlocks for evaporator and condenser.
11. Verify and record performance of chiller protection devices.
12. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.

B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assembly, installation, and connection.

C. Prepare test and inspection startup reports.

3.4 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain chillers. Video record the training sessions.

END OF SECTION 236426.16

SECTION 236513.13 - OPEN-CIRCUIT, FORCED-DRAFT COOLING TOWERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes factory-assembled, open-circuit, forced-draft cooling towers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Manufacturer's drawings of assembled cooling towers, control panels, sections, and elevations.
2. Assembled unit dimensions.
3. Diagram showing each separate piece requiring field assembly.
4. Shipped sub-assembly dimensions and weights for field assembly.
5. Operating weight and load distribution.
6. Unit vibration isolation and seismic controls.
7. Required clearances for maintenance and operation.
8. Sizes and dimensioned locations of piping and wiring connections.
9. Diagrams for power, signal, and control wiring.

C. Delegated-Design Submittal: For cooling tower support structure indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of support structure.
2. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment.
3. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and wind restraints and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings:

1. Drawings on which the following items are shown and coordinated with each other, using input from Installers of the items involved.
2. Each view to show screened background with the following:

    a. Structural grids.
    b. Adjacent walls, floors, and roofs.

c. Equipment and products of other trades that are located in vicinity of cooling towers and are part of final installation, such as controls, power, lighting, fire-suppression systems, and plumbing systems.

B. Product Certificates: For certification required in "Quality Assurance" Article.

C. Seismic Qualification Data: Certificates, for cooling towers, accessories, and components, from manufacturer.

D. Source quality-control reports.

E. Field quality-control reports.

F. Field Test Reports: Include startup service reports.

G. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Certified by CTI or An NRTL, as directed.

B. CTI Certification: Cooling tower thermal performance according to CTI STD 201RS.

C. FM Global: Approval and listing in the latest edition of FM Global's "Approval Guide."

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace the following components of cooling towers that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design cooling tower support structure and seismic restraints and wind restraints, including comprehensive engineering analysis.

B. Structural Performance: Cooling tower and support structure shall withstand the effects of loads and stresses within limits and under conditions indicated according to ASCE/SEI 7, IBC, as directed.

C. Seismic Performance: Cooling towers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: .5 - 1.0.
3. Component Amplification Factor: As directed.
4. Component Response Modification Factor: As directed.

D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.

F. Operation Following Loss of Normal Power:

1. Equipment, associated factory- and field-installed controls, and associated electrical equipment and power supply connected to backup power system shall automatically return equipment and associated controls to the operating state occurring immediately before loss of normal power without need for manual intervention by an operator when power is restored either through a backup power source, or through normal power if restored before backup power is brought online.
2. Include means and methods required to satisfy requirement even if not explicitly indicated.

G. Vibration:

1. Rotating assemblies shall be dynamically balanced to achieve a balance level of "good" while complying with industry-standard requirements for cooling towers.
2. Critical speed shall be at least 115 percent of design speed.

2.3 DESIGN ARRANGEMENT

A. Counterflow pattern with inlet airflow from bottom and forced-draft, bottom-mounted axial fans; and with pressurized pipe distribution near top.

B. Counterflow pattern with inlet airflow from one side and forced-draft, bottom-mounted centrifugal fans; and with pressurized pipe distribution near top.

C. Low-profile design with counterflow pattern, with inlet airflow from one side and forced-draft, side-mounted centrifugal fans to reduce overall height; and with pressurized pipe distribution near top.

2.4 CASING AND FRAME

A. Casing Material: FRP with UV inhibitors, HDPE with UV inhibitors, galvanized steel, ASTM A653/A653M, G210 (Z600) coating, galvanized steel, ASTM A653/A653M, G235 (Z700) coating or polymer-coated galvanized steel, as directed.

B. Frame Material: FRP with UV inhibitors, HDPE with UV inhibitors, galvanized steel, ASTM A653/A653M, G210 (Z600) coating, galvanized steel, ASTM A653/A653M, G235 (Z700) coating, polymer-coated galvanized steel or materials to match casing, as directed.

C. Hardware: Galvanized or stainless steel.

D. Joints and Seams: Sealed watertight.

E. Welded Connections: Sealed watertight by continuous welds.

2.5 COLLECTION BASIN

A. Factory-Assembled Collection Basin:

1. Material: FRP with UV inhibitors, HDPE with UV inhibitors, Galvanized steel, ASTM A653/A653M, G210 (Z600) coating, Galvanized steel, ASTM A653/A653M, G235 (Z700) coating or Polymer-coated galvanized steel, as directed.
2. Hardware: Galvanized or stainless steel.
3. Joints and Seams: Sealed watertight.
4. Welded Connections: Sealed watertight by continuous welds.
5. Removable stainless-steel strainer with openings smaller than nozzle orifices.
6. Overflow and drain connections.
7. Makeup-water connection.
8. Outlet Connection: Configured to mate to ASME B16.5, Class 150 flange.
9. Removable equalization flume plate between adjacent cells of multiple-cell towers.
10. Equalizer connection for field-installed equalizer piping configured to mate to ASME B16.5, Class 150 flange.

2.6 COLLECTION BASIN MAKEUP-WATER ASSEMBLY

A. Mechanically Operated, Collection Basin Water-Level Control: Manufacturer's standard adjustable, mechanical float assembly and valve.

B. Electric/Electronic, Collection Basin Water-Level Controller with Makeup-Water Valve:

1. Enclosures: NEMA 250, Type 4 or Type 4X.
2. Sensor: Solid-state controls with multiple electrode probes and relays factory wired to a terminal strip to control makeup-water valve, control makeup-water valve and low-level alarm, control makeup-water valve and low- and high-level alarms, control makeup-water valve, low- and high-level alarms, and output for shutoff of pump on low level, as directed.
3. Electrode Probes: Stainless steel.

4. Water-Stilling Chamber: Corrosion-resistant material, FRP, galvanized steel, PVC pipe, stainless steel, Grade 304 or stainless steel, Grade 316, as directed.
5. Makeup-Water Valve:

    a. Slow closing with stainless-steel body.
    b. Valve actuator controlled and powered through level controller in response to water-level set point.
    c. Actuator Enclosure: NEMA 250, Type 4 or Type 4X.
    d. Fail Position: Closed, Open or Last.
    e. Action: Two position or modulating.

6. Electrical Connection Requirements: 120-V ac, single phase, 60 Hz.

2.7 COLLECTION BASIN HEATER

A. Electric Heater:

1. Stainless-Steel Electric Immersion Heaters: Installed in a threaded coupling on the side of the collection basin.
2. Heater Control Panel: Mounted on the side of each cooling tower cell.
3. Enclosure: NEMA 250, Type 3R, Type 4 or Type 4X.
4. Magnetic contactors controlled by a temperature sensor/controller to maintain collection basin water-temperature set point. Water-level probe shall monitor cooling tower water level and de-energize the heater when the water reaches low-level set point.
5. Control-circuit transformer with primary and secondary side fuses.
6. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
7. Single-point, field-power connection to a fused disconnect switch, nonfused disconnect switch or circuit breaker and heater branch circuiting complying with NFPA 70.
8. Factory Wiring Method: Metal raceway for factory-installed wiring outside of enclosures; except, connections to each electric basin heater shall be liquidtight conduit.

    a. Raceway shall be corrosion-resistant stainless steel or PVC-coated steel.

2.8 PRESSURIZED DISTRIBUTION NETWORK

A. Main header and lateral branch piping designed for even distribution over fill and heat-exchanger coils throughout the entire flow range without the need for balancing valves and for connecting individual, easily removable, nonclogging spray nozzles.

B. Pipe Material: Schedule 40 PVC.

C. Spray Nozzle Material: Plastic, Polypropylene or PVC.

D. Piping Supports: Corrosion-resistant hangers and supports to resist movement during operation and shipment.

2.9 FILL

A. PVC:

1. Flame-Spread Index: 5 - 25 according to ASTM E84.
2. Minimum Thickness: 15 mils (0.4 mm) or 20 mils (0.5 mm) before forming.
3. Fabrication: Fill-type sheets, fabricated, formed, and bonded together after forming into removable assemblies that are factory installed by manufacturer.
4. Fill Material Operating Temperature: Suitable for entering-water temperatures up through 120 deg F (49 deg C).

B. Galvanized or stainless steel:

1. Minimum Material Thickness: As directed, before forming.
2. Fabrication: Fill-type sheets, fabricated, formed, and bonded together after forming into removable assemblies that are factory installed by manufacturer.
3. Fill Material Operating Temperature: Suitable for entering-water temperatures up through 170 deg F (77 deg C).

C. Hardware: Galvanized or stainless steel.

2.10 DRIFT ELIMINATORS

A. Material: PVC with maximum flame-spread index of 5 - 25 according to ASTM E84.

B. UV Treatment: Inhibitors to protect against damage caused by UV radiation.

C. Arrangement: Multiple, easily removable sections.

D. Configuration: Multipass, designed and tested to reduce water carryover to 0.001 percent of design flow rate indicated.

E. Hardware: Galvanized or stainless steel.

2.11 AIR INLET

A. Removable Air-Intake Screens:

1. Galvanized, Polymer-coated, galvanized or Stainless steel wire mesh, with openings of size sufficient to not restrict airflow or impact performance.
2. Segmented into manageable individual sections arranged to facilitate independent removal of each section without disturbing adjoining sections.

B. Hardware: Galvanized or stainless steel.

2.12 FAN AND DRIVE ASSEMBLY

A. Axial Fans: Factory balanced after assembly.

1. Blade Material: Aluminum, galvanized steel or thermoplastic, as directed.
2. Hub Material: Aluminum or galvanized steel.
3. Blade Pitch: Field adjustable.
4. Fan Shaft: Steel, coated to resist corrosion.
5. Fan Shaft Bearings: Self-aligning ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of 40,000, 50,000 or 100,000 hours, as directed.
6. Bearing Grease Fittings: Extended lubrication lines to an easily accessible location.

B. Centrifugal Fans: Double-width, double-inlet, forward-curved blades; statically and dynamically balanced at the factory after assembly.

1. Cooling Tower Cell Fan Assembly: Each cooling tower cell shall have a single fan or multiple fans connected to a common shaft.
2. Fan Wheel and Housing Materials: Hot-dip galvanized steel.
3. Fan Shaft: Steel, coated to resist corrosion.
4. Fan Shaft Bearings: Self-aligning ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of 40,000, 50,000 or 100,000 hours, as directed.
5. Bearing Grease Fittings: Extended lubrication lines to an easily accessible location.
6. Protective Enclosure: Removable, galvanized-steel, wire-mesh screens complying with OSHA regulations.

C. Belt Drives:

1. Service Factor: 1.5 based on motor nameplate horsepower.
2. Sheaves: Fan and motor shafts shall have taper-lock sheaves fabricated from corrosion-resistant materials.
3. Belt: Multiple V-belt design with a matched set of cogged belts.
4. Belt: One-piece, multigrooved, solid-back belt.
5. Belt Material: Oil resistant, nonstatic conducting, and constructed of neoprene polyester cord.
6. Belt-Drive Guard: Comply with OSHA regulations.
7. Two-Motor, Single-Fan Drive:

    a. Two single-speed motors per cooling tower cell fan assembly; one sized for full speed and load and the other sized for 67 - 100 percent of full-load speed.
    b. Each motor shall have belt drive and be configured for operation when other motor fails.
    c. Controls and wiring same as two-speed, two-winding motor.

D. Direct Drives: Fan hub directly connected, and properly secured, to motor shaft.

E. Fan Motors:

1. Comply with NEMA MG 1 unless otherwise indicated.
2. Description: NEMA MG 1, Design B as required to comply with capacity and torque characteristics; medium induction motor.

3. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.
4. Motor Enclosure: Totally enclosed, totally enclosed air-over (TEAO) or totally enclosed fan cooled (TEFC) and with epoxy or polyurethane finish, as directed.
5. Rotor: Random wound, squirrel cage.
6. Energy Efficiency: Comply with ASHRAE/IES 90.1 or NEMA Premium Efficient.
7. Service Factor: 1.15.
8. Temperature Rise: Match or One class lower than insulation rating, as directed.
9. Insulation: Class F or Class H.
10. Variable-Speed Motors: Inverter-duty rated according to NEMA MG 1, Section IV, "Performance Standard Applying to All Machines," Part 31, "Definite-Purpose, Inverter-Fed, Polyphase Motors."
11. Motor Location: Mounted outside of cooling tower airstream.
12. Severe-Duty Rating:

    a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
    b. Double-shielded, vacuum-degassed bearings lubricated with premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C).
    c. Internal Heater: Automatically energized when motor is de-energized.
    d. Complying with IEEE 841.

13. Motor Base: Adjustable, or other suitable belt-tensioning provisions.
14. Motor Shaft Grounding: Motors shall be controlled through variable-frequency controllers with shaft grounding system to protect motor bearings from induced voltage. Drag on motor shaft due to shaft ground system shall be less than 0.5 percent of motor nameplate horsepower.

F. Hardware: Galvanized or stainless steel.

2.13 AIR DISCHARGE

A. Discharge Hood:

1. Hood Configuration: Tapered or Straight; totally surrounding heat exchanger; pressurized distribution system and drift eliminators; constructed of same material as casing; and having factory-installed insulation and access doors.
2. Discharge Dampers: Positive-closure, automatic, isolation dampers constructed of aluminum or galvanized steel with corrosion-resistant linkages and electric actuators with NEMA 250, Type 4X enclosure.

    a. If not provided with factory controls, field-connect provisions for electrical power and controls to open dampers when pump is energized, and close dampers when pump is de-energized.

3. Capacity-Control Dampers: Aluminum or Galvanized-steel dampers, with corrosion-resistant linkages, electric operator, controller, limit switches, transformer, and weatherproof enclosure.

a. If not provided with factory controls, provide field power and controls to operate dampers when pump is energized, and close dampers when pump and fan is de-energized.

B. Hardware: Galvanized or stainless steel.

2.14 ELECTRICAL POWER

A. Factory Furnish for Field Installation: A disconnect switch, motor controller or variable-frequency controller for each fan motor.

B. Factory Install: A disconnect switch, motor controller or variable-frequency controller for each fan motor.

1. Locate in a convenient and field-accessible location within sight of motor.
2. Installation shall comply with NFPA 70.
3. Wire, Conduit, and Enclosures:

a. Minimum Conduit Size: 0.75 inch (20 mm).
b. Materials: Corrosion resistant and constructed of stainless steel or PVC-coated steel.
c. Motor Termination: Liquidtight conduit, not to exceed 36 inches (900 mm) long.
d. Supports: Support, conduits boxes, and enclosures using corrosion-resistant fastening hardware constructed of stainless steel.
e. Wire:

1) Copper rated for 600-V solid wire for size No. 10 AWG and smaller and stranded wire for larger sizes.
2) Minimum Wire Size: No. 12 AWG.
3) Each circuit shall have a ground wire.
4) Install wire in conduit.

f. Boxes, Condulets, and Enclosures: NEMA 250, Type 3R, Type 4 or Type 4X.

C. Disconnect Switches:

1. Specification Grade; "Heavy-Duty Type," "quick-make," "quick-break" construction.
2. Three pole fused or nonfused.
3. 600-V rated.
4. Minimum SCCR: As required by electrical power distribution system, but not less than 42,000 - 65,000 A.
5. Enclosure: NEMA 250, Type 3R, Type 4, Type 4X or Type 4X stainless steel.
6. Operating handle shall be of box-mounted type that directly drives switch mechanism.
7. Disconnect switch shall use a flange-operated visible blade that is close coupled to a vertical-lift-type handle that achieves a positive visible indication of disconnect with cover open or closed.
8. Disconnect switch shall have a defeatable, front-accessible, mechanical interlock to prevent opening of cover when switch is in "ON" position, and to prevent turning switch "ON" when the door is open.
9. Include a solid neutral as required by authorities having jurisdiction.

10. Include a ground lug for ground wire termination.
11. Operating handle shall be lockable in open position.
12. Horsepower rated.
13. Feed through or double lugged.

D. Motor Controllers:

1. NEMA ICS 2, Class A, full-voltage, non-reversing motor-rated controller.
2. Configured for control of single- or multi-speed motors.
3. Enclosure: NEMA 250, Type 3R, Type 4, Type 4X or Type 4X stainless steel, with hinged full-front access door with lock and key.
4. Externally Operated, Door-Interlocked Disconnect: Fused disconnect switch, Nonfused disconnect switch or Circuit breaker with lockable handle.
5. SCCR: As required by electrical power distribution system, but not less than 42,000 - 65,000 A.
6. Hand-Off-Auto Switch: Mounted on face of enclosure.
7. Push-to-Test Run Status Pilot Lights: NEMA ICS 2, heavy-duty type.
8. Control Relays: Time-delay relays.
9. Phase-Failure, Phase-Reversal, Undervoltage Relays: Solid-state sensing circuit with adjustable undervoltage setting and isolated output contacts for hardwired connection.
10. Elapsed-Time Meters: Numerical readout in hours on face of enclosure.
11. Number-of-Starts Counter: Numerical readout on face of enclosure.

E. Variable-Frequency Controllers:

1. Description: NEMA ICS 2; arranged to achieve motor variable speed by adjusting output voltage and frequency.
2. Enclosure: Unit mounted, NEMA 250, Type 3R, Type 4, Type 4X or Type 4X stainless steel with hinged full-front access door with lock and key.
3. Externally Operated, Door-Interlocked Disconnect: Fused disconnect switch, Nonfused disconnect switch or Circuit breaker with lockable handle.
4. Minimum SCCR: As required by electrical power distribution system, but not less than 42,000 - 65,000 A.
5. Technology: Pulse-width-modulated (PWM) output with insulated gate bipolar transistors (IGBTs); suitable for variable-torque loads.
6. Controller shall consist of a rectifier converter section, a digital/analog driver regulator section, and an inverter output section.
7. Output Rating: Three phase; with voltage proportional to frequency throughout voltage range.
8. Output signal shall be programmed to not cause mechanical vibration issues with fan drive assembly.
9. Operating Requirements:

    a. Input AC Voltage Tolerance: 10 percent.
    b. Input frequency tolerance of 60 Hz, plus or minus 2 Hz.
    c. Capable of driving full motor load, without derating.
    d. Minimum Efficiency: 96 percent at 60 Hz, full load.
    e. Minimum Displacement Primary-Side Power Factor: 95 percent.
    f. Overload Capability: 1.05 times the full-load current for seven seconds.
    g. Starting Torque: As required by fan and motor drive assembly.
    h. Speed Regulation: 1 percent.

i. Speed Range: 10:1 speed range.
j. To avoid equipment resonant vibrations, include critical speed lockout circuitry to allow bands of operating frequency at which controller shall not operate continuously.
k. Capable of being restarted into a motor, coasting in either the forward or reverse direction without tripping.

10. Controller Adjustability Capabilities: Minimum and maximum output frequency, acceleration and deceleration, and current limit.
11. Self-Protection and Reliability Features: Subjecting the controller to any of the following conditions shall not result in component failure or the need for replacement:

a. Overtemperature.
b. Short circuit at controller output.
c. Ground fault at controller output. Variable-frequency controller shall be able to start a grounded motor.
d. Open circuit at controller output.
e. Input undervoltage.
f. Input overvoltage.
g. Loss of input phase.
h. Reverse phase.
i. AC line-switching transients.
j. Instantaneous overload, line to line or line to ground.
k. Sustained overload exceeding 100 percent of controller-rated current.
l. Starting a rotating motor.

12. Motor Protection: Controller shall protect motor against overvoltage and undervoltage, phase loss, reverse phase, overcurrent, overtemperature, and ground fault.
13. Automatic Reset and Restart:

a. Capable of multiple restarts after controller fault or on return of power after an interruption and before shutting down for manual reset or fault correction.
b. Capable of automatic restart on phase-loss and overvoltage and undervoltage trips.

14. Visual Indication: On face of controller; indicating the following conditions:

a. Power on.
b. Run.
c. Overcurrent and overvoltage.
d. Motor speed (percent).
e. Various faults with alarm status.
f. Input kilovolt amperes.
g. Power factor.
h. Input kilowatts and kilowatt-hours.
i. Three-phase input and output voltage.
j. Three-phase input and output current.
k. Output frequency.
l. Elapsed operating time (hours).
m. Diagnostic and service parameters.

15. Operator Interface: Start-stop and auto-manual selector with manual-speed-control potentiometer.
16. Control Signal Interface: A minimum of two analog inputs (0 to 10 V or 0/4 to 20 mA) and four programmable digital inputs.
17. Bypass Controller:

    a. Integrated NEMA ICS 2, Class A, full-voltage, non-reversing, motor-rated controller to operate fan motor if variable-frequency controller is not operational.
    b. Configure power supply to bypass controller and variable-frequency controller to completely isolate power to variable-frequency controller while operating fan motor through bypass controller, for safe servicing of variable-frequency controller.
    c. Include "Bypass/VFC" manual selector switch on face of enclosure to provide for local operator control of preferred controller.
    d. Include fail-safe control logic to automatically transfer fan motor operation from failed variable-frequency controller to bypass controller.
    e. Install bypass controller in same enclosure as variable-frequency controller.

2.15 CONTROLS

A. Vibration Switch: For each fan drive.

1. Enclosure: NEMA 250, Type 4 or Type 4X.
2. Vibration Detection: Sensor with a field-adjustable, acceleration-sensitivity set point in a range of 0 to 1 g and frequency range of 0 to 3000 cycles per minute. Cooling tower manufacturer shall recommend switch set point for proper operation and protection.
3. Switch shall have manual-reset button with hardwired connection to fan motor electrical circuit.
4. Switch shall have field connection for hardwired connection to control system.
5. Switch shall, on sensing excessive vibration, signal an alarm for connection to control system and shut down the fan.

2.16 SERVICE ACCESS

A. Doors:

1. Large enough for personnel to access cooling tower internal components.
2. Doors shall be hinged with handles operable from both sides of the door.
3. Door materials shall match casing.
4. Hinges and handles shall be corrosion resistant or stainless steel.

B. External Ladders with Safety Cages: Aluminum, galvanized-steel or stainless-steel fixed ladders, with ladder extensions to access external platforms and top of cooling tower from adjacent grade without the need for portable ladders. Comply with 29 CFR 1910.27.

C. External Platforms with Handrails: Aluminum or galvanized-steel or stainless-steel bar grating at cooling tower access doors when cooling towers are elevated and not accessible from grade.

D. Handrail: Aluminum, galvanized steel or stainless steel complete with kneerail and toeboard, around external platforms and top of cooling tower. Comply with 29 CFR 1910.23.

E. Hardware: Galvanized steel when connecting galvanized-steel components and stainless steel when connecting other materials.

2.17 CAPACITIES AND CHARACTERISTICS

A. Number of Cells: As directed.

B. Air-Inlet Arrangement: One side or bottom.

C. Maximum Drift Loss: 0.001 percent of design water flow.

D. Waterside:

1. Design Water Flow per Cell: As directed, gpm (L/s).
2. Minimum Water Flow per Cell: As directed, gpm (L/s).
3. Water Pressure Drop: As directed, psig (kPa).
4. Entering-Water Temperature: As directed, deg F (deg C).
5. Leaving-Water Temperature: As directed, deg F (deg C).

E. Airside:

1. Entering-Air, Wet-Bulb Temperature: As directed, deg F (deg C).
2. Altitude: As directed.
3. Air Flow per Cell: As directed, cfm (L/s).

F. Economizer Mode Performance:

1. Fluid Flow per Cell: As directed, gpm (L/s).
2. Entering-Fluid Temperature: As directed, deg F (deg C).
3. Leaving-Fluid Temperature: As directed, deg F (deg C).
4. Entering-Air, Wet-Bulb Temperature: As directed, deg F (deg C).

G. Fan Drive Assembly:

1. Type: Belt or direct.
2. Fan Motor:

a. Type: Single speed, Two speed, single winding, Two speed, two winding or Variable speed.
b. Motor Size per Cell: As directed, hp.
c. Full-Load Ampacity: As directed, A.
d. Minimum Circuit Ampacity: As directed, A.
e. Maximum Overcurrent Protection Device: As directed, A.
f. Electrical Characteristics: 208, 240 or 480 V ac, 3 phase, 60 Hz, as directed.

H. Sound Pressure Level dBA at distance in feet (m) when measured according to CTI ATC 128, as directed.

I. Collection Basin Heater:

1. Basin Water Temperature: 40 deg F (5 deg C).
2. Outdoor Ambient Temperature: 0 deg F (minus 18 deg C) or Minus 20 deg F (Minus 29 deg C), as directed.
3. Capacity per Cell: As directed, kW.
4. Full-Load Ampacity: As directed, A.
5. Minimum Circuit Ampacity: As directed, A.
6. Maximum Overcurrent Protection Device: As directed, A.
7. Electrical Characteristics: 208, 240 or 480 V ac, 3 phase, 60 Hz, as directed.
8. Capacity/Cell: As directed, MBtu/h (kW).
9. Coil fluid Type: Water.
10. Entering-Fluid Temperature: As directed, deg F (deg C).
11. Leaving-Fluid Temperature: As directed, deg F (deg C).
12. Fluid Flow Rate: As directed, gpm (L/s).
13. Fluid Pressure Drop: As directed, psig (kPa).
14. Capacity/Cell: As directed, MBtu/h (kW).
15. Steam Flow: As directed, lb/h (L/s).
16. Steam Pressure: As directed, psig (kPa).

2.18 SOURCE QUALITY CONTROL

A. Performance Test: Factory test and certify cooling tower performance according to CTI STD 201RS.

B. Seismic Performance Testing: Shake table tested by an independent or a factory-certified laboratory to certify performance complies with seismic requirements indicated.

C. Factory Functional Tests:

1. Test collection and distribution basins after assembly, and prove free of leaks.
2. Test factory-installed electric/electronic water-level controls for proper operation.
3. Test factory-installed electric basin heaters for proper operation.
4. Test factory-installed fan and drive assemblies for proper operation.
5. Test factory-installed control package for proper operation.
6. Test access doors to ensure smooth operation and proper fit.
7. Submit report documenting tests performed and results within one week of test date.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine cooling towers before installation. Reject cooling towers that are damaged.

B. Install cooling towers on support structure.

C. Equipment Mounting:

1. Install cooling towers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

D. Install anchor bolts to elevations required for proper attachment to supported equipment.

E. Maintain manufacturer's recommended clearances for service and maintenance.

F. Maintain clearances required by governing code.

3.2 DUCT CONNECTIONS

A. Duct installation requirements are specified in other Sections. Drawings indicate general arrangement of ductwork and accessories.

B. Where installing duct adjacent to cooling towers, allow space for service and maintenance.

C. Install flexible connectors at duct connections to cooling towers.

3.3 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to cooling towers, allow space for service and maintenance.

C. Install flexible pipe connectors at pipe connections of cooling towers mounted on vibration isolators.

D. Connect cooling tower overflows and drains, and piping drains to sanitary sewage system.

E. Makeup-Water Piping:

1. Comply with applicable requirements in Section 221116 "Domestic Water Piping."
2. Connect to makeup-water connections with shutoff valve, plugged tee with pressure gage, flow meter, and drain connection with valve and union.

F. Supply and Return Piping:

1. Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."
2. Connect to entering-cooling-tower connections with shutoff valve, strainer, balancing valve, thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve.

3. Connect to leaving-cooling-tower connection with shutoff valve thermometer, plugged tee with full port ball valve for portable field instruments, and drain connection with valve.
4. Make connections to cooling tower with a flange.

G. Equalizer Piping:

1. Piping requirements to match supply and return piping.
2. Connect an equalizer pipe, full size of cooling tower connection, between tower cells.
3. Connect to cooling tower with shutoff valve and drain connection with valve.
4. Make connections to cooling tower with a flange.

H. Basin Heater Hot-Water Piping:

1. Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."
2. Connect to supply connections with shutoff valve, strainer, control valve thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve.
3. Connect to return connections with shutoff valve, balancing valve, thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve.
4. Make connections with a flange, union, or mechanical coupling.

I. Basin Heater Steam and Condensate Piping:

1. Comply with applicable requirements in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 "Steam and Condensate Heating Piping Specialties."
2. Connect steam supply connection with shutoff valve, strainer, control valve, pressure gage, and flow meter.
3. Connect to condensate connection with shutoff valve, strainer, and an appropriate steam trap assembly.
4. Make connections with a flange or union.

J. Basin Sweeper Piping:

1. Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."
2. Connect to supply connections with shutoff valve, flow meter, and drain connection with valve.
3. Connect to return connections with shutoff valve, balancing valve, flow meter, and drain connection with valve.
4. Make connections with a flange or union.

3.4 ELECTRICAL POWER CONNECTIONS

A. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for wiring connections.

B. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems" for grounding connections.

C. Install nameplate for each electrical connection indicating electrical equipment designation and circuit number feeding connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 1/2 inch (13 mm) high. Locate nameplate where easily visible.

3.5 CONTROLS CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between cooling towers and other equipment to interlock operation as required to achieve a complete and functioning system.

3.6 FIELD-TESTING PROVISIONS

A. Include provisions for cooling tower future field performance testing complying with ASME PTC 23 or CTI ATC 105.

B. Include provisions in field piping for future field performance testing complying with ASME PTC 23 or CTI ATC 105.

3.7 FIELD QUALITY CONTROL

A. Perform tests and inspections with the assistance of a factory-authorized service representative.

B. Tests and Inspections: Comply with ASME PTC 23 or CTI ATC 105.

C. Cooling towers will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.8 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform or Perform startup service.

B. Inspect field-assembled components, equipment installation, and piping; controls; and electrical connections for proper assemblies, installations, and connections.

C. Obtain performance data from manufacturer.

1. Complete installation and startup checks according to manufacturer's written instructions and perform the following:

    a. Clean entire unit, including basins.
    b. Verify that accessories are properly installed.
    c. Verify clearances for airflow and for cooling tower servicing.
    d. Check for vibration isolation and structural support.
    e. Lubricate bearings.

f. Verify fan rotation for correct direction and for vibration or binding, and correct problems.
g. Adjust belts to proper alignment and tension.
h. Operate variable-speed fans through entire operating range and check for harmonic vibration imbalance. Set motor controller to skip speeds resulting in abnormal vibration.
i. Check vibration switch setting. Verify operation.
j. Verify water level in tower basin. Fill to proper startup level. Check makeup-water-level control and valve.
k. Verify operation of basin heater and control.
l. Verify that cooling tower air discharge is not recirculating air into tower or HVAC air intakes. Recommend corrective action.
m. Replace defective and malfunctioning units.

D. Start cooling tower and associated water pumps. Follow manufacturer's written starting procedures.

E. Prepare a written startup report that records the results of tests and inspections.

3.9 ADJUSTING

A. Set and balance water flow to each tower inlet.

B. Adjust water-level control for proper operating level.

C. Adjust basin heater control for proper operating set point.

3.10 DEMONSTRATION

A. Engage a factory-authorized service representative to train or train Owner's maintenance personnel to adjust, operate, and maintain cooling towers.

END OF SECTION 236513.13

SECTION 236513.16 – CLOSED-CIRCUIT, FORCED-DRAFT COOLING TOWERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes factory-assembled, closed-circuit, forced-draft cooling towers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Manufacturer's drawings of assembled cooling towers, control panels, sections, and elevations.
2. Assembled unit dimensions.
3. Diagram showing each separate piece requiring field assembly.
4. Shipped sub-assembly dimensions and weights for field assembly.
5. Operating weight and load distribution.
6. Unit vibration isolation and seismic controls.
7. Required clearances for maintenance and operation.
8. Sizes and dimensioned locations of piping and wiring connections.
9. Diagrams for power, signal, and control wiring.

C. Delegated-Design Submittal: For cooling tower support structure indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of support structure.
2. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment.
3. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and wind restraints and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings:

1. Drawings on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
2. Each view to show screened background with the following:

a. Structural grids.
b. Adjacent walls, floors, and roofs.

c. Equipment and products of other trades that are located in vicinity of cooling towers and are part of final installation, such as controls, power, lighting, fire suppression systems, and plumbing systems.

B. Product Certificates: For certification required in "Quality Assurance" Article.

C. Seismic Qualification Data: Certificates, for cooling towers, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

D. Source quality-control reports.

E. Field quality-control reports.

F. Field Test Reports: Include startup service reports.

G. Sample Warranty: For special warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Certified by CTI or An NRTL.

B. ASME Compliance: Fabricate and label heat-exchanger coils to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

C. CTI Certification: Cooling tower thermal performance according to CTI STD 201RS.

D. FM Global: Approval and listing in the latest edition of FM Global's "Approval Guide."

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace the following components of cooling towers that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design cooling tower support structure and seismic restraints and wind restraints, including comprehensive engineering analysis.

B. Structural Performance: Cooling tower and support structure shall withstand the effects of loads and stresses within limits and under conditions indicated according to ASCE/SEI 7, IBC or governing code, as directed.

C. Seismic Performance: Cooling towers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: 1.5 - 1.0.
3. Component Amplification Factor: As directed.
4. Component Response Modification Factor: As directed.

D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.

F. Operation Following Loss of Normal Power:

1. Equipment, associated factory- and field-installed controls, and associated electrical equipment and power supply connected to back-up power system shall automatically return equipment and associated controls to the operating state occurring immediately before loss of normal power without need for manual intervention by an operator when power is restored either through a backup power source, or through normal power if restored before backup power is brought online.
2. Include means and methods required to satisfy requirement even if not explicitly indicated.

G. Vibration:

1. Rotating assemblies shall be dynamically balanced to achieve a balance level of "good" while complying with industry-standard requirements for cooling towers.
2. Critical speed shall be at least 115 percent of design speed.

2.3 DESIGN ARRANGEMENT

A. Counterflow pattern with inlet airflow from one side and forced-draft, bottom-mounted, axial fans; and with pressurized pipe distribution near top.

B. Counterflow pattern with inlet airflow from one side and forced-draft, bottom-mounted, centrifugal fans; and with pressurized pipe distribution near top.

C. Low-profile design with counterflow pattern, with inlet airflow from one side and forced-draft, side-mounted, centrifugal fans to reduce overall height; and with pressurized pipe distribution near top.

2.4 CASING AND FRAME

A. Casing Material: Galvanized steel, ASTM A653/A653M, G235 (Z700) coating or polymer-coated galvanized steel.

B. Frame Material: Galvanized steel, ASTM A653/A653M, G235 (Z700) coating, polymer-coated galvanized steel or materials to match casing.

C. Hardware: Galvanized or stainless steel.

D. Joints and Seams: Sealed watertight.

E. Welded Connections: Sealed watertight by continuous welds.

2.5 COLLECTION BASIN

A. Factory-Assembled Collection Basin:

1. Material: Galvanized steel, ASTM A653/A653M, G235 (Z700) coating or Polymer-coated galvanized steel.
2. Hardware: Galvanized or stainless steel.
3. Joints and Seams: Sealed watertight.
4. Welded Connections: Sealed watertight by continuous welds.
5. Removable stainless-steel strainer with openings smaller than nozzle orifices.
6. Overflow and drain connections.
7. Makeup-water connection.
8. Outlet Connection: Configured to mate to ASME B16.5, Class 150 flange.

2.6 COLLECTION BASIN MAKEUP-WATER ASSEMBLY

A. Mechanically Operated, Collection Basin Water-Level Control: Manufacturer's standard adjustable, mechanical float assembly and valve.

B. Electric/Electronic, Collection Basin Water-Level Controller with Makeup-Water Valve:

1. Enclosures: NEMA 250, Type 4 or Type 4X.

2. Sensor: Solid-state controls with multiple electrode probes and relays factory wired to a terminal strip to control makeup-water valve, control makeup-water valve and low-level alarm, control water makeup valve and low- and high-level alarms or control makeup-water valve, low- and high-level alarms, and output for shutoff of pump on low level.
3. Electrode Probes: Stainless steel.
4. Water-Stilling Chamber: Corrosion-resistant material, FRP, galvanized steel, PVC pipe or stainless steel, Grade 304, stainless steel, Grade 316.
5. Makeup Water Valve:

    a. Slow-closing with stainless-steel body.
    b. Valve actuator controlled and powered through level controller in response to water-level set point.
    c. Actuator Enclosure: NEMA 250, Type 4 or Type 4X.
    d. Fail Position: Closed, Open or Last.
    e. Action: Two position or modulating.

6. Electrical Connection Requirements: 120-V ac, single phase, 60 Hz.

2.7 COLLECTION BASIN HEATER

A. Electric Heater:

1. Stainless-Steel Electric Immersion Heaters: Installed in a threaded coupling on the side of the collection basin.
2. Heater Control Panel: Mounted on the side of each cooling tower cell.
3. Enclosure: NEMA 250, Type 3R, Type 4 or Type 4X.
4. Magnetic contactors controlled by a temperature sensor/controller to maintain collection basin water-temperature set point. Water-level probe shall monitor cooling tower water level and de-energize the heater when the water reaches low-level set point.
5. Control-circuit transformer with primary and secondary side fuses.
6. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
7. Single-point, field-power connection to a fused disconnect switch, nonfused disconnect switch or circuit breaker and heater branch circuiting complying with NFPA 70.
8. Factory Wiring Method: Metal raceway for factory-installed wiring outside of enclosures; except, connections to each electric basin heater shall be liquidtight conduit.

    a. Raceway shall be corrosion-resistant stainless steel or PVC-coated steel.

2.8 PRESSURIZED DISTRIBUTION NETWORK

A. Main header and lateral branch piping designed for even distribution over fill and heat-exchanger coils throughout the entire flow range without the need for balancing valves and for connecting individual, easily removable, nonclogging spray nozzles.

B. Pipe Material: Schedule 40 PVC.

C. Spray Nozzle Material: Plastic, Polypropylene or PVC.

D. Piping Supports: Corrosion-resistant hangers and supports to resist movement during operation and shipment.

2.9 HEAT-EXCHANGER COILS

A. Tube and Tube Sheet Materials: Copper tube with stainless-steel tube sheet, stainless-steel tube and tube sheet or carbon-steel tube and sheet with outer surface of tube and sheet hot-dip galvanized after fabrication.

B. Heat-Exchanger Arrangement:

1. Serpentine tubes, serpentine tubes with removable cover plate on inlet and outlet headers or straight tubes with removable header cover plate on both ends of heat exchanger for straight-through access to each tube; and sloped for complete drainage of fluid by gravity.
2. Tubes with extended surface fins if required to achieve performance indicated.
3. Multiple Separate Circuits: Separate circuits to achieve multiple isolated loops as required by application.

C. ASME Compliance: Designed, manufactured, and tested according to ASME Boiler and Pressure Vessel Code, Section VIII, Division 1 and bearing ASME "U" stamp; and sloped for complete drainage of fluid by gravity.

D. Field Piping Connections: Vent, supply, and return suitable for mating to ASME B16.5, Class 150 flange.

2.10 DRIFT ELIMINATORS

A. Material: PVC with maximum flame-spread index of 5 – 25 according to ASTM E84.

B. UV Treatment: Inhibitors to protect against damage caused by UV radiation.

C. Arrangement: Multiple, easily removable sections.

D. Configuration: Multipass, designed and tested to reduce water carryover to 0.001 percent of design flow rate indicated.

E. Hardware: Galvanized or stainless steel.

2.11 AIR INLET

A. Removable Air-Intake Screens:

1. Galvanized, Polymer-coated, galvanized or Stainless steel wire mesh, with openings of size sufficient to not restrict airflow or impact performance.
2. Segmented into manageable individual sections arranged to facilitate independent removal of each section without disturbing adjoining sections.

B. Hardware: Galvanized or stainless steel.

2.12 FAN AND DRIVE ASSEMBLY

A. Axial Fans: Factory balanced after assembly.

1. Blade Material: Aluminum or galvanized steel.
2. Hub Material: Aluminum or galvanized steel.
3. Fan Shaft: Steel, coated to resist corrosion.
4. Fan Shaft Bearings: Self-aligning ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of 40,000, 50,000 or 100,000 hours, as directed
5. Bearing Grease Fittings: Extended lubrication lines to an easily accessible location.

B. Centrifugal Fans: Double-width, double-inlet, forward-curved blades; statically and dynamically balanced at the factory after assembly.

1. Cooling Tower Cell Fan Assembly: Each cooling tower cell shall have a single fan or multiple fans connected to a common shaft.
2. Fan Wheel and Housing Materials: Hot-dip galvanized steel.
3. Fan Shaft: Steel, coated to resist corrosion.
4. Fan Shaft Bearings: Self-aligning ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of 40,000, 50,000 or 100,000 hours, as directed.
5. Bearing Grease Fittings: Extended lubrication lines to an easily accessible location.
6. Protective Enclosure: Removable, galvanized-steel, wire-mesh screens complying with OSHA regulations.

C. Belt Drives:

1. Service Factor: 1.5 based on motor nameplate horsepower.
2. Sheaves: Fan and motor shafts shall have taper-lock sheaves fabricated from corrosion-resistant materials.
3. Belt: Multiple V-belt design with a matched set of cogged belts.
4. Belt: One-piece, multigrooved, solid-back belt.
5. Belt Material: Oil resistant, nonstatic conducting, and constructed of neoprene polyester cord.
6. Belt-Drive Guard: Comply with OSHA regulations.
7. Two-Motor, Single-Fan Drive:

    a. Two single-speed motors per cooling tower cell fan assembly; one sized for full speed and load and the other sized for 67 – 100 percent of full-load speed.
    b. Each motor shall have belt drive and be configured for operation when other motor fails.
    c. Controls and wiring same as two-speed, two-winding motor.

D. Fan Motors:

1. Comply with NEMA MG 1 unless otherwise indicated.
2. Description: NEMA MG 1, Design B as required to comply with capacity and torque characteristics; medium induction motor.

3. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.
4. Motor Enclosure: Totally enclosed, totally enclosed air-over (TEAO) or totally enclosed fan cooled (TEFC) and with epoxy or polyurethane finish.
5. Rotor: Random wound, squirrel cage.
6. Energy Efficiency: Comply with ASHRAE/IES 90.1 or NEMA Premium Efficient.
7. Service Factor: 1.15.
8. Temperature Rise: Match or One class lower than insulation rating.
9. Insulation: Class F or Class H.
10. Variable-Speed Motors: Inverter-duty rated according to NEMA MG 1, Section IV, "Performance Standard Applying to All Machines," Part 31, "Definite-Purpose, Inverter-Fed, Polyphase Motors."
11. Motor Location: Mounted outside of cooling tower airstream.
12. Severe-Duty Rating:

    a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
    b. Double-shielded, vacuum-degassed bearings lubricated with premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C.).
    c. Internal Heater: Automatically energized when motor is de-energized.
    d. Complying with IEEE 841.

13. Motor Base: Adjustable, or other suitable belt-tensioning provisions.
14. Motor Shaft Grounding: Motors shall be controlled through variable-frequency controllers with shaft grounding system to protect motor bearings from induced voltage. Drag on motor shaft due to shaft ground system shall be less than 0.5 percent of motor nameplate horsepower.

E. Hardware: Galvanized or stainless steel.

2.13 AIR DISCHARGE

A. Discharge Hood:

1. Hood Configuration: Tapered or Straight; totally surrounding heat exchanger; pressurized distribution system and drift eliminators; constructed of same material as casing; and having factory-installed insulation and access doors.
2. Discharge Dampers: Positive-closure, automatic, isolation dampers constructed of aluminum, galvanized steel or stainless steel, with corrosion-resistant linkages and electric actuators with NEMA 250, Type 4X enclosure.

    a. If not provided with factory controls, field-connect provisions for electrical power and controls to open dampers when pump is energized, and close dampers when pump is de-energized.

3. Capacity-Control Dampers: Aluminum, Galvanized-steel or Stainless-steel dampers, with corrosion-resistant linkages, electric operator, controller, limit switches, transformer, and weatherproof enclosure.

a. If not provided with factory controls, provide field power and controls to operate dampers when pump is energized, and close dampers when pump and fan is de-energized.

B. Hardware: Galvanized or stainless steel.

2.14 RECIRCULATING-WATER DISTRIBUTION SYSTEM

A. Pump: Close-coupled, single-stage, bronze-fitted centrifugal pump with mechanical seal; suitable for outdoor service. Factory install pump with following:

1. Redundant Pump: Same performance as required for primary pump; easily switched and maintained while cooling tower remains operating.
2. Flanges at pump connections to piping.
3. Strainer, with blowdown isolation valve, installed in piping on suction side of pump.
4. Flow-balancing valve in piping on discharge side of pump.

B. Pump Motor:

1. Comply with NEMA MG 1 unless otherwise indicated.
2. Description: NEMA MG 1, Design B, as required to comply with capacity and torque characteristics; medium induction motor.
3. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.
4. Motor Enclosure: Open drip proof or totally enclosed and with epoxy or polyurethane finish, as directed.
5. Rotor: Random wound, squirrel cage.
6. Energy Efficiency: Comply with ASHRAE/IES 90.1 or NEMA Premium Efficient.
7. Service Factor: 1.15.
8. Temperature Rise: Match or One class lower than insulation rating, as directed.
9. Insulation: Class F or Class H.
10. Severe-Duty Rating:

    a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
    b. Double-shielded, vacuum-degassed bearings lubricated with premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C).
    c. Internal Heater: Automatically energized when motor is de-energized.
    d. Complying with IEEE 841.

C. Piping: Interconnecting collection basin to pump and pressurization distribution system.

1. Design delegated to manufacturer.
2. External to and supported from cooling tower casing and frame.
3. Material: Corrosion-resistant or PVC.
4. Install flanges at connections to collection basin and pressurized distribution system.
5. Drain connection with isolation valve at piping low point if piping does not drain directly into collection basin.

D. Piping: Field installed for connection to remotely installed pump and water storage that are not furnished with cooling tower.

2.15 ELECTRICAL POWER

A. Factory Furnish for Field Installation: A disconnect switch, motor controller or variable-frequency controller for each fan motor and a disconnect switch or motor controller for each pump motor.

B. Factory Install: A disconnect switch, motor controller or variable-frequency controller for each fan motor and a disconnect switch or motor controller for each pump motor.

1. Locate in a convenient and field-accessible location within sight of motor.
2. Installation shall comply with NFPA 70.
3. Wire, Conduit, and Enclosures:

    a. Minimum Conduit Size: 0.75 inch (20 mm).
    b. Materials: Corrosion resistant and constructed of stainless steel or PVC coated steel.
    c. Motor Termination: Liquidtight conduit, not to exceed 36 inches (900 mm) long.
    d. Supports: Support, conduits boxes, and enclosures using corrosion-resistant fastening hardware constructed of stainless steel.
    e. Wire:

        1) Copper, rated for 600-V, solid wire for size No. 10 AWG and smaller and stranded wire for larger sizes.
        2) Minimum Wire Size: No. 12 AWG.
        3) Each circuit shall have a ground wire.
        4) Install wire in conduit.

    f. Boxes, Condulets, and Enclosures: NEMA 250, Type 3R, Type 4 or Type 4X.

C. Disconnect Switches:

1. Specification Grade; "Heavy-Duty Type," "quick make," "quick break" construction.
2. Three pole fused or nonfused.
3. 600-V rated.
4. Minimum SCCR: As required by electrical power distribution system, but not less than 42,000 - 65,000 A.
5. Enclosure: NEMA 250, Type 3R, Type 4, Type 4X or Type 4X stainless steel.
6. Operating handle shall be of box-mounted type that directly drives switch mechanism.
7. Disconnect switch shall use a flange-operated visible blade that is close coupled to a vertical-lift-type handle that achieves a positive visible indication of disconnect with cover open or closed.
8. Disconnect switch shall have a defeatable, front-accessible, mechanical interlock to prevent opening of cover when switch is in "ON" position, and to prevent turning switch "ON" when the door is open.
9. Include a solid neutral as required by authorities having jurisdiction.
10. Include a ground lug for ground wire termination.
11. Operating handle shall be lockable in open position.

12. Horsepower rated.
13. Feed through or double lugged.

D. Motor Controllers:

1. NEMA ICS 2, Class A, full-voltage, non-reversing motor-rated controller.
2. Configured for control of single- or multi-speed motors.
3. Enclosure: NEMA 250, Type 3R, Type 4, Type 4X or Type 4X stainless steel, with hinged full-front access door with lock and key.
4. Externally Operated, Door-Interlocked Disconnect: Fused disconnect switch, Nonfused disconnect switch or Circuit breaker with lockable handle.
5. SCCR: As required by electrical power distribution system, but not less than 42,000 - 65,000 A.
6. Hand-Off-Auto Switch: Mounted on face of enclosure.
7. Push-to-Test Run Status Pilot Lights: NEMA ICS 2, heavy-duty type.
8. Control Relays: Time-delay relays.
9. Phase-Failure, Phase-Reversal, Undervoltage Relays: Solid-state sensing circuit with adjustable undervoltage setting and isolated output contacts for hardwired connection.
10. Elapsed-Time Meters: Numerical readout in hours on face of enclosure.
11. Number-of-Starts Counter: Numerical readout on face of enclosure.

E. Variable-Frequency Controllers:

1. Description: NEMA ICS 2; arranged to achieve motor variable speed by adjusting output voltage and frequency.
2. Enclosure: Unit mounted, NEMA 250, Type 3R, Type 4, Type 4X or Type 4X stainless steel, with hinged full-front access door with lock and key.
3. Externally Operated, Door-Interlocked Disconnect: Fused disconnect switch, Nonfused disconnect switch or Circuit breaker with lockable handle.
4. SCCR: As required by electrical power distribution system, but not less than 42,000 - 65,000 A.
5. Technology: Pulse-width-modulated (PWM) output with insulated gate bipolar transistors (IGBTs); suitable for variable-torque loads.
6. Controller shall consist of a rectifier converter section, a digital/analog driver regulator section, and an inverter output section.
7. Output Rating: Three phase; with voltage proportional to frequency throughout voltage range.
8. Output signal shall be programmed to not cause mechanical vibration issues with fan drive assembly.
9. Operating Requirements:

    a. Input AC Voltage Tolerance: 10 percent.
    b. Input frequency tolerance of 60 Hz, plus or minus 2 Hz.
    c. Capable of driving full motor load, without derating.
    d. Minimum Efficiency: 96 percent at 60 Hz, full load.
    e. Minimum Displacement Primary-Side Power Factor: 95 percent.
    f. Overload Capability: 1.05 times the full-load current for seven seconds.
    g. Starting Torque: As required by fan and motor drive assembly.
    h. Speed Regulation: 1 percent.
    i. Speed Range: 10:1 speed range.

j. To avoid equipment resonant vibrations, include critical speed lockout circuitry to allow bands of operating frequency at which controller shall not operate continuously.
k. Capable of being restarted into a motor, coasting in either the forward or reverse direction without tripping.

10. Controller Adjustability Capabilities: Minimum and maximum output frequency, acceleration and deceleration, and current limit.
11. Self-Protection and Reliability Features: Subjecting the controller to any of the following conditions shall not result in component failure or the need for replacement:

    a. Overtemperature.
    b. Short circuit at controller output.
    c. Ground fault at controller output. Variable-frequency controller shall be able to start a grounded motor.
    d. Open circuit at controller output.
    e. Input undervoltage.
    f. Input overvoltage.
    g. Loss of input phase.
    h. Reverse phase.
    i. AC line-switching transients.
    j. Instantaneous overload, line to line or line to ground.
    k. Sustained overload exceeding 100 percent of controller rated current.
    l. Starting a rotating motor.

12. Motor Protection: Controller shall protect motor against overvoltage and undervoltage, phase loss, reverse phase, overcurrent, overtemperature, and ground fault.
13. Automatic Reset and Restart:

    a. Capable of multiple restarts after controller fault or on return of power after an interruption and before shutting down for manual reset or fault correction.
    b. Capable of automatic restart on phase-loss and overvoltage and undervoltage trips.

14. Visual Indication: On face of controller; indicating the following conditions:

    a. Power on.
    b. Run.
    c. Overcurrent and overvoltage.
    d. Motor speed (percent).
    e. Various faults with alarm status.
    f. Input kilovolt amperes.
    g. Power factor.
    h. Input kilowatts and kilowatt-hours.
    i. Three-phase input and output voltage.
    j. Three-phase input and output current.
    k. Output frequency.
    l. Elapsed operating time (hours).
    m. Diagnostic and service parameters.

15. Operator Interface: Start-stop and auto-manual selector with manual-speed-control potentiometer.

16. Control Signal Interface: A minimum of two analog inputs (0 to 10 V or 0/4 to 20 mA) and four programmable digital inputs.
17. Bypass Controller:

    a. Integrated NEMA ICS 2, Class A, full-voltage, non-reversing, motor-rated controller to operate fan motor if variable-frequency controller is not operational.
    b. Configure power supply to bypass controller and variable-frequency controller to completely isolate power to variable-frequency controller while operating fan motor through bypass controller, for safe servicing of variable-frequency controller.
    c. Include "Bypass/VFC" manual selector switch on face of enclosure to provide for local operator control of preferred controller.
    d. Include fail-safe control logic to automatically transfer fan motor operation from failed variable-frequency controller to bypass controller.
    e. Install bypass controller in same enclosure as variable-frequency controller.

2.16 CONTROLS

A. Vibration Switch: For each fan drive.

1. Enclosure: NEMA 250, Type 4 or Type 4X.
2. Vibration Detection: Sensor with a field-adjustable, acceleration-sensitivity set point in a range of 0 to 1 g and frequency range of 0 to 3000 cycles per minute. Cooling tower manufacturer shall recommend switch set point for proper operation and protection.
3. Switch shall have manual-reset button with hardwired connection to fan motor electrical circuit.
4. Switch shall have field connection for hardwired connection to control system.
5. Switch shall, on sensing excessive vibration, signal an alarm for connection to control system and shut down the fan.

2.17 SERVICE ACCESS

A. Doors:

1. Large enough for personnel to access cooling tower internal components.
2. Doors shall be hinged with handles operable from both sides of the door.
3. Door materials shall match casing.
4. Hinges and handles shall be corrosion-resistant or stainless steel.

B. External Ladders with Safety Cages: Aluminum, galvanized steel or stainless-steel fixed ladders, with ladder extensions to access external platforms and top of cooling tower from adjacent grade without the need for portable ladders. Comply with 29 CFR 1910.27.

C. External Platforms with Handrails: Aluminum, galvanized steel or stainless-steel bar grating at cooling tower access doors when cooling towers are elevated and not accessible from grade.

D. Handrail: Aluminum, galvanized steel or stainless steel complete with kneerail and toeboard, around external platforms and top of cooling tower. Comply with 29 CFR 1910.23.

E. Hardware: Galvanized steel when connecting galvanized-steel components and stainless steel when connecting other materials.

2.18 CAPACITIES AND CHARACTERISTICS

A. Number of Cells: As directed.

B. Air-Inlet Arrangement: One side.

C. Maximum Drift Loss: 0.001 percent of design water flow.

D. Heat Exchanger:

1. Fluid Type: Water.
2. Design Fluid Flow per Cell: As directed, gpm (L/s).
3. Minimum Fluid Flow per Cell: As directed, gpm (L/s).
4. Fluid Pressure Drop: As directed, psig (kPa).
5. Fluid Pressure Rating: As directed, psig (kPa).
6. Entering-Fluid Temperature: As directed, deg F (deg C).
7. Leaving-Fluid Temperature: As directed, deg F (deg C).
8. Entering-Air Wet-Bulb Temperature: As directed, deg F (deg C).
9. Air Flow per Cell: As directed, cfm (L/s).

E. Economizer Mode Performance:

1. Fluid Flow per Cell: As directed, gpm (L/s).
2. Entering-Fluid Temperature: As directed, deg F (deg C).
3. Leaving-Fluid Temperature: As directed, deg F (deg C).
4. Entering-Air, Wet-Bulb Temperature: As directed, deg F (deg C).

F. Fan Drive Assembly:

1. Type: Belt.
2. Fan Motor:

    a. Type: Single speed, two speed, single winding, two-speed, two winding or variable speed, as directed.
    b. Motor Size per Cell: As directed, hp.
    c. Full-Load Ampacity: As directed, A.
    d. Minimum Circuit Ampacity: As directed, A.
    e. Maximum Overcurrent Protection Device: As directed, A.
    f. Electrical Characteristics: 208, 240 or 480 V ac, 3 phase, 60 Hz, as directed.

G. Pump and Motor:

1. Water Flow per Cell: As directed, gpm (L/s).
2. Motor Size per Cell: As directed, hp.
3. Full-Load Ampacity: As directed, A.
4. Minimum Circuit Ampacity: As directed, A.
5. Maximum Overcurrent Protection Device: As directed, A.

6. Electrical Characteristics: 120, 208, 240, 277 or 480 V ac, single or 3 phase, 60 Hz.

H. Sound Pressure Level: dBA (As directed) in feet (m) when measured according to CTI ATC 128.

I. Collection Basin Heater:

1. Basin Water Temperature: 40 deg F (5 deg C).
2. Outdoor Ambient Temperature: 0 deg F (minus 18 deg C) or Minus 20 deg F (Minus 29 deg C).
3. Capacity per Cell: As directed, kW.
4. Full-Load Ampacity: As directed, A.
5. Minimum Circuit Ampacity: As directed, A.
6. Maximum Overcurrent Protection Device: As directed, A.
7. Electrical Characteristics: 208, 240 or 480 V ac, 3 phase, 60 Hz, as directed.

2.19 SOURCE QUALITY CONTROL

A. Performance Test: Factory test and certify cooling tower performance according to CTI STD 201RS.

B. Seismic Performance Testing: Shake table tested by an independent or a factory-certified laboratory to certify performance complies with seismic requirements indicated.

C. Factory Functional Tests:

1. Test collection and distribution basins after assembly and prove free of leaks.
2. Test factory-installed electric/electronic water-level controls for proper operation.
3. Test factory-installed electric basin heaters for proper operation.
4. Test factory-installed fan and drive assemblies for proper operation.
5. Test factory-installed control package for proper operation.
6. Test access doors to ensure smooth operation and proper fit.

D. Heat-Exchanger Factory Pressure and Leak Tests:

1. Pneumatically test heat-exchanger assembly while submerged under water and prove to be free of leaks.
2. Test pressure equal to 1.5 times rated pressured, but not less than, as directed, psig (kPa).
3. Submit report documenting test and results.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine cooling towers before installation. Reject cooling towers that are damaged.

B. Install cooling towers on support structure.

C. Equipment Mounting:

1. Install cooling towers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

D. Install anchor bolts to elevations required for proper attachment to supported equipment.

E. Maintain manufacturer's recommended clearances for service and maintenance.

F. Maintain clearances required by governing code.

3.2 DUCT CONNECTIONS

A. Duct installation requirements are specified in other Sections. Drawings indicate general arrangement of ductwork and accessories.

B. Where installing duct adjacent to cooling towers, allow space for service and maintenance.

C. Install flexible connectors at duct connections to cooling towers.

3.3 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to cooling towers, allow space for service and maintenance.

C. Install flexible pipe connectors at pipe connections of cooling towers mounted on vibration isolators.

D. Connect cooling tower overflows and drains, and piping drains to sanitary sewage system.

E. Makeup-Water Piping:

1. Comply with applicable requirements in Section 221116 "Domestic Water Piping."
2. Connect to makeup-water connections with shutoff valve, plugged tee with pressure gage, flow meter, and drain connection with valve and union.

F. Supply and Return Piping:

1. Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."
2. Connect to entering-cooling-tower connections with shutoff valve, strainer, balancing valve, thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve.

3. Connect to leaving-cooling-tower connection with shutoff valve thermometer, plugged tee with full port ball valve for portable field instruments, and drain connection with valve.
4. Make connections to cooling tower with a flange.

G. Basin Heater Hot-Water Piping:

1. Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."
2. Connect to supply connections with shutoff valve, strainer, control valve thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve.
3. Connect to return connections with shutoff valve, balancing valve, thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve.
4. Make connections with a flange, union, or mechanical coupling.

H. Basin Heater Steam and Condensate Piping:

1. Comply with applicable requirements in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 "Steam and Condensate Heating Piping Specialties."
2. Connect steam supply connection with shutoff valve, strainer, control valve, pressure gage and flow meter.
3. Connect to condensate connection with shutoff valve, strainer, and an appropriate steam trap assembly.
4. Make connections with a flange or union.

I. Basin Sweeper Piping:

1. Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."
2. Connect to supply connections with shutoff valve, flow meter, and drain connection with valve.
3. Connect to return connections with shutoff valve, balancing valve, flow meter, and drain connection with valve.
4. Make connections with a flange or union.

3.4 ELECTRICAL POWER CONNECTIONS

A. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for wiring connections.

B. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems" for grounding connections.

C. Install nameplate for each electrical connection indicating electrical equipment designation and circuit number feeding connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 1/2 inch (13 mm) high. Locate nameplate where easily visible.

3.5 CONTROLS CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between cooling towers and other equipment to interlock operation as required to achieve a complete and functioning system.

3.6 FIELD TESTING PROVISIONS

A. Include provisions for cooling tower future field performance testing complying with ASME PTC 23 or CTI ATC 105.

B. Include provisions in field piping for future field performance testing complying with ASME PTC 23 or CTI ATC 105.

3.7 FIELD QUALITY CONTROL

A. Perform tests and inspections with the assistance of a factory-authorized service representative.

B. Tests and Inspections: Comply with ASME PTC 23 or CTI ATC 105.

C. Cooling towers will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.8 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform or Perform startup service.

B. Inspect field-assembled components, equipment installation, and piping; controls; and electrical connections for proper assemblies, installations, and connections.

C. Obtain performance data from manufacturer.

1. Complete installation and startup checks according to manufacturer's written instructions and perform the following:

    a. Clean entire unit, including basins.
    b. Verify that accessories are properly installed.
    c. Verify clearances for airflow and for cooling tower servicing.
    d. Check for vibration isolation and structural support.
    e. Lubricate bearings.
    f. Verify fan rotation for correct direction and for vibration or binding and correct problems.
    g. Verify pump rotation for correct direction, vibration, cavitation, and flow, and correct problems.
    h. Adjust belts to proper alignment and tension.

i. Operate variable-speed fans through entire operating range and check for harmonic vibration imbalance. Set motor controller to skip speeds resulting in abnormal vibration.
j. Check vibration switch setting. Verify operation.
k. Verify water level in tower basin. Fill to proper startup level. Check makeup-water-level control and valve.
l. Verify operation of basin heater and control.
m. Verify that cooling tower air discharge is not recirculating air into tower or HVAC air intakes. Recommend corrective action.
n. Replace defective and malfunctioning units.

D. Start cooling tower and associated water pumps. Follow manufacturer's written starting procedures.

E. Prepare a written startup report that records the results of tests and inspections.

3.9 ADJUSTING

A. Set and balance water flow to each tower inlet.

B. Adjust water-level control for proper operating level.

C. Adjust basin heater control for proper operating setpoint.

3.10 DEMONSTRATION

A. Engage a factory-authorized service representative to train or train Owner's maintenance personnel to adjust, operate, and maintain cooling towers.

END OF SECTION 236513.16

SECTION 236514.13 – OPEN-CIRCUIT, INDUCED-DRAFT, COUNTERFLOW COOLING TOWERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes factory-assembled, open-circuit, induced-draft, counterflow cooling towers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Manufacturer's drawings of assembled cooling towers, control panels, sections, and elevations.
2. Diagram showing each separate piece requiring field assembly.
3. Shipped sub-assembly dimensions and weights for field assembly.
4. Operating weight and load distribution.
5. Unit vibration isolation and seismic controls.
6. Required clearances for maintenance and operation.
7. Sizes and dimensioned locations of piping and wiring connections.
8. Diagrams for power, signal, and control wiring.

C. Delegated-Design Submittal: For cooling tower support structure indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of support structure.
2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment.
3. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and wind restraints and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings:

1. Drawings on which items are shown and coordinated with each other, using input from installers of the items involved.
2. Each view to show screened background with the following:

a. Structural grids.
b. Adjacent walls, floors, and roofs.

c. Equipment and products of other trades that are located in vicinity of cooling towers and are part of final installation, such as, controls, power, lighting, fire-suppression systems, and plumbing systems.

B. Seismic Qualification Data: Certificates, for cooling towers, accessories, and components, from manufacturer.

C. Product Certificates: For certification required in "Quality Assurance" Article.

D. Field test reports.

E. Source quality-control reports.

F. Field quality-control reports.

G. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Certified by CTI or An NRTL.

B. CTI Certification: Cooling tower thermal performance according to CTI STD 201RS.

C. FM Global: Approval and listing in the latest edition of FM Global's "Approval Guide."

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of cooling towers that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design cooling tower support structure and seismic restraint and wind restraints, including comprehensive engineering analysis.

B. Structural Performance: Cooling tower and support structure shall withstand the effects of loads and stresses within limits and under conditions indicated according to ASCE/SEI 7, the IBC or governing code, as directed.

C. Seismic Performance: Cooling towers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: 1.5 - 1.0.
3. Component Amplification Factor: As directed.
4. Component Response Modification Factor: Insert value.

D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.

F. Operation Following Loss of Normal Power:

1. Equipment, associated factory- and field-installed controls, and associated electrical equipment and power supply connected to backup power system shall automatically return equipment and associated controls to the operating state occurring immediately before loss of normal power without need for manual intervention by an operator when power is restored either through a backup power source, or through normal power if restored before backup power is brought on-line.
2. Include means and methods required to satisfy requirement even if not explicitly indicated.

G. Vibration:

1. Rotating assemblies shall be dynamically balanced to achieve a balance level of "good" while complying with industry-standard requirements for cooling towers.
2. Critical speed shall be at least 115 percent of design speed.

2.3 DESIGN ARRANGEMENT

A. Counterflow design with airflow from all sides and induced-draft, top-mounted axial fan and pressurized pipe distribution.

2.4 CASING AND FRAME

A. Casing Material: FRP with UV inhibitors, HDPE with UV inhibitors, Galvanized steel, ASTM A653/A653M, G210 (Z600) coating, Galvanized steel, ASTM A653/A653M, G235 (Z700) coating or Polymer-coated galvanized steel, as directed.

B. Frame Material: FRP with UV inhibitors, HDPE with UV inhibitors, galvanized steel, ASTM A653/A653M, G210 (Z600) coating, galvanized steel, ASTM A653/A653M, G235 (Z700) coating, polymer-coated galvanized steel or materials to match casing.

C. Hardware: Galvanized or stainless steel.

D. Joints and Seams: Sealed watertight.

E. Welded Connections: Sealed watertight by continuous welds.

2.5 COLLECTION BASIN

A. Field-Constructed Collection Basin: Configure tower without a factory-assembled collection basin for installation and operation with a field-constructed collection basin.

B. Factory-Assembled Collection Basin:

1. Material: FRP with UV inhibitors, HDPE with UV inhibitors, Galvanized steel, ASTM A653/A653M, G210 (Z600) coating, Galvanized steel, ASTM A653/A653M, G235 (Z700) coating, Polymer-coated galvanized steel, Stainless steel, Grade 304, Stainless steel, Grade 316, as directed.
2. Hardware: Galvanized or stainless steel.
3. Joints and Seams: Sealed watertight.
4. Welded Connections: Sealed watertight by continuous welds.
5. Removable stainless-steel strainer with openings smaller than nozzle orifices.
6. Overflow and drain connections.
7. Makeup-water connection.
8. Outlet Connection: Configured to mate to ASME B16.5, Class 150 flange.
9. Removable equalization flume plate between adjacent cells of multiple-cell towers.
10. Equalizer connection for field-installed equalizer piping configured to mate to ASME B16.5, Class 150 flange.

2.6 COLLECTION BASIN MAKEUP-WATER ASSEMBLY

A. Mechanically Operated, Collection Basin Water-Level Control: Manufacturer's standard adjustable, mechanical float assembly and valve.

B. Electric/Electronic, Collection Basin Water-Level Controller with Makeup-Water Valve:

1. Enclosures: NEMA 250, Type 4 or Type 4X.
2. Sensor: Solid-state controls with multiple electrode probes and relays factory wired to a terminal strip to control makeup-water valve, control makeup-water valve and low-level alarm, control makeup-water valve and low- and high-level alarms, control makeup-water valve, low- and high-level alarms, and output for shutoff of pump on low level.
3. Electrode Probes: Stainless steel.
4. Water Stilling Chamber: Corrosion-resistant material, FRP, Galvanized steel, PVC pipe, Stainless steel, Grade 304 or Stainless steel, Grade 316.
5. Makeup-Water Valve:

a. Slow closing with stainless-steel body.
b. Valve actuator controlled and powered through level controller in response to water-level set point.
c. Actuator Enclosure: NEMA 250, Type 4 or Type 4X.
d. Fail Position: Closed, Open or Last.
e. Action: Two position or modulating.

6. Electrical Connection Requirements: 120-V ac, single phase, 60 Hz.

2.7 COLLECTION BASIN HEATER

A. Electric Heater:

1. Stainless-Steel Electric Immersion Heaters: Installed in a threaded coupling on the side of the collection basin.
2. Heater Control Panel: Mounted on the side of each cooling tower cell.
3. Enclosure: NEMA 250, Type 3R, Type 4 or Type 4X, Magnetic contactors controlled by a temperature sensor/controller to maintain collection basin water-temperature set point. Water-level probe shall monitor cooling tower water level and de-energize the heater when the water reaches low-level set point.
4. Control-circuit transformer with primary and secondary side fuses.
5. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
6. Single-point, field-power connection to a fused disconnect switch, nonfused disconnect switch or circuit breaker and heater branch circuiting complying with NFPA 70.
7. Factory Wiring Method: Metal raceway for factory-installed wiring outside of enclosures, except connections to each electric basin heater shall be liquid tight conduit.

a. Raceway shall be corrosion-resistant stainless steel or PVC coated steel.

2.8 PRESSURIZED DISTRIBUTION NETWORK

A. Main header and lateral branch piping designed for even distribution over fill throughout the entire flow range without the need for balancing valves and for connecting individual, easily removable, non-clogging spray nozzles.

B. Pipe Material: Fiberglass, Schedule 40 PVC or galvanized steel.

C. Spray Nozzle Material: Plastic, polypropylene or PVC.

D. Piping Supports: Corrosion-resistant hangers and supports to resist movement during operation and shipment.

2.9 FILL

A. Materials: PVC, with maximum flame-spread index of 5 - 25 according to ASTM E84.

B. Minimum Thickness: 15 mils (0.4 mm) - 20 mils (0.5 mm), before forming.

C. Fabrication: Fill-type sheets, fabricated, formed, and bonded together after forming into removable assemblies that are factory installed by manufacturer.

D. Fill Material Operating Temperature: Suitable for entering-water temperatures up through 120 deg F (49 deg C).

E. Hardware: Galvanized or stainless steel.

2.10 DRIFT ELIMINATORS

A. Material: FRP, PVC, FRP or PVC; with maximum flame-spread index of 5 - 25 according to ASTM E84.

B. UV Treatment: Inhibitors to protect against damage caused by UV radiation.

C. Configuration: Multipass, designed and tested to reduce water carryover to 0.001 - 0.005 percent of design flow rate indicated.

D. Hardware: Galvanized or stainless steel.

2.11 AIR INLET

A. Air-Intake Louvers:

1. Material: FRP, PVC or Matching casing.
2. UV Treatment: Inhibitors to protect against damage caused by UV radiation.
3. Multiple, easily removable sections arranged to uniformly direct air into cooling tower, to minimize air resistance, to block direct sunlight, and to prevent water from splashing out of tower during all modes of operation including operation with fans off.

B. Removable Air-Intake Screens:

1. Galvanized, Polymer-coated, galvanized or stainless steel wire mesh with openings of size sufficient to not restrict airflow or impact performance.
2. Segmented into manageable individual sections arranged to facilitate independent removal of each section without disturbing adjoining sections.

C. Hardware: Galvanized or stainless steel.

2.12 FAN AND DRIVE ASSEMBLY

A. Axial Fan: Balanced at the factory after assembly.

1. Blade Material: Aluminum, FRP or galvanized steel.
2. Hub Material: Aluminum, FRP or galvanized steel.
3. Blade Pitch: Field adjustable.
4. Fan Shaft: Corrosion resistant or Stainless steel.
5. Fan Shaft Bearings: Self-aligning ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between minus 20 and plus

300 deg F (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of 40,000, 50,000 or 100,000 hours, as directed.

6. Bearings Grease Fittings: Extended lubrication lines to an easily accessible location.

B. Belt Drive:

1. Service Factor: 1.5 based on motor nameplate horsepower.
2. Sheaves: Fan and motor shafts shall have taper-lock sheaves fabricated from corrosion-resistant materials.
3. Belt: Multiple V-belt design with a matched set of cogged belts.
4. Belt: One-piece, multi-grooved, solid-back belt.
5. Belt Material: Oil resistant, non-static conducting, and constructed of neoprene polyester cord.
6. Belt-Drive Guard: Comply with OSHA regulations.
7. Two-Motor, Single-Fan Drive:

    a. Two single-speed motors per fan, one sized for full speed and load and the other sized for 67 percent of full-load speed.
    b. Each motor shall have belt drive and be configured for operation when other motor fails.
    c. Controls and wiring same as two-speed, two-winding motor.

C. Direct Drive: Fan hub directly connected, and properly secured, to motor shaft.

D. Gear Drive: Right angle, reduced speed, and designed for cooling tower applications according to CTI STD 111. Motor and gear drive shall be aligned before shipment.

1. Gear Drive and Coupling Service Factor: 2.0 based on motor nameplate horsepower.
2. Housing: Cast iron, with epoxy or polyurethane finish, beveled high-strength steel gears continuously bathed in oil, and with lubrication to other internal parts at all operating speeds.
3. Mounting: Directly mounted to fan hub and connected to motor so motor shaft is in horizontal position.
4. Operation: Able to operate both forward and in reverse. Able to operate throughout entire speed range from design speed indicated down to 10 -20 of design speed.
5. Drive-to-Motor Connection: Close coupled to motor using a flexible coupling.
6. Drive-to-Motor Connection: Connected to motor located outside of cooling tower casing by a full-floating drive shaft.
7. Drive Shaft Material: Corrosion resistant or Stainless steel and fitted with flexible couplings on both ends.
8. Drive Guards: Exposed shaft and couplings shall have guards according to OSHA regulations.
9. Extend oil fill, drain, and vent to outside of cooling tower casing using galvanized-steel or stainless-steel piping. Include oil-level sight glass.

E. Fan Motor:

1. Comply with NEMA MG 1 unless otherwise indicated.
2. Description: NEMA MG 1, Design B as required to comply with capacity and torque characteristics; medium induction motor.

3. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.
4. Motor Enclosure: Totally enclosed, totally enclosed air-over (TEAO), Totally enclosed fan-cooled (TEFC) and with epoxy or polyurethane finish, as directed.
5. Rotor: Random-wound, squirrel cage.
6. Energy Efficiency: Comply with ASHRAE/IES 90.1 or NEMA Premium Efficient.
7. Service Factor: 1.15
8. Temperature Rise: Match or One class lower than insulation rating, as directed.
9. Insulation: Class F or Class H as directed.
10. Variable-Speed Motors: Inverter-duty rated per NEMA MG 1, Section IV, "Performance Standard Applying to All Machines," Part 31, "Definite-Purpose, Inverter-Fed, Polyphase Motors."
11. Motor Location: Mounted outside of cooling tower casing and cooling tower discharge airstream.
12. Severe-Duty Rating:

    a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
    b. Double-shielded, vacuum-degassed bearings lubricated with premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C).
    c. Internal Heater: Automatically energized when motor is de-energized.
    d. Complying with IEEE 841.

13. Motor Base: Adjustable, or other suitable belt-tensioning provisions.
14. Motor Shaft Grounding: Motors shall be controlled through variable-frequency controllers with shaft grounding system to protect motor bearings from induced voltage. Drag on motor shaft due to shaft ground system shall be less than 0.5 percent of motor nameplate horsepower.

F. Hardware: Galvanized or stainless steel.

2.13 AIR DISCHARGE

A. Low-Profile Fan Discharge Stack:

1. Manufacturer's standard low-profile design.
2. Material: Material to match casing, FRP, Galvanized steel, Polymer-coated, galvanized steel or Stainless steel, as directed.
3. Stack Extension: Fabricated to extend above fan deck, as directed.
4. Stack Termination: Wire-mesh, galvanized-steel, polymer-coated, galvanized-steel or stainless-steel screens; segmented into multiple removable pie sections and complying with OSHA regulations.

B. Velocity Recovery Fan Discharge Stack:

1. Design: Tapered and expanded for velocity recovery and improved energy efficiency.
2. Material: FRP or material matching casing.

3. Stack Height: Fabricated to extend above fan deck at least 5 feet (1.5 m) unless otherwise indicated.
4. Service Access: Fabricated of multiple segments to facilitate removal of fan and drive components from overhead.
5. Stack Termination: Wire-mesh, galvanized-steel, polymer-coated, galvanized-steel or stainless-steel screens; segmented into multiple removable pie sections and complying with OSHA regulations.

C. Hardware: Galvanized or stainless steel.

2.14 ELECTRICAL POWER

A. Factory Furnish for Field Installation: A disconnect switch, motor controller or variable-frequency controller for each fan motor, as directed.

B. Factory Install: A disconnect switch, motor controller or variable-frequency controller for each fan motor, as directed.

1. Locate in a convenient and field-accessible location within sight of motor.
2. Installation shall comply with NFPA 70.
3. Wire, Conduit, and Enclosures:

    a. Minimum Conduit Size: 0.75 inch (20 mm).
    b. Materials: Corrosion resistant and constructed of 300L series stainless steel or PVC coated steel.
    c. Motor Termination: Liquidtight conduit, not to exceed 36 inches (900 mm) long.
    d. Supports: Support conduits, boxes, and enclosures using corrosion-resistant fastening hardware constructed of stainless steel.
    e. Wire:

        1) Copper, rated for 600-V, solid wire for size No. 10 AWG and smaller and stranded wire for larger sizes.
        2) Minimum Wire Size: No. 12 AWG.
        3) Each circuit shall have a ground wire.
        4) Install wire in conduit.

    f. Boxes, Condulets, and Enclosures: NEMA 250, Type 3R, Type 4 or Type 4X, as directed.

C. Disconnect Switches:

1. Specification Grade; "Heavy Duty Type"; "quick-make," "quick-break" construction.
2. Three pole, fused or nonfused.
3. 600-V rated.
4. Minimum SCCR: As required by electrical power distribution system, but not less than 42,000 - 65,000 A, as directed.
5. Enclosure: NEMA 250, Type 3R, Type 4, Type 4X or Type 4X stainless steel.
6. Operating handle shall be of box-mounted type that directly drives switch mechanism.

7. Disconnect switch shall use a flange-operated visible blade that is close coupled to a vertical-lift-type handle that achieves a positive visible indication of disconnect with cover open or closed.
8. Disconnect switch shall have a defeatable, front-accessible, mechanical interlock to prevent opening of cover when switch is in "ON" position, and to prevent turning switch "ON" when the door is open.
9. Include a solid neutral as required by authorities having jurisdiction.
10. Disconnect switch shall have a ground lug for ground wire termination.
11. Operating handle shall be lockable in open position.
12. Horsepower rated.
13. Feed through or double lugged.

D. Motor Controllers:

1. NEMA ICS 2, Class A, full-voltage, non-reversing, motor-rated controller.
2. Configured for control of single- or multispeed motors.
3. Enclosure: NEMA 250, Type 3R, Type 4, Type 4X or Type 4X stainless steel, with hinged full-front access door with lock and key.
4. Externally Operated, Door-Interlocked Disconnect: Fused disconnect switch, Nonfused disconnect switch or Circuit breaker with lockable handle.
5. SCCR: As required by electrical power distribution system, but not less than 42,000 - 65,000A, as directed.
6. Hand-Off-Auto Switch: Mounted on face of enclosure.
7. Push-to-Test Run Status Pilot Lights: NEMA ICS 2, heavy-duty type.
8. Control Relays: Time-delay relays.
9. Phase-Failure, Phase-Reversal, Undervoltage Relays: Solid-state sensing circuit with adjustable undervoltage setting and isolated output contacts for hardwired connection.
10. Elapsed-Time Meters: Numerical readout in hours on face of enclosure.
11. Number-of-Starts Counter: Numerical readout on face of enclosure.

E. Variable-Frequency Controllers:

1. Description: NEMA ICS 2; arranged to achieve motor variable speed by adjusting output voltage and frequency.
2. Enclosure: Unit mounted, NEMA 250, Type 3R, Type 4, Type 4X, or Type 4X stainless steel, with hinged full-front access door with lock and key.
3. Externally Operated, Door-Interlocked Disconnect: Fused disconnect switch, Nonfused disconnect switch or Circuit breaker with lockable handle.
4. Minimum SCCR: As required by electrical power distribution system, but not less than 42,000 - 65,000 A, as directed.
5. Technology: Pulse-width-modulated (PWM) output with insulated gate bipolar transistors (IGBT); suitable for variable torque loads.
6. Controller shall consist of a rectifier converter section, a digital/analog driver regulator section, and an inverter output section.
7. Output Rating: Three phase; with voltage proportional to frequency throughout voltage range.
8. Output signal shall be programmed to not cause mechanical vibration issues with fan drive assembly.
9. Operating Requirements:

    a. Input AC Voltage Tolerance: 10 percent.

b. Input frequency tolerance of 60 Hz, plus or minus 2 Hz.
c. Capable of driving full motor load, without derating.
d. Minimum Efficiency: 96 percent at 60 Hz, full load.
e. Minimum Displacement Primary-Side Power Factor: 95 percent.
f. Overload Capability: 1.05 times the full-load current for 7 seconds.
g. Starting Torque: As required by fan and motor drive assembly.
h. Speed Regulation: 1 percent.
i. Speed Range: 10:1 speed range.
j. To avoid equipment resonant vibrations, include critical speed lockout circuitry to allow bands of operating frequency at which controller shall not operate continuously.
k. Capable of being restarted into a motor coasting in either the forward or reverse direction without tripping.

10. Controller Adjustability Capabilities: Minimum and maximum output frequency, acceleration and deceleration, and current limit.
11. Self-Protection and Reliability Features: Subjecting the controller to any of the following conditions shall not result in component failure or the need for replacement:

    a. Overtemperature.
    b. Short circuit at controller output.
    c. Ground fault at controller output. Variable-frequency controller shall be able to start a grounded motor.
    d. Open circuit at controller output.
    e. Input undervoltage.
    f. Input overvoltage.
    g. Loss of input phase.
    h. Reverse phase.
    i. AC line switching transients.
    j. Instantaneous overload, line to line or line to ground.
    k. Sustained overload exceeding 100 percent of controller rated current.
    l. Starting a rotating motor.

12. Motor Protection: Controller shall protect motor against overvoltage and undervoltage, phase loss, reverse phase, overcurrent, overtemperature, and ground fault.
13. Automatic Reset and Restart:

    a. Capable of multiple restarts after controller fault or on return of power after an interruption and before shutting down for manual reset or fault correction.
    b. Capable of automatic restart on phase-loss and overvoltage and undervoltage trips.

14. Visual Indication: On face of controller; indicating the following conditions:

    a. Power on.
    b. Run.
    c. Overcurrent and overvoltage.
    d. Motor speed (percent).
    e. Various faults with alarm status.
    f. Input kilovolt amperes.
    g. Power factor.
    h. Input kilowatts and kilowatt-hours.

i. Three-phase input and output voltage.
j. Three-phase input and output current.
k. Output frequency.
l. Elapsed operating time (hours).
m. Diagnostic and service parameters.

15. Operator Interface: Start-stop and auto-manual selector with manual-speed-control potentiometer.
16. Control Signal Interface: A minimum of two analog inputs (0 to 10 V or 0/4 to 20 mA) and four programmable digital inputs.

2.15 CONTROLS

A. Vibration Switch: For each fan drive.

1. Enclosure: NEMA 250, Type 4 or Type 4X, as directed.
2. Vibration Detection: Sensor with a field-adjustable, acceleration-sensitivity set point in a range of 0 to 1 g and frequency range of 0 to 3000 cycles per minute. Cooling tower manufacturer shall recommend switch set point for proper operation and protection.
3. Switch shall have manual-reset button hardwired connection to fan motor electrical circuit.
4. Switch shall have field connection to a control system hardwired connection to fan motor electrical circuit.
5. Switch shall, on sensing excessive vibration, signal an alarm for connection to control system and shut down the fan.

B. Vibration Transmitter with Switch: For each fan drive.

1. Enclosure: NEMA 250, Type 4X.
2. Display: Local display of measured value, power, and alarm.
3. Vibration Detection: Sensor with a field-adjustable, acceleration-sensitivity set point.

    a. Cooling tower manufacturer shall select range that is suitable for cooling tower and recommend switch set point for proper operation and protection.

4. Transmitter: Continuous vibration level indication through a 4- to 20-mA signal for connection to control system.
5. Switch:

    a. Relay and switch with manual-reset button for field connection to control system and hardwired connection to fan motor electrical circuit.
    b. Switch shall, on sensing excessive vibration, signal an alarm to control system and shut down the fan.

6. Mounting: Locate out of cooling tower discharge airstream and mount in a location that is accessible and where display is easily viewable.
7. Field Electrical Connection Requirements: 120 V, single phase, 60 Hz.

C. Gear-Drive, Oil-Level Switch: Low-oil-level warning switch for connection to control system.

1. Switch shall, on reaching a low-oil-level set point recommended by cooling tower manufacturer, signal an alarm through control system.

2.16 HOISTING ASSEMBLY

A. Hoisting assembly consisting of pedestal base, davit arm, and winch to accommodate lowering and raising cooling tower components from their installed location to the base of cooling tower supports.

1. Cooling tower components serviceable by hoisting assembly shall include, but not be limited to, fan stack, fan, fan drive, and fan motor.
2. Hoisting assembly shall be designed to accommodate heaviest single component plus a safety factor of 1.5.
3. Construct cooling tower structural supports and reinforcing to accommodate lifting heaviest load with safety factor.

B. Pedestal Base:

1. Equip each cooling tower cell with a pedestal base to accommodate an easily removable davit arm and winch assembly.
2. Position pedestal base at a location on cooling tower for hoisting assembly coverage to fan, fan motor, and fan drive assembly.
3. Pedestal base design shall be open-socket, or comparable, design that is configured to accept and secure an inserted portable davit arm.
4. Fit each pedestal base with an easily removable cap or plug designed to seal the open top of the base when the davit arm is not installed.
5. Fasten pedestal base to cooling tower using threaded hardware.
6. Construct pedestal base of hot-dip galvanized steel or 300L series stainless steel.

C. Davit Arm:

1. Each cooling tower cell shall have a davit arm.
2. Davit arm shall be an adjustable telescoping design with angular adjustment to accommodate varying lifting conditions required by the application.
3. Davit arm assembly shall be portable and capable of being relocated to any cooling tower cell pedestal base.
4. Construct davit arm of hot-dip galvanized steel or 300L series stainless steel.

D. Winch:

1. Each davit arm shall have an electric or a hand operated winch.

    a. Electric winch shall include a power cord and plug for connection to a field-installed, weatherproof, 20-A receptacle with 120-V, single-phase, 60-Hz field power supply.
    b. Hand-operated winch with gear mechanism to limit force on handle to not more than 80 lb (36 kg) when lifting the heaviest component.

2. Coat winch body and exposed components with corrosion-resistant finish that is rated for outdoor duty in a highly corrosive environment and exposed to direct sunlight.

3. Winch cable shall be stainless steel and terminated with a stainless-steel hook and quick disconnecting mechanism. Cable length shall be at least 1.5 times actual length required for application.

E. Hardware: 304 or 316 series stainless steel.

F. Nameplate:

1. Stamped or engraved aluminum or stainless-steel nameplate with rated load capacity on each davit arm and pedestal.
2. Letter size legible from a distance 60 inches (1500 mm) and not less than1/2 inch (13 mm).
3. Fasten nameplate at multiple points with stainless-steel rivets or screws.

2.17 CAPACITIES AND CHARACTERISTICS

A. Number of Cells: As directed.

B. Air-Inlet Arrangement: All sides.

C. Maximum Drift Loss: 0.005 percent of design water flow.

D. Waterside:

1. Design Water Flow per Cell: As directed, gpm (L/s).
2. Minimum Water Flow per Cell: As directed, gpm (L/s).
3. Water Pressure Drop: As directed, (kPa).
4. Entering-Water Temperature: As directed, deg F (deg C).
5. Leaving-Water Temperature: As directed, deg F (deg C).

E. Airside:

1. Entering-Air Wet-Bulb Temperature: As directed, deg F (deg C).
2. Altitude: As directed.
3. Airflow per Cell: As directed, cfm (L/s).

F. Economizer-Mode Performance:

1. Water Flow per Cell: As directed, gpm (L/s).
2. Entering-Water Temperature: As directed, deg F (deg C).
3. Leaving-Water Temperature: As directed, deg F (deg C).
4. Entering-Air Wet-Bulb Temperature: As directed, deg F (deg C).

G. Fan Drive Assembly:

1. Type: Belt, direct or gear.
2. Fan Motor:

a. Type: Single speed, two speed, single winding, Two speed, two winding or Variable speed.
b. Motor Size per Cell: As directed, hp.

c. Full-Load Ampacity: As directed, A.
d. Minimum Circuit Ampacity: As directed.
e. Maximum Overcurrent Protection Device: As directed.
f. Electrical Characteristics: 208, 240 or 480 V ac, 3 phase, 60 Hz.

H. Sound Pressure Level: dBA, distance in feet (m), when measured according to CTI ATC 128, as directed.

I. Collection Basin Heater:

1. Basin Water Temperature: 40 deg F (5 deg C).
2. Outdoor Ambient Temperature: 0 deg F (Minus 18 deg C) or Minus 20 deg F (Minus 29 deg C).
3. Capacity per Cell: As directed.
4. Full-Load Ampacity: As directed.
5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection Device: As directed.
7. Electrical Characteristics: 208, 240 or 480 V ac, 3 phase, 60 Hz, as directed.
8. Capacity per Cell: As directed, MBtu/h (kW).
9. Coil Fluid Type: Water.
10. Entering-Fluid Temperature: As directed, deg F (deg C).
11. Leaving-Fluid Temperature: As directed, deg F (deg C).
12. Fluid Flow Rate: As directed, gpm (L/s).
13. Fluid Pressure Drop: As directed, psig (kPa).
14. Capacity per Cell: As directed, MBtu/h (kW).
15. Steam Flow: As directed, lb/h (L/s).
16. Steam Pressure: As directed, psig (kPa).

2.18 SOURCE QUALITY CONTROL

A. Performance Test: Factory test and certify cooling tower performance according to CTI STD 201RS, "Standard for the Certification of Water-Cooling Tower Thermal Performance."

B. Seismic Performance Testing: Shake table tested by an independent or a factory-certified laboratory to certify performance complies with seismic requirements indicated.

C. Factory Functional Tests:

1. Test collection and distribution basins after assembly, and prove free of leaks.
2. Test factory-installed electric/electronic water-level controls for proper operation.
3. Test factory-installed electric basin heaters for proper operation.
4. Test factory-installed fan and drive assemblies for proper operation.
5. Test factory-installed control package for proper operation.
6. Test access doors to ensure smooth operation and proper fit.
7. Allow Owner access to place where cooling towers are being tested. Notify Owner in writing at least 30 days in advance of testing.
8. Submit report documenting tests performed and results within one week of test date.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine cooling towers before installation. Reject cooling towers that are damaged.

B. Install cooling towers on support structure.

C. Equipment Mounting:

1. Install cooling towers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

D. Install anchor bolts to elevations required for proper attachment to supported equipment.

E. Maintain manufacturer's recommended clearances for service and maintenance.

F. Maintain clearances required by governing code.

3.2 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to cooling towers, allow space for service and maintenance.

C. Install flexible pipe connectors at pipe connections of cooling towers mounted on vibration isolators.

D. Install drain piping with valve at cooling tower drain connections and at low points in piping.

E. Connect cooling tower overflows and drains, and piping drains, to sanitary sewage system.

F. Makeup-Water Piping:

1. Comply with applicable requirements in Section 221116 "Domestic Water Piping."
2. Connect to makeup-water connections with shutoff valve, plugged tee with pressure gage, flow meter, and drain connection with valve and union.

G. Supply and Return Piping:

1. Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."

2. Connect to entering cooling tower connections with shutoff valve, strainer, balancing valve, thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve.
3. Connect to leaving cooling tower connection with shutoff valve thermometer, plugged tee with full port ball valve for portable field instruments, and drain connection with valve.
4. Make connections to cooling tower with a flange.

H. Equalizer Piping:

1. Piping requirements to match supply and return piping.
2. Connect an equalizer pipe, full size of cooling tower connection, between tower cells.
3. Connect to cooling tower with shutoff valve and drain connection with valve.
4. Make connections to cooling tower with a flange.

I. Basin Heater Hot-Water Piping:

1. Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."
2. Connect to supply connections with shutoff valve, strainer, control valve thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve.
3. Connect to return connections with shutoff valve, balancing valve, thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve.
4. Make connections with a flange, union, or mechanical coupling.

J. Basin Heater Steam and Condensate Piping:

1. Comply with applicable requirements in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 "Steam and Condensate Heating Piping Specialties."
2. Connect steam supply connection with shutoff valve, strainer, control valve, pressure gage, and flow meter.
3. Connect to condensate connection with shutoff valve, strainer, and an appropriate steam trap assembly.
4. Make connections with a flange or union.

3.3 ELECTRICAL POWER CONNECTIONS

A. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for wiring connections.

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems" for grounding connections.

C. Install nameplate for each electrical connection indicating electrical equipment designation and circuit number feeding connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 1/2 inch (13 mm) high. Locate nameplate where easily visible.

3.4 CONTROLS CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between cooling towers and other equipment to interlock operation as required to achieve a complete and functioning system.

3.5 FIELD TESTING PROVISIONS

A. Include provisions for cooling tower future field-performance testing complying with ASME PTC 23 or CTI ATC 105.

B. Include provisions in field piping for future field-performance testing complying with ASME PTC 23 or CTI ATC 105.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform tests and inspections with the assistance of a factory-authorized service representative.

D. Tests and Inspections: Comply with ASME PTC 23 or CTI ATC 105.

E. Cooling towers will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports.

3.7 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform or Perform startup service.

B. Inspect field-assembled components, equipment installation, and piping; controls; and electrical connections for proper assemblies, installations, and connections.

C. Obtain performance data from manufacturer.

1. Complete installation and startup checks according to manufacturer's written instructions and perform the following:

    a. Clean entire unit including basins.
    b. Verify that accessories are properly installed.
    c. Verify clearances for airflow and for cooling tower servicing.
    d. Check for vibration isolation and structural support.
    e. Lubricate bearings.
    f. Verify fan rotation for correct direction and for vibration or binding and correct problems.
    g. Adjust belts to proper alignment and tension.
    h. Verify proper oil level in gear-drive housing. Fill with oil to proper level.
    i. Operate variable-speed fans through entire operating range and check for harmonic vibration imbalance. Set motor controller to skip speeds resulting in abnormal vibration.

j. Check vibration switch setting. Verify operation.
k. Verify water level in tower basin. Fill to proper startup level. Check makeup-water-level control and valve.
l. Verify operation of basin heater and control.
m. Verify that cooling tower air discharge is not recirculating air into tower or HVAC air intakes. Recommend corrective action.
n. Replace defective and malfunctioning units.

D. Start cooling tower and associated water pumps. Follow manufacturer's written starting procedures.

E. Prepare a written startup report that records the results of tests and inspections.

3.8 ADJUSTING

A. Set and balance water flow to each tower inlet.

B. Adjust water-level control for proper operating level.

C. Adjust basin heater control for proper operating set point.

3.9 DEMONSTRATION

A. Engage a factory-authorized service representative to train or train Owner's maintenance personnel to adjust, operate, and maintain cooling towers.

END OF SECTION 236514.13

SECTION 236514.14 – OPEN-CIRCUIT, INDUCED-DRAFT, CROSSFLOW COOLING TOWERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes factory-assembled, open-circuit, induced-draft, crossflow cooling towers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Manufacturer's drawings of assembled cooling towers, control panels, sections, and elevations.
2. Diagram showing each separate piece requiring field assembly.
3. Shipped sub-assembly dimensions and weights for field assembly.
4. Operating weight and load distribution.
5. Unit vibration isolation and seismic controls.
6. Required clearances for maintenance and operation.
7. Sizes and dimensioned locations of piping and wiring connections.
8. Diagrams for power, signal, and control wiring.

C. Delegated-Design Submittal: For cooling tower support structure indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of support structure.
2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment.
3. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and wind restraints and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings:

1. Drawings on which items are shown and coordinated with each other, using input from installers of the items involved.
2. Each view to show screened background with the following:

a. Structural grids.
b. Adjacent walls, floors, and roofs.

c. Equipment and products of other trades that are located in vicinity of cooling towers and are part of final installation, such as, controls, power, lighting, fire-suppression systems, and plumbing systems.

B. Seismic Qualification Data: Certificates, for cooling towers, accessories, and components, from manufacturer.

C. Product Certificates: For certification required in "Quality Assurance" Article.

D. Field test reports.

E. Source quality-control reports.

F. Field quality-control reports.

G. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Certified by CTI or an NRTL.

B. CTI Certification: Cooling tower thermal performance according to CTI STD 201RS.

C. FM Global: Approval and listing in the latest edition of FM Global's "Approval Guide."

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of cooling towers that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design cooling tower support structure and seismic restraints and wind restraints, including comprehensive engineering analysis.

B. Structural Performance: Cooling tower and support structure shall withstand the effects of loads and stresses within limits and under conditions indicated according to ASCE/SEI 7, the IBC or governing codes.

C. Seismic Performance: Cooling towers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: 1.5 - 1.0.
3. Component Amplification Factor: As directed.
4. Component Response Modification Factor: As directed.

D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. Operation Following Loss of Normal Power:

1. Equipment, associated factory- and field-installed controls, and associated electrical equipment and power supply connected to backup power system shall automatically return equipment and associated controls to the operating state occurring immediately before loss of normal power without need for manual intervention by an operator when power is restored either through a backup power source, or through normal power if restored before backup power is brought on-line.
2. Include means and methods required to satisfy requirement even if not explicitly indicated.

G. Vibration:

1. Rotating assemblies shall be dynamically balanced to achieve a balance level of "good" while complying with industry-standard requirements for cooling towers.
2. Critical speed shall be at least 115 percent of design speed.

2.3 DESIGN ARRANGEMENT

A. Crossflow design with airflow from two sides and induced-draft, top-mounted axial fan and gravity distribution basin.

B. Crossflow design with airflow from one side and induced-draft, top-mounted axial fan and gravity distribution basin.

C. Crossflow design with airflow from one side and induced-draft, side-mounted axial fan and gravity distribution basin.

2.4 CASING AND FRAME

A. Casing Material: FRP with UV inhibitors, Galvanized steel, ASTM A653/A653M, G235 (Z700) coating or Polymer-coated galvanized steel.

B. Frame Material: FRP with UV inhibitors, galvanized steel, ASTM A653/A653M, G235 (Z700) coating, polymer-coated galvanized steel or materials to match casing.

C. Hardware: Galvanized or stainless steel.

D. Joints and Seams: Sealed watertight.

E. Welded Connections: Sealed watertight by continuous welds.

2.5 COLLECTION BASIN

A. Factory-Assembled Collection Basin:

1. Material: FRP with UV inhibitors or Galvanized steel, ASTM A653/A653M, G235 (Z700) coating, Polymer-coated galvanized steel, Stainless steel, Grade 304 or Stainless steel, Grade 316.
2. Hardware: Galvanized or stainless steel.
3. Joints and Seams: Sealed watertight.
4. Welded Connections: Sealed watertight by continuous welds.
5. Removable stainless-steel strainer with openings smaller than nozzle orifices.
6. Overflow and drain connections.
7. Makeup-water connection.
8. Outlet Connection: Configured to mate to ASME B16.5, Class 150 flange.
9. Removable equalization flume plate between adjacent cells of multiple-cell towers.
10. Equalizer connection for field-installed equalizer piping configured to mate to ASME B16.5, Class 150 flange.

2.6 COLLECTION BASIN MAKEUP-WATER ASSEMBLY

A. Mechanically Operated, Collection Basin Water-Level Control: Manufacturer's standard adjustable, mechanical float assembly and valve.

B. Electric/Electronic, Collection Basin Water-Level Controller with Makeup-Water Valve:

1. Enclosures: NEMA 250, Type 4 or Type 4X, as directed.
2. Sensor: Solid-state controls with multiple electrode probes and relays factory wired to a terminal strip to control makeup-water valve, control makeup-water valve and low-level alarm, control makeup-water valve and low- and high-level alarms, control makeup-water valve, low- and high-level alarms, and output for shutoff of pump on low level.
3. Electrode Probes: Stainless steel.
4. Water Stilling Chamber: Corrosion-resistant material, FRP, Galvanized steel, PVC pipe, Stainless steel, Grade 304 or Stainless steel, Grade 316.
5. Makeup-Water Valve:

a. Slow closing with stainless-steel body.
b. Actuator controlled and powered through level controller in response to water-level set point.
c. Actuator Enclosure: NEMA 250, Type 4 or Type 4X.
d. Fail Position: Closed, Open or Last, as directed.
e. Action: Two position or modulating.

6. Electrical Connection Requirements: 120-V ac, single phase, 60 Hz.

2.7 COLLECTION BASIN HEATER

A. Electric Heater:

1. Stainless-Steel Electric Immersion Heaters: Installed in a threaded coupling on the side of the collection basin.
2. Heater Control Panel: Mounted on the side of each cooling tower cell.
3. Enclosure: NEMA 250, Type 3R, Type 4 or Type 4X, as directed.
4. Magnetic contactors controlled by a temperature sensor/controller to maintain collection basin water-temperature set point. Water-level probe shall monitor cooling tower water level and de-energize the heater when the water reaches low-level set point.
5. Control-circuit transformer with primary and secondary side fuses.
6. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
7. Single-point, field-power connection to a fused disconnect switch, nonfused disconnect switch or circuit breaker and heater branch circuiting complying with NFPA 70.
8. Factory Wiring Method: Metal raceway for factory-installed wiring outside of enclosures, except connections to each electric basin heater shall be liquidtight conduit.

a. Raceway shall be corrosion-resistant stainless steel or PVC coated steel.

2.8 GRAVITY WATER DISTRIBUTION BASIN

A. Design: Non-pressurized design with head of water level in basin adequate to overcome spray nozzle losses and designed to evenly distribute water over fill throughout the flow range indicated.

1. Material: FRP with UV inhibitors, galvanized steel, ASTM A653/A653M, G235 (Z700) coating, polymer-coated galvanized steel or stainless steel.
2. Location: Over each bank of fill with easily replaceable plastic spray nozzles mounted in bottom of basin.
3. Inlet Connection: Configured to mate to ASME B16.5, Class 150 flange.
4. Fasteners: Galvanized or stainless steel.
5. Joints and Seams: Sealed watertight.
6. Welded Connections: Sealed watertight by continuous welds.
7. Partitioning Dams: Same material as basin to distribute water over the fill to minimize icing and achieve proper operation while operating throughout the flow range indicated.

a. Manufacturer has option to use individual nozzle cups in lieu of partitioning dams to achieve operation within flow range (design to minimum) indicated.

8. Removable Panels: Same material as basin to completely cover top of basin. Secure panels to basin with removable corrosion-resistant or stainless-steel hardware. Panels reinforced to accommodate service personnel walking on the panels without resulting in permanent deflection and damage.
9. Valves: Manufacturer's standard valve installed at each inlet connection and arranged to balance or shut off flow to each gravity distribution basin.
10. Single-Inlet, Field Pipe Connection: Galvanized-steel or PVC pipe arranged to achieve balancing of flow within cooling tower cell without the need for additional balancing valves. Pipe each cooling tower cell internally to a single, field connection suitable for mating to ASME B16.5, Class 150 flange and located on the bottom or side unless otherwise indicated.

2.9 FILL

A. Materials: PVC, with maximum flame-spread index of 5 - 25 according to ASTM E84.

B. Minimum Thickness: 15 mils (0.4 mm) - 20 mils (0.5 mm), before forming.

C. Fabrication: Fill-type sheets, fabricated, formed, and bonded together after forming into removable assemblies that are factory installed by manufacturer.

D. Fill Material Operating Temperature: Suitable for entering-water temperatures up through 120 deg F (49 deg C).

E. Hardware: Galvanized or stainless steel.

2.10 DRIFT ELIMINATORS

A. Material: FRP, PVC, FRP or PVC with maximum flame-spread index of 5 – 25 according to ASTM E84.

B. UV Treatment: Inhibitors to protect against damage caused by UV radiation.

C. Configuration: Multipass, designed and tested to reduce water carryover to 0.005 percent of design flow rate indicated.

D. Location: Integral to Separate and removable from fill.

E. Hardware: Galvanized or stainless steel.

2.11 AIR INLET

A. Air-Intake Louvers:

1. Material: FRP, PVC or Matching casing, as directed.
2. UV Treatment: Inhibitors to protect against damage caused by UV radiation.
3. Louver Blades: Arranged to uniformly direct air into cooling tower, to minimize air resistance, and to prevent water from splashing out of tower during all modes of operation including operation with fans off.

4. Location: Integral to Separate from fill.

B. Removable Air-Intake Screens:

1. Galvanized, Polymer-coated, galvanized or stainless steel wire mesh with openings of size sufficient to not restrict airflow or impact performance.
2. Segmented into manageable individual sections arranged to facilitate independent removal of each section without disturbing adjoining sections.

C. Hardware: Galvanized or stainless steel.

2.12 FAN AND DRIVE ASSEMBLY

A. Axial Fan: Balanced at the factory after assembly.

1. Blade Material: Aluminum, FRP or galvanized steel, as directed.
2. Hub Material: Aluminum, FRP or galvanized steel, as directed.
3. Blade Pitch: Field adjustable.
4. Fan Shaft: Corrosion resistant or Stainless steel.
5. Fan Shaft Bearings: Self-aligning ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of 40,000, 50,000 or 100,000 hours, as directed.
6. Bearings Grease Fittings: Extended lubrication lines to an easily accessible location.

B. Belt Drive:

1. Service Factor: 1.5 based on motor nameplate horsepower.
2. Sheaves: Fan and motor shafts shall have taper-lock sheaves fabricated from corrosion-resistant materials.
3. Belt: Multiple V-belt design with a matched set of cogged belts.
4. Belt: One-piece, multi-grooved, solid-back belt.
5. Belt Material: Oil resistant, non-static conducting, and constructed of neoprene polyester cord.
6. Belt-Drive Guard: Comply with OSHA regulations.
7. Two-Motor, Single-Fan Drive:

a. Two single-speed motors per fan, one sized for full speed and load and the other sized for 67 percent of full-load speed.
b. Each motor shall have belt drive and be configured for operation when other motor fails.
c. Controls and wiring same as two-speed, two-winding motor.

C. Direct Drive: Fan hub directly connected, and properly secured, to motor shaft.

D. Gear Drive: Right angle, reduced speed, and designed for cooling tower applications according to CTI STD 111. Motor and gear drive shall be aligned before shipment.

1. Gear Drive and Coupling Service Factor: 2.0 based on motor nameplate horsepower.

2. Housing: Cast iron, with epoxy or polyurethane finish, beveled high-strength steel gears continuously bathed in oil, and with lubrication to other internal parts at all operating speeds.
3. Mounting: Directly mounted to fan hub and connected to motor so motor shaft is in horizontal position.
4. Operation: Able to operate both forward and in reverse. Able to operate throughout entire speed range from design speed indicated down to 10 - 20 of design speed.
5. Drive-to-Motor Connection: Close coupled to motor using a flexible coupling.
6. Drive-to-Motor Connection: Connected to motor located outside of cooling tower casing by a full-floating drive shaft.
7. Drive Shaft Material: Corrosion resistant or Stainless steel, and fitted with flexible couplings on both ends.
8. Drive Guards: Exposed shaft and couplings shall have guards according to OSHA regulations.
9. Extend oil fill, drain, and vent to outside of cooling tower casing using galvanized-steel or stainless-steel piping. Include oil-level sight glass.

E. Fan Motor:

1. Comply with NEMA MG 1 unless otherwise indicated.
2. Description: NEMA MG 1, Design B as required to comply with capacity and torque characteristics; medium induction motor.
3. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.
4. Motor Enclosure: Totally enclosed, totally enclosed air-over (TEAO), Totally enclosed fan-cooled (TEFC) and with epoxy or polyurethane finish, as directed.
5. Rotor: Random-wound, squirrel cage.
6. Energy Efficiency: Comply with ASHRAE/IES 90.1 or NEMA Premium Efficient.
7. Service Factor: 1.15.
8. Temperature Rise: Match or One class lower than insulation rating, as directed.
9. Insulation: Class F or Class H,
10. Variable-Speed Motors: Inverter-duty rated per NEMA MG 1, Section IV, "Performance Standard Applying to All Machines," Part 31, "Definite-Purpose, Inverter-Fed, Polyphase Motors."
11. Motor Location: Mounted outside of cooling tower casing and cooling tower discharge airstream.
12. Severe-Duty Rating:

    a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
    b. Double-shielded, vacuum-degassed bearings lubricated with premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C.).
    c. Internal Heater: Automatically energized when motor is de-energized.
    d. Complying with IEEE 841.

13. Motor Base: Adjustable, or other suitable provision for adjusting belt tension.
14. Motor Shaft Grounding: Motors shall be controlled through variable-frequency controllers with shaft grounding system to protect motor bearings from induced voltage. Drag on motor shaft due to shaft ground system shall be less than 0.5 percent of motor nameplate horsepower.

F. Hardware: Galvanized or stainless steel.

2.13 AIR DISCHARGE

A. Low-Profile Fan Discharge Stack:

1. Manufacturer's standard low-profile design.
2. Material: Material to match casing, FRP, Galvanized steel, Polymer-coated, galvanized steel or Stainless steel.
3. Stack Extension: Fabricated to extend above fan deck, as directed.
4. Stack Termination: Wire-mesh, galvanized-steel, polymer-coated, galvanized-steel or stainless-steel screens; segmented into multiple removable pie sections and complying with OSHA regulations.

B. Velocity Recovery Fan Discharge Stack:

1. Design: Tapered and expanded for velocity recovery and improved energy efficiency.
2. Material: FRP or material matching casing.
3. Stack Height: Fabricated to extend above fan deck at least 5 feet (1.5 m) unless otherwise indicated.
4. Service Access: Fabricated of multiple segments to facilitate removal of fan and drive components from overhead.
5. Stack Termination: Wire-mesh, galvanized-steel, polymer-coated, galvanized-steel or stainless-steel screens; segmented into multiple removable pie sections and complying with OSHA regulations.

C. Hardware: Galvanized or stainless steel.

2.14 ELECTRICAL POWER

A. Factory Furnish for Field Installation: A disconnect switch, motor controller or variable-frequency controller for each fan motor, as directed.

B. Factory Install: A disconnect switch, motor controller or variable-frequency controller for each fan motor, as directed.

1. Locate in a convenient and field-accessible location within sight of motor.
2. Installation shall comply with NFPA 70.
3. Wire, Conduit, and Enclosures:

    a. Minimum Conduit Size: 0.75 inch (20 mm).
    b. Materials: Corrosion resistant and constructed of stainless steel or PVC coated steel.
    c. Motor Termination: Liquidtight conduit, not to exceed 36 inches (900 mm) long.
    d. Supports: Support conduits, boxes, and enclosures using corrosion-resistant fastening hardware constructed of stainless steel.
    e. Wire:

1) Copper, rated for 600-V, solid wire for size No. 10 AWG and smaller and stranded wire for larger sizes.
2) Minimum Wire Size: No. 12 AWG.
3) Each circuit shall have a ground wire.
4) Install wire in conduit.

f. Boxes, Condulets, and Enclosures: NEMA 250, Type 3R, Type 4 or Type 4X.

C. Disconnect Switches:

1. Specification Grade; "Heavy Duty Type"; "quick-make," "quick-break" construction.
2. Three pole, fused or nonfused.
3. 600 V rated.
4. Minimum SCCR: As required by electrical power distribution system, but not less than 42,000 - 65,000 A, as directed.
5. Enclosure: NEMA 250, Type 3R, Type 4 or Type 4X or Type 4X stainless steel, as directed.
6. Operating handle shall be of box-mounted type that directly drives switch mechanism.
7. Disconnect switch shall use a flange-operated visible blade that is close coupled to a vertical-lift-type handle that achieves a positive visible indication of disconnect with cover open or closed.
8. Disconnect switch shall have a defeatable, front-accessible, mechanical interlock to prevent opening of cover when switch is in "ON" position, and to prevent turning switch "ON" when the door is open.
9. Include a solid neutral as required by authorities having jurisdiction.
10. Disconnect switch shall have a ground lug for ground wire termination.
11. Operating handle shall be lockable in open position.
12. Horsepower rated.
13. Feed through or double lugged.

D. Motor Controllers:

1. NEMA ICS 2, Class A, full-voltage, non-reversing, motor-rated controller.
2. Configured for control of single- or multispeed motors as indicated.
3. Enclosure: NEMA 250, Type 3R, Type 4or Type 4X or Type 4X stainless steel, as directed, with hinged full-front access door with lock and key.
4. Externally Operated, Door-Interlocked Disconnect: Fused disconnect switch, Nonfused disconnect switch or Circuit breaker with lockable handle, as directed.
5. SCCR: As required by electrical power distribution system, but not less than 42,000 - 65,000 A, as directed.
6. Hand-Off-Auto Switch: Mounted on face of enclosure.
7. Push-to-Test Run Status Pilot Lights: NEMA ICS 2, heavy-duty type.
8. Control Relays: Time-delay relays.
9. Phase-Failure, Phase-Reversal, Undervoltage Relays: Solid-state sensing circuit with adjustable undervoltage setting and isolated output contacts for hardwired connection.
10. Elapsed-Time Meters: Numerical readout in hours on face of enclosure.
11. Number-of-Starts Counter: Numerical readout on face of enclosure.

E. Variable-Frequency Controllers:

1. Description: NEMA ICS 2; arranged to achieve motor variable speed by adjusting output voltage and frequency.
2. Enclosure: Unit mounted, NEMA 250, Type 3R, Type 4 or Type 4X or Type 4X stainless steel with hinged full-front access door with lock and key, as directed.
3. Externally Operated, Door-Interlocked Disconnect: Fused disconnect switch, Nonfused disconnect switch or Circuit breaker with lockable handle, as directed.
4. Minimum SCCR: As required by electrical power distribution system, but not less than 42,000 - 65,000 A, as directed.
5. Technology: Pulse-width-modulated (PWM) output with insulated gate bipolar transistors (IGBT); suitable for variable torque loads.
6. Controller shall consist of a rectifier converter section, a digital/analog driver regulator section, and an inverter output section.
7. Output Rating: Three phase; with voltage proportional to frequency throughout voltage range.
8. Output signal shall be programmed to not cause mechanical vibration issues with fan drive assembly.
9. Operating Requirements:

    a. Input AC Voltage Tolerance: 10 percent.
    b. Input frequency tolerance of 60 Hz, plus or minus 2 Hz.
    c. Capable of driving full motor load, without derating.
    d. Minimum Efficiency: 96 percent at 60 Hz, full load.
    e. Minimum Displacement Primary-Side Power Factor: 95 percent.
    f. Overload Capability: 1.05 times the full-load current for 7 seconds.
    g. Starting Torque: As required by fan and motor drive assembly.
    h. Speed Regulation: 1 percent.
    i. Speed Range: 10:1 speed range.
    j. To avoid equipment resonant vibrations, include critical speed lockout circuitry to allow bands of operating frequency at which controller shall not operate continuously.
    k. Capable of being restarted into a motor coasting in either the forward or reverse direction without tripping.

10. Controller Adjustability Capabilities: Minimum and maximum output frequency, acceleration and deceleration, and current limit.
11. Self-Protection and Reliability Features: Subjecting the controller to any of the following conditions shall not result in component failure or the need for replacement:

    a. Overtemperature.
    b. Short circuit at controller output.
    c. Ground fault at controller output. Variable-frequency controller shall be able to start a grounded motor.
    d. Open circuit at controller output.
    e. Input undervoltage.
    f. Input overvoltage.
    g. Loss of input phase.
    h. Reverse phase.
    i. AC line switching transients.
    j. Instantaneous overload, line to line or line to ground.
    k. Sustained overload exceeding 100 percent of controller rated current.
    l. Starting a rotating motor.

12. Motor Protection: Controller shall protect motor against overvoltage and undervoltage, phase loss, reverse phase, overcurrent, overtemperature, and ground fault.
13. Automatic Reset and Restart:

    a. Capable of multiple restarts after controller fault or on return of power after an interruption and before shutting down for manual reset or fault correction.
    b. Capable of automatic restart on phase-loss and overvoltage and undervoltage trips.

14. Visual Indication: On face of controller; indicating the following conditions:

    a. Power on.
    b. Run.
    c. Overcurrent and overvoltage.
    d. Motor speed (percent).
    e. Various faults with alarm status.
    f. Input kilovolt amperes.
    g. Power factor.
    h. Input kilowatts and kilowatt-hours.
    i. Three-phase input and output voltage.
    j. Three-phase input and output current.
    k. Output frequency.
    l. Elapsed operating time (hours).
    m. Diagnostic and service parameters.

15. Operator Interface: Start-stop and auto-manual selector with manual-speed-control potentiometer.
16. Control Signal Interface: A minimum of two analog inputs (0 to 10 V or 0/4 to 20 mA) and four programmable digital inputs.

2.15 CONTROLS

A. Vibration Switch: For each fan drive.

1. Enclosure: NEMA 250, Type 4 or Type 4X, as directed.
2. Vibration Detection: Sensor with a field-adjustable, acceleration-sensitivity set point in a range of 0 to 1 g and frequency range of 0 to 3000 cycles per minute. Cooling tower manufacturer shall recommend switch set point for proper operation and protection.
3. Switch shall have manual-reset button hardwired connection to fan motor electrical circuit.
4. Switch shall have field connection to a control system hardwired connection to fan motor electrical circuit.
5. Switch shall, on sensing excessive vibration, signal an alarm for connection to control system and shut down the fan.

B. Vibration Transmitter with Switch: For each fan drive.

1. Enclosure: NEMA 250, Type 4X.
2. Display: Local display of measured value, power, and alarm.
3. Vibration Detection: Sensor with a field-adjustable, acceleration-sensitivity set point.

a. Cooling tower manufacturer shall select range that is suitable for cooling tower and recommend switch set point for proper operation and protection.

4. Transmitter: Continuous vibration level indication through a 4- to 20-mA signal for connection to control system.
5. Switch:

a. Relay and switch with manual-reset button for field connection to control system and hardwired connection to fan motor electrical circuit.
b. Switch shall, on sensing excessive vibration, signal an alarm to control system and shut down the fan.

6. Mounting: Locate out of cooling tower discharge airstream and mount in a location that is accessible and where display is easily viewable.
7. Field Electrical Connection Requirements: 120 V, single phase, 60 Hz.

C. Gear-Drive, Oil-Level Switch: Low-oil-level warning switch for connection to control system.

1. Switch shall, on reaching a low-oil-level set point recommended by cooling tower manufacturer, signal an alarm through control system.

2.16 HOISTING ASSEMBLY

A. Hoisting assembly consisting of pedestal base, davit arm, and winch to accommodate lowering and raising cooling tower components from their installed location to the base of cooling tower supports.

1. Cooling tower components serviceable by hoisting assembly shall include, but not be limited to, fan stack, fan, fan drive, and fan motor.
2. Hoisting assembly shall be designed to accommodate heaviest single component plus a safety factor of 1.5.
3. Construct cooling tower structural supports and reinforcing to accommodate lifting heaviest load with safety factor.

B. Pedestal Base:

1. Equip each cooling tower cell with a pedestal base to accommodate an easily removable davit arm and winch assembly.
2. Position pedestal base at a location on cooling tower fan (top) deck for hoisting assembly coverage to fan, fan motor, and fan drive assembly.
3. Pedestal base design shall be open-socket, or comparable, design that is configured to accept and secure an inserted portable davit arm.
4. Fit each pedestal base with an easily removable cap or plug designed to seal the open top of the base when the davit arm is not installed.
5. Fasten pedestal base to cooling tower using threaded hardware.
6. Construct pedestal base of hot-dip galvanized steel or 300L series stainless steel.

C. Davit Arm:

1. Each cooling tower cell shall have a davit arm.

2. Davit arm shall be an adjustable telescoping design with angular adjustment to accommodate varying lifting conditions required by the application.
3. Davit arm assembly shall be portable and capable of being relocated to any cooling tower cell pedestal base.
4. Construct davit arm of hot-dip galvanized steel or 300L series stainless steel.

D. Winch:

1. Each davit arm shall have an electric or a hand operated winch.

   a. Electric winch shall include a power cord and plug for connection to a field-installed, weatherproof, 20-A receptacle with 120-V, single-phase, 60-Hz field power supply.
   b. Hand-operated winch with gear mechanism to limit force on handle to not more than 80 lb (36 kg) when lifting the heaviest component.

2. Coat winch body and exposed components with corrosion-resistant finish that is rated for outdoor duty in a highly corrosive environment and exposed to direct sunlight.
3. Winch cable shall be stainless steel and terminated with a stainless-steel hook and quick disconnecting mechanism. Cable length shall be at least 1.5 times actual length required for application.

E. Hardware: 304 or 316 series stainless steel.

F. Nameplate:

1. Stamped or engraved aluminum or stainless-steel nameplate with rated load capacity on each davit arm and pedestal.
2. Letter size legible from a distance of 60 inches (1500 mm) and not less than 1/2 inch (13 mm).
3. Fasten nameplate at multiple points with stainless-steel rivets or screws.

2.17 CAPACITIES AND CHARACTERISTICS

A. Number of Cells: As directed.

B. Air-Inlet Arrangement: Single side or Two sides, as directed.

C. Maximum Drift Loss: 0.005 percent of design water flow.

D. Waterside:

1. Design Water Flow per Cell: As directed, gpm (L/s).
2. Minimum Water Flow per Cell: As directed, gpm (L/s).
3. Water Pressure Drop: As directed, psig (kPa).
4. Entering-Water Temperature: As directed, deg F (deg C).
5. Leaving-Water Temperature: As directed, deg F (deg C).

E. Airside:

1. Entering-Air Wet-Bulb Temperature: As directed, deg F (deg C).

2. Altitude: As directed.
3. Airflow per Cell: As directed, (L/s).

F. Economizer-Mode Performance:

1. Water Flow per Cell: As directed, gpm (L/s.
2. Entering-Water Temperature: As directed, deg F (deg C).
3. Leaving-Water Temperature: As directed, deg F (deg C).
4. Entering-Air Wet-Bulb Temperature: As directed, deg F (deg C).

G. Fan Drive Assembly:

1. Type: Belt, direct or gear.
2. Fan Motor:

a. Type: Single speed, two speed, single winding, two speed, two winding or variable speed.
b. Motor Size per Cell: As directed, hp.
c. Full-Load Ampacity: As directed, A
d. Minimum Circuit Ampacity: As directed.
e. Maximum Overcurrent Protection Device: As directed.
f. Electrical Characteristics: 208, 240 or 480 V ac, 3 phase, 60 Hz, as directed

H. Sound Pressure Level: dBA at distance in feet (m), when measured according to CTI ATC 128.

I. Collection Basin Heater:

1. Basin Water Temperature: 40 deg F (5 deg C)
2. Outdoor Ambient Temperature: 0 deg F (Minus 18 deg C) or Minus 20 deg F (Minus 29 deg C), as directed.
3. Capacity per Cell: As directed.
4. Full-Load Ampacity: As directed.
5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection Device: As directed.
7. Electrical Characteristics: 208, 240 or 480 V ac, 3 phase, 60 Hz, as directed.
8. Capacity/Cell: As directed, MBtu/h (kW).
9. Coil Fluid Type: Water.
10. Entering-Fluid Temperature: As directed, deg F (deg C).
11. Leaving-Fluid Temperature: As directed, deg F (deg C).
12. Fluid Flow Rate: As directed, gpm (L/s).
13. Fluid Pressure Drop: As directed, psig (kPa).
14. Capacity/Cell: As directed, MBtu/h (kW).
15. Steam Flow: As directed, lb/h (L/s).
16. Steam Pressure: As directed, psig (kPa).

2.18 SOURCE QUALITY CONTROL

A. Performance Test: Factory test and certify cooling tower performance according to CTI STD 201RS, "Standard for the Certification of Water-Cooling Tower Thermal Performance."

B. Seismic Performance Testing: Shake table tested by an independent or a factory-certified laboratory to certify performance complies with seismic requirements indicated.

C. Factory Functional Tests:

1. Test collection and distribution basins after assembly, and prove free of leaks.
2. Test factory-installed electric/electronic water-level controls for proper operation.
3. Test factory-installed electric basin heaters for proper operation.
4. Test factory-installed fan and drive assemblies for proper operation.
5. Test factory-installed control package for proper operation.
6. Test access doors to ensure smooth operation and proper fit.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine cooling towers before installation. Reject cooling towers that are damaged.

B. Install cooling towers on support structure.

C. Equipment Mounting:

1. Install cooling towers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

D. Install anchor bolts to elevations required for proper attachment to supported equipment.

E. Maintain manufacturer's recommended clearances for service and maintenance.

F. Maintain clearances required by governing code.

3.2 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to cooling towers, allow space for service and maintenance.

C. Install flexible pipe connectors at pipe connections of cooling towers mounted on vibration isolators.

D. Install drain piping with valve at cooling tower drain connections and at low points in piping.

E. Connect cooling tower overflows and drains, and piping drains, to sanitary sewage system.

F. Makeup-Water Piping:

1. Comply with applicable requirements in Section 221116 "Domestic Water Piping."
2. Connect to makeup-water connections with shutoff valve, plugged tee with pressure gage, flow meter, and drain connection with valve and union.

G. Supply and Return Piping:

1. Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."
2. Connect to entering cooling tower connections with shutoff valve, strainer, balancing valve, thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve.
3. Connect to leaving cooling tower connection with shutoff valve thermometer, plugged tee with full port ball valve for portable field instruments, and drain connection with valve.
4. Make connections to cooling tower with a flange.

H. Equalizer Piping:

1. Piping requirements to match supply and return piping.
2. Connect an equalizer pipe, full size of cooling tower connection, between tower cells.
3. Connect to cooling tower with shutoff valve and drain connection with valve.
4. Make connections to cooling tower with a flange.

I. Basin Heater Hot-Water Piping:

1. Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."
2. Connect to supply connections with shutoff valve, strainer, control valve thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve.
3. Connect to return connections with shutoff valve, balancing valve, thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve.
4. Make connections with a flange, union, or mechanical coupling.

J. Basin Heater Steam and Condensate Piping:

1. Comply with applicable requirements in Section 232213 "Steam and Condensate Heating Piping" and Section 232216 "Steam and Condensate Heating Piping Specialties."
2. Connect steam supply connection with shutoff valve, strainer, control valve, pressure gage, and flow meter.
3. Connect to condensate connection with shutoff valve, strainer, and an appropriate steam trap assembly.
4. Make connections with a flange or union.

3.3 ELECTRICAL POWER CONNECTIONS

A. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for wiring connections.

B. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems" for grounding connections.

C. Install nameplate for each electrical connection indicating electrical equipment designation and circuit number feeding connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 1/2 inch (13 mm) high. Locate nameplate where easily visible.

3.4 CONTROLS CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between cooling towers and other equipment to interlock operation as required to achieve a complete and functioning system.

3.5 FIELD TESTING PROVISIONS

A. Include provisions for cooling tower future field-performance testing complying with ASME PTC 23 or CTI ATC 105, as directed.

B. Include provisions in field piping for future field-performance testing complying with ASME PTC 23 or CTI ATC 105, as directed.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform tests and inspections with the assistance of a factory-authorized service representative.

D. Tests and Inspections: Comply with ASME PTC 23 or CTI ATC 105, as directed.

E. Cooling towers will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports.

3.7 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform or Perform startup service.

B. Inspect field-assembled components, equipment installation, and piping; controls; and electrical connections for proper assemblies, installations, and connections.

C. Obtain performance data from manufacturer.

1. Complete installation and startup checks according to manufacturer's written instructions and perform the following:

a. Clean entire unit including basins.
b. Verify that accessories are properly installed.
c. Verify clearances for airflow and for cooling tower servicing.
d. Check for vibration isolation and structural support.
e. Lubricate bearings.
f. Verify fan rotation for correct direction and for vibration or binding and correct problems.
g. Adjust belts to proper alignment and tension.
h. Verify proper oil level in gear-drive housing. Fill with oil to proper level.
i. Operate variable-speed fans through entire operating range and check for harmonic vibration imbalance. Set motor controller to skip speeds resulting in abnormal vibration.
j. Check vibration switch setting. Verify operation.
k. Verify water level in tower basin. Fill to proper startup level. Check makeup-water-level control and valve.
l. Verify operation of basin heater and control.
m. Verify that cooling tower air discharge is not recirculating air into tower or HVAC air intakes. Recommend corrective action.
n. Replace defective and malfunctioning units.

D. Start cooling tower and associated water pumps. Follow manufacturer's written starting procedures.

E. Prepare a written startup report that records the results of tests and inspections.

3.8 ADJUSTING

A. Set and balance water flow to each tower inlet.

B. Adjust water-level control for proper operating level.

C. Adjust basin heater control for proper operating set point.

3.9 DEMONSTRATION

A. Engage a factory-authorized service representative to train or train Owner's maintenance personnel to adjust, operate, and maintain cooling towers.

END OF SECTION 236514.14

SECTION 236514.16 – CLOSED-CIRCUIT, INDUCED-DRAFT, COUNTERFLOW COOLING TOWERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes factory-assembled, closed-circuit, induced-draft, counterflow cooling towers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Manufacturer's drawings of assembled cooling towers, control panels, sections, and elevations.
2. Diagram showing each separate piece requiring field assembly.
3. Shipped sub-assembly dimensions and weights for field assembly.
4. Operating weight and load distribution.
5. Unit vibration isolation and seismic controls.
6. Required clearances for maintenance and operation.
7. Sizes and dimensioned locations of piping and wiring connections.
8. Diagrams for power, signal, and control wiring.

C. Delegated-Design Submittal: For cooling tower support structure indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of support structure.
2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment.
3. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and wind restraints and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings:

1. Drawings on which items are shown and coordinated with each other, using input from installers of the items involved.
2. Each view to show screened background with the following:

a. Structural grids.
b. Adjacent walls, floors, and roofs.

c. Equipment and products of other trades that are located in vicinity of cooling towers and are part of final installation, such as controls, power, lighting, fire-suppression systems, and plumbing systems.

B. Seismic Qualification Data: Certificates, for cooling towers, accessories, and components, from manufacturer.

C. Product Certificates: For certification required in "Quality Assurance" Article.

D. Field test reports.

E. Source quality-control reports.

F. Field quality-control reports.

G. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Certified by CTI or an NRTL.

B. ASME Compliance: Fabricate and label heat-exchanger coils to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

C. CTI Certification: Cooling tower thermal performance according to CTI STD 201RS.

D. FM Global: Approval and listing in the latest edition of FM Global's "Approval Guide."

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of cooling towers that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design cooling tower support structure and seismic restraints and wind restraints, including comprehensive engineering analysis.

B. Structural Performance: Cooling tower and support structure shall withstand the effects of loads and stresses within limits and under conditions indicated according to ASCE/SEI 7, the IBC or governing code, as directed.

C. Seismic Performance: Cooling towers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: 1.5 - 1.0.
3. Component Amplification Factor: As directed.
4. Component Response Modification Factor: As directed.

D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. Operation Following Loss of Normal Power:

1. Equipment, associated factory- and field-installed controls, and associated electrical equipment and power supply connected to backup power system shall automatically return equipment and associated controls to the operating state occurring immediately before loss of normal power without need for manual intervention by an operator when power is restored either through a backup power source, or through normal power if restored before backup power is brought on-line.
2. Include means and methods required to satisfy requirement even if not explicitly indicated.

G. Vibration:

1. Rotating assemblies shall be dynamically balanced to achieve a balance level of "good" while complying with industry standard requirements for cooling towers.
2. Critical speed shall be at least 115 percent of design speed.

2.3 DESIGN ARRANGEMENT

A. Counterflow design with airflow from all sides and induced-draft, top-mounted axial fan and pressurized pipe distribution.

2.4 CASING AND FRAME

A. Casing Material: Galvanized steel, ASTM A653/A653M, G235 (Z700) coating or Polymer-coated galvanized steel.

B. Frame Material: Galvanized steel, ASTM A653/A653M, G235 (Z700) coating, polymer-coated galvanized steel or materials to match casing.

C. Hardware: Galvanized or stainless steel.

D. Joints and Seams: Sealed watertight.

E. Welded Connections: Sealed watertight by continuous welds.

2.5 COLLECTION BASIN

A. Factory-Assembled Collection Basin:

1. Material: Galvanized steel, ASTM A653/A653M, G235 (Z700) coating, Polymer-coated galvanized steel.
2. Hardware: Galvanized or stainless steel.
3. Joints and Seams: Sealed watertight.
4. Welded Connections: Sealed watertight by continuous welds.
5. Removable stainless-steel strainer with openings smaller than nozzle orifices.
6. Overflow and drain connections.
7. Makeup-water connection.
8. Outlet Connection: Configured to mate to ASME B16.5, Class 150 flange.

2.6 COLLECTION BASIN MAKEUP-WATER ASSEMBLY

A. Mechanically Operated, Collection Basin Water-Level Control: Manufacturer's standard adjustable, mechanical float assembly and valve.

B. Electric/Electronic, Collection Basin Water-Level Controller with Makeup-Water Valve:

1. Enclosures: NEMA 250, Type 4 or Type 4X.
2. Sensor: Solid-state controls with multiple electrode probes and relays factory wired to a terminal strip to control makeup-water valve, control makeup-water valve and low-level alarm, control makeup-water valve and low- and high-level alarms or control makeup-water valve, low- and high-level alarms, and output for shutoff of pump on low level.
3. Electrode Probes: Stainless steel.
4. Water Stilling Chamber: Corrosion-resistant material, FRP, Galvanized steel, PVC pipe, Stainless steel, Grade 304 or Stainless steel, Grade 316.
5. Makeup-Water Valve:

a. Slow closing with stainless-steel body.
b. Valve actuator controlled and powered through level controller in response to water-level set point.
c. Actuator Enclosure: NEMA 250, Type 4 or Type 4X.
d. Fail Position: Closed, Open or Last.
e. Action: Two position or modulating.

6. Electrical Connection Requirements: 120-V ac, single phase, 60 Hz.

2.7 COLLECTION BASIN HEATER

A. Electric Heater:

1. Stainless-Steel Electric Immersion Heaters: Installed in a threaded coupling on the side of the collection basin.
2. Heater Control Panel: Mounted on the side of each cooling tower cell.
3. Enclosure: NEMA 250, Type 3R, Type 4 or Type 4X.
4. Magnetic contactors controlled by a temperature sensor/controller to maintain collection basin water-temperature set point. Water-level probe shall monitor cooling tower water level and de-energize the heater when the water reaches low-level set point.
5. Control-circuit transformer with primary and secondary side fuses.
6. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
7. Single-point, field-power connection to a fused disconnect switch, nonfused disconnect switch or circuit breaker and heater branch circuiting complying with NFPA 70, as directed.
8. Factory Wiring Method: Metal raceway for factory-installed wiring outside of enclosures, except make connections to each electric basin heater with liquidtight conduit.

a. Raceway shall be corrosion-resistant stainless steel or PVC coated steel.

2.8 PRESSURIZED DISTRIBUTION NETWORK

A. Main header and lateral branch piping designed for even distribution over heat-exchanger coils throughout the entire flow range without the need for balancing valves and for connecting individual, easily removable, nonclogging spray nozzles.

B. Pipe Material: Schedule 40 PVC.

C. Spray Nozzle Material: Plastic, Polypropylene or PVC.

D. Piping Supports: Corrosion-resistant hangers and supports to resist movement during operation and shipment.

2.9 HEAT-EXCHANGER COILS

A. Tube and Tube Sheet Materials: Copper tube with stainless-steel tube sheet, stainless-steel tube and tube sheet or carbon-steel tube and sheet with outer surface of tube and sheet hot-dip galvanized after fabrication.

B. Heat-Exchanger Arrangement:

1. Serpentine tubes, Serpentine tubes with removable cover plate on inlet and outlet headers or straight tubes with removable header cover plate on both ends of heat exchanger for straight-through access to each tube; sloped for complete drainage of fluid by gravity.
2. Tubes with extended surface fins if required to achieve performance indicated.
3. Multiple Separate Circuits: Separate circuits to achieve multiple isolated loops as required by application.

C. ASME Compliance: Designed, manufactured, and tested according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, and bearing ASME "U" stamp; sloped for complete drainage of fluid by gravity.

D. Field Piping Connections: Vent, supply, and return suitable for mating to ASME B16.5, Class 150 flange.

2.10 DRIFT ELIMINATORS

A. Material: PVC with maximum flame-spread index of 5 - 25 according to ASTM E84.

B. UV Treatment: Inhibitors to protect against damage caused by UV radiation.

C. Arrangement: Multiple, easily removable sections.

D. Configuration: Multipass, designed and tested to reduce water carryover to 0.001 percent of design flow rate indicated.

E. Hardware: Galvanized or stainless steel.

2.11 AIR INLET

A. Air-Intake Louvers:

1. Material: PVC.
2. UV Treatment: Inhibitors to protect against damage caused by UV radiation.
3. Multiple, easily removable sections arranged to uniformly direct air into cooling tower, to minimize air resistance, to block direct sunlight, and to prevent water from splashing out of tower during all modes of operation including operation with fans off.

B. Hardware: Galvanized or stainless steel.

2.12 FAN AND DRIVE ASSEMBLY

A. Axial Fan: Balanced at the factory after assembly.

1. Blade Material: Aluminum, FRP or galvanized steel.
2. Hub Material: Aluminum, FRP or galvanized steel.
3. Blade Pitch: Field adjustable.

4. Fan Shaft: Corrosion resistant or Stainless steel.
5. Fan Shaft Bearings: Self-aligning ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of 40,000, 50,000 or 100,000 hours, as directed.
6. Bearings Grease Fittings: Extended lubrication lines to an easily accessible location.
7. Automatic Bearing Greasing System:

    a. Manufacturer designed system to provide an as needed supply of new grease to bearings while reducing the need for periodic bearing maintenance and associated greasing problems.
    b. Easily replaceable storage container filled with recommended grease and located in an easily accessible location on cooling tower exterior. Container capacity of sufficient size to provide grease for one year.

B. Belt Drive:

1. Service Factor: 1.5 based on motor nameplate horsepower.
2. Sheaves: Fan and motor shafts shall have taper-lock sheaves fabricated from corrosion-resistant materials.
3. Belt: Multiple V-belt design with a matched set of cogged belts.
4. Belt: One-piece, multigrooved, solid-back belt.
5. Belt Material: Oil resistant, nonstatic conducting, and constructed of neoprene polyester cord.
6. Belt-Drive Guard: Comply with OSHA regulations.
7. Two-Motor, Single-Fan Drive:

    a. Two single-speed motors per fan, one sized for full speed and load and the other sized for 67 percent of full-load speed.
    b. Each motor shall have belt drive and be configured for operation when other motor fails.
    c. Controls and wiring same as two-speed, two-winding motor.

C. Direct Drive: Fan hub directly connected, and properly secured, to motor shaft.

D. Fan Motor:

1. Comply with NEMA MG 1 unless otherwise indicated.
2. Description: NEMA MG 1, Design B as required to comply with capacity and torque characteristics; medium induction motor.
3. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.
4. Motor Enclosure: Open dripproof with weather protective cover, totally enclosed, totally enclosed air-over (TEAO) or totally enclosed fan-cooled (TEFC) with epoxy or polyurethane finish, as directed.
5. Rotor: Random-wound, squirrel cage.
6. Energy Efficiency: Comply with ASHRAE/IES 90.1 or NEMA Premium Efficient.
7. Service Factor: 1.15.
8. Temperature Rise: Match or One class lower than insulation rating.
9. Insulation: Class F or Class H.

10. Variable-Speed Motors: Inverter-duty rated per NEMA MG 1, Section IV, "Performance Standard Applying to All Machines," Part 31, "Definite-Purpose, Inverter-Fed, Polyphase Motors."
11. Motor Location: Mounted outside of cooling tower casing and cooling tower discharge airstream.
12. Severe-Duty Rating:

    a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
    b. Double-shielded, vacuum-degassed bearings lubricated with premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C).
    c. Internal Heater: Automatically energized when motor is de-energized.
    d. Complying with IEEE 841.

13. Motor Base: Adjustable, or other suitable provision for adjusting belt tension.
14. Motor Shaft Grounding: Motors shall be controlled through variable-frequency controllers with shaft grounding system to protect motor bearings from induced voltage. Drag on motor shaft due to shaft ground system shall be less than 0.5 percent of motor nameplate horsepower.

E. Hardware: Galvanized or stainless steel.

2.13 AIR DISCHARGE

A. Fan Discharge Stack:

1. Manufacturer's standard low-profile design.
2. Material: Material to match casing.
3. Stack Extension: Fabricated to extend above fan deck unless otherwise indicated.
4. Stack Termination: Wire-mesh, galvanized-steel, polymer-coated, galvanized-steel or stainless-steel screens; segmented into multiple removable pie sections and complying with OSHA regulations.

B. Discharge Hood:

1. Hood Configuration: Tapered or Straight; totally surrounding heat exchanger, pressurized distribution system and drift eliminators; constructed of same material as casing; and having factory-installed insulation and access doors.
2. Discharge Dampers: Positive-closure, automatic, isolation dampers constructed of aluminum, galvanized steel or stainless steel with corrosion-resistant linkages and electric actuators with NEMA 250, Type 4X enclosure.

    a. If not provided with factory controls, field-connect provisions for electrical power and controls to open dampers when pump is energized and close dampers when pump is de-energized.

3. Capacity-Control Dampers: Aluminum, Galvanized-steel or Stainless-steel dampers, with corrosion-resistant linkages, electric operator, controller, limit switches, transformer, and weatherproof enclosure.

a. If not provided with factory controls, provide field power and controls to operate dampers when pump is energized and close dampers when pump and fan is de-energized.

C. Hardware: Galvanized or stainless steel.

2.14 RECIRCULATING WATER DISTRIBUTION SYSTEM

A. Pump: Close-coupled, single-stage, bronze-fitted centrifugal pump; with mechanical seal and suitable for outdoor service. Factory install pump with following:

1. Redundant Pump: Same performance as required for primary pump; easily switched and maintained while cooling tower remains operating.
2. Flanges at pump connections to piping.
3. Strainer, with blowdown isolation valve, installed in piping on suction side of pump.
4. Flow balancing valve in piping on discharge side of pump.

B. Pump Motor:

1. Comply with NEMA MG 1 unless otherwise indicated.
2. Description: NEMA MG 1, Design B as required to comply with capacity and torque characteristics; medium induction motor.
3. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.
4. Motor Enclosure: Open dripproof or totally enclosed and with epoxy or polyurethane finish.
5. Rotor: Random-wound, squirrel cage.
6. Energy Efficiency: Comply with ASHRAE/IES 90.1 or NEMA Premium Efficient.
7. Service Factor: 1.15.
8. Temperature Rise: Match or One class lower than insulation rating.
9. Insulation: Class F or Class H.
10. Severe-Duty Rating:

    a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
    b. Double-shielded, vacuum-degassed bearings lubricated with premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C).
    c. Internal Heater: Automatically energized when motor is de-energized.
    d. Complying with IEEE 841.

C. Piping: Interconnecting collection basin to pump and pressurization distribution system.

1. Design delegated to manufacturer.
2. External to and supported from cooling tower casing and frame.
3. Material: Corrosion resistant or PVC.
4. Install flanges at connections to collection basin and pressurized distribution system.
5. Drain connection with isolation valve at piping low point if piping does not drain directly into collection basin.

D. Piping: Field installed for connection to remotely installed pump and water storage that are not furnished with cooling tower.

2.15 ELECTRICAL POWER

A. Factory Furnish for Field Installation: A disconnect switch, motor controller or variable-frequency controller for each fan motor and a disconnect switch or motor controller for each pump motor.

B. Factory Install: A disconnect switch, motor controller or variable-frequency controller for each fan motor and a disconnect switch or motor controller for each pump motor.

1. Locate in a convenient and field-accessible location within sight of motor.
2. Installation shall comply with NFPA 70.
3. Wire, Conduit, and Enclosures:

    a. Minimum Conduit Size: 0.75 inch (20 mm).
    b. Materials: Corrosion resistant and constructed of stainless steel or PVC coated steel.
    c. Motor Termination: Liquidtight conduit, not to exceed 36 inches (900 mm) long.
    d. Supports: Support conduits, boxes, and enclosures using corrosion-resistant fastening hardware constructed of stainless steel.
    e. Wire:

        1) Copper, rated for 600-V, solid wire for size No. 10 AWG and smaller and stranded wire for larger sizes.
        2) Minimum Wire Size: No. 12 AWG.
        3) Each circuit shall have a ground wire.
        4) Install wire in conduit.

    f. Boxes, Condulets, and Enclosures: NEMA 250, Type 3R, Type 4 or Type 4X.

C. Disconnect Switches:

1. Specification Grade; "Heavy Duty Type"; "quick-make," "quick-break" construction.
2. Three pole, fused or nonfused.
3. 600 V rated.
4. Minimum SCCR: As required by electrical power distribution system, but not less than 42,000 - 65,000 A.
5. Enclosure: NEMA 250, Type 3R, Type 4, Type 4X or Type 4X stainless steel.
6. Operating handle shall be of box-mounted type that directly drives switch mechanism.
7. Disconnect switch shall use a flange-operated visible blade that is close coupled to a vertical-lift-type handle that achieves a positive visible indication of disconnect with cover open or closed.
8. Disconnect switch shall have a defeatable, front-accessible, mechanical interlock to prevent opening of cover when switch is in "ON" position, and to prevent turning switch "ON" when the door is open.
9. Include a solid neutral as required by authorities having jurisdiction.
10. Provide a ground lug for ground wire termination.
11. Operating handle shall be lockable in open position.

12. Horsepower rated.
13. Feed through or double lugged.

D. Motor Controllers:

1. NEMA ICS 2, Class A, full-voltage, non-reversing, motor-rated controller.
2. Configured for control of single- or multispeed motors as indicated.
3. Enclosure: NEMA 250, Type 3R, Type 4, Type 4X or Type 4X stainless steel, with hinged full-front access door with lock and key.
4. Externally Operated, Door-Interlocked Disconnect: Fused disconnect switch, Nonfused disconnect switch or Circuit breaker with lockable handle.
5. SCCR shall be as required by electrical power distribution system, but not less than 42,000 or 65,000 A.
6. Hand-Off-Auto Switch: Mounted on face of enclosure.
7. Push-to-Test Run Status Pilot Lights: NEMA ICS 2, heavy-duty type.
8. Control Relays: Time-delay relays.
9. Phase-Failure, Phase-Reversal, Undervoltage Relays: Solid-state sensing circuit with adjustable undervoltage setting and isolated output contacts for hardwired connection.
10. Elapsed-Time Meters: Numerical readout in hours on face of enclosure.
11. Number-of-Starts Counter: Numerical readout on face of enclosure.

E. Variable-Frequency Controllers:

1. Description: NEMA ICS 2; arranged to achieve motor variable speed by adjusting output voltage and frequency.
2. Enclosure: Unit mounted, NEMA 250, Type 3R, Type 4, Type 4X or Type 4X stainless steel, with hinged full-front access door with lock and key, as directed.
3. Externally Operated, Door-Interlocked Disconnect: Fused disconnect switch, Nonfused disconnect switch or Circuit breaker with lockable handle.
4. Minimum SCCR shall be as required by electrical power distribution system, but not less than 42,000 or 65,000 A.
5. Technology: Pulse-width-modulated (PWM) output with insulated gate bipolar transistors (IGBT); suitable for variable torque loads.
6. Controller shall consist of a rectifier converter section, a digital/analog driver regulator section, and an inverter output section.
7. Output Rating: Three phase; with voltage proportional to frequency throughout voltage range.
8. Output signal shall be programmed to not cause mechanical vibration issues with fan drive assembly.
9. Operating Requirements:

    a. Input AC Voltage Tolerance: 10 percent.
    b. Input frequency tolerance of 60 Hz, plus or minus 2 Hz.
    c. Capable of driving full motor load, without derating.
    d. Minimum Efficiency: 96 percent at 60 Hz, full load.
    e. Minimum Displacement Primary-Side Power Factor: 95 percent.
    f. Overload Capability: 1.05 times the full-load current for 7 seconds.
    g. Starting Torque: As required by fan and motor drive assembly.
    h. Speed Regulation: 1 percent.
    i. Speed Range: 10:1 speed range.

j. To avoid equipment resonant vibrations, include critical speed lockout circuitry to allow bands of operating frequency at which controller shall not operate continuously.
k. Capable of being restarted into a motor coasting in either the forward or reverse direction without tripping.

10. Controller Adjustability Capabilities: Minimum and maximum output frequency, acceleration and deceleration, and current limit.
11. Self-Protection and Reliability Features: Subjecting the controller to any of the following conditions shall not result in component failure or the need for replacement:

    a. Overtemperature.
    b. Short circuit at controller output.
    c. Ground fault at controller output. Variable-frequency controller shall be able to start a grounded motor.
    d. Open circuit at controller output.
    e. Input undervoltage.
    f. Input overvoltage.
    g. Loss of input phase.
    h. Reverse phase.
    i. AC line switching transients.
    j. Instantaneous overload, line to line or line to ground.
    k. Sustained overload exceeding 100 percent of controller rated current.
    l. Starting a rotating motor.

12. Motor Protection: Controller shall protect motor against overvoltage and undervoltage, phase loss, reverse phase, overcurrent, overtemperature, and ground fault.
13. Automatic Reset and Restart:

    a. Capable of multiple restarts after controller fault or on return of power after an interruption and before shutting down for manual reset or fault correction.
    b. Capable of automatic restart on phase-loss and overvoltage and undervoltage trips.

14. Visual Indication: On face of controller; indicating the following conditions:

    a. Power on.
    b. Run.
    c. Overcurrent and overvoltage.
    d. Motor speed (percent).
    e. Various faults with alarm status.
    f. Input kilovolt amperes.
    g. Power factor.
    h. Input kilowatts and kilowatt-hours.
    i. Three-phase input and output voltage.
    j. Three-phase input and output current.
    k. Output frequency.
    l. Elapsed operating time (hours).
    m. Diagnostic and service parameters.

15. Operator Interface: Start-stop and auto-manual selector with manual-speed-control potentiometer.

16. Control Signal Interface: A minimum of two analog inputs (0 to 10 V or 0/4 to 20 mA) and four programmable digital inputs.
17. Bypass Controller:

    a. Integrated NEMA ICS 2, Class A, full-voltage, non-reversing, motor-rated controller to operate fan motor if variable-frequency controller is not operational.
    b. Configure power supply to bypass controller and variable-frequency controller to completely isolate power to variable-frequency controller while operating fan motor through bypass controller for safe servicing of variable-frequency controller.
    c. Include "Bypass/VFC" manual selector switch on face of enclosure for local operator control of preferred controller.
    d. Include fail-safe control logic to automatically transfer fan motor operation from failed variable-frequency controller to bypass controller.
    e. Install bypass controller in same enclosure as variable-frequency controller.

2.16 CONTROLS

A. Vibration Switch: For each fan drive.

1. Enclosure: NEMA 250, Type 4 or Type 4X.
2. Vibration Detection: Sensor with a field-adjustable, acceleration-sensitivity set point in a range of 0 to 1 g and frequency range of 0 to 3000 cycles per minute. Cooling tower manufacturer shall recommend switch set point for proper operation and protection.
3. Switch shall have manual-reset button hardwired connection to fan motor electrical circuit.
4. Switch shall have field connection to a control system hardwired connection to fan motor electrical circuit.
5. Switch shall, on sensing excessive vibration, signal an alarm for connection to control system and shut down the fan.

2.17 WATER TREATMENT

A. Chemical-Free Water Treatment System: Complete factory-installed system consisting of the following:

1. Pulsed-power technology emitting high-frequency bursts of low energy electromagnetic fields to the recirculated water to control corrosion, bacteria, and scale.
2. Conductivity control of electrically operated valve designed to control totally dissolved solids levels and bleed rates.
3. Piping associated with system.
4. Interconnecting power and control wiring installed in corrosion-resistant metal raceway.

B. Chemical Water Treatment System: Complete factory-installed system consisting of the following:

1. Microprocessor-controlled conductivity controller housed in NEMA 250, Type 4X enclosure.
2. Chemical metering pump housed in NEMA 250, Type 4X enclosure.

3. Electrically operated valve designed to control totally dissolved solids levels and bleed rates.
4. Piping associated with system.
5. Interconnecting power and control wiring installed in corrosion-resistant metal raceway.

2.18 SERVICE ACCESS

A. Doors:

1. Large enough for personnel to access cooling tower internal components.
2. Doors shall be hinged with handles operable from both sides of the door.
3. Door materials shall match casing.
4. Hinges and handles shall be corrosion resistant or stainless steel.

B. External Ladders with Safety Cages: Aluminum, galvanized-steel or stainless-steel fixed ladders with ladder extensions to access external platforms and top of cooling tower from adjacent grade without the need for portable ladders. Comply with 29 CFR 1910.27.

C. External Platforms with Handrails: Aluminum, galvanized-steel or stainless-steel bar grating at cooling tower access doors when cooling towers are elevated and not accessible from grade.

D. External Motor Platforms with Handrails: Aluminum, galvanized-steel or stainless-steel bar grating.

E. Fan Deck Floor between Cooling Tower Cells:

1. Factory furnish reinforced fan deck floor panels between cooling tower cells for field installation.
2. Floor materials shall match adjacent cooling tower cell fan deck.
3. Fan deck floor shall fasten to and be supported by framing that is attached to cooling tower cells.
4. Frame shall be constructed of same materials as cooling tower frame.

F. Handrail: Aluminum, galvanized steel or stainless steel complete with kneerail and toeboard, around external platforms and top of cooling tower. Comply with 29 CFR 1910.23.

G. Internal Platforms: Aluminum, galvanized-steel or, stainless-steelbar grating.

1. Spanning the collection basin from one end of cooling tower to the other and positioned to form a path between. Platform shall be elevated so that all parts are above the high water level of the collection basin.
2. Elevated internal platforms with handrails accessible from fixed vertical ladders to access the fan drive assembly when out of reach.

H. Hardware: Galvanized steel when connecting galvanized-steel components; stainless steel when connecting other materials.

2.19 CAPACITIES AND CHARACTERISTICS

A. Number of Cells: As directed.

B. Air-Inlet Arrangement: All sides.

C. Maximum Drift Loss: 0.001 percent of design water flow.

D. Heat Exchanger:

1. Fluid Type: Water.
2. Design Fluid Flow per Cell: As directed, gpm (L/s).
3. Minimum Fluid Flow per Cell: As directed, gpm (L/s).
4. Fluid Pressure Drop: As directed, psig (kPa).
5. Fluid Pressure Rating: As directed, psig (kPa).
6. Entering-Fluid Temperature: As directed, deg F (deg C).
7. Leaving-Fluid Temperature: As directed, deg F (deg C).
8. Entering-Air Wet-Bulb Temperature: As directed, deg F (deg C).
9. Airflow per Cell: As directed, cfm (L/s).

E. Economizer-Mode Performance:

1. Fluid Flow per Cell: As directed, gpm (L/s).
2. Entering-Fluid Temperature: As directed, deg F (deg C).
3. Leaving-Fluid Temperature: As directed, deg F (deg C).
4. Entering-Air Wet-Bulb Temperature: As directed, deg F (deg C).

F. Fan Drive Assembly:

1. Type: Belt or direct.
2. Fan Motor:

    a. Type: Single speed, Two speed, single winding, Two speed, two winding or Variable speed.
    b. Motor Size per Cell: As directed, hp.
    c. Full-Load Ampacity: As directed.
    d. Minimum Circuit Ampacity: As directed.
    e. Maximum Overcurrent Protection Device: As directed.
    f. Electrical Characteristics: 208, 240 or 480V ac, 3 phase, 60 Hz.

G. Pump and Motor:

1. Water Flow per Cell: As directed, gpm (L/s).
2. Motor Size per Cell: As directed, hp.
3. Full-Load Ampacity: As directed.
4. Minimum Circuit Ampacity: As directed, A.
5. Maximum Overcurrent Protection Device: As directed.
6. Electrical Characteristics: 120, 208, 240, 277 and 480V ac, single or 3 phase, 60 Hz.

H. Sound Pressure Level: dBA at distance in feet (m) when measured according to CTI ATC 128.

I. Collection Basin Heater:

1. Basin Water Temperature: 40 deg F (5 deg C).

2. Outdoor Ambient Temperature: 0 deg F (Minus 18 deg C) or Minus 20 deg F (Minus 29 deg C).
3. Capacity/Cell: As directed.
4. Full-Load Ampacity: As directed.
5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection Device: As directed.
7. Electrical Characteristics: 208, 240 or 480V ac, 3 phase, 60 Hz.

2.20 SOURCE QUALITY CONTROL

A. Performance Test: Factory test and certify cooling tower performance according to CTI STD 201RS, "Standard for the Certification of Water-Cooling Tower Thermal Performance."

B. Seismic Performance Testing: Shake table tested by an independent or a factory-certified laboratory to certify performance complies with seismic requirements indicated.

C. Factory Functional Tests:

1. Test collection and distribution basins after assembly, and prove free of leaks.
2. Test factory-installed electric/electronic water-level controls for proper operation.
3. Test factory-installed electric basin heaters for proper operation.
4. Test factory-installed fan and drive assemblies for proper operation.
5. Test factory-installed control package for proper operation.
6. Test access doors to ensure smooth operation and proper fit.

D. Heat-Exchanger Factory Pressure and Leak Tests:

1. Pneumatically test heat-exchanger assembly while submerged underwater and prove to be free of leaks.
2. Test pressure equal to 1.5 times rated pressured, but not less than psig (kPa), as directed.
3. Submit report documenting test and results.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine cooling towers before installation. Reject cooling towers that are damaged.

B. Install cooling towers on support structure.

C. Equipment Mounting:

1. Install cooling towers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."

3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

D. Install anchor bolts to elevations required for proper attachment to supported equipment.

E. Maintain manufacturer's recommended clearances for service and maintenance.

F. Maintain clearances required by governing code.

3.2 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to cooling towers, allow space for service and maintenance.

C. Install flexible pipe connectors at pipe connections of cooling towers mounted on vibration isolators.

D. Install drain piping with valve at cooling tower drain connections and at low points in piping.

E. Connect cooling tower overflows and drains, and piping drains to sanitary sewage system.

F. Makeup-Water Piping:

1. Comply with applicable requirements in Section 221116 "Domestic Water Piping."
2. Connect to makeup-water connections with shutoff valve, plugged tee with pressure gage, flow meter, and drain connection with valve and union.

G. Supply and Return Piping:

1. Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."
2. Connect to entering cooling tower connections with shutoff valve, strainer, balancing valve, thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve.
3. Connect to leaving cooling tower connection with shutoff valve thermometer, plugged tee with full port ball valve for portable field instruments, and drain connection with valve.
4. Make connections to cooling tower with a flange.

3.3 ELECTRICAL POWER CONNECTIONS

A. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for wiring connections.

B. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems" for grounding connections.

C. Install nameplate for each electrical connection indicating electrical equipment designation and circuit number feeding connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 1/2 inch (13 mm) high. Locate nameplate where easily visible.

3.4 CONTROLS CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between cooling towers and other equipment to interlock operation as required to achieve a complete and functioning system.

3.5 FIELD TESTING PROVISIONS

A. Include provisions for cooling tower future field-performance testing complying with ASME PTC 23 or CTI ATC 105.

B. Include provisions in field piping for future field-performance testing complying with ASME PTC 23 or CTI ATC 105.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform tests and inspections with the assistance of a factory-authorized service representative.

D. Tests and Inspections: Comply with ASME PTC 23 or CTI ATC 105.

E. Cooling towers will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports.

3.7 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform or perform startup service.

B. Inspect field-assembled components, equipment installation, and piping; controls; and electrical connections for proper assemblies, installations, and connections.

C. Obtain performance data from manufacturer.

1. Complete installation and startup checks according to manufacturer's written instructions and perform the following:

    a. Clean entire unit including basins.
    b. Verify that accessories are properly installed.

c. Verify clearances for airflow and for cooling tower servicing.
d. Check for vibration isolation and structural support.
e. Lubricate bearings.
f. Verify fan rotation for correct direction and for vibration or binding and correct problems.
g. Verify pump rotation for correct direction, vibration, cavitation, and flow and correct problems.
h. Adjust belts to proper alignment and tension.
i. Operate variable-speed fans through entire operating range and check for harmonic vibration imbalance. Set motor controller to skip speeds resulting in abnormal vibration.
j. Check vibration switch setting. Verify operation.
k. Verify water level in tower basin. Fill to proper startup level. Check makeup-water-level control and valve.
l. Verify operation of basin heater and control.
m. Verify that cooling tower air discharge is not recirculating air into tower or HVAC air intakes. Recommend corrective action.
n. Replace defective and malfunctioning units.

D. Start cooling tower and associated water pumps. Follow manufacturer's written starting procedures.

E. Prepare a written startup report that records the results of tests and inspections.

3.8 ADJUSTING

A. Set and balance water flow to each tower inlet.

B. Adjust water-level control for proper operating level.

C. Adjust basin heater control for proper operating set point.

3.9 DEMONSTRATION

A. Engage a factory-authorized service representative to train or train Owner's maintenance personnel to adjust, operate, and maintain cooling towers.

END OF SECTION 236514.16

SECTION 236514.17 – CLOSED-CIRCUIT, INDUCED-DRAFT, COMBINED-FLOW COOLING TOWERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes factory-assembled, closed-circuit, induced-draft, combined-flow cooling towers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Manufacturer's drawings of assembled cooling towers, control panels, sections, and elevations.
2. Diagram showing each separate piece requiring field assembly.
3. Shipped sub-assembly dimensions and weights for field assembly.
4. Operating weight and load distribution.
5. Unit vibration isolation and seismic controls.
6. Required clearances for maintenance and operation.
7. Sizes and dimensioned locations of piping and wiring connections.
8. Diagrams for power, signal, and control wiring.

C. Delegated-Design Submittal: For cooling tower support structure indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of support structure.
2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment.
3. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and wind restraints and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings:

1. Drawings on which items are shown and coordinated with each other, using input from installers of the items involved.
2. Each view to show screened background with the following:

    a. Structural grids.
    b. Adjacent walls, floors, and roofs.

c. Equipment and products of other trades that are located in vicinity of cooling towers and are part of final installation, such as controls, power, lighting, fire-suppression systems, and plumbing systems.

B. Seismic Qualification Data: Certificates, for cooling towers, accessories, and components, from manufacturer.

C. Product Certificates: For certification required in "Quality Assurance" Article.

D. Field test reports.

E. Source quality-control reports.

F. Field quality-control reports.

G. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Certified by CTI or an NRTL.

B. ASME Compliance: Fabricate and label heat-exchanger coils to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

C. CTI Certification: Cooling tower thermal performance according to CTI STD 201RS.

D. FM Global: Approval and listing in the latest edition of FM Global's "Approval Guide."

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of cooling towers that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design cooling tower support structure and seismic restraints and wind restraints, including comprehensive engineering analysis.

B. Structural Performance: Cooling tower and support structure shall withstand the effects of loads and stresses within limits and under conditions indicated according to ASCE/SEI 7, the IBC or governing code.

C. Seismic Performance: Cooling towers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: 1.5 - 1.0.
3. Component Amplification Factor: As directed.
4. Component Response Modification Factor: As directed.

D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. Operation Following Loss of Normal Power:

1. Equipment, associated factory- and field-installed controls, and associated electrical equipment and power supply connected to backup power system shall automatically return equipment and associated controls to the operating state occurring immediately before loss of normal power without need for manual intervention by an operator when power is restored either through a backup power source, or through normal power if restored before backup power is brought on-line.
2. Include means and methods required to satisfy requirement even if not explicitly indicated.

G. Vibration:

1. Rotating assemblies shall be dynamically balanced to achieve a balance level of "good" while complying with industry standard requirements for cooling towers.
2. Critical speed shall be at least 115 percent of design speed.

2.3 DESIGN ARRANGEMENT

A. Combined flow with airflow from one side and induced-draft, top-mounted, axial fan; and with pressurized pipe distribution.

B. Combined flow with airflow from two sides and induced-draft, top-mounted, axial fan; and with pressurized pipe distribution.

C. Combined flow with airflow from all (four) sides and induced-draft, top-mounted, axial fan; and with pressurized pipe distribution.

2.4 CASING AND FRAME

A. Casing Material: Galvanized steel, ASTM A653/A653M, G235 (Z700) coating or Polymer-coated galvanized steel.

B. Frame Material: Galvanized steel, ASTM A653/A653M, G235 (Z700) coating, polymer-coated galvanized steel or materials to match casing.

C. Hardware: Galvanized or stainless steel.

D. Joints and Seams: Sealed watertight.

E. Welded Connections: Sealed watertight by continuous welds.

2.5 COLLECTION BASIN

A. Field-Constructed Collection Basin: Configure tower without a factory-assembled collection basin for installation and operation with a field-constructed collection basin.

B. Factory-Assembled Collection Basin:

1. Material: Galvanized steel, ASTM A653/A653M, G235 (Z700) coating or Polymer-coated galvanized steel.
2. Hardware: Galvanized or stainless steel.
3. Joints and Seams: Sealed watertight.
4. Welded Connections: Sealed watertight by continuous welds.
5. Removable stainless-steel strainer with openings smaller than nozzle orifices.
6. Overflow and drain connections.
7. Makeup-water connection.
8. Outlet Connection: Configured to mate to ASME B16.5, Class 150 flange.

2.6 COLLECTION BASIN MAKEUP-WATER ASSEMBLY

A. Mechanically Operated, Collection Basin Water-Level Control: Manufacturer's standard adjustable, mechanical float assembly and valve.

B. Electric/Electronic, Collection Basin Water-Level Controller with Makeup-Water Valve:

1. Enclosures: NEMA 250, Type 4 or Type 4X.
2. Sensor: Solid-state controls with multiple electrode probes and relays factory wired to a terminal strip to control makeup-water valve, control makeup-water valve and low-level alarm, control makeup-water valve and low- and high-level alarms or control makeup-water valve, low- and high-level alarms, and output for shutoff of pump on low level.
3. Electrode Probes: Stainless steel.
4. Water Stilling Chamber: Corrosion-resistant material, FRP, Galvanized steel, PVC pipe, Stainless steel, Grade 304 or Stainless steel, Grade 316.
5. Makeup-Water Valve:

    a. Slow closing with stainless-steel body.
    b. Valve actuator controlled and powered through level controller in response to water-level set point.
    c. Actuator Enclosure: NEMA 250, Type 4 or Type 4X.
    d. Fail Position: Closed, Open or Last.
    e. Action: Two position or modulating.

6. Electrical Connection Requirements: 120-V ac, single phase, 60 Hz.

2.7 COLLECTION BASIN HEATER

A. Electric Heater:

1. Stainless-Steel Electric Immersion Heaters: Installed in a threaded coupling on the side of the collection basin.
2. Heater Control Panel: Mounted on the side of each cooling tower cell.
3. Enclosure: NEMA 250, Type 3R, Type 4 or Type 4X.
4. Magnetic contactors controlled by a temperature sensor/controller to maintain collection basin water-temperature set point. Water-level probe shall monitor cooling tower water level and de-energize the heater when the water reaches low-level set point.
5. Control-circuit transformer with primary and secondary side fuses.
6. Terminal blocks with numbered and color-coded wiring to match wiring diagram.
7. Single-point, field-power connection to a fused disconnect switch, nonfused disconnect switch or circuit breaker and heater branch circuiting complying with NFPA 70.
8. Factory Wiring Method: Metal raceway for factory-installed wiring outside of enclosures, except make connections to each electric basin heater with liquidtight conduit.

    a. Raceway shall be corrosion-resistant stainless steel or PVC coated steel.

2.8 PRESSURIZED DISTRIBUTION NETWORK

A. Main header and lateral branch piping designed for even distribution over fill and heat-exchanger coils throughout the entire flow range without the need for balancing valves and for connecting individual, easily removable, nonclogging spray nozzles.

B. Pipe Material: Schedule 40 PVC.

C. Spray Nozzle Material: Plastic, Polypropylene or PVC.

D. Piping Supports: Corrosion-resistant hangers and supports to resist movement during operation and shipment.

2.9 FILL

A. Materials: PVC, with maximum flame-spread index of 5 - 25 according to ASTM E84.

B. Minimum Thickness: 15 mils (0.4 mm) or 20 mils (0.5 mm) before forming.

C. Fabrication: Fill-type sheets, fabricated, formed, and bonded together after forming into removable assemblies that are factory installed by manufacturer.

D. Fill Material Operating Temperature: Suitable for entering-water temperatures up through 120 deg F (49 deg C).

E. Hardware: Galvanized or stainless steel.

2.10 HEAT-EXCHANGER COILS

A. Tube and Tube Sheet Materials: Copper tube with stainless-steel tube sheet, stainless-steel tube and tube sheet or carbon-steel tube and sheet with outer surface of tube and sheet hot-dip galvanized after fabrication.

B. Heat-Exchanger Arrangement:

1. Serpentine tubes, serpentine tubes with removable cover plate on inlet and outlet headers or straight tubes with removable header cover plate on both ends of heat exchanger for straight-through access to each tube; sloped for complete drainage of fluid by gravity.
2. Tubes with extended surface fins if required to achieve performance indicated.
3. Multiple Separate Circuits: Separate circuits to achieve multiple isolated loops as required by application.

C. ASME Compliance: Designed, manufactured, and tested according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, and bearing ASME "U" stamp; sloped for complete drainage of fluid by gravity.

D. Field Piping Connections: Vent, supply, and return suitable for mating to ASME B16.5, Class 150 flange.

2.11 DRIFT ELIMINATORS

A. Material: PVC with maximum flame-spread index of 5 - 25 according to ASTM E84.

B. UV Treatment: Inhibitors to protect against damage caused by UV radiation.

C. Arrangement: Multiple, easily removable sections.

D. Configuration: Multipass, designed and tested to reduce water carryover to 0.001 percent of design flow rate indicated.

E. Hardware: Galvanized or stainless steel.

2.12 AIR INLET

A. Air-Intake Louvers:

1. Material: PVC.
2. UV Treatment: Inhibitors to protect against damage caused by UV radiation.
3. Multiple, easily removable sections arranged to uniformly direct air into cooling tower, to minimize air resistance, to block direct sunlight, and to prevent water from splashing out of tower during all modes of operation including operation with fans off.

B. Removable Air-Intake Screens:

1. Galvanized, Polymer-coated, galvanized or Stainless steel wire mesh with openings of size sufficient to not restrict airflow or impact performance.
2. Segmented into manageable individual sections arranged to facilitate independent removal of each section without disturbing adjoining sections.

C. Hardware: Galvanized or stainless steel.

2.13 FAN AND DRIVE ASSEMBLY

A. Axial Fan: Balanced at the factory after assembly.

1. Blade Material: Aluminum, FRP or galvanized steel.
2. Hub Material: Aluminum, FRP or galvanized steel.
3. Blade Pitch: Field adjustable.
4. Fan Shaft: Corrosion resistant or Stainless steel.
5. Fan Shaft Bearings: Self-aligning ball or roller bearings with moisture-proof seals and premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C). Bearings designed for an L-10 life of 40,000, 50,000 or 100,000 hours, as directed.
6. Bearings Grease Fittings: Extended lubrication lines to an easily accessible location.
7. Automatic Bearing Greasing System:

    a. Manufacturer-designed system to provide an as-needed supply of new grease to bearings while reducing the need for periodic bearing maintenance and associated greasing problems.
    b. Easily replaceable storage container filled with recommended grease and located in an easily accessible location on cooling tower exterior. Container capacity of sufficient size to provide grease for one year.

B. Belt Drive:

1. Service Factor: 1.5 based on motor nameplate horsepower.
2. Sheaves: Fan and motor shafts shall have taper-lock sheaves fabricated from corrosion-resistant materials.
3. Belt: Multiple V-belt design with a matched set of cogged belts.

4. Belt: One-piece, multigrooved, solid-back belt.
5. Belt Material: Oil resistant, nonstatic conducting, and constructed of neoprene polyester cord.
6. Belt-Drive Guard: Comply with OSHA regulations.
7. Two-Motor, Single-Fan Drive:

    a. Two single-speed motors per fan, one sized for full speed and load and the other sized for 67 percent of full-load speed.
    b. Each motor shall have belt drive and be configured for operation when other motor fails.
    c. Controls and wiring same as two-speed, two-winding motor.

C. Direct Drive: Fan hub directly connected, and properly secured, to motor shaft.

D. Gear Drive: Right angle, reduced speed, and designed for cooling tower applications according to CTI STD 111. Motor and gear drive shall be aligned before shipment.

1. Gear Drive and Coupling Service Factor: 2.0 based on motor nameplate horsepower.
2. Housing: Cast iron, with epoxy or polyurethane finish, beveled high-strength steel gears continuously bathed in oil, and with lubrication to other internal parts at all operating speeds.
3. Mounting: Directly mounted to fan hub and connected to motor so motor shaft is in horizontal position.
4. Operation: Able to operate both forward and in reverse. Able to operate throughout entire speed range from design speed indicated down to 10 - 20 of design speed.
5. Drive-to-Motor Connection: Close coupled to motor using a flexible coupling.
6. Drive-to-Motor Connection: Connected to motor located outside of cooling tower casing by a full-floating drive shaft.
7. Drive Shaft Material: Corrosion resistant or Stainless steel and fitted with flexible couplings on both ends.
8. Drive Guards: Provide exposed shaft and couplings with guards according to OSHA regulations.
9. Extend oil fill, drain, and vent to outside of cooling tower casing using galvanized-steel or stainless-steel piping. Provide installation with oil-level sight glass.

E. Fan Motor:

1. Comply with NEMA MG 1 unless otherwise indicated.
2. Description: NEMA MG 1, Design B as required to comply with capacity and torque characteristics; medium induction motor.
3. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.
4. Motor Enclosure: Totally enclosed, Totally enclosed air-over (TEAO), Totally enclosed fan-cooled (TEFC) and with epoxy or polyurethane finish.
5. Rotor: Random-wound, squirrel cage.
6. Energy Efficiency: Comply with ASHRAE/IES 90.1 or NEMA Premium Efficient.
7. Service Factor: 1.15.
8. Temperature Rise: Match or One class lower than insulation rating.
9. Insulation: Class F or Class H.

10. Variable-Speed Motors: Inverter-duty rated per NEMA MG 1, Section IV, "Performance Standard Applying to All Machines," Part 31, "Definite-Purpose, Inverter-Fed, Polyphase Motors."
11. Motor Location: Mounted outside of cooling tower casing and cooling tower discharge airstream.
12. Severe-Duty Rating:

    a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
    b. Double-shielded, vacuum-degassed bearings lubricated with premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C).
    c. Internal Heater: Automatically energized when motor is de-energized.
    d. Complying with IEEE 841.

13. Motor Base: Adjustable, or other suitable provision for adjusting belt tension.
14. Motor Shaft Grounding: Motors shall be controlled through variable-frequency controllers with shaft grounding system to protect motor bearings from induced voltage. Drag on motor shaft due to shaft ground system shall be less than 0.5 percent of motor nameplate horsepower.

F. Hardware: Galvanized or stainless steel.

2.14 AIR DISCHARGE

A. Fan Discharge Stack:

1. Manufacturer's standard low-profile design.
2. Material: Material to match casing.
3. Stack Extension: Fabricated to extend above fan deck unless otherwise indicated.
4. Stack Termination: Wire-mesh, galvanized-steel, polymer-coated, galvanized-steel or stainless-steel screens; segmented into multiple removable pie sections and complying with OSHA regulations.

B. Discharge Hood:

1. Hood Configuration: Tapered or Straight; totally surrounding heat exchanger, pressurized distribution system and drift eliminators; constructed of same material as casing; and having factory-installed insulation and access doors.
2. Discharge Dampers: Positive-closure, automatic, isolation dampers constructed of aluminum, galvanized-steel or stainless-steel with corrosion-resistant linkages and electric actuators with NEMA 250, Type 4X enclosure.

    a. If not provided with factory controls, provide field power and controls to open dampers when pump is energized and close dampers when pump is de-energized.

3. Capacity-Control Dampers: Aluminum, Galvanized-steel or Stainless-steel dampers, with corrosion-resistant linkages, electric operator, controller, limit switches, transformer, and weatherproof enclosure.

a. If not provided with factory controls, provide field power and controls to operate dampers when pump is energized and close dampers when pump and fan is de-energized.

C. Hardware: Galvanized or stainless steel.

2.15 RECIRCULATING WATER DISTRIBUTION SYSTEM

A. Pump: Close-coupled, single-stage, bronze-fitted centrifugal pump; with mechanical seal and suitable for outdoor service. Factory install pump with the following:

1. Redundant Pump: Same performance as required for primary pump; easily switched and maintained while cooling tower remains operating.
2. Flanges at pump connections to piping.
3. Strainer, with blowdown isolation valve, installed in piping on suction side of pump.
4. Flow balancing valve in piping on discharge side of pump.

B. Pump Motor:

1. Comply with NEMA MG 1 unless otherwise indicated.
2. Description: NEMA MG 1, Design B as required to comply with capacity and torque characteristics; medium induction motor.
3. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.
4. Motor Enclosure: Totally enclosed with epoxy or polyurethane finish.
5. Rotor: Random-wound, squirrel cage.
6. Energy Efficiency: Comply with ASHRAE/IES 90.1 or NEMA Premium Efficient.
7. Service Factor: 1.15.
8. Temperature Rise: Match or One class lower than insulation rating.
9. Insulation: Class F or Class H.
10. Severe-Duty Rating:

    a. Rotor and stator protected with corrosion-inhibiting epoxy resin.
    b. Double-shielded, vacuum-degassed bearings lubricated with premium, moisture-resistant grease suitable for temperatures between minus 20 and plus 300 deg F (minus 29 and plus 149 deg C).
    c. Internal Heater: Automatically energized when motor is de-energized.
    d. Complying with IEEE 841.

C. Piping: Interconnecting collection basin to pump and pressurization distribution system.

1. Design delegated to manufacturer.
2. External to and supported from cooling tower casing and frame.
3. Material: Corrosion resistant or PVC.
4. Install flanges at connections to collection basin and pressurized distribution system.
5. Drain connection with isolation valve at piping low point if piping does not drain directly into collection basin.

D. Piping: Field installed for connection to remotely installed pump and water storage that are not furnished with cooling tower.

2.16 ELECTRICAL POWER

A. Factory Furnish for Field Installation: A disconnect switch, motor controller or variable-frequency controller for each fan motor and a disconnect switch or motor controller for each pump motor.

B. Factory Install: A disconnect switch, motor controller or variable-frequency controller for each fan motor and a disconnect switch or motor controller for each pump motor.

1. Locate in a convenient and field-accessible location within sight of motor.
2. Installation shall comply with NFPA 70.
3. Wire, Conduit, and Enclosures:

    a. Minimum Conduit Size: 0.75 inch (20 mm).
    b. Materials: Corrosion resistant and constructed of stainless steel or PVC coated steel.
    c. Motor Termination: Liquidtight conduit, not to exceed 36 inches (900 mm) long.
    d. Supports: Support conduits, boxes, and enclosures using corrosion-resistant fastening hardware constructed of stainless steel.
    e. Wire:

        1) Copper, rated for 600-V, solid wire for size No. 10 AWG size and smaller and stranded wire for larger sizes.
        2) Minimum Wire Size: No. 12 AWG.
        3) Each circuit shall have a ground wire.
        4) Install wire in conduit.

    f. Boxes, Condulets, and Enclosures: NEMA 250, Type 3R, Type 4 or Type 4X.

C. Disconnect Switches:

1. Specification Grade; "Heavy Duty Type"; "quick-make," "quick-break" construction.
2. Three pole, fused or nonfused.
3. 600-V rated.
4. Minimum short-circuit current rating (SCCR) shall be as required by electrical power distribution system, but not less than 42,000 - 65,000 A.
5. Enclosure: NEMA 250, Type 3R, Type 4 or Type 4X or Type 4X stainless steel.
6. Operating handle shall be of box-mounted type that directly drives switch mechanism.
7. Disconnect switch shall use a flange-operated visible blade that is close coupled to a vertical-lift-type handle that achieves a positive visible indication of disconnect with cover open or closed.
8. Disconnect switch shall have a defeatable, front-accessible, mechanical interlock to prevent opening of cover when switch is in "ON" position, and to prevent turning switch "ON" when the door is open.
9. Include a solid neutral as required by authorities having jurisdiction.
10. Include a ground lug for ground wire termination.
11. Operating handle shall be lockable in open position.

12. Horsepower rated.
13. Feed through or double lugged.

D. Motor Controllers:

1. NEMA ICS 2, Class A, full-voltage, non-reversing, motor-rated controller.
2. Configured for control of single- or multispeed motors as indicated.
3. Enclosure: NEMA 250, Type 3R, Type 4, Type 4X or Type 4X stainless steel Type, with hinged full-front access door with lock and key.
4. Externally Operated, Door-Interlocked Disconnect: Fused disconnect switch, Nonfused disconnect switch or Circuit breaker with lockable handle.
5. SCCR shall be as required by electrical power distribution system, but not less than 42,000 - 65,000 A.
6. Hand-Off-Auto Switch: Mounted on face of enclosure.
7. Push-to-Test Run Status Pilot Lights: NEMA ICS 2, heavy-duty type.
8. Control Relays: Time-delay relays.
9. Phase-Failure, Phase-Reversal, Undervoltage Relays: Solid-state sensing circuit with adjustable undervoltage setting and isolated output contacts for hardwired connection.
10. Elapsed-Time Meters: Numerical readout in hours on face of enclosure.
11. Number-of-Starts Counter: Numerical readout on face of enclosure.

E. Variable-Frequency Controllers:

1. Description: NEMA ICS 2; arranged to achieve motor variable speed by adjusting output voltage and frequency.
2. Enclosure: Unit mounted, NEMA 250, Type 3R, Type 4 or Type 4X or Type 4X stainless steel, with hinged full-front access door with lock and key.
3. Externally Operated, Door-Interlocked Disconnect: Fused disconnect switch, Nonfused disconnect switch or Circuit breaker with lockable handle.
4. Minimum SCCR: As required by electrical power distribution system, but not less than 42,000 - 65,000 A.
5. Technology: Pulse-width-modulated (PWM) output with insulated gate bipolar transistors (IGBT); suitable for variable torque loads.
6. Controller shall consist of a rectifier converter section, a digital/analog driver regulator section, and an inverter output section.
7. Output Rating: Three phase; with voltage proportional to frequency throughout voltage range.
8. Output signal shall be programmed to not cause mechanical vibration issues with fan drive assembly.
9. Operating Requirements:

    a. Input AC Voltage Tolerance: 10 percent.
    b. Input frequency tolerance of 60 Hz, plus or minus 2 Hz.
    c. Capable of driving full motor load, without derating.
    d. Minimum Efficiency: 96 percent at 60 Hz, full load.
    e. Minimum Displacement Primary-Side Power Factor: 95 percent.
    f. Overload Capability: 1.05 times the full-load current for 7 seconds.
    g. Starting Torque: As required by fan and motor drive assembly.
    h. Speed Regulation: 1 percent.
    i. Speed Range: 10:1 speed range.

j. To avoid equipment resonant vibrations, include critical speed lockout circuitry to allow bands of operating frequency at which controller shall not operate continuously.
k. Capable of being restarted into a motor coasting in either the forward or reverse direction without tripping.

10. Controller Adjustability Capabilities: Minimum and maximum output frequency, acceleration and deceleration, and current limit.
11. Self-Protection and Reliability Features: Subjecting the controller to any of the following conditions shall not result in component failure or the need for replacement:

a. Overtemperature.
b. Short circuit at controller output.
c. Ground fault at controller output. Variable-frequency controller shall be able to start a grounded motor.
d. Open circuit at controller output.
e. Input undervoltage.
f. Input overvoltage.
g. Loss of input phase.
h. Reverse phase.
i. AC line switching transients.
j. Instantaneous overload, line to line or line to ground.
k. Sustained overload exceeding 100 percent of controller rated current.
l. Starting a rotating motor.

12. Motor Protection: Controller shall protect motor against overvoltage and undervoltage, phase loss, reverse phase, overcurrent, overtemperature, and ground fault.
13. Automatic Reset and Restart:

a. Capable of multiple restarts after controller fault or on return of power after an interruption and before shutting down for manual reset or fault correction.
b. Capable of automatic restart on phase-loss and overvoltage and undervoltage trips.

14. Visual Indication: On face of controller; indicating the following conditions:

a. Power on.
b. Run.
c. Overcurrent and overvoltage.
d. Motor speed (percent).
e. Various faults with alarm status.
f. Input kilovolt amperes.
g. Power factor.
h. Input kilowatts and kilowatt-hours.
i. Three-phase input and output voltage.
j. Three-phase input and output current.
k. Output frequency.
l. Elapsed operating time (hours).
m. Diagnostic and service parameters.

15. Operator Interface: Start-stop and auto-manual selector with manual-speed-control potentiometer.

16. Control Signal Interface: A minimum of two analog inputs (0 to 10 V or 0/4 to 20 mA) and four programmable digital inputs.

2.17 CONTROLS

A. Vibration Switch: For each fan drive.

1. Enclosure: NEMA 250, Type 4 or Type 4X.
2. Vibration Detection: Sensor with a field-adjustable, acceleration-sensitivity set point in a range of 0 to 1 g and frequency range of 0 to 3000 cycles per minute. Cooling tower manufacturer shall recommend switch set point for proper operation and protection.
3. Switch shall have manual-reset button with hardwired connection to fan motor electrical circuit.
4. Switch shall have field connection for hardwired connection to control system.
5. Switch shall, on sensing excessive vibration, signal an alarm for connection to control system and shut down the fan.

B. Vibration Transmitter with Switch: For each fan drive.

1. Enclosure: NEMA 250, Type 4X.
2. Display: Local display of measured value, power, and alarm.
3. Vibration Detection: Sensor with a field-adjustable, acceleration-sensitivity set point.

    a. Cooling tower manufacturer shall select range that is suitable for cooling tower provided and recommend switch set point for proper operation and protection.

4. Transmitter: Continuous vibration level indication through a 4- to 20-mA signal for connection to control system.
5. Switch:

    a. Relay and switch with manual-reset button for field connection to control system and hardwired connection to fan motor electrical circuit.
    b. Switch shall, on sensing excessive vibration, signal an alarm to control system and shut down the fan.

6. Mounting: Locate out of cooling tower discharge airstream and mount in a location that is accessible and where display is easily viewable.
7. Field Electrical Connection Requirements: 120 V, single phase, 60 Hz.

C. Gear-Drive, Oil-Level Switch: Low-oil-level warning switch for connection to control system.

1. Switch shall, on reaching a low-oil-level set point recommended by cooling tower manufacturer, signal an alarm through control system.

2.18 WATER TREATMENT

A. Chemical-Free Water Treatment System: Complete factory-installed system consisting of the following:

1. Pulsed-power technology emitting high-frequency bursts of low energy electromagnetic fields to the recirculated water to control corrosion, bacteria, and scale.
2. Conductivity control of electrically operated valve designed to control totally dissolved solids levels and bleed rates.
3. Piping associated with system.
4. Interconnecting power and control wiring installed in corrosion-resistant metal raceway.

B. Chemical Water Treatment System: Complete factory-installed system consisting of the following:

1. Microprocessor-controlled conductivity controller housed in a NEMA 250, Type 4X enclosure.
2. Chemical metering pump housed in a NEMA 250, Type 4X enclosure.
3. Electrically operated valve designed to control totally dissolved solids levels and bleed rates.
4. Piping associated with system.
5. Interconnecting power and control wiring installed in corrosion-resistant metal raceway.

2.19 CAPACITIES AND CHARACTERISTICS

A. Number of Cells: As directed.

B. Air-Inlet Arrangement: One, two or all sides.

C. Maximum Drift Loss: 0.001 percent of design water flow.

D. Heat Exchanger:

1. Fluid Type: Water.
2. Fluid Flow per Cell: As directed, gpm (L/s).
3. Minimum Fluid Flow per Cell: As directed, gpm (L/s).
4. Fluid Pressure Drop: As directed, psig (kPa).
5. Fluid Pressure Rating: As directed, psig (kPa).
6. Entering-Fluid Temperature: As directed, deg F (deg C).
7. Leaving-Fluid Temperature: As directed, deg F (deg C).
8. Entering-Air Wet-Bulb Temperature: As directed, deg F (deg C).
9. Airflow per Cell: As directed, cfm (L/s).

E. Economizer-Mode Performance:

1. Fluid Flow per Cell: As directed, gpm (L/s).
2. Entering-Fluid Temperature: As directed, deg F (deg C).
3. Leaving-Fluid Temperature: As directed, deg F (deg C).
4. Entering-Air Wet-Bulb Temperature: As directed, deg F (deg C).

F. Fan Drive Assembly:

1. Type: Belt, direct or gear.
2. Fan Motor:

a. Type: Single speed, Two speed, single winding, Two speed, two winding or Variable speed.
b. Motor Size per Cell: As directed, hp.
c. Full-Load Ampacity: As directed.
d. Minimum Circuit Ampacity: As directed.
e. Maximum Overcurrent Protection Device: As directed.
f. Electrical Characteristics: 208, 240 or 480V ac, 3 phase, 60 Hz.

G. Pump and Motor:

1. Water Flow per Cell: As directed, gpm (L/s).
2. Motor Size per Cell: As directed, hp.
3. Full-Load Ampacity: As directed.
4. Minimum Circuit Ampacity: As directed.
5. Maximum Overcurrent Protection Device: As directed.
6. Electrical Characteristics: 120, 208, 240, 277 or 480V ac, single or 3 phase, 60 Hz.

H. Sound Pressure Level: dBA, as directed feet (m) when measured according to CTI ATC 128.

I. Collection Basin Heater:

1. Basin Water Temperature: 40 deg F (5 deg C).
2. Outdoor Ambient Temperature: 0 deg F (Minus 18 deg C) or Minus 20 deg F (Minus 29 deg C).
3. Capacity per Cell: As directed.
4. Full-Load Ampacity: As directed.
5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection Device: As directed.
7. Electrical Characteristics: 208, 240 or 480V ac, 3 phase, 60 Hz.

2.20 SOURCE QUALITY CONTROL

A. Performance Test: Factory test and certify cooling tower performance according to CTI STD 201RS, "Standard for the Certification of Water-Cooling Tower Thermal Performance."

B. Seismic Performance Testing: Shake table tested by an independent or a factory-certified laboratory to certify performance complies with seismic requirements indicated.

C. Factory Functional Tests:

1. Test collection and distribution basins after assembly and prove free of leaks.
2. Test factory-installed electric/electronic water-level controls for proper operation.
3. Test factory-installed electric basin heaters for proper operation.
4. Test factory-installed fan and drive assemblies for proper operation.

D. Heat-Exchanger Factory Pressure and Leak Tests:

1. Pneumatically test heat-exchanger assembly while submerged underwater and prove to be free of leaks.

2. Test pressure equal to 1.5 times rated pressured, but not less than (As directed) psig (kPa).
3. Submit report documenting test and results.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine cooling towers before installation. Reject cooling towers that are damaged.

B. Install cooling towers on support structure.

C. Equipment Mounting:

1. Install cooling towers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

D. Install anchor bolts to elevations required for proper attachment to supported equipment.

E. Maintain manufacturer's recommended clearances for service and maintenance.

F. Maintain clearances required by governing code.

3.2 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to cooling towers, allow space for service and maintenance.

C. Install flexible pipe connectors at pipe connections of cooling towers mounted on vibration isolators.

D. Connect cooling tower overflows and drains, and piping drains, to sanitary sewage system.

E. Makeup-Water Piping:

1. Comply with applicable requirements in Section 221116 "Domestic Water Piping."
2. Connect to makeup-water connections with shutoff valve, plugged tee with pressure gage, flow meter, and drain connection with valve and union.

F. Supply and Return Piping:

1. Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."
2. Connect to entering cooling tower connections with shutoff valve, strainer, balancing valve, thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve.
3. Connect to leaving cooling tower connection with shutoff valve thermometer, plugged tee with full port ball valve for portable field instruments, and drain connection with valve.
4. Make connections to cooling tower with a flange.

3.3 ELECTRICAL POWER CONNECTIONS

A. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for wiring connections.

B. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems" for grounding connections.

C. Install nameplate for each electrical connection indicating electrical equipment designation and circuit number feeding connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 1/2 inch (13 mm) high. Locate nameplate where easily visible.

3.4 CONTROLS CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between cooling towers and other equipment to interlock operation as required to achieve a complete and functioning system.

3.5 FIELD TESTING PROVISIONS

A. Include provisions for cooling tower future field-performance testing complying with ASME PTC 23 or CTI ATC 105.

B. Include provisions in field piping for future field-performance testing complying with ASME PTC 23 or CTI ATC 105.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform tests and inspections with the assistance of a factory-authorized service representative.

D. Tests and Inspections: Comply with ASME PTC 23 or CTI ATC 105.

E. Cooling towers will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports.

3.7 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform or Perform startup service.

B. Inspect field-assembled components, equipment installation, and piping; controls; and electrical connections for proper assemblies, installations, and connections.

C. Obtain performance data from manufacturer.

1. Complete installation and startup checks according to manufacturer's written instructions and perform the following:

a. Clean entire unit including basins.
b. Verify that accessories are properly installed.
c. Verify clearances for airflow and for cooling tower servicing.
d. Check for vibration isolation and structural support.
e. Lubricate bearings.
f. Verify fan rotation for correct direction and for vibration or binding and correct problems.
g. Verify pump rotation for correct direction, vibration, cavitation and flow and correct problems.
h. Adjust belts to proper alignment and tension.
i. Operate variable-speed fans through entire operating range and check for harmonic vibration imbalance. Set motor controller to skip speeds resulting in abnormal vibration.
j. Check vibration switch setting. Verify operation.
k. Verify water level in tower basin. Fill to proper startup level. Check makeup-water-level control and valve.
l. Verify operation of basin heater and control.
m. Verify that cooling tower air discharge is not recirculating air into tower or HVAC air intakes. Recommend corrective action.
n. Replace defective and malfunctioning units.

D. Start cooling tower and associated water pumps. Follow manufacturer's written starting procedures.

E. Prepare a written startup report that records the results of tests and inspections.

3.8 ADJUSTING

A. Set and balance water flow to each tower inlet.

B. Adjust water-level control for proper operating level.

C. Adjust basin heater control for proper operating set point.

3.9 DEMONSTRATION

A. Engage a factory-authorized service representative to train or train Owner's maintenance personnel to adjust, operate, and maintain cooling towers.

END OF SECTION 236514.17

SECTION 237213 - HEAT WHEEL AIR-TO-AIR ENERGY RECOVERY UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes heat wheels.

B. Related Requirements:

1. Section 233119 "HVAC Casings" for customized housings used for air-to-air energy recovery units.
2. Section 237313.19 "Indoor, Custom Air-Handling Units" for custom housings used for air-to-air energy recovery units.
3. Section 237343.19 "Outdoor, Custom Air-Handling Units" for custom housings used for air-to-air energy recovery units.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For air-to-air energy recovery equipment.

1. Include plans, elevations, sections, details, and mounting or attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

D. Delegated-Design Submittal: For air-to-air energy recovery equipment indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, elevations, and other details, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Seismic Qualification Data: Certificates, for air-to-air energy recovery equipment, accessories, and components, from manufacturer.

C. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of air-to-air energy recovery equipment that fail in materials or workmanship within specified warranty period.

1. As directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of unit components.

C. ASHRAE Compliance:

1. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
2. Capacity ratings for air-to-air energy recovery equipment shall comply with ASHRAE 84, "Method of Testing Air-to-Air Heat/Energy Exchangers."

D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

E. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design vibration isolation and seismic restraints, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

F. Seismic Performance: Air-to-air energy recovery equipment shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: 1.5 - 1.0.

2.2 CAPACITIES AND CHARACTERISTICS

A. Exhaust Air:

1. Airflow: As directed, cfm (L/s).
2. Face Velocity: As directed, fpm (m/s).
3. Summer:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

4. Winter:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

5. Air Pressure Drop: As directed, inches wg (Pa).

B. Supply Air:

1. Airflow: As directed, cfm (L/s).
2. Face Velocity: As directed, fpm (m/s).
3. Summer:

    a. Entering-Air Temperature, Dry Bulb:). As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb:). As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

4. Winter:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

5. Air Pressure Drop: As directed, inches wg (Pa).

C. Wheel Drive:

1. Motor Size: As directed.
2. Motor Electrical Characteristics: As directed.

    a. Volts: 120, 208 or 230V.
    b. Phase: Single or Three.
    c. Hertz: 60 Hz.

D. Effectiveness: As directed.

2.3 MANUFACTURERS

2.4 HEAT WHEELS

A. Casing:

1. Galvanized steel, stainless steel, or aluminum with standard factory finish.
2. Integral purge section limiting carryover of exhaust air to between 0.05 percent at 1.6-inch wg and 0.20 percent at 4-inch wg (0.05 percent at 400-Pa and 0.20 percent at 1000-Pa) differential pressure.
3. Casing seals on periphery of rotor and on duct divider and purge section.
4. Support vertical rotors on grease-lubricated ball bearings having extended grease fittings or permanently lubricated bearings with an L-10, 400,000 hours. Support horizontal rotors on tapered roller bearing.

B. Rotor: Aluminum or polymer segmented wheel strengthened with radial spokes, with nontoxic, noncorrosive, silica-gel desiccant coating.

C. Rotor: Aluminum, metallic, or polymer segmented wheel strengthened with radial spokes impregnated with nonmigrating, water-selective, 3-angstrom, molecular-sieve desiccant coating.

D. Drive: Fractional horsepower motor and gear reducer, with speed changed by variable-frequency controller and self-adjusting multilink belt around outside of rotor.

1. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
2. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

E. Controls:

1. Starting relay, factory mounted and wired, and manual motor starter for field wiring.
2. Variable-Frequency Controller: Factory mounted and wired, permitting input of field-connected 4- to 20-mA or 1- to 10-V control signal.
3. Variable-Frequency Controller with Exhaust-Air Sensor: Factory mounted and wired, with exhaust-air sensor to vary rotor speed and maintain exhaust temperature above freezing.
4. Variable-Frequency Controller with Exhaust- and Outdoor-Air Sensors: Factory mounted and wired, with exhaust- and outdoor-air sensors, automatic changeover thermostat and set-point adjuster, to vary rotor speed and maintain exhaust temperature above freezing and air differential temperature above set point. Rotor speed shall increase to maximum when exhaust-air temperature is less than outdoor-air temperature.
5. Pilot-Light Indicator: Display rotor rotation and speed.
6. Speed Settings: Adjustable settings for maximum and minimum rotor speed limits.

2.5 SOURCE QUALITY CONTROL

A. AHRI 1060 Certification: Testing according to AHRI 1060 and listed and labeled by AHRI.

PART 3 - EXECUTION

3.1 INSTALLATION OF HEAT WHEELS

A. Examine roughing-in for electrical services to verify actual locations of connections before installation.

B. Install heat wheels so supply and exhaust airstreams flow in opposite directions and rotation is away from exhaust side to purge section to supply side.

1. Install access doors in both supply and exhaust ducts, both upstream and downstream, for access to wheel surfaces, drive motor, and seals.
2. Install removable panels or access doors between supply and exhaust ducts on building side for bypass during startup.
3. Access doors and panels are specified in Section 233300 "Air Duct Accessories."

C. Install floor-mounted units on 4-inch- (100-mm-) high concrete base designed to withstand, without damage to equipment, seismic force required by code.

D. Equipment Mounting:

1. Install air-to-air energy recovery equipment on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."

E. Install seismic restraints according to manufacturers' written instructions.

F. Suspended Units: Suspend and brace units from structural-steel support frame using threaded steel rods and spring hangers. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."

G. Install units with clearances for service and maintenance.

H. Comply with requirements for ductwork specified in Section 233113 "Metal Ducts."

3.2 PIPING CONNECTIONS

A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to unit, allow space for service and maintenance.

C. Connect piping to units mounted on vibration isolators with flexible connectors.

D. Condensate Drain Piping: Pipe drains from drain pans to nearest floor drain; use ASTM B88, Type L (ASTM B88M, Type B), drawn-temper copper water tubing with soldered joints, same size as condensate drain connection.

E. Condensate Drain Piping: Pipe drains from drain pans to nearest floor drain; use ASTM D1785, Schedule 40 PVC pipe and solvent-welded fittings, same size as condensate drain connection.

F. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.

3.3 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.

D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.4 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
2. Adjust seals and purge.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
4. Set initial temperature and humidity set points.
5. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

D. Air-to-air energy recovery equipment will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train or train Owner's maintenance personnel to adjust, operate, and maintain air-to-air energy recovery units.

END OF SECTION 237213

SECTION 237216 - HEAT PIPE AIR-TO-AIR ENERGY RECOVERY UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes heat-pipe heat exchangers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For air-to-air energy recovery equipment.

1. Include plans, elevations, sections, and mounting or attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

D. Delegated-Design Submittal: For air-to-air energy recovery equipment indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of air-to-air energy recovery equipment.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, elevations, and other details, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Seismic Qualification Data: Certificates, for air-to-air energy recovery equipment, accessories, and components, from manufacturer.

C. Field quality-control reports.

D. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of air-to-air energy recovery equipment that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Heat Pipe Energy Recovery Equipment: Two years.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. NPFA Compliance: Comply with NFPA 90A for design, fabrication, and installation of unit components.

C. ASHRAE Compliance:

1. Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
2. Capacity ratings for air-to-air energy recovery equipment shall comply with ASHRAE 84, "Method of Testing Air-to-Air Heat/Energy Exchangers."

D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

E. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to detail fabrication and assembly of air-to-air energy recovery equipment.

F. Seismic Performance: Air-to-air energy recovery equipment shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: 1.5 - 1.0.

2.2 CAPACITIES AND CHARACTERISTICS

A. Exhaust Air:

1. Airflow: As directed, cfm (L/s).
2. Face Velocity: As directed, fpm (m/s).
3. Summer:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

4. Winter:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

5. Air Pressure Drop: As directed, inches wg (Pa).

B. Supply Air:

1. Airflow: As directed, cfm (L/s).
2. Face Velocity: As directed, fpm (m/s).
3. Summer:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

4. Winter:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

5. Air Pressure Drop: As directed, inches wg (Pa).

C. Tilt Motor:

1. Horsepower: As directed, hp.
2. Electrical Characteristics:

    a. Volts: As directed, V.
    b. Phase: As directed.
    c. Hertz: 60 Hz.

D. Effectiveness: As directed.

2.3 HEAT-PIPE HEAT EXCHANGERS

A. Casing: Galvanized or Stainless steel flanged casing, with airtight single or double partition between airstreams.

B. Refrigerant: ASHRAE 34, Safety Group 1.

C. Tubes:

1. Tube Diameter: As directed, diameter.
2. Tube Material: Aluminum or Copper.
3. Number of Tube Rows: As required to meet scheduled capacity conditions.

D. Fins: As directed.

1. Fin Spacing: As required to meet scheduled capacity conditions.
2. Fin and Tube Joint: Mechanical bond or Silver brazed.

E. Coating: None, Flexible epoxy polymer e-coating or Baked phenolic; apply to supply and exhaust.

F. Control: Integral plenum containing heat-pipe coil and gasketed, face-and-bypass, opposed-blade dampers with rods extended outside casing for damper operator and linkage.

G. Control: Pivot center of bottom of heat-pipe coil on shaft and bearings to tilt coil. Include tilt controls with electronic controller, electric actuator and linkage, thermostats, sensors, and polyester fabric with PVC-coated flexible connector for automatic supply temperature regulation, summer/winter changeover, and frost protection.

2.4 SOURCE QUALITY CONTROL

A. AHRI Certification: Certified according to AHRI 410.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install heat-pipe heat exchangers so supply and exhaust airstreams flow in opposite directions. Install flexible connectors on ducts to enable tilt control; make connections airtight and with slack to compensate for full tilt.

1. Install heat exchanger with clearance space for heat-pipe coil removal.
2. Install duct access doors in both supply and exhaust ducts, both upstream and downstream, for access to both sides of heat-pipe coil. Access doors and panels are specified in Section 233300 "Air Duct Accessories."
3. Install tilt-control components, including electronic controller, electric actuator and linkage, thermostats, and sensors.

B. Install floor-mounted units on 4-inch- (100-mm) high, concrete base designed to withstand, without damage to equipment, seismic force required by code.

C. Equipment Mounting:

1. Install air-to-air energy recovery equipment on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."

D. Install seismic restraints according to manufacturers' written instructions.

E. Install units with clearances for service and maintenance.

3.2 PIPING CONNECTIONS

A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to unit, allow space for service and maintenance.

C. Connect piping to units mounted on vibration isolators with flexible connectors.

D. Condensate Drain Piping: Pipe drains from drain pans to nearest floor drain; use ASTM B88, Type L (ASTM B88M, Type B), drawn-temper copper water tubing with soldered joints, same size as condensate drain connection.

E. Condensate Drain Piping: Pipe drains from drain pans to nearest floor drain; use ASTM D1785, Schedule 40 PVC pipe and solvent-welded fittings, same size as condensate drain connection.

F. Condensate Drain Piping Installation: Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.

3.3 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260529 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install electrical devices furnished with units, but not factory mounted, according to NFPA 70 and NECA 1.

D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."

2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.4 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper tilt control and unit operation.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

D. Air-to-air energy recovery equipment will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.6 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform or Perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. Verify that shipping, blocking, and bracing are removed.
3. Verify that unit is secure on mountings and supporting devices and that connections to electrical systems are complete. Verify that proper thermal-overload protection is installed.
4. Verify tilt mechanism operation.
5. Verify that moving parts are lubricated with factory-recommended lubricants.

B. Starting procedures for air-handling units include the following:

1. Energize actuator motor and verify proper operation of motor and tilt system.
2. Measure and record motor electrical values for voltage and amperage.
3. Operate bypass dampers from full closed to fully open position.

3.7 ADJUSTING

A. Adjust tilt mechanism for proper operation.

B. Adjust bypass dampers for proper operation.

C. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.

3.8 CLEANING

A. After completing system installation and testing, adjusting, and balancing air-to-air heat recovery unit, and after completing startup service, clean unit to remove foreign material and construction dirt and dust.

3.9 DEMONSTRATION

A. Engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain heat pipe air-to-air energy recovery units.

END OF SECTION 237216

SECTION 237219 - FIXED PLATE AIR-TO-AIR ENERGY RECOVERY UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes fixed-plate, sensible and total, heat exchangers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For air-to-air energy recovery equipment.

1. Include plans, elevations, sections, and mounting or attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

D. Delegated-Design Submittal: For air-to-air energy recovery equipment indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of air-to-air energy recovery equipment.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, elevations, and other details, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Seismic Qualification Data: Certificates, for air-to-air energy recovery equipment, accessories, and components, from manufacturer.

C. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of air-to-air energy recovery equipment that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Fixed-Plate Total Heat Exchangers: 10 years.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of unit components.

C. ASHRAE Compliance:

1. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
2. Capacity ratings for air-to-air energy recovery equipment shall comply with ASHRAE 84, "Method of Testing Air-to-Air Heat/Energy Exchangers."

D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

E. Comply with ASTM E84 or UL 723.

F. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to detail fabrication and assembly of air-to-air energy recovery equipment.

G. Seismic Performance: Air-to-air energy recovery equipment shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: 1.5 - 1.0.

2.2 CAPACITIES AND CHARACTERISTICS

A. Type: Fixed-plate sensible or total heat exchanger.

B. Exhaust Air:

1. Airflow: As directed, cfm (L/s).

2. Face Velocity: As directed, fpm (m/s).
3. Summer:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

4. Winter:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

5. Air Pressure Drop: As directed, inches wg (Pa).

C. Supply Air:

1. Airflow: As directed, cfm (L/s).
2. Face Velocity: As directed, fpm (m/s).
3. Summer:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

4. Winter:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

5. Air Pressure Drop: As directed, inches wg (Pa).

D. Effectiveness: As directed.

2.3 FIXED-PLATE SENSIBLE HEAT EXCHANGERS

A. Casing: Aluminum or Galvanized steel with duct collars.

B. Plates: Evenly spaced, sealed, and arranged for counter or cross airflow.

1. Plate Material: Embossed aluminum, Stainless steel or High-density plastic.
2. Plate Coating: None or Epoxy.

C. Bypass Plenum: Within casing, with gasketed face-and-bypass dampers having operating rods extended outside casing.

D. Maximum Differential Pressure: Suitable for maximum 6-inch wg (1500 Pa).

E. Maximum Temperature: Suitable for maximum 194 deg F (90 deg C).

F. Water Wash: Automatic system, with spray manifold to individual spray tubes or traversing type with stainless-steel-screw operating mechanism and electric motor drive; activated by time clock, with detergent injection.

2.4 FIXED-PLATE TOTAL HEAT EXCHANGERS

A. Casing: Aluminum or Galvanized steel.

B. Drain Pan: Same material as casing, with drain connections on exhaust and supply side or Molded ABS covering bottom of case, with drain connections on exhaust and supply side.

1. Comply with requirements in ASHRAE 62.1.

C. Plates: Evenly spaced, sealed, and arranged for counter airflow.

1. Plate Material and Coating: Chemically treated paper, or polymer on aluminum, with selective hydroscopicity, moisture permeability, and gas barrier properties.

D. Bypass Plenum: Within casing, with gasketed face-and-bypass dampers having operating rods extended outside casing.

E. Maximum Differential Pressure: Suitable for maximum 6-inch wg (1500 Pa).

F. Maximum Temperature: Suitable for maximum 194 deg F (90 deg C).

2.5 SOURCE QUALITY CONTROL

A. AHRI 1060 Certification: Certified according to AHRI 1060.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install fixed-plate heat exchangers so supply and exhaust airstreams flow in opposite directions.

1. Install duct access doors in both supply and exhaust ducts, both upstream and downstream, for access to heat exchanger. Access doors and panels are specified in Section 233300 "Air Duct Accessories."

B. Install floor-mounted units on 4-inch (100-mm) high, concrete base designed to withstand, without damage to equipment, seismic force required by code.

C. Equipment Mounting:

1. Install air-to-air energy recovery equipment on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."

D. Install seismic restraints according to manufacturers' written instructions.

E. Install units with clearances for service and maintenance.

F. Comply with requirements for ductwork specified in Section 233113 "Metal Ducts."

G. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.

3.2 PIPING CONNECTIONS

A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to unit, allow space for service and maintenance.

C. Connect piping to units mounted on vibration isolators with flexible connectors.

D. Condensate Drain Piping: Pipe drains from drain pans to nearest floor drain; use ASTM B88, Type L (ASTM B88M, Type B), drawn-temper copper water tubing with soldered joints, same size as condensate drain connection.

E. Condensate Drain Piping: Pipe drains from drain pans to nearest floor drain; use ASTM D1785, Schedule 40 PVC pipe and solvent-welded fittings, same size as condensate drain connection.

F. Condensate Drain Piping Installation: Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.

3.3 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260529 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 250526 "Grounding and Bonding for Electrical Systems."

C. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.

D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."

2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.4 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper water wash control and unit operation.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

D. Air-to-air energy recovery equipment will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.6 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform or Perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. Verify that shipping, blocking, and bracing are removed.
3. Verify that unit is secure on mountings and supporting devices and that connections to electrical systems are complete. Verify that proper thermal-overload protection is installed.
4. Verify water wash mechanism operation.

B. Starting procedures for air-handling units include the following:

1. Energize water wash motor and verify proper operation of motor and water wash system.
2. Measure and record motor electrical values for voltage and amperage.

3.7 CLEANING

A. After completing system installation and testing, adjusting, and balancing air-to-air heat recovery unit, and after completing startup service, clean unit to remove foreign material and construction dirt and dust.

3.8 DEMONSTRATION

A. Engage a factory-authorized service representative to train or train Owner's maintenance personnel to adjust, operate, and maintain fixed-plate air-to-air energy recovery units.

END OF SECTION 237219

SECTION 237223.13 - PACKAGED INDOOR HEAT WHEEL ENERGY RECOVERY UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Heat wheels in packaged energy-recovery units.

B. Related Requirements:

1. Section 237313.16 "Indoor, Semi-Custom Air-Handling Units" for indoor, semi-custom air-handling units if they also include coils, other than electric coils for frost control, in addition to heat wheels.
2. Section 237313.19 "Indoor, Custom Air-Handling Units" for indoor, custom air-handling units if they also include coils, other than electric coils for frost control, in addition to heat wheels.
3. Section 237343.16 "Outdoor, Semi-Custom Air-Handling Units" for outdoor, semi-custom air-handling units if they also include coils, other than electric coils for frost control, in addition to heat wheels.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For air-to-air energy recovery equipment.

1. Include plans, elevations, sections, details, and mounting or attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

D. Delegated-Design Submittal: For air-to-air energy-recovery equipment indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of air-to-air energy-recovery equipment.
2. Vibration-Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
3. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration-isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, elevations, and other details, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Seismic Qualification Data: Certificates, for air-to-air energy-recovery equipment, accessories, and components, from manufacturer.

C. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of packaged, indoor, heat wheel energy-recovery units that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Packaged Energy-Recovery Units: Two years.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.

B. ASHRAE Compliance:

1. Applicable requirements in ASHRAE 62.1.
2. Capacity ratings for air-to-air energy-recovery equipment shall comply with ASHRAE 84.

C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1.

D. UL Compliance:

1. Packaged heat-recovery ventilators shall comply with requirements in UL 1812 or UL 1815.
2. Electric coils shall comply with requirements in UL 1995.

E. Comply with ASTM E84 or UL 723.

F. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design vibration-isolation controls and seismic restraints, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

G. Seismic Performance: Packaged, indoor, heat wheel energy-recovery units shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: 1.5 - 1.0.

2.2 CAPACITIES AND CHARACTERISTICS

A. Exhaust Air:

1. Airflow: As directed, cfm (L/s).
2. Face Velocity: As directed, fpm (m/s).
3. Summer:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

4. Winter:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

5. Air Pressure Drop: As directed, inches wg (Pa).
6. Fan Motor Size: As directed, horsepower (watts).
7. Fan Motor Electrical Characteristics:

    a. Volts: 120, 208 or 230 V.
    b. Phase: Single or Three.
    c. Hertz: 60.

B. Supply Air:

1. Airflow: As directed, cfm (L/s).
2. Face Velocity: As directed, fpm (m/s).
3. Summer:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).

b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

4. Winter:

a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

5. Air Pressure Drop: As directed, inches wg (Pa).
6. Fan Motor Size: As directed, horsepower (watts).
7. Fan Motor Electrical Characteristics:

a. Volts: 120, 208 or 230 V.
b. Phase: Single or Three.
c. Hertz: 60.

C. Wheel Drive:

1. Motor Size: As directed, horsepower (watts).
2. Motor Electrical Characteristics:

a. Volts: 120, 208 or 230.
b. Phase: Single or Three.
c. Hertz: 60.

D. Effectiveness: As directed, percent.

E. Electric Frost-Control Coils:

1. Heat-Transfer Rate: As directed, Btu/h (kW).
2. Entering-Air Temperature: As directed, deg F (deg C).
3. Leaving-Air Temperature: As directed, deg F (deg C).
4. Power Input: As directed, Kw.
5. Volts: As directed, V.
6. Phase: Single or Three.
7. Hertz: 60.
8. Full-Load Amperes: As directed, A.
9. Maximum Overcurrent Protection: As directed, A.
10. Capacity Control Number of Steps: As directed.

F. Filters:

1. Type: Flat, nonpleated or pleated.
2. Face Dimensions, each: As directed, inches by inches (mm by mm).
3. Depth: As directed, inches (mm).
4. Number of Filters, Wide by High: As directed, inches by inches (mm by mm).
5. Maximum or Rated Face Velocity: As directed, fpm (m/s).
6. Initial Resistance: As directed, inches wg (Pa).

7. Recommended Final Resistance: As directed, inches wg (Pa).
8. Minimum Efficiency Reporting Value and Average Arrestance:

    a. MERV Rating: MERV 1, MERV 2, MERV 3 and MERV 4]and corresponding average arrestance according to ASHRAE 52.2.

9. Minimum Efficiency Reporting Value:

    a. MERV Rating: MERV 6 or MERV 13 according to ASHRAE 52.2.

2.3 PACKAGED, INDOOR, HEAT WHEEL ENERGY-RECOVERY UNITS

A. Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Housing: Manufacturer's standard construction with corrosion-protection coating and exterior finish, gasketed, hinged access doors or removable panels with neoprene gaskets for inspection and access to internal parts, minimum (1- (25) – (2- (50-) inch- (mm-) thick, thermal insulation, knockouts for electrical connections, exterior drain connection, and lifting lugs.

C. Heat Wheel:

1. Casing:

    a. Manufacturer's standard construction with standard factory finish.
    b. Slide-in, slide-out cassette style for easy access.
    c. Integral purge section, limiting carryover of exhaust air to between percent at (as directed) inch (Pa) and percent at (as directed) inch (Pa) differential pressure.
    d. Casing seals on periphery of rotor and on duct divider and purge section.
    e. Support vertical rotors on grease-lubricated ball bearings having extended grease fittings or permanently lubricated bearings with an L-50 of 200,000 hours. Support horizontal rotors on tapered roller bearing.

2. Rotor: Aluminum or polymer segmented wheel, strengthened with radial spokes.
3. Rotor: Aluminum or polymer segmented wheel, strengthened with radial spokes, with nontoxic, noncorrosive, silica-gel coating.
4. Rotor: Aluminum, metallic, or polymer segmented wheel, strengthened with radial spokes impregnated with nonmigrating, water-selective, four-angstrom, molecular-sieve desiccant coating.
5. Drive: Fractional horsepower motor and gear reducer, with speed changed by variable-frequency motor controller and self-adjusting multilink belt around outside of rotor.

    a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
    b. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

D. Supply and Exhaust Fans: Forward-curved, centrifugal fan with spring isolators of restrained, spring isolators of 1- (25-) inch (mm) static deflection, as directed.

1. Motor and Drive: Direct driven or Belt driven with adjustable sheaves; motor mounted on adjustable base, with speed changed by variable-frequency motor controller.
2. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
3. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

E. Filters:

1. Particulate air filtration is specified in Section 234100 "Particulate Air Filtration."

F. Filters:

1. Description: Flat, nonpleated or Pleated factory-fabricated, self-supported, disposable air filters with holding frames.
2. UL Compliance: Comply with UL 900.
3. Media: Interlaced glass fibers sprayed with nonflammable adhesive and antimicrobial agent.
4. Filter Media Frame: Beverage board with perforated metal retainer or metal grid on outlet side.
5. Filter-Mounting Frames: Arranged with access doors or panels on both sides of unit. Filters shall be removable from one side or lift out from access plenum.

G. Electric Coils:

1. Casing Assembly: Slip-in or Flanged type with galvanized-steel frame.
2. Access: Fabricate coil section to allow removal and replacement of coil and to allow in-place access for service.
3. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame.
4. Overtemperature Protection: Disk-type, automatically resetting, thermal-cutout safety device; serviceable through terminal box without removing heater from coil section.
5. Secondary Protection: Load-carrying, manually resetting or manually replaceable thermal cutouts; factory wired in series with each heater stage.
6. Control Panel: Unit or Remote mounted with disconnecting means and overcurrent protection.

    a. Magnetic contactor.
    b. Solid-state, stepless SCR controller or Step controller.
    c. Time-delay relay.
    d. Pilot lights

        1) One per step for step-controlled coils.

    e. Airflow proving switch.

H. Wiring: Fabricate units with space within housing for electrical conduits. Wire motors and controls, so only external connections are required during installation.

1. Indoor Enclosure: NEMA 250, Type 12 enclosure contains relays, starters, and terminal strip.
2. Include fused or nonfused disconnect switches.

2.4 CONTROLS

A. Control Panel: Solid-state, programmable, microprocessor-based control unit for wall mounting. Integrate to BACnet, LonWorks, or Modbus, as specified in Section 230923 "Direct Digital Control (DDC) System for HVAC".

B. Starting relay, factory mounted and wired, and manual motor starter for field wiring.

C. Frost Control: Electric preheat or Variable rotor speed.

D. Motion (Occupancy) Sensor: Passive infrared sensor for wall or ceiling mounting, with adjustable time-off delay of up to 30 minutes to energize unit.

E. Carbon Dioxide Sensor: Adjustable control from 600 to 2000 ppm for wall or duct mounting, with digital display and computer/building management system interface to energize unit.

F. Economizer Control: Stop wheel rotation or modulate wheel rotation when conditions are favorable for economizer operation.

G. Economizer Control: Heat wheel airflow bypass. See Section 230923 "Direct Digital Control (DDC) System for HVAC" for control sequence.

H. Dry-bulb temperature or Enthalpy sensor.

I. Rotation sensor and alarm.

J. Dirty filter switch.

K. Low-Voltage Transformer: Integral transformer to provide control voltage to unit from primary incoming electrical service.

L. Electric Coil Controls:

1. Factory-mounted sensor in outside-air intake with sensor adjustment located in control panel to control electric coil and maintain minimum entering temperature, to avoid frost formation.

M. Variable-Frequency Motor Controller: Comply with Section 262923 "Variable-Frequency Motor Controllers."

N. Variable-Frequency Motor Controller: Serving wheel rotation motor.

1. Manufactured Units: Pulse-width modulated; constant torque and variable torque, as directed, for Design A and Design B or inverter-duty motors, as directed.
2. Output Rating: Three phase; 10 to 60 Hz, with voltage proportional to frequency throughout voltage range or 66 Hz, with torque constant as speed changes; maximum voltage equals input voltage.

3. Unit Operating Requirements:

   a. Internal Adjustability:

      1) Minimum Speed: 5 to 25 percent of maximum rpm.
      2) Maximum Speed: 80 to 100 percent of maximum rpm.
      3) Acceleration: 0.1 to 999.9 seconds, as directed.
      4) Deceleration: 0.1 to 999.9 seconds, as directed.
      5) Current Limit: 30 to minimum of 150 percent of maximum rating.

   b. Self-Protection and Reliability Features:

      1) Surge suppression.
      2) Loss of input signal protection.
      3) Under- and overvoltage trips.
      4) Variable-frequency motor controller and motor-overload/overtemperature protection.
      5) Critical frequency rejection.
      6) Loss-of-phase protection.
      7) Reverse-phase protection.
      8) Motor-overtemperature fault.

   c. Bidirectional autospeed search.
   d. Torque boost.
   e. Motor temperature compensation at slow speeds.

      1) Panel-mounted operator station.
      2) Historical logging information and displays.
      3) Digital indicating devices.

   f. Control Signal Interface: Electric.
   g. Proportional integral derivative (PID) control interface.
   h. DDC System for HVAC Protocols for Network Communications: ASHRAE 135.

4. Line Conditioning:

   a. Input line conditioning.
   b. Output filtering.
   c. EMI/RFI filtering.

O. Variable-Speed Control: Factory mounted and wired, permitting input of field-connected, 4-20 mA or 1-10-V control signal.

P. Variable-Speed Control: Factory mounted and wired, with exhaust-air sensor to vary rotor speed and maintain exhaust temperature above freezing.

Q. Variable-Speed Control: Factory mounted and wired, with exhaust- and outdoor-air sensors, automatic changeover thermostat, and set-point adjuster, to vary rotor speed and maintain exhaust temperature above freezing and air differential temperature above set point. Rotor speed shall increase to maximum when exhaust-air temperature is less than outdoor-air temperature.

2.5 SOURCE QUALITY CONTROL

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended application.

B. AHRI Compliance: Capacity ratings for air-to-air energy-recovery equipment certified as complying with AHRI 1060 (AHRI 1061).

C. Fan Performance Rating: Comply with AMCA 211 and label fans with AMCA-certified rating seal. Factory test fan performance for airflow, pressure, power, air density, rotation speed, and efficiency according to AMCA 210/ASHRAE 51.

D. Fan Sound Rating: Comply with AMCA 301 or AHRI 260 (IP). Air-handling unit fan sound ratings shall comply with AMCA 301 or AHRI 260 (IP).

E. UL Compliance:

1. Packaged heat recovery ventilators shall comply with requirements in UL 1812 or UL 1815.
2. Electric Coils: Comply with UL 1995.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine casing insulation materials and filter media before packaged, indoor, heat wheel energy-recovery unit installation. Replace with new insulation materials any filter media that are wet, moisture damaged, or mold damaged.

B. Install packaged, indoor, heat wheel energy-recovery units, so supply and exhaust airstreams flow in opposite directions, and rotation is away from exhaust side to purge section to supply side.

1. Install access doors in both supply and exhaust ducts, both upstream and downstream, for access to wheel surfaces, drive motor, and seals.
2. Install removable panels or access doors between supply and exhaust ducts on building side for bypass during startup.
3. Access doors and panels are specified in Section 233300 "Air Duct Accessories."

C. Equipment Mounting:

1. Install packaged, indoor, heat wheel energy-recovery units on 4-inch(100mm) cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."
2. Comply with requirements for vibration-isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."

3. Comply with requirements for vibration-isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

D. Suspended Units: Suspend and brace units from structural-steel support frame, using threaded steel rods and spring hangers. Comply with requirements for vibration-isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC." Or Section 230548.13 "Vibration Controls for HVAC."

E. Install units with clearances for service and maintenance.

F. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing with new, clean filters.

3.2 DUCTWORK CONNECTIONS

A. Comply with requirements for ductwork according to Section 233113 "Metal Ducts."

B. Connect duct to units with flexible connections. Comply with requirements in Section 233300 "Air Duct Accessories."

C. Isolation Dampers: Install isolation dampers according to Section 230923.12 "Control Dampers."

3.3 PIPING CONNECTIONS

A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to unit, allow service and maintenance.

C. Connect piping to units mounted on vibration isolators with flexible connectors.

D. Condensate Drain Piping: See Section 232113 "Hydronic Piping" for pipe type. Pipe drains from drain pans to nearest floor drain, same size as condensate drain connection.

1. Construct deep trap at connection to drain pan, and install cleanouts at changes in direction.

3.4 ELECTRICAL CONNECTIONS

A. Install electrical devices furnished with units but not factory mounted.

B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

C. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

D. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.

E. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.5 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform tests and inspections with the assistance of a factory-authorized service representative.

D. Tests and Inspections:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Packaged, indoor, heat wheel energy-recovery equipment will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

3.7 DEMONSTRATION

A. Engage a factory-authorized service representative to train or train Owner's maintenance personnel to adjust, operate, and maintain air-to-air energy-recovery units.

END OF SECTION 237223.13

SECTION 237223.19 – PACKAGED INDOOR FIXED PLATE ENERGY RECOVERY UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Fixed-plate, sensible heat exchangers in packaged, indoor, energy-recovery units.
2. Fixed-plate, total heat exchangers in packaged, indoor, energy-recovery units.

B. Related Requirements:

1. Section 237313.16 "Indoor, Semi-Custom Air-Handling Units" for indoor, semi-custom air-handling units if they also include coils, other than electric coils for frost control, in addition to fixed plate heat exchangers.
2. Section 237313.19 "Indoor, Custom Air-Handling Units" for indoor, custom air-handling units if they also include coils, other than electric coils for frost control, in addition to fixed plate heat exchangers.
3. Section 237343.16 "Outdoor, Semi-Custom Air-Handling Units" for outdoor, semi-custom air-handling units if they also include coils, other than electric coils for frost control, in addition to fixed plate heat exchangers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For packaged, indoor, fixed-plate, energy-recovery units.

1. Include plans, elevations, sections, details, and mounting or attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, elevations, and other details, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Seismic Qualification Data: Certificates, for packaged, indoor, fixed-plate, energy-recovery units, accessories, and components, from manufacturer.

C. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of packaged, indoor, fixed-plate, energy-recovery units that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Packaged Energy-Recovery Units: Two years.
2. Warranty Period for Fixed-Plate Total Heat Exchangers: 10 years.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.

B. ASHRAE Compliance:

1. Applicable requirements in ASHRAE 62.1.
2. Capacity ratings for fixed-plate energy-recovery units shall comply with ASHRAE 84.

C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1.

D. UL Compliance:

1. Packaged heat-recovery ventilators shall comply with requirements in UL 1812 or UL 1815.
2. Electric coils shall comply with requirements in UL 1995.

E. Comply with ASTM E84 or UL 723.

F. Seismic Performance: Packaged, indoor, fixed-plate, energy-recovery units shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: 1.5 - 1.0.

2.2 CAPACITIES AND CHARACTERISTICS

A. Type: Fixed-plate sensible or total energy-recovery unit.

B. Exhaust Air:

1. Airflow: As directed, cfm (L/s).
2. Face Velocity: As directed, fpm (m/s).
3. Summer:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

4. Winter:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

5. Air Pressure Drop: As directed, inches wg (Pa).
6. Fan Motor Size: As directed, horsepower (watts).
7. Fan Motor Electrical Characteristics:

    a. Volts: 120, 208 or 230 V.
    b. Phase: Single or Three.
    c. Hertz: 60.

C. Supply Air:

1. Airflow: As directed, cfm (L/s).
2. Face Velocity: As directed, fpm (m/s).
3. Summer:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

4. Winter:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

5. Air Pressure Drop: As directed, inches wg (Pa).
6. Fan Motor Size: As directed.
7. Fan Motor Electrical Characteristics:

a. Volts: 120, 208 or 230 V.
b. Phase: Single or Three.
c. Hertz: 60.

D. Effectiveness: As directed, percent.

E. Electric Frost-Control Coils:

1. Heat-Transfer Rate: As directed, Btu/h (kW).
2. Entering-Air Temperature: As directed, deg F (deg C).
3. Leaving-Air Temperature: As directed, deg F (deg C).
4. Power Input: Kw.
5. Volts: 208, 230 or 480 V.
6. Phase: Single or Three.
7. Hertz: 60.
8. Full-Load Amperes: As directed, A.
9. Maximum Overcurrent Protection: As directed, A.
10. Capacity Control Number of Steps: As directed.

F. Filters:

1. Type: Flat, nonpleated or Pleated.
2. Face Dimensions, Each: As directed, inches by inches (mm by mm).
3. Depth: As directed, inches (mm).
4. Number of Filters, Wide by High: As directed, inches by inches (mm by mm).
5. Maximum or Rated Face Velocity: As directed, fpm (m/s).
6. Initial Resistance: As directed, inches wg (Pa).
7. Recommended Final Resistance: As directed, inches wg (Pa).
8. Minimum Efficiency Reporting Value and Average Arrestance:

a. MERV Rating: MERV 1, MERV 2, MERV 3 or MERV 4, as directed, and corresponding average arrestance according to ASHRAE 52.2.

9. Minimum Efficiency Reporting Value:

a. MERV Rating: MERV 6 or MERV 13 according to ASHRAE 52.2.

2.3 PACKAGED, INDOOR, FIXED-PLATE, SENSIBLE ENERGY-RECOVERY UNITS

A. Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Housing: Manufacturer's standard construction with corrosion-protection coating and exterior finish, gasketed, hinged access doors or removable panels with neoprene gaskets for inspection and access to internal parts, minimum 1-inch (25mm) - 2-inch (50mm) thick, thermal insulation, knockouts for electrical and piping connections, exterior drain connection, and lifting lugs.

C. Fixed-Plate Sensible Heat Exchanger:

1. Casing: Aluminum
2. Drain Pan: Same material as casing, with drain connections on exhaust and supply side.

a. Comply with requirements in ASHRAE 62.1.

3. Plates: Evenly spaced, sealed, and arranged for counter or cross flow.

a. Plate Material: Embossed aluminum.

4. Bypass Plenum: Within casing, with gasketed face-and-bypass dampers having operating rods extended outside casing.

D. Supply and Exhaust Fans: Forward-curved centrifugal fan with spring isolators or restrained spring isolators of 1-inch (25-mm) static deflection.

1. Motors and Drives: Direct driven, Belt driven with adjustable sheaves or Belt driven with fixed sheaves.

a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
b. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

E. Filters:

1. Particulate air filtration is specified in Section 234100 "Particulate Air Filtration."

F. Filters:

1. Description: Flat, nonpleated or Pleated factory-fabricated, self-supported, disposable air filters with holding frames.
2. UL Compliance: Comply with UL 900.
3. Media: Interlaced glass fibers sprayed with nonflammable adhesive and antimicrobial agent.
4. Filter Media Frame: Beverage board with perforated metal retainer or metal grid on outlet side.
5. Filter-Mounting Frames: Arranged with access doors or panels on both sides of unit. Filters shall be removable from one side or lift out from access plenum.

G. Electric Coils:

1. Casing Assembly: Slip-in or Flanged type with galvanized-steel frame.
2. Access: Fabricate coil section to allow removal and replacement of coil and to allow in-place access for service.
3. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame.
4. Overtemperature Protection: Disk-type, automatically resetting, thermal-cutout safety device; serviceable through terminal box without removing heater from coil section.
5. Secondary Protection: Load-carrying, manually resetting or manually replaceable thermal cutouts; factory wired in series with each heater stage.
6. Control Panel: Unit or Remote mounted with disconnecting means and overcurrent protection.

a. Magnetic contactor.
b. Solid-state, stepless SCR controller or Step controller.
c. Time-delay relay.
d. Pilot Lights:

1) One per step for step-controlled coils.

e. Airflow proving switch.

H. Wiring: Fabricate units with space within housing for electrical conduits. Wire motors and controls so only external connections are required during installation.

1. Indoor Enclosure: NEMA 250, Type 12 enclosure contains relays, starters, and terminal strip.
2. Include fused or nonfused disconnect switches.

2.4 PACKAGED, INDOOR, FIXED-PLATE TOTAL ENERGY RECOVERY UNITS

A. Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Housing: Manufacturer's standard construction with corrosion-protection coating and exterior finish, gasketed, hinged access doors or removable panels with neoprene gaskets for inspection and access to internal parts, minimum 1-inch (25-mm) or 2-inch (50-mm) thick thermal insulation as directed, knockouts for electrical connections, exterior drain connection, and lifting lugs.

C. Fixed-Plate Total Heat Exchanger:

1. Casing: Galvanized steel.
2. Plates: Evenly spaced and sealed and arranged for counter flow or crossflow.

a. Plate Material: Chemically treated paper or polymer membrane with selective hydroscopicity and moisture permeability, and gas barrier properties.

3. Bypass Plenum: Within casing, with gasketed face-and-bypass dampers having operating rods extended outside casing.

D. Supply and Exhaust Fans: Forward-curved centrifugal fan with spring isolators or restrained spring isolators of 1-inch (25mm) static deflection.

1. Motor and Drive: Direct driven, Belt driven with adjustable sheaves or Belt driven with fixed sheaves.
2. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
3. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

E. Filters:

1. Particulate air filtration is specified in Section 234100 "Particulate Air Filtration."

F. Filters:

1. Description: Flat, nonpleated or Pleated factory-fabricated, self-supported, disposable air filters with holding frames.
2. UL Compliance: Comply with UL 900.
3. Media: Interlaced glass fibers sprayed with nonflammable adhesive and antimicrobial agent.
4. Filter Media Frame: Beverage board with perforated metal retainer, or metal grid, on outlet side.
5. Filter Mounting Frames: Arranged with access doors or panels on both sides of unit. Filters shall be removable from one side or lift out from access plenum.

G. Electric Coils:

1. Casing Assembly: Slip-in or Flang type with galvanized-steel frame.
2. Access: Fabricate coil section to allow removal and replacement of coil and to allow in-place access for service.
3. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame.
4. Overtemperature Protection: Disk-type, automatically resetting, thermal-cutout safety device; serviceable through terminal box without removing heater from coil section.
5. Secondary Protection: Load-carrying, manually resetting or manually replaceable thermal cutouts; factory wired in series with each heater stage.
6. Control Panel: Unit or Remote mounted with disconnecting means and overcurrent protection.

    a. Magnetic contactor.
    b. Solid-state, stepless SCR controller or Step controller.
    c. Time-delay relay.
    d. Pilot Lights:

        1) One per step for step-controlled coils.

    e. Airflow proving switch.

H. Wiring: Fabricate units with space within housing for electrical conduits. Wire motors and controls, so only external connections are required during installation.

1. Indoor Enclosure: NEMA 250, Type 12 enclosure contains relays, starters, and terminal strip.
2. Include fused or nonfused disconnect switches.

2.5 CONTROLS

A. Control Panel: Solid-state, programmable, microprocessor-based control unit for wall mounting, Integrate to BACnet, LonWorks, or Modbus, as specified in Section 230923 "Direct Digital Control (DDC) System for HVAC".

B. Starting relay, factory mounted and wired, and manual motor starter for field wiring.

C. Frost Control: Electric preheat.

D. Motion (Occupancy) Sensor: Passive infrared sensor for wall or ceiling mounting with adjustable time-off delay of up to 30 minutes to energize unit.

E. Carbon Dioxide Sensor: Adjustable control from 600 to 2000 ppm for wall or duct mounting, with digital display and computer/building management system interface to energize unit.

F. Economizer Control: Fixed-plate airflow bypass. See Section 230923 "Direct Digital Control (DDC) System for HVAC" for control sequence.

G. Dry-bulb temperature or Enthalpy sensor.

H. Dirty filter switch.

I. Low-Voltage Transformer: Integral transformer to provide control voltage to unit from primary incoming electrical service.

J. Electric-Coils Controls:

1. Factory-mounted sensor in outside-air intake with sensor adjustment located in control panel to control electric coil and maintain minimum entering temperature, to avoid frost formation.

2.6 SOURCE QUALITY CONTROL

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.

B. AHRI Compliance: Capacity ratings for air-to-air energy-recovery equipment certified as complying with AHRI 1060 (AHRI 1061).

C. Fan Performance Rating: Comply with AMCA 211 and label fans with AMCA-certified rating seal. Factory test fan performance for airflow, pressure, power, air density, rotation speed, and efficiency according to AMCA 210/ASHRAE 51.

D. Fan Sound Ratings: Comply with AMCA 301 or AHRI 260 (IP). Air-handling unit fan sound ratings shall comply with AMCA 301 or AHRI 260 (IP).

E. UL Compliance:

1. Packaged fixed plate energy recovery units shall comply with requirements in UL 1812; or UL 1815.
2. Electric Coils: Comply with UL 1995.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine casing insulation materials and filter media before packaged, indoor, fixed-plate, energy-recovery unit installation. Replace with new insulation materials and filter media that are wet, moisture damaged, or mold damaged.

B. Install packaged, indoor, fixed-plate, energy-recovery units, so supply and exhaust airstreams flow in opposite directions.

1. Install access doors in both supply and exhaust ducts, both upstream and downstream, for access to interior components.
2. Install removable panels or access doors between supply and exhaust ducts on building side for bypass during startup.
3. Access doors and panels are specified in Section 233300 "Air Duct Accessories."

C. Equipment Mounting:

1. Install packaged, indoor, fixed-plate, energy-recovery units on 4-inch (100-mm) cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."
2. Comply with requirements for vibration-isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration-isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

D. Suspended Units: Suspend and brace units from structural-steel support frame, using threaded steel rods and spring hangers. Comply with requirements for vibration-isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC." Or Section 230548.13 "Vibration Controls for HVAC."

E. Install units with clearances for service and maintenance.

F. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing with new, clean filters.

3.2 DUCTWORK CONNECTIONS

A. Comply with requirements for ductwork according to Section 233113 "Metal Ducts."

B. Connect duct to units with flexible connections. Comply with requirements in Section 233300 "Air Duct Accessories."

C. Isolation Dampers: Install isolation dampers according to Section 230923.12 "Control Dampers."

3.3 PIPING CONNECTIONS

A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to unit, allow for service and maintenance.

C. Connect piping to units mounted on vibration isolators with flexible connectors.

D. Condensate Drain Piping: See Section 232113 "Hydronic Piping" for pipe type. Pipe drains from drain pans to nearest floor drain, same size as condensate drain connection.

1. Construct deep trap at connection to drain pan, and install cleanouts at changes in direction.

3.4 ELECTRICAL CONNECTIONS

A. Install electrical devices furnished with units but not factory mounted.

B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

C. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

D. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.

E. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.5 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform tests and inspections with the assistance of a factory-authorized service representative.

D. Tests and Inspections:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Packaged, indoor, fixed-plate, energy-recovery units will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

3.7 DEMONSTRATION

A. Engage a factory-authorized service representative to train or train Owner's maintenance personnel to adjust, operate, and maintain air-to-air energy-recovery units.

END OF SECTION 237223.19

SECTION 237223.23 - PACKAGED, OUTDOOR, HEAT WHEEL ENERGY RECOVERY UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Heat wheels in packaged, outdoor, sensible heat or total energy recovery units.

B. Related Requirements:

1. Section 237343.16 "Outdoor, Semi-Custom Air-Handling Units" for outdoor, semi-custom air-handling units if they also include coils, other than electric coils for frost control, in addition to heat wheels.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Shop Drawings: For packaged, outdoor, heat-wheel, energy-recovery units.

1. Include plans, elevations, sections, details, and mounting or attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, lifting requirements, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

D. Delegated-Design Submittal: For packaged, outdoor, heat-wheel, energy-recovery units indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of heat-wheel, energy-recovery equipment.
2. Vibration-Isolation Roof Curb Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include rails and frames for equipment mounting.
3. Design Calculations: Calculate requirements for selecting vibration isolators, seismic restraints and for designing vibration-isolation roof curbs.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, roof plans, elevations, and other details, drawn to scale and coordinated with each other, using input from installers of items involved.

B. Seismic Qualification Data: Certificates, for packaged, outdoor, heat-wheel, energy-recovery units, accessories, and components, from manufacturer.

C. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 COORDINATION

A. Coordinate sizes and locations of building openings and duct connections with actual equipment provided.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of packaged, outdoor, heat-wheel, energy-recovery units that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Packaged Energy-Recovery Units: One – Three years from date of Substantial Completion.
2. Warranty Period for Energy-Recovery Wheel: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.

B. ASHRAE Compliance:

1. Applicable requirements in ASHRAE 62.1.
2. Capacity ratings for heat-wheel, energy-recovery equipment: Comply with ASHRAE 84.

C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1.

D. UL Compliance:

1. Packaged Heat-Recovery Ventilators: Comply with requirements in UL 1815 or UL 1812.
2. Electric Coils: Comply with requirements in UL 1995.

E. Comply with ASTM E84 or UL 723.

F. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design vibration-isolation controls and seismic restraints, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

G. Seismic Performance: Packaged, outdoor, heat wheel energy-recovery units shall withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: 1.5 - 1.0.

2.2 CAPACITIES AND CHARACTERISTICS

A. Type: Heat-wheel sensible heat or total energy-recovery unit.

B. Exhaust Air:

1. Airflow: As directed, cfm (L/s).
2. Face Velocity: As directed, fpm (m/s).
3. Summer:

    a. Entering-Air Temperature, Dry Bulb: As directed, Insert deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, Insert deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, Insert deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, Insert deg F (deg C).

4. Winter:

    a. Entering-Air Temperature, Dry Bulb: As directed, Insert deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, Insert deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, Insert deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, Insert deg F (deg C).

5. Air Pressure Drop: As directed, inches wg (Pa).
6. Fan Motor Electrical Characteristics:

    a. Volts: 208, 230 or 460 V.
    b. Phase: Single or Three.
    c. Hertz: 60.

C. Supply Air:

1. Airflow: As directed, cfm (L/s).
2. Face Velocity: As directed, fpm (m/s).
3. Summer:

    a. Entering-Air Temperature, Dry Bulb: As directed, Insert deg F (deg C).

b. Entering-Air Temperature, Wet Bulb: As directed, Insert deg F (deg C).
c. Leaving-Air Temperature, Dry Bulb: As directed, Insert deg F (deg C).
d. Leaving-Air Temperature, Wet Bulb: As directed, Insert deg F (deg C).

4. Winter:

a. Entering-Air Temperature, Dry Bulb: As directed, Insert deg F (deg C).
b. Entering-Air Temperature, Wet Bulb: As directed, Insert deg F (deg C).
c. Leaving-Air Temperature, Dry Bulb: As directed, Insert deg F (deg C).
d. Leaving-Air Temperature, Wet Bulb: As directed, Insert deg F (deg C).

5. Air Pressure Drop: As directed, inches wg (Pa).
6. Fan Motor Size: As directed, horsepower (watts).
7. Fan Motor Electrical Characteristics:

a. Volts: 208, 230 or 460 V.
b. Phase: Single or Three.
c. Hertz: 60.

D. Wheel Drive:

1. Motor Size: As directed, horsepower (watts).
2. Motor Electrical Characteristics:

a. Volts: 208, 230 or 460 V.
b. Phase: Single or Three.
c. Hertz: 60.

E. Effectiveness: As directed, percent.

F. Electric Frost-Control Coils:

1. Heat-Transfer Rate: As directed, Btu/h (kW).
2. Entering-Air Temperature: As directed, deg F (deg C).
3. Leaving-Air Temperature: As directed, deg F (deg C).
4. Power Input: As directed, Kw.
5. Volts: 208, 230 or 480 V.
6. Phase: Single or Three.
7. Hertz: 60.
8. Full-Load Amperes: As directed, A.
9. Maximum Overcurrent Protection: As directed, A.
10. Provide Silicon-Controlled Rectifier (SCR) to modulate electric coil.

G. Filters:

1. Type: Cleanable wire mesh and Pleated.
2. Face Dimensions, each: As directed, inches by inches (mm by mm).
3. Depth: As directed, inches (mm).
4. Filter Quantity: As directed, Dimensions (Wide by High) inches by inches (mm by mm).
5. Maximum or Rated Face Velocity: As directed, fpm (m/s).

6. Initial Resistance: As directed, inches wg (Pa).
7. Recommended Final Resistance: As directed, inches wg (Pa).
8. Minimum Efficiency Reporting Value and Average Arrestance:

    a. MERV Rating: MERV 4 and corresponding average arrestance according to ASHRAE 52.2.

9. Minimum Efficiency Reporting Value:

    a. MERV Rating: MERV 6, MERV 8, MERV 11 or MERV 13 in accordance with ASHRAE 52.2.

2.3 PACKAGED, OUTDOOR, HEAT-WHEEL, ENERGY-RECOVERY UNITS

A. Source Limitations: Obtain packaged, outdoor, heat-wheel, energy-recovery units from single manufacturer.

B. Surfaces in Contact with Airstream: Comply with requirements in ASHRAE 62.1.

C. Housing: Manufacturer's standard construction with corrosion-protection coating and exterior finish, gasketed, hinged access doors or removable panels with neoprene gaskets for inspection and access to internal parts, minimum 1 inch (25 mm) or 2 inches (50 mm) thick, thermal insulation, knockouts for electrical connections, exterior drain connection, and lifting lugs.

D. Heat Wheel:

1. Casing:

    a. Manufacturer's standard construction with standard factory finish.
    b. Slide-in, slide-out cassette style.
    c. Provide unit with integral purge section, limiting carryover of exhaust air to between percent inch wg (Pa) as directed, and percent at inch wg (Pa) as directed, differential pressure.
    d. Provide casing seals on periphery of rotor and on duct divider and purge section.
    e. Support vertical rotors on grease-lubricated ball bearings having extended grease fittings or permanently lubricated bearings with minimum L-50 of 200,000 hours. Support horizontal rotors on tapered roller bearing.

2. Rotor: Aluminum or polymer segmented wheel, strengthened with radial spokes.
3. Rotor: Aluminum or polymer segmented wheel, strengthened with radial spokes, with nontoxic, noncorrosive, silica-gel coating.
4. Rotor: Aluminum, metallic, or polymer segmented wheel, strengthened with radial spokes impregnated with nonmigrating, water-selective, four-angstrom, molecular-sieve desiccant coating.
5. Drive: Electric motor, with speed changed by variable-frequency motor controller and self-adjusting multilink belt around outside of rotor.

    a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

b. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

E. Supply and Exhaust Fans: Centrifugal, forward-curved or backward-inclined fan with spring isolators, restrained, spring isolators of 1-inch (25-mm) static deflection.

1. Motor and Drive: Direct driven or Belt driven, with adjustable sheaves; motor mounted on adjustable base, with speed changed by variable-frequency motor controller.

a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
b. Motor Sizes: Minimum size as indicated. If size is not indicated, provide motor large enough so driven load will not require motor to operate in service factor range above 1.0.

F. Filters:

1. Particulate air filtration is specified in Section 234100 "Particulate Air Filtration."

G. Filters:

1. Description: Cleanable wire mesh at outside air intake and pleated, factory-fabricated, self-supported, disposable air filters with holding frames.
2. UL Compliance: Comply with UL 900.
3. Media: Interlaced glass fibers sprayed with nonflammable adhesive and antimicrobial coating.
4. Filter Media Frame: Beverage board with perforated metal retainer or metal grid on outlet side.
5. Filter-Mounting Frames: Arranged with access doors or panels on one or both sides of unit. Design unit with filters removable from one side, or lift out from access plenum.

H. Electric Coils:

1. Casing Assembly: Slip-in or Flanged type with galvanized-steel frame.
2. Access: Fabricate coil section to allow removal and replacement of coil, and to allow in-place access for service.
3. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium, supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame.
4. Overtemperature Protection: Disk-type, automatically resetting, thermal-cutout safety device; serviceable through terminal box without removing heater from coil section.
5. Secondary Protection: Load-carrying, manually resetting or manually replaceable thermal cutouts; factory wired in series with heater.
6. Control Panel: Unit or Remote mounted, with disconnecting means and overcurrent protection.

a. Magnetic contactor.
b. Solid-state, stepless SCR controller.
c. Time-delay relay.

d. Airflow proving switch.

I. Wiring: Fabricate units with space within housing for electrical conduits. Wire motors and controls, so only external connections are required during installation.

1. Outdoor Enclosure: NEMA 250, Type 3R enclosure contains relays, starters, and terminal strip.
2. Include fused or nonfused disconnect switches.

2.4 CONTROLS

A. Control Panel: Solid-state, programmable, microprocessor-based control unit for wall mounting, Integrate to BACnet, LonWorks, or Modbus, as specified in Section 230923 "Direct Digital Control (DDC) System for HVAC".

B. Starting relay, factory mounted and wired, and manual motor starter for field wiring.

C. Frost Control: None, Timed exhaust-only operation, Electric preheat or Variable rotor speed or Low-temperature thermostat deenergizes supply air fan.

D. Motion (Occupancy) Sensor: Passive infrared sensor for wall or ceiling mounting, with adjustable time-off delay of up to 30 minutes to energize unit.

E. Carbon Dioxide Sensor: Adjustable control from 600 to 2000 ppm for wall or duct mounting, with digital display and direct digital control (DDC) system interface to energize unit.

F. Economizer Control, Stop Wheel: Stop wheel rotation or modulate wheel rotation speed when conditions are favorable for economizer operation.

G. Economizer Control, Airflow Bypass: Heat-wheel airflow bypass. See Section 230923 "Direct Digital Control (DDC) System for HVAC" for control sequence.

H. Dry-bulb temperature or Enthalpy sensor.

I. Rotation sensor and alarm.

J. Dirty filter switch.

K. Low-Voltage Transformer: Integral transformer to provide control voltage to unit from primary incoming electrical service.

L. Electric Coil Controls:

1. Factory-mounted sensor in outside-air intake with sensor adjustment located in control panel to control electric coil and maintain minimum entering temperature, to avoid frost formation.

M. Variable-Frequency Motor Controller: Comply with Section 262923 "Variable-Frequency Motor Controllers."

N. Variable-Frequency Motor Controller: Serving wheel rotation motor.

1. Manufactured Units: Pulse-width modulated; constant torque and variable torque for Design A and Design B or inverter-duty motors.
2. Output Rating: Three phase; 10 to 60 Hz, with voltage proportional to frequency throughout voltage range or 66 Hz, with torque constant as speed changes; maximum voltage equals input voltage.
3. Unit Operating Requirements:

    a. Internal Adjustability:

        1) Minimum Speed: 5 to 25 percent of maximum rpm.
        2) Maximum Speed: 80 to 100 percent of maximum rpm.
        3) Acceleration: 0.1 to 999.9 seconds, as directed.
        4) Deceleration: 0.1 to 999.9 seconds, as directed.
        5) Current Limit: 30 to minimum of 150 percent of maximum rating.

    b. Self-Protection and Reliability Features:

        1) Surge suppression.
        2) Loss of input signal protection.
        3) Under- and overvoltage trips.
        4) Variable-frequency motor controller and motor-overload/overtemperature protection.
        5) Critical frequency rejection.
        6) Loss-of-phase protection.
        7) Reverse-phase protection.
        8) Motor-overtemperature fault.

    c. Bidirectional autospeed search.
    d. Torque boost.
    e. Motor temperature compensation at slow speeds.

        1) Panel-mounted operator station.
        2) Historical logging information and displays.
        3) Digital indicating devices.

    f. Control Signal Interface: Electric.
    g. Proportional integral derivative (PID) control interface.
    h. DDC System for HVAC Protocols for Network Communications: ASHRAE 135.

4. Line Conditioning:

    a. Input line conditioning.
    b. Output filtering.
    c. EMI/RFI filtering.

O. Variable-Speed Control: Factory mounted and wired, permitting input of field-connected, 4- to 20-mA or 1- to 10-V control signal.

P. Variable-Speed Control: Factory mounted and wired, with exhaust-air sensor to vary rotor speed and maintain exhaust temperature above freezing.

Q. Variable-Speed Control: Factory mounted and wired, with exhaust- and outdoor-air sensors, automatic changeover thermostat, and set-point adjuster, to vary rotor speed and maintain exhaust temperature above freezing and air differential temperature above set point. Increase rotor speed to maximum when exhaust-air temperature is less than outdoor-air temperature.

2.5 SOURCE QUALITY CONTROL

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended application.

B. AHRI Compliance: Capacity ratings for air-to-air energy-recovery equipment certified as complying with AHRI 1060 (IP) (AHRI 1061 SI).

C. Fan Performance Rating: Comply with AMCA 211, and label fans with AMCA-certified rating seal. Factory test fan performance for airflow, pressure, power, air density, rotation speed, and efficiency in accordance with AMCA 210 and ASHRAE 51.

D. Fan Sound Rating: Comply with AMCA 301 or AHRI 260 (IP) (AHRI 261 SI).

E. UL Compliance:

1. Packaged Heat-Recovery Ventilators: Comply with requirements in UL 1812.
2. Electric Coils: Comply with UL 1995.

PART 3 - EXECUTION

3.1 INSTALLATION OF PACKAGED, OUTDOOR, HEAT-WHEEL, ENERGY-RECOVERY UNITS

A. Examine casing insulation materials and filter media before packaged, outdoor, heat wheel energy-recovery unit installation. Replace insulation materials and filter media that are wet, moisture damaged, or mold contaminated.

B. Install packaged, outdoor, heat-wheel, energy-recovery units, so supply and exhaust airstreams flow in opposite directions, and rotation is away from exhaust side to purge section to supply side.

1. Install access doors in both supply and exhaust ducts, both upstream and downstream, for access to wheel surfaces, drive motor, and seals.
2. Install removable panels or access doors between supply and exhaust ducts on building side for bypass during startup.
3. Access doors and panels are specified in Section 233300 "Air Duct Accessories."

C. Equipment Mounting:

1. Install deck-mounted packaged, outdoor, heat-wheel, energy-recovery units on 4-inch (100-mm) cast-in-place concrete equipment bases. Comply with requirements for

equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete."

2. Install roof-mounted packaged, outdoor, heat-wheel, energy-recovery units on manufacturer's-recommended-height equipment roof curbs. Comply with requirements for equipment curbs specified in Section 077200 "Roof Accessories."
3. Comply with requirements for vibration-isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
4. Comply with requirements for vibration-isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

D. Suspended Units: Suspend and brace units from outdoor structural-steel support frame, using threaded steel rods and spring hangers. Comply with requirements for vibration-isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC." Or Section 230548.13 "Vibration Controls for HVAC."

E. Install units with clearances for service and maintenance.

F. Do not operate equipment fans until temporary or permanent filters are in place. Replace temporary filters used during construction and testing with new, clean filters prior to final inspection.

3.2 DUCTWORK CONNECTIONS

A. Comply with requirements for ductwork in accordance with Section 233113 "Metal Ducts."

B. Connect duct to units with flexible connections. Comply with requirements in Section 233300 "Air Duct Accessories."

C. Isolation Dampers: Install isolation dampers in accordance with Section 230923.12 "Control Dampers."

3.3 PIPING CONNECTIONS

A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to unit, allow service and maintenance.

C. Connect piping to units mounted on vibration isolators with flexible connectors.

D. Condensate Drain Piping: See Section 232113 "Hydronic Piping" for pipe type. Install condensate drain piping from drain pans to nearest floor drain, same size as condensate drain connection.

1. Construct deep trap at connection to drain pan, and install cleanouts at changes in direction.

3.4 ELECTRICAL CONNECTIONS

A. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.

B. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

C. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.5 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring in accordance with Section 260523 "Control-Voltage Electrical Power Cables."

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage qualified testing agency to perform tests and inspections.

C. Perform tests and inspections with assistance of factory-authorized service representative.

D. Tests and Inspections:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Packaged, outdoor, heat-wheel, energy-recovery equipment will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

3.7 DEMONSTRATION

A. Engage factory-authorized service representative to train or train Owner's maintenance personnel to adjust, operate, and maintain air-to-air energy-recovery units.

END OF SECTION 237223.23

SECTION 237223.29 - PACKAGED, OUTDOOR, FIXED PLATE ENERGY RECOVERY UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Fixed-plate, sensible heat exchangers in packaged, outdoor, energy-recovery units.

B. Related Requirements:

1. Section 237343.16 "Outdoor, Semi-Custom Air-Handling Units" for outdoor, semi-custom air-handling units if they also include coils, other than electric coils for frost control, in addition to fixed-plate heat exchangers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Shop Drawings: For packaged, outdoor, fixed-plate, energy-recovery units.

1. Include plans, elevations, sections, details, and mounting or attachment details as directed.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, lifting requirements, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

D. Delegated-Design Submittal: For air-to-air energy-recovery equipment indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of air-to-air energy-recovery equipment.
2. Vibration-Isolation Roof Curb Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include rails and frames for equipment mounting.
3. Design Calculations: Calculate requirements for selecting vibration isolators, seismic restraints, and for designing vibration-isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, roof plans elevations, and other details, drawn to scale. and coordinated with each other, using input from installers of items involved.

B. Seismic Qualification Data: Certificates, for packaged, outdoor, fixed-plate, energy-recovery units, accessories, and components, from manufacturer.

C. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 COORDINATION

A. Coordinate sizes and locations of building openings and duct connections with actual equipment provided.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of packaged, outdoor, fixed-plate, energy-recovery units that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Packaged Energy-Recovery Units: One years from date of Substantial Completion.
2. Warranty Period for Fixed-Plate Heat Exchangers: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.

B. ASHRAE Compliance:

1. Applicable requirements in ASHRAE 62.1.
2. Capacity ratings for fixed-plate energy-recovery units shall comply with ASHRAE 84.

C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1.

D. UL Compliance:

1. Packaged heat-recovery ventilators shall comply with requirements in UL 1815 or UL 1812.
2. Electric coils shall comply with requirements in UL 1995.

E. Comply with ASTM E84 or UL 723.

F. Delegated Design: Engage registered professional engineer, as defined in Section 014000 "Quality Requirements," to design vibration-isolation controls and seismic restraints, including comprehensive engineering analysis using performance requirements and design criteria indicated.

G. Seismic Performance: Packaged, outdoor, fixed-plate, energy-recovery units shall withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: As directed, 1.5 or 1.0.

2.2 CAPACITIES AND CHARACTERISTICS

A. Type: Fixed-plate sensible heat, energy-recovery unit.

B. Exhaust Air:

1. Airflow: As directed, cfm (L/s).
2. Face Velocity: As directed, fpm (m/s).
3. Summer:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

4. Winter:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

5. Air Pressure Drop: As directed, inches wg (Pa).
6. Fan Motor Size: As directed, horsepower (watts).
7. Fan Motor Electrical Characteristics:

    a. Volts: As directed, 208, 230 or 460 V.
    b. Phase: As directed, Single or Three.
    c. Hertz: 60.

C. Supply Air:

1. Airflow: As directed, cfm (L/s).
2. Face Velocity: As directed, fpm (m/s).
3. Summer:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

4. Winter:

    a. Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    b. Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
    c. Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
    d. Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

5. Air Pressure Drop: As directed, inches wg (Pa).
6. Fan Motor Size: As directed, horsepower (watts).
7. Fan Motor Electrical Characteristics:

    a. Volts: As directed, 208 or 230 V.
    b. Phase: As directed, Single or Three.
    c. Hertz: 60.

D. Effectiveness: Percent as directed.

E. Electric Frost-Control Coils:

1. Heat-Transfer Rate: As directed, Btu/h (kW).
2. Entering-Air Temperature: As directed, deg F (deg C).
3. Leaving-Air Temperature: As directed, deg F (deg C).
4. Power Input: As directed, Kw.
5. Volts: As directed, 208, 230 or 480V.
6. Phase: As directed, Single or Three.
7. Hertz: 60.
8. Full-Load Amperes: As directed, A.
9. Maximum Overcurrent Protection: As directed, A.
10. Provide Silicon-Controlled Rectifier (SCR) to modulate electric coil.

F. Filters:

1. Type: Cleanable wire mesh and Pleated.
2. Face Dimensions, Each: As directed, inches by inches (mm by mm).
3. Depth: As directed, inches (mm).
4. Filter Quantity: Number As directed, Dimensions (Wide by High) inches by inches (mm by mm).
5. Maximum or Rated Face Velocity: As directed, fpm (m/s).
6. Initial Resistance: As directed, inches wg (Pa).
7. Recommended Final Resistance: As directed, inches wg (Pa).
8. Minimum Efficiency Reporting Value and Average Arrestance:

    a. MERV Rating: MERV 4 and corresponding average arrestance in accordance with ASHRAE 52.2.

9. Minimum Efficiency Reporting Value:

    a. MERV Rating: As directed, MERV 6, MERV 8, MERV 11 or MERV 13 in accordance with ASHRAE 52.2.

2.3 PACKAGED, OUTDOOR, FIXED-PLATE, SENSIBLE HEAT, ENERGY-RECOVERY UNITS

A. Source Limitations: Obtain packaged, outdoor, fixed-plate, energy-recovery units from single manufacturer.

B. Surfaces in Contact with Airstream: Comply with requirements in ASHRAE 62.1.

C. Housing: As directed, Manufacturer's standard construction with corrosion-protection coating and exterior finish, gasketed, hinged access doors or removable panels with neoprene gaskets for inspection and access to internal parts, minimum 1-inch (25-mm) or 2-inch (50-mm) thick, thermal

insulation, knockouts for electrical and piping connections, exterior drain connection, and lifting lugs.

D. Fixed-Plate, Sensible Heat Exchanger:

1. Casing: Aluminum.
2. Drain Pan: Same material as casing, with drain connections on exhaust and supply side.

    a. Comply with requirements in ASHRAE 62.1.

3. Plates: As directed Evenly spaced, sealed, and arranged for counter- or cross-flow.

    a. Plate Material: Embossed aluminum.

4. Bypass Plenum: Within casing, with gasketed face-and-bypass dampers having operating rods extended outside casing.

E. Supply and Exhaust Fans: As directed, Forward-curved centrifugal fan with spring isolators or restrained spring isolators of 1-inch (25-mm) static deflection.

1. Motors and Drives: As directed, Direct driven, Belt driven, with adjustable sheaves or Belt driven, with fixed sheaves as directed.

    a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
    b. Motor Sizes: Minimum size as indicated. If size is not indicated, provide motor large enough so driven load will not require motor to operate in service factor range above 1.0.

F. Filters:

1. Particulate air filtration is specified in Section 234100 "Particulate Air Filtration."

G. Filters:

1. Description: Cleanable wire mesh at outside air intake and pleated factory-fabricated, self-supported, disposable air filters with holding frames.
2. UL Compliance: Comply with UL 900.
3. Media: Interlaced glass fibers sprayed with nonflammable adhesive and antimicrobial agent.
4. Filter Media Frame: Beverage board with perforated metal retainer or metal grid on outlet side.
5. Filter-Mounting Frames: Arranged with access doors or panels on both sides of unit. Filters shall be removable from one side or lift out from access plenum.

H. Electric Coils:

1. Casing Assembly: As directed, Slip-in or Flanged type with galvanized-steel frame.
2. Access: Fabricate coil section to allow removal and replacement of coil and to allow in-place access for service.
3. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame.

4. Overtemperature Protection: Disk-type, automatically resetting, thermal-cutout safety device; serviceable through terminal box without removing heater from coil section.
5. Secondary Protection: Load-carrying, manually resetting or manually replaceable thermal cutouts; factory wired in series with each heater stage.
6. Control Panel: As directed, Unit or Remote mounted with disconnecting means and overcurrent protection.

    a. Magnetic contactor.
    b. Solid-state, stepless SCR controller.
    c. Time-delay relay.
    d. Airflow proving switch.

I. Wiring: Fabricate units with space within housing for electrical conduits. Wire motors and controls so only external connections are required during installation.

1. Outdoor Enclosure: NEMA 250, Type 3R enclosure contains relays, starters, and terminal strip.
2. As directed, include fused or nonfused disconnect switches.

2.4 CONTROLS

A. Control Panel: Solid-state, programmable, microprocessor-based control unit for wall mounting. Integrate to BACnet, LonWorks, or Modbus, as specified in Section 230923 "Direct Digital Control (DDC) System for HVAC".

B. Starting relay, factory mounted and wired, and manual motor starter for field wiring.

C. Frost Control: As directed, None, Timed exhaust-only operation, Electric preheat or Low-temperature thermostat deenergizes supply air fan.

D. Motion (Occupancy) Sensor: As directed, Passive infrared sensor for wall or ceiling mounting, with adjustable time-off delay of up to 30 minutes to energize unit.

E. Carbon Dioxide Sensor: As directed, Adjustable control from 600 to 2000 ppm for wall or duct mounting, with digital display and direct digital control (DDC) system interface to energize unit.

F. Economizer Control: Fixed-plate airflow bypass. See Section 230923 "Direct Digital Control (DDC) System for HVAC" for control sequence.

G. Dry-bulb temperature sensor.

H. Dirty filter switch.

I. Low-Voltage Transformer: Integral transformer to provide control voltage to unit from primary incoming electrical service.

J. Electric Coil Controls:

1. Factory-mounted sensor in outside-air intake with sensor adjustment located in control panel to control electric coil and maintain minimum entering temperature, to avoid frost formation.

2.5 SOURCE QUALITY CONTROL

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by NRTL, and marked for intended location and application.

B. AHRI Compliance: Capacity ratings for air-to-air energy-recovery equipment certified as complying with AHRI 1060 (IP) (AHRI 1061 SI).

C. Fan Performance Rating: Comply with AMCA 211, and label fans with AMCA-certified rating seal. Factory test fan performance for airflow, pressure, power, air density, rotation speed, and efficiency in accordance with AMCA 210 and ASHRAE 51.

D. Fan Sound Ratings: Comply with AMCA 301 or AHRI 260 (IP) (AHRI 261 SI).

E. UL Compliance:

1. Packaged, Fixed-Plate, Energy-Recovery Units: Comply with requirements in UL 1812.
2. Electric Coils: Comply with UL 1995.

PART 3 - EXECUTION

3.1 INSTALLATION OF PACKAGED, OUTDOOR, FIXED-PLATE, ENERGY-RECOVERY UNITS

A. Examine casing insulation materials and filter media before packaged, outdoor, fixed-plate, energy-recovery unit installation. Replace insulation materials and filter media that are wet, moisture damaged, or mold damaged.

B. Install packaged, outdoor, fixed-plate, energy-recovery units, so supply and exhaust airstreams flow in opposite directions.

1. Install access doors in both supply and exhaust ducts, both upstream and downstream, for access to interior components.
2. Install removable panels or access doors between supply and exhaust ducts on building side for bypass during startup.
3. Access doors and panels are specified in Section 233300 "Air Duct Accessories."

C. Equipment Mounting:

1. Install packaged, outdoor, fixed-plate, energy-recovery units on 4-inch (100-mm) cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" as directed.
2. Install roof-mounted packaged, outdoor, fixed-plate, energy-recovery units on manufacturer's-recommended-height equipment roof curbs. Comply with requirements for equipment curbs specified in Section 077200 "Roof Accessories."
3. Comply with requirements for vibration-isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
4. Comply with requirements for vibration-isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

D. Suspended Units: Suspend and brace units from outdoor structural-steel support frame, using threaded steel rods and spring hangers. Comply with requirements for vibration-isolation devices

specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" as directed.

E. Install units with clearances for service and maintenance.

F. Do not operate equipment fans until temporary or permanent filters are in place. Replace temporary filters used during construction and testing with new, clean filters prior to final inspection.

3.2 DUCTWORK CONNECTIONS

A. Comply with requirements for ductwork in accordance with Section 233113 "Metal Ducts."

B. Connect duct to units with flexible connections. Comply with requirements in Section 233300 "Air Duct Accessories."

C. Isolation Dampers: Install isolation dampers in accordance with Section 230923.12 "Control Dampers."

3.3 PIPING CONNECTIONS

A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to unit, allow for service and maintenance.

C. Connect piping to units mounted on vibration isolators with flexible connectors.

D. Condensate Drain Piping: See Section 232113 "Hydronic Piping" for pipe type. Install condensate drain piping from drain pans to nearest floor drain, same size as condensate drain connection.

1. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.

3.4 ELECTRICAL CONNECTIONS

A. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.

B. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

C. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.5 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring in accordance with Section 260523 "Control-Voltage Electrical Power Cables."

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage qualified testing agency to perform tests and inspections.

C. Perform tests and inspections with assistance of factory-authorized service representative.

D. Tests and Inspections:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Packaged, outdoor, fixed-plate, energy-recovery units will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

3.7 DEMONSTRATION

A. As directed, Engage factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain air-to-air energy-recovery units.

END OF SECTION 237223.29

SECTION 237313.13 - INDOOR, BASIC AIR-HANDLING UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Factory-assembled, indoor air-handling units with limited features.

1.2 ACTION SUBMITTALS

A. Product Data: For each air-handling unit.

1. Unit dimensions and weight.
2. Cabinet material, metal thickness, finishes, insulation, and accessories.
3. Fans:

    a. Certified fan-performance curves with system operating conditions indicated.
    b. Certified fan-sound power ratings.
    c. Fan construction and accessories.
    d. Motor ratings, electrical characteristics, and motor accessories.

4. Certified coil-performance ratings with system operating conditions indicated.
5. Dampers, including housings, linkages, and operators.
6. Filters with performance characteristics.

B. Sustainable Design Submittals:

C. Delegated-Design Submittal: For vibration isolation and seismic restraints indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Include design calculations for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans and other details, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Seismic Qualification Data: Certificates for indoor, basic air-handling units, accessories, and components, from manufacturer.

C. Source quality-control reports.

D. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

B. Coordinate sizes and locations of structural-steel support members, if any, with actual equipment provided.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.

C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

E. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design vibration isolation and seismic restraints, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

F. Structural Performance: Casing panels shall be self-supporting and capable of withstanding positive/negative 4-inch wg (996 Pa) of internal static pressure, without exceeding a midpoint deflection of 0.005 inches/inch (0.005 mm/mm) of panel span.

G. Seismic Performance: Air-handling units shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: As directed, 1.5 or 1.0.

2.2 CAPACITIES AND CHARACTERISTICS

A. Supply Fan:

1. Type: As directed, DWDI, forward-curved centrifugal fan or SWSI, airfoil unhoused centrifugal plenum fan.
2. As directed, Class I or Class II: AMCA 99-2408.
3. Drive: As directed, V-belt or Direct.
4. Number of Fan Wheels: One.
5. Fan Diameter: As directed, inches (mm).
6. Airflow: As directed, cfm (L/s).
7. Total Static Pressure: As directed, inches wg (kPa).
8. External Static Pressure: As directed, inches wg (kPa).
9. Speed: As directed.
10. Maximum Outlet Velocity: As directed, fpm (m/s).
11. Motor:

    a. Size: As directed.
    b. Speed: As directed.
    c. Volts: As directed, 208, 230 or 460 V.
    d. Phase: Three.
    e. Hertz: 60 Hz.
    f. Full-Load Amperes: As directed.
    g. Minimum Circuit Ampacity: As directed.
    h. Maximum Overcurrent Protection: As directed.

12. Fan Discharge Sound Power, dB:

    a. 1st Octave: As directed.
    b. 2nd Octave: As directed.
    c. 3rd Octave: As directed.
    d. 4th Octave: As directed.
    e. 5th Octave: As directed.
    f. 6th Octave: As directed.
    g. 7th Octave: As directed.
    h. 8th Octave: As directed.

B. Return Fan:

1. Type: As directed, DWDI, forward-curved centrifugal fan or SWSI, airfoil unhoused centrifugal plenum fan.
2. As directed, Class I or Class II: AMCA 99-2408.
3. Drive: As directed, V-belt or Direct.
4. Number of Fan Wheels: One.
5. Fan Diameter: As directed, inches (mm).
6. Airflow: As directed, cfm (L/s).
7. Total Static Pressure: As directed, inches wg (kPa).
8. External Static Pressure: As directed, inches wg (kPa).
9. Speed: As directed.
10. Maximum Outlet Velocity: As directed, fpm (m/s).
11. Motor:

    a. Size: As directed.
    b. Speed: As directed.
    c. Volts: As directed, 208 or 230 V.

d. Phase: Three.
e. Hertz: 60 Hz.
f. Full-Load Amperes: As directed.
g. Minimum Circuit Ampacity: As directed.
h. Maximum Overcurrent Protection: As directed.

12. Fan Inlet Sound Power, dB:

a. 1st Octave: As directed.
b. 2nd Octave: As directed.
c. 3rd Octave: As directed.
d. 4th Octave: As directed.
e. 5th Octave: As directed.
f. 6th Octave: As directed.
g. 7th Octave: As directed.
h. 8th Octave: As directed.

C. Preheat Coil:

1. Heat-Transfer Rate: As directed, Btu/h (kW).
2. Entering-Air Temperature: As directed, deg F (deg C).
3. Leaving-Air Temperature: As directed, deg F (deg C).
4. Face Area: As directed, sq. ft. (sq. m).
5. Maximum Face Velocity: As directed, fpm (m/s).
6. Maximum Air-Side, Static-Pressure Drop: As directed, inches wg (kPa).
7. Fin Spacing: Maximum As directed, fins per inch (per mm).
8. Minimum Number of Rows: As directed.
9. Water:

a. Water Flow: As directed, gpm (L/s).
b. Maximum Water Pressure Drop: As directed, feet of head (kPa).
c. Entering-Water Temperature: As directed, deg F (deg C).
d. Leaving-Water Temperature: As directed, deg F (deg C).
e. Tube Velocity: As directed, fpm (m/s).

D. Heating Coil:

1. Heat-Transfer Rate: As directed, Btu/h (kW).
2. Entering-Air Temperature: As directed, deg F (deg C).
3. Leaving-Air Temperature: As directed, deg F (deg C).
4. Face Area: As directed, sq. ft. (sq. m).
5. Maximum Face Velocity: As directed, fpm (m/s).
6. Maximum Air-Side, Static-Pressure Drop: As directed, inches wg (kPa).
7. Number of Rows: As directed.
8. Fin Spacing: Maximum As directed, fins per inch (per mm).
9. Water:

a. Water Flow: As directed, gpm (L/s).
b. Maximum Water Pressure Drop: As directed, feet of head (kPa).
c. Entering-Water Temperature: As directed, deg F (deg C).
d. Leaving-Water Temperature: As directed, deg F (deg C).

e. Tube Velocity: As directed, fpm (L/s).

E. Electric Heating Coil:

1. Heat-Transfer Rate: As directed, number of Btu/h (kW).
2. Input: As directed.
3. Volts: As directed, 120, 208 or 230 V.
4. Phase: As directed, Single or Three.
5. Full-Load Amperes: As directed.
6. Number of Steps: As directed.

F. Cooling Coil:

1. Sensible Heat-Transfer Rate: As directed, Btu/h (kW).
2. Total Heat-Transfer Rate: As directed, Btu/h (kW).
3. Entering-Air, Dry-Bulb Temperature: As directed, deg F (deg C).
4. Entering-Air, Wet-Bulb Temperature: As directed, deg F (deg C).
5. Leaving-Air, Dry-Bulb Temperature: As directed, deg F (deg C).
6. Leaving-Air, Wet-Bulb Temperature: As directed, deg F (deg C).
7. Face Area: As directed, sq. ft. (sq. m).
8. Maximum Face Velocity: As directed, fpm (m/s).
9. Maximum Air-Side, Static-Pressure Drop: As directed, inches wg (kPa).
10. Number of Rows: As directed.
11. Fin Spacing: Maximum fins per inch (per mm) As directed.
12. Water:

    a. Water Flow: As directed, gpm (L/s).
    b. Maximum Water Pressure Drop: As directed, feet of head (kPa).
    c. Entering-Water Temperature: As directed, deg F (deg C).
    d. Leaving-Water Temperature: As directed, deg F (deg C).
    e. Tube Velocity: As directed, fpm (L/s).

13. Refrigerant:

    a. Refrigerant Type: As directed.

G. Filters:

1. Type: As directed.
2. Face Dimensions, each: As directed, inches by inches (mm by mm).
3. Depth: As directed, inches (mm).
4. Number of Filters in Filter Bank: As directed, wide by high.
5. Access Location: Side.
6. Maximum or Rated Face Velocity: As directed, fpm (m/s).
7. Initial Resistance: As directed, inches wg (kPa).
8. Recommended Final Resistance: As directed, inches wg (kPa).
9. Minimum Efficiency Reporting Value and Average Arrestance:

    a. MERV Rating and Corresponding Average Arrestance: As directed, MERV 1, MERV 2, MERV 3 or MERV 4, and corresponding average arrestance according to ASHRAE 52.2.

10. Minimum Efficiency Reporting Value:

    a. MERV Rating: As directed, MERV 6 or MERV 13, according to ASHRAE 52.2.

11. Depth: As directed, inches (mm).

2.3 INDOOR, BASIC AIR-HANDLING UNIT MANUFACTURERS

2.4 UNIT CASINGS

A. General Fabrication Requirements for Casings:

1. Forming: Form walls, roofs, and floors with at least two breaks at each joint.
2. Joints: Sheet metal screws or pop rivets.
3. Sealing: Seal all joints with water-resistant sealant. Hermetically seal at each corner and around entire perimeter.
4. Base Rail:

    a. Material: Galvanized steel.
    b. Height: 4 inches (150 mm).

B. Single Wall:

1. Material: Galvanized steel with manufacturer's standard finish.
2. Floor Plate: Galvanized steel, treadplate, minimum 18-gauge (1.3 mm) thick.
3. Insulation and Adhesive:

    a. Materials: ASTM C1071, Type I or Type II glass-fiber blanket or board insulation, neoprene coated or foil-faced.
    b. Location and Application: Factory applied with adhesive and mechanical fasteners to the internal surface of section panels downstream from, and including, the cooling coil section.

        1) Liner Adhesive: Comply with ASTM C916, Type I.
        2) Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, or mechanical attachment, to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.

C. Double Wall:

1. Outside Casing Wall: Galvanized steel, minimum 18-gauge (1.3 mm) thick, with manufacturer's standard finish.
2. Inside Casing Wall: Galvanized steel, solid or perforated, minimum 18-gauge (1.3 mm) thick.
3. Floor Plate: Galvanized steel, treadplate, minimum 18-gauge (1.3 mm) thick.
4. Casing Insulation:

    a. Materials: Glass-fiber blanket or board insulation, Type I or Type II ASTM C1071 or injected polyurethane foam insulation.

b. Casing Panel R-Value: Minimum As directed.
c. Insulation Thickness: 1 inch (25 mm).
d. Thermal Break: Provide continuity of insulation with no through-casing metal in casing walls, floors, or roofs of air-handling unit.

D. Static-Pressure Classifications:

1. For Unit Sections Upstream of Fans: Minus As directed, 2-inch wg (500 Pa) or 3-inch wg (750 Pa).
2. For Unit Sections Downstream and Including Fans: 2-inch wg (500 Pa), 3-inch wg (750 Pa) or 4-inch wg (1000 Pa).

E. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

F. Panels and Doors:

1. Panels:

a. Fabrication: Formed and reinforced with same materials and insulation thickness as casing.
b. Fasteners: Two or more camlock type for panel lift-out operation. Arrangement shall allow panels to be opened against airflow.
c. Gasket: Neoprene, applied around entire perimeters of panel frames.
d. Size: Large enough to allow unobstructed access for inspection and maintenance of air-handling unit's internal components. As directed, At least 18 inches (450 mm) or 24 inches (600 mm) wide by full height of unit casing up to a maximum height of 60 inches (1500 mm) or 72 inches (1800 mm).

2. Doors:

a. Fabrication: Formed and reinforced with same materials and insulation thickness as casing.
b. Hinges: A minimum of two ball-bearing hinges or stainless-steel piano hinge and two wedge-lever-type latches, operable from inside and outside. Arrange doors to be opened against airflow. Provide safety latch retainers on doors so that doors do not open uncontrollably.
c. Gasket: Neoprene, applied around entire perimeters of frame.
d. Size: Large enough to allow for unobstructed access for inspection and maintenance of air-handling unit's internal components. At least 18 inches (450 mm) wide by full height of unit casing up to a maximum height of 60 inches (1500 mm).

3. Locations and Applications:

a. Fan Section: As directed, Doors or Panels.
b. Coil Section: Panels.
c. Access Section: As directed, Doors or Panels.
d. Access Sections Immediately Upstream and Downstream of Coil Sections: As directed, Doors or Panels.
e. Damper Section: As directed, Doors or Panels.

f. Filter Section: As directed, Doors or Panels large enough to allow periodic removal and installation of filters.
g. Mixing Section: As directed, Doors or Panels.

G. Condensate Drain Pans:

1. Construction:

a. As directed, Single-wall, galvanized-steel or noncorrosive polymer or stainless-steel sheet.

2. Drain Connection:

a. Located at lowest point of pan and sized to prevent overflow. As directed, terminate with threaded nipple on one end or both ends of pan.
b. Minimum Connection Size: As directed, NPS 1 (DN 25) or NPS 2 (DN 50).

3. Slope: Minimum 0.125 in./ft. (10 mm/mm) slope, to comply with ASHRAE 62.1, in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and from humidifiers, and to direct water toward drain connection.
4. Length: Extend drain pan downstream from leaving face for distance to comply with ASHRAE 62.1.
5. Width: Entire width of water producing device.
6. Depth: A minimum of 2 inches (50 mm) deep.

2.5 FAN, DRIVE, AND MOTOR SECTION

A. Fan and Drive Assemblies: Statically and dynamically balanced and designed for continuous operation at maximum-rated fan speed and motor horsepower.

1. Shafts: With field-adjustable alignment.

a. Turned, ground, and polished hot-rolled steel with keyway. Ship with a protective coating of lubricating oil.
b. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.

B. Centrifugal Fan Housings: Formed- and reinforced-steel panels to form curved scroll housings with shaped cutoff and spun-metal inlet bell.

1. Bracing: Steel angle or channel supports for mounting and supporting fan scroll, wheel, motor, and accessories.
2. Horizontal-Flanged, Split Housing: Bolted construction.
3. Housing for Supply Fan: Attach housing to fan-section casing with metal-edged flexible duct connector.
4. Flexible Connector: Factory fabricated with a fabric strip minimum 3-1/2 inches (89 mm) wide, attached to two strips of minimum 2-3/4-inch (70-mm) wide by 0.028-inch- (0.7-mm-) thick, galvanized-steel sheet.

a. Flexible Connector Fabric: Glass fabric, double coated with neoprene. Fabrics, coatings, and adhesives shall comply with UL 181, Class 1.

1) Fabric Minimum Weight: 26 oz./sq. yd. (880 g/sq. m).
2) Fabric Minimum Tensile Strength: 480 lbf/inch (84 N/mm) in the warp and 360 lbf/inch (63 N/mm) in the filling.
3) Fabric Minimum Service Temperature Range: Minus 40 to plus 200 deg F (Minus 40 to plus 93 deg C).

C. Plenum Fan Housings: Steel frame and panel; fabricated without fan scroll and volute housing. Provide inlet screens for Type SWSI fans.

D. Forward-Curved, Centrifugal Fan Wheels: Inlet flange, backplate, and shallow blades with inlet and tip curved forward in direction of airflow and mechanically fastened to flange and backplate; as directed, steel or aluminum hub swaged to backplate and fastened to shaft with setscrews.

E. Airfoil, Centrifugal Fan Wheels (Plenum Fan Wheels): Smooth-curved inlet flange, backplate, and hollow die-formed airfoil-shaped blades continuously welded at tip flange and backplate; steel hub riveted to backplate and fastened to shaft with setscrews.

F. Fan Shaft Bearings:

1. Self-aligning, pillow-block type with an L-50 rated life of minimum 100,000 hours according to ABMA 9.

G. Belt Drives: Factory mounted, with adjustable alignment and belt tensioning, and with 1.5 or 1.25 service factor based on fan motor as directed.

1. Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
2. Motor Pulleys: Adjustable pitch for use with 5-hp motors and smaller; fixed pitch for use with motors larger than 5 hp. Select pulley size so pitch adjustment is at the middle of adjustment range at fan design conditions.
3. Belts: Oil resistant, nonsparking, and nonstatic; in matched sets for multiple-belt drives.
4. Belt Guards: Comply with requirements specified by OSHA and fabricate according to SMACNA's "HVAC Duct Construction Standards"; 0.146-inch- (2.7-mm-) thick, 3/4-inch (20-mm) diamond-mesh wire screen, welded to steel angle frame; prime coated.

H. Discharge Dampers: Heavy-duty steel assembly with channel frame and sealed ball bearings, and as directed, opposed or parallel blades constructed of two plates formed around and welded to shaft, with blades linked out of airstream to single control lever.

I. Internal Vibration Isolation and Seismic Control: Fans shall be factory mounted with manufacturer's standard restrained vibration isolation mounting devices having a minimum static deflection of 1 inch (25 mm).

J. Motor: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Enclosure Type: Totally enclosed, fan cooled.
2. NEMA Premium Efficient motors as defined in NEMA MG 1.
3. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
4. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.
5. Mount unit-mounted disconnect switches on exterior or interior of unit.

K. Variable-Frequency Motor Controller: Comply with Section 262923 "Variable-Frequency Motor Controllers."

L. Variable-Frequency Motor Controller: As directed, serving each fan individually or all fans combined in fan array.

1. Manufactured Units: Pulse-width modulated; constant torque and variable torque for Design A and Design B motors or inverter-duty motors as directed.
2. Output Rating: As directed, Three phase; 10 to 60 Hz, with voltage proportional to frequency throughout voltage range or 66 Hz, with torque constant as speed changes; maximum voltage equals input voltage.
3. Unit Operating Requirements:

    a. Internal Adjustability:

        1) Minimum Speed: 5 to 25 percent of maximum rpm.
        2) Maximum Speed: 80 to 100 percent of maximum rpm.
        3) Acceleration: 0.1 to 999.9 seconds.
        4) Deceleration: 0.1 to 999.9 seconds.
        5) Current Limit: 30 to minimum of 150 percent of maximum rating.

    b. Self-Protection and Reliability Features:

        1) Surge suppression.
        2) Loss of input signal protection.
        3) Under- and overvoltage trips.
        4) Variable-frequency motor controller and motor-overload/overtemperature protection.
        5) Critical frequency rejection.
        6) Loss-of-phase protection.
        7) Reverse-phase protection.
        8) Motor-overtemperature fault.

    c. Bidirectional autospeed search.
    d. Torque boost.
    e. Motor temperature compensation at slow speeds.

        1) Panel-mounted operator station.
        2) Historical logging information and displays.
        3) Digital indicating devices.

    f. Control Signal Interface: Electric.
    g. Proportional Integral Directive (PID) control interface.

h. DDC system for HVAC Protocols for Network Communications: ASHRAE 135.

4. Line Conditioning:

a. Input line conditioning.
b. Output filtering.
c. EMI/RFI filtering.

2.6 COIL SECTION

A. General Requirements for Coil Section:

1. Comply with AHRI 410.
2. Fabricate coil section to allow removal and replacement of coil for maintenance and to allow in-place access for service and maintenance of coil(s).
3. Coils shall not act as structural component of unit.

B. Preheat Coils:

1. Electrical Coils: Comply with UL 1995.

a. Casing Assembly: As directed, Slip-in or Flanged type with galvanized-steel frame.
b. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame.
c. Overtemperature Protection: Disk-type, automatically resetting, thermal-cutout, safety device; serviceable through terminal box without removing heater from coil section.
d. Secondary Protection: Load-carrying, manually resetting or manually replaceable, thermal cutouts; factory wired in series with each heater stage.
e. Control Panel: As directed, Unit or Remote mounted with disconnecting means and overcurrent protection.

1) As directed, Magnetic or Mercury contactor.
2) Solid-state, stepless pulse controller.
3) Toggle switches, one per step.
4) Step controller.
5) Time-delay relay.
6) Pilot lights, one per step.
7) Airflow proving switch.

2. Hot-Water Coils: As directed, Continuous circuit, Self-draining or Cleanable.

a. Piping Connections: As directed, Threaded, Flanged, same end or opposite ends of coil.

b. Tube Material: Copper.
c. Fin Type: Plate.
d. Fin Material: As directed, Aluminum or Copper.
e. Fin Thickness: As directed, inches (mm).
f. Fin and Tube Joint: As directed, Mechanical bond or Silver brazed.
g. Headers:

1) Cast iron with cleaning plugs and drain and air vent tappings extended to exterior of unit.
2) Seamless copper tube with brazed joints, prime coated.
3) Fabricated steel, with brazed joints, prime coated.
4) Provide insulated cover to conceal exposed outside casings of headers.

h. Frames: Channel frame, minimum 0.052-inch- (1.3-mm-) thick galvanized steel.
i. Coil Working-Pressure Ratings: 200 psig (1380 kPa), 325 deg F (163 deg C).

C. Heating Coils:

1. Electrical Coils: Comply with UL 1995.

a. Casing Assembly: As directed, Slip-in or Flanged type with galvanized-steel frame.
b. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame.
c. Overtemperature Protection: Disk-type, automatically resetting, thermal-cutout, safety device; serviceable through terminal box without removing heater from coil section.
d. Secondary Protection: Load-carrying, manually resetting or manually replaceable, thermal cutouts; factory wired in series with each heater stage.
e. Control Panel: As directed, Unit or Remote mounted with disconnecting means and overcurrent protection.

1) As directed, Magnetic or Mercury contactor.
2) Solid-state, stepless pulse controller.
3) Toggle switches, one per step.
4) Step controller.
5) Time-delay relay.
6) Pilot lights, one per step.
7) Airflow proving switch.

2. Hot-Water Coils: As directed, Continuous circuit, Self-draining or Cleaning.

a. Piping Connections: As directed, Threaded, Flanged, same end or opposite ends of coil.
b. Tube Material: Copper.
c. Fin Type: Plate.
d. Fin Material: As directed, Aluminum or Copper.
e. Fin Thickness: As directed, inches (mm).
f. Fin and Tube Joint: As directed, Mechanical bond or Silver brazed.

g. Headers:

1) Cast iron with cleaning plugs and drain and air vent tappings extended to exterior of unit.
2) Seamless copper tube with brazed joints, prime coated.
3) Fabricated steel, with brazed joints, prime coated.
4) Provide insulated cover to conceal exposed outside casings of headers.

h. Frames: Channel frame, minimum 0.052-inch- (1.3-mm-) thick galvanized steel.
i. Coil Working-Pressure Ratings: 200 psig (1380 kPa), 325 deg F (163 deg C).

D. Cooling Coils:

1. Chilled-Water Coil: As directed, Continuous circuit, Self-draining or Cleanable.

a. Piping Connections: As directed, Threaded, Flanged, same end or opposite ends of coil.
b. Tube Material: Copper.
c. Tube Thickness: As directed, inches (mm).
d. Fin Type: Plate.
e. Fin Material: As directed, Aluminum or Copper.
f. Fin Thickness: As directed, inches (mm).
g. Fin and Tube Joint: Mechanical bond or Silver brazed.
h. Headers:

1) Cast iron with cleaning plugs and drain and air vent tappings extended to exterior of unit.
2) Seamless copper tube with brazed joints, prime coated.
3) Fabricated steel, with brazed joints, prime coated.
4) Provide insulated cover to conceal exposed outside casings of headers.

i. Frames: Channel frame, minimum 0.052-inch- (1.3-mm-) thick galvanized steel.
j. Working-Pressure Ratings: 200 psig (1380 kPa), 325 deg F (163 deg C).

2. Refrigerant Coil:

a. Tubes: Copper.
b. Fins:

1) Material: Aluminum.

c. Fin and Tube Joints: Mechanical bond.
d. Headers: Seamless-copper headers with brazed connections.
e. Frames: Galvanized steel.
f. Ratings: Designed, tested, and rated according to ASHRAE 33 and AHRI 410.

1) Working Pressure: Minimum 300 psig (2070 kPa).

2.7 AIR FILTRATION SECTION

A. Particulate air filtration specified in Section 234100 "Particulate Air Filtration."

B. Panel Filters:

1. Description: As directed, Flat, non-pleated or Pleated factory-fabricated, self-supported disposable air filters with holding frames.
2. Filter Unit Class: UL 900.
3. Media: Interlaced glass, synthetic, or cotton fibers coated with nonflammable adhesive.
4. Filter-Media Frame: High wet-strength beverage board with perforated metal retainer, or metal grid, on outlet side.

C. Side-Access Filter Mounting Frames:

1. Particulate Air Filter Frames: Match inner casing and outer casing material, and insulation thickness. Galvanized steel track.

    a. Sealing: Incorporate positive-sealing device to ensure seal between gasketed material on channels to seal top and bottom of filter cartridge frames to prevent bypass of unfiltered air.

2.8 DAMPERS

A. General Requirements for Dampers: Leakage rate, according to AMCA 500, "Laboratory Methods for Testing Dampers for Rating," shall not exceed 4 cfm/sq. ft. (20 L/s per sq. m) at 1-inch wg (250 Pa) and 8 cfm/sq. ft. (40 L/s per sq. m) at 4-inch wg (1.0 MPa).

B. Damper Operators: Comply with requirements in Section 230923.12 "Control Dampers."

C. Electronic Damper Operators:

1. Direct-coupled type designed for minimum 60,000 full-stroke cycles at rated torque.
2. Electronic damper position indicator shall have visual scale indicating percent of travel and 2- to 10-V dc, feedback signal.
3. Operator Motors:

    a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
    b. Size to operate with sufficient reserve power to provide smooth modulating action or two-position action.
    c. Permanent Split-Capacitor or Shaded-Pole Type: Gear trains completely oil immersed and sealed. Equip spring-return motors with integral spiral-spring mechanism in housings designed for easy removal for service or adjustment of limit switches, auxiliary switches, or feedback potentiometer.

4. Nonspring-Return Motors for Dampers Larger Than 25 Sq. Ft. (2.3 sq. m): Size for running torque of 150 in. x lbf (16.9 N x m) and breakaway torque of 300 in. x lbf (33.9 N x m).

5. Spring-Return Motors for Dampers Larger Than 25 Sq. Ft. (2.3 sq. m): Size for running and breakaway torque of 150 in. x lbf (16.9 N x m).
6. Size dampers for running torque calculated as follows:

    a. Parallel-Blade Damper with Edge Seals: 7 inch-lb/sq. ft. (86.8 kg-cm/sq. m) of damper.
    b. Opposed-Blade Damper with Edge Seals: 5 inch-lb/sq. ft. (62 kg-cm/sq. m) of damper.
    c. Parallel-Blade Damper without Edge Seals: 4 inch-lb/sq. ft (49.6 kg-cm/sq. m) of damper.
    d. Opposed-Blade Damper without Edge Seals: 3 inch-lb/sq. ft. (37.2 kg-cm/sq. m) of damper.
    e. Dampers with 2- to 3-Inch wg (500 to 750 Pa) of Pressure Drop or Face Velocities of 1000 to 2500 fpm (5 to 13 m/s): Increase running torque by 1.5.
    f. Dampers with 3- to 4-Inch wg (750 to 1000 Pa) of Pressure Drop or Face Velocities of 2500 to 3000 fpm (13 to 15 m/s): Increase running torque by 2.0.

7. Coupling: V-bolt and V-shaped, toothed cradle.
8. Overload Protection: Electronic overload or digital rotation-sensing circuitry.
9. Fail-Safe Operation: Mechanical, spring-return mechanism with external, manual gear release on nonspring-return actuators.
10. Power Requirements (Two-Position Spring Return): As directed, 24 V dc, 120 V ac or 230 V ac.
11. Power Requirements (Modulating): Maximum 10 VA at 24 V ac or 8 W at 24 V dc.
12. Proportional Signal: 2 to 10 V dc or 4 to 20 mA, and 2- to 10-V dc position feedback signal.
13. Temperature Rating: As directed, Minus 22 to plus 122 deg F (Minus 30 to plus 50 deg C) or 40 to 104 deg F (5 to 40 deg C).
14. Run Time: As directed, 12 seconds open, 5 seconds closed, 30 seconds, 60 seconds or 120 seconds.

D. Outdoor- and Return-Air Dampers: Low-leakage, double-skin, airfoil-blade, galvanized-steel dampers with compressible jamb seals and extruded-vinyl blade edge seals in opposed or parallel-blade arrangement as directed, with zinc-plated steel operating rods rotating in sintered bronze or nylon bearings mounted in a single galvanized-steel frame, and with operating rods connected with a common linkage. Leakage rate shall not exceed 4 cfm/sq. ft. (20 L/s per sq. m) at 1-inch wg (250 Pa) and 8 cfm/sq. ft. (40 L/s per sq. m) at 4-inch wg (1.0 MPa).

E. Mixing Section: Multiple-blade, air-mixer assembly located immediately downstream of mixing section.

F. Combination Filter and Mixing Section:

1. Cabinet support members shall hold 2-inch- (50-mm-) thick, pleated, flat, permanent or throwaway filters.
2. Multiple-blade, air-mixer assembly shall mix air to prevent stratification, located immediately downstream of mixing box.

2.9 MATERIALS

A. Steel:

1. ASTM A36/A36M for carbon structural steel.
2. ASTM A568/A568M for steel sheet.

B. Stainless Steel:

1. Manufacturer's standard grade for casing.
2. Manufacturer's standard type, ASTM A240/A240M for bare steel exposed to airstream or moisture.

C. Galvanized Steel: ASTM A653/A653M.

D. Aluminum: ASTM B209.

2.10 SOURCE QUALITY CONTROL

A. AHRI 430 Certification: Air-handling units and their components shall be factory tested according to AHRI 430 and shall be listed and labeled by AHRI.

1. AMCA 210 Compliance: Fan performance according to AMCA 210.

B. AMCA 300 and AMCA 301, or AHRI 260 Certification: Air-handling unit fan sound ratings shall comply with AMCA 300, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data" and AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data," or with AHRI 260, "Sound Rating of Ducted Air Moving and Conditioning Equipment."

C. Water Coils: Factory tested to 300 psig (2070 kPa) according to AHRI 410 and ASHRAE 33.

D. Refrigerant Coils: Factory tested to minimum 450-psig (3105-kPa) internal pressure, and to minimum 300-psig (2070-kPa) internal pressure while underwater, according to AHRI 410 and ASHRAE 33.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine casing insulation materials and filter media before air-handling unit installation. Replace with new insulation materials and filter media that are wet, moisture damaged, or mold damaged.

B. Equipment Mounting:

1. Install air-handling units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" as directed.

2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

C. Suspended Units: Suspend and brace units from structural-steel support frame using threaded steel rods and spring hangers. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" as directed.

D. Arrange installation of units to provide access space around air-handling units for service and maintenance.

E. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing with new, clean filters.

F. Connect duct to air-handling units with flexible connections. Comply with requirements in Section 233300 "Air Duct Accessories."

3.2 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to air-handling unit, allow for service and maintenance.

C. Connect piping to air-handling units mounted on vibration isolators with flexible connectors.

D. Connect condensate drain pans using NPS 1-1/4 (DN 32), ASTM B88, Type M (ASTM B88M, Type C) copper tubing. Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.

E. Hot- and Chilled-Water Piping: Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Install shutoff valve and union or flange at each coil supply connection. Install balancing valve and union or flange at each coil return connection.

F. Refrigerant Piping: Comply with applicable requirements in Section 232300 "Refrigerant Piping." Install shutoff valve and union or flange at each supply and return connection.

3.3 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.

D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.4 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Leak Test: After installation, fill water and steam coils with water, and test coils and connections for leaks.
2. Charge refrigerant coils with refrigerant and test for leaks.
3. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

D. Air-handling unit or components will be considered defective if unit or components do not pass tests and inspections.

E. Prepare test and inspection reports.

3.6 DEMONSTRATION

A. As directed, engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain air-handling units.

END OF SECTION 237313.13

SECTION 237313.16 - INDOOR, SEMI-CUSTOM AIR-HANDLING UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes insulated, double-wall-casing, indoor, semi-custom air-handling units that are factory assembled using multiple section components.

1.2 ACTION SUBMITTALS

A. Product Data: For each air-handling unit.

B. Sustainable Design Submittals:

C. Delegated-Design Submittal: For vibration isolation and seismic restraints indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Include design calculations for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans and other details, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Seismic Qualification Data: Certificates for air-handling units, accessories, and components, from manufacturer.

C. Source quality-control reports:

D. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

B. Coordinate sizes and locations of structural-steel support members, if any, with actual equipment provided.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.

C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

E. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design vibration isolation and seismic restraints, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

F. Structural Performance: Casing panels shall be self-supporting and capable of withstanding positive/negative 8-inch wg (2000 Pa) of internal static pressure, without exceeding a midpoint deflection of 0.0042 inch/inch (0.0042 mm/mm) of panel span.

G. Casing Leakage Performance: ASHRAE 111, Class 6 leakage or better at plus or minus 8 inch wg (2000 Pa).

H. Seismic Performance: Air-handling units shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: As directed, 1.5 or 1.0.

2.2 CAPACITIES AND CHARACTERISTICS

A. Supply Fan:

1. Type: As directed, DWDI, backward-inclined centrifugal fan, DWDI, forward-curved centrifugal fan, DWDI, airfoil centrifugal fan or SWSI, airfoil unhoused centrifugal fan.
2. As directed, Class I, Class II or Class III: AMCA 99-2408.
3. Drive: As directed, V-belt or Direct.
4. Number of Fan Wheels: As directed.
5. Fan Diameter: As directed, inches (mm).
6. Airflow: As directed, cfm (L/s).
7. Total Static Pressure: As directed, inches wg (kPa).
8. External Static Pressure: As directed, inches wg (kPa).

9. Speed: As directed.
10. Maximum Outlet Velocity: As directed, fpm (m/s).
11. Motor:

    a. Size: As directed.
    b. Speed: As directed.
    c. Volts: As directed, 208, 230 or 460 As directed.
    d. Phase: Three.
    e. Hertz: 60 Hz.
    f. Full-Load Amperes: As directed, A.
    g. Minimum Circuit Ampacity: As directed, A.
    h. Maximum Overcurrent Protection: As directed, A.

12. Fan Discharge Sound Power, dB:

    a. 1st Octave: As directed.
    b. 2nd Octave: As directed.
    c. 3rd Octave: As directed.
    d. 4th Octave: As directed.
    e. 5th Octave: As directed.
    f. 6th Octave: As directed.
    g. 7th Octave: As directed.
    h. 8th Octave: As directed.

B. As directed, Return or Exhaust Fan:

1. Type: As directed, DWDI, backward-inclined centrifugal fan, DWDI, forward-curved centrifugal fan, DWDI, airfoil centrifugal fan or SWSI, airfoil unhoused centrifugal plenum fan.
2. As directed, Class I, Class II or Class III: AMCA 99-2408.
3. Drive: As directed, V-belt or Direct.
4. Number of Fan Wheels: As directed.
5. Fan Diameter: As directed, inches (mm).
6. Airflow: As directed, cfm (L/s).
7. Total Static Pressure: As directed, inches wg (kPa).
8. External Static Pressure: As directed, inches wg (kPa).
9. Speed: As directed.
10. Maximum Outlet Velocity: As directed, fpm (m/s).
11. Motor:

    a. Size: As directed.
    b. Speed: As directed.
    c. Volts: As directed, 208, 230 or 460.
    d. Phase: Three.
    e. Hertz: 60 Hz.
    f. Full-Load Amperes: As directed.
    g. Minimum Circuit Ampacity: As directed.
    h. Maximum Overcurrent Protection: As directed.

12. Fan Inlet Sound Power, dB:

a. 1st Octave: As directed.
b. 2nd Octave: As directed.
c. 3rd Octave: As directed.
d. 4th Octave: As directed.
e. 5th Octave: As directed.
f. 6th Octave: As directed.
g. 7th Octave: As directed.
h. 8th Octave: As directed.

C. Preheat Coil:

1. Heat-Transfer Rate: As directed, Btu/h (kW).
2. Entering-Air Temperature: As directed, deg F (deg C).
3. Leaving-Air Temperature: As directed, deg F (deg C).
4. Face Area: As directed, sq. ft. (sq. m).
5. Maximum Face Velocity: As directed, fpm (m/s).
6. Maximum Air-Side, Static-Pressure Drop: As directed, inches wg (Pa).
7. Fin Spacing: Maximum number of fins per inch (per mm) As directed.
8. Minimum Number of Rows: As directed.
9. Integral Face-and-Bypass Dampers: As directed, Horizontal or Vertical, opposed-blade, galvanized-steel, aluminum or extruded-aluminum dampers with zinc-plated steel operating rods rotating in sintered bronze or nylon bearings mounted in a single galvanized-steel, aluminum or extruded-aluminum frame as directed, with operating rods connected with a common linkage. Meeting edges of blades shall have gaskets and edge seals, and blades shall be mechanically fastened.
10. Water:

    a. Water Flow: As directed, gpm (L/s).
    b. Maximum Water Pressure Drop: As directed, feet of head (kPa).
    c. Entering-Water Temperature: As directed, deg F (deg C).
    d. Leaving-Water Temperature: As directed, deg F (deg C).
    e. Tube Velocity: As directed, fpm (L/s).

D. Heating Coil:

1. Heat-Transfer Rate: As directed Btu/h (kW).
2. Entering-Air Temperature: As directed, deg F (deg C).
3. Leaving-Air Temperature: As directed, deg F (deg C).
4. Face Area: As directed, sq. ft. (sq. m).
5. Maximum Face Velocity: As directed, fpm (m/s).
6. Maximum Air-Side, Static-Pressure Drop: As directed, inches wg (Pa).
7. Number of Rows: As directed.
8. Fin Spacing: Maximum fins per inch (per mm) As directed.
9. Water:

    a. Water Flow: As directed, gpm (L/s).
    b. Maximum Water Pressure Drop: As directed, feet of head (kPa).
    c. Entering-Water Temperature: As directed, deg F (deg C).
    d. Leaving-Water Temperature: As directed, deg F (deg C).
    e. Tube Velocity: As directed, fpm (L/s).

E. Electric Heating Coil:

1. Heat-Transfer Rate: As directed, Btu/h (kW).
2. Input: As directed, kilowatts.
3. Volts: As directed, 120, 208 or 230 V.
4. Phase: As directed, Single or Three.
5. Full-Load Amperes: As directed.
6. Number of Steps: As directed.

F. Cooling Coil:

1. Sensible Heat-Transfer Rate: As directed, Btu/h (kW).
2. Total Heat-Transfer Rate: As directed, Btu/h (kW).
3. Entering-Air, Dry-Bulb Temperature: As directed, deg F (deg C).
4. Entering-Air, Wet-Bulb Temperature: As directed, deg F (deg C).
5. Leaving-Air, Dry-Bulb Temperature: As directed, deg F (deg C).
6. Leaving-Air, Wet-Bulb Temperature: As directed, deg F (deg C).
7. Face Area: As directed, sq. ft. (sq. m).
8. Maximum Face Velocity: As directed, fpm (m/s).
9. Maximum Air-Side, Static-Pressure Drop: As directed, inches wg (Pa).
10. Number of Rows: As directed.
11. Fin Spacing: As directed, Maximum fins per inch (per mm).
12. Water:
    a. Water Flow: As directed, gpm (L/s).
    b. Maximum Water Pressure Drop: As directed, feet of head (kPa).
    c. Entering-Water Temperature: As directed, deg F (deg C).
    d. Leaving-Water Temperature: As directed, deg F (deg C).
    e. Tube Velocity: As directed, fpm (L/s).
13. Refrigerant:
    a. Refrigerant Type: As directed.

G. Prefilters:

1. Type: As directed.
2. Face Dimensions, each: As directed, inches by inches (mm by mm).
3. Depth: As directed, inches (mm).
4. Number of Filters, Wide by High: As directed.
5. Access Location: As directed, Front, Back, Side or Bottom.
6. Maximum or Rated Face Velocity: As directed, fpm (m/s).
7. Initial Resistance: As directed, inches wg (Pa).
8. Recommended Final Resistance: As directed, inches wg (Pa).
9. Minimum Efficiency Reporting Value and Average Arrestance:
    a. MERV Rating: As directed, MERV 1, MERV 2, MERV 3 or MERV 4, and corresponding average arrestance according to ASHRAE 52.2.
10. Minimum Efficiency Reporting Value:

a. MERV Rating: As directed, MERV 6 or MERV 13, according to ASHRAE 52.2.

H. Final Filters:

1. Type: As directed.
2. Face Dimensions, each: As directed, inches by inches (mm by mm).
3. Depth: As directed, inches (mm).
4. Number of Filters, Wide by High: As directed.
5. Access Location: As directed, Front, Back, Side or Bottom.
6. Maximum or Rated Face Velocity: As directed, fpm (m/s).
7. Initial Resistance: As directed, inches wg (Pa).
8. Recommended Final Resistance: As directed, inches wg (Pa).
9. Minimum Efficiency Reporting Value:

a. MERV Rating: As directed, MERV 6 or MERV 13, according to ASHRAE 52.2.

I. Dampers: As directed, Zone, Mixing dampers or Face and bypass.

J. Sound Attenuators:

1. Configuration: As directed, Straight or Elbow.
2. Shape: As directed, Rectangular or Round.
3. Attenuation Mechanism: As directed, Acoustic glass fiber or Packless.
4. Maximum Pressure Drop: As directed, inches wg (Pa).
5. Length: As directed, inches (mm).
6. Face Dimension: As directed, inches (mm) wide by inches (mm) high.
7. Face Velocity: As directed, fpm (m/s).
8. Dynamic Insertion Loss:

a. 1st Octave: As directed.
b. 2nd Octave: As directed.
c. 3rd Octave: As directed.
d. 4th Octave: As directed.
e. 5th Octave: As directed.
f. 6th Octave: As directed.
g. 7th Octave: As directed.
h. 8th Octave: As directed.

9. Generated Noise:

a. 1st Octave: As directed.
b. 2nd Octave: As directed.
c. 3rd Octave: As directed.
d. 4th Octave: As directed.
e. 5th Octave: As directed.
f. 6th Octave: As directed.
g. 7th Octave: As directed.
h. 8th Octave: As directed.

K. Steam Grid Humidifier:

1. Humidification Rate: As directed, lb/h (g/s).
2. Steam Supply Pressure: As directed, psig (kPa).
3. Dry-Bulb Air Temperature at Discharge: As directed, deg F (deg C).
4. Wet-Bulb Air Temperature at Discharge: As directed, deg F (deg C).
5. Maximum Absorption Distance: As directed, inches (mm).
6. Number of Distribution Tubes or Manifolds: As directed.

L. Self-Contained Electric-Resistance Humidifier.

1. Humidification Rate: As directed, lb/h (g/s).
2. Dry-Bulb Air Temperature at Discharge: As directed, deg F (deg C).
3. Wet-Bulb Air Temperature at Discharge: As directed, deg F (deg C).
4. Maximum Absorption Distance: As directed, inches (mm).
5. Minimum Makeup Water Supply Pressure: As directed, psig (kPa).
6. Electric-Resistance Evaporation Chamber:

    a. Power Input per Chamber: As directed, kW.
    b. Number of Chambers: As directed.

M. Self-Contained Gas-Fired Humidifier:

1. Humidification Rate: As directed, lb/h (g/s).
2. Dry-Bulb Air Temperature at Discharge: As directed, deg F (deg C).
3. Wet-Bulb Air Temperature at Discharge: As directed, deg F (deg C).
4. Maximum Absorption Distance: As directed, inches (mm).
5. Minimum Makeup Water Supply Pressure: As directed, psig (kPa).
6. Gas-Fired Generator:

    a. Fuel Input: As directed, Btu/h (kW).
    b. Fuel Pressure: As directed, inches wg (kPa).

7. Number of Distribution As directed, Tubes or Manifolds: As directed.

N. Heat-Exchanger Humidifier:

1. Humidification Rate: As directed lb/h (g/s).
2. Dry-Bulb Air Temperature at Discharge: As directed deg F (deg C).
3. Wet-Bulb Air Temperature at Discharge: As directed deg F (deg C).
4. Maximum Absorption Distance: As directed inches (mm).
5. Minimum Makeup Water Supply Pressure: As directed psig (kPa).
6. Steam to Heat Exchanger:

    a. Supply Pressure at Control Valve: As directed psig (kPa).
    b. Condensing Rate: As directed lb/h (g/s).

O. Air-to-Air Energy Recovery:

1. Type: As directed Heat-wheel air-to-air energy recovery or Fixed-plate air-to-air energy recovery.
2. Exhaust Air:

a. Airflow: As directed cfm (L/s).
b. Face Velocity: As directed fpm (m/s).
c. Summer:

1) Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
2) Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
3) Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
4) Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

d. Winter:

1) Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
2) Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
3) Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
4) Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).
5) Air Pressure Drop: As directed, inches wg (Pa).

3. Supply Air:

a. Airflow: As directed cfm (L/s).
b. Face Velocity: As directed fpm (m/s).
c. Summer:

1) Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
2) Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
3) Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
4) Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).

d. Winter:

1) Entering-Air Temperature, Dry Bulb: As directed, deg F (deg C).
2) Entering-Air Temperature, Wet Bulb: As directed, deg F (deg C).
3) Leaving-Air Temperature, Dry Bulb: As directed, deg F (deg C).
4) Leaving-Air Temperature, Wet Bulb: As directed, deg F (deg C).
5) Air Pressure Drop: As directed, inches wg (Pa).

e. Wheel Drive:

1) Motor Size: As directed.
2) Motor Electrical Characteristics:

a) Volts: As directed 120, 208 or 230.
b) Phase: As directed Single or Three.
c) Hertz: 60 Hz.

f. Effectiveness:

4. Air Blender:

a. Airflow: As directed cfm (L/s).
b. Minimum Velocity: As directed fpm (m/s).

c. Air Pressure Drop: As directed inches wg (Pa).

5. Diffuser:

a. Airflow: As directed cfm (L/s).
b. Air Pressure Drop: As directed inches wg (Pa).

2.3 INDOOR, SEMI-CUSTOM AIR-HANDLING UNIT MANUFACTURERS

2.4 UNIT CASINGS

A. Frame: Modular and providing overall structural integrity without reliance on casing panels for structural support.

B. Base Rail:

1. Material: As directed Galvanized steel or Welded structural steel.
2. Height: 6 inches (150 mm).

C. Casing Joints: Hermetically sealed at each corner and around entire perimeter.

D. Outside Casing Wall:

1. Material: Galvanized steel, minimum as directed 18-gauge (1.3 mm), 16-gauge (1.6 mm) or 14-gauge (2.0 mm) thick.
2. Material: Aluminum, minimum as directed 16-gauge (1.3 mm), 14-gauge (1.6 mm) or 12-gauge (2.0 mm) thick.
3. Factory Finish: Provide manufacturer's standard finish.

E. Inside Casing Wall:

1. Material: As directed Galvanized steel, solid or perforated, minimum 18-gauge (1.3 mm) or 16-gauge (1.6 mm) thick.
2. Material: Aluminum, solid or perforated, minimum 16-gauge (1.3 mm) or 14-gauge (1.6 mm) thick.

F. Floor Plate:

1. Material: As directed Galvanized steel, treadplate, minimum 18-gauge (1.3 mm), 16-gauge (1.6 mm), 14-gauge (2.0 mm), 12-gauge (2.7 mm) or 10-gauge (3.5 mm) thick.
2. Material: Aluminum, treadplate, minimum 18-gauge (1.0 mm), 16-gauge (1.3 mm), 14-gauge (1.6 mm), 12-gauge (2.0 mm) or 10-gauge (2.6 mm) thick.

G. Static-Pressure Classifications:

1. For Unit Sections Upstream of Fans: Minus 2-inch wg (500 Pa), 3-inch wg (750 Pa), 4-inch wg (1000 Pa) or 6-inch wg (1500 Pa).
2. For Unit Sections Downstream and Including Fans: As directed 2-inch wg (500 Pa), 3-inch wg (750 Pa), 4-inch wg (1000 Pa) or 6-inch wg (1500 Pa).

H. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

I. Casing Insulation:

1. Materials: As directed Glass-fiber blanket or board insulation, Type I or Type II ASTM C1071, injected polyurethane foam insulation or Glass-fiber insulation layered over injected foam in perforated interior casing sections to meet specified acoustic requirements.
2. Casing Panel R-Value: Minimum As directed R-11 or R-13.
3. Insulation Thickness: 2 inches (50 mm).
4. Thermal Break: Provide continuity of insulation with no through-casing metal in casing walls, floors, or roofs of air-handling unit.

J. Panels, Doors and Windows:

1. Panels:

a. Fabrication: Formed and reinforced, double-wall and insulated panels of same materials and thicknesses as casing.
b. Fasteners: Two or more camlock type for panel lift-out operation. Arrangement shall allow panels to be opened against airflow
c. Gasket: Neoprene, applied around entire perimeters of panel frames.
d. Size: Large enough to allow unobstructed access for inspection and maintenance of air-handling unit's internal components. As directed At least 18 inches (450 mm) or 24 inches (600 mm) wide by full height of unit casing up to a maximum height of 60 inches (1500 mm) or 72 inches (1800 mm).

2. Doors:

a. Fabrication: Formed and reinforced, double-wall and insulated panels of same materials and thicknesses as casing.
b. Hinges: A minimum of two ball-bearing hinges or stainless-steel piano hinge and two wedge-lever latches, operable from inside and outside. Arrange doors to be opened against airflow. Provide safety latch retainers on doors so that doors do not open uncontrollably.
c. Gasket: Neoprene, applied around entire perimeters of panel frames.
d. Size: Large enough to allow for unobstructed access for inspection and maintenance of air-handling unit's internal components. At least 18 inches (450 mm) or 24 inches (600 mm) wide by full height of unit casing up to a maximum height of 60 inches (1500 mm) or 72 inches (1800 mm).

3. Windows:

a. Construction: Fabricate windows in access panels and doors of double-glazed, safety glass with an airspace between panes and sealed with interior and exterior rubber seals.
b. Size: Minimum 6 inches (150 mm), square or round.

4. Locations and Applications:

a. Fan Section: As directed, Doors, Panels, with windows.
b. Coil Section: Panels.
c. Access Section: As directed Doors, Panels, with windows.
d. Access Sections Immediately Upstream and Downstream of Coil Sections: As directed Doors, Panels, with windows.
e. Damper Section: As directed Doors, Panels, with viewing windows.
f. Filter Section: As directed Doors or Panels large enough to allow periodic removal and installation of filters.
g. Access Sections Immediately Upstream and Downstream of Filter Sections: As directed Doors, Panels, with windows.
h. Mixing Section: As directed Doors, Panels, with windows.
i. Humidifier Section: As directed Doors, Panels, with windows.

5. Service Lights: LED vaporproof luminaire with individual switched junction box located outside or inside as directed, adjacent to each access door and panel.

   a. Locations: As directed Each section accessed with door or panel or Fan section.

6. Convenience Outlets: One 20-A duplex GFCI receptacle per location with junction box located on outside casing wall.

   a. Locations: As directed Each section accessed with a door or panel or Fan section.

K. Condensate Drain Pans:

1. Construction:

   a. Single-wall, galvanized-steel or noncorrosive polymer sheet.
   b. Double-wall, galvanized-steel or noncorrosive polymer sheet with space between walls filled with foam insulation and moisture-tight seal.

2. Drain Connection:

   a. Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on one end or both ends of pan as directed.
   b. Minimum Connection Size: As directed NPS 1 (DN 25) or NPS 2 (DN 50).

3. Slope: Minimum 0.125-in./ft. (10-mm/mm) slope, to comply with ASHRAE 62.1, in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and from humidifiers and to direct water toward drain connection.
4. Length: Extend drain pan downstream from leaving face for distance to comply with ASHRAE 62.1.
5. Width: Entire width of water producing device.
6. Depth: A minimum of 2 inches (50 mm) deep.
7. As directed Formed sections or Integral part of floor plating.
8. Pan-Top Surface Coating for Galvanized-Steel Drain Pans: Asphaltic waterproofing compound.
9. Units with stacked coils shall have an intermediate drain pan to collect condensate from top coil.

2.5 FAN, DRIVE, AND MOTOR SECTION

A. Fan and Drive Assemblies: Statically and dynamically balanced and designed for continuous operation at maximum-rated fan speed and motor horsepower.

1. Shafts: With field-adjustable alignment.

a. Turned, ground, and polished hot-rolled steel with keyway. Ship with a protective coating of lubricating oil.
b. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.

B. Centrifugal Fan Housings: Formed- and reinforced-steel panels to form curved scroll housings with shaped cutoff and spun-metal inlet bell.

1. Bracing: Steel angle or channel supports for mounting and supporting fan scroll, wheel, motor, and accessories.
2. Horizontal-Flanged, Split Housing: Bolted construction.
3. Housing for Supply Fan: Attach housing to fan-section casing with metal-edged flexible duct connector.
4. Flexible Connector: As directed Factory fabricated with a fabric strip 3-1/2 inches (89 mm) or 5-3/4 inches (146 mm) wide attached to two strips of 2-3/4 inches (70 mm) wide, 0.028-inch- (0.7-mm-) thick, galvanized-steel sheet or 0.032-inch- (0.8-mm-) thick, aluminum sheets.

a. Flexible Connector Fabric: Glass fabric, double coated with neoprene. Fabrics, coatings, and adhesives shall comply with UL 181, Class 1.

1) Fabric Minimum Weight: 26 oz./sq. yd. (880 g/sq. m).
2) Fabric Minimum Tensile Strength: 480 lbf/inch (84 N/mm) in the warp and 360 lbf/inch (63 N/mm) in the filling.
3) Fabric Minimum Service Temperature Range: Minus 40 to plus 200 deg F (Minus 40 to plus 93 deg C).

C. Plenum Fan Housings: Steel frame and panel; fabricated without fan scroll and volute housing. Provide inlet screens for Type SWSI fans.

D. Plenum Fan Arrays: As directed Contained or Uncontained as defined in AHRI 430. Steel or aluminum frame with inlet cone and structural framing around each fan built into an array of multiple fans. As directed Provide backdraft or motorized dampers at each fan to prevent short circuiting of flow if one fan is not operating.

E. Backward-Inclined, Centrifugal Fan Wheels: Construction with curved inlet flange, backplate, backward-inclined blades welded or riveted to flange and backplate; as directed steel or aluminum hub riveted to backplate and fastened to shaft with setscrews.

F. Forward-Curved, Centrifugal Fan Wheels: Inlet flange, backplate, and shallow blades with inlet and tip curved forward in direction of airflow and mechanically fastened to flange and backplate; as directed steel or aluminum hub swaged to backplate and fastened to shaft with setscrews.

G. Airfoil, Centrifugal Fan Wheels: Smooth-curved inlet flange, backplate, and hollow die-formed airfoil-shaped blades continuously welded at tip flange and backplate; as directed steel or aluminum hub riveted to backplate and fastened to shaft with setscrews.

H. Fan Shaft Bearings:

1. Prelubricated and Sealed, Ball Bearings: Self-aligning, pillow-block type with an L-50 rated life of 200,000 hours according to ABMA 9.
2. Grease-Lubricated, Tapered-Roller Bearings: Self-aligning, pillow-block type with double-locking collars and two-piece, cast-iron housing with grease lines extended to outside unit and an L-50 rated life of 200,000 hours according to ABMA 11.
3. Grease-Lubricated Bearings: Self-aligning, pillow-block-type, ball or roller bearings with adapter mount and two-piece, cast-iron housing with grease lines extended to outside unit and an L-50 rated life of 200,000.

I. Belt Drives: Factory mounted, with adjustable alignment and belt tensioning, and with 1.5 or 1.25 service factor based on fan motor as directed.

1. Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
2. Motor Pulleys: Adjustable pitch for use with 5-hp motors and smaller; fixed pitch for use with motors larger than 5 hp. Select pulley size so pitch adjustment is at the middle of adjustment range at fan design conditions.
3. Belts: Oil resistant, nonsparking, and nonstatic; in matched sets for multiple-belt drives.
4. Belt Guards: Comply with requirements specified by OSHA and fabricate according to SMACNA's "HVAC Duct Construction Standards"; 0.146 inch- (2.7 mm-) thick, 3/4-inch (20-mm) diamond-mesh wire screen, welded to steel angle frame; prime coated.

J. Discharge Dampers: Heavy-duty steel assembly with channel frame and sealed ball bearings, and opposed or parallel blades as directed constructed of two plates formed around and welded to shaft, with blades linked out of airstream to single control lever.

K. Internal Vibration Isolation and Seismic Control: Fans shall be factory mounted with manufacturer's standard restrained vibration isolation mounting devices having a minimum static deflection of 1 inch (25 mm) or 2 inches (50 mm).

L. Motor: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Enclosure Type: Totally enclosed, fan cooled.
2. NEMA Premium Efficient motors as defined in NEMA MG 1.
3. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
4. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.
5. Mount unit-mounted disconnect switches on exterior or interior of unit as directed.

M. Variable-Frequency Motor Controller: Comply with Section 262923 "Variable-Frequency Motor Controllers."

N. Variable-Frequency Motor Controller: As directed Serving each fan individually or all fans combined in fan array.

1. Manufactured Units: Pulse-width modulated; constant torque and variable torque for Design A and Design B or inverter-duty motors as directed.
2. Output Rating: As directed Three phase; 10 to 60 Hz, with voltage proportional to frequency throughout voltage range or 66 Hz, with torque constant as speed changes; maximum voltage equals input voltage.
3. Unit Operating Requirements:

    a. Internal Adjustability:

        1) Minimum Speed: 5 to 25 percent of maximum rpm.
        2) Maximum Speed: 80 to 100 percent of maximum rpm.
        3) Acceleration: 0.1 to 999.9 seconds.
        4) Deceleration: 0.1 to 999.9 seconds.
        5) Current Limit: 30 to minimum of 150 percent of maximum rating.

    b. Self-Protection and Reliability Features:

        1) Surge suppression.
        2) Loss of input signal protection.
        3) Under- and overvoltage trips.
        4) Variable-frequency motor controller and motor-overload/overtemperature protection.
        5) Critical frequency rejection.
        6) Loss-of-phase protection.
        7) Reverse-phase protection.
        8) Motor-overtemperature fault.

    c. Bidirectional autospeed search.
    d. Torque boost.
    e. Motor temperature compensation at slow speeds.

        1) Panel-mounted operator station.
        2) Historical logging information and displays.
        3) Digital indicating devices.

    f. Control Signal Interface: Electric.
    g. Proportional Integral Directive (PID) control interface.
    h. DDC system for HVAC Protocols for Network Communications: ASHRAE 135.

4. Line Conditioning:

    a. Input line conditioning.
    b. Output filtering.
    c. EMI/RFI filtering.

5. Bypass Systems:

    a. Bypass Mode: As directed Manual operation only or Field-selectable automatic or manual.
    b. Bypass Controller: Two-contactor style, with bypass and output isolating contactors and isolating switch.
    c. Bypass Controller: Three-contactor style, with bypass and input and output isolating contactors and isolating switch.
    d. Bypass Contactor Configuration: As directed Full-voltage (across the line) or Reduced-voltage (autotransformer) type.

2.6 COIL SECTION

A. General Requirements for Coil Section:

1. Comply with AHRI 410.
2. Fabricate coil section to allow removal and replacement of coil for maintenance and to allow in-place access for service and maintenance of coil(s).
3. For multizone units, provide air deflectors and air baffles to balance airflow across coils.
4. Coils shall not act as structural component of unit.

B. Preheat Coils:

1. Electrical Coils, Controls, and Accessories: Comply with UL 1995.

    a. Casing Assembly: As directed Slip-in or Flanged type with galvanized-steel frame.
    b. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame.
    c. Overtemperature Protection: Disk-type, automatically resetting, thermal-cutout, safety device; serviceable through terminal box without removing heater from coil section.
    d. Secondary Protection: Load-carrying, manually resetting or manually replaceable, thermal cutouts; factory wired in series with each heater stage.
    e. Control Panel: As directed Unit or Remote mounted with disconnecting means and overcurrent protection.

        1) As directed Magnetic or Mercury contactor.
        2) Solid-state, stepless pulse controller.
        3) Toggle switches, one per step.
        4) Step controller.
        5) Time-delay relay.
        6) Pilot lights, one per step.
        7) Airflow proving switch.

2. Hot-Water Coils: As directed Continuous circuit, Self-draining or Cleanable.

    a. Piping Connections: As directed Threaded, Flanged, same end or opposite ends of coil.

b. Tube Material: Copper.
c. Fin Type: Plate.
d. Fin Material: As directed Aluminum or Copper.
e. Fin Spacing: As directed Maximum 10 or 12 fins per inch (mm).
f. Fin Thickness: Inches (mm) as directed.
g. Fin and Tube Joint: As directed Mechanical bond or Silver brazed.
h. Headers:

1) Cast iron with cleaning plugs and drain and air vent tappings extended to exterior of unit.
2) Seamless copper tube with brazed joints, prime coated.
3) Fabricated steel, with brazed joints, prime coated.
4) Provide insulated cover to conceal exposed outside casings of headers.

i. Frames: Channel frame, As directed 0.052-inch- (1.3-mm-) thick, galvanized steel, 0.064-inch- (1.6-mm-) thick, galvanized steel, 0.079-inch- (2.0-mm-) thick, galvanized steel, 0.0625-inch- (1.58-mm-) thick, galvanized steel or 0.0625-inch- (1.58-mm-) thick, stainless steel.
j. Coil Working-Pressure Ratings: 200 psig (1380 kPa), 325 deg F (163 deg C).
k. Integral Face-and-Bypass Dampers: As directed Horizontal or Vertical, opposed-blade, galvanized-steel, aluminum or extruded-aluminum dampers with zinc-plated steel operating rods rotating in sintered bronze or nylon bearings mounted in a single galvanized-steel, aluminum or extruded-aluminum frame, with operating rods connected with a common linkage. Meeting edges of blades shall have gaskets and edge seals, and blades shall be mechanically fastened.
l. Integral Face-and-Bypass Dampers: As directed Horizontal or Vertical opposed-blade, galvanized-steel, aluminum or extruded-aluminum dampers with zinc-plated steel operating rods rotating in sintered bronze or nylon bearings mounted in a single galvanized-steel, aluminum or extruded-aluminum frame, with operating rods connected with a common linkage. Meeting edges of blades shall have gaskets and edge seals, and blades shall be mechanically fastened.

C. Heating Coils:

1. Electrical Coils, Controls, and Accessories: Comply with UL 1995.

a. Casing Assembly: As directed Slip-in or Flanged type with galvanized-steel frame.
b. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame.
c. Overtemperature Protection: Disk-type, automatically resetting, thermal-cutout, safety device; serviceable through terminal box without removing heater from coil section.
d. Secondary Protection: Load-carrying, manually resetting or manually replaceable, thermal cutouts; factory wired in series with each heater stage.
e. Control Panel: As directed Unit or Remote mounted with disconnecting means and overcurrent protection.

1) As directed Magnetic or Mercury contactor.
2) Solid-state, stepless pulse controller.

3) Toggle switches, one per step.
4) Step controller.
5) Time-delay relay.
6) Pilot lights, one per step.
7) Airflow proving switch.

2. Hot-Water Coils: As directed Continuous circuit, Self-draining or Cleaning.

a. Piping Connections: As directed Threaded, Flanged, same end or opposite ends of coil.
b. Tube Material: Copper.
c. Fin Type: Plate.
d. Fin Material: As directed Aluminum or Copper.
e. Fin Spacing: As directed Maximum 10 or 12 fins per inch (mm).
f. Fin Thickness: Inches (mm) as directed.
g. Fin and Tube Joint: As directed Mechanical bond or Silver brazed.
h. Headers:

1) Cast iron with cleaning plugs and drain and air vent tappings extended to exterior of unit.
2) Seamless copper tube with brazed joints, prime coated.
3) Fabricated steel, with brazed joints, prime coated.
4) Provide insulated cover to conceal exposed outside casings of headers.

i. Frames: As directed Channel frame, 0.052-inch- (1.3-mm-) thick, galvanized steel, 0.064-inch- (1.6-mm-) thick, galvanized steel, 0.079-inch- (2.0-mm-) thick, galvanized steel, 0.0625-inch- (1.58-mm-) thick, galvanized steel or 0.0625-inch- (1.58-mm-) thick, stainless steel.
j. Coil Working-Pressure Ratings: 200 psig (1380 kPa), 325 deg F (163 deg C).

D. Cooling Coils:

1. Chilled-Water Coil: As directed Continuous circuit, Self-draining or Cleanable.

a. Piping Connections: As directed Threaded, Flanged, same end or opposite ends of coil.
b. Tube Material: Copper.
c. Tube Thickness: Inches (mm) as directed.
d. Fin Type: Plate.
e. Fin Material: As directed Aluminum or Copper.
f. Fin Spacing: As directed 0.125 inch (3.18 mm), 0.091 inch (2.31 mm) or 0.071 inch (1.80 mm), 0.067 inch (1.70 mm), 0.056 inch (1.42 mm) or 0.0075 inch (0.19 mm).
g. Fin Thickness: Inches (mm) as directed.
h. Fin and Tube Joint: As directed Mechanical bond or Silver brazed.
i. Headers:

1) Cast iron with cleaning plugs and drain and air vent tappings extended to exterior of unit.
2) Seamless copper tube with brazed joints, prime coated.
3) Fabricated steel, with brazed joints, prime coated.

4) Provide insulated cover to conceal exposed outside casings of headers.

j. Frames: As directed Channel frame, 0.052-inch- (1.3-mm-) thick, galvanized steel, 0.064-inch- (1.6-mm-) thick, galvanized steel, 0.079-inch- (2.0-mm-) thick, galvanized steel, 0.0625-inch- (1.58-mm-) thick, galvanized steel or 0.0625-inch- (1.58-mm-) thick, stainless steel.
k. Working-Pressure Ratings: 200 psig (1380 kPa), 325 deg F (163 deg C).

2. Refrigerant Coil:

a. Tubes: Copper.
b. Fins:

1) Material: As directed Aluminum or Copper.
2) Fin Spacing: As directed Maximum 12, 10 or 8 fins per inch (mm).

c. Fin and Tube Joints: Mechanical bond.
d. Headers: Seamless-copper headers with brazed connections.
e. Frames: As directed Galvanized steel or Stainless steel.
f. Ratings: Designed, tested, and rated according to ASHRAE 33 and AHRI 410.

1) Working Pressure: Minimum 300 psig (2070 kPa).

2.7 AIR FILTRATION SECTION

A. Particulate air filtration is specified in Section 234100 "Particulate Air Filtration."

B. High-efficiency particulate air (HEPA) filtration is specified in Section 234133 "High-Efficiency Particulate Air Filtration."

C. Gas-phase air filtration is specified in Section 234200 "Gas-Phase Air Filtration."

D. Panel Filters:

1. Description: As directed Flat, non-pleated or Pleated factory-fabricated, self-supported, disposable air filters with holding frames.
2. Filter Unit Class: UL 900.
3. Media: Interlaced glass, synthetic or cotton fibers coated with nonflammable adhesive.
4. Filter-Media Frame: Beverage board with perforated metal retainer, or metal grid, on outlet side.

E. Bag Filters:

1. Description: Factory-fabricated, dry, extended-surface, self-supporting filters with holding frames in steel, basket-type retainers.
2. Filter Unit Class: UL 900.
3. Media: Fibrous material, coated with antimicrobial agent, constructed so individual pockets are maintained in tapered form by flexible internal supports under rated-airflow conditions.

4. Filter-Media Frame: Galvanized steel.

F. Cartridge Filters:

1. Description: Factory-fabricated, adhesive-coated disposable, packaged air filters with media perpendicular to airflow, and with holding frames.
2. Filter Unit Class: UL 900.
3. Media: Fibrous material, coated with antimicrobial agent, constructed so individual pleats are maintained in pleated form under rater-airflow conditions by corrugated aluminum separators.
4. Filter Media Frame: As directed Galvanized steel.

G. Front- or Back-Access Filter Mounting Frames:

1. Particulate Air Filter Frames: As directed Galvanized-steel or Aluminum framing members with access for filter servicing, cut to size and prepunched for assembly into modules. Vertically support filters to prevent deflection of horizontal members without interfering with either filter installation or operation.

    a. Prefilters: Incorporate a separate 2-inch- (50-mm-) thick track with spring clips, with same access as primary filter.
    b. Sealing: Full periphery foam gaskets.

2. HEPA Filter Frames: As directed Aluminum or Stainless-steel framing members, cut to size and prepunched for assembly into modules. Vertically support filters to prevent deflection of horizontal members without interfering with either filter installation operation. Bolted filter-sealing mechanism shall mount and continuously seal each individual filter.

    a. Prefilters: As directed Incorporate a separate 2-inch- (50-mm-) or 4-inch- (50-mm-) thick track with spring clips with same access as primary filter.
    b. Sealing: Gasketed or gel, hand-crank locking mechanism to provide positive-sealing for each filter to ensure seal between filter elements to prevent bypass of unfiltered air.

3. Gas-Phase Air Filter Frames: As directed Galvanized-steel or Aluminum framing members with access for filter servicing, cut to size and prepunched for assembly into modules. Vertically support filters to prevent deflection of horizontal members without interfering with either filter installation or operation.

    a. Prefilters: Incorporate a separate 2-inch- (50-mm-) thick track with spring clips.
    b. Sealing: As directed Full periphery foam gaskets or Positive-sealing-device for each row of filters to ensure seal between gasketed filter elements to prevent bypass of unfiltered air.

H. Side-Access Filter Mounting Frames:

1. Particulate Air Filter Frames: Match inner casing and outer casing material, and insulation thickness. As directed Galvanized steel or Aluminum track.

a. Prefilters: Incorporate an integral 2-inch- (50-mm-) thick track with same access as primary filter.
b. Sealing: Incorporate positive-sealing device to ensure seal between gasketed material on channels to seal top and bottom of filter cartridge frames to prevent bypass of unfiltered air.

2. HEPA Filter Frames:

a. Frames: Match inner casing and outer casing material, and insulation thickness. As directed Aluminum or Stainless steel track.
b. Prefilters: As directed Incorporate an integral 2-inch- (50-mm-) or 4-inch- (100-mm-) thick track,
c. Sealing: Incorporate positive-sealing clamping device on each filter between gasket or gel seal on all sides of filter cartridge frames to prevent bypass of unfiltered air as directed.

3. Gas-Phase Air Filter Frames:

a. Frames: Matching inner casing and outer casing material, and insulation thickness. Galvanized-steel or Aluminum track as directed.
b. Prefilters: Incorporate an integral 2-inch- (50-mm-) thick track.
c. Sealing: Incorporate positive-sealing gasket material on channels to seal top and bottom of filter cartridge frames to prevent bypass of unfiltered air.

2.8 DAMPERS

A. General Requirements for Dampers: Leakage rate, according to AMCA 500, "Laboratory Methods for Testing Dampers for Rating," shall not exceed 4 cfm/sq. ft. (20 L/s per sq. m) at 1-inch wg (250 Pa) and 8 cfm/sq. ft. (40 L/s per sq. m) at 4-inch wg (1.0 MPa).

B. Damper Operators: Comply with requirements in Section 230923.12 "Control Dampers."

C. Electronic Damper Operators:

1. Direct-coupled type designed for minimum 60,000 full-stroke cycles at rated torque.
2. Electronic damper position indicator shall have visual scale indicating percent of travel and 2 to 10 V dc, feedback signal.
3. Operator Motors:

a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
b. Size to operate with sufficient reserve power to provide smooth modulating action or two-position action.
c. Permanent Split-Capacitor or Shaded-Pole Type: Gear trains completely oil immersed and sealed. Equip spring-return motors with integral spiral-spring mechanism in housings designed for easy removal for service or adjustment of limit switches, auxiliary switches, or feedback potentiometer.

4. Nonspring-Return Motors for Dampers Larger Than 25 Sq. Ft. (2.3 sq. m): Size for running torque of 150 in. x lbf (16.9 N x m) and breakaway torque of 300 in. x lbf (33.9 N x m).
5. Spring-Return Motors for Dampers Larger Than 25 Sq. Ft. (2.3 sq. m): Size for running and breakaway torque of 150 in. x lbf (16.9 N x m).
6. Size dampers for running torque calculated as follows:

    a. Parallel-Blade Damper with Edge Seals: 7 inch-lb/sq. ft. (86.8 kg-cm/sq. m) of damper.
    b. Opposed-Blade Damper with Edge Seals: 5 inch-lb/sq. ft. (62 kg-cm/sq. m) of damper.
    c. Parallel-Blade Damper without Edge Seals: 4 inch-lb/sq. ft (49.6 kg-cm/sq. m) of damper.
    d. Opposed-Blade Damper without Edge Seals: 3 inch-lb/sq. ft. (37.2 kg-cm/sq. m) of damper.
    e. Dampers with 2- to 3-Inch wg (500 to 750 Pa) of Pressure Drop or Face Velocities of 1000 to 2500 fpm (5 to 13 m/s): Increase running torque by 1.5.
    f. Dampers with 3- to 4-Inch wg (750 to 1000 Pa) of Pressure Drop or Face Velocities of 2500 to 3000 fpm (13 to 15 m/s): Increase running torque by 2.0.

7. Coupling: V-bolt and V-shaped, toothed cradle.
8. Overload Protection: Electronic overload or digital rotation-sensing circuitry.
9. Fail-Safe Operation: Mechanical, spring-return mechanism with external, manual gear release on nonspring-return actuators.
10. Power Requirements (Two-Position Spring Return): As directed 24 V dc, 120 V ac or 230 V ac.
11. Power Requirements (Modulating): Maximum 10 VA at 24 V ac or 8 W at 24 V dc.
12. Proportional Signal: 2- to 10-V dc or 4 to 20 mA, and 2- to 10-V dc position feedback signal.
13. Temperature Rating: As directed Minus 22 to plus 122 deg F (Minus 30 to plus 50 deg C) or 40 to 104 deg F (5 to 40 deg C).
14. Run Time: As directed 12 seconds open, 5 seconds closed, 30 seconds, 60 seconds or 120 seconds.

D. Zone Dampers: As directed Two single-blade, galvanized-steel, aluminum or extruded-aluminum dampers offset 90 degrees from each other on zinc-plated steel operating rod rotating in sintered bronze or nylon bearings mounted in a single galvanized-steel, aluminum or extruded-aluminum frame. Provide blade gaskets and edge seals, and mechanically fasten blades to operating rod.

E. Face-and-Bypass Dampers: As directed Opposed-blade, galvanized-steel, aluminum or extruded-aluminum dampers with zinc-plated steel operating rods rotating in sintered bronze or nylon bearings mounted in a single galvanized-steel, aluminum or extruded-aluminum frame and with operating rods connected with a common linkage. Provide blade gaskets and edge seals, and mechanically fasten blades to operating rod.

F. Outdoor- and Return-Air Dampers: As directed Low-leakage, double-skin, airfoil-blade, galvanized-steel, aluminum or extruded-aluminum dampers with compressible jamb seals and extruded-vinyl blade edge seals in opposed or parallel-blade arrangement with zinc-plated steel operating rods rotating in stainless-steel sleeve or sintered bronze or nylon bearings mounted in a single galvanized-steel, aluminum or extruded-aluminum frame, and with operating rods

connected with a common linkage. Leakage rate shall not exceed 4 cfm/sq. ft. (20 L/s per sq. m) at 1-inch wg (250 Pa) and 8 cfm/sq. ft. (040 L/s per sq. m) at 4-inch wg (1.0 MPa).

G. Mixing Section: Multiple-blade, air-mixer assembly located immediately downstream of mixing section.

H. Combination Filter and Mixing Section:

1. Cabinet support members shall hold 2-inch- (50-mm-) thick, pleated, flat, permanent or throwaway filters.
2. Multiple-blade, air-mixer assembly shall mix air to prevent stratification, located immediately downstream of mixing box.

2.9 SOUND ATTENUATORS

A. General Requirements:

1. Factory fabricated.
2. Fire Performance Characteristics: Adhesives, sealants, packing materials, and accessory materials with flame-spread index not exceeding 25 and smoke-developed index not exceeding 50, ASTM E84.
3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with ASHRAE 62.1.

B. Shape: As directed Rectangular, straight, Round, straight, Rectangular, elbow or Round, elbow.

C. Rectangular Silencer Outer Casing: Galvanized steel.

D. Round Silencer Outer Casing: Galvanized steel.

E. Inner Casing and Baffles: Galvanized steel.

F. Principal Sound-Absorbing Mechanism:

1. Packless Type: Controlled impedance membranes and broadly tuned resonators without adsorptive media.
2. Dissipative Type: Polymer film-lined absorptive fill material.

    a. Fill Material: As directed Inert and vermin-proof fibrous material.

3. Joints: Lock formed and sealed, continuously welded or flanged.

2.10 HUMIDIFIERS

A. Direct-steam-injection humidifiers are specified in Section 238413.23 "Direct-Steam-Injection Humidifiers."

B. Self-contained humidifiers are specified in Section 238413.29 "Self-Contained Humidifiers."

C. Heat-exchanger humidifiers are specified in Section 238413.36 "Heat Exchanger Humidifiers."

2.11 AIR-TO-AIR ENERGY RECOVERY

A. Heat Wheels:

1. Casing:

   a. Galvanized steel, stainless steel, or aluminum with manufacturer's standard finish.
   b. Integral purge section limiting carryover of exhaust air to between 0.05 percent at 1.6-inch wg and 0.20 percent at 4-inch wg (0.5 percent at 400-Pa and 0.20 percent at 1000-Pa) differential pressure.
   c. Casing seals on periphery of rotor, on duct divider, and on purge section.
   d. Support rotor on grease-lubricated ball bearings with extended grease fittings. Mount horizontal wheels on tapered roller bearing.

2. Rotor: Aluminum or polymer segmented wheel, strengthened with radial spokes, with nontoxic, noncorrosive, silica-gel desiccant coating.
3. Rotor: Aluminum, metallic, or polymer segmented wheel, strengthened with radial spokes impregnated with nonmigrating, water-selective, 3-angstrom molecular-sieve desiccant coating.
4. Drive: Fractional horsepower motor and gear reducer, with speed changed by variable-frequency controller. Permanently lubricated wheel bearings with an L-10400,000 hours.
5. Controls:

   a. Starting relay, factory mounted and wired, and manual motor starter for field wiring.
   b. Variable-frequency controller, factory mounted and wired, permitting input of field connected 4- to 20-mA or 1- to 10-V control signal.
   c. Variable-frequency controller, factory mounted and wired, with exhaust-air sensor to vary rotor speed and maintain exhaust temperature above freezing.
   d. Variable-frequency controller, factory mounted and wired, with exhaust- and outdoor-air sensors, automatic changeover thermostat and set-point adjuster, to vary rotor speed and maintain exhaust temperature above freezing and air differential temperature above set point. Provide maximum rotor speed when exhaust-air temperature is less than outdoor-air temperature.
   e. Pilot-Light Indicator: Display rotor rotation and speed.
   f. Speed Settings: Adjustable settings for maximum and minimum rotor speed limits.

B. Fixed-Plate Sensible Heat Exchangers:

1. Casing: As directed Aluminum or Galvanized steel.
2. Plates: As directed Evenly spaced and sealed and arranged for counter or cross airflow.
3. Plate Material: As directed Embossed aluminum, Stainless steel or High-density plastic.
4. Plate Coating: Epoxy.
5. Bypass: Plenum within casing, with gasketed face-and-bypass dampers that have operating rods extended outside casing.
6. Heat-Exchanger Prefilters: As directed 1 inch (25 mm) thick, disposable, 2 inches (50 mm) thick, disposable or MERV 6.

2.12 AIR BLENDER

A. Description: Static air mixer device to provide mixing of two airstreams to within plus/minus 6 deg F (3 deg C).

B. Material: As directed Galvanized steel or Aluminum.

C. Coating: As directed None or Corrosion-resistant coating.

2.13 DIFFUSER

A. Description: Velocity profile equalizer device for providing equalized airflow profile downstream of Type DWDI fans.

B. Material: As directed Galvanized steel or Aluminum.

2.14 UV-C LAMP SYSTEMS

A. Description:

1. UV-C lamp system consisting of power supply, power supply housing, wiring, ultraviolet lamp(s), lamp plug, lamp plug protector, encapsulated lamp, and lamp holder used for UV germicidal irradiation of cooling coil and condensate drain pan.
2. Factory installed and preengineered.

B. Standard: UL Category Code ABQK, HVAC accessories, air-duct mounted.

C. Lamps: High output, hot cathode.

D. Lamp-Holder Construction:

1. UV- and moisture-resistant materials and designed to connect the lamp to the plug.
2. Adjustable positioning.

E. Lamp-Clamp Construction:

1. UV- and moisture-resistant materials, water-tight connection.
2. Adjustable positioning.

F. Lamp Protection: Hermetically sealed to provide protection against lamp breakage and to ensure lamp contents from a broken lamp are contained.

G. Lamp Output: UV-C energy, primarily at the 254-nm wavelength with a 360-degree energy distribution.

H. Access Door Interlocks: Automatic disconnect on all access doors into UV-installed casing sections to shield servicing personnel from contact with light.

I. Power Supply: UL-listed, single-point electrical connection with service disconnect.

J. Power Consumption: Maximum of 15 W/sq. ft. (161 W/sq. m).

2.15 MATERIALS

A. Steel:

1. ASTM A36/A36M for carbon structural steel.
2. ASTM A568/A568M for steel sheet.

B. Galvanized Steel: ASTM A653/A653M.

C. Aluminum: ASTM B209 (ASTM B209M).

2.16 SOURCE QUALITY CONTROL

A. AHRI 430 Certification: Air-handling units and their components shall be factory tested according to AHRI 430 and shall be listed and labeled by AHRI.

B. AHRI 1060 Certification: Air-handling units that include air-to-air energy recovery devices shall be factory tested according to AHRI 1060 and shall be listed and labeled by AHRI.

C. AMCA 301 or AHRI 260: Air-handling unit fan sound ratings shall comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data," or AHRI 260, "Sound Rating of Ducted Air Moving and Conditioning Equipment."

D. Fan Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Fans shall bear AMCA-certified sound ratings seal.

E. Fan Performance Rating: Factory test fan performance for airflow, pressure, power, air density, rotation speed, and efficiency. Rate performance according to AMCA 210, "Laboratory Methods of Testing Fans for Aerodynamic Performance Rating."

F. Water Coils: Factory tested to 300 psig (2070 kPa) according to AHRI 410 and ASHRAE 33.

G. Refrigerant Coils: Factory tested to minimum 450-psig (3105-kPa) internal pressure and to minimum 300-psig (2070-kPa) internal pressure while underwater, according to AHRI 410 and ASHRAE 33.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine casing insulation materials and filter media before air-handling unit installation. Reject insulation materials and filter media that are wet, moisture damaged, or mold damaged.

C. Examine roughing-in for steam, hydronic, and condensate drainage piping systems and electrical services to verify actual locations of connections before installation.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Equipment Mounting:

1. Install air-handling units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" as directed.
2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

B. Suspended Units: Suspend and brace units from structural-steel support frame using threaded steel rods and spring hangers. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" as directed.

C. Arrange installation of units to provide access space around air-handling units for service and maintenance.

D. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing, with new, clean filters.

E. Install filter-gauge, static-pressure taps upstream and downstream of filters. Mount filter gauges on outside of filter housing or filter plenum in accessible position. Provide filter gauges on filter banks, installed with separate static-pressure taps upstream and downstream of filters.

F. Connect duct to air-handling units with flexible connections. Comply with requirements in Section 233300 "Air Duct Accessories."

3.3 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to air-handling unit, allow for service and maintenance.

C. Connect piping to air-handling units mounted on vibration isolators with flexible connectors.

D. Connect condensate drain pans using NPS 1-1/4 (DN 32), ASTM B88, Type M (ASTM B88M, Type C) copper tubing. Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.

E. Hot- and Chilled-Water Piping: Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Install shutoff valve and

union or flange at each coil supply connection. Install balancing valve and union or flange at each coil return connection.

F. Refrigerant Piping: Comply with applicable requirements in Section 232300 "Refrigerant Piping." Install shutoff valve and union or flange at each supply and return connection.

3.4 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.

D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.5 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Leak Test: After installation, fill water and steam coils with water, and test coils and connections for leaks.
2. Charge refrigerant coils with refrigerant and test for leaks.
3. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. HEPA Filters: Pressurize housing to a minimum of 3-inch wg (750 Pa) or to designed operating pressure, whichever is higher; test housing joints, door seals, and sealing edges of filter with soapy water to check for air leaks.

5. HEPA Filters: Pressurize housing to a minimum of 3-inch wg (750 Pa) or to designed operating pressure, whichever is higher; test housing joints, door seals, and sealing edges of filter for air leaks according to ASME AG-1, pressure-decay method.
6. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Air-handling unit or components will be considered defective if unit or components do not pass tests and inspections.

E. Prepare test and inspection reports.

3.7 DEMONSTRATION

A. As directed Engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain air-handling units.

END OF SECTION 237313.16

SECTION 237333.16 - INDOOR, INDIRECT, GAS-FIRED HEATING AND VENTILATING UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes indirect, gas-fired heating and ventilating units.

1.2 ACTION SUBMITTALS

A. Product Data: For each type and configuration of indoor, indirect, gas-fired heating and ventilating unit.

B. Sustainable Design Submittals:

C. Shop Drawings: For each type and configuration of indoor, indirect, gas-fired heating and ventilating unit.

1. Include plans, elevations, sections, and mounting or attachment details as directed.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Sample warranty.

B. Seismic Qualification Data: Certificates, for indoor, indirect, gas-fired heating and ventilating units, accessories, and components, from manufacturer.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Comply with NFPA 70.

B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of indirect, gas-fired heating and ventilating units that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Heat Exchangers: Manufacturer's standard, but not less than five or 10 years from date of Substantial Completion as directed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 SYSTEM DESCRIPTION

A. Factory-assembled, prewired, self-contained unit consisting of cabinet, supply fan, controls, filters, and indirect-fired gas burner to be installed inside the building.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 UNIT CASINGS

A. General Fabrication Requirements for Casings:

1. Forming: Form walls, roofs, and floors with at least two breaks at each joint.
2. Casing Joints: Sheet metal screws or pop rivets, factory sealed with water-resistant sealant.
3. Factory Finish for Steel and Galvanized-Steel Casings: Apply manufacturer's standard primer immediately after cleaning and pretreating.
4. Air-Handling-Unit Mounting Frame: Formed galvanized-steel channel or structural channel supports, designed for low deflection, welded with integral lifting lugs.

    a. Seismic Fabrication Requirements: Fabricate mounting base and attachment to air-handling-unit sections, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when air-handling-unit frame is anchored to building structure.

5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Configuration: As directed, Horizontal or Vertical unit with top, horizontal or bottom discharge for floor-mounted or suspended installation.

C. Cabinet: Galvanized-steel panels, formed to ensure rigidity and supported by galvanized-steel channels or structural channel supports with lifting lugs. Duct flanges at inlet and outlet.

D. Outer Casing: 0.0359-inch (0.912-mm) steel with heat-resistant, baked-enamel finish over-corrosion-resistant-treated surface in color to match fan section.

E. Inner Casing:

1. Burner Section Inner Casing: 0.0299-inch (0.759-mm) steel.
2. Double-wall casing with inner wall of perforated or solid steel as directed, for the following sections:

    a. Blower section.
    b. Filter section.
    c. Mixing box.
    d. Inlet plenum.
    e. Discharge plenum.
    f. As directed, Access Doors or Panels: As directed, Lift out, Piano hinged with cam-lock fasteners or Hinged with handles for burner and fan motor assemblies on both sides of unit.

3. Internal Insulation: Fibrous-glass duct lining, neoprene coated, comply with ASTM C1071, Type II, applied on complete unit or burner and fan sections only as directed.

    a. Thickness: As directed, 1 inch (25 mm) or 2 inches (50 mm).
    b. Insulation Adhesive: Comply with ASTM C916, Type I.
    c. Density: As directed, 1.5 lb/cu. ft. (24.0 kg/cu. m), 2.0 lb/cu. ft. (32.0 kg/cu. m) or 3.0 lb/cu. ft. (48.0 kg/cu. m).
    d. Mechanical Fasteners: Galvanized steel suitable for adhesive, mechanical, or welding attachment to casing without damaging liner when applied as recommended by manufacturer and without causing air leakage.

F. Discharge Section: As directed, Galvanized or Aluminized-steel assembly with gravity or individually adjustable, vaned, two-position, motorized, parallel-blade dampers with nylon bushings.

1. Pattern: As directed, Single or Double deflection.
2. Leakage: As directed, Standard or Low leakage.

G. Discharge Section: Trapezoidal cowls with horizontal louvers.

H. Discharge Section: As directed, Plenum with two or four sides louvered.

I. Discharge Section: Down-discharge plenum insulated with 1 inch (25 mm), 1.5 lb/cu. ft. (24.0 kg/cu. m) fibrous glass.

J. Casing Internal Insulation:

1. Materials: ASTM C1071, Type I or Type II as directed.

2. Location and Application: Factory applied with adhesive and mechanical fasteners to the internal surface of section panels downstream from, and including, the heating-coil section.

K. Inspection and Access Panels and Access Doors: Formed and reinforced, single- or double-wall and insulated panels of same materials and thicknesses as casing and complying with requirements in ASHRAE 62.1.

L. Condensate Drain Pans: As directed, fabricated with one or two percent slope in at least two planes to collect condensate from condensate-producing heat exchangers and from humidifiers and to direct water toward drain connection and complying with ASHRAE 62.1.

2.4 ACCESSORIES

A. Service Platform: Galvanized steel, 42 inches (1070 mm) wide running entire length of unit and located on service access side, with angle side rails, 4-inch (100-mm) kick plates, and expanded metal floor. Provide platform with a fixed ladder that extends from the top of the side rail to the floor.

2.5 SUPPLY-AIR FAN

A. Fan Type: Centrifugal, rated according to AMCA 210; statically and dynamically balanced, galvanized steel; mounted on solid-steel shaft with heavy-duty, self-aligning, permanently lubricated ball bearings, pillow-block bearings rated for L50 or 200,000 hours with external grease fittings as directed.

B. Drive: V-belt drive with matching fan pulley and adjustable motor sheaves and belt assembly.

C. Mounting: Fan wheel, motor, and drives shall be mounted in fan casing with restrained, elastomeric or spring isolators as directed.

D. Fan-Shaft Lubrication Lines: Extended to a location outside the casing.

2.6 AIR FILTERS

A. Comply with As directed, NFPA 90A or NFPA 90B.

B. Cleanable Filters: Cleanable metal mesh, 1 inch (25 mm) thick.

C. Disposable Panel Filters: Factory-fabricated, flat-panel-type, disposable air filters, 1 inch (25 mm) thick.

2.7 DAMPERS

A. Outdoor-Air and Return-Air Damper: Galvanized-steel, opposed-blade dampers with vinyl blade seals and stainless-steel jamb seals, having a maximum leakage of 10 cfm/sq. ft. (51 L/s per sq. m) of damper area, at a differential pressure of 2-inch wg (448 Pa).

B. Damper Operator: Direct coupled, electronic with spring return or fully modulating as required by the control sequence.

2.8 INDIRECT-FIRED GAS BURNER

A. Description: Factory assembled, piped, and wired; and complying with ANSI Z21.47, "Gas-Fired Central Furnaces," and with NFPA 54, "National Fuel Gas Code."

1. CSA Approval: Designed and certified by and bearing label of CSA.
2. Burners: Aluminized steel with stainless-steel inserts or Stainless steel as directed.

    a. Gas Control Valve: As directed, Single stage, Two stage or Modulating.
    b. Fuel: As directed, Natural or Propane gas.
    c. Minimum Combustion Efficiency: 80 percent.
    d. Ignition: Electronically controlled electric spark with flame sensor.
    e. High-Altitude Model or Kit as directed: For Project elevation above sea level.

B. Venting: Gravity vented.

C. Combustion-Air Intake: Separate combustion-air intake and vent terminal assembly.

D. Heat Exchanger: As directed, Aluminized or Stainless steel.

E. Heat-Exchanger Drain Pan: Stainless steel.

F. Safety Controls:

1. Vent Flow Verification: Differential pressure switch to verify open vent or Flame rollout switch.
2. Control Transformer: 24-V ac.
3. High Limit: Thermal switch or fuse to stop burner.
4. Gas Train: As directed, Regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, hydraulic or electronic-modulating temperature control valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff all in one body.
5. Purge-period timer shall automatically delay burner ignition and bypass low-limit control.
6. Gas Manifold: Safety switches and controls complying with ANSI standards and FM Global or XL Insurance as directed.
7. Airflow Proving Switch: Differential pressure switch senses correct airflow before energizing pilot.
8. Automatic-Reset, High-Limit Control Device: Stops burner and closes main gas valve if high-limit temperature is exceeded.
9. Safety Lockout Switch: Locks out ignition sequence if burner fails to light after three tries. Controls are reset manually by turning the unit off and on.

2.9 UNIT CONTROL PANEL

A. Factory-wired, fuse-protected control transformer, connection for power supply and field-wired unit to remote control panel.

B. Control Panel: As directed, Surface-mounted or Recessed, with trim ring, remote panel, with engraved plastic cover, and the following lights and switches:

1. As directed, On-off or On-off-auto fan switch.
2. Heat-vent-off switch.
3. Supply-fan operation indicating light.
4. Heating operation indicating light.
5. Thermostat.
6. Damper position potentiometer.
7. Dirty-filter indicating light operated by unit-mounted differential pressure switch.
8. Safety-lockout indicating light.
9. Enclosure: As directed, NEMA 250, Type 1, Type 3R, Type 4 or Explosion proof.

2.10 CONTROLS

A. Control Devices:

1. Remote Thermostat: Adjustable room thermostat with temperature readout.
2. Remote Setback Thermostat: Adjustable room thermostat without temperature readout.
3. Fire-Protection Thermostats: Fixed or adjustable settings to operate at not less than 75 deg F (24 deg C) above normal maximum operating temperature.
4. Timers: Seven-day, programming-switch timer with synchronous-timing motor and seven-day dial; continuously charged, nickel-cadmium-battery-driven, eight-hour, power-failure carryover; multiple-switch trippers; minimum of two and maximum of eight signals per day with two normally open and two normally closed output contacts.
5. Ionization-Type Smoke Detectors: 24-V dc, nominal; self-restoring; plug-in arrangement; integral visual-indicating light; sensitivity that can be tested and adjusted in place after installation; integral addressable module; remote controllability; responsive to both visible and invisible products of combustion; self-compensating for changes in environmental conditions.
6. Smoke detectors, located in supply and return air, shall stop fans when the presence of smoke is detected.

B. Fan Control: Interlock fan to start with exhaust fan(s) to which this heating and ventilating unit is associated for makeup air.

C. Outdoor-Air Damper Control, 100 Percent Outdoor-Air Units: Outdoor-air damper shall open when supply fan starts, and close when fan stops.

D. Mixed Outdoor- and Return-Air Damper Control: When fan is running, outdoor- and return-air dampers shall modulate to supply minimum outdoor air.

E. Temperature Control: Operates gas valve to maintain supply-air temperature.

1. Operates gas valve to maintain discharge-air temperature with factory-mounted sensor in blower outlet.
2. Timer shall select remote setback thermostat to maintain space temperature at 50 deg F (10 deg C).
3. Burner Control: Two or four steps of control using one or two burner sections in series.

2.11 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Enclosure: As directed, Open, dripproof, totally enclosed, fan cooled, Totally enclosed, air over, Open, externally ventilated, Totally enclosed, nonventilated, Severe duty, Explosion proof or Dust-ignition-proof machine.
2. Enclosure Materials: As directed, Cast iron, Cast aluminum or Rolled steel.
3. Motor Bearings: As directed.
4. Unusual Service Conditions:

    a. Ambient Temperature: As directed.
    b. Altitude: As directed, feet (m) above sea level.
    c. High humidity.

5. Efficiency: As directed, Premium efficient or EPAct compliant.
6. NEMA Design: As directed.
7. Service Factor: As directed.

2.12 CAPACITIES AND CHARACTERISTICS

A. Fan:

1. Discharge Configuration: As directed, Horizontal or Vertical.
2. Airflow: As directed.
3. External Static Pressure: As directed.
4. Maximum RPM: As directed.
5. Minimum Size: As directed.
6. Altitude: As directed.

B. Fan Motor:

1. Horsepower: As directed.
2. RPM: As directed.
3. Service Factor: As directed.
4. Speed: As directed, Single or Two.

C. Single-Point Electrical Connection:

1. Volts: As directed, 120, 240, 277 or 480.
2. Phase: As directed, Single or Three.
3. Hertz: 60.
4. Full-Load Amperes: As directed.
5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection: As directed.

D. Indirect-Fired Gas Burner:

1. Minimum Combustion Efficiency: As directed.
2. Entering-Air Temperature: As directed, deg F (deg C).
3. Leaving-Air Temperature: As directed, deg F (deg C).
4. Airflow: As directed, cfm (L/s).
5. Gas Input: As directed, MBh (kW).
6. Burner Output: As directed, MBh (kW).
7. Number of Stages: As directed.
8. Minimum Inlet Pressure: As directed, inches wg (Pa).
9. Maximum Inlet Pressure: As directed, inches wg (Pa).
10. Gas Piping Connection Size: As directed, NPS (DN).
11. Vent Diameter: As directed, inches (mm).

PART 3 - EXECUTION

3.1 INSTALLATION

A. Equipment Mounting:

1. Install heating and ventilating units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" as directed.
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

B. Unit Support: Install heating and ventilating unit level on structural curbs or pilings as directed. Coordinate wall penetrations and flashing with wall construction. Secure units to structural support with anchor bolts.

C. Install gas-fired units according to NFPA 54, "National Fuel Gas Code."

D. Install controls and equipment shipped by manufacturer for field installation with indirect-fired heating and ventilating units.

3.2 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

1. Gas Piping: Comply with requirements in Section 231123 "Facility Natural-Gas Piping" or Section 231126 "Facility Liquefied-Petroleum Gas Piping" As directed. Connect gas piping with shutoff valve and union and with sufficient clearance for burner removal and service. Make final connections of gas piping to unit with corrugated, stainless-steel tubing flexible connectors complying with ANSI LC 1/CSA 6.26 equipment connections.

B. Drain: Comply with requirements in Section 221316 "Sanitary Waste and Vent Piping" for traps and accessories on piping connections to condensate drain pans under condensing heat exchangers.

C. Where installing piping adjacent to heating and ventilating units, allow space for service and maintenance.

D. Duct Connections: Connect supply and return ducts to indirect-fired heating and ventilating units with flexible duct connectors. Comply with requirements in Section 233300 "Air Duct Accessories" for flexible duct connectors.

E. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

F. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

A. Perform tests and inspections with the assistance of a factory-authorized service representative.

B. Units will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

3.4 ADJUSTING

A. Adjust initial temperature set points.

B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

3.5 DEMONSTRATION

A. As directed, engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain heating and ventilating units.

END OF SECTION 237333.16

SECTION 237339 - INDOOR, DIRECT-FIRED HEATING AND VENTILATING UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes indoor, direct-fired heating and ventilating units.

1.2 ACTION SUBMITTALS

A. Product Data: For each type and configuration of indoor, direct-fired heating and ventilating unit.

B. Sustainable Design Submittals:

C. Shop Drawings: For each type and configuration of indoor, direct-fired heating and ventilating unit.

1. Include plans, elevations, sections, and mounting or attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Sample Warranty: For manufacturer's special warranty.

B. Seismic Qualification Certificates: For indoor, direct-fired heating and ventilating units, accessories, and components, from manufacturer.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Comply with NFPA 70.

B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of direct-fired heating and ventilating units that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Heat Exchangers: As directed, Manufacturer's standard, but not less than five or 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 SYSTEM DESCRIPTION

A. Factory-assembled, prewired, self-contained unit consisting of cabinet, supply fan, controls, filters, and direct-fired gas burner to be installed exterior to the building.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 UNIT CASINGS

A. General Fabrication Requirements for Casings:

1. Forming: Form walls, roofs, and floors with at least two breaks at each joint.
2. Casing Joints: Sheet metal screws or pop rivets, factory sealed with water-resistant sealant.
3. Factory Finish for Steel and Galvanized-Steel Casings: Apply manufacturer's standard primer immediately after cleaning and pretreating.
4. Air-Handling-Unit Mounting Frame: Formed galvanized-steel channel or structural channel supports, designed for low deflection, welded with integral lifting lugs.

    a. Seismic Fabrication Requirements: Fabricate mounting base and attachment to air-handling-unit sections, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when air-handling-unit frame is anchored to building structure.

5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Configuration: As directed, Horizontal unit with top, horizontal or bottom discharge for floor-mounting or suspended installation.

C. Cabinet: Galvanized-steel panels, formed to ensure rigidity and supported by galvanized-steel channels or structural channel supports with lifting lugs. Duct flanges at inlet and outlet.

D. Outer Casing: As directed, 0.0598-inch (1.519-mm), 0.0478-inch (1.214-mm) or 0.0359-inch (0.912-mm) thick steel with heat-resistant, baked-enamel, enamel-painted, baked-on, polyester-powder or unpainted over-corrosion-resistant-treated surface in color to match fan section.

E. Outer Casing: As directed, 0.0598-inch (1.519-mm), 0.0478-inch (1.214-mm) or 0.0359-inch (0.912-mm) thick steel with unpainted finish.

F. Outer Casing: 0.0359-inch (0.912-mm) thick steel with heat-resistant, baked-enamel over-corrosion-resistant-treated surface in color to match fan section.

G. Inner Casing:

1. Burner Section Inner Casing: 0.0299-inch- (0.759-mm-) thick steel. Retain first subparagraph below if double-wall casing is required.
2. As directed, double-wall casing with inner wall of perforated or solid steel, for the following sections:

    a. Blower section.
    b. Filter section.
    c. Mixing box.
    d. Inlet plenum.
    e. Discharge plenum.
    f. Access Doors or Panels As Directed: As directed, Lift out, Piano hinged with cam-lock fasteners or Hinged with handles for burner and fan motor assemblies on both sides of unit.

3. Internal Insulation: Fibrous-glass duct lining, neoprene coated, comply with ASTM C1071, Type II, applied on complete unit or burner and fan sections only as directed.

    a. Thickness: As directed, 1 inch (25 mm) or 2 inches (50 mm).
    b. Insulation Adhesive: Comply with ASTM C916, Type I.
    c. Density: As directed, 1.5 lb/cu. ft. (24.0 kg/cu. m), 2.0 lb/cu. ft. (32.0 kg/cu. m) or 3.0 lb/cu. ft. (48.0 kg/cu. m).
    d. Mechanical Fasteners: Galvanized steel suitable for adhesive, mechanical, or welding attachment to casing without damaging liner when applied as recommended by manufacturer and without causing air leakage.

H. Discharge Section: As directed, Galvanized or Aluminized-steel assembly with gravity, individually adjustable, vaned, two-position, motorized, parallel-blade dampers with nylon bushings.

1. Pattern: As directed, Single or Double deflection.
2. Leakage: As directed, Standard or Low leakage.

I. Discharge Section: Trapezoidal cowls with horizontal louvers.

J. Discharge Section: As directed, Plenum with two or four sides louvered.

K. Discharge Section: Down-discharge plenum insulated with 1-inch (25-mm), 1.5-lb/cu. ft. (24.0-kg/cu. m) fibrous glass.

L. Casing Insulation and Adhesive:

1. Materials: As directed, ASTM C1071, Type I or Type II.
2. Location and Application: Factory applied with adhesive and mechanical fasteners to the internal surface of section panels downstream from, and including, the heating-coil section.

M. Inspection and Access Panels and Access Doors: Formed and reinforced, single- or double-wall and insulated panels of same materials and thicknesses as casing and complying with ASHRAE 62.1.

2.4 ACCESSORIES

A. Service Platform: As directed, Steel, Galvanized steel or Aluminum, 42 inches (1070 mm) wide running entire length of unit and located on service access side, with angle side rails, 4-inch (100-mm) kick plates, and expanded metal floor. Provide platform with a fixed ladder that extends from the top of the side rail to the floor.

2.5 SUPPLY-AIR FAN

A. Fan Type: Centrifugal, rated according to AMCA 210; statically and dynamically balanced, galvanized steel; mounted on solid-steel shaft with heavy-duty, self-aligning, permanently lubricated ball bearings, pillow-block bearings as directed. Bearing rating: As directed, L10 of 60,000 hours, L10 of 120,000 hours or L10 of 150,000 hours.

B. Drive: V-belt drive with matching fan pulley and adjustable motor sheaves and belt assembly.

C. Mounting: Fan wheel, motor, and drives shall be mounted in fan casing with restrained, elastomeric or spring isolators.

D. Fan-Shaft Lubrication Lines: Extended to a location outside the casing.

2.6 AIR FILTERS

A. Comply with NFPA 90A or NFPA 90B as directed.

B. Cleanable Filters: Cleanable metal mesh; As directed, 1 inch (25 mm) or 2 inches (50 mm).

C. Disposable Panel Filters: Factory-fabricated, flat-panel-type, disposable air filters; 1 inch (25 mm).

2.7 DAMPERS

A. Outdoor-Air and Return-Air amper: Galvanized-steel, opposed-blade dampers with vinyl blade seals and stainless-steel jamb seals, having a maximum leakage of 10 cfm/sq. ft. (51 L/s per sq. m) of damper area, at a differential pressure of 2-inch wg (448 Pa).

B. Damper Operator: Direct coupled, electronic with spring return or fully modulating as required by the control sequence.

2.8 DIRECT-FIRED GAS BURNER

A. Description: Factory assembled, piped, and wired; and complying with ANSI Z21.47, "Gas-Fired Central Furnaces," and with NFPA 54, "National Fuel Gas Code."

1. CSA Approval: Designed and certified by and bearing label of CSA.
2. Burners: Aluminized steel with stainless-steel inserts or Stainless steel as directed.

    a. Gas Control Valve: As directed, Single stage, two stage or Modulating.
    b. Rated maximum turndown ratio of 30 to 1.
    c. Fuel: Natural or Propane gas.
    d. Minimum Combustion Efficiency: 95 percent.
    e. Ignition: Electronically controlled electric spark with flame sensor.
    f. High-Altitude Model or Kit as directed: For Project elevation above sea level.

B. Safety Controls:

1. Vent Flow Verification: As directed, Differential pressure switch to verify open vent or Flame rollout switch.
2. Control Transformer: 24-V ac.
3. High Limit: Thermal switch or fuse to stop burner.
4. Gas Train: As directed, Regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, hydraulic or electronic-modulating temperature control valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff all in one body.
5. Purge-period timer shall automatically delay burner ignition and bypass low-limit control.
6. Gas Manifold: Safety switches and controls complying with ANSI standards and FM Global or XL Insurance as directed.
7. Airflow Proving Switch: Differential pressure switch senses correct airflow before energizing pilot.
8. Automatic-Reset, High-Limit Control Device: Stops burner and closes main gas valve if high-limit temperature is exceeded.
9. Safety Lockout Switch: Locks out ignition sequence if burner fails to light after three tries. Controls are reset manually by turning the unit off and on.

2.9 UNIT CONTROL PANEL

A. Factory-wired, fuse-protected control transformer, connection for power supply and field-wired unit to remote control panel.

B. Control Panel: As directed, Surface-mounted or Recessed, with trim ring, remote panel, with engraved plastic cover and the following lights and switches:

1. As directed, On-off or On-off-auto fan switch.
2. Heat-vent-off switch.
3. Supply-fan operation indicating light.
4. Heating operation indicating light.
5. Thermostat.
6. Damper position potentiometer.
7. Dirty-filter indicating light operated by unit-mounted differential pressure switch.
8. Safety-lockout indicating light.
9. Enclosure: As directed, NEMA 250, Type 1, Type 3R, Type 4 or Explosion proof.

2.10 CONTROLS

A. Control Devices:

1. Remote Thermostat: Adjustable room thermostat with temperature readout.
2. Remote Setback Thermostat: Adjustable room thermostat without temperature readout.
3. Static-Pressure Transmitter: Nondirectional sensor with suitable range for expected input, and temperature compensated.
4. Fire-Protection Thermostats: Fixed or adjustable settings to operate at not less than 75 deg F (24 deg C) above normal maximum operating temperature.
5. Timers: Seven-day, programming-switch timer with synchronous-timing motor and seven-day dial; continuously charged, nickel-cadmium-battery-driven, eight-hour, power-failure carryover; multiple-switch trippers; minimum of two and maximum of eight signals per day with two normally open and two normally closed output contacts.
6. Ionization-Type Smoke Detectors: 24-V dc, nominal; self-restoring; plug-in arrangement; integral visual-indicating light; sensitivity that can be tested and adjusted in place after installation; integral addressable module; remote controllability; responsive to both visible and invisible products of combustion; self-compensating for changes in environmental conditions.

B. Fan Control: Interlock fan to start with exhaust fan(s) to which this heating and ventilating unit is associated for makeup air.

C. Smoke detectors, located in supply and return air, shall stop fans when the presence of smoke is detected.

D. Outdoor-Air Damper Control, 100 Percent Outdoor-Air Units: Outdoor-air damper shall open when supply fan starts, and close when fan stops.

E. Mixed Outdoor- and Return-Air Damper Control: When fan is running, outdoor- and return-air dampers shall modulate to supply minimum outdoor air.

F. Temperature Control: Operates gas valve to maintain supply-air temperature.

1. Operates gas valve to maintain discharge-air temperature with factory-mounted sensor in blower outlet.

2. Timer shall select remote setback thermostat to maintain space temperature at 50 deg F (10 deg C).
3. Burner Control: Two or four steps of control using one or two burner sections in series.

2.11 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Enclosure: As directed, Open, dripproof, totally enclosed, fan cooled, Totally enclosed, air over, Open, externally ventilated, Totally enclosed, nonventilated, Severe duty, Explosion proof or Dust-ignition-proof machine.
2. Enclosure Materials: As directed, Cast iron, Cast aluminum or Rolled steel.
3. Motor Bearings: As directed.
4. Unusual Service Conditions:

    a. Ambient Temperature: As directed.
    b. Altitude: Feet (m) above sea level as directed.
    c. High humidity.

5. Efficiency: As directed, Premium efficient or EPAct compliant.
6. NEMA Design: As directed.
7. Service Factor: As directed.

2.12 CAPACITIES AND CHARACTERISTICS

A. Fan:

1. Discharge Configuration: As directed, Horizontal or Vertical.
2. Airflow in CFM (L/s): As directed.
3. External Static Pressure: As directed.
4. Maximum RPM: As directed.
5. Minimum Size: As directed.
6. Altitude: As directed.

B. Fan Motor:

1. Horsepower: As directed.
2. RPM: As directed.
3. Service Factor: As directed.
4. Speed: As directed, Single or Two.

C. Single-Point Electrical Connection:

1. Volts: As directed, 120, 240, 277 or 480.
2. Phase: As directed, Single or Three.
3. Hertz: 60.
4. Full-Load Amperes: As directed.

5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection: As directed.

D. Direct-Fired Gas Burner:

1. Minimum Combustion Efficiency: Percent As directed.
2. Entering-Air Temperature: As directed.
3. Leaving-Air Temperature: As directed.
4. Airflow: As directed.
5. Gas Input: As directed.
6. Burner Output: As directed.
7. Number of Stages: As directed.
8. Minimum Inlet Pressure: As directed.
9. Maximum Inlet Pressure: As directed.
10. Gas Piping Connection Size: As directed.
11. Vent Diameter: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Equipment Mounting:

1. Install heating and ventilating units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" as directed.
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

B. Unit Support: Install heating and ventilating unit level on structural curbs or pilings As directed. Coordinate wall penetrations and flashing with wall construction. Secure units to structural support with anchor bolts.

C. Install gas-fired units according to NFPA 54, "National Fuel Gas Code."

D. Install controls and equipment shipped by manufacturer for field installation with direct-fired heating and ventilating units.

E. Install seismic restraints according to manufacturer's written instructions.

3.2 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

1. Gas Piping: Comply with requirements in Section 231123 "Facility Natural-Gas Piping" or Section 231126 "Facility Liquefied-Petroleum Gas Piping" As directed, Connect gas

piping with shutoff valve and union, and with sufficient clearance for burner removal and service. Make final connections of gas piping to unit with corrugated, stainless-steel tubing flexible connectors complying with ANSI LC 1/CSA 6.26 equipment connections.

B. Duct Connections: Connect supply and return ducts to direct-fired heating and ventilating units with flexible duct connectors. Comply with requirements in Section 233300 "Air Duct Accessories" for flexible duct connectors.

C. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

D. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

A. Perform tests and inspections with the assistance of a factory-authorized service representative.

B. Units will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

3.4 ADJUSTING

A. Adjust initial temperature set points.

B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

3.5 DEMONSTRATION

A. As directed, Engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain heating and ventilating units.

END OF SECTION 237339

SECTION 237343.16 - OUTDOOR, SEMI-CUSTOM AIR-HANDLING UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes outdoor, semi-custom air-handling units that are factory assembled using multiple section components; including:

1. Unit casings.
2. Fan, drive, and motor section.
3. Coil section.
4. Air filtration section.
5. Dampers.
6. Sound attenuators.
7. Humidifiers.
8. Air-to-air energy recovery units.
9. Air blenders.
10. Diffusers.
11. UV-C lamp systems.
12. Roof curbs.
13. Intake and relief air openings.

1.2 ACTION SUBMITTALS

A. Product Data: For each air-handling unit.

B. Sustainable Design Submittals:
1. As directed.

C. Delegated-Design Submittal: For vibration isolation and seismic restraints indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Include design calculations for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans and other details, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Seismic Qualification Data: Certificates for air-handling units, accessories, and components, from manufacturer.

C. Source quality-control reports:

D. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.

C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

E. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design vibration isolation and seismic restraints, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

F. Structural Performance:

1. Casing Panels: Self-supporting and capable of withstanding positive/negative 8-inch wg (2000-Pa) internal static pressure, without exceeding a midpoint deflection of 0.0042 inch/inch (0.0042 mm/mm) of panel span.
2. Floor and Roof Panels: Self-supporting and capable of withstanding 300-lb (136-kg) static load at midspan, without exceeding a midpoint deflection of 0.0042 inch/inch (0.0042 mm/mm).
3. Roof Panels: Self-supporting and capable of withstanding a static snow load of 30 lb/sq. ft. (146 kg/sq. m), without exceeding a midpoint deflection of 0.0042 inch/inch (0.0042 mm/mm).

G. Casing Leakage Performance: ASHRAE 111, Class 6 leakage or better at plus or minus 8-inch wg (2000 Pa).

H. Seismic Performance: Air-handling units shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: As directed, 1.5 or 1.0.

2.2 CAPACITIES AND CHARACTERISTICS

A. Supply Fan:

1. Type: As directed, DWDI, backward-inclined centrifugal fan, DWDI, forward-curved centrifugal fan, DWDI, airfoil centrifugal fan or SWSI, airfoil unhoused centrifugal fan.
2. As directed, Class I, Class II or Class III: AMCA 99-2408.
3. Drive: As directed, V-belt or Direct.
4. Number of Fan Wheels: As directed.
5. Fan Diameter: Inches (mm) V.
6. Airflow: cfm (L/s) As directed.
7. Total Static Pressure: Inches wg (kPa) As directed.
8. External Static Pressure: Inches wg (kPa) As directed.
9. Speed: As directed.
10. Maximum Outlet Velocity: fpm (m/s) As directed.
11. Motor:

    a. Size: As directed.
    b. Speed: As directed.
    c. Volts: As directed, 208, 230 or 460 V.
    d. Phase: Three.
    e. Hertz: 60 Hz.
    f. Full-Load Amperes: As directed.
    g. Minimum Circuit Ampacity: As directed.
    h. Maximum Overcurrent Protection: As directed.

12. Fan Discharge Sound Power, dB:

    a. 1st Octave: As directed.
    b. 2nd Octave: As directed.
    c. 3rd Octave: As directed.
    d. 4th Octave: As directed.
    e. 5th Octave: As directed.
    f. 6th Octave: As directed.
    g. 7th Octave: As directed.
    h. 8th Octave: As directed.

B. Return or Exhaust Fan As directed:

1. Type: As directed, DWDI, backward-inclined centrifugal fan, DWDI, forward-curved centrifugal fan, DWDI, airfoil centrifugal fan or SWSI, airfoil unhoused centrifugal plenum fan.
2. Class I, Class II or Class III: AMCA 99-2408.
3. Drive: As directed, V-belt or Direct.
4. Number of Fan Wheels: As directed.
5. Fan Diameter: Inches (mm) As directed.
6. Airflow: cfm (L/s) As directed.
7. Total Static Pressure: Inches wg (kPa) As directed.
8. External Static Pressure: Inches wg (kPa) As directed.
9. Speed: As directed.
10. Maximum Outlet Velocity: fpm (m/s) As directed.

11. Motor:

    a. Size: hp as directed.
    b. Speed: rpm as directed.
    c. Volts: As directed, 208, 230 or 460 V.
    d. Phase: Three.
    e. Hertz: 60 Hz.
    f. Full-Load Amperes: As directed.
    g. Minimum Circuit Ampacity: As directed.
    h. Maximum Overcurrent Protection: As directed.

12. Fan Inlet Sound Power, dB:

    a. 1st Octave: As directed.
    b. 2nd Octave: As directed.
    c. 3rd Octave: As directed.
    d. 4th Octave: As directed.
    e. 5th Octave: As directed.
    f. 6th Octave: As directed.
    g. 7th Octave: As directed.
    h. 8th Octave: As directed.

C. Preheat Coil:

1. Heat-Transfer Rate: Btu/h (kW) As directed.
2. Entering-Air Temperature: deg F (deg C) As directed.
3. Leaving-Air Temperature: deg F (deg C) As directed.
4. Face Area: sq. ft. (sq. m) As directed.
5. Maximum Face Velocity: As directed, fpm (m/s) As directed.
6. Maximum Air-Side, Static-Pressure Drop: Inches wg (Pa) As directed.
7. Fin Spacing: Maximum Fins per inch (per mm) As directed.
8. Minimum Number of Rows: As directed.
9. Integral Face-and-Bypass Dampers: As directed, Horizontal or Vertical, opposed-blade, galvanized-steel dampers with zinc-plated steel operating rods rotating in sintered bronze or nylon bearings mounted in a single galvanized-steel frame, with operating rods connected with a common linkage. Meeting edges of blades shall have gaskets and edge seals, and blades shall be mechanically fastened.
10. Water:

    a. Water Flow: gpm (L/s) As directed.
    b. Maximum Water Pressure Drop: feet of head (kPa) As directed.
    c. Entering-Water Temperature: deg F (deg C) As directed.
    d. Leaving-Water Temperature: deg F (deg C) As directed.
    e. Tube Velocity: fpm (L/s) As directed.

D. Heating Coil:

1. Heat-Transfer Rate: Btu/h (kW) As directed.
2. Entering-Air Temperature: deg F (deg C) As directed.
3. Leaving-Air Temperature: deg F (deg C) As directed.
4. Face Area: sq. ft. (sq. m) As directed.

5. Maximum Face Velocity: fpm (m/s) As directed.
6. Maximum Air-Side, Static-Pressure Drop: Inches wg (Pa) As directed.
7. Number of Rows: As directed.
8. Fin Spacing: Maximum Fins per inch (per mm) As directed.
9. Water:

    a. Water Flow: gpm (L/s) As directed.
    b. Maximum Water Pressure Drop: feet of head (kPa) As directed.
    c. Entering-Water Temperature: deg F (deg C) As directed.
    d. Leaving-Water Temperature: deg F (deg C) As directed.
    e. Tube Velocity: fpm (L/s) As directed.

E. Electric Heating Coil:

1. Heat-Transfer Rate: Btu/h (kW) As directed.
2. Input: As directed.
3. Volts: As directed, 120, 208 or 230 V.
4. Phase: As directed, Single or Three.
5. Full-Load Amperes: As directed.
6. Number of Steps: As directed.

F. Cooling Coil:

1. Sensible Heat-Transfer Rate: As directed, Btu/h (kW).
2. Total Heat-Transfer Rate: As directed, Btu/h (kW).
3. Entering-Air, Dry-Bulb Temperature: deg F (deg C) As directed.
4. Entering-Air, Wet-Bulb Temperature: deg F (deg C) As directed.
5. Leaving-Air, Dry-Bulb Temperature: deg F (deg C) As directed.
6. Leaving-Air, Wet-Bulb Temperature: deg F (deg C) As directed.
7. Face Area: sq. ft. (sq. m) As directed.
8. Maximum Face Velocity: fpm (m/s) As directed.
9. Maximum Air-Side, Static-Pressure Drop: inches wg (Pa) As directed.
10. Number of Rows: As directed.
11. Fin Spacing: Maximum As directed, fins per inch (per mm) As directed.
12. Water:

    a. Water Flow: gpm (L/s) As directed.
    b. Maximum Water Pressure Drop: feet of head (kPa) As directed.
    c. Entering-Water Temperature: deg F (deg C) As directed.
    d. Leaving-Water Temperature: deg F (deg C) As directed.
    e. Tube Velocity: fpm (L/s) As directed.

13. Refrigerant:

    a. Refrigerant Type: As directed.

G. Prefilters:

1. Type: As directed.
2. Face Dimensions, each: Inches by inches (mm by mm) As directed.
3. Depth: Inches (mm) As directed.

4. Number of Filters, Wide by High: As directed.
5. Access Location: As directed, Front, Back, Side or Bottom.
6. Maximum or Rated Face Velocity: fpm (m/s) As directed.
7. Initial Resistance: Inches wg (Pa) As directed.
8. Recommended Final Resistance: Inches wg (Pa) As directed.
9. Minimum Efficiency Reporting Value and Average Arrestance:

    a. MERV Rating: As directed, MERV 1, MERV 2, MERV 3 or MERV 4, and corresponding average arrestance according to ASHRAE 52.2.

10. Minimum Efficiency Reporting Value:

    a. MERV Rating: As directed, MERV 6 or MERV 13, according to ASHRAE 52.2.

H. Final Filters:

1. Type: As directed.
2. Face Dimensions, each: Inches by inches (mm by mm) As directed.
3. Depth: Inches (mm) As directed.
4. Number of Filters, Wide by High: As directed.
5. Access Location: As directed, Front, Back, Side or Bottom.
6. Maximum or Rated Face Velocity: fpm (m/s) As directed.
7. Initial Resistance: Inches wg (Pa) As directed.
8. Recommended Final Resistance: Inches wg (Pa) As directed.
9. Minimum Efficiency Reporting Value:

    a. MERV Rating: As directed, MERV 6 or MERV 13, according to ASHRAE 52.2.

I. Dampers: As directed, Zone, Mixing dampers or Face and bypass.

J. Sound Attenuators:

1. Configuration: As directed, Straight Elbow.
2. Shape: As directed, Rectangular or Round.
3. Attenuation Mechanism: Acoustic glass fiber.
4. Maximum Pressure Drop: Inches wg (Pa) As directed.
5. Length: Inches (mm) As directed.
6. Face Dimension: Inches (mm) wide by inches (mm) high As directed.
7. Face Velocity: fpm (m/s) As directed.
8. Dynamic Insertion Loss:

    a. 1st Octave: As directed.
    b. 2nd Octave: As directed.
    c. 3rd Octave: As directed.
    d. 4th Octave: As directed.
    e. 5th Octave: As directed.
    f. 6th Octave: As directed.
    g. 7th Octave: As directed.
    h. 8th Octave: As directed.

9. Generated Noise:

a. 1st Octave: As directed.
b. 2nd Octave: As directed.
c. 3rd Octave: As directed.
d. 4th Octave: As directed.
e. 5th Octave: As directed.
f. 6th Octave: As directed.
g. 7th Octave: As directed.
h. 8th Octave: As directed.

10. Number of Distribution As directed, Tubes or Manifolds: As directed.

K. Self-Contained Electric-Resistance Humidifier.

1. Humidification Rate: lb/h (g/s) As directed.
2. Dry-Bulb Air Temperature at Discharge: deg F (deg C) As directed.
3. Wet-Bulb Air Temperature at Discharge: deg F (deg C) As directed.
4. Maximum Absorption Distance: inches (mm) As directed.
5. Minimum Makeup Water Supply Pressure: psig (kPa) As directed.
6. Electric-Resistance Evaporation Chamber:

a. Power Input per Chamber: kW As directed.
b. Number of Chambers: As directed.

L. Self-Contained Gas-Fired Humidifier:

1. Humidification Rate: lb/h (g/s) As directed.
2. Dry-Bulb Air Temperature at Discharge: deg F (deg C) As directed.
3. Wet-Bulb Air Temperature at Discharge: deg F (deg C) As directed.
4. Maximum Absorption Distance: inches (mm) As directed.
5. Minimum Makeup Water Supply Pressure: psig (kPa) As directed.
6. Gas-Fired Generator:

a. Fuel Input: Btu/h (kW) As directed.
b. Fuel Pressure: inches wg (kPa) As directed.

7. Number of Distribution As directed, Tubes or Manifolds: As directed.

M. Heat-Exchanger Humidifier:

1. Humidification Rate: lb/h (g/s).
2. Dry-Bulb Air Temperature at Discharge: As directed, deg F (deg C).
3. Wet-Bulb Air Temperature at Discharge: As directed, deg F (deg C).
4. Maximum Absorption Distance: As directed, inches (mm).
5. Minimum Makeup Water Supply Pressure: As directed, psig (kPa).
6. Steam to Heat Exchanger:

a. Supply Pressure at Control Valve: psig (kPa) As directed.
b. Condensing Rate: lb/h (g/s) As directed.

N. Air-to-Air Energy Recovery:

1. Type: As directed, Heat-wheel air-to-air energy recovery or Fixed-plate air-to-air energy recovery.
2. Exhaust Air:

    a. Airflow: cfm (L/s) As directed.
    b. Face Velocity: fpm (m/s) As directed.
    c. Summer:

        1) Entering-Air Temperature, Dry Bulb: deg F (deg C) As directed.
        2) Entering-Air Temperature, Wet Bulb: deg F (deg C) As directed.
        3) Leaving-Air Temperature, Dry Bulb: deg F (deg C) As directed.
        4) Leaving-Air Temperature, Wet Bulb: deg F (deg C) As directed.

    d. Winter:

        1) Entering-Air Temperature, Dry Bulb: deg F (deg C) As directed.
        2) Entering-Air Temperature, Wet Bulb: deg F (deg C) As directed.
        3) Leaving-Air Temperature, Dry Bulb: deg F (deg C) As directed.
        4) Leaving-Air Temperature, Wet Bulb: deg F (deg C) As directed.
        5) Air Pressure Drop: As directed, inches wg (Pa).

3. Supply Air:

    a. Airflow: cfm (L/s) As directed.
    b. Face Velocity: fpm (m/s) As directed.
    c. Summer:

        1) Entering-Air Temperature, Dry Bulb: deg F (deg C) As directed.
        2) Entering-Air Temperature, Wet Bulb: deg F (deg C) As directed.
        3) Leaving-Air Temperature, Dry Bulb: deg F (deg C) As directed.
        4) Leaving-Air Temperature, Wet Bulb: deg F (deg C) As directed.

    d. Winter:

        1) Entering-Air Temperature, Dry Bulb: deg F (deg C) As directed.
        2) Entering-Air Temperature, Wet Bulb: deg F (deg C) As directed.
        3) Leaving-Air Temperature, Dry Bulb: deg F (deg C) As directed.
        4) Leaving-Air Temperature, Wet Bulb: deg F (deg C) As directed.
        5) Air Pressure Drop: Inches wg (Pa) As directed.

    e. Wheel Drive:

        1) Motor Size: As directed.
        2) Motor Electrical Characteristics:

            a) Volts: As directed, 120, 208 or 230V.
            b) Phase: As directed, Single or Three.
            c) Hertz: 60 Hz.

    f. Effectiveness: As directed.

4. Air Blender:

    a. Airflow: cfm (L/s) As directed.
    b. Minimum Velocity: fpm (m/s) As directed.
    c. Air Pressure Drop: inches wg (Pa) As directed.

5. Diffuser:

    a. Airflow: cfm (L/s) As directed.
    b. Air Pressure Drop: inches wg (Pa) As directed.

2.3 MANUFACTURERS

2.4 UNIT CASINGS

A. Frame: Modular and providing overall structural integrity without reliance on casing panels for structural support.

B. Base Rail:

1. Material: Galvanized steel.
2. Height: 6 inches (150 mm).

C. Casing Joints: Hermetically sealed at each corner and around entire perimeter.

D. Outside Casing Wall:

1. Material: As directed, Galvanized steel, minimum 18 gauge (1.3 mm), 16 gauge (1.6 mm) or 14 gauge (2.0 mm) thick.
2. Material: As directed, Aluminum, minimum 16 gauge (1.3 mm), 14 gauge (1.6 mm) or 12 gauge (2.0 mm) thick.
3. Factory Finish: Provide manufacturer's standard finish.

E. Inside Casing Wall:

1. Material: As directed, Galvanized steel, solid or perforated, minimum 18 gauge (1.3 mm) or 16 gauge (1.6 mm) thick.
2. Material: As directed, Aluminum, solid or perforated, minimum 16 gauge (1.3 mm) or 14 gauge (1.6 mm) thick.

F. Floor Plate:

1. Material: As directed, Galvanized steel, treadplate, minimum 18 gauge (1.3 mm), 16 gauge (1.6 mm), 14 gauge (2.0 mm), 12 gauge (2.7 mm) or 10 gauge (3.5 mm) thick.
2. Material: As directed, Aluminum, treadplate, minimum 18 gauge (1.0 mm), 16 gauge (1.3 mm), 14 gauge (1.6 mm), 12 gauge (2.0 mm) or 10 gauge (2.6 mm) thick.

G. Roof: Cross-broken and pitched with "C" caps over joints to provide watertight seal.

H. Piping Vestibule: As directed, Insulated with same insulation and thickness as casing, 18 inches (450 mm), 24 inches (600 mm) or 30 inches (750 mm) deep by full width of piping connections.

I. Static-Pressure Classifications:

1. For Unit Sections Upstream of Fans: As directed, Minus 2-inch wg (500 Pa), 3-inch wg (750 Pa), 4-inch wg (1000 Pa) or 6-inch wg (1500 Pa).
2. For Unit Sections Downstream and Including Fans: As directed, 2-inch wg (500 Pa), 3-inch wg (750 Pa), 4-inch wg (1000 Pa) or 6-inch wg (1500 Pa).

J. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

K. Casing Insulation:

1. Materials: Glass-fiber blanket or board insulation, Type I or Type II ASTM C1071 or injected polyurethane foam insulation.
2. Casing Panel R-Value: Minimum As directed, R-6.5, R-11 or R-13.
3. Insulation Thickness: As directed, 1 inch (25 mm) or 2 inches (50 mm).
4. Thermal Break: Provide continuity of insulation with no through-casing metal in casing walls, floors, or roofs of air-handling unit.

L. Panels, Doors, and Windows:

1. Panels:

a. Fabrication: Formed and reinforced, double-wall and insulated panels of same materials and thicknesses as casing.
b. Fasteners: Two or more camlock type for panel lift-out operation. Arrangement shall allow panels to be opened against airflow.
c. Gasket: Neoprene, applied around entire perimeters of panel frames.
d. Size: Large enough to allow unobstructed access for inspection and maintenance of air-handling unit's internal components. As directed, At least 18 inches (450 mm) or 24 inches (600 mm) wide by full height of unit casing up to a maximum height of 60 inches (1500 mm) or 72 inches (1800 mm).

2. Doors:

a. Fabrication: Formed and reinforced, double-wall and insulated panels of same materials and thicknesses as casing.
b. Hinges: A minimum of two ball-bearing hinges or stainless-steel piano hinge and two wedge-lever latches, operable from inside and outside. Arrange doors to be opened against airflow. Provide safety latch retainers on doors so that doors do not open uncontrollably.
c. Gasket: Neoprene, applied around entire perimeters of panel frames.
d. Size: Large enough to allow for unobstructed access for inspection and maintenance of air-handling unit's internal components. As directed, At least 18 inches (450 mm) or 24 inches (600 mm) wide by full height of unit casing up to a maximum height of 60 inches (1500 mm) or 72 inches (1800 mm).

3. Windows:

    a. Construction: Fabricate windows in access panels and doors of double-glazed, safety glass with an airspace between panes and sealed with interior and exterior rubber seals.
    b. Size: Minimum 6 inches (150 mm), square or round.

4. Locations and Applications:

    a. Fan Section: Doors, with windows.
    b. Coil Section: Panels.
    c. Access Section: Doors, with windows.
    d. Access Sections Immediately Upstream and Downstream of Coil Sections: Doors, with windows.
    e. Damper Section: Doors, with windows.
    f. Filter Section: As directed, Doors or Panels large enough to allow periodic removal and installation of filters.
    g. Access Sections Immediately Upstream and Downstream of Filter Sections: Doors, Panels, with windows as directed.
    h. Mixing Section: Doors, Panels, with windows as directed.
    i. Humidifier Section: Doors, Panels, with windows as directed.

5. Service Lights: As directed, LED vaporproof luminaire with individual switched junction box located outside or inside, adjacent to each access door and panel.

    a. Locations: As directed, Each section accessed with door or panel or Fan section.

6. Convenience Outlets: One 20-A duplex GFCI receptacle per location with junction box located on outside casing wall.

    a. Locations: As directed, Each section accessed with a door or panel or Fan section.

M. Condensate Drain Pans:

1. Construction:

    a. As directed, single-wall, galvanized-steel or noncorrosive polymer or stainless-steel sheet.
    b. As directed, double-wall, galvanized-steel or noncorrosive polymer or stainless-steel sheet with space between walls filled with foam insulation and moisture-tight seal.

2. Drain Connection:

    a. Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on one end or both ends of pan As directed.
    b. Minimum Connection Size: As directed, NPS 1 (DN 25) or NPS 2 (DN 50).

3. Slope: Minimum 0.125-in./ft. (10-mm/mm) slope, to comply with ASHRAE 62.1, in at least two planes to collect condensate from cooling coils (including coil piping

connections, coil headers, and return bends) and from humidifiers and to direct water toward drain connection.

4. Length: Extend drain pan downstream from leaving face for distance to comply with ASHRAE 62.1.
5. Width: Entire width of water producing device.
6. Depth: A minimum of 2 inches (50 mm) deep.
7. Formed sections or Integral part of floor plating.
8. Pan-Top Surface Coating for Galvanized-Steel Drain Pans: Asphaltic waterproofing compound.
9. Units with stacked coils shall have an intermediate drain pan to collect condensate from top coil.

2.5 FAN, DRIVE, AND MOTOR SECTION

A. Fan and Drive Assemblies: Statically and dynamically balanced and designed for continuous operation at maximum-rated fan speed and motor horsepower.

1. Shafts: With field-adjustable alignment.

a. Turned, ground, and polished hot-rolled steel with keyway. Ship with a protective coating of lubricating oil.
b. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.

B. Centrifugal Fan Housings: Formed- and reinforced-steel panels to form curved scroll housings with shaped cutoff and spun-metal inlet bell.

1. Bracing: Steel angle or channel supports for mounting and supporting fan scroll, wheel, motor, and accessories.
2. Horizontal-Flanged, Split Housing: Bolted construction.
3. Housing for Supply Fan: Attach housing to fan-section casing with metal-edged flexible duct connector.
4. Flexible Connector: As directed, Factory fabricated with a fabric strip 3-1/2 inches (89 mm) or 5-3/4 inches (146 mm) wide attached to two strips of 2-3/4 inches (70 mm) wide, 0.028-inch- (0.7-mm-) thick, galvanized-steel sheet or 0.032-inch- (0.8-mm-) thick, aluminum sheets.

a. Flexible Connector Fabric: Glass fabric, double coated with neoprene. Fabrics, coatings, and adhesives shall comply with UL 181, Class 1.

1) Fabric Minimum Weight: 26 oz./sq. yd. (880 g/sq. m).
2) Fabric Minimum Tensile Strength: 480 lbf/inch (84 N/mm) in the warp and 360 lbf/inch (63 N/mm) in the filling.
3) Fabric Minimum Service Temperature Range: Minus 40 to plus 200 deg F (Minus 40 to plus 93 deg C).

C. Plenum Fan Housings: Steel frame and panel; fabricated without fan scroll and volute housing. Provide inlet screens for Type SWSI fans.

D. Plenum Fan Arrays: As directed, Contained or Uncontained as defined in AHRI 430. Steel or aluminum frame with inlet cone and structural framing around each fan built into an array of multiple fans. As directed, Provide backdraft or motorized dampers at each fan to prevent short circuiting of flow if one fan is not operating.

E. Backward-Inclined, Centrifugal Fan Wheels: Construction with curved inlet flange, backplate, backward-inclined blades welded or riveted to flange and backplate; As directed, steel or aluminum hub riveted to backplate and fastened to shaft with setscrews.

F. Forward-Curved, Centrifugal Fan Wheels: Inlet flange, backplate, and shallow blades with inlet and tip curved forward in direction of airflow and mechanically fastened to flange and backplate; As directed, steel or aluminum hub swaged to backplate and fastened to shaft with setscrews.

G. Airfoil, Centrifugal Fan Wheels: Smooth-curved inlet flange, backplate, and hollow die-formed airfoil-shaped blades continuously welded at tip flange and backplate; As directed, steel or aluminum hub riveted to backplate and fastened to shaft with setscrews.

H. Fan Shaft Bearings:

1. Prelubricated and Sealed, Ball Bearings: Self-aligning, pillow-block type with an L-50 rated life of 200,000 hours according to ABMA 9.
2. Grease-Lubricated, Tapered-Roller Bearings: Self-aligning, pillow-block type with double-locking collars and two-piece, cast-iron housing with grease lines extended to outside unit and an L-50 rated life of 200,000 hours according to ABMA 11.
3. Grease-Lubricated Bearings: Self-aligning, pillow-block-type, ball or roller bearings with adapter mount and two-piece, cast-iron housing with grease lines extended to outside unit and an L-50 rated life of 200,000.

I. Belt Drives: Factory mounted, with adjustable alignment and belt tensioning, and with 1.5 or 1.25 service factor based on fan motor As directed.

1. Pulleys: Cast iron or steel with split, tapered bushing; dynamically balanced at factory.
2. Motor Pulleys: Adjustable pitch for use with 5-hp motors and smaller; fixed pitch for use with motors larger than 5 hp. Select pulley size so pitch adjustment is at the middle of adjustment range at fan design conditions.
3. Belts: Oil resistant, nonsparking, and nonstatic; in matched sets for multiple-belt drives.
4. Belt Guards: Comply with requirements specified by OSHA and fabricate according to SMACNA's "HVAC Duct Construction Standards"; 0.146-inch- (2.7-mm-) thick, 3/4-inch (20-mm) diamond-mesh wire screen, welded to steel angle frame; prime coated.

J. Internal Vibration Isolation and Seismic Control: Fans shall be factory mounted with manufacturer's standard restrained vibration isolation mounting devices having a minimum static deflection of 1 inch (25 mm) or 2 inches (50 mm).

K. Motor: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Enclosure Type: Totally enclosed, fan cooled.
2. NEMA Premium Efficient motors as defined in NEMA MG 1.

3. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
4. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.
5. Mount unit-mounted disconnect switches on exterior or interior of unit As directed.

    a. Listed and labeled disconnects and components, complying with applicable provisions of NFPA 70.
    b. As directed, Fused, Non-fused, NEMA 3R or NEMA 4.

L. Variable-Frequency Motor Controller: Comply with Section 262923 "Variable-Frequency Motor Controllers."

M. Variable-Frequency Motor Controller: Serving each fan individually or all fans combined in fan array as directed.

1. Manufactured Units: Pulse-width modulated; As directed, constant torqueand or variable torque for Design A and Design B or inverter-duty motors.
2. Output Rating: As directed, Three phase; 10 to 60 Hz, with voltage proportional to frequency throughout voltage range or 66 Hz, with torque constant as speed changes; maximum voltage equals input voltage.
3. Unit Operating Requirements:

    a. Internal Adjustability:

        1) Minimum Speed: 5 to 25 percent of maximum rpm.
        2) Maximum Speed: 80 to 100 percent of maximum rpm.
        3) Acceleration: 0.1 to 999.9 seconds.
        4) Deceleration: 0.1 to 999.9 seconds.
        5) Current Limit: 30 to minimum of 150 percent of maximum rating.

    b. Self-Protection and Reliability Features:

        1) Surge suppression.
        2) Loss of input signal protection.
        3) Under- and overvoltage trips.
        4) Variable-frequency motor controller and motor-overload/overtemperature protection.
        5) Critical frequency rejection.
        6) Loss-of-phase protection.
        7) Reverse-phase protection.
        8) Motor-overtemperature fault.

    c. Bidirectional autospeed search.
    d. Torque boost.
    e. Motor temperature compensation at slow speeds.

        1) Panel-mounted operator station.

2) Historical logging information and displays.
3) Digital indicating devices.

f. Control Signal Interface: Electric.
g. Proportional Integral Directive (PID) control interface.
h. DDC system for HVAC Protocols for Network Communications: ASHRAE 135.

4. Line Conditioning:

a. Input line conditioning.
b. Output filtering.
c. EMI/RFI filtering.

5. Bypass Systems:

a. Bypass Mode: As directed, Manual operation only or Field-selectable automatic or manual.
b. Bypass Controller: Two-contactor style, with bypass and output isolating contactors and isolating switch.
c. Bypass Controller: Three-contactor style, with bypass and input and output isolating contactors and isolating switch.
d. Bypass Contactor Configuration: Full-voltage (across the line) or Reduced-voltage (autotransformer) type.

2.6 COIL SECTION

A. General Requirements for Coil Section:

1. Comply with AHRI 410.
2. Fabricate coil section to allow removal and replacement of coil for maintenance and to allow in-place access for service and maintenance of coil(s).
3. For multizone units, provide air deflectors and air baffles to balance airflow across coils.
4. Coils shall not act as structural component of unit.

B. Preheat Coils:

1. Electrical Coils, Controls, and Accessories: Comply with UL 1995.

a. Casing Assembly: As directed, Slip-in or Flanged type with galvanized-steel frame.
b. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame.
c. Overtemperature Protection: Disk-type, automatically resetting, thermal-cutout, safety device; serviceable through terminal box without removing heater from coil section.
d. Secondary Protection: Load-carrying, manually resetting or manually replaceable, thermal cutouts; factory wired in series with each heater stage.

e. Control Panel: As directed, Unit or Remote mounted with disconnecting means and overcurrent protection.

1) As directed, Magnetic or Mercury contactor.
2) Solid-state, stepless pulse controller.
3) Toggle switches, one per step.
4) Step controller.
5) Time-delay relay.
6) Pilot lights, one per step.
7) Airflow proving switch.

2. Hot-Water Coils; As directed, Continuous circuit, Self-draining or Cleanable.

a. Piping Connections: As directed, Threaded, Flanged, same end or opposite ends of coil.
b. Tube Material: Copper.
c. Fin Type: Plate.
d. Fin Material: Aluminum.
e. Fin Spacing: Maximum 10 or 12 fins per inch (mm).
f. Fin Thickness: Inches (mm) As directed.
g. Fin and Tube Joint: As directed, Mechanical bond or Silver brazed.
h. Headers:

1) Cast iron with cleaning plugs and drain and air vent tappings extended to exterior of unit.
2) Seamless copper tube with brazed joints, prime coated.
3) Fabricated steel, with brazed joints, prime coated.
4) Provide insulated cover to conceal exposed outside casings of headers.

i. Frames: As directed, Channel frame, 0.052-inch- (1.3-mm-) thick, galvanized steel, 0.064-inch- (1.6-mm-) thick, galvanized steel, 0.079-inch- (2.0-mm-) thick, galvanized steel, 0.0625-inch- (1.58-mm-) thick, galvanized steel or 0.0625-inch- (1.58-mm-) thick, stainless steel.
j. Coil Working-Pressure Ratings: 200 psig (1380 kPa), 325 deg F (163 deg C).
k. Integral Face-and-Bypass Dampers: As directed, Horizontal or Vertical, opposed-blade, galvanized-steel dampers with zinc-plated steel operating rods rotating in sintered bronze or nylon bearings mounted in a single galvanized-steel frame, with operating rods connected with a common linkage. Meeting edges of blades shall have gaskets and edge seals, and blades shall be mechanically fastened.

C. Heating Coils:

1. Electrical Coils, Controls, and Accessories: Comply with UL 1995.

a. Casing Assembly: As directed, Slip-in or Flanged type with galvanized-steel frame.
b. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame.

c. Overtemperature Protection: Disk-type, automatically resetting, thermal-cutout, safety device; serviceable through terminal box without removing heater from coil section.
d. Secondary Protection: Load-carrying, manually resetting or manually replaceable, thermal cutouts; factory wired in series with each heater stage.
e. Control Panel: As directed, Unit or Remote mounted with disconnecting means and overcurrent protection.

1) As directed, Magnetic or Mercury contactor.
2) Solid-state, stepless pulse controller.
3) Toggle switches, one per step.
4) Step controller.
5) Time-delay relay.
6) Pilot lights, one per step.
7) Airflow proving switch.

2. Hot-Water Coils: As directed, Continuous circuit, Self-draining or Cleaning.

a. Piping Connections: As directed, Threaded, Flanged, same end or opposite ends of coil.
b. Tube Material: Copper.
c. Fin Type: Plate.
d. Fin Material: Aluminum.
e. Fin Spacing: As directed, Maximum 10 or 12 fins per inch (mm).
f. Fin Thickness: Inches (mm) As directed.
g. Fin and Tube Joint: As directed, Mechanical bond or Silver brazed.
h. Headers:

1) Cast iron with cleaning plugs and drain and air vent tappings extended to exterior of unit.
2) Seamless copper tube with brazed joints, prime coated.
3) Fabricated steel, with brazed joints, prime coated.
4) Provide insulated cover to conceal exposed outside casings of headers.

i. Frames: As directed, Channel frame, 0.052-inch- (1.3-mm-) thick, galvanized steel, 0.064-inch- (1.6-mm-) thick, galvanized steel, 0.079-inch- (2.0-mm-) thick, galvanized steel, 0.0625-inch- (1.58-mm-) thick, galvanized steel or 0.0625-inch- (1.58-mm-) thick, stainless steel.
j. Coil Working-Pressure Ratings: 200 psig (1380 kPa), 325 deg F (163 deg C).

D. Cooling Coils:

1. Chilled-Water Coil: As directed, Continuous circuit, Self-draining or Cleanable.

a. Piping Connections: As directed, Threaded, Flanged, same end or opposite ends of coil.
b. Tube Material: Copper.
c. Tube Thickness: Inches (mm) As directed.
d. Fin Type: Plate.
e. Fin Material: Aluminum.

f. Fin Spacing: As directed, 0.125 inch (3.18 mm), 0.091 inch (2.31 mm), 0.071 inch (1.80 mm), 0.067 inch (1.70 mm), 0.056 inch (1.42 mm) or 0.0075 inch (0.19 mm).
g. Fin Thickness: Inches (mm) As directed.
h. Fin and Tube Joint: As directed, Mechanical bond or Silver brazed.
i. Headers:

1) Cast iron with cleaning plugs and drain and air vent tappings extended to exterior of unit.
2) Seamless copper tube with brazed joints, prime coated.
3) Fabricated steel, with brazed joints, prime coated.
4) Provide insulated cover to conceal exposed outside casings of headers.

j. Frames: As directed, Channel frame, 0.052-inch- (1.3-mm-) thick, galvanized steel, 0.064-inch- (1.6-mm-) thick, galvanized steel, 0.079-inch- (2.0-mm-) thick, galvanized steel, 0.0625-inch- (1.58-mm-) thick, galvanized steel or 0.0625-inch- (1.58-mm-) thick, stainless steel.
k. Working-Pressure Ratings: 200 psig (1380 kPa), 325 deg F (163 deg C).

2. Refrigerant Coil:

a. Tubes: Copper.
b. Fins:

1) Material: Aluminum.
2) Fin Spacing: As directed, Maximum 12, 10 or 8 fins per inch (mm).

c. Fin and Tube Joints: Mechanical bond.
d. Headers: Seamless-copper headers with brazed connections.
e. Frames: Galvanized steel.
f. Ratings: Designed, tested, and rated according to ASHRAE 33 and AHRI 410.

1) Working Pressure: Minimum 300 psig (2070 kPa).

2.7 AIR FILTRATION SECTION

A. Particulate air filtration is specified in Section 234100 "Particulate Air Filtration."

B. Panel Filters:

1. Description: As directed, Flat, non-pleated or Pleated factory-fabricated, self-supported, disposable air filters with holding frames.
2. Filter Unit Class: UL 900.
3. Media: Interlaced glass, synthetic, or cotton fibers coated with nonflammable adhesive.
4. Filter-Media Frame: As directed, Beverage board with perforated metal retainer, or metal grid, on outlet side.

C. Bag Filters:

1. Description: Factory-fabricated, dry, extended-surface, self-supporting filters with holding frames in steel, basket-type retainers.
2. Filter Unit Class: UL 900.
3. Media: Fibrous material, coated with antimicrobial agent, constructed so individual pockets are maintained in tapered form by flexible internal supports under rated-airflow conditions.
4. Filter-Media Frame: As directed, Galvanized steel.

D. Cartridge Filters:

1. Description: Factory-fabricated, adhesive-coated disposable, packaged air filters with media perpendicular to airflow, and with holding frames.
2. Filter Unit Class: UL 900.
3. Media: Fibrous material, coated with antimicrobial agent, constructed so individual pleats are maintained in pleated form under rater-airflow conditions by corrugated aluminum separators.
4. Filter Media Frame: Galvanized steel.

E. Front- or Back-Access Filter Mounting Frames:

1. Particulate Air Filter Frames: As directed, Galvanized-steel or Aluminum framing members with access for filter servicing, cut to size and prepunched for assembly into modules. Vertically support filters to prevent deflection of horizontal members without interfering with either filter installation or operation.

    a. Prefilters: Incorporate a separate 2-inch- (50-mm-) thick track with spring clips, with same access as primary filter.
    b. Sealing: Full periphery foam gaskets.

F. Side-Access Filter Mounting Frames:

1. Particulate Air Filter Frames: Match inner casing and outer casing material, and insulation thickness. As directed, Galvanized steel or Aluminum track.

    a. Prefilters: Incorporate an integral 2-inch- (50-mm-) thick track with same access as primary filter.
    b. Sealing: Incorporate positive-sealing device to ensure seal between gasketed material on channels to seal top and bottom of filter cartridge frames to prevent bypass of unfiltered air.

2.8 DAMPERS

A. General Requirements for Dampers: Leakage rate, according to AMCA 500, "Laboratory Methods for Testing Dampers for Rating," shall not exceed 4 cfm/sq. ft. (20 L/s/sq. m) at 1-inch wg (250 Pa) and 8 cfm/sq. ft. (40 L/s/sq. m) at 4-inch wg (1.0-MPa), leakage Class 1 pressure differential.

B. Damper Operators: Comply with requirements in Section 230923.12 "Control Dampers."

C. Electronic Damper Operators:

1. Direct-coupled type designed for minimum 60,000 full-stroke cycles at rated torque.
2. Electronic damper position indicator shall have visual scale indicating percent of travel and 2- to 10-V dc, feedback signal.
3. Operator Motors:

    a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
    b. Size to operate with sufficient reserve power to provide smooth modulating action or two-position action.
    c. Permanent Split-Capacitor or Shaded-Pole Type: Gear trains completely oil immersed and sealed. Equip spring-return motors with integral spiral-spring mechanism in housings designed for easy removal for service or adjustment of limit switches, auxiliary switches, or feedback potentiometer.

4. Nonspring-Return Motors for Dampers Larger Than 25 Sq. Ft. (2.3 sq. m): Size for running torque of 150 in. x lbf (16.9 N x m) and breakaway torque of 300 in. x lbf (33.9 N x m).
5. Spring-Return Motors for Dampers Larger Than 25 Sq. Ft. (2.3 sq. m): Size for running and breakaway torque of 150 in. x lbf (16.9 N x m).
6. Size dampers for running torque calculated as follows:

    a. Parallel-Blade Damper with Edge Seals: 7 inch-lb/sq. ft. (86.8 kg-cm/sq. m) of damper.
    b. Opposed-Blade Damper with Edge Seals: 5 inch-lb/sq. ft. (62 kg-cm/sq. m) of damper.
    c. Parallel-Blade Damper without Edge Seals: 4 inch-lb/sq. ft (49.6 kg-cm/sq. m) of damper.
    d. Opposed-Blade Damper without Edge Seals: 3 inch-lb/sq. ft. (37.2 kg-cm/sq. m) of damper.
    e. Dampers with 2- to 3-Inch wg (500 to 750 Pa) of Pressure Drop or Face Velocities of 1000 to 2500 fpm (5 to 13 m/s): Increase running torque by 1.5.
    f. Dampers with 3- to 4-Inch wg (750 to 1000 Pa) of Pressure Drop or Face Velocities of 2500 to 3000 fpm (13 to 15 m/s): Increase running torque by 2.0.

7. Coupling: V-bolt and V-shaped, toothed cradle.
8. Overload Protection: Electronic overload or digital rotation-sensing circuitry.
9. Fail-Safe Operation: Mechanical, spring-return mechanism with external, manual gear release on nonspring-return actuators.
10. Power Requirements (Two-Position Spring Return): As directed, 24 V dc, 120 V ac or 230 V ac.
11. Power Requirements (Modulating): Maximum 10 VA at 24 V ac or 8 W at 24 V dc.
12. Proportional Signal: 2 to 10 V dc or 4 to 20 mA, and 2- to 10-V dc position feedback signal.
13. Temperature Rating: As directed, Minus 22 to plus 122 deg F (Minus 30 to plus 50 deg C) or 40 to 104 deg F (5 to 40 deg C).
14. Run Time: As directed, 12 seconds open, 5 seconds closed, 30 seconds, 60 seconds or 120 seconds.

D. Zone Dampers: Two single-blade, galvanized-steel dampers offset 90 degrees from each other on zinc-plated steel operating rod rotating in sintered bronze or nylon bearings mounted in a single galvanized-steel frame. Provide blade gaskets and edge seals, and mechanically fasten blades to operating rod.

E. Face-and-Bypass Dampers: Opposed-blade, galvanized-steel dampers with zinc-plated steel operating rods rotating in sintered bronze or nylon bearings mounted in a single galvanized-steel frame and with operating rods connected with a common linkage. Provide blade gaskets and edge seals, and mechanically fasten blades to operating rod.

F. Outdoor- and Return-Air Dampers: As directed, Low-leakage, double-skin, airfoil-blade, galvanized-steel dampers with compressible jamb seals and extruded-vinyl blade edge seals in opposed or parallel-blade arrangement with zinc-plated steel operating rods rotating in stainless-steel sleeve or sintered bronze or nylon bearings mounted in a single galvanized-steel frame, and with operating rods connected with a common linkage. Leakage rate shall not exceed 4 cfm/sq. ft. (20 L/s/sq. m) at 1-inch wg (250 Pa) and 8 cfm/sq. ft. (40 L/s/sq. m) at 4-inch wg (1.0 MPa), leakage Class 1.

G. Mixing Section: Multiple-blade, air-mixer assembly located immediately downstream of mixing section.

H. Combination Filter and Mixing Section:

1. Cabinet support members shall hold 2-inch- (50-mm-) thick, pleated, flat, permanent or throwaway filters.
2. Multiple-blade, air-mixer assembly shall mix air to prevent stratification, located immediately downstream of mixing box.

2.9 SOUND ATTENUATORS

A. General Requirements:

1. Factory fabricated.
2. Fire-Performance Characteristics: Adhesives, sealants, packing materials, and accessory materials with flame-spread index not exceeding 25 and smoke-developed index not exceeding 50; ASTM E84.
3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with ASHRAE 62.1.

B. Shape: As directed, Rectangular, straight, Round, straight, Rectangular, elbow or Round, elbow.

C. Rectangular Silencer Outer Casing: Galvanized steel.

D. Round Silencer Outer Casing: Galvanized steel.

E. Inner Casing and Baffles: Galvanized steel

F. Principal Sound-Absorbing Mechanism:

1. Dissipative Type: Polymer film-lined absorptive fill material.

a. Fill Material: Inert and vermin-proof fibrous material.

2. Joints: Lock formed and sealed, continuously welded or flanged.

2.10 HUMIDIFIERS

A. Self-contained humidifiers are specified in Section 238413.29 "Self-Contained Humidifiers."

B. Heat-exchanger humidifiers are specified in Section 238413.36 "Heat Exchanger Humidifiers."

2.11 AIR-TO-AIR ENERGY RECOVERY UNITS

A. Heat Wheels:

1. Casing:

a. Galvanized steel, stainless steel, or aluminum with manufacturer's standard finish.
b. Integral purge section limiting carryover of exhaust air to between 0.05 percent at 1.6-inch wg and 0.20 percent at 4-inch wg (0.5 percent at 400-Pa and 0.20 percent at 1000-Pa) differential pressure.
c. Casing seals on periphery of rotor, on duct divider, and on purge section.
d. Support rotor on grease-lubricated ball bearings with extended grease fittings. Mount horizontal wheels on tapered roller bearing.

2. Rotor: Aluminum or polymer segmented wheel, strengthened with radial spokes, with nontoxic, noncorrosive, silica-gel desiccant coating.
3. Rotor: Aluminum, metallic, or polymer segmented wheel, strengthened with radial spokes impregnated with nonmigrating, water-selective, 3-angstrom molecular-sieve desiccant coating. Drive: Fractional horsepower motor and gear reducer, with speed changed by variable-frequency controller. Permanently lubricated wheel bearings with an L-10 or 400,000 hours As directed.
4. Controls:

a. Starting relay, factory mounted and wired, and manual motor starter for field wiring.
b. Variable-frequency controller, factory mounted and wired, permitting input of field connected 4- to 20-mA or 1- to 10-V control signal.
c. Variable-frequency controller, factory mounted and wired, with exhaust-air sensor to vary rotor speed and maintain exhaust temperature above freezing.
d. Variable-frequency controller, factory mounted and wired, with exhaust- and outdoor-air sensors, automatic changeover thermostat and set-point adjuster, to vary rotor speed and maintain exhaust temperature above freezing and air differential temperature above set point. Provide maximum rotor speed when exhaust-air temperature is less than outdoor-air temperature.
e. Pilot-Light Indicator: Display rotor rotation and speed.
f. Speed Settings: Adjustable settings for maximum and minimum rotor speed limits.

B. Fixed-Plate Sensible Heat Exchangers:

1. Casing: As directed, Aluminum or Galvanized steel.
2. Plates: Evenly spaced and sealed and arranged for counter or cross airflow.
3. Plate Material: As directed, Embossed aluminum, Stainless steel or High-density plastic.
4. Bypass: Plenum within casing, with gasketed face-and-bypass dampers that have operating rods extended outside casing.
5. Heat-Exchanger Prefilters:

    a. Thickness: 1 inch (25 mm) thick, disposable or 2 inches (50 mm) thick, disposable.
    b. MERV Rating: MERV 6.

2.12 AIR BLENDERS

A. Description: Static air mixer device to provide mixing of two airstreams to within plus/minus 6 deg F (3 deg C).

B. Material: Galvanized steel.

2.13 DIFFUSERS

A. Description: Velocity profile equalizer device for providing equalized airflow profile downstream of Type DWDI fans.

B. Material: Galvanized steel.

2.14 ROOF CURBS

A. Roof curbs with vibration isolators and wind or seismic restraints are specified in Section 230548 "Vibration and Seismic Controls for HVAC."

B. Materials: Galvanized steel with corrosion-resistant coating, watertight gaskets, and factory-installed wood nailer; complying with NRCA standards.

1. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.

    a. Materials: ASTM C1071, Type I or II.
    b. Thickness: As directed, 1 inch (25 mm), 1-1/2 inches (38 mm) or 2 inches (50 mm).

2. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.

    a. Liner Adhesive: Comply with ASTM C916, Type I.
    b. Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
    c. Liner materials applied in this location shall have airstream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric depending on service air velocity.

d. Liner Adhesive: Comply with ASTM C916, Type I.

C. Curb Dimensions: As directed, Height of 14 inches (355 mm), 24 inches (610 mm) or 36 inches (910 mm). Adaptable horizontal dimensions as required for existing roof openings.

2.15 INTAKE AND RELIEF AIR OPENINGS

A. Provide hood, including moisture eliminator, over all unit intake and relief openings. Match material and finish of casing exterior.

2.16 MATERIALS

A. Steel:

1. ASTM A36/A36M for carbon structural steel.
2. ASTM A568/A568M for steel sheet.

B. Stainless Steel:

1. Manufacturer's standard grade for casing.
2. Manufacturer's standard type, ASTM A240/A240M for bare steel exposed to airstream or moisture.

C. Galvanized Steel: ASTM A653/A653M.

D. Aluminum: ASTM B209 (ASTM B209M).

2.17 SOURCE QUALITY CONTROL

A. AHRI 430 Certification: Air-handling units and their components shall be factory tested according to AHRI 430 and shall be listed and labeled by AHRI.

B. AHRI 1060 Certification: Air-handling units that include air-to-air energy recovery devices shall be factory tested according to AHRI 1060 and shall be listed and labeled by AHRI.

C. AMCA 301 or AHRI 260: Air-handling unit fan sound ratings shall comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data," or AHRI 260, "Sound Rating of Ducted Air Moving and Conditioning Equipment."

D. Fan Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Fans shall bear AMCA-certified sound ratings seal.

E. Fan Performance Rating: Factory test fan performance for airflow, pressure, power, air density, rotation speed, and efficiency. Rate performance according to AMCA 210, "Laboratory Methods of Testing Fans for Aerodynamic Performance Rating."

F. Water Coils: Factory tested to 300 psig (2070 kPa) according to AHRI 410 and ASHRAE 33.

G. Refrigerant Coils: Factory tested to minimum 450-psig (3105-kPa) internal pressure and to minimum 300-psig (2070-kPa) internal pressure while underwater, according to AHRI 410 and ASHRAE 33.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine casing insulation materials and filter media before air-handling unit installation. Reject insulation materials and filter media that are wet, moisture damaged, or mold damaged.

C. Examine roughing-in for hydronic and condensate drainage piping systems and electrical services to verify actual locations of connections before installation.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Equipment Mounting:

B. Roof Curb: As directed, install on roof structure or concrete base, level and secure, according to NRCA's "NRCA Roofing Manual: Membrane Roof Systems" or AHRI Guideline B. Install units on curbs and coordinate roof penetrations and flashing with roof construction specified in Section 077200 "Roof Accessories." Secure units to upper curb rail, and secure curb base to roof framing or concrete base with anchor bolts.

C. Unit Support: As directed, Install unit level on structural curbs or steel supports. Coordinate wall penetrations and flashing with wall construction. Secure units to structural support with anchor bolts.

1. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
2. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

D. Arrange installation of units to provide access space around air-handling units for service and maintenance.

E. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing, with new, clean filters.

F. Install filter-gauge, static-pressure taps upstream and downstream of filters. Mount filter gauges on outside of filter housing or filter plenum in accessible position. Provide filter gauges on filter banks, installed with separate static-pressure taps upstream and downstream of filters.

G. Connect duct to air-handling units with flexible connections. Comply with requirements in Section 233300 "Air Duct Accessories."

3.3 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to air-handling unit, allow space for service and maintenance.

C. Connect piping to air-handling units mounted on vibration isolators with flexible connectors.

D. Connect condensate drain pans using NPS 1-1/4 (DN 32), ASTM B88, Type M (ASTM B88M, Type C) copper tubing. Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.

E. Hot- and Chilled-Water Piping: Comply with applicable requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Install shutoff valve and union or flange at each coil supply connection. Install balancing valve and union or flange at each coil return connection.

F. Refrigerant Piping: Comply with applicable requirements in Section 232300 "Refrigerant Piping." Install shutoff valve and union or flange at each supply and return connection.

3.4 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.

D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.5 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

D. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Leak Test: After installation, fill water and steam coils with water, and test coils and connections for leaks.
2. Charge refrigerant coils with refrigerant and test for leaks.
3. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Air-handling unit or components will be considered defective if unit or components do not pass tests and inspections.

F. Prepare test and inspection reports.

3.7 DEMONSTRATION

A. As directed, Engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain air-handling units.

END OF SECTION 237343.16

SECTION 237416.11 - PACKAGED, SMALL-CAPACITY, ROOFTOP AIR-CONDITIONING UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes packaged, small-capacity, rooftop air-conditioning units (RTUs) with the following components and accessories:

1. Casings.
2. Fans.
3. Motors.
4. Rotary heat exchangers.
5. Coils.
6. Refrigerant circuit components.
7. Air filtration.
8. Gas furnaces.
9. Dampers.
10. Electrical power connections.
11. Controls.
12. Accessories.
13. Roof curbs.

1.2 ACTION SUBMITTALS

A. Product Data: For each RTU.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings:

1. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Include diagrams for power, signal, and control wiring.

D. Delegated-Design Submittal: For RTU supports indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans and other details, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Seismic Qualification Data: Certificates, for RTUs, accessories, and components, from manufacturer.

C. Product Certificates: Submit certification that specified equipment will withstand wind forces identified in "Performance Requirements" Article and in Section 230548 "Vibration and Seismic Controls for HVAC."

D. Field quality-control reports.

E. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of RTUs that fail in materials or workmanship within specified warranty period.

PART 2 - PRODUCTS

2.1 DESCRIPTION

A. AHRI Compliance:

1. Comply with AHRI 210/240 for testing and rating energy efficiencies for RTUs.
2. Comply with AHRI 340/360 for testing and rating energy efficiencies for RTUs.
3. Comply with AHRI 270 for testing and rating sound performance for RTUs.
4. Comply with AHRI 1060 for testing and rating performance for air-to-air exchanger.

B. AMCA Compliance:

1. Comply with AMCA 11 and bear the AMCA-Certified Ratings Seal for air and sound performance according to AMCA 211 and AMCA 311.
2. Damper leakage tested according to AMCA 500-D.
3. Operating Limits: Classify according to AMCA 99.

C. ASHRAE Compliance:

1. Comply with ASHRAE 15 for refrigeration system safety.
2. Comply with ASHRAE 33 for methods of testing cooling and heating coils.
3. Comply with applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

D. ASHRAE/IES Compliance: Comply with applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

E. NFPA Compliance: Comply with NFPA 90A or NFPA 90B.

F. UL Compliance: Comply with UL 1995.

G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 MANUFACTURERS

2.3 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design mounting and restraints for RTUs, including comprehensive engineering analysis.

1. Design RTU supports to comply with wind and seismic performance requirements.

B. Wind-Restraint Performance:

1. Basic Wind Speed: As directed.
2. Building Classification Category: As directed I, II, III or IV.
3. Minimum 10 lb/sq. ft. (48.8 kg/sq. m) multiplied by the maximum area of the mechanical component projected on a vertical plane that is normal to the wind direction, and 45 degrees either side of normal.

C. Seismic Performance: RTUs, accessories, and components shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

2.4 CAPACITIES AND CHARACTERISTICS

A. Exterior Casing Thickness: As directed 0.052 inch (1.3 mm), 0.0626 inch (1.6 mm) or 0.079 inch (2.0 mm) thick.

B. Supply-Air Fan:

1. Fan Type: As directed Belt driven, double width, forward curved or backward inclined, centrifugal.
2. Fan Type: Double width, forward curved, centrifugal.
3. Airflow: As directed.
4. External Static Pressure: As directed.
5. Fan Speed: Variable.
6. Enclosure Type: As directed Open, dripproof, totally enclosed, fan cooled, Totally enclosed, air over, Open, externally ventilated, Totally enclosed, nonventilated, Severe duty, Explosion proof or Dust-ignition-proof machine.
7. Enclosure Materials: As directed Cast iron, Cast aluminum or Rolled steel.

8. Motor Characteristics:

    a. Horsepower: As directed.
    b. Motor Speed: As directed Multispeed, ECM or Constant.
    c. Volts: As directed 120, 208, 230 or 460.
    d. Phase: As directed Single or Poly.
    e. Hertz: 60.
    f. Full-Load Amperes: As directed.
    g. Minimum Circuit Ampacity: As directed.
    h. Maximum Overcurrent Protection: As directed.

C. Relief (Exhaust)-Air Fan:

1. Airflow: As directed.
2. External Static Pressure: As directed.
3. Fan Speed: As directed.
4. Enclosure Type: As directed Open, dripproof, totally enclosed, fan cooled, Totally enclosed, air over, Open, externally ventilated, Totally enclosed, nonventilated, Severe duty, Explosion proof or Dust-ignition-proof machine.
5. Enclosure Materials: As directed Cast iron, Cast aluminum or Rolled steel.
6. Motor Characteristics:

    a. Horsepower: As directed.
    b. Motor Speed: As directed.
    c. Volts: As directed 120, 208, 230 or 460.
    d. Phase: As directed Single or Poly.
    e. Hertz: 60.
    f. Full-Load Amperes: As directed.
    g. Minimum Circuit Ampacity: As directed.
    h. Maximum Overcurrent Protection: As directed.

D. Outdoor-Air-Intake Relief-Air Fan:

1. Airflow: As directed.
2. Static Pressure: As directed.
3. Fan Speed: As directed.
4. Enclosure Type: As directed Open, dripproof, totally enclosed, fan cooled, Totally enclosed, air over, Open, externally ventilated, Totally enclosed, nonventilated, Severe duty, Explosion proof or Dust-ignition-proof machine.
5. Enclosure Materials: As directed Cast iron, Cast aluminum or Rolled steel.
6. Motor Characteristics:

    a. Horsepower: As directed.
    b. Motor Speed: As directed.
    c. Volts: As directed 120, 208, 230, 460.
    d. Phase: As directed Single or Polyh.
    e. Hertz: 60.
    f. Full-Load Amperes: As directed.
    g. Minimum Circuit Ampacity: As directed.
    h. Maximum Overcurrent Protection: As directed.

E. Rotary Heat Exchanger:

1. Effectiveness: Percent as directed.
2. Intake Airflow: As directed.
3. Pressure Differential: As directed.
4. Entering Supply-Air Dry-Bulb Temperature: As directed.
5. Entering Supply-Air Wet-Bulb Temperature: As directed.
6. Leaving-Air Dry-Bulb Temperature: As directed.
7. Leaving-Air Wet-Bulb Temperature: As directed.
8. Exhaust Airflow: As directed.
9. Pressure Differential: As directed.
10. Entering Exhaust-Air Dry-Bulb Temperature: As directed.
11. Entering Exhaust-Air Wet-Bulb Temperature: As directed.
12. Leaving Exhaust-Air Dry-Bulb Temperature: As directed.
13. Leaving Exhaust-Air Wet-Bulb Temperature: As directed.

F. Supply-Air Refrigerant Coil:

1. Total Cooling Capacity: As directed.
2. Sensible Cooling Capacity: As directed.
3. Entering-Air Dry-Bulb Temperature: As directed.
4. Entering-Air Wet-Bulb Temperature: As directed.

G. Outdoor-Air Refrigerant Coil:

1. Ambient-Air Temperature: As directed.
2. Fan Motor: As directed.
3. Number of Fans: As directed.

H. Electric-Resistance Heating Coil:

1. Capacity: As directed.
2. Number of Steps: As directed.

I. Compressors:

1. Number of Refrigerant Circuits: As directed One or Two.
2. Compressor Speed: As directed Single or Variable.
3. Suction Temperature: As directed.
4. Power Input: As directed.
5. Seasonal Energy-Efficiency Ratio (SEER): As directed.

J. Gas Furnace:

1. Airflow: As directed.
2. Gas Control Valve: As directed Single stage, two stage, Modulating.
3. Minimum AFUE: Percent As directed.
4. Minimum Thermal Efficiency: Percent As directed.
5. Minimum Combustion Efficiency: Percent As directed.
6. Input: As directed.
7. Output: As directed.

8. Entering-Air Temperature: As directed.
9. Air-Temperature Rise: As directed.

K. Dampers:

1. Outdoor-Air Damper: As directed Linked damper blades, for zero to 25 or 30 percent outdoor air, with manual or motorized damper filter.
2. Outdoor- and Return-Air Mixing Dampers: As directed Parallel- or Opposed-blade galvanized-steel dampers mechanically fastened to cadmium plated for galvanized-steel operating rod in reinforced cabinet. Connect operating rods with common linkage or gears and interconnect so dampers operate simultaneously.
3. Relief-Air Damper: Gravity actuated or motorized, as required by ASHRAE/IES 90.1.
4. Barometric relief dampers.

L. Recirculating-Air Filters:

1. Minimum Face Area: As directed.
2. As directed One- or Two-wide filter racks.
3. Thickness: As directed 1 inch (25 mm) or 2 inches (50 mm).
4. Filter Type: Glass fiber with minimum 80 percent arrestance, and MERV 8.
5. Pleated with minimum 90 percent arrestance, and MERV 13.
6. Initial Resistance: As directed.
7. Final Resistance: As directed.

M. Outdoor-Air Filters:

1. Minimum Face Area: As directed.
2. As directed One- or Two-wide filter racks.
3. Thickness: As directed 1 inch (25 mm) or 2 inches (50 mm).
4. Filter Type: Glass fiber with minimum 80 percent arrestance, and MERV 8.
5. Pleated with minimum 90 percent arrestance, and MERV 13.
6. Initial Resistance: As directed.
7. Final Resistance: As directed.

N. Vibration Isolation and Seismic-Control Devices: Device type, with minimum value deflection as directed.

O. RTU Electrical Characteristics for Single-Point Connection:

1. Voltage: As directed 120, 208, 230 or 460.
2. Phase: As directed Single or Poly.
3. Hertz: 60.
4. Full-Load Amperes: As directed.
5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection: As directed.

P. Sound Power: Radiated from condenser casing.

1. 1st Octave: As directed dB.
2. 2nd Octave: As directed dB.
3. 3rd Octave: As directed dB.

4. 4th Octave: As directed dB.
5. 5th Octave: As directed dB.
6. 6th Octave: As directed dB.
7. 7th Octave: As directed dB.
8. 8th Octave: As directed dB.

2.5 CASINGS

A. General Fabrication Requirements for Casings: Formed and reinforced double-wall insulated panels, fabricated to allow removal for access to internal parts and components, with joints between sections sealed.

B. Double-Wall Construction: As directed Fill space between walls with 1-inch (25-mm) or 2-inch (50-mm) foam insulation and seal moisture tight for R-7 or R-13 performance.

C. Exterior Casing Material: Galvanized steel with factory-painted finish, with pitched roof panels and knockouts with grommet seals for electrical and piping connections and lifting lugs.

D. Inner Casing Fabrication Requirements:

1. Inside Casing: As directed G-90-coated galvanized steel, 0.034 inch (0.86 mm) or 0.028 inch (0.7 mm) thick, perforated 40 percent free area.

E. Casing Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.

1. Materials: ASTM C1071, Type I.
2. Thickness: As directed 1/2 inch (13 mm) or 1 inch (25 mm).
3. Liner materials shall have airstream surface coated with erosion- and temperature-resistant coating or faced with a plain or coated fibrous mat or fabric.
4. Liner Adhesive: Comply with ASTM C916, Type I.

F. Plastic Condensate Drain Pans: Fabricated using rigid heavy plastic polymer, a minimum of 2 inches (50 mm) deep, and complying with ASHRAE 62.1 for design and construction of drain pans.

G. Condensate Drain Pans: As directed Fabricated using G-90-coated galvanized-steel sheet 0.028 inch (0.70 mm) thick or stainless-steel sheet 0.025 inch (0.715 mm) thick, a minimum of 2 inches (50 mm) deep, and complying with ASHRAE 62.1 for design and construction of drain pans.

1. Double-Wall Construction: Fill space between walls with foam insulation and seal moisture tight.
2. Drain Connections: Threaded nipple.

H. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

2.6 FANS

A. Supply-Air Fans: Aluminum or painted-steel wheels, and galvanized- or painted-steel fan scrolls.

1. Direct-Driven Supply-Air Fans: Motor shall be resiliently mounted in the fan inlet.
2. Belt-Driven Supply-Air Fans: Motors shall be installed on an adjustable fan base resiliently mounted in the casing.

B. Condenser-Coil Fan: Variable-speed propeller, mounted on shaft of permanently lubricated multispeed or ECM motors As directed.

C. Relief-Air Fan: As directed, Propeller, Forward curved or Backward inclined, shaft mounted on permanently lubricated motor.

2.7 MOTORS

A. Comply with Section 230513 "Common Motor Requirements for HVAC Equipment" and the requirements of this Article.

B. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

C. Service Factor: 1.15.

D. Motor Bearings: As directed.

E. Unusual Service Conditions:

1. Ambient Temperature: As directed.
2. Altitude: Feet (m) above sea level as directed.
3. High humidity.

F. Efficiency: Premium efficient.

G. NEMA Design: As directed.

2.8 ROTARY HEAT EXCHANGER

A. Heat exchanger integral with unit.

B. Casing:

1. Steel with standard factory-painted finish.
2. Integral purge section limiting carryover of exhaust air to between 0.05 percent at 1.6-inch wg and 0.20 percent at 4-inch wg (0.05 percent at 400-Pa and 0.20 percent at 1000-Pa) differential pressure.
3. Casing seals on periphery of rotor and on duct divider and purge section.

4. Support vertical rotors on grease-lubricated ball bearings having extended grease fittings or permanently lubricated bearings. Support horizontal rotors on tapered roller bearing.

C. Rotor: Aluminum segmented wheel strengthened with radial spokes, with nontoxic, noncorrosive, silica-gel desiccant coating.

1. Maximum Solid Size for Media to Pass: As directed 500, 800 or 1200 micrometer.

D. Rotor: As directed Glass-fiber or Polymer segmented wheel strengthened with radial spokes impregnated with nonmigrating, water-selective, molecular-sieve desiccant coating.

1. Maximum Solid Size for Media to Pass: As directed 800 or 1200 micrometer.

E. Drive: Fractional horsepower motor and gear reducer, with speed changed by variable-frequency controller and self-adjusting multilink belt around outside of rotor.

F. Controls:

1. Starting relay, factory mounted and wired, and manual motor starter for field wiring.
2. Variable-frequency controller, factory mounted and wired, permitting input of field connected 4-20 mA or 1-10-V control signal.
3. Variable-frequency controller, factory mounted and wired, with exhaust-air sensor to vary rotor speed and maintain exhaust temperature above freezing.
4. Control energy recovery to permit air economizer operation.

    a. Bypass dampers to assist energy recovery control.

5. Pilot-Light Indicator: Display rotor rotation and speed.
6. Speed Settings: Adjustable settings for maximum and minimum rotor speed limits.
7. Defrost cycle.

2.9 COILS

A. Supply-Air Refrigerant Coil:

1. As directed Aluminum or Copper-plate fin and seamless internally grooved copper tube in steel casing with equalizing-type vertical distributor.
2. Polymer strip shall prevent all copper coils from contacting steel coil frame or condensate pan.
3. Coil Split: Interlaced.
4. Coated.

B. Outdoor-Air Refrigerant Coil:

1. As directed Aluminum or Copper-plate fin and seamless internally grooved copper tube in steel casing with equalizing-type vertical distributor.
2. Polymer strip shall prevent all copper coils from contacting steel coil frame or condensate pan.

C. Electric-Resistance Heating:

1. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium, supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame. Terminate elements in stainless-steel machine-staked terminals secured with stainless-steel hardware.
2. Overtemperature Protection: Disk-type, automatically reset, thermal-cutout, safety device; serviceable through terminal box.
3. Overcurrent Protection: Manual-reset thermal cutouts, factory wired in each heater stage.
4. Control Panel: Unit mounted with disconnecting means and overcurrent protection. Include the following controls:

    a. As directed Magnetic or Mercury contactors.
    b. Step Controller: Pilot lights and override toggle switch for each step.
    c. SCR Controller: Pilot lights operate on load ratio, a minimum of five steps.
    d. Time-delay relay.
    e. Airflow proving switch.

2.10 REFRIGERANT CIRCUIT COMPONENTS

A. Compressor: Hermetic, variable-speed scroll, mounted on vibration isolators; with internal overcurrent and high-temperature protection, internal pressure relief, and crankcase heater.

B. Refrigeration Specialties:

1. Refrigerant: R-410A.
2. Expansion valve with replaceable thermostatic element.
3. Refrigerant filter/dryer.
4. Manual-reset high-pressure safety switch.
5. Automatic-reset low-pressure safety switch.
6. Minimum off-time relay.
7. Automatic-reset compressor motor thermal overload.
8. Brass service valves installed in compressor suction and liquid lines.

2.11 AIR FILTRATION

A. Minimum arrestance and MERV according to ASHRAE 52.2.

2.12 GAS FURNACE

A. Description: Factory assembled, piped, and wired; complying with ANSI Z21.47/CSA 2.3 and NFPA 54.

1. CSA Approval: Designed and certified by and bearing label of CSA.

B. Burners: Stainless steel.

1. Fuel: As directed Natural or Propane gas.
2. Ignition: Electronically controlled electric spark or hot-surface igniter with flame sensor.

C. Heat-Exchanger and Drain Pan: Stainless steel.

D. Venting: Gravity vented with vertical extension.

E. Power Vent: Integral, motorized centrifugal fan interlocked with gas valve with vertical extension.

F. Gas Valve Train: Single-body, regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff.

2.13 DAMPERS

A. Leakage Rate: Comply with ASHRAE/IES 90.1.

B. Damper Motor: Modulating with adjustable minimum position.

2.14 ELECTRICAL POWER CONNECTIONS

A. RTU shall have a single connection of power to unit with unit-mounted disconnect switch accessible from outside unit and control-circuit transformer with built-in overcurrent protection.

2.15 CONTROLS

A. Control equipment and sequence of operation are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."

B. Basic Unit Controls:

1. Control-voltage transformer.
2. Wall-mounted thermostat or sensor with the following features:

    a. Heat-cool-off switch.
    b. Fan on-auto switch.
    c. Fan-speed switch.
    d. As directed Manual or Automatic changeover.
    e. Adjustable deadband.
    f. As directed Concealed or Exposed set point.
    g. As directed Concealed or Exposed indication.
    h. As directed Degree F or Degree C indication.
    i. Unoccupied-period-override push button.
    j. Data entry and access port to input temperature and humidity set points, occupied and unoccupied periods, and output room temperature and humidity, supply-air temperature, operating mode, and status.

3. Wall-mounted humidistat or sensor with the following features:

    a. As directed Concealed or Exposed set point.
    b. As directed Concealed or Exposed indication.

4. As directed Remote Wall or Unit-Mounted Annunciator Panel for Each Unit:

    a. Lights to indicate power on, cooling, heating, fan running, filter dirty, and unit alarm or failure.
    b. DDC controller or programmable timer and interface with HVAC instrumentation and control system.
    c. Digital display of outdoor-air temperature, supply-air temperature, return-air temperature, economizer damper position, indoor-air quality, and control parameters.

C. As directed Electronic or DDC Controller:

1. Controller shall have volatile-memory backup.
2. Safety Control Operation:

    a. Smoke Detectors: Stop fan and close outdoor-air damper if smoke is detected. Provide additional contacts for alarm interface to fire-alarm control panel.
    b. Firestats: Stop fan and close outdoor-air damper if air greater than 130 deg F (54 deg C) enters unit. Provide additional contacts for alarm interface to fire-alarm control panel.
    c. Fire-Alarm Control Panel Interface: Provide control interface to coordinate with operating sequence described in Section 284621.11 "Addressable Fire-Alarm Systems" or Section 284621.13 "Conventional Fire-Alarm Systems" As directed
    d. Defrost Control for Condenser Coil: Pressure differential switch to initiate defrost sequence.

3. Scheduled Operation: As directed Occupied and unoccupied periods on seven or 365-day clock with a minimum of two or four programmable periods per day.
4. Unoccupied Period:

    a. Heating Setback: 10 deg F (5.6 deg C).
    b. Cooling Setback: System off.
    c. Override Operation: Two hours.

5. Supply Fan Operation:

    a. Occupied Periods: Run fan continuously.
    b. Unoccupied Periods: Cycle fan to maintain setback temperature.

6. Refrigerant Circuit Operation:

    a. Occupied Periods: Cycle or stage compressors to match compressor output to cooling load to maintain room or discharge temperature and humidity. Cycle condenser fans to maintain maximum hot-gas pressure.
    b. Unoccupied Periods: Compressors off.

7. Gas Furnace Operation:

    a. Occupied Periods: As directed Cycle, Stage or Modulate burner to maintain room or discharge temperature.

b. Unoccupied Periods: Cycle burner to maintain setback temperature.

8. Electric-Heating-Coil Operation:

a. Occupied Periods: As directed Cycle, Stage or Modulate coil to maintain room or discharge temperature.
b. Unoccupied Periods: Energize coil to maintain setback temperature.

9. Fixed Minimum Outdoor-Air Damper Operation:

a. Occupied Periods: Open to 25 percent.
b. Unoccupied Periods: Close the outdoor-air damper.

10. Economizer Outdoor-Air Damper Operation:

a. As directed Morning warm-up, cool-down or building outdoor-air flush cycles.
b. Occupied Periods: As directed Open to 10 or 25 percent fixed minimum intake, and maximum 100 percent of the fan capacity. Controller shall permit air-side economizer operation when outdoor air is less than 60 deg F (15 deg C). As directed Use outdoor-air temperature, mixed-air and outdoor-air temperature, outdoor-air enthalpy or mixed-air temperature and select between outdoor-air and return-air enthalpy to adjust mixing dampers. Start relief-air fan with end switch on outdoor-air damper. During economizer cycle operation, lock out cooling.
c. Unoccupied Periods: Close outdoor-air damper and open return-air damper.

11. Terminal-Unit Relays:

a. Provide heating- and cooling-mode changeover relays compatible with terminal control system required in Section 233600 "Air Terminal Units" and Section 230923 "Direct Digital Control (DDC) System for HVAC."

D. Interface Requirements for HVAC Instrumentation and Control System:

1. Interface relay for scheduled operation.
2. Interface relay to provide indication of fault at the central workstation and diagnostic code storage.
3. Provide BACnet or LonWorks compatible interface for central HVAC control workstation for the following:

a. Adjusting set points.
b. Monitoring supply fan start, stop, and operation.
c. Inquiring data to include outdoor-air damper position, supply- and room-air temperature and humidity.
d. Monitoring occupied and unoccupied operations.
e. Monitoring constant and variable motor loads.
f. Monitoring variable-frequency drive operation.
g. Monitoring cooling load.
h. Monitoring economizer cycles.
i. Monitoring air-distribution static pressure and ventilation air volume.

2.16 ACCESSORIES

A. Electric heater with integral thermostat maintains minimum 50 deg F (10 deg C) temperature in gas burner compartment.

B. Duplex, 115-V, ground-fault-interrupter outlet with 15-A overcurrent protection. Include transformer if required. Outlet shall be energized even if the unit main disconnect is open.

C. Filter differential pressure switch with sensor tubing on either side of filter. Set for final filter pressure loss.

D. Remote potentiometer to adjust minimum economizer damper position.

E. Return-air bypass damper.

F. Factory- or field-installed, demand-controlled ventilation.

G. Safeties:

1. Smoke detector.
2. Condensate overflow switch.
3. Phase-loss reversal protection.
4. High and low pressure control.
5. As directed Gas furnace or Electric coil airflow-proving switch.

H. Coil guards of painted, galvanized-steel wire.

I. Hail guards of galvanized steel painted to match casing.

J. Concentric diffuser with white louvers and polished aluminum return grilles, insulated diffuser box with mounting flanges, and interior transition.

K. Door switches to disable heating or reset set point when open.

L. Outdoor-air intake weather hood with moisture eliminator.

M. Oil separator.

N. Service Lights and Switch: Factory installed in fan section, fan and coil sections or each accessible section with weatherproof cover. Factory wire lights to a single-point field connection.

2.17 ROOF CURBS

A. Roof curbs with vibration isolators and wind or seismic restraints are specified in Section 230548 "Vibration and Seismic Controls for HVAC."

B. Materials: Galvanized steel with corrosion-protection coating, watertight gaskets, and factory-installed wood nailer; complying with NRCA standards.

1. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.

a. Materials: ASTM C1071, Type I or II.
b. Thickness: As directed 1 inch (25 mm), 1-1/2 inches (38 mm) or 2 inches (50 mm).

2. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.

a. Liner Adhesive: Comply with ASTM C916, Type I.
b. Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
c. Liner materials applied in this location shall have airstream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric depending on service air velocity.
d. Liner Adhesive: Comply with ASTM C916, Type I.

C. Curb Dimensions: As directed Height of 14 inches (355 mm), 24 inches (610 mm) or 36 inches (910 mm). Adaptable horizontal dimensions as required for existing roof openings.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Roof Curb: Install on roof structure or concrete base, level and secure, according to NRCA's "NRCA Roofing Manual: Membrane Roof Systems" or AHRI Guideline B As directed. Install RTUs on curbs and coordinate roof penetrations and flashing with roof construction specified in Section 077200 "Roof Accessories." Secure RTUs to upper curb rail, and secure curb base to roof framing with anchor bolts.

B. Unit Support: As directed Install unit level on structural curbs or steel supports. Coordinate wall penetrations and flashing with wall construction. Secure RTUs to structural support with anchor bolts.

3.2 CONNECTIONS

A. Comply with duct installation requirements specified in other HVAC Sections. Drawings indicate general arrangement of ducts. The following are specific connection requirements:

1. Install ducts to termination at top of roof curb.
2. Remove roof decking only as required for passage of ducts. Do not cut out decking under entire roof curb.
3. Connect supply ducts to RTUs with flexible duct connectors specified in Section 233300 "Air Duct Accessories."
4. Install return-air duct continuously through roof structure.
5. Install normal-weight, 3000-psi (20.7-MPa), compressive strength (28-day) concrete mix inside roof curb, 4 inches (100 mm) thick. Concrete, formwork, and reinforcement are specified with concrete.

B. Install condensate drain, minimum connection size, with trap and indirect connection to nearest roof drain or area drain.

C. Where installing piping adjacent to RTUs, allow space for service and maintenance.

1. Gas Piping: Comply with applicable requirements in Section 231123 "Facility Natural-Gas Piping" or Section 231126 "Facility Liquefied-Petroleum Gas Piping" As directed Connect gas piping to burner, full size of gas train inlet, and connect with union and shutoff valve with sufficient clearance for burner removal and service.

D. Connect electrical wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

E. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

F. Install nameplate for each electrical connection indicating electrical equipment designation and circuit number feeding connection.

3.3 FIELD QUALITY CONTROL

A. Perform tests and inspections with the assistance of a factory-authorized service representative.

B. Tests and Inspections:

1. After installing RTUs and after electrical circuitry has been energized, test units for compliance with requirements.
2. Inspect for and remove shipping bolts, blocks, and tie-down straps.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. RTU will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.4 CLEANING AND ADJUSTING

A. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

B. After completing system installation and testing, adjusting, and balancing RTU and air-distribution systems, clean filter housings and install new filters.

3.5 DEMONSTRATION

A. As directed Engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain RTUs.

END OF SECTION 237416.11

SECTION 237416.13 - PACKAGED, LARGE-CAPACITY, ROOFTOP AIR-CONDITIONING UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes packaged, large-capacity, rooftop air conditioning units (RTUs) with the following components and accessories:

1. Casings.
2. Fans.
3. Motors.
4. Coils.
5. Refrigerant circuit components.
6. Air filtration.
7. Supported bag filters.
8. Gas furnaces.
9. Dampers.
10. Electrical power connections.
11. Controls.
12. Accessories
13. Roof curbs.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Shop Drawings:

1. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Include diagrams for power, signal, and control wiring.

D. Delegated-Design Submittal: For RTU supports indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
2. Detail mounting, securing, and flashing of roof curb to roof structure. Indicate coordinating requirements with roof membrane system.

3. Wind- and Seismic-Restraint Details: Detail fabrication and attachment of wind and seismic restraints and snubbers. Show anchorage details and indicate quantity, diameter, and depth of penetration of anchors.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans and other details, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Product Certificates: Submit certification that specified equipment will withstand wind forces identified in "Performance Requirements" Article and in Section 230548 "Vibration and Seismic Controls for HVAC."

C. Seismic Qualification Data: Certificates, for RTUs, accessories, and components, from manufacturer.

D. Field quality-control reports.

E. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of RTUs that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Compressors: As directed, Manufacturer's standard, but not less than five or 10 years from date of Substantial Completion.
2. Warranty Period for Gas Furnace Heat Exchangers: Manufacturer's standard, but not less than five, 10, 15 or 20 years from date of Substantial Completion As directed.
3. Warranty Period for Solid-State Ignition Modules: Manufacturer's standard, but not less than three years from date of Substantial Completion.
4. Warranty Period for Control Boards: Manufacturer's standard, but not less than three years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. AHRI Compliance:

1. Comply with AHRI 340/360 for testing and rating energy efficiencies for RTUs.
2. Comply with AHRI 270 for testing and rating sound performance for RTUs.
3. Comply with AHRI 1060 for testing and rating performance for air-to-air exchanger.

4. Comply with AHRI 210/240 for testing and rating energy efficiencies for RTUs.

B. AMCA Compliance:

1. Comply with AMCA 11 and bear the AMCA-Certified Ratings Seal for air and sound performance according to AMCA 211 and AMCA 311.
2. Damper leakage tested in accordance with AMCA 500-D.
3. Operating Limits: Classify according to AMCA 99.

C. ASHRAE Compliance:

1. Comply with ASHRAE 15 for refrigeration system safety.
2. Comply with ASHRAE 33 for methods of testing cooling and heating coils.
3. Comply with applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

E. NFPA Compliance: Comply with NFPA 90A or NFPA 90B.

F. UL Compliance: Comply with UL 1995.

G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 MANUFACTURERS

2.3 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design mounting and restraints for RTUs, including comprehensive engineering analysis.

1. Design RTU supports to comply with wind and seismic performance requirements.

B. Wind-Restraint Performance:

1. Basic Wind Speed: As directed.
2. Building Classification Category: As directed, I, II, III or IV.
3. Minimum 10 lb/sq. ft. (48.8 kg/sq. m) multiplied by the maximum area of the mechanical component projected on a vertical plane that is normal to the wind direction, and 45 degrees either side of normal.

C. Seismic Performance: RTUs shall withstand the effects of earthquake motions determined according to ASCE 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified" and the unit will be fully operational after the seismic event.

2.4 CAPACITIES AND CHARACTERISTICS

A. Exterior Casing Thickness: As directed, 0.052 inch (1.3 mm), 0.0626 inch (1.6 mm) or 0.079 inch (2.0 mm) thick.

B. Supply-Air Fan:

1. Fan Type: As directed, Belt-driven, double width, forward curved or backward inclined, centrifugal.
2. Fan Type: Double width, forward curved, centrifugal.
3. Airflow: As directed.
4. External Static Pressure: As directed.
5. Fan Speed: Variable.
6. Motor Horsepower: As directed.

C. Relief (Exhaust)-Air Fan:

1. Airflow: As directed.
2. External Static Pressure: As directed.
3. Fan Speed: As directed.
4. Motor Horsepower: As directed.
5. Motor Speed: As directed.

D. Outdoor-Air-Intake Relief-Air Fan:

1. Airflow: As directed.
2. Static Pressure: As directed.
3. Fan Speed: As directed.
4. Motor Horsepower: As directed.
5. Motor Speed: As directed.

E. Motors:

1. Service Factor: 1.15.
2. Motor Bearings: As directed.
3. Unusual Service Conditions:

    a. Ambient Temperature: As directed.
    b. Altitude: Feet (m) above sea level As directed.
    c. Humidity: High As directed.
    d. Other: As directed.

4. Efficiency: Premium efficient. As directed.
5. NEMA Design: As directed.

F. Supply-Air Refrigerant Coil:

1. Total Cooling Capacity: As directed.
2. Sensible Cooling Capacity: As directed.
3. Entering-Air Dry-Bulb Temperature: As directed.
4. Entering-Air Wet-Bulb Temperature: As directed.

G. Outdoor-Air Refrigerant Coil:

1. Ambient-Air Temperature: As directed.
2. Fan Motor: As directed.
3. Number of Fans: As directed.

H. Electric-Resistance Heating Coil:

1. Capacity: As directed.
2. Number of Steps: As directed.

I. Compressors:

1. Suction Temperature: As directed.
2. Power Input: As directed.
3. Seasonal Energy Efficiency Ratio (SEER): As directed.

J. Gas Furnace:

1. Airflow: As directed.
2. Minimum AFUE: Percent As directed.
3. Minimum Thermal Efficiency: Percent As directed.
4. Minimum Combustion Efficiency: Percent As directed.
5. Input: As directed.
6. Output: As directed.
7. Entering-Air Temperature: As directed.
8. Air-Temperature Rise: As directed.

K. Recirculating-Air Filters:

1. Minimum Face Area: As directed.
2. Thickness: As directed, 1 inch (25 mm) or 2 inches (50 mm).
3. Initial Resistance: As directed.
4. Final Resistance: As directed.

L. Outdoor-Air Filters:

1. Minimum Face Area: As directed.
2. Thickness: As directed, 1 inch (25 mm) or 2 inches (50 mm).
3. Initial Resistance: As directed.
4. Final Resistance: As directed.

M. Electrical Characteristics for Single-Point Connection:

1. Voltage: As directed.
2. Phase: As directed.

3. Hertz: As directed.
4. Full-Load Amperes: As directed.
5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection: As directed.

N. Attenuator Insertion Loss Rating (ILR):

1. 1st Octave: dB as directed.
2. 2nd Octave: dB as directed.
3. 3rd Octave: dB as directed.
4. 4th Octave: dB as directed.
5. 5th Octave: dB as directed.
6. 6th Octave: dB as directed.
7. 7th Octave: dB as directed.
8. 8th Octave: dB as directed.

2.5 CASINGS

A. General Fabrication Requirements for Casings: Formed and reinforced double-wall insulated panels, fabricated to allow removal for access to internal parts and components, with joints between sections sealed.

B. Double-Wall Construction: As directed, Fill space between walls with 1 inch (25 mm) or 2 inch (50 mm) foam insulation and seal moisture tight for R-7 or R-13 performance.

C. Exterior Casing Material: Galvanized steel with factory-painted finish, with pitched roof panels and knockouts with grommet seals for electrical and piping connections and lifting lugs.

D. Inner Casing Fabrication Requirements:

1. Inside Casing: As directed, G-90-coated galvanized steel, 0.034 inch (0.86 mm) or 0.028 inch (0.7 mm) thick, perforated 40 percent free area.

E. Casing Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.

1. Materials: ASTM C1071, Type I.
2. Thickness: As directed, 1/2 inch (13 mm) or 1 inch (25 mm).
3. Liner materials shall have air-stream surface coated with an erosion- and temperature-resistant coating or faced with a plain or coated fibrous mat or fabric.
4. Liner Adhesive: Comply with ASTM C916, Type I.

F. Plastic Condensate Drain Pans: Fabricated using rigid heavy plastic polymer complying with ASTM G21, a minimum of 2 inches (50 mm) deep, and complying with ASHRAE 62.1 for design and construction of drain pans.

G. Condensate Drain Pans: As directed, Fabricated using G-90-coated galvanized 0.028 inch (0.70 mm) thick or stainless 0.025 inch (0.715 mm) thick steel sheet, a minimum of 2 inches (50 mm) deep, and complying with ASHRAE 62.1 for design and construction of drain pans.

1. Double-Wall Construction: Fill space between walls with foam insulation and seal moisture tight.
2. Drain Connections: Threaded nipple.

H. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

2.6 FANS

A. Supply-Air Fans: Aluminum or painted-steel wheels, and galvanized- or painted-steel fan scrolls.

1. Direct-Driven Supply-Air Fans: Motor shall be resiliently mounted in the fan inlet.
2. Belt-Driven Supply-Air Fans: Motors shall be installed on an adjustable fan base resiliently mounted in the casing.

B. Condenser-Coil Fan: Variable-speed propeller, mounted on shaft of permanently lubricated multispeed or ECM motors.

C. Relief-Air Fan: As directed, Propeller, forward curved or Backward inclined, shaft mounted on permanently lubricated motor.

D. Seismic Fabrication Requirements: Fabricate fan section, internal mounting frame and attachment to fans, fan housings, motors, casings, accessories, and other fan section components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when fan-mounted frame and RTU-mounted frame are anchored to building structure.

2.7 MOTORS

A. Comply with Section 230513 "Common Motor Requirements for HVAC Equipment" and the requirements of this Article.

B. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

C. Service Factor: 1.15.

D. Motor Bearings: As directed.

E. Unusual Service Conditions:

1. Ambient Temperature: As directed.
2. Altitude: Feet (m) above sea level as directed.
3. High humidity.

F. Efficiency: Premium efficient.

G. NEMA Design: As directed.

2.8 COILS

A. Supply-Air Refrigerant Coil:

1. As directed, Aluminum or Copper-plate fin and seamless internally grooved copper tube in steel casing with equalizing-type vertical distributor.
2. Polymer strip shall prevent all copper coil from contacting steel coil frame or condensate pan.
3. Coil Split: Interlaced.
4. Condensate Drain Pan: As directed, Galvanized steel with corrosion-resistant coating or Stainless steel formed with pitch and drain connections complying with ASHRAE 62.1.

B. Supply-Air Hydronic Heating Coil:

1. As directed, One- or Two-row aluminum or copper-plate fin and seamless internally grooved copper tube in steel casing with equalizing-type vertical distributor and with air vent and drain.

C. Outdoor-Air Refrigerant Coil:

1. As directed, Aluminum or Copper-plate fin and seamless internally grooved copper tube in steel casing with equalizing-type vertical distributor.
2. Polymer strip shall prevent all copper coil from contacting steel coil frame or condensate pan.

D. Electric-Resistance Heating:

1. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium, supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame. Terminate elements in stainless-steel machine-staked terminals secured with stainless-steel hardware.
2. Overtemperature Protection: Disk-type, automatically reset, thermal-cutout, safety device; serviceable through terminal box.
3. Overcurrent Protection: Manual-reset thermal cutouts, factory wired in each heater stage.
4. Control Panel: Unit mounted with disconnecting means and overcurrent protection. Include the following controls:

    a. As directed, Magnetic or Mercury contactors.
    b. Step Controller: Pilot lights and override toggle switch for each step.
    c. SCR Controller: Pilot lights operate on load ratio, a minimum of five steps.
    d. Time-delay relay.
    e. Airflow proving switch.

2.9 REFRIGERANT CIRCUIT COMPONENTS

A. Number of Refrigerant Circuits: As directed, One or Two.

B. Compressor: Hermetic, variable speed scroll, mounted on vibration isolators; with internal overcurrent and high-temperature protection, internal pressure relief, and crankcase heater.

C. Refrigeration Specialties:

1. Refrigerant: R-410A.
2. Expansion valve with replaceable thermostatic element.
3. Refrigerant filter/dryer.
4. Manual-reset high-pressure safety switch.
5. Automatic-reset low-pressure safety switch.
6. Minimum off-time relay.
7. Automatic-reset compressor motor thermal overload.
8. Brass service valves installed in compressor suction and liquid lines.

2.10 AIR FILTRATION

A. Minimum arrestance and a minimum efficiency reporting value according to ASHRAE 52.2.

B. Flat Panel Filters:

1. Description: Factory-fabricated, self-supported, flat, nonpleated, panel-type, disposable air filters with holding frames.
2. Filter Unit Class: UL 900, Class 1 or Class 2.
3. Media: As directed, Interlaced glass or synthetic fibers or Cotton and synthetic fibers coated with nonflammable adhesive.

    a. Adhesive: As recommended by air-filter manufacturer and with a VOC content of 80 g/L or less.
    b. Adhesive: As recommended by air-filter manufacturer and that complies with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
    c. Media shall be coated with an antimicrobial agent.
    d. Metal Retainer: Upstream side and downstream side.

C. Pleated Panel Filters:

1. Description: Factory-fabricated, self-supported, extended-surface, pleated, panel-type, disposable air filters with holding frames.
2. Filter Unit Class: As directed, UL 900, Class 1 or Class 2.
3. Media: As directed, Interlaced glass or synthetic fibers or Cotton and synthetic fibers coated with nonflammable adhesive.

    a. Adhesive: As recommended by air-filter manufacturer and with a VOC content of 80 g/L or less.
    b. Adhesive: As recommended by air-filter manufacturer and that complies with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
    c. Media shall be coated with an antimicrobial agent.
    d. Separators shall be bonded to the media to maintain pleat configuration.
    e. Welded-wire grid shall be on downstream side to maintain pleat.
    f. Media shall be bonded to frame to prevent air bypass.

g. Support members on upstream and downstream sides to maintain pleat spacing.

2.11 SUPPORTED BAG FILTERS

A. Description: Factory-fabricated, dry, extended-surface, self-supported filters with holding frames in steel, basket-type retainers.

B. Filter Unit Class: As directed, UL 900, Class 1 or Class 2.

C. Media: Fibrous material constructed so individual pleats are maintained in tapered form under rated-airflow conditions by flexible internal supports.

1. Media shall be coated with an antimicrobial agent.

D. Rigid Cell Box Filters:

1. Description: Factory-fabricated, adhesive-coated, disposable, packaged air filters with media perpendicular to airflow, and with holding frames.
2. Filter Unit Class: As directed, UL 900, Class 1 or Class 2.
3. Media: Fibrous material constructed so individual pleats are maintained in tapered form under rated-airflow conditions by flexible internal supports.

a. Adhesive: As recommended by air-filter manufacturer and with a VOC content of 80 g/L or less.
b. Adhesive: As recommended by air-filter manufacturer and that complies with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
c. Media shall be coated with an antimicrobial agent.

2.12 GAS FURNACES

A. Description: Factory assembled, piped, and wired; complying with ANSI Z21.47/CSA 2.3 and NFPA 54.

1. CSA Approval: Designed and certified by and bearing label of CSA.

B. Burners: Stainless steel.

1. Fuel: As directed, Natural or Propane gas.
2. Ignition: Electronically controlled electric spark or hot-surface igniter with flame sensor.
3. High-Altitude Model or Kit as airected: For Project elevations more than 2000 feet (610 m) above sea level.

C. Heat-Exchanger and Drain Pan: Stainless steel.

D. Venting: Gravity vented with vertical extension.

E. Power Vent: Integral, motorized centrifugal fan interlocked with gas valve with vertical extension.

F. Safety Controls:

1. Gas Control Valve: As directed, Single stage, Two stage or Modulating.
2. Gas Train: Single-body, regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff.

2.13 DAMPERS

A. Outdoor-Air Damper: Linked damper blades, for 0 to 25 or 30 percent outdoor air, with manual or motorized damper filter as directed.

B. Outdoor- and Return-Air Mixing Dampers: As directed, Parallel- or Opposed-blade galvanized-steel dampers mechanically fastened to cadmium plated for galvanized-steel operating rod in reinforced cabinet. Connect operating rods with common linkage or gears and interconnect so dampers operate simultaneously.

1. Leakage Rate: As required by ASHRAE/IES 90.1.
2. Damper Motor: Modulating with adjustable minimum position.
3. Relief-Air Damper: Gravity actuated or motorized, as required by ASHRAE/IES 90.1, with bird screen and hood.

C. Barometric relief dampers.

2.14 ELECTRICAL POWER CONNECTIONS

A. RTU shall have a single connection of power to unit with unit-mounted disconnect switch accessible from outside unit and control-circuit transformer with built-in overcurrent protection.

2.15 CONTROLS

A. Basic Unit Controls:

1. Control-voltage transformer.
2. Wall-mounted thermostat or sensor with the following features:

a. Heat-cool-off switch.
b. Fan on-auto switch.
c. Fan-speed switch.
d. As directed, Manual or Automatic changeover.
e. Adjustable deadband.
f. As directed, Concealed or Exposed set point.
g. As directed, Concealed or Exposed indication.
h. As directed, Degree F or Degree C indication.
i. Unoccupied-period-override push button.

j. Data entry and access port to input temperature and humidity set points, occupied and unoccupied periods, and output room temperature and humidity, supply-air temperature, operating mode, and status.

3. As directed, Remote Wall or Unit-Mounted Annunciator Panel for Each Unit:

a. Lights to indicate power on, cooling, heating, fan running, filter dirty, and unit alarm or failure.
b. DDC controller or programmable timer and interface with HVAC instrumentation and control system.
c. Digital display of outdoor-air temperature, supply-air temperature, return-air temperature, economizer damper position, indoor-air quality, and control parameters.

B. As directed, Electronic or DDC Controller:

1. Controller shall have non-volatile-memory backup.
2. Safety Control Operation:

a. Smoke Detectors: Stop fan and close outdoor-air damper if smoke is detected. Provide additional contacts for alarm interface to fire alarm control panel.
b. Firestats: Stop fan and close outdoor-air damper if air greater than 130 deg F (54 deg C) enters unit. Provide additional contacts for alarm interface to fire alarm control panel.
c. Fire Alarm Control Panel Interface: Provide control interface to coordinate with operating sequence described in Section 284621.11 "Addressable Fire-Alarm Systems" or Section 284621.13 "Conventional Fire-Alarm Systems" As directed

3. Scheduled Operation: As directed, Occupied and unoccupied periods on seven or 365-day clock with a minimum of two or four programmable periods per day.
4. Unoccupied Period:

a. Heating Setback: Plus 10 deg F (Minus 11 deg C).
b. Cooling Setback: System off.
c. Override Operation: Two hours.

5. Supply Fan Operation:

a. Occupied Periods: Run fan continuously.
b. Unoccupied Periods: Cycle fan to maintain setback temperature.

6. Refrigerant Circuit Operation:

a. Occupied Periods: As directed, Cycle or stage compressors to match compressor output to cooling load to maintain room or discharge temperature and humidity. Cycle condenser fans to maintain maximum hot-gas pressure.
b. Unoccupied Periods: Compressors off.

7. Gas Furnace Operation:

a. Occupied Periods: As directed, Cycle, Stage or Modulate burner to maintain room or discharge temperature.
b. Unoccupied Periods: Cycle burner to maintain setback temperature.

8. Electric-Heating-Coil Operation:

a. Occupied Periods: As directed, Cycle, Stage or Modulate coil to maintain room or discharge temperature.
b. Unoccupied Periods: Energize coil to maintain setback temperature.

9. Fixed Minimum Outdoor-Air Damper Operation:

a. Occupied Periods: Open to 25 percent.
b. Unoccupied Periods: Close the outdoor-air damper.

10. Economizer Outdoor-Air Damper Operation:

a. Morning warm up, cool down or building outdoor air flush cycles.
b. Occupied Periods: Open to 10 or 25 percent fixed minimum intake, and maximum 100 percent of the fan capacity. Controller shall permit air-side economizer operation when outdoor air is less than 60 deg F (15 deg C). As directed, use outdoor-air temperature, mixed-air and outdoor-air temperature, outdoor-air enthalpy or mixed-air temperature and select between outdoor-air and return-air enthalpy to adjust mixing dampers. Start relief-air fan with end switch on outdoor-air damper. During economizer cycle operation, lock out cooling.
c. Unoccupied Periods: Close outdoor-air damper and open return-air damper.

11. Terminal-Unit Relays:

a. Provide heating- and cooling-mode changeover relays compatible with terminal control system required in Section 233600 "Air Terminal Units" and Section 230923 "Direct Digital Control (DDC) System for HVAC."

C. Interface Requirements for HVAC Instrumentation and Control System:

1. Interface relay for scheduled operation.
2. Interface relay to provide indication of fault at the central workstation and diagnostic code storage.
3. Provide BACnet or LonWorks compatible interface for central HVAC control workstation for the following:

a. Adjusting set points.
b. Monitoring supply fan start, stop, and operation.
c. Inquiring data to include outdoor-air damper position, supply- and room-air temperature and humidity.
d. Monitoring occupied and unoccupied operations.
e. Monitoring constant and variable motor loads.
f. Monitoring variable-frequency drive operation.
g. Monitoring cooling load.
h. Monitoring economizer cycles.
i. Monitoring air-distribution static pressure and ventilation air volume.

2.16 ACCESSORIES

A. Electric heater with integral thermostat maintains minimum 50 deg F (10 deg C) temperature in gas burner compartment.

B. Duplex, 115-V, ground-fault-interrupter outlet with 15-A overcurrent protection. Include transformer if required. Outlet shall be energized even if the unit main disconnect is open.

C. Filter differential pressure switch with sensor tubing on either side of filter. Set for final filter pressure loss.

D. Remote potentiometer to adjust minimum economizer damper position.

E. Return-air bypass damper.

F. Factory- or field-installed demand-controlled ventilation.

G. Safeties:

1. Smoke detector.
2. Condensate overflow switch.
3. Phase-loss reversal protection.
4. High and low pressure control.
5. As directed, Gas furnace or Electric coil airflow-proving switch.

H. Coil guards of painted, galvanized-steel wire.

I. Hail guards of galvanized steel, painted to match casing.

J. Concentric diffuser with white louvers and polished aluminum return grilles, insulated diffuser box with mounting flanges, and interior transition.

K. Vertical vent extensions to increase the separation between the outdoor-air intake and the flue-gas outlet.

L. Door switches to disable heating or reset set point when open.

M. Outdoor air intake weather hood with moisture eliminator.

N. Service Lights and Switch: As directed, factory installed in fan section, fan and coil sections or each accessible section with weatherproof cover. Factory wire lights to a single-point field connection.

2.17 ROOF CURBS

A. Roof curbs with vibration isolators and wind or seismic restraints are specified in Section 230548 "Vibration and Seismic Controls for HVAC."

B. Wind and Seismic Restraints: Metal brackets compatible with the curb and casing, painted to match RTU, used to anchor unit to the curb, and designed for loads at Project site. Comply with

requirements in Section 230548 "Vibration and Seismic Controls for HVAC" for wind-load requirements.

C. Materials: Galvanized steel with corrosion-protection coating, watertight gaskets, and factory-installed wood nailer; complying with NRCA standards.

1. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.

a. Materials: ASTM C1071, Type I or II.
b. Thickness: As directed, 1 inch (25 mm), 1-1/2 inches (38 mm) or 2 inches (50 mm).

2. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.

a. Liner Adhesive: Comply with ASTM C916, Type I.
b. Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
c. Liner materials applied in this location shall have air-stream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric depending on service air velocity.
d. Liner Adhesive: Comply with ASTM C916, Type I.

D. Curb Dimensions: As directed, Height of 14 inches (355 mm), 24 inches (610 mm) or 36 inches (910 mm) Adaptable horizontal dimensions as required for existing roof openings.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Roof Curb: Install on roof structure, level and secure, according to NRCA's "NRCA Roofing Manual: Membrane Roof Systems" or AHRI Guideline B As directed. Install RTUs on curbs and coordinate roof penetrations and flashing with roof construction specified in Section 077200 "Roof Accessories." Secure RTUs to upper curb rail, and secure curb base to roof framing.

B. Unit Support: As directed, Install unit level on structural curbs or steel supports. Coordinate wall penetrations and flashing with wall construction. Secure RTUs to structural support with anchor bolts.

C. Equipment Mounting:

1. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
2. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

3.2 CONNECTIONS

A. Install condensate drain, minimum connection size, with trap and indirect connection to nearest roof drain or area drain.

B. Install piping adjacent to RTUs to allow service and maintenance.

1. Gas Piping: Comply with applicable requirements in Section 231123 "Facility Natural-Gas Piping" or Section 231126 "Facility Liquefied-Petroleum Gas Piping" As directed. Connect gas piping to burner, full size of gas train inlet, and connect with union and shutoff valve with sufficient clearance for burner removal and service.

C. Duct installation requirements are specified in other HVAC Sections. Drawings indicate the general arrangement of ducts. The following are specific connection requirements:

1. Install ducts to termination at top of roof curb.
2. Remove roof decking only as required for passage of ducts. Do not cut out decking under entire roof curb.
3. Connect supply ducts to RTUs with flexible duct connectors specified in Section 233300 "Air Duct Accessories."
4. Install return-air duct continuously through roof structure.
5. Install normal-weight, 3000-psi (20.7-MPa), compressive strength (28-day) concrete mix inside roof curb, 4 inches (100 mm) thick. Concrete, formwork, and reinforcement are specified with concrete.

D. Connect electrical wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

E. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

F. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs as layers of black with engraved white letters at least 1/2-inch (13-mm) high.
3. Locate nameplate where easily visible.

3.3 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. After installing RTUs and after electrical circuitry has been energized, test units for compliance with requirements.

2. Inspect for and remove shipping bolts, blocks, and tie-down straps.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. RTU will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.4 DEMONSTRATION

A. As directed, Engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain RTUs.

END OF SECTION 237416.13

SECTION 237423.13 - PACKAGED, DIRECT-FIRED, OUTDOOR, HEATING-ONLY MAKEUP-AIR UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes direct-fired heating and ventilating units.

1.2 ACTION SUBMITTALS

A. Product Data: For each type and configuration of outdoor, direct-fired heating and ventilating unit.

B. Sustainable Design Submittals:

C. Shop Drawings: For each type and configuration of outdoor, direct-fired heating and ventilating unit.

1. As directed, include plans, elevations, sections, and mounting or attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Sample Warranty: For manufacturer's special warranty.

B. Seismic Qualification Certificates: For outdoor, direct-fired heating and ventilating units, accessories, and components, from manufacturer.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Comply with NFPA 70.

B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of direct-fired heating and ventilating units that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Heat Exchangers: As directed, manufacturer's standard, but not less than five or 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 SYSTEM DESCRIPTION

A. Factory-assembled, prewired, self-contained unit consisting of cabinet, supply fan, controls, filters, and direct-fired gas burner to be installed exterior to the building.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 UNIT CASINGS

A. General Fabrication Requirements for Casings:

1. Forming: Form walls, roofs, and floors with at least two breaks at each joint.
2. Casing Joints: Sheet metal screws or pop rivets, factory sealed with water-resistant sealant.
3. Factory Finish for Steel and Galvanized-Steel Casings: Apply manufacturer's standard primer immediately after cleaning and pretreating.
4. Air-Handling-Unit Mounting Frame: Formed galvanized-steel channel or structural channel supports, designed for low deflection, welded with integral lifting lugs.

    a. Seismic Fabrication Requirements: Fabricate mounting base and attachment to air-handling-unit sections, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when air-handling-unit frame is anchored to building structure.

5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Configuration: As directed, horizontal unit with top, horizontal or bottom discharge for roof-mounting or concrete-base installation.

C. Cabinet: As directed, galvanized-steel, Aluminized- or galvanized-steel or Aluminized-steel panels, formed to ensure rigidity and supported by galvanized-steel channels or structural channel supports with lifting lugs. Duct flanges at inlet and outlet. Pitched roof panels and knockouts with grommet seals for electrical and piping connections and lifting lugs.

D. Outer Casing: As directed, 0.0598-inch (1.519-mm), 0.0478-inch (1.214-mm) or 0.0359-inch (0.912-mm) thick steel with heat-resistant, baked-enamel, enamel-painted, baked-on, polyester-powder or unpainted over-corrosion-resistant-treated surface in color to match fan section.

E. Outer Casing: As directed, 0.0598-inch (1.519-mm), 0.0478-inch (1.214-mm) or 0.0359-inch (0.912-mm) thick steel with unpainted finish.

F. Outer Casing: 0.0359-inch (0.912-mm) thick steel with heat-resistant, baked-enamel over-corrosion-resistant-treated surface in color to match fan section.

G. Inner Casing:

1. Burner Section Inner Casing: 0.0299-inch- (0.759-mm-) thick steel.Retain first subparagraph below if double-wall casing is required.
2. As double-wall casing with inner wall of perforated or solid steel, for the following sections:

    a. Blower section.
    b. Filter section.
    c. Mixing box.
    d. Inlet plenum.
    e. Discharge plenum.
    f. As directed, access Doors or Panels: As directed, Lift out, Piano hinged with cam-lock fasteners or Hinged with handles for burner and fan motor assemblies on both sides of unit.

3. Internal Insulation: As directed, fibrous-glass duct lining, neoprene coated, comply with ASTM C1071, Type II, applied on complete unit or burner and fan sections only.

    a. Thickness: As directed, 1 inch (25 mm) or 2 inches (50 mm).
    b. Insulation Adhesive: Comply with ASTM C916, Type I.
    c. Density: As directed, 1.5 lb/cu. ft. (24.0 kg/cu. m), 2.0 lb/cu. ft. (32.0 kg/cu. m) or 3.0 lb/cu. ft. (48.0 kg/cu. m).
    d. Mechanical Fasteners: Galvanized steel suitable for adhesive, mechanical, or welding attachment to casing without damaging liner when applied as recommended by manufacturer and without causing air leakage.

H. Discharge Section: As directed, Galvanized or Aluminized-steel assembly with gravity, individually adjustable, vaned, two-position, motorized, parallel-blade dampers with nylon bushings.

1. Pattern: As directed, Single or Double deflection.
2. Leakage: As directed, Standard or Low leakage.

I. Discharge Section: Trapezoidal cowls with horizontal louvers.

J. Discharge Section: As directed, Plenum with two or four sides louvered.

K. Discharge Section: Down-discharge plenum insulated with 1-inch (25-mm), 1.5-lb/cu. ft. (24.0-kg/cu. m) fibrous glass.

L. Casing Insulation and Adhesive:

1. Materials: As directed, ASTM C1071, Type I or Type II.
2. Location and Application: Factory applied with adhesive and mechanical fasteners to the internal surface of section panels downstream from, and including, the heating-coil section.

M. Inspection and Access Panels and Access Doors: Formed and reinforced, single- or double-wall and insulated panels of same materials and thicknesses as casing.

2.4 ACCESSORIES

A. Service Platform: As directed, Steel, Galvanized steel, Aluminum, 42 inches (1070 mm) wide running entire length of unit and located on service access side, with angle side rails, 4-inch (100-mm) kick plates, and expanded metal floor. Provide platform with a fixed ladder that extends from the top of the side rail to the floor.

B. Electric heater with integral thermostat maintains minimum 50 deg F (10 deg C) temperature in gas burner compartment.

C. Coil guards of painted, galvanized-steel wire.

D. Hail guards of galvanized steel, painted to match casing.

2.5 OUTDOOR-AIR INTAKE HOOD

A. Type: Manufacturer's standard hood or louver.

B. Materials: Match cabinet.

C. Bird Screen: Comply with requirements in ASHRAE 62.1.

D. Filter: As directed, Aluminum, 1 inch (25 mm) or 2 inches (50 mm) cleanable.

E. Configuration: Designed to inhibit wind-driven rain and snow from entering unit.

2.6 ROOF CURBS

A. Materials: Galvanized steel with corrosion-protection coating, watertight gaskets, and factory-installed wood nailer; complying with NRCA standards.

1. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
2. Thickness: As directed, 1 inch (25 mm), 1-1/2 inches (38 mm) or 2 inches (50 mm).

3. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.

    a. Liner Adhesive: Comply with ASTM C916, Type I.
    b. Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
    c. Liner materials applied in this location shall have air-stream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric depending on service air velocity.
    d. Liner Adhesive: Comply with ASTM C916, Type I.

B. Curb Height: As directed, 14 inches (355 mm), 24 inches (610 mm) or 36 inches (910 mm).

2.7 SUPPLY-AIR FAN

A. Fan Type: As directed, Centrifugal, rated according to AMCA 210; statically and dynamically balanced, galvanized steel; mounted on solid-steel shaft with heavy-duty, self-aligning, permanently lubricated ball bearings, pillow-block bearings. Bearing rating: As directed, L10 of 60,000 hours, L10 of 120,000 hours or L10 of 150,000 hours.

B. Drive: V-belt drive with matching fan pulley and adjustable motor sheaves and belt assembly.

C. Mounting: As directed, Fan wheel, motor, and drives shall be mounted in fan casing with restrained, elastomeric or spring isolators.

D. Fan-Shaft Lubrication Lines: Extended to a location outside the casing.

2.8 AIR FILTERS

A. Comply with as directed, NFPA 90A or NFPA 90B.

B. Cleanable Filters: Cleanable metal mesh.

1. Thickness: As directed, 1 inch (25 mm) or 2 inches (50 mm).

C. Disposable Panel Filters: Factory-fabricated, flat-panel-type, disposable air filters with holding frames, with a MERV 6 according to ASHRAE 52.2.

2.9 DAMPERS

A. Outdoor-Air and Return-Air Damper: Galvanized-steel, opposed-blade dampers with vinyl blade seals and stainless-steel jamb seals, having a maximum leakage of 10 cfm/sq. ft. (51 L/s per sq. m) of damper area, at a differential pressure of 2-inch wg (448 Pa).

B. Damper Operator: Direct coupled, electronic with spring return or fully modulating as required by the control sequence.

2.10 DIRECT-FIRED GAS BURNER

A. Description: Factory assembled, piped, and wired; and complying with ANSI Z21.47, "Gas-Fired Central Furnaces," and with NFPA 54, "National Fuel Gas Code."

1. CSA Approval: Designed and certified by and bearing label of CSA.
2. Burners: As directed, Aluminized steel with stainless-steel inserts or Stainless steel.

    a. Gas Control Valve: As directed, Single stage, Two stage or Modulating.
    b. Fuel: As directed, Natural or Propane gas.
    c. Minimum Combustion Efficiency: 95 percent.
    d. Ignition: Electronically controlled electric spark with flame sensor.
    e. High-Altitude Model or Kit As directed: For Project elevation above sea level.

B. Safety Controls:

1. Vent Flow Verification: As directed, Differential pressure switch to verify open vent or Flame rollout switch.
2. Control Transformer: 24-V ac.
3. High Limit: Thermal switch or fuse to stop burner.
4. Gas Train: As directed, Regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, hydraulic or electronic-modulating temperature control valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff all in one body.
5. Purge-period timer shall automatically delay burner ignition and bypass low-limit control.
6. Gas Manifold: Safety switches and controls complying with ANSI standards, FM Global or XL Insurance As directed.
7. Airflow Proving Switch: Differential pressure switch senses correct airflow before energizing pilot.
8. Automatic-Reset, High-Limit Control Device: Stops burner and closes main gas valve if high-limit temperature is exceeded.
9. Safety Lockout Switch: Locks out ignition sequence if burner fails to light after three tries. Controls are reset manually by turning the unit off and on.

2.11 CONTROLS

A. Comply with requirements in Section 230900 "Instrumentation and Control for HVAC" and Section 230993 "Sequence of Operations for HVAC Controls" for control equipment and sequence of operation.

B. Control Devices:

1. Remote Thermostat: Adjustable room thermostat with temperature readout.
2. Remote Setback Thermostat: Adjustable room thermostat without temperature readout.
3. Static-Pressure Transmitter: Nondirectional sensor with suitable range for expected input, and temperature compensated.
4. Fire-Protection Thermostats: Fixed or adjustable settings to operate at not less than 75 deg F (24 deg C) above normal maximum operating temperature.
5. Timers: Seven-day, programming-switch timer with synchronous-timing motor and seven-day dial; continuously charged, nickel-cadmium-battery-driven, eight-hour, power-

failure carryover; multiple-switch trippers; minimum of two and maximum of eight signals per day with two normally open and two normally closed output contacts.

6. Ionization-Type Smoke Detectors: 24-V dc, nominal; self-restoring; plug-in arrangement; integral visual-indicating light; sensitivity that can be tested and adjusted in place after installation; integral addressable module; remote controllability; responsive to both visible and invisible products of combustion; self-compensating for changes in environmental conditions.

C. Fan Control: Interlock fan to start with exhaust fan(s) to which this heating and ventilating unit is associated for makeup air.

D. Outdoor-Air Damper Control, 100 Percent Outdoor-Air Units: Outdoor-air damper shall open when supply fan starts, and close when fan stops.

E. Mixed Outdoor- and Return-Air Damper Control: When fan is running, outdoor- and return-air dampers shall modulate to supply minimum outdoor air as follows:

F. Temperature Control: Operates gas valve to maintain supply-air temperature.

1. Operates gas valve to maintain discharge-air temperature with factory-mounted sensor in blower outlet.
2. Timer shall select remote setback thermostat to maintain space temperature at 50 deg F (10 deg C).
3. Burner Control: Two or four steps of control using one or two burner sections in series.

2.12 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Enclosure: As directed, Open, dripproof, Totally enclosed, fan cooled, Totally enclosed, air over, Open, externally ventilated, Totally enclosed, nonventilated, Severe duty, Explosion proof or Dust-ignition-proof machine.
2. Enclosure Materials: As directed, Cast iron, Cast aluminum or Rolled steel.
3. Motor Bearings: As directed.
4. Unusual Service Conditions:

    a. Ambient Temperature: As directed.
    b. Altitude: Feet (m) above sea level as directed.
    c. High humidity.

    Efficiency: As directed, Premium efficient or EPAct compliant.
5. NEMA Design: As directed.
6. Service Factor: As directed.

2.13 CAPACITIES AND CHARACTERISTICS

A. Fan:

1. Discharge Configuration: As directed, Horizontal or Vertical.
2. Airflow in CFM (L/s): As directed.
3. External Static Pressure: As directed.
4. Maximum RPM: As directed.
5. Minimum Size: As directed.
6. Altitude: As directed.

B. Fan Motor:

1. Horsepower: As directed.
2. RPM: As directed.
3. Service Factor: As directed.
4. Speed: As directed, Single or Two.

C. Single-Point Electrical Connection:

1. Volts: As directed, 120, 240, 277 or 480.
2. Phase: As directed, Single or Three.
3. Hertz: 60.
4. Full-Load Amperes: As directed.
5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection: As directed.

D. Direct-Fired Gas Burner:

1. Minimum Combustion Efficiency: As directed.
2. Entering-Air Temperature: As directed.
3. Leaving-Air Temperature: As directed.
4. Airflow: As directed.
5. Gas Input: As directed.
6. Burner Output: As directed.
7. Number of Stages: As directed.
8. Minimum Inlet Pressure: As directed.
9. Maximum Inlet Pressure: As directed.
10. Gas Piping Connection Size: As directed.
11. Vent Diameter: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Equipment Mounting:

1. Install heating and ventilating unit on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000

"Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" As directed.

2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

B. Unit Support: Install heating and ventilating unit level on structural curbs or pilings As directed. Coordinate wall penetrations and flashing with wall construction. Secure units to structural support with anchor bolts.

C. Install gas-fired units according to NFPA 54, "National Fuel Gas Code."

D. Install controls and equipment shipped by manufacturer for field installation with direct-fired heating and ventilating units.

E. Roof Curb: As directed, install on roof structure or concrete base, level and secure, according to NRCA's "Low-Slope Membrane Roofing Construction Details Manual," Illustration "Raised Curb Detail for Rooftop Air Handling Units and Ducts" or AHRI Guideline B. Install units on curbs and coordinate roof penetrations and flashing with roof construction specified in Section 077200 "Roof Accessories." Secure units to upper curb rail, and secure curb base to roof framing or concrete base with anchor bolts.

F. Unit Support: As directed, Install unit level on structural curbs or pilings. Coordinate wall penetrations and flashing with wall construction. Secure units to structural support with anchor bolts.

3.2 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

1. Gas Piping: As directed, comply with requirements in Section 231123 "Facility Natural-Gas Piping" or Section 231126 "Facility Liquefied-Petroleum Gas Piping". Connect gas piping with shutoff valve and union, and with sufficient clearance for burner removal and service. Make final connections of gas piping to unit with corrugated, stainless-steel tubing flexible connectors complying with ANSI LC 1/CSA 6.26 equipment connections.

B. Drain: Comply with requirements in Section 221316 "Sanitary Waste and Vent Piping" for traps and accessories on piping connections to condensate drain pans under condensing heat exchangers. Where installing piping adjacent to heating and ventilating units, allow space for service and maintenance.

C. Duct Connections: Connect supply and return ducts to direct-fired heating and ventilating units with flexible duct connectors. Comply with requirements in Section 233300 "Air Duct Accessories" for flexible duct connectors.

D. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

E. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

A. Perform tests and inspections with the assistance of a factory-authorized service representative.

B. Units will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

3.4 ADJUSTING

A. Adjust initial temperature set points.

B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

3.5 DEMONSTRATION

A. As directed, engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain heating and ventilating units.

END OF SECTION 237423.13

SECTION 237423.16 - PACKAGED, INDIRECT-FIRED, OUTDOOR, HEATING-ONLY MAKEUP-AIR UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes indirect-fired makeup-air units.

1.2 ACTION SUBMITTALS

A. Product Data: For each type and configuration of outdoor, indirect-fired makeup-air unit.

B. Sustainable Design Submittals:

C. Shop Drawings: For each type and configuration of outdoor, indirect-fired heating and ventilating unit.

1. Include plans, elevations, sections, and mounting or attachment details As directed.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Sample Warranty: For manufacturer's special warranty.

B. Seismic Qualification Certificates: For outdoor, indirect-fired makeup-air units, accessories, and components, from manufacturer.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Comply with NFPA 70.

B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of indirect-fired heating and ventilating units that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Heat Exchangers: As directed, Manufacturer's standard, but not less than five or 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 SYSTEM DESCRIPTION

A. Factory-assembled, prewired, self-contained unit consisting of cabinet, supply fan, controls, filters, and indirect-fired gas burner to be installed exterior to the building.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 UNIT CASINGS

A. General Fabrication Requirements for Casings:

1. Forming: Form walls, roofs, and floors with at least two breaks at each joint.
2. Casing Joints: Sheet metal screws or pop rivets, factory sealed with water-resistant sealant.
3. Factory Finish for Steel and Galvanized-Steel Casings: Apply manufacturer's standard primer immediately after cleaning and pretreating.
4. Air-Handling-Unit Mounting Frame: Formed galvanized-steel channel or structural channel supports, designed for low deflection, welded with integral lifting lugs.

a. Seismic Fabrication Requirements: Fabricate mounting base and attachment to air-handling-unit sections, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when air-handling-unit frame is anchored to building structure.

5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Configuration: As directed, Horizontal unit with top, horizontal or bottom discharge for roof-mounting or concrete-base installation.

C. Cabinet: As directed, Galvanized-steel, Aluminized- or galvanized-steel or Aluminized-steel panels, formed to ensure rigidity and supported by galvanized-steel channels or structural

channel supports with lifting lugs. Duct flanges at inlet and outlet. Pitched roof panels and knockouts with grommet seals for electrical and piping connections and lifting lugs.

D. Outer Casing: As directed, 0.0598-inch (1.519-mm), 0.0478-inch (1.214-mm) or 0.0359-inch (0.912-mm) thick steel with heat-resistant, baked-enamel, enamel-painted, baked-on, polyester-powder or unpainted over-corrosion-resistant-treated surface in color to match fan section.

E. Outer Casing: As directed, 0.0598-inch (1.519-mm), 0.0478-inch (1.214-mm) or 0.0359-inch (0.912-mm) thick steel with unpainted finish.

F. Outer Casing: 0.0359-inch (0.912-mm) thick steel with heat-resistant, baked-enamel over-corrosion-resistant-treated surface in color to match fan section.

G. Inner Casing:

1. Burner Section Inner Casing: 0.0299-inch- (0.759-mm-) thick steel.
2. Double-wall casing with inner wall of perforated or solid steel, for the following sections:

    a. Blower section.
    b. Filter section.
    c. Mixing box.
    d. Inlet plenum.
    e. Discharge plenum.
    f. As directed, access Doors or Panels: Lift out, Piano hinged with cam-lock fasteners or Hinged with handles for burner and fan motor assemblies on both sides of unit.

3. Internal Insulation: Fibrous-glass duct lining, neoprene coated, comply with ASTM C1071, Type II, applied on complete unit or burner and fan sections only.

    a. Thickness: As directed, 1 inch (25 mm) or 2 inches (50 mm).
    b. Insulation Adhesive: Comply with ASTM C916, Type I.
    c. Density: As directed, 1.5 lb/cu. ft. (24.0 kg/cu. m), 2.0 lb/cu. ft. (32.0 kg/cu. m) or 3.0 lb/cu. ft. (48.0 kg/cu. m).
    d. Mechanical Fasteners: Galvanized steel suitable for adhesive, mechanical, or welding attachment to casing without damaging liner when applied as recommended by manufacturer and without causing air leakage.

H. Discharge Section: As directed, Galvanized or Aluminized-steel assembly with gravity or individually adjustable, vaned, two-position, motorized, parallel-blade dampers with nylon bushings.

1. Pattern: As directed, Single or Double deflection.
2. Leakage: As directed, Standard or Low leakage.

I. Discharge Section: Trapezoidal cowls with horizontal louvers.

J. Discharge Section: As directed, Plenum with two or four sides louvered.

K. Discharge Section: Down-discharge plenum insulated with 1-inch (25-mm), 1.5-lb/cu. ft. (24.0-kg/cu. m) fibrous glass.

L. Casing Insulation and Adhesive:

1. Materials: As directed, ASTM C1071, Type I or Type II.
2. Location and Application: Factory applied with adhesive and mechanical fasteners to the internal surface of section panels downstream from, and including, the heating-coil section.

M. Inspection and Access Panels and Access Doors: As directed, fabricated with one or two percent slope in at least two planes to collect condensate from condensate-producing heat exchangers and from humidifiers, and to direct water toward drain connection; and complying with ASHRAE 62.1.

2.4 ACCESSORIES

A. Service Platform: As directed, Steel, Galvanized steel, Aluminum, 42 inches (1070 mm) wide running entire length of unit and located on service access side, with angle side rails, 4-inch (100-mm) kick plates, and expanded metal floor. Provide platform with a fixed ladder that extends from the top of the side rail to the floor.

2.5 OUTDOOR-AIR INTAKE HOOD

A. Type: Manufacturer's standard hood or louver.

B. Materials: Match cabinet.

C. Bird Screen: Comply with requirements in ASHRAE 62.1.

D. Filter: Aluminum, 1 inch (25 mm), cleanable.

E. Configuration: Designed to inhibit wind-driven rain and snow from entering unit.

2.6 ROOF CURBS

A. Materials: Galvanized steel with corrosion-protection coating, watertight gaskets, and factory-installed wood nailer; complying with NRCA standards.

1. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
2. Thickness: As directed, 1 inch (25 mm), 1-1/2 inches (38 mm) or 2 inches (50 mm).
3. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.

B. Curb Height: As directed, 14 inches (355 mm), 24 inches (610 mm) or 36 inches (910 mm).

2.7 SUPPLY-AIR FAN

A. Fan Type: Centrifugal, rated according to AMCA 210; statically and dynamically balanced, galvanized steel; mounted on solid-steel shaft with heavy-duty, self-aligning, permanently

lubricated ball bearings, pillow-block bearings. Bearing rating: As directed, L10 of 60,000 hours, L10 of 120,000 hours or L10 of 150,000 hours.

B. Drive: V-belt drive with matching fan pulley and adjustable motor sheaves and belt assembly.

C. Mounting: Fan wheel, motor, and drives shall be mounted in fan casing with restrained, elastomeric or spring isolators.

D. Fan-Shaft Lubrication Lines: Extended to a location outside the casing.

2.8 AIR FILTERS

A. Comply with NFPA 90A or NFPA 90B as directed.

B. Cleanable Filters: Cleanable metal mesh.

1. Thickness: As directed, 1 inch (25 mm) or 2 inches (50 mm).

C. Disposable Panel Filters: Factory-fabricated, flat-panel-type, disposable air filters with holding frames, with a MERV 6 according to ASHRAE 52.2.

2.9 DAMPERS

A. Outdoor-Air and Return-Air Damper: Galvanized-steel, opposed-blade dampers with vinyl blade seals and stainless-steel jamb seals, having a maximum leakage of 10 cfm/sq. ft. (51 L/s per sq. m) of damper area, at a differential pressure of 2-inch wg (448 Pa).

B. Damper Operator: Direct coupled, electronic with spring return or fully modulating as required by the control sequence.

2.10 INDIRECT-FIRED GAS BURNER

A. Description: Factory assembled, piped, and wired; and complying with ANSI Z21.47, "Gas-Fired Central Furnaces," and with NFPA 54, "National Fuel Gas Code."

1. CSA Approval: Designed and certified by and bearing label of CSA.
2. Burners: Aluminized steel with stainless-steel inserts or Stainless steel.

a. Gas Control Valve: As directed, Single stage, Two stage or Modulating.
b. Fuel: As directed, Natural or Propane gas.
c. Minimum Combustion Efficiency: 80 percent.
d. Ignition: Electronically controlled electric spark with flame sensor.
e. High-Altitude As directed, Model or Kit: For Project elevation above sea level.

B. Venting: Gravity vented.

C. Venting: Power vented, with integral, motorized centrifugal fan interlocked with gas valve.

D. Combustion-Air Intake: Separate combustion-air intake and vent terminal assembly.

E. Heat Exchanger: As directed, Aluminized or Stainless steel.

F. Heat-Exchanger Drain Pan: Stainless steel.

G. Safety Controls:

1. Vent Flow Verification: As directed, Differential pressure switch to verify open vent or Flame rollout switch.
2. Control Transformer: 24-V ac.
3. High Limit: Thermal switch or fuse to stop burner.
4. Gas Train: As directed, Regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, hydraulic or electronic-modulating temperature control valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff all in one body.
5. Purge-period timer shall automatically delay burner ignition and bypass low-limit control.
6. Gas Manifold: As directed, Safety switches and controls complying with ANSI standards and FM Global or XL Insurance.
7. Airflow Proving Switch: Differential pressure switch senses correct airflow before energizing pilot.
8. Automatic-Reset, High-Limit Control Device: Stops burner and closes main gas valve if high-limit temperature is exceeded.
9. Safety Lockout Switch: Locks out ignition sequence if burner fails to light after three tries. Controls are reset manually by turning the unit off and on.

2.11 UNIT CONTROL PANEL

A. Factory-wired, fuse-protected control transformer, connection for power supply and field-wired unit to remote control panel.

B. Control Panel: As directed, Surface-mounted or Recessed, with trim ring, remote panel, with engraved plastic cover and the following lights and switches:

1. As directed, On-off or On-off-auto fan switch.
2. Heat-vent-off switch.
3. Supply-fan operation indicating light.
4. Heating operation indicating light.
5. Thermostat.
6. Damper position potentiometer.
7. Dirty-filter indicating light operated by unit-mounted differential pressure switch.
8. Safety-lockout indicating light.
9. Enclosure: As directed, NEMA 250, Type 1, Type 3R, Type 4 or Explosion proof.

2.12 CONTROLS

A. Control Devices:

1. Remote Thermostat: Adjustable room thermostat with temperature readout.
2. Remote Setback Thermostat: Adjustable room thermostat without temperature readout.

3. Static-Pressure Transmitter: Nondirectional sensor with suitable range for expected input, and temperature compensated.
4. Fire-Protection Thermostats: Fixed or adjustable settings to operate at not less than 75 deg F (24 deg C) above normal maximum operating temperature.
5. Timers: Seven-day, programming-switch timer with synchronous-timing motor and seven-day dial; continuously charged, nickel-cadmium-battery-driven, eight-hour, power-failure carryover; multiple-switch trippers; minimum of two and maximum of eight signals per day with two normally open and two normally closed output contacts.
6. Ionization-Type Smoke Detectors: 24-V dc, nominal; self-restoring; plug-in arrangement; integral visual-indicating light; sensitivity that can be tested and adjusted in place after installation; integral addressable module; remote controllability; responsive to both visible and invisible products of combustion; self-compensating for changes in environmental conditions.

B. Fan Control: Interlock fan to start with exhaust fan(s) to which this heating and ventilating unit is associated for makeup air.

1. Smoke detectors, located in supply and return air, shall stop fans when the presence of smoke is detected.

C. Outdoor-Air Damper Control, 100 Percent Outdoor-Air Units: Outdoor-air damper shall open when supply fan starts, and close when fan stops.

D. Mixed Outdoor- and Return-Air Damper Control: When fan is running, outdoor- and return-air dampers shall modulate to supply minimum outdoor air as follows:

E. Temperature Control: Operates gas valve to maintain supply-air temperature.

1. Operates gas valve to maintain discharge-air temperature with factory-mounted sensor in blower outlet.
2. Timer shall select remote setback thermostat to maintain space temperature at 50 deg F (10 deg C).
3. Burner Control: Two or four steps of control using one or two burner sections in series.
4. Burner Control: 20 to 100 percent modulation of the firing rate. 10 to 100 percent with dual burner units.

2.13 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Enclosure: As directed Open, dripproof, Totally enclosed, fan cooled, Totally enclosed, air over, Open, externally ventilated, Totally enclosed, nonventilated, Severe duty, Explosion proof or Dust-ignition-proof machine.
2. Enclosure Materials: As directed Cast iron, Cast aluminum or Rolled steel.
3. Motor Bearings: As directed.
4. Unusual Service Conditions:

a. Ambient Temperature: As directed.

b. Altitude: Feet (m) above sea level as directed.
c. High humidity.

5. Efficiency: As directed Premium efficient or EPAct compliant.
6. NEMA Design: As directed.
7. Service Factor: As directed.

2.14 CAPACITIES AND CHARACTERISTICS

A. Fan:

1. Discharge Configuration: As directed Horizontal or Vertical.
2. Airflow in CFM (L/s): As directed.
3. External Static Pressure: As directed.
4. Maximum RPM: As directed.
5. Minimum Size: As directed.
6. Altitude: As directed.

B. Fan Motor:

1. Horsepower: As directed.
2. RPM: As directed.
3. Service Factor: As directed.
4. Speed: As directed Single or Two.

C. Single-Point Electrical Connection:

1. Volts: As directed 120, 240, 277 or 480.
2. Phase: As directed Single or Three.
3. Hertz: 60.
4. Full-Load Amperes: As directed.
5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection: As directed.

D. Indirect-Fired Gas Burner:

1. Minimum Combustion Efficiency: Percent As directed.
2. Entering-Air Temperature: As directed.
3. Leaving-Air Temperature: As directed.
4. Airflow: As directed.
5. Gas Input: As directed.
6. Burner Output: As directed.
7. Number of Stages: As directed.
8. Minimum Inlet Pressure: As directed.
9. Maximum Inlet Pressure: As directed.
10. Gas Piping Connection Size: As directed.
11. Vent Diameter: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Equipment Mounting:

1. Install heating and ventilating units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" As directed
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

B. Unit Support: As directed Install heating and ventilating unit level on structural curbs or pilings. Coordinate wall penetrations and flashing with wall construction. Secure units to structural support with anchor bolts.

C. Install gas-fired units according to NFPA 54, "National Fuel Gas Code."

D. Install controls and equipment shipped by manufacturer for field installation with indirect-fired heating and ventilating units.

E. Roof Curb: As directed Install on roof structure or concrete base, level and secure, according to NRCA's "Low-Slope Membrane Roofing Construction Details Manual," Illustration "Raised Curb Detail for Rooftop Air Handling Units and Ducts" or ARI Guideline B. Install units on curbs and coordinate roof penetrations and flashing with roof construction specified in Section 077200 "Roof Accessories." Secure units to upper curb rail, and secure curb base to roof framing or concrete base with anchor bolts.

F. Unit Support: As directed Install unit level on structural curbs or pilings. Coordinate wall penetrations and flashing with wall construction. Secure units to structural support with anchor bolts.

3.2 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

1. Gas Piping: As directed Comply with requirements in Section 231123 "Facility Natural-Gas Piping" or Section 231126 "Facility Liquefied-Petroleum Gas Piping." Connect gas piping with shutoff valve and union, and with sufficient clearance for burner removal and service. Make final connections of gas piping to unit with corrugated, stainless-steel tubing flexible connectors complying with ANSI LC 1/CSA 6.26 equipment connections.

B. Drain: Comply with requirements in Section 221316 "Sanitary Waste and Vent Piping" for traps and accessories on piping connections to condensate drain pans under condensing heat exchangers. Where installing piping adjacent to heating and ventilating units, allow space for service and maintenance.

C. Duct Connections: Connect supply and return ducts to indirect-fired heating and ventilating units with flexible duct connectors. Comply with requirements in Section 233300 "Air Duct Accessories" for flexible duct connectors.

D. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

E. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

B. Perform tests and inspections with the assistance of a factory-authorized service representative.

C. Units will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.4 ADJUSTING

A. Adjust initial temperature set points.

B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

3.5 DEMONSTRATION

A. As directed Engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain heating and ventilating units.

END OF SECTION 237423.16

SECTION 237433 - DEDICATED OUTDOOR-AIR UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes factory-packaged units capable of supplying up to 100 percent outdoor air and providing cooling only and heating.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Shop Drawings: Include plans, elevations, sections, and attachment details.

D. Delegated-Design Submittal: For design of vibration isolation, seismic restraints and, wind restraints, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Roof-curb mounting details, drawn to scale, and coordinated with each other, using input from installers of the items involved:

B. Seismic Qualification Certificates: For dedicated outdoor-air units, accessories, and components, from manufacturer.

C. Startup service reports.

D. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to replace components of units that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Compressors: Five years from date of Substantial Completion.
2. Warranty Period for Heat Exchangers: As directed, Five or 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. General Fabrication Requirements: Comply with requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment," and Section 7 - "Construction and System Start-up."

B. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design vibration isolation, seismic restraints, and, wind restraints As directed.

C. Seismic Performance: Units shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

D. Wind-Restraint Performance:

1. Basic Wind Speed: As directed.
2. Building Classification Category: As directed, I, II, III or IV.
3. Minimum 10 lb/sq. ft (48.8 kg/sq. m) multiplied by the maximum area of unit projected on a vertical plane that is normal to the wind direction and 45 degrees either side of normal.

E. Cabinet Thermal Performance:

1. Maximum Overall U-Value: Comply with requirements in ASHRAE/IESNA 90.1.
2. Maximum Overall U-Value: 0.10 Btu/h x sq. ft. x deg F (0.57 W/sq. m x deg K).
3. Include effects of metal-to-metal contact and thermal bridges in the calculations.

F. Cabinet Surface Condensation:

1. Cabinet shall have additional insulation and vapor seals if required to prevent condensation on the interior and exterior of the cabinet.
2. Portions of cabinet located downstream from the cooling coil shall have a thermal break at each thermal bridge between the exterior and interior casing to prevent condensation from occurring on the interior and exterior surfaces. The thermal break shall not compromise the structural integrity of the cabinet.

G. Maximum Cabinet Leakage: As directed, 0.5, 1 or 2 percent of the total supply-air flow at a pressure rating equal to the fan shut-off pressure.

H. Cabinet Deflection Performance:

1. As directed, Walls and roof deflection shall be within 1/200 or 1/240 of the span at the design working pressure equal to the fan shut-off pressure. Deflection limits shall be measured at any point on the surface.
2. As directed, Floor deflections shall be within 1/240, 1/300 or 1/360 of the span considering the worst-case condition caused by the following:

    a. Service personnel.
    b. Internal components.
    c. Design working pressure defined for the walls and roof.

I. Electrical components, devices, and accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

J. Capacities and Characteristics:

1. Supply Airflow: As directed.
2. External Static Pressure: As directed.
3. Supply Fan:

    a. Size: As directed.
    b. Speed: As directed.
    c. Brake Horsepower: As directed.

4. Supply Fan Motor:

    a. Size: As directed.
    b. Speed: As directed.
    c. Volts: As directed, 120, 208, 230 or 460.
    d. Phase: As directed, Single or Three.
    e. Hertz: 60.

5. Refrigerant Cooling:

    a. Capacity: As directed.
    b. Full-Load Efficiency (EER or COP): As directed.
    c. Condenser Ambient-Air Temperature: As directed.
    d. Evaporator Coil:

        1) Sensible Heat-Transfer Rate: As directed.
        2) Total Heat-Transfer Rate: As directed.
        3) Entering-Air, Dry-Bulb Temperature: As directed.
        4) Entering-Air, Wet-Bulb Temperature: As directed.
        5) Leaving-Air, Dry-Bulb Temperature: As directed.
        6) Leaving-Air, Wet-Bulb Temperature: As directed.
        7) Face Area: As directed.
        8) Maximum Face Velocity: As directed.
        9) Maximum Air-Side, Static-Pressure Drop: As directed.
        10) Fin Spacing: As directed.
        11) Fin Thickness: As directed.
        12) Number of Rows: As directed.

6. Electric-Resistance Heating Coils:

    a. Heat-Transfer Rate: As directed.
    b. Entering-Air Temperature: As directed.
    c. Leaving-Air Temperature: As directed.
    d. Power Input: As directed.
    e. Volts: As directed, 120, 208, 230 or 480.
    f. Phase: As directed, Single or Three.
    g. Hertz: 60.
    h. Full-Load Amperes: As directed.
    i. Maximum Overcurrent Protection: As directed.
    j. Capacity Control Number of Steps: As directed.

7. Gas-Fired Furnace Heating:

    a. Heat-Transfer Rate: As directed.
    b. Entering-Air Temperature: As directed.
    c. Leaving-Air Temperature: As directed.
    d. Efficiency: 80 percent.
    e. Fuel: As directed, Natural or Propane gas.
    f. Gas Heating Value: As directed.
    g. Gas Input: As directed.
    h. Gas Burner Electrical Characteristics:

        1) Power Input: As directed.
        2) Volts: As directed, 120, 208, 230 or 460.
        3) Phase: As directed, Single or Three.
        4) Hertz: 60.
        5) Full-Load Amperes: As directed.
        6) Minimum Circuit Ampacity: As directed.
        7) Maximum Overcurrent Protection: As directed.

8. Hot-Water Heating Coils:

    a. Heat-Transfer Rate: As directed.
    b. Entering-Air Temperature: As directed.
    c. Leaving-Air Temperature: As directed.
    d. Face Area: As directed.
    e. Maximum Face Velocity: As directed.
    f. Maximum Air-Side, Static-Pressure Drop: As directed.
    g. Coil Type: As directed, Continuous circuit, Self-draining or Cleanable.
    h. Piping Connections: As directed, Threaded, Flanged; same end or opposite ends of coil.
    i. Tube Thickness: As directed.
    j. Fin Spacing: As directed.
    k. Fin Thickness: As directed.
    l. Number of Rows: As directed.
    m. Coil Working-Pressure Ratings: 200 psig (1380 kPa), 325 deg F (163 deg C).
    n. Fluid Flow: As directed.
    o. Maximum Fluid-Pressure Drop: As directed.
    p. Entering-Fluid Temperature: As directed.

q. Leaving-Fluid Temperature: As directed.
r. Fluid Velocity: As directed.

9. Overall Unit Electrical Characteristics:

a. Volts: As directed, 120, 208, 230 or 460.
b. Phase: As directed, Single or Three.
c. Hertz: 60.
d. Full-Load Amperes: As directed.
e. Minimum Circuit Ampacity: As directed.
f. Maximum Overcurrent Protection: As directed.

2.3 CABINET

A. Construction: Single or double wall.

B. Exterior Casing Material: Galvanized steel with paint finish or stainless steel.

C. Interior Casing Material: As directed, Galvanized or stainless steel.

D. Lifting and Handling Provisions: Factory-installed shipping skids and lifting lugs.

E. Base Rails: As directed, Galvanized or Stainless-steel rails for mounting on roof curb or pad as indicated.

F. Access for Inspection, Cleaning, and Maintenance: Comply with requirements in ASHRAE 62.1.

1. Service Doors: Hinged access doors with gaskets. Material and construction of doors shall match material and construction of cabinet in which doors are installed.

G. Roof: Standing seam or membrane; sloped to drain water.

H. Floor: Reinforced, metal surface; reinforced to limit deflection when walked on by service personnel. Insulation shall be below metal walking surface.

I. Cabinet Insulation:

1. Type: Fibrous-glass duct lining complying with ASTM C1071, Type II or flexible elastomeric insulation complying with ASTM C534, Type II, sheet materials.
2. Thickness: As directed, 1 inch (25 mm) or 2 inches (50 mm).
3. Insulation Adhesive: Comply with ASTM C916, Type I.
4. Mechanical Fasteners: Suitable for adhesive, mechanical, or welding attachment to casing without damaging liner and without causing air leakage when applied as recommended by manufacturer.

J. Condensate Drain Pans:

1. Shape: As directed, Rectangular, with 1 or 2 percent slope in at least two planes to direct water toward drain connection.

2. Size: Large enough to collect condensate from cooling coils including coil piping connections, coil headers, and return bends.

    a. Length: Extend drain pan downstream from leaving face to comply with ASHRAE 62.1.
    b. Depth: A minimum of 2 inches (50 mm) deep.

3. Configuration: Single wall.
4. Configuration: Double wall, with space between walls filled with foam insulation and moisture-tight seal.
5. Material: Galvanized-steel sheet with asphaltic waterproofing compound coating on pan top surface.
6. Material: Stainless-steel sheet.
7. Drain Connection:

    a. As directed, located on one end or both ends of pan, at lowest point of pan.
    b. Terminated with threaded nipple.
    c. Minimum Connection Size: As directed, NPS 1 (DN 25) or NPS 2 (DN 50).

8. Units with stacked coils shall have an intermediate drain pan to collect condensate from top coil.

K. Surfaces in Contact with Airstream: Comply with requirements in ASHRAE 62.1 for resistance to mold and erosion.

L. Roof Curb: As directed, Full-perimeter curb of sheet metal, minimum 8 inches (200 mm), 12 inches (300 mm) or 16 inches (400 mm) high, with wood nailer, neoprene sealing strip, and welded Z-bar flashing.

1. Comply with requirements in "The NRCA Roofing Manual."

2.4 SUPPLY FAN

A. Forward-Curved Fan Type: Centrifugal; statically and dynamically balanced.

1. Fan Wheel Material: As directed, Galvanized, Painted or Coated steel, mounted on solid-steel shaft.
2. Bearings: As directed, Self-aligning, permanently lubricated ball bearings or Pillow-block bearings rated L_{50} for 200,000 hours and having external grease fittings.

B. Plenum Fan Type: Single width, non-overloading, with backward-inclined or airfoil blades.

1. Fan Wheel Material: Aluminum; attached directly to motor shaft.
2. Fan Wheel Drive and Arrangement: Direct drive, AMCA Arrangement 4.
3. Fan panel and frame Material: Powder-coated steel, stainless steel, or aluminum.
4. Fan Enclosure: Easily removable enclosure around rotating parts.
5. Fan Balance: Precision balance fan below 0.08 inch/s (2.0 mm/s) at design speed with filter in.

C. Service Factor for Belt Drive Applications: Multiple V-belt drive with matching fan pulley and adjustable motor sheaves and belt assembly with minimum 1.4, 1.5 or 2.0 service factor As directed.

D. Motors:

1. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
2. Enclosure: As directed, Open dripproof or Totally enclosed.
3. Enclosure Materials: As directed, Cast iron, Cast aluminum or Rolled steel.
4. Motor Bearings: As directed.
5. Unusual Service Conditions:

    a. Ambient Temperature: As directed.
    b. Altitude: Feet (m) above sea level As directed.
    c. High humidity.

6. Efficiency: Premium efficient.
7. NEMA Design: As directed.
8. Service Factor: As directed, 1.0 or 1.15.

E. Mounting: As directed, Fan wheel, motor, and drives shall be mounted to fan casing with restrained, elastomeric or spring isolators.

2.5 COOLING COILS

A. Capacity Ratings: Comply with ASHRAE 33 and ARI 410 and coil bearing the ARI label.

B. Coil Casing Material: As directed, Manufacturer's standard material, Aluminum, Galvanized steel or Stainless steel.

C. Tube Material: Copper.

D. Tube Header Material: As directed, Manufacturer's standard material, Copper, Carbon steel or Red brass.

E. Fin Material: As directed, Aluminum or Copper.

F. Fin and Tube Joints: Mechanical bond.

G. Leak Test: Coils shall be leak tested with air underwater.

H. Refrigerant Coil Capacity Reduction: As directed, Circuit coils for face, row or interleaved control.

I. Refrigerant Coil Suction and Distributor Header Materials: Seamless copper tube with brazed joints.

J. Coating: Corrosion-resistant coating after assembly.

2.6 REFRIGERATION SYSTEM

A. Comply with requirements in ASHRAE 15, "Safety Standard for Refrigeration Systems."

B. Refrigerant Charge: Factory charged with refrigerant and filled with oil.

C. Compressors: As directed, Scroll or Reciprocating or scroll compressors with integral vibration isolators, internal overcurrent and overtemperature protection, internal pressure relief, and crankcase heater.

D. Refrigerant: As directed, R-134a, R-407C, R-410A or HFC refrigerant.

1. Classified as Safety Group A1 according to ASHRAE 34.
2. Provide unit with operating charge of refrigerant.

E. Refrigeration System Specialties:

1. Expansion valve with replaceable thermostatic element.
2. Refrigerant dryer.
3. High-pressure switch.
4. Low-pressure switch.
5. Thermostat for coil freeze-up protection during low ambient temperature operation or loss of air.
6. Brass service valves installed in discharge and liquid lines.

F. Capacity Control:

1. Hot-gas bypass refrigerant control for capacity control with continuous dehumidification on a single compressor.
2. Patented, Rawal APR control with zero to 100 percent modulating capacity control using hot-gas bypass. Evaporator coil shall be continuously active for dehumidification.
3. Single compressor with evaporator and condenser coil within the refrigerant section to provide initial pre-cooling and to reheat for humidity control.
4. Heat-pipe heat exchanger wrapped around the evaporator coil to pre-cool the air entering the evaporator coil and reheat the air leaving the evaporator coil to control humidity.

G. Refrigerant condenser and reheat condenser coils:

1. Capacity Ratings: Complying with ASHRAE 33 and ARI 410 and coil bearing the ARI label.
2. Tube Material: Copper.
3. Fin Material: As directed, Aluminum or Copper.
4. Fin and Tube Joint: Mechanical bond.
5. Leak Test: Coils shall be leak tested with air underwater.
6. Coating: Corrosion-resistant coating after assembly.

H. Condenser Fan Assembly:

1. Fans: Direct-drive propeller type with statically and dynamically balanced fan blades.
2. Fan Motors:

a. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
b. Motor Enclosure: Totally enclosed non-ventilating (TENV) or totally enclosed air over (TEAO) enclosure.
c. Enclosure Materials: As directed, Cast iron, Cast aluminum or Rolled steel.
d. Motor Bearings: Permanently lubricated bearings.
e. Unusual Service Conditions:

1) Ambient Temperature: As directed.
2) Altitude: Feet (m) above sea level as directed.
3) High humidity.

f. Built-in overcurrent and thermal-overload protection.
g. Efficiency: Premium efficient.
h. NEMA Design: As directed.
i. Service Factor: As directed.

3. Fan Safety Guards: Steel with corrosion-resistant coating.

I. Safety Controls:

1. Compressor motor and condenser coil fan motor low ambient lockout.
2. Overcurrent protection for compressor motor.

2.7 ELECTRIC-RESISTANCE HEATING COIL

A. UL Compliance: Comply with requirements in UL 1995, "Heating and Cooling Equipment."

B. Electric-Resistance Heating Elements:

1. Coiled Resistance Wire: 80 percent nickel and 20 percent chromium.
2. Tubular-Steel Sheath: Compacted magnesium oxide powder.
3. Fins: Spiral-wound, copper-plated, steel fins continuously brazed to sheath.
4. Heating Capacity: Low density 35 W per sq. in. (54 kW per sq. m), factory wired for single-point wiring connection; with time delay for element staging and overcurrent- and overheat-protection devices.
5. Safety Controls:

a. Blower-motor interlock, air-pressure switch.
b. Quiet mercury contactors.
c. Time delay between steps.
d. Integral, nonfused power disconnect switch.

C. Electric-Resistance Heating Elements:

1. Open-Coil Resistance Wire: 80 percent nickel and 20 percent chromium.
2. Supports and Insulation: Floating ceramic bushings recessed into casing openings; fastened to supporting brackets and mounted in galvanized-steel frame.

3. Heating Capacity: Low density 35 W per sq. in. (54 kW per sq. m), factory wired for single-point wiring connection; with time delay for element staging and overcurrent- and overheat-protection devices.
4. Safety Controls:

    a. Blower-motor interlock, air-pressure switch.
    b. Quiet mercury contactors.
    c. Time delay between steps.
    d. Integral, nonfused power disconnect switch.

2.8 INDIRECT-FIRED GAS FURNACE HEATING

A. Furnace Assembly:

1. Factory assembled, piped, and wired.
2. Comply with requirements in NFPA 54, "National Fuel Gas Code," and ANSI Z21.47, "Gas-Fired Central Furnaces."
3. AGA Approval: Designed and certified by and bearing label of AGA.

B. Burners:

1. Heat-Exchanger Material: As directed, Aluminized steel with stainless-steel inserts or Stainless steel with a minimum thermal efficiency of 80 percent.
2. Fuel: As directed, Natural or Propane gas.
3. Ignition: Electronically controlled electric spark with flame sensor.
4. High-Altitude As directed, Model or Kit: For Project elevations more than 2000 feet (610 m) above sea level.

C. Heat-Exchanger Drain Pan Material: Stainless steel.

D. Venting: Gravity vented.

E. Venting: Power vent with integral, motorized centrifugal fan interlocked with gas valve.

F. Safety Controls:

1. Gas Control Valve: As directed, Single stage, Two stage or Electronic modulating.
2. Gas Train: Single-body, regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff.

2.9 HOT-WATER HEATING COIL

A. Capacity Ratings: Comply with ASHRAE 33 and ARI 410 and coil bearing the ARI label.

B. Coil Casing Material: As directed, Manufacturer's standard material, Aluminum, Galvanized steel or Stainless steel.

C. Tube Material: Copper.

D. Tube Header Material: As directed, Manufacturer's standard material, Copper, Carbon steel or Red brass.

E. Fin Material: As directed, Aluminum or Copper.

F. Fin and Tube Joints: Mechanical bond.

G. Leak Test: Coils shall be leak tested with air underwater.

H. Coating: Corrosion-resistant coating after assembly.

2.10 CORROSION-RESISTANT COATINGS

A. Corrosion-Resistant Coating: Coat coils and fan guards with a corrosion-resistant coating capable of withstanding a 3,000-hour salt-spray test according to ASTM B117.

1. Standards:

   a. ASTM B117 for salt spray.
   b. ASTM D2794 for minimum impact resistance of 100 in-lb (11.3 N-m)
   c. ASTM D3359 for cross hatch adhesion of 5B.

2. Application: As directed, Immersion or Spray.
3. Thickness: 1 mil.
4. Gloss: Minimum gloss of 50 gloss units on a single angle 60-degree meter.
5. UV Protection: Spray applied topcoat.

2.11 OUTDOOR-AIR INTAKE HOOD

A. Type: Manufacturer's standard hood or louver.

B. Materials: Match cabinet.

C. Bird Screen: Comply with requirements in ASHRAE 62.1.

D. Configuration: Designed to inhibit wind-driven rain and snow from entering unit.

2.12 FILTERS

A. Cleanable Filters: 2-inch- (50-mm-) thick, cleanable metal mesh.

B. Disposable Panel Filters:

1. Comply with NFPA 90A.
2. Factory-fabricated, viscous-coated, flat-panel type.
3. Thickness: As directed, 1 inch (25 mm) or 2 inches (50 mm).
4. Initial Resistance: As directed.
5. Recommended Final Resistance: As directed.
6. Minimum Arrestance: 80, according to ASHRAE 52.1.

7. Minimum MERV: 6, according to ASHRAE 52.2.
8. Media: Interlaced glass fibers sprayed with nonflammable adhesive and antimicrobial agent.

C. Extended-Surface, Disposable Panel Filters:

1. Comply with NFPA 90A.
2. Factory-fabricated, dry, extended-surface type.
3. Thickness: As directed, 1 inch (25 mm), 2 inches (50 mm) or 4 inches (100 mm).
4. Initial Resistance: As directed.
5. Recommended Final Resistance: As directed.
6. Minimum Arrestance: 90, according to ASHRAE 52.1.
7. Minimum MERV: 7, according to ASHRAE 52.2.
8. Media: Fibrous material formed into deep-V-shaped pleats with antimicrobial agent and held by self-supporting wire grid.

D. Extended-Surface, Nonsupported-Media Filters:

1. Comply with NFPA 90A.
2. Factory-fabricated, dry, extended-surface, self-supporting type.
3. Initial Resistance: As directed.
4. Recommended Final Resistance: As directed.
5. Minimum Arrestance: 95, according to ASHRAE 52.1.
6. Minimum MERV: 13, according to ASHRAE 52.2.
7. Media: Fibrous material coated with an antimicrobial agent and constructed so individual pleats are maintained in tapered form by flexible internal supports under rated-airflow conditions.

E. Mounting Frames:

1. Panel filters arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or from access plenum.
2. Extended surface filters arranged for flat orientation, removable from access plenum.
3. Galvanized or stainless steel with gaskets and fasteners, suitable for bolting together into built-up filter banks with space for prefilter.

2.13 ELECTRICAL POWER CONNECTIONS

A. General Electrical Power Connection Requirements: Factory-installed and -wired switches, motor controllers, transformers, and other necessary electrical devices shall provide a single-point field power connection to unit.

B. Enclosure: NEMA 250, As directed, Type 3R, Type 4 or Type 4X, mounted in unit with hinged access door in unit cabinet having a lock and key or padlock and key,

C. Wiring: Numbered and color-coded to match wiring diagram.

D. Wiring Location: Install factory wiring outside an enclosure in a raceway.

E. Power Interface: As directed, Field power interface shall be to wire lugs or NEMA KS 1, heavy-duty, nonfused disconnect switch.

F. Factory Wiring: Branch power circuit to each motor and to controls with one of the following disconnecting means:

1. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
2. NEMA KS 1, heavy-duty, nonfusible switch.
3. UL 489, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.

G. Factory-Mounted, Overcurrent-Protection Service: For each motor.

H. Transformer: Factory mounted with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.

I. Controls: Factory wire unit-mounted controls where indicated.

J. Lights: Factory wire unit-mounted lights.

K. Receptacle: Factory wire unit-mounted, ground fault interrupt (GFI) duplex receptacle.

L. Control Relays: Auxiliary and adjustable time-delay relays.

2.14 CONTROLS

A. Control equipment and sequence of operation are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

B. Control Valves: Comply with requirements in Section 230923.11 "Control Valves."

C. Control Wiring: Factory wire connection for controls' power supply.

D. Control Devices: Sensors, transmitters, relays, switches, detectors, operators, actuators, and valves shall be manufacturer's standard items to accomplish indicated control functions.

E. As directed, Remote or Unit-Mounted Status Panel:

1. Cooling/Off/Heating Controls: Control operational mode.
2. Damper Position: Indicate position of outdoor-air dampers in terms of percentage of outdoor air.
3. Status Lights:

    a. Filter dirty.
    b. Fan operating.
    c. Cooling operating.
    d. Heating operating.
    e. Smoke alarm.
    f. General alarm.

4. Digital Numeric Display:

    a. Outdoor airflow.
    b. Supply airflow.
    c. Outdoor dry-bulb temperature.
    d. Outdoor dew point temperature.
    e. Space temperature.
    f. Supply temperature.
    g. Space relative humidity.
    h. Space carbon dioxide level

F. Control Dampers:

1. Damper Location: Factory installed inside unit for ease of blade axle and bushing service. Arrange dampers located in a mixing box to achieve convergent airflow to minimize stratification.
2. Damper Leakage: Comply with requirements in AMCA 500-D. Leakage shall not exceed 6.5 cfm per sq. ft. (33 L/s per sq. m) at a static-pressure differential of 4.0 inches water column (1000 Pa) when a torque of 5 inch pounds per sq. ft. (30.1 Newton meters per sq. m) is applied to the damper jackshaft.
3. Damper Rating: Rated for close-off pressure equal to the fan shutoff pressure.
4. Damper Label: Bear the AMCA seal for both air leakage and performance.
5. Blade Configuration: Unless otherwise indicated, use parallel blade configuration for two-position control and equipment isolation service and use modulating control when mixing two airstreams. For other applications, use an opposed-blade configuration.
6. Damper Frame Material: As directed, Extruded aluminum, galvanized steel or stainless steel.
7. Blade Type: Single-thickness metal reinforced with multiple V-grooves or hollow-shaped airfoil.
8. Blade Material: As directed, Extruded aluminum, galvanized steel or stainless steel.
9. Maximum Blade Width: 6 inches (150 mm).
10. Maximum Blade Length: 48 inches (1200 mm).
11. Blade Seals: Replaceable, continuous perimeter vinyl seals and jambs with stainless-steel compression-type seals.
12. Bearings: Thrust bearings for vertical blade axles.
13. Airflow Measurement:

    a. Monitoring System: Complete and functioning system of airflow monitoring as an integral part of the damper assembly where indicated.
    b. Remote Monitoring Signal: 0-10 volt or 4-20 mA scaled signal.
    c. Accuracy of flow measurement: As directed, Within 5 or 10 percent of the actual flow rate between the range of the scheduled minimum and maximum airflow. For units with a large range between minimum and maximum airflow, configure the damper sections and flow measurement assembly as necessary to comply with accuracy.
    d. Straightening Device: Integral to the flow measurement assembly if required to achieve the specified accuracy as installed.
    e. Flow measuring device: Suitable for operation in untreated and unfiltered outdoor air. If necessary, include temperature and altitude compensation and correction to maintain the accuracy.

G. Damper Operators:

1. Factory-installed electric operator for each damper assembly with one operator for each damper assembly mounted to the damper frame.
2. Operator capable of shutoff against fan pressure and able to operate the damper with sufficient reserve power to achieve smooth modulating action and proper speed of response at the velocity and pressure conditions to which the damper is subjected.
3. Maximum Operating Time: As directed, Open or close damper 90 degrees in 60 or 90 seconds.
4. Adjustable Stops: For both maximum and minimum positions.
5. Position Indicator and Graduated Scale: Factory installed on each actuator with words "OPEN" and "CLOSED," or similar identification, at travel limits.
6. Spring-return operator to fail-safe; either closed or open as required by application.
7. Operator Type: Direct coupled, designed for minimum 60,000 full-stroke cycles at rated torque.
8. Position feedback Signal: For remote monitoring of damper position.
9. Coupling: V-bolt and V-shaped, toothed cradle.
10. Circuitry: Electronic overload or digital rotation-sensing circuitry.

H. Refrigeration System Controls:

1. Unit-mounted enthalpy controller shall lock out refrigerant system when outdoor-air enthalpy is less than 28 Btu/lb (65 kJ/kg) of dry air or outdoor-air temperature is less than 60 deg F (15 deg C).
2. Outdoor-air sensor de-energizes dehumidifier operation when outdoor-air temperature is less than 60 deg F (15 deg C).
3. Relative-humidity sensor energizes dehumidifier operation when relative humidity is more than 50 percent.

I. Furnace Controls:

1. As directed, Factory-mounted sensor in supply outlet or Remote sensor for field installation in supply-air duct with sensor adjustment located in control panel to modulate gas furnace burner to maintain space temperature.
2. As directed, Wall-mounted, space-temperature sensor with temperature adjustment, unit-mounted temperature adjustment or adjustment on remote-control panel to modulate gas furnace burner to maintain space temperature.
3. Remote Setback: Adjustable room thermostat selected by timer, set at 50 deg F (10 deg C); cycles supply fan and gas furnace burner to maintain space temperature.
4. Staged Burner Control: As directed, Two or Four steps of control.
5. Electromechanical or Electronic Burner Control: 20 to 100 percent modulation of the firing rate; 10 to 100 percent with dual-furnace units.

J. Electric-Resistance Heat Controls:

1. As directed, Factory-mounted sensor in unit discharge or Remote sensor for field installation in supply-air duct with sensor adjustment located in control panel to control electric coil to maintain temperature.
2. As directed, Wall-mounted, space-temperature sensor with temperature adjustment, unit-mounted temperature adjustment or adjustment on remote-control panel to control electric coil to maintain temperature.

3. Capacity Controls: As directed, On/off, Multiple steps or Modulating SCR.

K. Hot-Water Coil Controls: As directed, Factory-mounted sensor in unit discharge or Remote sensor for field installation in supply-air duct with sensor adjustment located in control panel to modulate factory-mounted or furnished coil control valve to maintain temperature.

L. Hot-Water Coil Controls: Space-temperature sensor with temperature adjustment, unit-mounted temperature adjustment or adjustment on remote-control panel to modulate factory-mounted or furnished coil control valve to maintain temperature.

M. Damper Controls: Space pressure sensor modulates outdoor- and return-air dampers to maintain a positive pressure in space at a minimum of 0.05 inch wg (12.4 Pa) with respect to outdoor reference.

N. Integral Smoke Alarm: Smoke detector installed in supply and return air.

O. DDC Temperature Control: Standalone control module for link between unit controls and DDC temperature-control system. Control module shall be compatible with control system specified in Section 230923 "Direct Digital Control (DDC) System for HVAC." Links shall include the following:

1. Start/stop interface relay, and relay to notify DDC temperature-control system alarm condition.
2. Hardware interface or additional sensors for the following:

    a. Room temperature.
    b. Discharge-air temperature.
    c. Refrigeration system operating.
    d. Furnace operating.
    e. Constant and variable motor loads.
    f. Variable-frequency-controller operation.
    g. Cooling load.
    h. Economizer cycles.
    i. Air-distribution static pressure and ventilation-air volumes.

P. Interface with DDC System for HVAC: Factory-installed hardware and software to enable the DDC system for HVAC to monitor, control, and display unit status and alarms.

1. Hardwired Points:

    a. Monitoring: On-off status, common trouble alarm.
    b. Control: As directed, On-off operation, space temperature set-point adjustment, supply temperature set-point adjustment, space humidity set-point adjustment or space pressure set-point adjustment.

2. As directed, ASHRAE 135 (BACnet), LonTalk, Modbus or Industry-accepted, open-protocol communication interface with the DDC system for HVAC shall enable the DDC system for HVAC operator to remotely control and monitor the unit from an operator workstation. Control features and monitoring points displayed locally at unit control panel shall be available through the DDC system for HVAC.

2.15 ACCESSORIES

A. Service Lights and Switch: As directed, Factory installed in fan section, fan and coil sections or each accessible section with weatherproof cover. Factory wire lights to a single-point field connection.

B. Duplex Receptacle: Factory mounted in unit supply-fan section and refrigeration section, with 20 amp 120 V GFI duplex receptacle and weatherproof cover.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Comply with manufacturer's rigging and installation instructions for unloading units and moving to final locations.

B. Curb Support: Install roof curb on roof structure according to "The NRCA Roofing Manual."

1. Install and secure units on curbs and coordinate roof penetrations and flashing with roof construction.
2. Coordinate size, installation, and structural capacity of roof curbs, equipment supports, and roof penetrations. These items are specified in Section 077200 "Roof Accessories."
3. Coordinate size, location, and installation of unit manufacturer's roof curbs and equipment supports with roof Installer.

C. Restrained Curb Support: Install restrained vibration isolation roof-curb rails on roof structure according to "The NRCA Roofing Manual."

D. Equipment Mounting:

1. Install air units on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" As directed
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

E. Suspended Units: Suspend and brace units from structural-steel support frame using threaded steel rods and spring hangers. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" As directed.

F. Install wall- and duct-mounted sensors furnished by manufacturer for field installation. Install control wiring and make final connections to control devices and unit control panel.

G. Install 3000-psi (20.7-MPa), compressive-strength (28-day) concrete base inside roof curb, 4 inches (100 mm) thick. Concrete and reinforcement are specified with concrete.

H. Comply with requirements for gas-fired furnace installation in NFPA 54, "National Fuel Gas Code."

I. Install separate devices furnished by manufacturer and not factory installed.

J. Install new filters at completion of equipment installation and before testing, adjusting, and balancing.

K. Install drain pipes from unit drain pans to sanitary drain.

1. Drain Piping: Drawn-temper copper water tubing complying with ASTM B88, Type L (ASTM B88M, Type B), with soldered joints.
2. Drain Piping: Schedule 40 PVC pipe complying with ASTM D1785, with solvent-welded fittings.
3. Pipe Size: Same size as condensate drain pan connection.

3.2 CONNECTIONS

A. Where installing piping adjacent to units, allow space for service and maintenance.

B. Gas Piping Connections:

1. Comply with requirements in Section 231123 "Facility Natural-Gas Piping" or Section 231126 "Facility Liquefied-Petroleum Gas Piping" As directed.
2. Connect gas piping to furnace, full size of gas train inlet, and connect with union, pressure regulator, and shutoff valve with sufficient clearance for burner removal and service.
3. Install AGA-approved flexible connectors.

C. Hydronic Piping Connections:

1. Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."
2. Install shutoff valve and union or flange on each supply connection and install balancing valve and union or flange on each return connection.

D. Duct Connections:

1. Comply with requirements in Section 233113 "Metal Ducts."
2. Drawings indicate the general arrangement of ducts.
3. Connect ducts to units with flexible duct connectors. Comply with requirements for flexible duct connectors in Section 233300 "Air Duct Accessories."

E. Electrical Connections: Comply with requirements for power wiring, switches, and motor controls in electrical Sections.

1. Install electrical devices furnished by unit manufacturer but not factory mounted.

3.3 STARTUP SERVICE

A. As directed, Engage a factory-authorized service representative to perform or Perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. Inspect units for visible damage to furnace combustion chamber.
3. Perform the following operations for both minimum and maximum firing and adjust burner for peak efficiency:

    a. Measure gas pressure at manifold.
    b. Measure combustion-air temperature at inlet to combustion chamber.
    c. Measure flue-gas temperature at furnace discharge.
    d. Perform flue-gas analysis. Measure and record flue-gas carbon dioxide and oxygen concentration.
    e. Measure supply-air temperature and volume when burner is at maximum firing rate and when burner is off. Calculate useful heat to supply air.

4. Verify operation of remote panel including pilot-light operation and failure modes. Inspect the following:

    a. High-limit heat exchanger.
    b. Alarms.

5. Inspect units for visible damage to refrigerant compressor, condenser and evaporator coils, and fans.
6. Start refrigeration system when outdoor-air temperature is within normal operating limits and measure and record the following:

    a. Cooling coil leaving-air, dry- and wet-bulb temperatures.
    b. Cooling coil entering-air, dry- and wet-bulb temperatures.
    c. Condenser coil entering-air dry-bulb temperature.
    d. Condenser coil leaving-air dry-bulb temperature.

7. Simulate maximum cooling demand and inspect the following:

    a. Compressor refrigerant suction and hot-gas pressures.
    b. Short-circuiting of air through outside coil or from outside coil to outdoor-air intake.

8. Inspect casing insulation for integrity, moisture content, and adhesion.
9. Verify that clearances have been provided for servicing.
10. Verify that controls are connected and operable.
11. Verify that filters are installed.
12. Clean coils and inspect for construction debris.
13. Clean furnace flue and inspect for construction debris.
14. Inspect operation of power vents.
15. Purge gas line.
16. Inspect and adjust vibration isolators and seismic restraints.
17. Verify bearing lubrication.

18. Clean fans and inspect fan-wheel rotation for movement in correct direction without vibration and binding.
19. Adjust fan belts to proper alignment and tension.
20. Start unit.
21. Inspect and record performance of interlocks and protective devices including response to smoke detectors by fan controls and fire alarm.
22. Operate unit for run-in period.
23. Calibrate controls.
24. Adjust and inspect high-temperature limits.
25. Inspect outdoor-air dampers for proper stroke and interlock with return-air dampers.
26. Verify operational sequence of controls.
27. Measure and record the following airflows. Plot fan volumes on fan curve.

    a. Supply-air volume.
    b. Return-air flow.
    c. Outdoor-air flow.

B. After startup, change filters, verify bearing lubrication, and adjust belt tension.

C. Remove and replace components that do not properly operate and repeat startup procedures as specified above.

D. Prepare written report of the results of startup services.

3.4 ADJUSTING

A. Adjust initial temperature and humidity set points.

B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

C. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

END OF SECTION 237433

SECTION 238113.11 - PACKAGED TERMINAL AIR-CONDITIONERS, THROUGH-WALL UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes packaged, terminal, through-the-wall air conditioners.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: For packaged, terminal air conditioners.

1. Include plans, elevations, sections, details for wall penetrations, seismic bracing, and attachments to other work.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

C. Color Samples: For unit cabinet, discharge grille, and exterior louver, and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of packaged, terminal air conditioners that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Sealed Refrigeration System: Manufacturer's standard, but not less than five years from date of Substantial Completion, including components and labor.
2. Warranty Period for Nonsealed System Parts: Manufacturer's standard, but not less than five years from date of Substantial Completion, including only components and excluding labor.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 MANUFACTURED UNITS

A. Description: Factory-assembled and -tested, self-contained, packaged, terminal air conditioner with room cabinet, electric refrigeration system, heating, and temperature controls; fully charged with refrigerant and filled with oil; with cord-connected or hardwired chassis As directed.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Ventilation Rate Procedures," and Section 7 - "Construction and Startup."

D. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.

2.3 CHASSIS

A. Cabinet: As directed, 0.052-inch- (1.3-mm-) thick galvanized or powder-coated steel with removable front panel with concealed latches.

1. Mounting: As directed, Wall with wall sleeve or Floor with subbase.
2. Top: As directed, Angled or Flat.
3. Discharge Grille: As directed, Punched-louver discharge grille allowing four-way discharge-air pattern, Extruded-aluminum discharge grille or Reversible-polycarbonate discharge grille allowing upward and horizontal airflow, tamperproof, and carrying a flame test rating in accordance with UL standard 494.
4. Louvers: As directed, Extruded aluminum with enamel finish, Stamped aluminum with clear-anodized finish, Stamped steel with enamel finish; white, bronze, brown or beige color.
5. Finish: As directed, Epoxy coating or Baked enamel.
6. Access Door: Hinged door in top of cabinet for access to controls.
7. Cabinet Extension: Matching cabinet in construction and finish, allowing diversion of airflow to adjoining room; with grille.
8. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
9. Subbase: Enameled steel with adjustable leveling feet and adjustable end plates, with factory-installed and -wired, fused disconnect switch and receptacle sized for unit.
10. Wall Sleeves: Galvanized steel with polyester finish, Galvanized steel with powder-coated paint, Molded polymer or Molded fiberglass-reinforced polyester.

B. Refrigeration System: Direct-expansion indoor coil with capillary restrictor and hermetically sealed scroll compressor with vibration isolation and overload protection.

1. Indoor and Outdoor Coils: Seamless copper tubes mechanically expanded into aluminum fins with capillary tube distributor on indoor coil.
2. Accumulator.
3. Constant-pressure expansion valve.
4. Reversing valve.
5. Charge: As directed, R-407C or R-410A.

C. Indoor Fan: Forward curved, centrifugal; with motor and positive-pressure ventilation damper with concealed manual or electric operator as directed.

D. Filters: Washable polyurethane in molded plastic frame.

E. Condensate Drain: Drain pan to direct condensate to outdoor coil for re-evaporation and piping to direct condensate to building waste and vent piping.

1. Comply with ASHRAE 62.1 for drain pan construction and connections.

F. Outdoor Fan: As directed, forward curved, centrifugal, Propeller or Forward curved, centrifugal or propeller type with separate or driven by indoor fan motor.

1. Indoor and Outdoor Fan Motors: Two speed; comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

a. Fan Motors: Permanently lubricated split capacitor.
b. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
c. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.

2.4 HEATING

A. Electric-Resistance Heating Coil: Nickel-chromium-wire, electric-resistance heating elements with contactor and high-temperature-limit switch.

2.5 CONTROLS

A. Control Module: Unit-mounted digital panel with touchpad temperature control and with touchpad for heating, cooling, and fan operation. Include the following features:

1. Low-Ambient Lockout Control: Prevents cooling-cycle operation below 40 deg F (5 deg C) outdoor air temperature.
2. Heat-Pump Ambient Control: Field-adjustable switch changes to heat-pump heating operation above 40 deg F (5 deg C) and to supplemental heating below plus 25 deg F (minus 4 deg C).
3. Temperature-Limit Control: Prevents occupant from exceeding preset setback or setup temperature.
4. Reverse-Cycle Defrost: Solid-state sensor monitors frost buildup on indoor or outdoor coil and reverses unit to melt frost as directed.

B. Remote Control: Standard unit-mounted controls with remote-mounted, low-voltage, adjustable thermostat with heat anticipator; heat-off-cool-auto or heat-off-cool switch as directed; and on-auto fan switch.

C. Outdoor Air: Motorized intake damper. Open intake when unit indoor-air fan runs.

D. Outdoor Air: Manual intake damper.

2.6 CAPACITIES AND CHARACTERISTICS

A. Airflow: As directed.

B. Outdoor-Air Intake Rate: As directed.

C. Cooling Capacity:

1. Total: As directed.
2. Sensible: As directed.
3. Energy-Efficiency Ratio: As directed.
4. Indoor Coil Entering-Air Dry Bulb Temperature: As directed.
5. Indoor Coil Entering-Air Wet Bulb Temperature: As directed.
6. Indoor Coil Leaving-Air Dry Bulb Temperature: As directed.
7. Indoor Coil Leaving-Air Wet Bulb Temperature: As directed.
8. Outdoor Coil Entering-Air Temperature: As directed.

D. Heat-Pump Capacity:

1. Total: As directed.
2. Outdoor Temperature: As directed.

E. Electric Heat Capacity: As directed.

F. Sound:

1. Indoor: As directed.
2. Outdoor: As directed.

G. Electrical Characteristics:

1. Volts: As directed.
2. Phase: As directed, Single or Three.
3. Hertz: 60.
4. Full-Load Amperes: As directed.
5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection: As directed.

2.7 SOURCE QUALITY CONTROL

A. Sound-Power Level Ratings: Factory test to comply with AHRI 300, "Sound Rating and Sound Transmission Loss of Packaged Terminal Equipment."

B. Unit Performance Ratings: Factory test to comply with AHRI 310/380/CSA C744, "Packaged Terminal Air-Conditioners and Heat Pumps."

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install units level and plumb, maintaining manufacturer's recommended clearances and tolerances.

B. Install wall sleeves in finished wall assembly; seal and weatherproof. Joint-sealant materials and applications are specified in Section 079200 "Joint Sealants."

C. Install and anchor wall sleeves to withstand, without damage to equipment and structure, seismic forces required by building code.

3.2 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Inspect for and remove shipping bolts, blocks, and tie-down straps.
2. After installing packaged, terminal air conditioners and after electrical circuitry has been energized, test for compliance with requirements.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Packaged, terminal air conditioners will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 238113.11

SECTION 238113.12 - PACKAGED TERMINAL AIR-CONDITIONERS, FREESTANDING UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes packaged, terminal, freestanding air conditioners.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Sustainable Design Submittals:
1.

C. Shop Drawings: For packaged, terminal air conditioners.

1. Include plans, elevations, sections, details for wall penetrations, seismic bracing, and attachments to other work.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

D. Color Samples: For unit cabinet, discharge grille, and exterior louver, and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of packaged, terminal air conditioners that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Sealed Refrigeration System: Manufacturer's standard, but not less than five years from date of Substantial Completion, including components and labor.

2. Warranty Period for Nonsealed System Parts: Manufacturer's standard, but not less than five years from date of Substantial Completion, including only components and excluding labor.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 MANUFACTURED UNITS

A. Description: Factory-assembled and -tested, self-contained, packaged, terminal air conditioner with room cabinet, electric refrigeration system, heating, and temperature controls; fully charged with refrigerant and filled with oil; with cord-connected or hardwired chassis as directed.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Ventilation Rate Procedures," and Section 7 - "Construction and Startup."

D. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.

2.3 CHASSIS

A. Cabinet: As directed, 0.052-inch- (1.32-mm-) thick galvanized or powder-coated steel with removable front panel with concealed latches.

1. Mounting: As directed, Floor with subbase, Horizontal or Vertical.
2. Top: As directed, Angled or Flat.
3. Discharge Grille: As directed, Punched-louver discharge grille allowing four-way discharge-air pattern, Extruded-aluminum discharge grille or Reversible-polycarbonate discharge grille allowing upward and horizontal airflow, tamperproof, and carrying a flame test rating in accordance with UL standard 494.
4. Louvers: As directed, Extruded aluminum with enamel finish, Stamped aluminum with clear-anodized finish, Stamped steel with enamel finish; white, bronze, brown or beige color.
5. Finish: As directed, Epoxy coating or Baked enamel.
6. Access Door: Hinged door in top of cabinet for access to controls.
7. Cabinet Extension: Matching cabinet in construction and finish, allowing diversion of airflow to adjoining room; with grille.
8. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
9. Subbase: Enameled steel with four adjustable leveling feet and adjustable end plates, with factory-installed and -wired, fused disconnect switch and receptacle sized for unit.

10. Wall Sleeves: As directed, Galvanized steel with polyester finish, Galvanized steel with powder coated paint, Molded polymer or Molded fiberglass-reinforced polyester.

B. Refrigeration System: Direct-expansion indoor coil with capillary restrictor and hermetically sealed scroll compressor with vibration isolation and overload protection.

1. Indoor and Outdoor Coils: Seamless copper tubes mechanically expanded into aluminum fins with capillary tube distributor on indoor coil.
2. Accumulator.
3. Constant-pressure expansion valve.
4. Reversing valve.
5. Charge: As directed, R-407C or R-410A.

C. Indoor Fan: Forward curved, centrifugal; with motor and positive-pressure ventilation damper with concealed manual or electric operator as directed.

D. Filters: Washable polyurethane in molded plastic frame.

E. Condensate Drain: Drain pan to direct condensate to outdoor coil for re-evaporation and piping to direct condensate to building waste and vent piping.

1. Comply with ASHRAE 62.1 for drain pan construction and connections.

F. Outdoor Fan: As directed, forward curved, centrifugal, Propeller, forward curved, centrifugal or propeller type with separate or driven by indoor fan motor.

1. Indoor and Outdoor Fan Motors: Two speed; comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

a. Fan Motors: Permanently lubricated split capacitor.
b. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
c. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.

2.4 HEATING

A. Electric-Resistance Heating Coil: Nickel-chromium-wire, electric-resistance heating elements with contactor and high-temperature-limit switch.

2.5 CONTROLS

A. Control Module: Unit-mounted digital panel with touchpad temperature control and with touchpad for heating, cooling, and fan operation. Include the following features:

1. Low-Ambient Lockout Control: Prevents cooling-cycle operation below 40 deg F (5 deg C) outdoor air temperature.

2. Heat-Pump Ambient Control: Field-adjustable switch changes to heat-pump heating operation above 40 deg F (5 deg C) and to supplemental heating below plus 25 deg F (minus 4 deg C).
3. Temperature-Limit Control: Prevents occupant from exceeding preset setback or setup temperature.
4. Reverse-Cycle Defrost: As directed, Solid-state sensor monitors frost buildup on indoor or outdoor coil and reverses unit to melt frost.

B. Remote Control: Standard unit-mounted controls with remote-mounted, low-voltage, adjustable thermostat with heat anticipator; As directed, heat-off-cool-auto or heat-off-cool switch; and on-auto fan switch.

C. Outdoor Air: Motorized intake damper. Open intake when unit indoor-air fan runs.

D. Outdoor Air: Manual intake damper.

2.6 CAPACITIES AND CHARACTERISTICS

A. Airflow: As directed.

B. Outdoor-Air Intake Rate: As directed.

C. Cooling Capacity:

1. Total: As directed.
2. Sensible: As directed.
3. Energy-Efficiency Ratio: As directed.
4. Indoor Coil Entering-Air Dry Bulb Temperature: As directed.
5. Indoor Coil Entering-Air Wet Bulb Temperature: As directed.
6. Indoor Coil Leaving-Air Dry Bulb Temperature: As directed.
7. Indoor Coil Leaving-Air Wet Bulb Temperature: As directed.
8. Outdoor Coil Entering-Air Temperature: As directed.

D. Heat-Pump Capacity:

1. Total: As directed.
2. Outdoor Temperature: As directed.

E. Electric Heat Capacity: As directed.

F. Sound:

1. Indoor: As directed.
2. Outdoor: As directed.

G. Electrical Characteristics:

1. Volts: As directed.
2. Phase: As directed, Single or Three.
3. Hertz: 60.
4. Full-Load Amperes: As directed.

5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection: As directed.

2.7 SOURCE QUALITY CONTROL

A. Sound-Power Level Ratings: Factory test to comply with AHRI 300, "Sound Rating and Sound Transmission Loss of Packaged Terminal Equipment."

B. Unit Performance Ratings: Factory test to comply with AHRI 310/380/CSA C744, "Packaged Terminal Air-Conditioners and Heat Pumps."

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install units level and plumb, maintaining manufacturer's recommended clearances and tolerances.

B. Install exterior louver in finished wall assembly; seal and weatherproof. Joint-sealant materials and applications are specified in Section 079200 "Joint Sealants."

C. Install and anchor exterior louver to withstand, without damage to equipment and structure, seismic forces required by building code.

3.2 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Inspect for and remove shipping bolts, blocks, and tie-down straps.
2. After installing packaged, terminal air conditioners and after electrical circuitry has been energized, test for compliance with requirements.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Packaged, terminal air conditioners will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 238113.12

SECTION 238113.13 - PACKAGED TERMINAL AIR-CONDITIONERS, OUTDOOR, WALL-MOUNTED UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes packaged, terminal, outdoor, wall-mounted air conditioners.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: For packaged, terminal air conditioners.

1. Include plans, elevations, sections, details for wall penetrations, seismic bracing, and attachments to other work.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

C. Color Samples: For unit cabinet, discharge grille, and exterior louver, and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of packaged, terminal air conditioners that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Sealed Refrigeration System: Manufacturer's standard, but not less than five years from date of Substantial Completion, including components and labor.
2. Warranty Period for Nonsealed System Parts: Manufacturer's standard, but not less than five years from date of Substantial Completion, including only components and excluding labor.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 MANUFACTURED UNITS

A. Description: Factory-assembled and -tested, self-contained, packaged, terminal air conditioner with room cabinet, electric refrigeration system, heating, and temperature controls; fully charged with refrigerant and filled with oil; with hardwired chassis and circuit breaker.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Ventilation Rate Procedures," and Section 7 - "Construction and Startup."

D. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.

2.3 CHASSIS

A. Cabinet: Sloped top, 0.052-inch- (1.32-mm-) thick steel or aluminum with removable front panel with concealed latches as directed.

1. Mounting: On exterior wall.
2. Discharge Grille: As directed, Extruded-aluminum discharge grille or Supply-air acoustical plenum.
3. Return Grille: As directed, Extruded-aluminum grille or Return-air acoustical plenum.
4. Louvers: As directed, Extruded aluminum with enamel finish or Stamped aluminum with clear-anodized finish; medium bronze or dark bronze color.
5. Finish: As directed, Epoxy coating or Baked enamel.
6. Access Door: Hinged door in top of cabinet for access to controls.
7. Cabinet Extension: Matching cabinet in construction and finish, allowing diversion of airflow to adjoining room; with grille.
8. Insulation: Cooling and heating sections fully insulated with 1-inch (25-mm)-thick fiberglass insulation.
9. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
10. Wall Sleeves: As directed, Galvanized steel with polyester finish, Molded polymer or Molded fiberglass-reinforced polyester.

B. Refrigeration System: Direct-expansion indoor coil with capillary restrictor and hermetically sealed scroll compressor with vibration isolation, and overload protection.

1. Indoor and Outdoor Coils: Seamless copper tubes mechanically expanded into aluminum fins with capillary tube distributor on indoor coil.
2. Accumulator.
3. Constant-pressure expansion valve.

4. Reversing valve.
5. Charge: As directed, R-407C or R-410A.

C. Indoor Fan: Forward curved, centrifugal; with motor and positive-pressure ventilation damper with concealed manual or electric operator as directed.

D. Filters: Washable polyurethane in molded plastic frame.

E. Condensate Drain: Coated galvanized-steel drain pan to direct condensate to outdoor coil for re-evaporation and piping to direct condensate to building waste and vent piping.

1. Comply with ASHRAE 62.1 for drain pan construction and connections.

F. Outdoor Fan: Forward curved, centrifugal, Propeller, forward curved, centrifugal, or propeller type with separate, driven by indoor fan motor As directed.

1. Indoor and Outdoor Fan Motors: Two speed; comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

a. Fan Motors: Permanently lubricated split capacitor.
b. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
c. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.

2.4 HEATING

A. Electric-Resistance Heating Coil: Nickel-chromium-wire, electric-resistance heating elements with contactor and high-temperature-limit switch.

2.5 CONTROLS

A. Control Module: Unit-mounted digital panel with touchpad temperature control and with touchpad for heating, cooling, and fan operation. Include the following features:

1. Low-Ambient Lockout Control: Prevents cooling-cycle operation below 40 deg F (5 deg C) outdoor air temperature.
2. Heat-Pump Ambient Control: Field-adjustable switch changes to heat-pump heating operation above 40 deg F (5 deg C) and to supplemental heating below plus 25 deg F (minus 4 deg C).
3. Temperature-Limit Control: Prevents occupant from exceeding preset setback or setup temperature.
4. Reverse-Cycle Defrost: Solid-state sensor monitors frost buildup on indoor or outdoor coil and reverses unit to melt frost.

B. Remote Control: Standard unit-mounted controls with remote-mounted, low-voltage, adjustable thermostat with heat anticipator; heat-off-cool-auto or heat-off-cool switch; and on-auto fan switch.

C. Outdoor Air: Motorized intake damper. Open intake when unit indoor-air fan runs.

D. Outdoor Air: Manual intake damper.

2.6 CAPACITIES AND CHARACTERISTICS

A. Airflow: As directed.

B. Outdoor-Air Intake Rate: As directed.

C. Cooling Capacity:

1. Total: As directed.
2. Sensible: As directed.
3. Energy-Efficiency Ratio: As directed.
4. Indoor Coil Entering-Air Dry Bulb Temperature: As directed.
5. Indoor Coil Entering-Air Wet Bulb Temperature: As directed.
6. Indoor Coil Leaving-Air Dry Bulb Temperature: As directed.
7. Indoor Coil Leaving-Air Wet Bulb Temperature: As directed.
8. Outdoor Coil Entering-Air Temperature: As directed.

D. Heat-Pump Capacity:

1. Total: As directed.
2. Outdoor Temperature: As directed.

E. Electric Heat Capacity: As directed.

F. Sound:

1. Indoor: As directed.
2. Outdoor: As directed.

G. Electrical Characteristics:

1. Volts: As directed.
2. Phase: As directed, Single or Three.
3. Hertz: 60.
4. Full-Load Amperes: As directed.
5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection: As directed.

2.7 SOURCE QUALITY CONTROL

A. Sound-Power Level Ratings: Factory test to comply with AHRI 300, "Sound Rating and Sound Transmission Loss of Packaged Terminal Equipment."

B. Unit Performance Ratings: Factory test to comply with AHRI 310/380/CSA C744, "Packaged Terminal Air-Conditioners and Heat Pumps."

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install units level and plumb, maintaining manufacturer's recommended clearances and tolerances.

B. Install wall sleeves in finished wall assembly; seal and weatherproof. Joint-sealant materials and applications are specified in Section 079200 "Joint Sealants."

C. Install and anchor wall sleeves to withstand, without damage to equipment and structure, seismic forces required by building code.

3.2 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Inspect for and remove shipping bolts, blocks, and tie-down straps.
2. After installing packaged, terminal air conditioners and after electrical circuitry has been energized, test for compliance with requirements.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Packaged, terminal air conditioners will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 238113.13

SECTION 238119 - SELF-CONTAINED AIR-CONDITIONERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes packaged, air-cooled air-conditioning units with refrigerant compressors and controls intended for indoor installations.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Shop Drawings:

1. Include plans, elevations, sections, and mounting or attachment details As directed.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
4. Include diagrams for power, signal, and control wiring.

D. Samples: For units with factory-applied color finishes.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Detail self-contained air-conditioners and adjacent equipment. Show support locations, type of support, weight on each support, required clearances, and other details, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Seismic Qualification Data: Certificates, for self-contained air-conditioners, accessories, and components, from manufacturer.

C. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: An NRTL.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of self-contained air-conditioners that fail in materials or workmanship within specified warranty period.

1. Warranty Period:

a. For Compressor: As directed, One or Five year(s) from date of Substantial Completion.
b. For Parts: As directed, One or Five year(s) from date of Substantial Completion.
c. For Labor: As directed, One or Five year(s) from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. ASHRAE Compliance:

1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."
2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Ventilation Rate Procedures," and Section 7 - "Construction and Startup."

C. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.

D. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design vibration isolation and seismic restraints, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

E. Seismic Performance: Self-contained air-conditioners shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: As directed, 1.5 or 1.0.

2.2 CAPACITIES AND CHARACTERISTICS

A. Cooling Capacity:

1. Total: As directed.
2. Sensible: As directed.
3. Seasonal Energy-Efficiency Ratio: As directed, 10.0, 12.0, 13.0, 14.0 or 16.0.
4. Energy-Efficiency Ratio: As directed, 10.0, 12.0, 13.0, 14.0 or 16.0.
5. Entering-Air Temperature:

    a. Dry Bulb: As directed.
    b. Wet Bulb: As directed.

6. Leaving-Air Temperature:

    a. Dry Bulb: As directed.
    b. Wet Bulb: As directed.

B. Heating Capacity:

1. Total: As directed.
2. Air-Temperature Rise: As directed.
3. Airflow:

    a. High: As directed.
    b. Low: As directed.

4. Electric Heat:

    a. Total Capacity: As directed, Btu/h (kW).
    b. Air-Temperature Rise: As directed, deg F (deg C).
    c. Control Steps: As directed, One, Two or Three.

C. Supply-Air Fan:

1. Size: As directed.
2. Total Airflow:

    a. High: As directed.
    b. Low: As directed.

3. Outdoor Airflow: As directed.

D. Air-Cooled Condenser:

1. Number of Fans: As directed, Two or Four.
2. Motor Speed: As directed, rpm.
3. Motor Horsepower (Watts): hp (W).
4. Ambient Temperature: As directed, deg F (deg C).

E. Filters:

1. Type: As directed.
2. Face Dimensions, each: inches by inches (mm by mm).
3. Depth: As directed, inches (mm).
4. Numbers of Filters, Wide by High: As directed.
5. Maximum or Rated Face Velocity: As directed, fpm (m/s).
6. Initial Resistance: As directed, inches wg (Pa).
7. Recommended Final Resistance: As directed, inches wg (Pa).
8. Minimum Efficiency Reporting Value and Average Arrestance:

    a. MERV Rating: MERV 4, and corresponding average arrestance according to ASHRAE 52.2.

9. Minimum Efficiency Reporting Value:

    a. MERV Rating: As directed, MERV 6 or MERV 13, according to ASHRAE 52.2.

F. Accessories:

1. Manual outdoor-air damper.
2. Motorized outdoor-air damper.
3. Air-side economizer.
4. Hot-gas bypass.
5. Air Pressure Switch: Indicates when differential pressure exceeds set point representing dirty filters.

G. Single-Point Electrical Characteristics:

1. Volts: As directed, 120, 208, 230 or 460 V.
2. Phase: As directed, Single or Three.
3. Hertz: 60 Hz.
4. Full-Load Amperes: As directed.
5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection: As directed.

2.3 MANUFACTURERS

2.4 PACKAGED UNITS

A. Description: Factory assembled, wired, and tested; and fully charged with refrigerant and oil.

B. Configuration: Horizontal, ceiling-plenum mounted.

C. Configuration: Vertical, floor mounted; vertical and horizontal discharge.

D. Configuration: Horizontal, ceiling mounted and vertical, floor mounted; vertical and horizontal discharge.

E. Disconnect Switch: Factory mounted in control panel or on cabinet.

2.5 CABINET

A. Frame and Panels: Structural-steel frame with galvanized-steel panels and access doors or panels.

1. Exterior-Surface Finish: Factory painted in color selected by Architect.
2. Interior-Surface Finish: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Insulation: 1-inch- (25-mm-) thick, glass-fiber duct liner complying with ASTM C1091 and having a microbial coating on cabinet interior and control panel..

C. Return-Air Opening: Rear, open or flange for duct connection.

D. Corrosion-Resistant Treatment: As directed, None or Phenolic coating on unit interior and exterior.

2.6 Supply-air Fan

A. Fan Material: Galvanized steel.

B. Configuration: As directed, Double-width, double-inlet, forward-curved or airfoil centrifugal fan; statically and dynamically balanced. Vertical or Horizontal discharge with flexible discharge collar.

C. Drive: As directed, Belt, with permanently lubricated bearings, with greaseable bearings Direct, with fan and motor resiliently mounted.

D. Motor Type: As directed, Multispeed, permanent split case, Open-dripproof, Totally enclosed fan-cooled or Electronically commutated variable speed type.

E. Motor Sheave: As directed, Fixed or Variable and adjustable pitch, dynamically balanced, and selected to achieve specified rpm when set at midposition.

F. Fan Sheaves: As directed, Variable or Fixed pitch, dynamically balanced, bored to fit shafts, and keyed for initial startup.

G. Belt Rating: As recommended by manufacturer or a minimum of one and one-half times nameplate rating of motor.

H. Bearings: Grease lubricated with grease lines extended to exterior of unit with L-50 life at 200,000 hours.

I. Variable-Frequency Motor Controller: Comply with Section 262923 "Variable-Frequency Motor Controllers."

J. Variable-Frequency Motor Controller: Serving each fan.

1. Manufactured Units: Pulse-width modulated; constant torque and variable torque for Design A and Design B or inverter-duty motors As directed.

2. Output Rating: Three phase; 10 to 60 Hz, with voltage proportional to frequency throughout voltage range or 66 Hz, with torque constant as speed changes; maximum voltage equals input voltage.
3. Unit Operating Requirements:

    a. Internal Adjustability:

        1) Minimum Speed: 5 to 25 percent of maximum rpm.
        2) Maximum Speed: 80 to 100 percent of maximum rpm.
        3) Acceleration: 0.1 to 999.9 seconds.
        4) Deceleration: 0.1 to 999.9 seconds.
        5) Current Limit: 30 to minimum of 150 percent of maximum rating.

    b. Self-Protection and Reliability Features:

        1) Surge suppression.
        2) Loss of input signal protections.
        3) Under- and overvoltage trips.
        4) Variable-frequency motor controller and motor-overload/overtemperature protection.
        5) Critical frequency rejection.
        6) Loss-of-phase protection.
        7) Reverse-phase protection.
        8) Motor-overtemperature fault.

    c. Bidirectional autospeed search.
    d. Torque boost.
    e. Motor temperature compensation at slow speeds.

        1) Panel-mounted operator station.
        2) Historical logging information and displays.
        3) Digital indicating devices.

    f. Control Signal Interface: Electric.
    g. Proportional Integral Derivative control interface.
    h. DDC system for HVAC Protocols for Network Communications: ASHRAE 135.

4. Line Conditioning:

    a. Input line conditioning.
    b. Output filtering.
    c. EMI/RFI filtering.

5. Bypass Systems:

    a. Bypass Mode: As directed, Manual operation only or Field-selectable automatic or manual.
    b. Bypass Controller: Two-contactor style, with bypass and output isolating contactors and isolating switch.
    c. Bypass Controller: Three-contactor style, with bypass and input and output isolating contactors and isolating switch.

d. Bypass Contactor Configuration: As directed, Full-voltage (across the line) or Reduced-voltage (autotransformer) type.

K. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Special Motor Features: Premium efficiency, as defined in Section 230513 "Common Motor Requirements for HVAC Equipment."

L. Isolation: Mount fan and motor on common subbase and mount assembly on spring isolators with minimum static deflection of 1 inch (25 mm).

M. Outdoor-Air-Intake Accessories:

1. Barometric Outdoor-Air Damper: Adjustable-blade damper allowing induction of up to 25 percent outdoor air when evaporator fan is running.
2. Motorized Outdoor-Air Damper: Motorized, two-position blade damper allowing induction of up to 25 percent outdoor air; with spring-return, low-voltage damper motor.
3. Energy-Recovery Ventilator: Assembly of desiccant-coated, heat-recovery wheels and centrifugal exhaust fans to transfer approximately 67 percent of the difference between the sensible and latent heat of outdoor and exhaust air; with type and depth filter as directed, on outside-air inlet side to keep ventilator clean.
4. Air-Side Economizer: Damper assembly allowing induction of up to 100 percent outdoor air to maintain a selected mixed-air temperature; and exhaust damper and spring-return, low-voltage, modulating damper motor with minimum position adjustment.

2.7 REFRIGERATION SYSTEM

A. Compressor: Scroll type, hermetically sealed, 3600 rpm maximum, and resiliently mounted with positive lubrication and internal motor protection.

B. Refrigerant Coils Indoor and Outdoor for Air-Cooled Units: Seamless copper tubes expanded into aluminum fins.

1. Corrosion-Resistant Treatment: Phenolic coating applied with multiple coating dips and baked.
2. Refrigerant Circuits: A separate circuit for each compressor, with externally equalized thermal-expansion valve with adjustable superheat, filter dryer, sight glass, high-pressure relief valve, and charging valves.
3. Mount coil assembly over sloped, stainless-steel drain pan complying with ASHRAE 62.1 and having a condensate pump unit with integral float switch, pump-motor assembly, and condensate reservoir.
4. Refrigerant: R-407C or R-410A.
5. Refrigerant dryer.
6. High-pressure switch.
7. Low-pressure switch.
8. Thermostat for coil freeze-up protection during low ambient temperature operation or loss of air.

9. Low ambient temperature switch.
10. Brass service valves installed in discharge and liquid lines.

2.8 Heating Coil

A. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements with refractory ceramic support bushings; automatic-reset thermal cutout; built-in magnetic contactors; manual-reset thermal cutout; airflow-proving device; and one-time fuses in terminal box for overcurrent protection.

2.9 CONTROLS

A. Control equipment and sequence of operation are specified in Section 230923 "Direct-Digital Control System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

B. Control Package: Factory wired, including contactor, high- and low-pressure cutouts, internal-winding thermostat for compressor, control-circuit transformer, and noncycling reset relay.

1. System Selector Switch: As directed, Heat-off-cool or Off-heat-auto-cool.
2. Adjustable Thermostat: As directed, Unit mounted or Remote to control the following:

    a. Supply fan.
    b. Compressor.
    c. Condenser.
    d. Electric heater.

3. Time-Delay Relay: Delay in starting lag compressor to prevent power demand surges.
4. Antirecycle Timer: Locks out the compressor for an interval of time to prevent rapid starting and stopping.

C. Control Package:

1. Microprocessor Control Panel: Controls unit functions as standalone, full BAS communication via BACnet MS/TP, full BAS communication via BACnet/IP, full BAS communication via LON or full BAS communication via MODBUS As directed, including refrigeration and safety controls, with unit-mounted display, and the following:

    a. Supply fan.
    b. Supply-fan motor speed.
    c. Compressors.
    d. Air-cooled condenser.
    e. Cooling tower pump.
    f. Multistep, electric heater.
    g. Time-of-day control to cycle unit on and off.
    h. Night-heat, morning warm-up cycle.
    i. Economizer control.
    j. Panel-mounted control switch to operate unit in remote or local control mode or to stop or reset.
    k. Panel-mounted indication of the following:

1) Operating status.
2) System diagnostics and safety alarms.
3) Supply-air temperature set point.
4) Zone heating-temperature set point.
5) Supply-air pressure set point.
6) Economizer minimum position set point.
7) Supply-air-pressure, high-limit set point.

2.10 SOURCE QUALITY CONTROL

A. AHRI Compliance:

1. AHRI 210/240 Certification: Units and their components shall be factory tested according to AHRI 210/240 and shall be listed and labeled by AHRI.
2. AHRI 340/360 Certification: Units and their components shall be factory tested according to AHRI 340/360 and shall be listed and labeled by AHRI.
3. AHRI 390 Certification: Units and their components shall be factory tested according to AHRI 390 and shall be listed and labeled by AHRI.

B. ETL listed.

C. Refrigerant Coils: Factory tested to minimum 450-psig (3100-kPa) internal pressure and to minimum 300-psig (2070-kPa) internal pressure while underwater, according to AHRI 410 and ASHRAE 33.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Equipment Mounting:

1. Install air-handling units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" As directed
2. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork are specified in Section 033000 "Cast-in-Place Concrete."
3. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
4. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548.13 "Vibration Controls for HVAC."

B. Suspended Units: Suspend and brace units from structural-steel support frame using threaded steel rods and spring hangers. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" As directed.

C. Arrange installation of units to provide access space around units for service and maintenance.

D. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing, with new, clean filters.

E. Connect duct to units with flexible connections. Comply with requirements in Section 233300 "Air Duct Accessories."

F. Duct Connections: Duct installation requirements are specified in Section 233113 "Metal Ducts." Drawings indicate the general arrangement of ducts. Connect supply and return ducts to self-contained air-conditioners with flexible duct connectors. Flexible duct connectors are specified in Section 233300 "Air Duct Accessories."

3.2 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect condensate drain pans using NPS 1-1/4 (DN 32), ASTM B88, Type M (ASTM B88M, Type C) copper tubing. Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.

C. Refrigerant Piping: Comply with applicable requirements in Section 232300 "Refrigerant Piping." Install shutoff valve and union or flange at each supply and return connection.

D. Where installing piping adjacent to equipment, allow space for service and maintenance.

E. Connect piping to units mounted on vibration isolators with flexible connectors.

3.3 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.

D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

3.4 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Charge refrigerant coils with refrigerant and test for leaks.
2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Units will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.6 ADJUSTING

A. Adjust damper linkages for proper damper operation.

B. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing unit.

3.7 CLEANING

A. After completing system installation and testing, adjusting, and balancing unit and after completing startup service, clean units internally to remove foreign material and construction dirt and dust. Clean fan wheels, cabinets, dampers, coils, and filter housings; install new, clean filters.

END OF SECTION 238119

SECTION 238123.11 – SMALL CAPACITY (6 TONS (21 KW) AND SMALLER), COMPUTER-ROOM AIR-CONDITIONERS, FLOOR-MOUNTED UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes floor-mounted, computer-room air conditioners of 6 tons (21 kW) and smaller.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For computer-room air conditioners.

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

D. Color Samples: For unit cabinet, discharge grille, and exterior louver and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans, elevations, and other details, drawn to scale, using input from installers of the items involved.

B. Seismic Qualification Data: Certificates, for computer-room air conditioners, accessories, and components, from manufacturer.

C. Field quality-control reports.

D. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of computer-room air conditioners that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Compressors: Manufacturer's standard, but not less than five or 10 years from date of Substantial Completion As directed.
2. Warranty Period for Humidifiers: Manufacturer's standard, but not less than three years from date of Substantial Completion.
3. Warranty Period for Control Boards: Manufacturer's standard, but not less than three years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Computer-room air conditioners shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. ASHRAE Compliance:

1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."
2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Ventilation Rate Procedures," and Section 7 - "Construction and Startup."

D. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.

E. ASME Compliance: Fabricate and label water-cooled condenser shell to comply with ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1.

2.3 MANUFACTURED UNITS

A. Description: Self-contained, factory assembled, prewired, and prepiped; consisting of cabinet, fan, filters, and controls; for vertical floor mounting in upflow or downflow configuration.

B. Cabinet and Frame: Welded tubular-steel frame with removable steel panels with baked-enamel finish, insulated with 1-inch- (25-mm-) thick duct liner.

1. Floor Stand: Welded tubular steel, required height high as directed, with adjustable legs and vibration isolation pads with turning vanes mounted within the stand.
2. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
3. As directed, Unit with two, three or four-way, powder-coated insulated air distribution plenum.

C. Supply-Air Fan: Forward curved, centrifugal, and with adjustable V-belt drive.

D. Refrigeration System:

1. Compressor: Digital Scroll, variable capacity, with oil strainer, internal motor overload protection, resilient suspension system, and crankcase heater.
2. Refrigeration Circuit:

    a. Low-pressure switch.
    b. Manually reset, high-pressure switch.
    c. Thermal-expansion valve with external equalizer.
    d. Sight glass with moisture indicator.
    e. Service shutoff valves.
    f. Charging valves.
    g. Hot-gas bypass.
    h. Refrigerant charge.

3. Refrigerant: As directed, R-407C or R-410A.
4. Refrigerant Evaporator Coil: Direct-expansion coil of seamless copper tubes expanded into aluminum fins, with two circuits, each with solenoid valve.
5. Refrigerant line sets.
6. Refrigerant line-sweat-adapter kit to permit field brazing of refrigerant lines.

    a. Mount stainless-steel drain pan complying with ASHRAE 62.1 and having a condensate pump unit with integral float switch, pump-motor assembly, and condensate reservoir under coil assembly.

7. Remote Air-Cooled Refrigerant Condenser:

    a. Integral, copper-tube aluminum-fin coil.
    b. Condenser with surge protection device (SPD) and locking disconnect in the enclosed electrical panel section.

8. Fan: As directed, Direct-drive, single or variable-speed propeller type.
9. Fan: Belt-drive, single propeller type.
10. Fan: As directed, Direct-drive, single or variable-speed centrifugal type.
11. Fan: Belt-drive, single-speed centrifugal type.
12. Split system shall have suction- and liquid-line compatible fittings and refrigerant piping for field interconnection.

E. Electric-Resistance Reheat Coil:

1. Finned-tube electric elements with contactor and high-temperature-limit switches.
2. SCR to proportionally control the reheat elements providing precise temperature control.

F. Pre-Filter: As directed, 2-inch- (50-mm-) or 4-inch- (100-mm-)] thick, disposable, pleated, glass-fiber media.

G. Filter: As directed, 2-inch- (50-mm-) or 4-inch- (100-mm-) thick, disposable, pleated, glass-fiber media.

1. Initial Resistance: Inches wg (Pa) As directed.
2. Recommended Final Resistance: Inches wg (Pa) As directed.
3. Pre-Filter Minimum Efficiency Reporting Value and Average Arrestance:

    a. MERV Rating: As directed, MERV 1, MERV 2, MERV 3 or MERV 4 and corresponding average arrestance according to ASHRAE 52.2.

4. Pre-Filter Minimum Efficiency Reporting Value:

    a. MERV 6 according to ASHRAE 52.2.

5. Filter Minimum Efficiency Reporting Value:

    a. MERV Rating: As directed, MERV 6 or MERV 13 according to ASHRAE 52.2.

H. Electrode Steam Humidifier: Self-contained, microprocessor-controlled unit with disposable, polypropylene-plastic cylinders and having field-adjustable steel electrodes and stainless-steel steam dispersion tube.

1. Plumbing Components and Valve Bodies: Plastic, linked by flexible rubber hosing, with water fill with air gap and solenoid valve incorporating built-in strainer, pressure-reducing and flow-regulating orifice, and drain with integral air gap.
2. Control: Fully modulating to provide gradual modulation from zero to 100 percent capacity with field-adjustable maximum capacity; with high-water probe.
3. Drain Cycle: Field-adjustable drain duration and drain interval.

I. Disconnect Switch: As directed, Locking or Non-locking disconnect with handle accessible with the door closed.

J. Disconnect Switch: Non-locking, non-automatic, molded-case circuit breaker with handle accessible when panel is closed and capable of preventing access until switched to off position.

K. Control System:

1. As directed, Microprocessor unit or remote-mounted panel.
2. Fan contactor.
3. Compressor contactor.
4. Compressor start capacitor.
5. Control transformer with circuit breaker.
6. Solid-state temperature- and humidity-control modules.
7. Humidity contactor.
8. Time-delay relay.
9. Heating contactor.
10. Smoke sensor.
11. High-temperature thermostat.

12. As directed, Solid-state, wall-mounted control panel with start-stop switch, adjustable humidity set point, remote temperature sensors or remote humidity sensors and adjustable temperature set point.
13. Remote panel to monitor and change temperature and humidity set points and sensitivities of the unit and unit alarms.

L. Fan Motors:

1. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
2. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load does not require motor to operate in service factor range above 1.0.
3. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.

2.4 CAPACITIES AND CHARACTERISTICS

A. Unit Configuration: As directed, Draw or Blow through.

B. Supply-Air Fan:

1. Number of Fans: As directed, One or Two.
2. Airflow: As directed.
3. Minimum Static Pressure: As directed.
4. Motor Size: As directed, hp.

C. Refrigeration System:

1. Unit Energy Efficiency: As directed, COP or EER.
2. Refrigerant Compressor:

    a. Total Unit Cooling Capacity: As directed.
    b. Sensible Unit Cooling Capacity: As directed.
    c. Number of Compressors: As directed, One or Two.
    d. Motor Size: As directed, hp.

3. Refrigerant Evaporator Coil:

    a. Cooling Capacity: As directed.
    b. Entering-Air Dry-Bulb Temperature: As directed.
    c. Entering-Air Wet-Bulb Temperature: As directed.
    d. Leaving-Air Dry-Bulb Temperature: As directed.
    e. Leaving-Air Wet-Bulb Temperature: As directed.

4. Air-Cooled Refrigerant Condenser:

    a. Cooling Capacity: As directed.
    b. Entering-Air Temperature: As directed.

c. Number of Condenser Fan Motors: As directed.
d. Condenser Fan Motors: As directed, hp.

D. Electric-Resistance Reheating Coil:

1. Total Capacity: As directed.
2. Stages of Heating: As directed, 1 or 2.

E. Humidifier:

1. Total: As directed.
2. Input: As directed.

F. Electrical Characteristics:

1. Volts: As directed, 120, 208, 240, 277 or 480.
2. Phase: As directed, Single or Three.
3. Hertz: 60.
4. Full-Load Amperes: As directed.
5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Layout and install computer-room air conditioners and suspension system coordinated with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

B. Install computer-room air conditioners coordinated with computer-room access flooring Installer.

C. Install computer-room air conditioners level and plumb, maintaining manufacturer's recommended clearances. Install according to AHRI Guideline B.

D. Computer-Room Air-Conditioner Mounting: As directed, Install using elastomeric pads, elastomeric mounts or restrained spring isolators. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" As directed

1. Minimum Deflection: As directed, 1/4 inch (6 mm) or 1 inch (25 mm).

E. Suspended Computer-Room Air Conditioners: As directed, Install using continuous-thread hanger rods and elastomeric hangers, spring hangers or spring hangers with vertical-limit stop of size required to support weight of computer-room air conditioner.

1. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" As directed. Fabricate brackets or supports as required.

2. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

F. Air-Cooled Refrigerant Condenser Mounting: Install using elastomeric pads, elastomeric mounts or restrained spring isolators on concrete base. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" As directed

1. Minimum Deflection: As directed, 1/4 inch (6 mm) or 1 inch (25 mm).

3.2 CONNECTIONS

A. Piping installation requirements are specified in other heating, ventilating, and air-conditioning Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to computer-room air conditioners, allow space for service and maintenance.

C. Drainage Connections: Comply with applicable requirements in Section 221116 "Domestic Water Piping." Provide adequate connections for water-cooled units, condensate drain, and humidifier flushing system.

D. Refrigerant Piping: Comply with applicable requirements in Section 232300 "Refrigerant Piping." Provide shutoff valves and piping.

3.3 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Inspect for and remove shipping bolts, blocks, and tie-down straps.
2. After installing computer-room air conditioners and after electrical circuitry has been energized, test for compliance with requirements.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Computer-room air conditioners will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

D. After startup service and performance test, change filters and flush humidifier.

3.4 DEMONSTRATION

A. As directed, engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain computer-room air conditioners.

END OF SECTION 238123.11

SECTION 238123.12 – LARGE CAPACITY (7 TONS (25 KW) AND LARGER), COMPUTER-ROOM AIR-CONDITIONERS, FLOOR-MOUNTED UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes floor-mounted, computer-room air conditioners of 7 tons (25 kW) and larger.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Shop Drawings: For computer-room air conditioners.

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

D. Color Samples: For unit cabinet, discharge grille, and exterior louver and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans, elevations, and other details, drawn to scale, using input from installers of the items involved.

B. Seismic Qualification Data: Certificates, for computer-room air conditioners, accessories, and components, from manufacturer.

C. Field quality-control reports.

D. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of computer-room air conditioners that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Compressors: As directed, Manufacturer's standard, but not less than five or 10 years from date of Substantial Completion.
2. Warranty Period for Humidifiers: Manufacturer's standard, but not less than three years from date of Substantial Completion.
3. Warranty Period for Control Boards: Manufacturer's standard, but not less than three years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Computer-room air conditioners shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. ASHRAE Compliance:

1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."
2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Ventilation Rate Procedures," and Section 7 - "Construction and Startup."

D. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.

E. ASME Compliance: Fabricate and label water-cooled condenser shell to comply with ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1.

2.3 MANUFACTURED UNITS

A. Description: Self-contained, factory assembled, prewired, and prepiped; consisting of cabinet, fan, filters, and controls; for vertical floor mounting in upflow or downflow configuration.

B. Cabinet and Frame: As directed, Welded tubular-steel frame with removable single or double-thick steel panels and insulated with 1-inch- (25-mm-) or 1-1/2-inch- (38-mm-) thick duct liner.

1. Floor Stand: As directed, Welded tubular steel, 4 inches (100 mm) or 6 inches (150 mm) high, with adjustable legs and vibration isolation pads with turning vanes mounted within the stand.
2. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
3. As directed, Unit with two, three or four-way, powder-coated insulated air distribution plenum.

C. Supply-Air Fan:

1. Forward curved, double width, double inlet, centrifugal, with adjustable V-belt drive.
2. Plug/plenum, single inlet, direct drive, electronically commutated, and variable speed.

D. Refrigeration System:

1. Compressor: As directed, Semihermetic, Scroll or Digital scroll, variable capacity with oil strainer, internal motor overload protection, resilient suspension system, and crankcase heater.
2. Refrigeration Circuit:

    a. Two independent circuits with hot-gas mufflers.
    b. Low-pressure switch.
    c. Manually reset, high-pressure switch.
    d. Thermal-expansion valve with external equalizer.
    e. Sight glass with moisture indicator.
    f. Service shutoff valves.
    g. Charging valves.
    h. Hot-gas bypass.
    i. Refrigerant charge.

3. Refrigerant: R-407C or R-410A
4. Refrigerant Evaporator Coil: Direct-expansion coil of seamless copper tubes expanded into aluminum fins, with two circuits, each with solenoid valve.

    a. Mount stainless-steel drain pan complying with ASHRAE 62.1 and having a condensate pump unit with integral float switch, pump-motor assembly, and condensate reservoir under coil assembly.

5. Remote Air-Cooled Refrigerant Condenser:

    a. Integral, copper-tube aluminum-fin coil.
    b. Condenser with surge protection device (SPD) and locking disconnect in the enclosed electrical panel section.

6. Fan: As directed, Direct-drive, single or variable-speed propeller type.
7. Fan: Belt-drive, single-speed propeller type.
8. Fan: As directed, Direct-drive, single or variable-speed centrifugal type.
9. Fan: Belt-drive, single-speed centrifugal type.
10. Split system shall have suction- and liquid-line compatible fittings and refrigerant piping for field interconnection.

E. Hot-Gas Reheat: Copper-tube, aluminum-fin coil with three-way solenoid valve and refrigerant check valve.

F. Electric-Resistance Reheat Coil:

1. Finned-tube electric elements with contactor and high-temperature-limit switches.
2. SCR to proportionally control the reheat elements providing precise temperature control.

G. Pre-Filter: As directed, 2-inch- (50-mm-) or 4-inch- (100-mm-) thick, disposable, pleated, glass-fiber media.

H. Final Filter: As directed, 2-inch- (50-mm-) or 4-inch- (100-mm-) thick, disposable, pleated, glass-fiber media.

1. Initial Resistance: Inches wg (Pa) As directed.
2. Recommended Final Resistance: Inches wg (Pa) As directed.
3. Pre-Filter Minimum Efficiency Reporting Value and Average Arrestance:

    a. MERV Rating: As directed, MERV 1, MERV 2, MERV 3 or MERV 4 and corresponding average arrestance according to ASHRAE 52.2.

4. Pre-Filter Minimum Efficiency Reporting Value:

    a. MERV 6 according to ASHRAE 52.2.

5. Filter Minimum Efficiency Reporting Value:

    a. MERV Rating: As directed, MERV 6 or MERV 13 according to ASHRAE 52.2.

I. Electrode Steam Humidifier: Self-contained, microprocessor-controlled unit with disposable, polypropylene-plastic cylinders and having field-adjustable steel electrodes and stainless-steel steam dispersion tube.

1. Plumbing Components and Valve Bodies: Plastic, linked by flexible rubber hosing, with water fill with air gap and solenoid valve incorporating built-in strainer, pressure-reducing and flow-regulating orifice, and drain with integral air gap.
2. Control: Fully modulating to provide gradual modulation from zero to 100 percent capacity with field-adjustable maximum capacity; with high-water probe.
3. Drain Cycle: Field-adjustable drain duration and drain interval.

J. Disconnect Switch: As directed, Locking or Non-locking disconnect with handle accessible with the door closed.

K. Disconnect Switch: Non-locking, non-automatic, molded-case circuit breaker with handle accessible when panel is closed and capable of preventing access until switched to off position.

L. Control System:

1. As directed, Microprocessor unit or remote-mounted panel.
2. Fan contactor.
3. Compressor contactor.
4. Compressor start capacitor.

5. Control transformer with circuit breaker.
6. Solid-state temperature- and humidity-control modules.
7. Humidity contactor.
8. Time-delay relay.
9. Heating contactor.
10. Smoke sensor.
11. High-temperature thermostat.
12. As directed, Solid-state, wall-mounted control panel with start-stop switch, adjustable humidity set point, remote temperature sensors or remote humidity sensors and adjustable temperature set point.
13. Remote panel to monitor and change temperature and humidity set points and sensitivities of the unit and unit alarms.
14. Sequential load activation and self-diagnostics.

M. Fan Motors:

1. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
2. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load does not require motor to operate in service factor range above 1.0.
3. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.
4. Type: As directed, Open dripproof or Totally enclosed fan cooled.

2.4 CAPACITIES AND CHARACTERISTICS

A. Unit Configuration: As directed, Draw or Blow through.

B. Supply-Air Fan:

1. Number of Fans: As directed, One or Two.
2. Airflow: As directed.
3. Minimum Static Pressure: As directed.
4. Motor Size: hp as directed.

C. Refrigeration System:

1. Unit Energy Efficiency: As directed, COP or EER.
2. Refrigerant Compressor:

    a. Total Unit Cooling Capacity: As directed.
    b. Sensible Unit Cooling Capacity: As directed.
    c. Number of Compressors: As directed, One or Two.
    d. Motor Size: hp as directed.

3. Refrigerant Evaporator Coil:

a. Cooling Capacity: As directed.
b. Entering-Air Dry-Bulb Temperature: As directed.
c. Entering-Air Wet-Bulb Temperature: As directed.
d. Leaving-Air Dry-Bulb Temperature: As directed.
e. Leaving-Air Wet-Bulb Temperature: As directed.

4. Air-Cooled Refrigerant Condenser:

a. Cooling Capacity: As directed.
b. Entering-Air Temperature: As directed.
c. Number of Condenser Fan Motors: As directed.
d. Condenser Fan Motors: hp as directed.

D. Electric-Resistance Reheating Coil:

1. Total Capacity: As directed.
2. Stages of Heating: As directed, 1 or 2.

E. Humidifier:

1. Total: As directed.
2. Input: As directed.

F. Electrical Characteristics:

1. Volts: As directed, 120, 208, 240, 277 or 480.
2. Phase: As directed, Single or Three.
3. Hertz: 60.
4. Full-Load Amperes: As directed.
5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Layout and install computer-room air conditioners and suspension system coordinated with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

B. Install computer-room air conditioners coordinated with computer-room access flooring Installer.

C. Install computer-room air conditioners level and plumb, maintaining manufacturer's recommended clearances. Install according to AHRI Guideline B.

D. Computer-Room Air-Conditioner Mounting: Install using elastomeric pads, elastomeric mounts or restrained spring isolators. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" As directed

1. Minimum Deflection: As directed, 1/4 inch (6 mm) or 1 inch (25 mm).

E. Suspended Computer-Room Air Conditioners: As directed, Install using continuous-thread hanger rods and elastomeric hangers, spring hangers or spring hangers with vertical-limit stop of size required to support weight of computer-room air conditioner.

1. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" As directed, fabricate brackets or supports as required.
2. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

F. Air-Cooled Refrigerant Condenser Mounting: Install using elastomeric pads, elastomeric mounts or restrained spring isolators on concrete base. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" As directed

1. Minimum Deflection: 1/4 inch (6 mm) or 1 inch (25 mm) As directed.

3.2 CONNECTIONS

A. Piping installation requirements are specified in other heating, ventilating, and air-conditioning Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to computer-room air conditioners, allow space for service and maintenance.

C. Drainage Connections: Comply with applicable requirements in Section 221116 "Domestic Water Piping." Provide adequate connections for water-cooled units, condensate drain, and humidifier flushing system.

D. Refrigerant Piping: Comply with applicable requirements in Section 232300 "Refrigerant Piping." Provide shutoff valves and piping.

3.3 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Inspect for and remove shipping bolts, blocks, and tie-down straps.
2. After installing computer-room air conditioners and after electrical circuitry has been energized, test for compliance with requirements.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Computer-room air conditioners will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

D. After startup service and performance test, change filters and flush humidifier.

3.4 DEMONSTRATION

A. As directed, engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain computer-room air conditioners.

END OF SECTION 238123.12

SECTION 238123.13 - COMPUTER-ROOM AIR-CONDITIONERS, CEILING-MOUNTED UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes ceiling-mounted, computer-room air conditioners.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For computer-room air conditioners.

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

D. Color Samples: For unit cabinet, discharge grille, and exterior louver and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans, elevations, and other details, drawn to scale, using input from installers of the items involved.

B. Seismic Qualification Certificates: For computer-room air conditioners, accessories, and components, from manufacturer.

C. Field quality-control reports.

D. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of computer-room air conditioners that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Compressors: As directed, Manufacturer's standard, but not less than five or 10 years from date of Substantial Completion.
2. Warranty Period for Humidifiers: Manufacturer's standard, but not less than three years from date of Substantial Completion.
3. Warranty Period for Control Boards: Manufacturer's standard, but not less than three years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Computer-room air-conditioners, ceiling-mounted units shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. ASHRAE Compliance:

1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."
2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Ventilation Rate Procedures," and Section 7 - "Construction and Startup."

D. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.

E. ASME Compliance: Fabricate and label water-cooled condenser shell to comply with ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1.

2.3 MANUFACTURED UNITS

A. Description: Self-contained, factory assembled, prewired, and prepiped; consisting of cabinet, fan, filters, and controls.

1. Mounting Configuration: Exposed in the space.

2. Mounting Configuration: Fit T-bar in lay-in ceiling opening.
3. Mounting Configuration: Concealed above a hard ceiling.

B. Cabinet: Galvanized steel serviceable from one side, with baked-enamel finish, insulated with 1/2-inch- (13-mm-) thick duct liner, and mounting bracket attached to the unit.

1. Integral factory-supplied supply and return grille to fit ceiling grid kit of 24 by 48 inches (610 by 1220 mm), with filter.
2. Unit with supply and return collars for ducting in the field.
3. Unit with 24-by-48-inch (610-by-1220-mm) air distribution plenum, with integral MERV 8 filter and three-way air distribution.
4. Unit with two-speed, centrifugal direct-drive fan.
5. Unit with single-speed, centrifugal belt-driven fan.
6. Unit with high static blower assembly consisting of field-attached blower box with double-inlet, centrifugal belt-driven fan; with single-speed motor mounted on an adjustable base, and providing up to 2 inches wc (500 Pa) of external pressure.
7. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

C. Supply-Air Fan:

1. Forward curved, double width, double inlet, centrifugal, with adjustable V-belt drive.
2. Plug/plenum, single inlet, direct drive, electronically commutated, and variable speed.

D. Refrigeration System:

1. Compressor: Scroll, with oil strainer, internal motor overload protection, resilient suspension system, and crankcase heater.
2. Refrigeration Circuit Components:

    a. Low-pressure switch.
    b. Manually reset, high-pressure switch.
    c. Thermal-expansion valve with external equalizer.
    d. Sight glass with moisture indicator.
    e. Service shutoff valves.
    f. Charging valves.
    g. Hot-gas bypass.
    h. Refrigerant charge.

3. Refrigerant: R-407C or R-410A.
4. Refrigerant Evaporator Coil: Direct-expansion coil of seamless copper tubes expanded into aluminum fins.
5. As directed, Refrigerant line sets precharged in lengths of 15 feet (4.6 m) or 30 feet (9.0 m) and of sufficient length to serve the unit from its condensing unit.
6. Refrigerant line-sweat-adapter kit to permit field brazing of refrigerant lines.

    a. Mount stainless-steel drain pan complying with ASHRAE 62.1 and having a condensate pump unit with integral float switch, pump-motor assembly, and condensate reservoir under coil assembly.

7. Remote, Air-Cooled Refrigerant Condenser: Integral, copper-tube aluminum-fin coil with direct-drive, propeller or centrifugal fan As directed.
8. Split system shall have suction- and liquid-line compatible fittings and refrigerant piping for field interconnection.
9. Mount stainless-steel drain pan complying with ASHRAE 62.1 and having a condensate pump unit with integral float switch, pump-motor assembly, and condensate reservoir under coil assembly.

E. Electric-Resistance Reheat Coil:

1. Finned-tube electric elements with contactor.
2. Dehumidification relay.
3. High-temperature-limit switches.
4. SCR to proportionally control the reheat elements providing precise temperature control.

F. Filter: 1-inch- (25-mm-) thick, disposable, glass-fiber media.

1. Initial Resistance: Inches wg (Pa) as directed.
2. Recommended Final Resistance: Inches wg (Pa) As directed.
3. Pre-Filter Minimum Efficiency Reporting Value and Average Arrestance:

    a. MERV Rating: As directed, MERV 1, MERV 2, MERV 3 or MERV 4 and corresponding average arrestance according to ASHRAE 52.2.

4. Pre-Filter Minimum Efficiency Reporting Value:

    a. MERV 6 according to ASHRAE 52.2.

5. Filter Minimum Efficiency Reporting Value:

    a. MERV Rating: As directed, MERV 6 or MERV 13 according to ASHRAE 52.2.

G. Electrode Steam Humidifier: Self-contained, microprocessor-controlled unit with disposable, polypropylene-plastic cylinders, and having field-adjustable steel electrodes and stainless-steel steam dispersion tube.

1. Plumbing Components and Valve Bodies: Plastic, linked by flexible rubber hosing, with water fill with air gap and solenoid valve incorporating built-in strainer, pressure-reducing and flow-regulating orifice, and drain with integral air gap.
2. Control: Fully modulating to provide gradual modulation from zero to 100 percent capacity with field-adjustable maximum capacity; with high-water probe.
3. Drain Cycle: Field-adjustable drain duration and drain interval.

H. Disconnect Switch: Non-automatic, molded-case circuit breaker with handle accessible when panel is closed and capable of preventing access until switched to off position.

I. Single point power kit permitting single electrical feed to the evaporator and condensing unit of a close-coupled system.

J. Epoxy-coated, step-down transformer suitable for mounting on the outdoor condensing unit to provide it with 277-V input power.

K. Control System:

1. As directed, Microprocessor unit or remote-mounted panel.
2. Fan contactor.
3. Compressor contactor.
4. Compressor start capacitor.
5. Control transformer with circuit breaker.
6. Solid-state temperature- and humidity-control modules.
7. Humidity contactor.
8. Time-delay relay.
9. Heating contactor.
10. Smoke sensor.
11. Filter clog switch.
12. Alarm contacts.
13. High-temperature thermostat.
14. As directed, Solid-state, wall-mounted control panel with start-stop switch, adjustable humidity set point, remote temperature sensors or remote humidity sensors and adjustable temperature set point.
15. Remote panel to monitor and change temperature and humidity set points and sensitivities of the unit and unit alarms.

L. Fan Motors:

1. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

    a. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load does not require motor to operate in service factor range above 1.0.
    b. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.

2.4 CAPACITIES AND CHARACTERISTICS

A. Supply-Air Fan:

1. Airflow: As directed.
2. Minimum Static Pressure: As directed.
3. Motor Size: hp as directed.

B. Refrigeration System:

1. Unit Energy Efficiency: As directed, COP or EER.
2. Refrigerant Compressor:

    a. Total Unit Cooling Capacity: As directed.

b. Sensible Unit Cooling Capacity: As directed.
c. Number of Compressors: As directed, One or Two.
d. Motor Size: hp as directed.

3. Refrigerant Evaporator Coil:

a. Cooling Capacity: As directed.
b. Entering-Air Dry-Bulb Temperature: As directed.
c. Entering-Air Wet-Bulb Temperature: As directed.
d. Leaving-Air Dry-Bulb Temperature: As directed.
e. Leaving-Air Wet-Bulb Temperature: As directed.

4. Air-Cooled Refrigerant Condenser:

a. Cooling Capacity: As directed.
b. Entering-Air Temperature: As directed.
c. Number of Condenser Fan Motors: As directed.
d. Condenser Fan Motors: hp As directed.

C. Electric-Resistance Reheating Coil:

1. Total Capacity: As directed.
2. Stages of Heating: As directed, 1 or 2.

D. Humidifier:

1. Total: As directed.
2. Input: As directed.

E. Electrical Characteristics:

1. Volts: As directed, 120, 208, 240, 277 or 480.
2. Phase: As directed, Single or Three.
3. Hertz: 60.
4. Full-Load Amperes: As directed.
5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Layout and install computer-room air conditioners and suspension system coordinated with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

B. Install computer-room air conditioners coordinated with computer-room access flooring Installer.

C. Install computer-room air conditioners level and plumb, maintaining manufacturer's recommended clearances. Install according to AHRI Guideline B.

D. Suspended Computer-Room Air Conditioners: As directed, Install using continuous-thread hanger rods and elastomeric hangers, spring hangers or spring hangers with vertical-limit stop of size required to support weight of computer-room air conditioner.

1. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" as directed, fabricate brackets or supports as required.
2. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

E. Air-Cooled Refrigerant Condenser Mounting: As directed, Install using elastomeric pads, elastomeric mounts or restrained spring isolators on concrete base. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" As directed.

1. Minimum Deflection: As directed, 1/4 inch (6 mm) or 1 inch (25 mm).

3.2 CONNECTIONS

A. Piping installation requirements are specified in other heating, ventilating, and air-conditioning Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to computer-room air conditioners, allow space for service and maintenance.

C. Water and Drainage Connections: Comply with applicable requirements in Section 221116 "Domestic Water Piping." Provide adequate connections for water-cooled units, condensate drain, and humidifier flushing system.

D. Refrigerant Piping: Comply with applicable requirements in Section 232300 "Refrigerant Piping." Provide shutoff valves and piping.

3.3 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Inspect for and remove shipping bolts, blocks, and tie-down straps.
2. After installing computer-room air conditioners and after electrical circuitry has been energized, test for compliance with requirements.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Computer-room air conditioners will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

D. After startup service and performance test, change filters and flush humidifier.

3.4 DEMONSTRATION

A. As directed, engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain computer-room air conditioners.

END OF SECTION 238123.13

SECTION 238123.14 - COMPUTER-ROOM AIR-CONDITIONERS, CONSOLE UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes console computer-room air conditioners.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Shop Drawings: For computer-room air conditioners.

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

D. Color Samples: For unit cabinet, discharge grille, and exterior louver and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans, elevations, and other details, drawn to scale, using input from installers of the items involved.

B. Seismic Qualification Certificates: For computer-room air conditioners, accessories, and components, from manufacturer.

C. Field quality-control reports.

D. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of computer-room air conditioners that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Compressors: As directed, Manufacturer's standard, but not less than five or 10 years from date of Substantial Completion.
2. Warranty Period for Humidifiers: Manufacturer's standard, but not less than three years from date of Substantial Completion.
3. Warranty Period for Control Boards: Manufacturer's standard, but not less than three years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Computer-room air-conditioners, console units shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. ASHRAE Compliance:

1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."
2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Ventilation Rate Procedures," and Section 7 - "Construction and Startup."

D. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.

E. ASME Compliance: Fabricate and label water-cooled condenser shell to comply with ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1.

2.3 MANUFACTURED UNITS

A. Description: Split system consisting of evaporator section for floor or wall mounting and remote condensing section.

B. Evaporator Cabinet: Furniture-grade steel with baked-enamel finish; with front access and containing direct-drive centrifugal fans and two-speed motor.

1. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

C. Condenser Cabinet: Steel with baked-enamel finish and containing compressor and condenser.

D. Refrigeration System:

1. Compressor: Scroll, with oil strainer, internal motor overload protection, resilient suspension system, and crankcase heater.
2. Refrigeration Circuit:

    a. Filter/dryer.
    b. Manual-reset high-pressure switch.
    c. Thermal-expansion valve with external equalizer.
    d. Sight glass with moisture indicator.
    e. Service shutoff valves.
    f. Charging valves.
    g. Hot-gas bypass.
    h. Refrigerant charge.

3. Refrigerant: R-407C or R-410A.
4. Refrigerant Evaporator Coil: Direct-expansion coil of seamless copper tubes expanded into aluminum fins.
5. As directed, Refrigerant line sets precharged in lengths of 15 feet (4.5 m) or 30 feet (9.0 m).
6. Refrigerant line sweat adapter kit to permit field brazing of refrigerant lines.

    a. Mount stainless-steel drain pan complying with ASHRAE 62.1 and having a condensate pump unit with integral float switch, pump-motor assembly, and condensate reservoir under coil assembly.

7. Remote, Air-Cooled Refrigerant Condenser: As directed, Integral, copper-tube aluminum-fin coil with direct-drive, propeller or centrifugal fan.
8. Split system shall have suction- and liquid-line compatible fittings and refrigerant piping for field interconnection.

E. Electric-Resistance Reheat Coil:

1. Finned-tube electric elements with contactor and high-temperature-limit switches.
2. SCR to proportionally control the reheat elements providing precise temperature control.

F. Filter: Cleanable polypropylene monofilament over expanded aluminum with aluminum frame.

G. Filter: 1-inch- (25-mm-) thick, disposable, glass-fiber media.

1. Initial Resistance: Inches wg (Pa) As directed.
2. Recommended Final Resistance: Inches wg (Pa) As directed.
3. Pre-Filter Minimum Efficiency Reporting Value and Average Arrestance:

    a. MERV Rating: As directed, MERV 1, MERV 2, MERV 3 or MERV 4 and corresponding average arrestance according to ASHRAE 52.2.

4. Pre-Filter Minimum Efficiency Reporting Value:

    a. MERV 6 according to ASHRAE 52.2.

5. Filter Minimum Efficiency Reporting Value:

    a. MERV Rating: As directed, MERV 6 or MERV 13 according to ASHRAE 52.2.

H. Electrode Steam Humidifier: Self-contained, microprocessor-controlled unit with disposable, polypropylene-plastic cylinders and having field-adjustable steel electrodes and stainless-steel steam dispersion tube.

1. Plumbing Components and Valve Bodies: Plastic, linked by flexible rubber hosing, with water fill with air gap and solenoid valve incorporating built-in strainer, pressure-reducing and flow-regulating orifice, and drain with integral air gap.
2. Control: Fully modulating to provide gradual modulation from zero to 100 percent capacity with field-adjustable maximum capacity; with high-water probe.
3. Drain Cycle: Field-adjustable drain duration and drain interval.

I. Disconnect Switch: Non-automatic, molded-case circuit breaker with handle accessible when panel is closed and capable of preventing access until switched to off position.

J. Epoxy-coated, step-down transformer suitable for mounting on the outdoor condensing unit to provide it with 277-V ac input power.

K. Control System:

1. Microprocessor, wall-mounted panel interfacing with the unit controls.
2. Contactors.
3. Control transformer with circuit breaker.
4. Solid-state, temperature- and humidity-control modules.
5. Solid-state, unit-mounted control panel with start-stop switch, adjustable humidity set point, and adjustable temperature set point.
6. Remote panel to monitor and change temperature and humidity set points and sensitivities of the unit and unit alarms.

L. Fan Motors:

1. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
2. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load does not require motor to operate in service factor range above 1.0.
3. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.

2.4 CAPACITIES AND CHARACTERISTICS

A. Unit Configuration: As directed, Draw or Blow through.

B. Supply-Air Fan:

1. Airflow: As directed.

2. Minimum Static Pressure: As directed.
3. Motor Size: hp as directed.

C. Refrigeration System:

1. Unit Energy Efficiency: As directed, COP or EER.
2. Refrigerant Compressor:

    a. Total Unit Cooling Capacity: As directed.
    b. Sensible Unit Cooling Capacity: As directed.
    c. Number of Compressors: As directed, One or Two.
    d. Motor Size: hp as directed.

3. Refrigerant Evaporator Coil:

    a. Cooling Capacity: As directed.
    b. Entering-Air Dry-Bulb Temperature: As directed.
    c. Entering-Air Wet-Bulb Temperature: As directed.
    d. Leaving-Air Dry-Bulb Temperature: As directed.
    e. Leaving-Air Wet-Bulb Temperature: As directed.

4. Air-Cooled Refrigerant Condenser:

    a. Cooling Capacity: As directed.
    b. Entering-Air Temperature: As directed.
    c. Number of Condenser Fan Motors: As directed.
    d. Condenser Fan Motors: hp As directed.

D. Electric-Resistance Reheating Coil:

1. Total Capacity: As directed.
2. Stages of Heating: As directed, 1 or 2.

E. Humidifier:

1. Total: As directed.
2. Input: As directed.

F. Electrical Characteristics:

1. Volts: As directed, 120, 208, 240, 277 or 480.
2. Phase: As directed, Single or Three.
3. Hertz: 60.
4. Full-Load Amperes: As directed.
5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Layout and install computer-room air conditioners and suspension system coordinated with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

B. Install computer-room air conditioners coordinated with computer-room access flooring Installer.

C. Install computer-room air conditioners level and plumb, maintaining manufacturer's recommended clearances. Install according to AHRI Guideline B.

D. Computer-Room Air-Conditioner Mounting: Install using elastomeric pads, elastomeric mounts or restrained spring isolators. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" As directed

1. Minimum Deflection: As directed, 1/4 inch (6 mm) or 1 inch (25 mm).

E. Air-Cooled Refrigerant Condenser Mounting: As directed, Install using elastomeric pads, elastomeric mounts or restrained spring isolators on concrete base. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" As directed

1. Minimum Deflection: As directed, 1/4 inch (6 mm) or 1 inch (25 mm).

3.2 CONNECTIONS

A. Piping installation requirements are specified in other heating, ventilating, and air-conditioning Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to computer-room air conditioners, allow space for service and maintenance.

C. Drainage Connections: Comply with applicable requirements in Section 221116 "Domestic Water Piping." Provide adequate connections for water-cooled units, condensate drain, and humidifier flushing system.

D. Refrigerant Piping: Comply with applicable requirements in Section 232300 "Refrigerant Piping." Provide shutoff valves and piping.

3.3 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Inspect for and remove shipping bolts, blocks, and tie-down straps.

2. After installing computer-room air conditioners and after electrical circuitry has been energized, test for compliance with requirements.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Computer-room air conditioners will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

D. After startup service and performance test, change filters and flush humidifier.

3.4 DEMONSTRATION

A. As directed, engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain computer-room air conditioners.

END OF SECTION 238123.14

SECTION 238123.18 - COMPUTER-ROOM, RACK-COOLING EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Central refrigeration units.
2. Rear-mounted rack-cooling modules.
3. Top-mounted rack-cooling modules.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For central refrigeration units and rack-cooling units.

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

D. Color Samples: For unit cabinets and discharge grille and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans, elevations, and other details, drawn to scale, using input from installers of the items involved.

B. Seismic Qualification Certificates: For computer-room rack-cooling equipment, accessories, and components, from manufacturer.

C. Field quality-control reports.

D. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of computer-room, rack-cooling equipment that fails in materials or workmanship within specified warranty period.

1. Warranty Period for Compressors: As directed, Manufacturer's standard, but not less than five or 10 years from date of Substantial Completion.
2. Warranty Period for Control Boards: Manufacturer's standard, but not less than three years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Computer-room, rack-cooling equipment shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. ASHRAE Compliance:

1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."
2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Ventilation Rate Procedures," and Section 7 - "Construction and Startup."

D. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.

E. ASME Compliance: Fabricate and label water-cooled condenser shell to comply with ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1.

2.3 CENTRAL REFRIGERATION UNIT

A. Description: Packaged, factory assembled, wired, and piped; consisting of cabinet, refrigeration system, heat exchanger, and controls.

B. Cabinet and Frame: Powder-painted cabinet, hinged doors, and welded tubular steel frame.

C. Pumps: As directed, One or Two, factory piped and wired.

D. Heat Exchanger: Brazed plate, Type 316 stainless-steel plates.

E. Chilled-Water Valve: Modulating, two-way valve, responding to room dew point temperature changes to optimize the supply water temperature to avoid condensation.

F. Compressor: Scroll type with a suction gas-cooled motor, vibration isolators, thermal overloads, manual reset high-pressure switch, and pump down low-pressure switch.

G. Control System:

1. Unit-mounted microprocessor panel interfacing with the unit controls consisting of contactors, control transformer with circuit breaker, solid-state temperature- and humidity-control modules and start-stop switch, adjustable humidity set point, and adjustable temperature set point.
2. Remote panel to monitor and change temperature and humidity set points and sensitivities of the unit and unit alarms.

H. Capacities and Characteristics:

1. Refrigeration System:

a. Unit Energy Efficiency: As directed, COP or EER.
b. Refrigerant Compressor:

1) Total Unit Cooling Capacity: As directed.

c. Sensible Unit Cooling Capacity: As directed.
d. Number of Compressors: As directed, One or Two.
e. Motor Size: hp as directed.
f. Refrigerant Heat Exchanger:

1) Cooling Capacity: As directed.
2) Entering-Primary Refrigerant Temperature: As directed.
3) Leaving-Primary Refrigerant Temperature: As directed.
4) Entering-Secondary Refrigerant Temperature: As directed.
5) Leaving-Secondary Refrigerant Temperature: As directed.

g. Water-Cooled Heat Exchanger:

1) Cooling Capacity: As directed.
2) Primary Water Flow: As directed.
3) Cooling Medium: As directed, Water or Glycol solution.
4) Entering-Water Temperature: As directed.
5) Leaving-Water Temperature: As directed.
6) Fluid Pressure Drop: As directed.

2. Electrical Characteristics:

a. Volts: As directed, 120, 208, 240, 277 or 480.
b. Phase: As directed, Single or Three.
c. Hertz: 60.

d. Full-Load Amperes: As directed.
e. Minimum Circuit Ampacity: As directed.
f. Maximum Overcurrent Protection: As directed.

2.4 REAR-MOUNTED RACK-COOLING MODULE

A. Description: Packaged, factory assembled, prewired, consisting of cabinet, refrigeration coils and controls.

B. Cabinet and Frame: Powder-painted cabinet, hinged doors, and welded tubular steel frame with self-locking door latch.

C. Cooling Coils: Two aluminum microchannels with drip pan.

D. Dual power cords with 20-A, 120-V ac receptacle.

E. Refrigerant Piping: ACR copper tubing with brazed joints. Factory-installed piping shall be leak tested and pressure tested prior to shipment from the factory. Factory-supplied pipe connections for field piping.

F. Rack Mounting Kit: Black painted steel.

G. Capacities and Characteristics:

1. Supply-Air Fan:

a. Number of Fans: Six axial fans with finger guards.
b. Airflow: As directed.
c. Minimum Static Pressure: As directed.
d. Refrigerant Heat Exchanger:

1) Cooling Capacity: As directed.
2) Entering-Primary Refrigerant Temperature: As directed.
3) Entering-Secondary Refrigerant Temperature: As directed.
4) Leaving-Primary Refrigerant Temperature: As directed.
5) Leaving-Secondary Refrigerant Temperature: As directed.

2. Electrical Characteristics:

a. Motor Size: hp as directed.
b. Volts: As directed, 120, 208, 240, 277 or 480.
c. Phase: As directed, Single or Three.
d. Hertz: 60.
e. Full-Load Amperes: As directed.
f. Minimum Circuit Ampacity: As directed.
g. Maximum Overcurrent Protection: As directed.

2.5 TOP-MOUNTED RACK-COOLING MODULE

A. Description: Packaged, factory assembled, prewired, and prepiped; consisting of cabinet cooling coil and controls.

B. Cabinet and Frame: Powder-painted cabinet, hinged doors, and welded tubular steel frame.

C. Cooling Coil: Aluminum microchannel with drip pan.

D. Electrical Components:

1. Each module shall be equipped with two sets of two 10-foot (3-m) power cords with automatic switching, primary and secondary, attached with IEC connectors to the rear of the unit.
2. Each cord shall have a NEMA 5-15P (IEC 320-C14) plug at the end.
3. CE-listed version of the unit shall have permanently attached power cords.

E. Refrigerant Piping: ACR copper tubing with brazed joints. Factory-installed piping shall be leak tested and pressure tested prior to shipment from the factory. Factory-supplied pipe connections for field piping.

F. Discharge Diffusers: Mounted on the unit front, discharging to one or both sides.

G. Capacities and Characteristics:

1. Supply-Air Fan:

a. Number of Fans: Six axial fans with finger guards.
b. Airflow: As directed.
c. Minimum Static Pressure: As directed.
d. Refrigerant Heat Exchanger:

1) Cooling Capacity: As directed.
2) Entering-Primary Refrigerant Temperature: As directed.
3) Entering-Secondary Refrigerant Temperature: As directed.
4) Leaving-Primary Refrigerant Temperature: As directed.
5) Leaving-Secondary Refrigerant Temperature: As directed.

2. Electrical Characteristics:

a. Motor Size: hp as directed.
b. Volts: As directed, 120, 208, 240, 277 or 480.
c. Phase: As directed, Single or Three.
d. Hertz: 60.
e. Full-Load Amperes: As directed.
f. Minimum Circuit Ampacity: As directed.
g. Maximum Overcurrent Protection: As directed.

2.6 REFRIGERANT

A. Refrigerant Type: R-134A.

2.7 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load does not require motor to operate in service factor range above 1.0.
2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Layout and install computer-room rack-cooling equipment and suspension system coordinated with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

B. Install computer-room, rack-cooling equipment level and plumb, maintaining manufacturer's recommended clearances. Install according to AHRI Guideline B.

C. Suspended Units: As directed, Install using continuous-thread hanger rods and elastomeric hangers, spring hangers or spring hangers with vertical-limit stop of size required to support weight of computer-room, rack-cooling equipment.

1. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" As directed. Fabricate brackets or supports as required.
2. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

3.2 CONNECTIONS

A. Piping installation requirements are specified in other heating, ventilating, and air-conditioning Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to computer-room rack-cooling equipment, allow space for service and maintenance.

C. Refrigerant Piping: Comply with applicable requirements in Section 232300 "Refrigerant Piping." Provide shutoff valves and piping.

3.3 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Inspect for and remove shipping bolts, blocks, and tie-down straps.
2. After installing computer-room rack-cooling equipment and after electrical circuitry has been energized, test for compliance with requirements.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Computer-room, rack-cooling equipment will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.4 DEMONSTRATION

A. As directed, engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain computer-room, rack-cooling equipment.

END OF SECTION 238123.18

SECTION 238126 - SPLIT-SYSTEM AIR-CONDITIONERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes split-system air-conditioning and heat-pump units consisting of separate evaporator-fan and compressor-condenser components.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Sustainable Design Submittals:

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1.3 INFORMATIONAL SUBMITTALS

A. Warranty: Sample of special warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. ASHRAE Compliance:

1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."
2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - " Procedures," and Section 7 - "Construction and System Start-up."

C. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.

1.6 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of split-system air-conditioning units that fail in materials or workmanship within specified warranty period.

1. Warranty Period:

a. For Compressor: As directed, One or Five year(s) from date of Substantial Completion.
b. For Parts: As directed, One or Five year(s) from date of Substantial Completion.
c. For Labor: As directed, One or Five year(s) from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 INDOOR UNITS (5 TONS (18 kW) OR LESS)

A. Concealed Evaporator-Fan Components:

1. Chassis: Galvanized steel with flanged edges, removable panels for servicing, and insulation on back of panel.
2. Insulation: Faced, glass-fiber duct liner.
3. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.
4. Water Coil: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm); leak tested to 300 psig (2070 kPa) underwater; with a two-position control valve.
5. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements; with refractory ceramic support bushings, automatic-reset thermal cutout, built-in magnetic contactors, manual-reset thermal cutout, airflow proving device, and one-time fuses in terminal box for overcurrent protection.
6. Fan: Forward-curved, double-width wheel of galvanized steel; directly connected to motor.
7. Fan Motors:

a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
b. Multitapped, multispeed with internal thermal protection and permanent lubrication.
c. Wiring Terminations: Connect motor to chassis wiring with plug connection.

8. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
9. Filters: Permanent, cleanable.
10. Condensate Drain Pans:

a. Fabricated with one or two percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection as directed.

1) Length: Extend drain pan downstream from leaving face to comply with ASHRAE 62.1.
2) Depth: A minimum of 2 inches (50 mm) deep.

b. As directed, Single-wall, galvanized or stainless-steel sheet.
c. As directed, Double-wall, galvanized or stainless-steel sheet with space between walls filled with foam insulation and moisture-tight seal.
d. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on one end or both ends of pan as directed..

1) Minimum Connection Size: As directed, NPS 1 (DN 25) or NPS 2 (DN 50).

e. Pan-Top Surface Coating: Asphaltic waterproofing compound.
f. Units with stacked coils shall have an intermediate drain pan to collect condensate from top coil.

B. Floor-Mounted, Evaporator-Fan Components:

1. Cabinet: Enameled steel with removable panels on front and ends in color selected by Architect.

a. Discharge Grille: As directed, Steel with surface-mounted frame or Welded steel bars forming a linear grille and welded into supporting panel as directed..
b. Insulation: Faced, glass-fiber duct liner.
c. Drain Pans: Galvanized steel, with connection for drain; insulated.

2. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.
3. Water Coil: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm); leak tested to 300 psig (2070 kPa) underwater; with a two-position control valve.
4. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements; with refractory ceramic support bushings, automatic-reset thermal cutout, built-in magnetic contactors, manual-reset thermal cutout, airflow proving device, and one-time fuses in terminal box for overcurrent protection.
5. Fan: Direct drive, centrifugal, with power-induced outside air.
6. Fan Motors:

a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
b. Multitapped, multispeed with internal thermal protection and permanent lubrication.

7. Air Filtration Section:

a. General Requirements for Air Filtration Section:

1) Comply with NFPA 90A.
2) Minimum MERV according to ASHRAE 52.2.
3) Filter-Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.

b. Disposable Panel Filters:

1) Factory-fabricated, viscous-coated, flat-panel type.
2) Thickness: As directed, 1 inch (25 mm) or 2 inches (50 mm).
3) Dust-Holding Capacity: As directed.
4) Initial Resistance: As directed.
5) Recommended Final Resistance: As directed.
6) MERV according to ASHRAE 52.2: 5.
7) Media: Interlaced glass fibers sprayed with nonflammable adhesive and antimicrobial agent.
8) Frame: Galvanized steel, with metal grid on outlet side, steel rod grid on inlet side, and hinged; with pull and retaining handles.

c. Extended-Surface, Disposable Panel Filters:

1) Factory-fabricated, dry, extended-surface type.
2) Thickness: As directed, 1 inch (25 mm), 2 inches (50 mm) or 4 inches (100 mm).
3) Dust-Holding Capacity: As directed.
4) Initial Resistance: As directed.
5) Recommended Final Resistance: As directed.
6) MERV according to ASHRAE 52.2: 7.
7) Media: Fibrous material formed into deep-V-shaped pleats with antimicrobial agent and held by self-supporting wire grid.
8) Media-Grid Frame: As directed, Nonflammable cardboard, Galvanized steel or Fire-retardant, 3/4-inch (20-mm) particleboard with gaskets.
9) Mounting Frames: Welded, galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.

C. Wall-Mounted, Evaporator-Fan Components:

1. Cabinet: Enameled steel with removable panels on front and ends in color selected by Architect, and discharge drain pans with drain connection.
2. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.
3. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements; with refractory ceramic support bushings, automatic-reset thermal cutout, built-in magnetic contactors, manual-reset thermal cutout, airflow proving device, and one-time fuses in terminal box for overcurrent protection.
4. Fan: Direct drive, centrifugal.
5. Fan Motors:

a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
b. Multitapped, multispeed with internal thermal protection and permanent lubrication.
c. Enclosure Type: Totally enclosed, fan cooled.
d. NEMA Premium (TM) efficient motors as defined in NEMA MG 1.
e. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.
f. As directed, Mount unit-mounted disconnect switches on exterior or interior of unit as directed.

6. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
7. Condensate Drain Pans:

a. Fabricated with one or two percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection as directed.

1) Length: Extend drain pan downstream from leaving face to comply with ASHRAE 62.1.
2) Depth: A minimum of 1 inch (25 mm) deep.

b. Single-wall, galvanized or stainless-steel sheet as directed.
c. Double-wall, galvanized or stainless-steel sheet with space between walls filled with foam insulation and moisture-tight seal As directed.
d. Drain Connection: Located at lowest point of pan and sized to prevent overflow. As directed, Terminate with threaded nipple on one end or both ends of pan.

1) Minimum Connection Size: As directed, NPS 1 (DN 25) or NPS 2 (DN 50).

e. Pan-Top Surface Coating: Asphaltic waterproofing compound.

8. Air Filtration Section:

a. General Requirements for Air Filtration Section:

1) Comply with NFPA 90A.
2) Minimum MERV according to ASHRAE 52.2.
3) Filter-Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.

b. Disposable Panel Filters:

1) Factory-fabricated, viscous-coated, flat-panel type.
2) Thickness: As directed, 1 inch (25 mm) or 2 inches (50 mm).
3) Dust-Holding Capacity: As directed.

4) Initial Resistance: As directed.
5) Recommended Final Resistance: As directed.
6) MERV according to ASHRAE 52.2: 5.
7) Media: Interlaced glass fibers sprayed with nonflammable adhesive and antimicrobial agent.
8) Frame: Galvanized steel, with metal grid on outlet side, steel rod grid on inlet side, and hinged; with pull and retaining handles.

c. Extended-Surface, Disposable Panel Filters:

1) Factory-fabricated, dry, extended-surface type.
2) Thickness: As directed, 1 inch (25 mm), 2 inches (50 mm) or 4 inches (100 mm).
3) Dust-Holding Capacity: As directed.
4) Initial Resistance: As directed.
5) Recommended Final Resistance: As directed.
6) MERV according to ASHRAE 52.2: 7.
7) Media: Fibrous material formed into deep-V-shaped pleats with antimicrobial agent and held by self-supporting wire grid.
8) Media-Grid Frame: As directed, Nonflammable cardboard, Galvanized steel or Fire-retardant, 3/4-inch (20-mm) particleboard with gaskets.
9) Mounting Frames: Welded, galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.

2.3 OUTDOOR UNITS (5 TONS (18 kW) OR LESS)

A. Air-Cooled, Compressor-Condenser Components:

1. Casing: Steel, finished with baked enamel in color selected by Architect, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
2. Compressor: Hermetically sealed with crankcase heater and mounted on vibration isolation device. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.

a. Compressor Type: Scroll.
b. Two-speed compressor motor with manual-reset high-pressure switch and automatic-reset low-pressure switch.
c. Refrigerant: As directed, R-22, R-407C or R-410A.
d. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and liquid subcooler. Comply with ARI 206/110.

3. Heat-Pump Components: Reversing valve and low-temperature-air cutoff thermostat.
4. Fan: Aluminum-propeller type, directly connected to motor.
5. Motor: Permanently lubricated, with integral thermal-overload protection.
6. Low Ambient Kit: Permits operation down to 45 deg F (7 deg C).
7. Mounting Base: Polyethylene.

2.4 ACCESSORIES

A. Control equipment and sequence of operation are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

B. Thermostat: Low voltage with subbase to control compressor and evaporator fan.

C. Thermostat: Wireless infrared functioning to remotely control compressor and evaporator fan, with the following features:

1. Compressor time delay.
2. 24-hour time control of system stop and start.
3. Liquid-crystal display indicating temperature, set-point temperature, time setting, operating mode, and fan speed.
4. Fan-speed selection including auto setting.

D. Automatic-reset timer to prevent rapid cycling of compressor.

E. Refrigerant Line Kits: Soft-annealed copper suction and liquid lines factory cleaned, dried, pressurized, and sealed; factory-insulated suction line with flared fittings at both ends.

F. Drain Hose: For condensate.

G. Monitoring:

1. Monitor constant and variable motor loads.
2. Monitor variable-frequency-drive operation.
3. Monitor economizer cycle.
4. Monitor cooling load.
5. Monitor air distribution static pressure and ventilation air volumes.

2.5 CAPACITIES AND CHARACTERISTICS

A. Cooling Capacity:

1. Total: As directed.
2. Sensible: As directed.
3. SEER: As directed, 10.0, 12.0, 13.0, 14.0 or 16.0.
4. EER: As directed, 10.0, 12.0, 13.0, 14.0 or 16.0.
5. Moisture Removal: As directed.
6. Entering-Air Temperature:

    a. Dry Bulb: As directed.
    b. Wet Bulb: As directed.

7. Leaving-Air Temperature:

    a. Dry Bulb: As directed.
    b. Wet Bulb: As directed.

B. Heating Capacity:

1. Type: As directed, Electric or Natural gas.
2. Total Capacity: As directed.
3. Air-Temperature Rise: As directed.
4. Coefficient of Performance: As directed.
5. Heating Season Performance Factor: As directed, 7.7 or 8.0.
6. Hot Water:

    a. Entering-Water Temperature: As directed.
    b. Leaving-Water Temperature: As directed.
    c. Water Flow: As directed.
    d. Water Pressure Drop: As directed.

7. Electric Heating Coil:

    a. Total Capacity: kW as directed.
    b. Volts: As directed, 120, 208, 230 or 460 V ac.
    c. Phase: As directed, Single or Poly.
    d. Frequency: 60 Hz.
    e. Steps: As directed, One, Two or Three.

8. Gas Heating Section:

    a. Input: As directed.
    b. Output: As directed.

C. Auxiliary Heating Capacity:

1. Type: As directed, Electric, Natural gas or Propane.
2. Total Capacity: As directed.
3. Volts: As directed, 120, 208, 230 or 460 V ac.
4. Phase: As directed, Single or Poly.
5. Frequency: 60 Hz.
6. Steps: As directed, One, Two or Three.
7. Input: As directed.
8. Output: As directed.

D. Indoor Unit:

1. Fan Motor Electrical Characteristics:

    a. Volts: As directed, 120, 208, 230 or 460 V ac.
    b. Phase: As directed, Single or Poly.
    c. Frequency: 60 Hz.

2. Airflow: As directed.

E. Outdoor Unit:

1. Type: As directed, Air cooled or Water cooled.

2. Electrical Characteristics:

    a. Volts: 120, 208, 230 or 460 as directed.
    b. Phase: Single or Poly as directed.
    c. Frequency: 60 Hz.
    d. Minimum Circuit Ampacity: as directed.
    e. Maximum Overcurrent Protection: as directed.
    f. Fan Motor Full-Load Amperes: as directed.
    g. Compressor Full-Load Amperes: as directed.
    h. Compressor Locked-Rotor Amperes: as directed.

3. Sound-Pressure Level: dBa as directed.
4. Water:

    a. Entering-Water Temperature: As directed.
    b. Water Flow: As directed.
    c. Water Pressure Drop: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install units level and plumb.

B. Install evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure.

C. Install roof-mounted, compressor-condenser components on equipment supports specified in Section 077200 "Roof Accessories." Anchor units to supports with removable, cadmium-plated fasteners.

D. Equipment Mounting:

1. Install ground-mounted, compressor-condenser components on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete"as directed.
2. Install ground-mounted, compressor-condenser components on polyethylene mounting base.
3. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
4. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

E. Install and connect precharged refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.

3.2 CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

1. Water Coil Connections: Comply with requirements specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Connect hydronic piping to supply and return coil connections with shutoff-duty valve and union or flange on the supply connection and with throttling-duty valve and union or flange on the return connection.
2. Remote, Water-Cooled Condenser Connections: Comply with requirements specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Connect hydronic piping to supply and return connections with shutoff-duty valve and union or flange on the supply connection and with throttling-duty valve and union or flange on the return connection.

B. Where piping is installed adjacent to unit, allow space for service and maintenance of unit.

C. Duct Connections: Duct installation requirements are specified in Section 233113 "Metal Ducts." Drawings indicate the general arrangement of ducts. Connect supply and return ducts to split-system air-conditioning units with flexible duct connectors. Flexible duct connectors are specified in Section 233300 "Air Duct Accessories."

3.3 FIELD QUALITY CONTROL

A. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Tests and Inspections:

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Remove and replace malfunctioning units and retest as specified above.

D. Prepare test and inspection reports.

3.4 DEMONSTRATION

A. As directed, engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain units.

END OF SECTION 238126

SECTION 238129 – VARIABLE-REFRIGERANT-FLOW HVAC SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes complete VRF HVAC system(s) including, but not limited to, delegated design and the following components to make a complete operating system(s) according to requirements indicated:

1. Indoor, concealed, ceiling-mounted units for ducting.
2. Indoor, concealed, floor-mounted units for ducting.
3. Indoor, exposed, wall-mounted units.
4. Indoor, recessed, ceiling-mounted units.
5. Indoor, suspended, ceiling-mounted units.
6. Outdoor, air-source, heat pump units.
7. Outdoor, air-source heat recovery units.
8. Heat recovery control units.
9. System controls.
10. System refrigerant and oil.
11. System condensate drain piping.
12. System hydronic piping.
13. System refrigerant piping.
14. Metal hangers and supports.
15. Metal framing systems.
16. Fastener systems.
17. Pipe stands.
18. Miscellaneous support materials.
19. Piping and tubing insulation.
20. System control cable and raceways.

1.2 DEFINITIONS

A. Air-Conditioning System Operation: System capable of operation with all zones in cooling only.

B. Heat-Pump System Operation: System capable of operation with all zones in either heating or cooling, but not with simultaneous heating and cooling zones that transfer heat between zones.

C. Heat Recovery System Operation: System capable of operation with simultaneous heating and cooling zones that transfer heat between zones.

D. HRCU: Heat Recovery Control Unit. HRCUs are used in heat recovery VRF HVAC systems to manage and control refrigerant between indoor units to provide simultaneous heating and cooling zones. "Heat Recovery Control Unit" is the term used by ASHRAE for what different manufacturers term as branch circuit controller, branch selector box, changeover box, flow selector unit, mode change unit, and other such terms.

E. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

F. Plenum: A space forming part of the air distribution system to which one or more air ducts are connected. An air duct is a passageway, other than a plenum, for transporting air to or from heating, ventilating, or air-conditioning equipment.

G. Three-Pipe System Design: One high pressure refrigerant vapor line, one low pressure refrigerant vapor line, and one refrigerant liquid line connect a single outdoor unit or multiple manifold outdoor units in a single system to associated system HRCUs. One liquid line and refrigerant vapor line connect HRCUs to associated indoor units.

H. Two-Pipe System Design: One refrigerant vapor line and one refrigerant liquid line connect a single outdoor unit or multiple manifold outdoor units in a single system to associated system HRCUs. One refrigerant liquid line and refrigerant vapor line connect HRCUs to associated indoor units. HRCUs used in two pipe systems act as an intermediate heat exchanger and include diverting valves and gas/liquid separators to move high and low pressure refrigerant between indoor units.

I. VRF: Variable refrigerant flow.

1.3 ACTION SUBMITTALS

A. Product data.

B. Sustainable Design Submittals:

C. Shop Drawings: For VRF HVAC systems.

1. Include plans, elevations, sections, and mounting or attachment details As directed.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
4. Include diagrams and details of refrigerant piping and tubing showing installation requirements for manufacturer-furnished divided flow fittings.
5. Include diagrams for power, signal, and control wiring.

D. Samples for Initial Selection: For fully and partially exposed indoor units with factory finishes viewable by occupants.

E. Delegated-Design Submittals:

1. Include design calculations for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
2. Include design calculations with corresponding diagram of refrigerant piping and tubing sizing for each system installed.

3. Include design calculations with corresponding floor plans indicating that refrigerant concentration limits are within allowable limits of ASHRAE 15 and governing codes.
4. Include calculations showing that system travel distance for refrigerant piping and controls cabling are within horizontal and vertical travel distances set by manufacturer. Provide a comparison table for each system installed.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans, elevations, sections, and details, drawn to scale, using input from installers of the items involved.

B. Qualification Data:

1. For Installer.
2. For VRF HVAC system manufacturer.
3. For VRF HVAC system provider.

C. Seismic Qualification Data: Certificates, for equipment, accessories, and components, from manufacturer.

D. Product Certificates: For each type of product.

E. Product test reports.

F. Source quality-control reports.

G. Field quality-control reports.

H. Sample warranties.

1.5 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

B. Software and Firmware Operational Documentation:

1. Software operating and upgrade manuals.
2. Program Software Backup: On CD or DVD, USB media, or approved cloud storage platform, complete with data files.
3. Device address list.
4. Printout of software application and graphic screens.

1.6 QUALITY ASSURANCE

A. Factory-Authorized Service Representative Qualifications:

1. Authorized representative of, and trained by, VRF HVAC system manufacturer.
2. In-place facility located within distance of Project As directed.

3. As directed, demonstrated past experience with products being installed for period within three or five consecutive years before time of bid.
4. Demonstrated past experience on five projects of similar complexity, scope, and value.

    a. Each person assigned to Project shall have demonstrated past experience.

5. Staffing resources of competent and experienced full-time employees that are assigned to execute work according to schedule.
6. Service and maintenance staff assigned to support Project during warranty period.
7. Product parts inventory to support ongoing system operation for a period of not less than five years after Substantial Completion.
8. VRF HVAC system manufacturer's backing to take over execution of Work if necessary to comply with requirements indicated. Include Project-specific written letter, signed by manufacturer's corporate officer, if requested.

B. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by VRF HVAC system manufacturer.

1. Each employee shall be certified by manufacturer for proper installation of systems, including, but not limited to, equipment, piping, controls, and accessories indicated and furnished for installation.
2. Installer certification shall be valid and current for duration of Project.
3. Retain copies of Installer certificates on-site and make available on request.
4. Each person assigned to Project shall have demonstrated past experience.

    a. As directed, demonstrated past experience with products being installed for period within three or five consecutive years before time of bid.
    b. As directed, Demonstrated past experience on five projects of similar complexity, scope, and value.

5. Installers shall have staffing resources of competent, trained, and experienced full-time employees that are assigned to execute work according to schedule.

C. ISO Compliance: System equipment and components furnished by VRF HVAC system manufacturer shall be manufactured in an ISO 9001 and ISO 14001 facility.

1.7 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace equipment and components that fail(s) in materials or workmanship within specified warranty period.

1. Warranty Period:

    a. For Compressor: As directed, Five, Seven or 10 year(s) from date of Substantial Completion.
    b. For Parts, Including Controls: As directed, Five, Seven or 10 year(s) from date of Substantial Completion.
    c. For Labor: As directed, Five, Seven or 10 year(s) from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 SYSTEM DESCRIPTION

A. Direct-expansion (DX) VRF HVAC system(s) with variable capacity in response to varying cooling and heating loads. System shall consist of multiple indoor units, HRCUs, outdoor unit(s), piping, controls, and electrical power to make complete operating system(s) complying with requirements indicated.

1. Two-pipe or three-pipe system design.
2. As directed, System(s) operation, air-conditioning, heat pump or heat recovery as indicated on Drawings.
3. Each system with one refrigerant circuit shared by all indoor units connected to system.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. AHRI Compliance: System and equipment performance certified according to AHRI 1230 and products listed in AHRI directory.

D. ASHRAE Compliance:

1. ASHRAE 15: For safety code for mechanical refrigeration.
2. ASHRAE 62.1: For indoor air quality.
3. ASHRAE 135: For control network protocol with remote communication.
4. ASHRAE/IES 90.1 Compliance: For system and component energy efficiency.

E. UL Compliance: Comply with UL 1995.

2.3 PERFORMANCE REQUIREMENTS

A. Delegated Design: As directed, engage a qualified professional engineer or specialist, as defined in Section 014000 "Quality Requirements," to design complete and operational VRF HVAC system(s) complying with requirements indicated.

1. Provide system refrigerant calculations.

a. Refrigerant concentration limits shall be within allowable limits of ASHRAE 15 and governing codes.
b. Indicate compliance with manufacturer's maximum vertical and horizontal travel distances. Prepare a comparison table for each system showing calculated distances compared to manufacturer's maximum allowed distances.

2. Include a mechanical ventilation system and gas detection system as required to comply with ASHRAE 15 and governing codes.
3. System Refrigerant Piping and Tubing:

a. Arrangement: Arrange piping to interconnect indoor units, HRCUs, and outdoor unit(s) in compliance with manufacturer requirements and requirements indicated.
b. Routing: Conceal piping above ceilings and behind walls to maximum extent possible.
c. Sizing: Size piping system, using a software program acceptable to manufacturer, to provide performance requirements indicated. Consider requirements to accommodate future change requirements.

4. System Controls:

a. Network arrangement.
b. Network interface with other building systems.
c. Product selection.
d. Sizing.

B. Service Access:

1. Provide and document service access requirements.
2. Locate equipment, system isolation valves, and other system components that require service and inspection in easily accessible locations. Avoid locations that are difficult to access if possible.
3. Where serviceable components are installed behind walls and above inaccessible ceilings, provide finished assembly with access doors or panels to gain access. Properly size the openings to allow for service, removal, and replacement.
4. If less than full and unrestricted access is provided, locate components within an 18-inch (450-mm) reach of the finished assembly.
5. Where ladder access is required to service elevated components, provide an installation that provides for sufficient access within ladder manufacturer's written instructions for use.
6. Comply with OSHA regulations.

C. System Design and Installation Requirements:

1. Design and install systems indicated according to manufacturer's recommendations and written instructions.
2. Where manufacturer's requirements differ from requirements indicated, contact Architect for direction. The most stringent requirements should apply unless otherwise directed in writing by Architect.

D. System Adaptability to Future Changes: Arrange and size system refrigerant piping to accommodate future changes to system without having to resize and replace existing refrigerant piping.

1. Future changes to system(s) indicated on Drawings.
2. As directed, each branch circuit shall accommodate addition of one or two indoor unit(s) with unit capacity equal to largest, smallest or average indoor unit connected to the branch circuit.
3. As directed, each branch circuit shall accommodate deletion of one or two indoor unit(s) with unit capacity equal to largest, smallest or average indoor unit connected to the branch circuit.

E. Isolation of Equipment: Provide isolation valves to isolate each HRCU, indoor unit and outdoor unit for service, removal, and replacement without interrupting system operation.

F. System Capacity Ratio: The sum of connected capacity of all indoor units shall be within the following range of outdoor-unit rated capacity:

1. As directed, Not less than 50 or 60 percent.
2. As directed, Not more than 130 or 150 percent.
3. Range acceptable to manufacturer.

G. System Turndown: Stable operation down to 20 percent of outdoor-unit capacity.

H. System Auto Refrigerant Charge: Each system shall have an automatic refrigerant charge function to ensure the proper amount of refrigerant is installed in system.

I. Outdoor Conditions:

1. Suitable for outdoor ambient conditions encountered.

    a. Design equipment and supports to withstand wind loads of governing code and ASCE/SEI 7.
    b. Design equipment and supports to withstand snow and ice loads of governing code and ASCE/SEI 7.
    c. Provide corrosion-resistant coating for components and supports where located in coastal or industrial climates that are known to be harmful to materials and finishes.

2. Maximum System Operating Outdoor Temperature: See Drawings.
3. Minimum System Operating Outdoor Temperature: See Drawings.

J. Seismic Performance: VRF HVAC system(s) shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified and the system will be fully operational after the seismic event."
2. Component Importance Factor: As directed, 1.5 or 1.0.

K. Sound Performance: Sound levels generated by operating HVAC equipment shall be within requirements indicated.

1. Indoor: See Drawings or Within design guidelines of "2015 ASHRAE HANDBOOK-HVAC Applications"
2. Outdoor: As directed, See Drawings or Within ordinance of governing authorities.

L. Thermal Movements: Allow for controlled thermal movements from ambient, surface, and system temperature changes.

M. Capacities and Characteristics: As indicated on Drawings.

2.4 INDOOR, CONCEALED, CEILING-MOUNTED UNITS FOR DUCTING

A. Description: Factory-assembled and -tested complete unit with components, piping, wiring, and controls required for mating to ductwork, piping, power, and controls field connections.

B. Cabinet:

1. Material: As directed, Galvanized or painted steel.
2. Insulation: Manufacturer's standard internal insulation, complying with ASHRAE 62.1, to provide thermal resistance and prevent condensation.
3. Duct Connections: Extended collar or flange, or designated exterior cabinet surface, designed for attaching field-installed ductwork.
4. Mounting: Manufacturer-designed provisions for field installation.
5. Internal Access: Removable panels or hinged doors of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. DX Coil Assembly:

1. Coil Casing: Aluminum, galvanized, or stainless steel.
2. Coil Fins: Aluminum, mechanically bonded to tubes, with arrangement required by performance.
3. Coil Tubes: Copper, of diameter and thickness required by performance.
4. Expansion Valve: Electronic modulating type with linear or proportional characteristics.
5. Unit Internal Tubing: Copper tubing with brazed joints.
6. Unit Internal Tubing Insulation: Manufacturer's standard insulation, of thickness to prevent condensation.
7. Field Piping Connections: Manufacturer's standard.
8. Factory Charge: Dehydrated air or nitrogen.
9. Testing: Factory pressure tested and verified to be without leaks.

D. Drain Assembly:

1. Pan: Non-ferrous material, with bottom sloped to low point drain connection.
2. Condensate Removal: Unit-mounted pump or other integral lifting mechanism, capable of lifting drain water to an elevation above top of cabinet.
3. Field Piping Connection: Non-ferrous material with threaded NPT.

E. Fan and Motor Assembly:

1. Fan(s):

    a. Direct-drive arrangement.
    b. Single or multiple fans connected to a common motor shaft and driven by a single motor.
    c. Fabricated from non-ferrous components or ferrous components with corrosion-resistant finish.
    d. Wheels statically and dynamically balanced.

2. Motor: Brushless dc or electronically commutated with permanently lubricated bearings.
3. Motor Protection: Integral protection against thermal, overload, and voltage fluctuations.

4. Speed Settings and Control: Two (low, high), three (low, medium, high), or more than three speed settings or variable speed with a speed range of least 50 percent.
5. Vibration Control: Integral isolation to dampen vibration transmission.

F. Filter Assembly:

1. Access: Bottom, side, or rear to accommodate field installation without removing ductwork and to accommodate filter replacement without need for tools.
2. Efficiency: As directed, ASHRAE 52.2, MERV 7, ASHRAE 52.2, MERV 11 or ASHRAE 52.2, MERV 13.
3. Media: If more than one filter type is indicated, Contractor has option to choose.

    a. Replaceable: Extended surface, panel, or cartridge with antimicrobial treatment fiber media.
    b. Washable: Manufacturer's standard filter with antimicrobial treatment.

G. Unit Accessories:

1. Outdoor Air Ventilation Kit: Connection, motorized damper, and control sized to allow sequence of operation indicated on Drawings.
2. Remote Room Temperature Sensor Kit: Wall-mounted, hardwired room temperature sensor kit for use in rooms that do not have room temperature measurement.

H. Unit Controls:

1. Enclosure: Metal, suitable for indoor locations.
2. Factory-Installed Controller: Configurable digital control.
3. Factory-Installed Sensors:

    a. Unit inlet air temperature.
    b. Coil entering refrigerant temperature.
    c. Coil leaving refrigerant temperature.

4. Field-Customizable I/O Capability:

    a. Analog Inputs: As directed, Two, Three or Four for use in customizable control strategies.
    b. Digital Inputs: As directed, Two, Three or Four for use in customizable control strategies.
    c. Digital Outputs: As directed, Two, Three or Four for use in customizable control strategies.

5. Features and Functions:

    a. Self-diagnostics.
    b. Time delay.
    c. Auto-restart.
    d. External static pressure control.
    e. Auto operation mode.
    f. Manual operation mode.

g. Filter service notification.
h. Power consumption display.
i. Drain assembly high water level safety shutdown and notification.
j. Run test switch.

6. Communication: Network communication with other indoor and outdoor units.
7. Cable and Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
8. Field Connection: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

I. Unit Electrical:

1. Enclosure: Metal, suitable for indoor locations.
2. Field Connection: Single point connection to power unit and integral controls.
3. Disconnecting Means: Factory-mounted circuit breaker or switch.
4. Control Transformer: Manufacturer's standard. Coordinate requirements with field power supply.
5. Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
6. Raceways: Enclose line voltage wiring in metal raceways.

2.5 INDOOR, CONCEALED, FLOOR-MOUNTED UNITS FOR DUCTING

A. Description: Factory-assembled and -tested complete unit with components, piping, wiring, and controls required for mating to ductwork, piping, power, and controls field connections.

B. Cabinet:

1. Material: Galvanized or painted steel.
2. Insulation: Manufacturer's standard internal insulation, complying with ASHRAE 62.1, to provide thermal resistance and prevent condensation.
3. Duct Connections: Extended collar or flange, or designated exterior cabinet surface, designed for attaching field-installed ductwork.
4. Mounting: Manufacturer-designed provisions for field installation.
5. Internal Access: Removable panels or hinged doors of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. DX Coil Assembly:

1. Coil Casing: Aluminum, galvanized, or stainless steel.
2. Coil Fins: Aluminum, mechanically bonded to tubes, with arrangement required by performance.
3. Coil Tubes: Copper, of diameter and thickness required by performance.
4. Expansion Valve: Electronic modulating type with linear or proportional characteristics.
5. Unit Internal Tubing: Copper tubing with brazed joints.
6. Unit Internal Tubing Insulation: Manufacturer's standard insulation, of thickness to prevent condensation.
7. Field Piping Connections: Manufacturer's standard.
8. Factory Charge: Dehydrated air or nitrogen.

9. Testing: Factory pressure tested and verified to be without leaks.

D. Drain Assembly:

1. Pan: Non-ferrous material, with bottom sloped to low point drain connection.
2. Condensate Removal: Unit-mounted pump or other integral lifting mechanism, capable of lifting drain water to an elevation above top of cabinet.
3. Field Piping Connection: Non-ferrous material with threaded NPT.

E. Fan and Motor Assembly:

1. Fan(s):

   a. Direct-drive arrangement.
   b. Single or multiple fans connected to a common motor shaft and driven by a single motor.
   c. Materials: Non-ferrous components or ferrous components with corrosion resistant finish.
   d. Statically and dynamically balanced.

2. Motor: Brushless dc or electronically commutated with permanently lubricated bearings.
3. Motor Protection: Integral protection against thermal, overload, and voltage fluctuations.
4. Speed Settings and Control: Two (low, high), three (low, medium, high), or more than three speed settings or variable speed with a speed range of least 50 percent.
5. Vibration Control: Integral isolation to dampen vibration transmission.

F. Filter Assembly:

1. Access: Bottom, side, or rear to accommodate field installation without removing ductwork and to accommodate filter replacement without need for tools.
2. Efficiency: As directed, ASHRAE 52.2, MERV 7, ASHRAE 52.2, MERV 11 or ASHRAE 52.2, MERV 13.
3. Media: If more than one filter type is indicated, Contractor has option to choose.

   a. Replaceable: Extended surface, panel, or cartridge with antimicrobial treatment fiber media.
   b. Washable: Manufacturer's standard filter with antimicrobial treatment.

G. Unit Accessories:

1. Outdoor Air Ventilation Kit: Connection, motorized damper, and control sized to allow sequence of operation indicated on Drawings.
2. Remote Room Temperature Sensor Kit: Wall-mounted, hardwired room temperature sensor kit for use in rooms that do not have room temperature measurement.

H. Unit Controls:

1. Enclosure: Metal, suitable for indoor locations.
2. Factory-Installed Controller: Configurable digital control.
3. Factory-Installed Sensors:

a. Unit inlet air temperature.
b. Coil entering refrigerant temperature.
c. Coil leaving refrigerant temperature.

4. Field-Customizable I/O Capability:

a. Analog Inputs: As directed, Two, Three or Four for use in customizable control strategies.
b. Digital Inputs: As directed, Two, Three or Four for use in customizable control strategies.
c. Digital Outputs: As directed, Two, Three or Four for use in customizable control strategies.

5. Features and Functions:

a. Self-diagnostics.
b. Time delay, auto-restart.
c. External static pressure control.
d. Auto operation mode.
e. Manual operation mode.
f. Filter service notification.
g. Power consumption display.
h. Drain assembly high water level safety shutdown and notification.
i. Run test switch.

6. Communication: Network communication with other indoor units and outdoor unit(s).
7. Cable and Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
8. Field Connection: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

I. Unit Electrical:

1. Enclosure: Metal, similar to enclosure, and suitable for indoor locations.
2. Field Connection: Single point connection to power unit and integral controls.
3. Disconnecting Means: Factory-mounted circuit breaker or switch.
4. Control Transformer: Manufacturer's standard. Coordinate requirements with field power supply.
5. Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
6. Raceways: Enclose line voltage wiring in metal raceways.

2.6 INDOOR, EXPOSED, FLOOR-MOUNTED UNITS

A. Description: Factory-assembled and -tested complete unit with components, piping, wiring, and controls required for mating to piping, power, and controls field connections.

B. Cabinet:

1. Material: Painted steel, or coated steel frame covered by a plastic cabinet, with an architectural acceptable finish suitable for tenant occupancy on exposed surfaces.
2. Insulation: Manufacturer's standard internal insulation, complying with ASHRAE 62.1, to provide thermal resistance and prevent condensation.
3. Mounting: Manufacturer-designed provisions for field installation.
4. Internal Access: Removable panels of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. DX Coil Assembly:

1. Coil Casing: Aluminum, galvanized, or stainless steel.
2. Coil Fins: Aluminum, mechanically bonded to tubes, with arrangement required by performance.
3. Coil Tubes: Copper, of diameter and thickness required by performance.
4. Expansion Valve: Electronic modulating type with linear or proportional characteristics.
5. Unit Internal Tubing: Copper tubing with brazed joints.
6. Unit Internal Tubing Insulation: Manufacturer's standard insulation, of thickness to prevent condensation.
7. Field Piping Connections: Manufacturer's standard.
8. Factory Charge: Dehydrated air or nitrogen.
9. Testing: Factory pressure tested and verified to be without leaks.

D. Drain Assembly:

1. Pan: Non-ferrous material, with bottom sloped to low point drain connection.
2. Condensate Removal: Gravity.

    a. If a floor drain is not available at unit, provide unit with field-installed condensate pump accessory.

3. Field Piping Connection: Non-ferrous material with threaded NPT.

E. Fan and Motor Assembly:

1. Fan(s):

    a. Direct-drive arrangement.
    b. Single or multiple fans connected to a common motor shaft and driven by a single motor.
    c. Materials: Non-ferrous components or ferrous components with corrosion-resistant finish.
    d. Statically and dynamically balanced.

2. Motor: Brushless dc or electronically commutated with permanently lubricated bearings.
3. Motor Protection: Integral protection against thermal, overload, and voltage fluctuations.
4. Speed Settings and Control: Two (low, high), three (low, medium, high), or more than three speed settings or variable speed with a speed range of least 50 percent.
5. Vibration Control: Integral isolation to dampen vibration transmission.

F. Filter Assembly:

1. Access: Front, to accommodate filter replacement without the need for tools.
2. Efficiency: As directed
3. Washable Media: Manufacturer's standard filter with antimicrobial treatment.

G. Grille Assembly: Manufacturer's standard discharge grille with field-adjustable air pattern mounted in top of unit cabinet.

H. Unit Accessories:

1. Remote Room Temperature Sensor Kit: Wall-mounted, hardwired room temperature sensor kit for use in rooms that do not have room temperature measurement.
2. Condensate Pump: Integral reservoir and control with electrical power connection through unit power.

I. Unit Controls:

1. Enclosure: Manufacturer's standard, and suitable for indoor locations.
2. Factory-Installed Controller: Configurable digital control.
3. Factory-Installed Sensors:

    a. Unit inlet air temperature.
    b. Coil entering refrigerant temperature.
    c. Coil leaving refrigerant temperature.

4. Field-Customizable I/O Capability:

    a. Analog Inputs: As directed, Two, Three or Four for use in customizable control strategies.
    b. Digital Inputs: As directed, Two, Three or Four for use in customizable control strategies.
    c. Digital Outputs: As directed, Two, Three or Four for use in customizable control strategies.

5. Features and Functions:

    a. Self-diagnostics.
    b. Time delay.
    c. Auto-restart.
    d. External static pressure control.
    e. Auto operation mode.
    f. Manual operation mode.
    g. Filter service notification
    h. Power consumption display.
    i. Drain assembly high water level safety shutdown and notification.
    j. Run test switch.

6. Communication: Network communication with other indoor units and outdoor unit(s).
7. Cable and Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

8. Field Connection: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

J. Unit Electrical:

1. Enclosure: Manufacturer's standard, and suitable for indoor locations.
2. Field Connection: Single point connection to power entire unit and integral controls.
3. Disconnecting Means: Factory-mounted circuit breaker or switch.
4. Control Transformer: Manufacturer's standard. Coordinate requirements with field power supply.
5. Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
6. Raceways: Enclose line voltage wiring in metal raceways.

2.7 INDOOR, EXPOSED, WALL-MOUNTED UNITS

A. Description: Factory-assembled and -tested complete unit with components, piping, wiring, and controls required for mating to piping, power, and controls field connections.

B. Cabinet:

1. Material: Painted steel, or coated steel frame covered by a plastic cabinet, with an architectural acceptable finish suitable for tenant occupancy on exposed surfaces.
2. Insulation: Manufacturer's standard internal insulation, complying with ASHRAE 62.1, to provide thermal resistance and prevent condensation.
3. Mounting: Manufacturer-designed provisions for field installation.
4. Internal Access: Removable panels of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. DX Coil Assembly:

1. Coil Casing: Aluminum, galvanized, or stainless steel.
2. Coil Fins: Aluminum, mechanically bonded to tubes, with arrangement required by performance.
3. Coil Tubes: Copper, of diameter and thickness required by performance.
4. Expansion Valve: Electronic modulating type with linear or proportional characteristics.
5. Unit Internal Tubing: Copper tubing with brazed joints.
6. Unit Internal Tubing Insulation: Manufacturer's standard insulation, of thickness to prevent condensation.
7. Field Piping Connections: Manufacturer's standard.
8. Factory Charge: Dehydrated air or nitrogen.
9. Testing: Factory pressure tested and verified to be without leaks.

D. Drain Assembly:

1. Pan: Non-ferrous material, with bottom sloped to low point drain connection.
2. Condensate Removal: Gravity.

    a. If a floor drain is not available at unit, provide unit with field-installed condensate pump accessory.

3. Field Piping Connection: Non-ferrous material with threaded NPT.

E. Fan and Motor Assembly:

1. Fan(s):

a. Direct-drive arrangement.
b. Single or multiple fans connected to a common motor shaft and driven by a single motor.
c. Fabricated from non-ferrous components or ferrous components with corrosion protection finish.
d. Wheels statically and dynamically balanced.

2. Motor: Brushless dc or electronically commutated with permanently lubricated bearings.
3. Motor Protection: Integral protection against thermal, overload, and voltage fluctuations.
4. Speed Settings and Control: Two (low, high), three (low, medium, high), or more than three speed settings or variable speed with a speed range of least 50 percent.
5. Vibration Control: Integral isolation to dampen vibration transmission.

F. Filter Assembly:

1. Access: Front, to accommodate filter replacement without the need for tools.
2. Efficiency: As directed.
3. Washable Media: Manufacturer's standard filter with antimicrobial treatment.

G. Grille Assembly: Manufacturer's standard discharge grille with field-adjustable air pattern mounted in top or front face of unit cabinet.

H. Unit Accessories:

1. Remote Room Temperature Sensor Kit: Wall-mounted, hardwired room temperature sensor kit for use in rooms that do not have room temperature measurement.
2. Condensate Pump: Integral reservoir and control with electrical power connection through unit power.

I. Unit Controls:

1. Enclosure: Manufacturer's standard, and suitable for indoor locations.
2. Factory-Installed Controller: Configurable digital control.
3. Factory-Installed Sensors: As directed, Unit inlet air temperature, Coil entering refrigerant temperature or Coil leaving refrigerant temperature.
4. Field-Customizable I/O Capability:

a. Analog Inputs: As directed, Two, Three or Four for use in customizable control strategies.
b. Digital Inputs: As directed, Two, Three or Four for use in customizable control strategies.
c. Digital Outputs: As directed, Two, Three or Four for use in customizable control strategies.

5. Features and Functions: As directed, Self-diagnostics, time delay, auto-restart, external static pressure control, auto operation mode, manual operation mode, filter service notification, power consumption display, drain assembly high water level safety shutdown and notification, run test switch.
6. Communication: Network communication with other indoor units and outdoor unit(s).
7. Cable and Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
8. Field Connection: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

J. Unit Electrical:

1. Enclosure: Manufacturer's standard, and suitable for indoor locations.
2. Field Connection: Single point connection to power entire unit and integral controls.
3. Disconnecting Means: Factory-mounted circuit breaker or switch, complying with NFPA 70.
4. Control Transformer: Manufacturer's standard. Coordinate requirements with field power supply.
5. Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
6. Raceways: Enclose line voltage wiring in metal raceways to comply with NFPA 70.

2.8 INDOOR, RECESSED, CEILING-MOUNTED UNITS

A. Description: Factory-assembled and -tested complete unit with components, piping, wiring, and controls required for mating to ductwork, piping, power, and controls field connections.

B. Cabinet:

1. Material: Painted steel, or coated steel frame covered by a plastic cabinet, with an architectural acceptable finish suitable for tenant occupancy on exposed surfaces.
2. Insulation: Manufacturer's standard internal insulation, complying with ASHRAE 62.1, to provide thermal resistance and prevent condensation.
3. Mounting: Manufacturer-designed provisions for field installation.
4. Internal Access: Removable panels of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. DX Coil Assembly:

1. Coil Casing: Aluminum, galvanized, or stainless steel.
2. Coil Fins: Aluminum, mechanically bonded to tubes, with arrangement required by performance.
3. Coil Tubes: Copper, of diameter and thickness required by performance.
4. Expansion Valve: Electronic modulating type with linear or proportional characteristics.
5. Internal Tubing: Copper tubing with brazed joints.
6. Internal Tubing Insulation: Manufacturer's standard insulation, of thickness to prevent condensation.
7. Field Piping Connections: Manufacturer's standard.
8. Factory Charge: Dehydrated air or nitrogen.
9. Testing: Factory pressure tested and verified to be without leaks.

D. Drain Assembly:

1. Pan: Non-ferrous material, with bottom sloped to low point drain connection.
2. Condensate Removal: Unit-mounted pump or other integral lifting mechanism, capable of lifting drain water to an elevation above top of cabinet.
3. Field Piping Connection: Non-ferrous material with threaded NPT.

E. Fan and Motor Assembly:

1. Fan(s):

    a. Direct-drive arrangement.
    b. Single or multiple fans connected to a common motor shaft and driven by a single motor.
    c. Fabricated from non-ferrous components or ferrous components with corrosion protection finish.
    d. Wheels statically and dynamically balanced.

2. Motor: Brushless dc or electronically commutated with permanently lubricated bearings.
3. Motor Protection: Integral protection against thermal, overload, and voltage fluctuations.
4. Speed Settings and Control: Two (low, high), three (low, medium, high), or more than three speed settings or variable speed with a speed range of least 50 percent.
5. Vibration Control: Integral isolation to dampen vibration transmission.

F. Filter Assembly:

1. Access: Bottom, to accommodate filter replacement without the need for tools.
2. Efficiency: As directed, ASHRAE 52.2, MERV 7, ASHRAE 52.2, MERV 11 or ASHRAE 52.2, MERV 13.
3. Media: If more than one filter type is indicated, Contractor has option to choose.

    a. Replaceable: Extended surface, panel, or cartridge with antimicrobial treatment fiber media.
    b. Washable: Manufacturer's standard filter with antimicrobial treatment.

G. Discharge-Air Grille Assembly: Mounted in bottom of unit cabinet.

1. Discharge Pattern: One-, two-, three-, or four-way throw as indicated on Drawings.

    a. Discharge Pattern Adjustment: Field-adjustable limits for up and down range of motion.
    b. Discharge Pattern Closure: Ability to close individual discharges of units with multiple patterns.

2. Motorized Vanes: Modulating up and down flow pattern for uniform room air distribution.
3. Additional Branch Supply Duct Connection: Sheet metal knockout for optional connection to one additional supply branch duct.

H. Return-Air Grille Assembly: Manufacturer's standard grille mounted in bottom of unit cabinet.

I. Outdoor Air Ventilation Connection: Sheet metal knockout for optional connection to outdoor air ventilation duct.

J. Unit Accessories:

1. Outdoor Air Ventilation Kit: Connection, motorized damper, and control to satisfy unit control sequence of operation indicated on Drawings.
2. Remote Room Temperature Sensor Kit: Wall-mounted, hardwired room temperature sensor kit for use in rooms that do not have room temperature measurement.

K. Unit Controls:

1. Enclosure: Manufacturer's standard, and suitable for indoor locations.
2. Factory-Installed Controller: Configurable digital control.
3. Factory-Installed Sensors: As directed, Unit inlet air temperature, Coil entering refrigerant temperature or Coil leaving refrigerant temperature.
4. Field-Customizable I/O Capability:

    a. Analog Inputs: As directed, Two, Three or Four for use in customizable control strategies.
    b. Digital Inputs: As directed, Two, Three or Four for use in customizable control strategies.
    c. Digital Outputs: As directed, Two, Three or Four for use in customizable control strategies.

5. Features and Functions: As directed, Self-diagnostics, time delay, auto-restart, external static pressure control, auto operation mode, manual operation mode, filter service notification, power consumption display, drain assembly high water level safety shutdown and notification, run test switch.
6. Communication: Network communication with other indoor units and outdoor unit(s).
7. Cable and Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
8. Field Connection: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

L. Unit Electrical:

1. Enclosure: Manufacturer's standard, and suitable for indoor locations.
2. Field Connection: Single point connection to power entire unit and integral controls.
3. Disconnecting Means: Factory-mounted circuit breaker or switch, complying with NFPA 70.
4. Control Transformer: Manufacturer's standard. Coordinate requirements with field power supply.
5. Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
6. Raceways: Enclose line voltage wiring in metal raceways to comply with NFPA 70.

2.9 INDOOR, SUSPENDED, CEILING-MOUNTED UNITS

A. Description: Factory-assembled and -tested complete unit with components, piping, wiring, and controls required for mating to piping, power, and controls field connections.

B. Cabinet:

1. Material: Painted steel, or coated steel frame covered by a plastic cabinet, with an architectural acceptable finish suitable for tenant occupancy on exposed surfaces.
2. Insulation: Manufacturer's standard internal insulation, complying with ASHRAE 62.1, to provide thermal resistance and prevent condensation.
3. Mounting: Manufacturer-designed provisions for field installation.
4. Internal Access: Removable panels of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. DX Coil Assembly:

1. Coil Casing: Aluminum, galvanized, or stainless steel.
2. Coil Fins: Aluminum, mechanically bonded to tubes, with arrangement required by performance.
3. Coil Tubes: Copper, of diameter and thickness required by performance.
4. Expansion Valve: Electronic modulating type with linear or proportional characteristics.
5. Internal Tubing: Copper tubing with brazed joints.
6. Internal Tubing Insulation: Manufacturer's standard insulation, of thickness to prevent condensation.
7. Field Piping Connections: Manufacturer's standard.
8. Factory Charge: Dehydrated air or nitrogen.
9. Testing: Factory pressure tested and verified to be without leaks.

D. Drain Assembly:

1. Pan: Non-ferrous material, with bottom sloped to low point drain connection.
2. Condensate Removal: Gravity.

    a. If a floor drain is not available at unit, provide unit with field-installed condensate pump accessory.

3. Field Piping Connection: Non-ferrous material with threaded NPT.

E. Fan and Motor Assembly:

1. Fan(s):

    a. Direct-drive arrangement.
    b. Single or multiple fans connected to a common motor shaft and driven by a single motor.
    c. Fabricated from non-ferrous components or ferrous components with corrosion protection finish.
    d. Wheels statically and dynamically balanced.

2. Motor: Brushless dc or electronically commutated with permanently lubricated bearings.
3. Motor Protection: Integral protection against thermal, overload, and voltage fluctuations.
4. Speed Settings and Control: Two (low, high), three (low, medium, high), or more than three speed settings or variable speed with a speed range of least 50 percent.
5. Vibration Control: Integral isolation to dampen vibration transmission.

F. Filter Assembly:

1. Access: Front, to accommodate filter replacement without the need for tools.
2. Efficiency: As directed.
3. Washable Media: Manufacturer's standard filter with antimicrobial treatment.

G. Discharge-Air Grille Assembly: Mounted in front of unit cabinet.

1. Discharge Pattern: One-way throw.
2. Discharge Pattern Adjustment: Field-adjustable limits for range of pattern.
3. Motorized Vanes: Modulating up and down flow pattern for uniform room air distribution.

H. Return-Air Grille Assembly: Manufacturer's standard.

I. Outdoor Air Ventilation Connection: Sheet metal knockout for optional connection to outdoor air ventilation duct.

J. Unit Accessories:

1. Remote Room Temperature Sensor Kit: Wall-mounted, hardwired room temperature sensor kit for use in rooms that do not have room temperature measurement.
2. Condensate Pump: Integral reservoir and control with electrical power connection through unit power.

K. Unit Controls:

1. Enclosure: Manufacturer's standard, and suitable for indoor locations.
2. Factory-Installed Controller: Configurable digital control.
3. Factory-Installed Sensors: As directed, Unit inlet air temperature, Coil entering refrigerant temperature or Coil leaving refrigerant temperature.
4. Field-Customizable I/O Capability:

    a. Analog Inputs: As directed, Two, Three or Four for use in customizable control strategies.
    b. Digital Inputs: As directed, Two, Three or Four for use in customizable control strategies.
    c. Digital Outputs: As directed, Two, Three or Four for use in customizable control strategies.

5. Features and Functions: As directed, Self-diagnostics, time delay, auto-restart, external static pressure control, auto operation mode, manual operation mode, filter service notification, power consumption display, drain assembly high water level safety shutdown and notification, run test switch.

6. Communication: Network communication with other indoor units and outdoor unit(s).
7. Cable and Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
8. Field Connection: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

L. Unit Electrical:

1. Enclosure: Manufacturer's standard, and suitable for indoor locations.
2. Field Connection: Single point connection to power entire unit and integral controls.
3. Disconnecting Means: Factory-mounted circuit breaker or switch, complying with NFPA 70.
4. Control Transformer: Manufacturer's standard. Coordinate requirements with field power supply.
5. Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
6. Raceways: Enclose line voltage wiring in metal raceways to comply with NFPA 70.

2.10 OUTDOOR, AIR-SOURCE HEAT-PUMP UNITS

A. Description: Factory-assembled and -tested complete unit with components, piping, wiring, and controls required for mating to piping, power, and controls field connections.

1. Specially designed for use in systems with either all heating or all cooling demands, but not for use in systems with simultaneous heating and cooling.
2. Systems shall consist of one unit, or multiple unit modules that are designed by variable refrigerant system manufacturer for field interconnection to make a single refrigeration circuit that connects multiple indoor units.
3. All units installed shall be from the same product development generation.

B. Cabinet:

1. Galvanized steel and coated with a corrosion-resistant finish.

    a. Coating with documented salt spray test performance of 1000 hours according ASTM B117 surface scratch test (SST) procedure.

2. Mounting: Manufacturer-designed provisions for field installation.
3. Internal Access: Removable panels or hinged doors of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. Compressor and Motor Assembly:

1. One or more positive-displacement, direct-drive and hermetically sealed scroll compressor(s) with inverter drive and turndown to 15 percent of rated capacity.
2. Protection: Integral protection against the following:

    a. High refrigerant pressure.
    b. Low oil level.

c. High oil temperature.
d. Thermal and overload.
e. Voltage fluctuations.
f. Phase failure and phase reversal.
g. Short cycling.

3. Speed Control: Variable to automatically maintain refrigerant suction and condensing pressures while varying refrigerant flow to satisfy system cooling and heating loads.
4. Vibration Control: Integral isolation to dampen vibration transmission.
5. Oil management system to ensure safe and proper lubrication over entire operating range.
6. Crankcase heaters with integral control to maintain safe operating temperature.
7. Fusible plug.

D. Condenser Coil Assembly:

1. Plate Fin Coils:

a. Casing: Aluminum, galvanized, or stainless steel.
b. Fins: Aluminum or copper, mechanically bonded to tubes, with arrangement required by performance.
c. Tubes: Copper, of diameter and thickness required by performance.

2. Aluminum Microchannel Coils:

a. Series of flat tubes containing a series of multiple, parallel-flow microchannels layered between refrigerant header manifolds.
b. Single- or multiple-pass arrangement.
c. Construct fins, tubes, and header manifolds of aluminum alloy.

3. Corrosion Protection: Coating with documented salt spray test performance of 1000 hours according ASTM B117 surface scratch test (SST) procedure.
4. Hail Protection: Provide condenser coils with louvers, baffles, or hoods to protect against hail damage.

E. Condenser Fan and Motor Assembly:

1. Fan(s): Propeller type.

a. Direct-drive arrangement.
b. Fabricated from non-ferrous components or ferrous components with corrosion protection finish to match performance indicated for condenser coil.
c. Statically and dynamically balanced.

2. Fan Guards: Removable safety guards complying with OSHA regulations. If using metal materials, coat with corrosion-resistant coating to match performance indicated for condenser coil.
3. Motor(s): Brushless dc or electronically commutated with permanently lubricated bearings and rated for outdoor duty.
4. Motor Protection: Integral protection against thermal, overload, and voltage fluctuations.
5. Speed Settings and Control: Variable speed with a speed range of least 75 percent.
6. Vibration Control: Integral isolation to dampen vibration transmission.

F. Drain Pan: If required by manufacturer's design, provide unit with non-ferrous drain pan with bottom sloped to a low point drain connection.

G. Unit Controls:

1. Enclosure: Manufacturer's standard, and suitable for unprotected outdoor locations.
2. Factory-Installed Controller: Configurable digital control.
3. Factory-Installed Sensors:

    a. Refrigerant suction temperature.
    b. Refrigerant discharge temperature.
    c. Outdoor air temperature.
    d. Refrigerant high pressure.
    e. Refrigerant low pressure.
    f. Oil level.

4. Features and Functions: As directed, Self-diagnostics, time delay, auto-restart, fuse protection, auto operation mode, manual operation mode, night setback control, power consumption display, run test switch or equalize run time between multiple same components.
5. Communication: Network communication with indoor units and other outdoor unit(s).
6. Cable and Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
7. Field Connection: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

H. Unit Electrical:

1. Enclosure: Metal, similar to enclosure, and suitable for unprotected outdoor locations.
2. Field Connection: Single point connection to power entire unit and integral controls.
3. Disconnecting Means: Factory-mounted circuit breaker or switch, complying with NFPA 70.
4. Control Transformer: Manufacturer's standard. Coordinate requirements with field power supply.
5. Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
6. Raceways: Enclose line voltage wiring in metal raceways to comply with NFPA 70.

I. Unit Hardware: Zinc-plated steel, or stainless steel. Coat exposed surfaces with additional corrosion-resistant coating if required to prevention corrosion when exposed to salt spray test for 1000 hours according ASTM B117.

J. Unit Piping:

1. Unit Tubing: Copper tubing with brazed joints.
2. Unit Tubing Insulation: Manufacturer's standard insulation, of thickness to prevent condensation.
3. Field Piping Connections: Manufacturer's standard.
4. Factory Charge: Dehydrated air or nitrogen.
5. Testing: Factory pressure tested and verified to be without leaks.

2.11 OUTDOOR, AIR-SOURCE HEAT RECOVERY UNITS

A. Description: Factory-assembled and -tested complete unit with components, piping, wiring, and controls required for mating to piping, power, and controls field connections.

1. Specially designed for use in systems with simultaneous heating and cooling.
2. Systems shall consist of one unit, or multiple unit modules that are designed by variable refrigerant system manufacturer for field interconnection to make a single refrigeration circuit that connects multiple indoor units.
3. All units installed shall be from the same product development generation.

B. Cabinet:

1. Galvanized steel and coated with a corrosion-resistant finish.

    a. Coating with documented salt spray test performance of 1000 hours according ASTM B117 surface scratch test (SST) procedure.

2. Mounting: Manufacturer-designed provisions for field installation.
3. Internal Access: Removable panels or hinged doors of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. Compressor and Motor Assembly:

1. One or more positive-displacement, direct-drive and hermetically sealed scroll compressor(s) with inverter drive and turndown to 15 percent of rated capacity.
2. Protection: Integral protection against the following:

    a. High refrigerant pressure.
    b. Low oil level.
    c. High oil temperature.
    d. Thermal and overload.
    e. Voltage fluctuations.
    f. Phase failure and phase reversal.
    g. Short cycling.

3. Speed Control: Variable to automatically maintain refrigerant suction and condensing pressures while varying refrigerant flow to satisfy system cooling and heating loads.
4. Vibration Control: Integral isolation to dampen vibration transmission.
5. Oil management system to ensure safe and proper lubrication over entire operating range.
6. Crankcase heaters with integral control to maintain safe operating temperature.
7. Fusible plug.

D. Condenser Coil Assembly:

1. Plate Fin Coils:

    a. Casing: Aluminum, galvanized, or stainless steel.
    b. Fins: Aluminum or copper, mechanically bonded to tubes, with arrangement required by performance.

c. Tubes: Copper, of diameter and thickness required by performance.

2. Aluminum Microchannel Coils:

a. Series of flat tubes containing a series of multiple, parallel-flow microchannels layered between refrigerant header manifolds.
b. Single- or multiple-pass arrangement.
c. Construct fins, tubes, and header manifolds of aluminum alloy.

3. Corrosion Protection: Coating with documented salt spray test performance of 1000 hours according ASTM B117 surface scratch test (SST) procedure.
4. Hail Protection: Provide condenser coils with louvers, baffles, or hoods to protect against hail damage.

E. Condenser Fan and Motor Assembly:

1. Fan(s): Propeller type.

a. Direct-drive arrangement.
b. Fabricated from non-ferrous components or ferrous components with corrosion protection finish to match performance indicated for condenser coil.
c. Statically and dynamically balanced.

2. Fan Guards: Removable safety guards complying with OSHA regulations. If using metal materials, coat with corrosion-resistant coating to match performance indicated for condenser coil.
3. Motor(s): Brushless dc or electronically commutated with permanently lubricated bearings and rated for outdoor duty.
4. Motor Protection: Integral protection against thermal, overload, and voltage fluctuations.
5. Speed Settings and Control: Variable speed with a speed range of least 75 percent.
6. Vibration Control: Integral isolation to dampen vibration transmission.

F. Drain Pan: If required by manufacturer's design, provide unit with non-ferrous drain pan with bottom sloped to a low point drain connection.

G. Unit Controls:

1. Enclosure: Manufacturer's standard, and suitable for unprotected outdoor locations.
2. Factory-Installed Controller: Configurable digital control.
3. Factory-Installed Sensors:

a. Refrigerant suction temperature.
b. Refrigerant discharge temperature.
c. Outdoor air temperature.
d. Refrigerant high pressure.
e. Refrigerant low pressure.
f. Oil level.

4. Features and Functions: Self-diagnostics, time delay, auto-restart, fuse protection, auto operation mode, manual operation mode, night setback control, power consumption display, run test switch or equalize run time between multiple same components.
5. Communication: Network communication with indoor units and other outdoor unit(s).
6. Cable and Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
7. Field Connection: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

H. Unit Electrical:

1. Enclosure: Metal, similar to enclosure, and suitable for unprotected outdoor locations.
2. Field Connection: Single point connection to power entire unit and integral controls.
3. Disconnecting Means: Factory-mounted circuit breaker or switch, complying with NFPA 70.
4. Control Transformer: Manufacturer's standard. Coordinate requirements with field power supply.
5. Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
6. Raceways: Enclose line voltage wiring in metal raceways to comply with NFPA 70.

I. Unit Hardware: Zinc-plated steel, or stainless steel. Coat exposed surfaces with additional corrosion-resistant coating if required to prevention corrosion when exposed to salt spray test for 1000 hours according ASTM B117.

J. Unit Piping:

1. Unit Tubing: Copper tubing with brazed joints.
2. Unit Tubing Insulation: Manufacturer's standard insulation, of thickness to prevent condensation.
3. Field Piping Connections: Manufacturer's standard.
4. Factory Charge: Dehydrated air or nitrogen.
5. Testing: Factory pressure tested and verified to be without leaks.

2.12 HEAT RECOVERY CONTROL UNITS (HRCUs)

A. Description: Factory-assembled and -tested complete unit with components, piping, wiring, and controls required for mating to piping, power, and controls field connections.

1. Specially designed for use in systems with simultaneous heating and cooling.
2. Systems shall consist of one unit, or multiple unit that are designed by variable refrigerant system manufacturer for field interconnection to make a single refrigeration circuit that connects multiple indoor units.

B. Cabinet:

1. Galvanized-steel construction.
2. Insulation: Manufacturer's standard internal insulation to provide thermal resistance and prevent condensation.

3. Mounting: Manufacturer-designed provisions for field installation.
4. Internal Access: Removable panels or hinged doors of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. Drain Pan: If required by manufacturer's design, provide unit with non-ferrous drain pan with bottom sloped to a low point drain connection.

D. Refrigeration Assemblies and Specialties:

1. Specially designed by manufacturer for type of VRF HVAC system being installed, either two or three pipes.
2. Each refrigerant branch circuit shall have refrigerant control valve(s) to control refrigerant flow.
3. Spares: As directed, each heat recovery control unit shall include at least one or two branch circuit port(s) for future use.
4. Each system piping connection upstream of heat recovery unit shall be fitted with an isolation valve to allow for service to any heat recovery control unit in the system without interrupting operation of the system.
5. Each branch circuit connection shall be fitted with an isolation valve and capped service port to allow for service to any individual branch circuit without interrupting operation of the system.

    a. If not available as an integral part of the heat recovery control unit, isolation valves shall be field installed adjacent to the unit pipe connection.

E. Unit Controls:

1. Enclosure: Manufacturer's standard, and suitable for indoor locations.
2. Factory-Installed Controller: Configurable digital control.
3. Factory-Installed Sensors: As directed.
4. Features and Functions: Self-diagnostics, fuse protection, As directed.
5. Communication: Network communication with indoor units and outdoor unit(s).
6. Cable and Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
7. Field Connection: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

F. Unit Electrical:

1. Enclosure: Metal, similar to enclosure, and suitable for indoor locations.
2. Field Connection: Single point connection to power entire unit and integral controls.
3. Disconnecting Means: Factory-mounted circuit breaker or switch, complying with NFPA 70.
4. Control Transformer: Manufacturer's standard. Coordinate requirements with field power supply.
5. Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
6. Raceways: Enclose line voltage wiring in metal raceways to comply with NFPA 70.

G. Unit Piping:

1. Unit Tubing: Copper tubing with brazed joints.
2. Unit Tubing Insulation: Manufacturer's standard insulation, of thickness to prevent condensation.
3. Field Piping Connections: Manufacturer's standard.
4. Factory Charge: Dehydrated air or nitrogen.
5. Testing: Factory pressure tested and verified to be without leaks.

2.13 SYSTEM CONTROLS

A. General Requirements:

1. Network: Indoor units, HRCUs, and outdoor units shall include integral controls and connect through a TIA-485A or manufacturer-selected control network.
2. Network Communication Protocol: Manufacturer proprietary or open control communication between interconnected units.
3. Integration with Building Automation System: ASHRAE 135, BACnet IP and certified by BACnet Testing Lab (BTL), including the following:

    a. Ethernet connection via RJ-45 connectors and port with transmission at 100 Mbps or higher.
    b. Integration devices shall be connected to local uninterruptible power supply unit(s) to provide at least 5 minutes of battery backup operation after a power loss.
    c. Integration shall include control, monitoring, scheduling or change of value notifications as directed.

4. Operator Interface:

    a. Operators shall interface with system and unit controls through the following:

        1) Operator interfaces integral to controllers.
        2) Owner-furnished PC connected to central controller(s).
        3) Web interface through web browser software.
        4) Integration with Building Automation System.

    b. Users shall be capable of interface with controllers for control of indoor units to extent privileges are enabled. Control features available to users shall include the following:

        1) On/off control.
        2) Temperature set-point adjustment.

B. VRF HVAC System Operator Software for PC:

1. Software offered by VRF HVAC system manufacturer shall provide system operators with ability to monitor and control VRF HVAC system(s) from a single dedicated Owner-furnished PC.
2. Software shall provide operator with a graphic user interface to allow monitoring and control of multiple central controllers from a single device location through point-and-click mouse exchange.

3. Plan views shall show building plans with location of indoor units and identification superimposed on plans.
4. Controls operation mode of indoor units as individual units, by selected groups of indoor units, or as collection of all indoor units. Operation modes available through central controller shall match those operation modes of controllers for indoor units.
5. Schedules operation of indoor units as individual units, by selected groups of indoor units, or as collection of all indoor units. Schedules daily, weekly, and annual events.
6. Changes operating set points of indoor units as individual units, by selected groups of indoor units, or as collection of all indoor units.
7. Optimized start feature to start indoor units before scheduled time to reach temperature set-point at scheduled time based on operating history.
8. Night setback feature to operate indoor units at energy-conserving heating and cooling temperature set-points during unoccupied periods.
9. Supports Multiple Languages: As directed, English or French or Spanish.
10. Supports Imperial and Metric Temperature Units: As directed, Fahrenheit or Celsius or Fahrenheit and Celsius.
11. Displays service notifications and error codes.
12. Monitors and displays up to 3000 item error history and 10000 item operation history for regular reporting and further archiving.
13. Monitors and displays cumulative operating time of indoor units.
14. Able to disable and enable operation of individual controllers for indoor units.
15. Information displayed on individual controllers shall also be available for display.
16. Information displayed for outdoor units, including refrigerant high and low pressures percent capacity.

C. Central Controllers:

1. Centralized control for all indoor and outdoor units from a single central controller location.

    a. Include multiple interconnected controllers as required.

2. Controls operation mode of indoor units as individual units, by selected groups of indoor units, or as collection of all indoor units. Operation modes available through central controller shall match those operation modes of controllers for indoor units.
3. Schedule operation of indoor units as individual units, by selected groups of indoor units, or as collection of all indoor units.

    a. Sets schedule for daily, weekly, and annual events.
    b. Schedule options available through central controller shall at least include the schedule options of controllers for indoor units.

4. Changes operating set points of indoor units as individual units, by selected groups of indoor units, or as collection of all indoor units.
5. Optimized start feature to start indoor units before scheduled time to reach temperature set-point at scheduled time based on operating history.
6. Night setback feature to operate indoor units at energy-conserving heating and cooling temperature set-points during unoccupied periods.
7. Service diagnostics tool.
8. Able to disable and enable operation of individual controllers for indoor units.

9. Information displayed on individual controllers shall also be available for display through central controller.
10. Information displayed for outdoor units, including refrigerant high and low pressures percent capacity.
11. Multiple RJ-45 ports for direct connection to a local PC and an Ethernet network switch.
12. Operator interface through a backlit, high-resolution color display touch panel and web accessible through standard web browser software.

D. Wired Controllers for Indoor Units:

1. Single controller capable of controlling multiple indoor units as group.
2. Auto Timeout Touch Screen LCD: Timeout duration shall be adjustable.
3. Multiple Language: As directed, English or French or Spanish.
4. Temperature Units: As directed, Fahrenheit or Celsius Fahrenheit and Celsius.
5. On/Off: Turns indoor unit on or off.
6. Hold: Hold operation settings until hold is released.
7. Operation Mode: Cool, Heat, Auto, Dehumidification, Fan Only, and Setback.
8. Temperature Display: 1-degree increments.
9. Temperature Set-Point: Separate set points for Cooling, Heating, and Setback. Adjustable in 1-degree increments between temperature range As directed.
10. Relative Humidity Display: 1 percent increments.
11. Relative Humidity Set-Point: Adjustable in 1 percent increments between humidity range As directed.
12. Fan Speed Setting: Select between available options furnished with the unit.
13. Airflow Direction Setting: If applicable to unit, select between available options furnished with the unit.
14. Seven-day programmable operating schedule with up to five or eight events per day as directed. Operations shall include On/Off, Operation Mode, and Temperature Set-Point.
15. Auto Off Timer: Operates unit for an adjustable time duration and then turns unit off.
16. Occupancy detection.
17. Service Notification Display: "Filter" As directed.
18. Service Run Tests: Limit use by service personnel to troubleshoot operation.
19. Error Code Notification Display: Used by service personnel to troubleshoot abnormal operation and equipment failure.
20. User and Service Passwords: Capable of preventing adjustments by unauthorized users.
21. Setting stored in nonvolatile memory to ensure that settings are not lost if power is lost. Battery backup for date and time only.
22. Low-voltage power required for controller shall be powered through non-polar connections to indoor unit.

E. Wireless Controllers for Indoor Units:

1. Wireless Communication:

    a. Controller communicates to remote-mounted receiver that is wired to indoor unit(s).

        1) Include receivers with wireless controllers as required to complete installation.
        2) Low-voltage power required for receivers shall be powered through non-polar connections to indoor unit.

b. One wireless controller shall be capable of communicating with one or multiple receivers to control one or multiple indoor units as a group.

2. Controller Battery Life: Three years.
3. Auto Timeout Touch Screen LCD: Timeout duration shall be adjustable.
4. Multiple Language: As directed, English or French or Spanish.
5. Temperature Units: As directed, Fahrenheit or Celsius or Fahrenheit and Celsius.
6. On/Off: Turns indoor unit on or off.
7. Hold: Hold operation settings until hold is released.
8. Operation Mode: Cool, Heat, Auto, Dehumidification, Fan Only, and Setback.
9. Temperature Display: 1-degree increments.
10. Temperature Set-Point: Separate set points for Cooling, Heating, and Setback. Adjustable in 1-degree increments between temperature range As directed.
11. Relative Humidity Display: 1 percent increments.
12. Relative Humidity Set-Point: Adjustable in 1 percent increments between humidity range As directed.
13. Fan Speed Setting: Select between available options furnished with the unit.
14. Airflow Direction Setting: If applicable to unit, select between available options furnished with the unit.
15. Seven-day programmable operating schedule with up to five or eight events per day As directed. Operations shall include On/Off, Operation Mode, and Temperature Set-Point.
16. Auto Off Timer: Operates unit for an adjustable time duration and then turns unit off.
17. Occupancy detection.
18. Service Notification Display: "Filter" As directed.
19. Service Run Tests: Limit use by service personnel to troubleshoot operation.
20. Error Code Notification Display: Used by service personnel to troubleshoot abnormal operation and equipment failure.
21. User and Service Passwords: Capable of preventing adjustments by unauthorized users.
22. Setting stored in non-volatile memory to ensure that settings are not lost if power is lost. Battery for date and time only.

2.14 SYSTEM REFRIGERANT AND OIL

A. Refrigerant:

1. As required by VRF HVAC system manufacturer for system to comply with performance requirements indicated.
2. ASHRAE 34, Class A1 or refrigerant classification.
3. R-410a or refrigerant as directed.

B. Oil:

1. As required by VRF HVAC system manufacturer and to comply with performance requirements indicated.

2.15 SYSTEM CONDENSATE DRAIN PIPING

A. If more than one material is listed, material selection is Contractor's option.

B. Copper Tubing:

1. Drawn-Temper Tubing: As directed, According to ASTM B88, Type L (ASTM B88M, Type B) or ASTM B88, Type M (ASTM B88M, Type C) or Type DWV according to ASTM B306.
2. Wrought-Copper Fittings: ASME B16.22.
3. Wrought-Copper Unions: ASME B16.22.
4. Solder Filler Metals: ASTM B32, lead-free alloys, and water-flushable flux according to ASTM B813.

C. CPVC plastic pipe according to ASTM F441/F441M, Schedule 40, with socket-type pipe fittings according to ASTM F438 and solvent cement according to ASTM F493.

D. PVC plastic pipe according to ASTM D1785, Schedule 40, with socket-type pipe fittings according to ASTM D2466 and solvent cement according to ASTM D2564, primer according to ASTM F656.

2.16 SYSTEM HYDRONIC PIPING

A. Comply with requirements in Section 232113 "Hydronic Piping" for system piping requirements.

2.17 SYSTEM REFRIGERANT PIPING

A. Comply with requirements in Section 232300 "Refrigerant Piping" for system piping requirements.

B. Refrigerant Piping:

1. Copper Tube: ASTM B280, Type ACR.
2. Wrought-Copper Fittings: ASME B16.22.
3. Brazing Filler Metals: AWS A5.8/A5.8M.

C. Refrigerant Tubing Kits:

1. Furnished by VRF HVAC system manufacturer.
2. Factory-rolled and -bundled, soft-copper tubing with tubing termination fittings at each end.
3. Standard one-piece length for connecting to indoor units.
4. Pre-insulated with flexible elastomeric insulation of thickness to comply with governing energy code and sufficient to eliminate condensation.
5. Factory Charge: Dehydrated air or nitrogen or charge as directed.

D. Divided-Flow Specialty Fittings: Where required by VRF HVAC system manufacturer for proper system operation, VRF HVAC system manufacturer shall furnish specialty fittings with identification and instructions for proper installation by Installer.

E. Refrigerant Isolation Ball Valves:

1. Description: Uni-body full port design, rated for maximum system temperature and pressure, and factory tested under pressure to ensure tight shutoff. Designed for valve operation without removing seal cap.
2. Seals: Compatible with system refrigerant and oil. Seal service life of at least 20 years.
3. Valve Connections: Flare or sweat depending on size.

2.18 METAL HANGERS AND SUPPORTS

A. Copper Tube Hangers:

1. Description: MSS SP-58, Types 1 through 58, copper-coated-steel, factory-fabricated components.
2. Hanger Rods: As directed, Continuous-thread rod, nuts, and washer made of galvanized or copper-coated steel or stainless steel.

B. Plastic Pipe Hangers:

1. Description: MSS SP-58, Types 1 through 58, galvanized-steel, factory-fabricated components.
2. Hanger Rods: Continuous-thread rod, nuts, and washer made of galvanized steel or stainless steel as directed.

2.19 METAL FRAMING SYSTEMS

A. MFMA Manufacturer Metal Framing Systems:
1. Description: Shop- or field-fabricated, pipe-support assembly for supporting multiple parallel pipes.
2. Standard: MFMA-4.
3. Channels: Continuous slotted steel channel with inturned lips.
4. Channel Nuts: Formed or stamped steel nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
5. Hanger Rods: Continuous-thread rod, nuts, and washer made of galvanized steel for use indoors and of stainless steel for use outdoors.
6. Metallic Coating for Use Indoors: Electroplated zinc or hot-dip galvanized or mill galvanized as directed.
7. Plastic Coating for Use Outdoors: As directed, PVC, polyurethane, epoxy or polyester.

2.20 FASTENER SYSTEMS

A. Powder-Actuated Fasteners: Threaded, zinc-coated steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

B. Mechanical-Expansion Anchors: Insert-wedge-type anchors, for use in hardened portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

1. Indoor Applications: Zinc-coated or stainless steel.

2. Outdoor Applications: Stainless steel.

2.21 PIPE STANDS

A. General Requirements for Pipe Stands: Shop- or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.

B. Compact Pipe Stand: One-piece plastic unit with integral-rod roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.

C. Low-Type, Single-Pipe Stand: As directed, One-piece plastic or stainless-steel base unit with plastic roller, for roof installation without membrane penetration.

D. High-Type, Single-Pipe Stand:

1. Description: Assembly of base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.
2. Base: As directed, Plastic or Stainless steel.
3. Vertical Members: Two or more cadmium-plated-steel or stainless-steel, continuous-thread rods.
4. Horizontal Member: Cadmium-plated-steel or stainless-steel rod with plastic or stainless-steel, roller-type pipe support.

E. High-Type, Multiple-Pipe Stand:

1. Description: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.
2. Bases: One or more; plastic.
3. Vertical Members: Two or more protective-coated-steel channels.
4. Horizontal Member: Protective-coated-steel channel.
5. Pipe Supports: Galvanized-steel, clevis-type pipe hangers.

F. Curb-Mounted-Type Pipe Stands: Shop- or field-fabricated pipe supports made from structural-steel shapes, continuous-thread rods, and rollers, for mounting on permanent stationary roof curb.

2.22 MISCELLANEOUS SUPPORT MATERIALS

A. Grout: ASTM C1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.

1. Properties: Nonstaining, noncorrosive, and nongaseous.
2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.

B. Structural Steel: ASTM A36/A36M, carbon-steel plates, shapes, and bars; galvanized.

C. Threaded Rods: Continuously threaded. Zinc-plated steel or galvanized steel for indoor applications and stainless steel for outdoor applications. Mating nuts and washers of similar material as rods.

2.23 PIPING AND TUBING INSULATION

A. Comply with requirements in Section 230719 "HVAC Piping Insulation" for system piping insulation requirements.

B. Condensate Drain Piping and Tubing Insulation and Jacket Requirements:

1. Flexible Elastomeric Insulation:

   a. Closed-cell, sponge- or expanded-rubber materials, complying with ASTM C534, Type I for tubular materials.
   b. Indoors: As directed, 1/2 inch (13 mm), 3/4 inch (19 mm) or 1 inch (25 mm) thick.
   c. Outdoors: As directed, 1/2 inch (13 mm), 3/4 inch (19 mm) or 1 inch (25 mm) thick.

2. Field-Applied Jacket:

   a. Concealed: None required.
   b. Indoors, Exposed to View: As directed, none required, PVC, 20 mils (0.5 mm) thick or PVC, color selected by Architect, 20 mils (0.5 mm) thick.
   c. Outdoors, Exposed to View: As directed, none required or Aluminum, smooth, 0.020 inch (0.51 mm) thick.

C. Refrigerant Tubing Insulation and Jacket Requirements:

1. Flexible Elastomeric Insulation:

   a. Closed-cell, sponge- or expanded-rubber materials, complying with ASTM C534, Type I for tubular materials.
   b. Indoors: 1 inch (25 mm) thick.
   c. Outdoors: 1 inch (25 mm) thick.

2. Field-Applied Jacket:

   a. Concealed: None required.
   b. Indoors, Exposed to View: As directed, none required, PVC, 20 mils (0.5 mm) thick or PVC, color selected by Architect, 20 mils (0.5 mm) thick.
   c. Outdoors, Exposed to View: As directed, none required or Aluminum, smooth, 0.020 inch (0.51 mm) thick.

D. Flexible Elastomeric Insulation Adhesive: Comply with MIL-A-24179A, Type II, Class I.

E. PVC Jacket Adhesive: Compatible with PVC jacket.

F. Metal Jacket Flashing Sealants:

1. Materials shall be compatible with insulation materials, jackets, and substrates.
2. Fire- and water-resistant, flexible, elastomeric sealant.
3. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
4. Color: Aluminum.

2.24 SYSTEM CONTROL CABLE AND RACEWAYS

A. Low-Voltage Control Cabling:

1. Plenum-Rated, Paired Cable: NFPA 70, Type CMP.

B. TIA-485A Network Cabling:

1. Standard Cable: NFPA 70, Type CMG.
2. Plenum-Rated Cable: NFPA 70, Type CMP.

C. Ethernet Network Cabling: As directed, TIA-568-C.2 Category 6 or 6a cable with RJ-45 connectors.

D. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems" for control wiring and cable raceways.

2.25 SOURCE QUALITY CONTROL

A. Factory Tests: Test and inspect factory-assembled equipment.

B. Equipment will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports for historical record. Submit reports only if requested.

PART 3 - EXECUTION

3.1 EQUIPMENT INSTALLATION

A. Clearance:

1. Maintain manufacturer's recommended clearances for service and maintenance.
2. Maintain clearances required by governing code.

B. Loose Components: Install components, devices, and accessories furnished by manufacturer, with equipment, that are not factory mounted.

1. Loose components shall be installed by manufacturer's service representative or system Installer under supervision of manufacturer's service representative.

C. Equipment Restraint Installation: Install equipment with seismic-restraint device. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."

D. Indoor Unit Installations:

1. Install units to be level and plumb while providing a neat and finished appearance.
2. Unless otherwise required by VRF HVAC system manufacturer, support ceiling-mounted units from structure above using threaded rods; minimum rod size of 3/8 inch (10 mm).

3. Adjust supports of exposed and recessed units to draw units tight to adjoining surfaces.
4. Protect finished surfaces of ceilings, floors, and walls that come in direct contact with units. Refinish or replaced damaged areas after units are installed.
5. In rooms with ceilings, conceal piping and tubing, controls, and electrical power serving units above ceilings.
6. In rooms without ceiling, arrange piping and tubing, controls, and electrical power serving units to provide a neat and finished appearance.
7. Provide lateral bracing if needed to limit movement of suspended units to not more than 0.25 inch (13 mm).
8. For floor- and wall-mounted units that are exposed, conceal piping and tubing, controls, and electrical power serving units within walls.
9. Floor-mounted units located in mechanical rooms.
10. Install floor-mounted units on support structure indicated on Drawings.
11. Install floor-mounted units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" As directed
12. Attachment: Install hardware for proper attachment to supported equipment.
13. Grouting: Place grout under equipment supports and make bearing surface smooth.

E. Outdoor Unit Installations:

1. Install units to be level and plumb while providing a neat and finished appearance.
2. Install outdoor units on support structures indicated on Drawings.
3. Pad-Mounted Installations: Install outdoor units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" as directed.

    a. Attachment: Install anchor bolts to elevations required for proper attachment to supported equipment.
    b. Grouting: Place grout under equipment supports and make bearing surface smooth.

4. Roof-Mounted Installations: Install outdoor units on equipment supports specified in Section 077200 "Roof Accessories." Anchor units to supports with removable, stainless-steel fasteners.

3.2 GENERAL REQUIREMENTS FOR PIPING AND TUBING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping and tubing systems. Install piping and tubing as indicated unless deviations to layout are approved on coordination drawings.

B. Install piping and tubing in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

C. Install piping and tubing at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

D. Install piping and tubing above accessible ceilings to allow sufficient space for ceiling panel removal.

E. Install piping and tubing to permit valve servicing.

F. Install piping and tubing at indicated slopes.

G. Install piping and tubing free of sags.

H. Install fittings for changes in direction and branch connections.

I. Install piping and tubing to allow application of insulation.

J. Install groups of pipes and tubing parallel to each other, spaced to permit applying insulation with service access between insulated piping and tubing.

K. Install sleeves for piping and tubing penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."

L. Install escutcheons for piping and tubing penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 230518 "Escutcheons for HVAC Piping."

3.3 CONDENSATE DRAIN PIPE AND TUBING INSTALLATION

A. General Requirements for Drain Piping and Tubing:

1. Install a union in piping at each threaded unit connection.
2. Install an adjustable stainless-steel hose clamp with adjustable gear operator on unit hose connections. Tighten clamp to provide a leak-free installation.
3. If required for unit installation, provide a trap assembly in drain piping to prevent air circulated through unit from passing through drain piping. Comply with more stringent of the following:

    a. Details indicated on Drawings.
    b. Manufacturer's requirements.
    c. Governing codes.
    d. In the absence of requirements, comply with requirements of ASHRAE handbooks.

4. Extend drain piping from units with drain connections to drain receptors as indicated on Drawings. If not indicated on Drawings, terminate drain connection at nearest accessible location that is not exposed to view by occupants.
5. Provide each 90-degree change in direction with a Y- or T-fitting. Install a threaded plug connection in the dormant side of fitting or future use as a service cleanout.

B. Gravity Drains:

1. Slope piping from unit connection toward drain termination at a constant slope of not less than one or two percent As directed.

C. Pumped Drains:

1. If unit condensate pump or lift mechanism is not included with an integral check valve, install a full-size check valve in each branch pipe near unit connection to prevent backflow into unit.

3.4 HYDRONIC PIPING AND TUBING INSTALLATION

A. Comply with requirements for hydronic pipe and tubing specified in Section 232113 "Hydronic Piping."

B. Comply with requirements for hydronic specialties specified in Section 232116 "Hydronic Piping Specialties."

C. Comply with requirements for ball valves specified in Section 230523.12 "Ball Valves for HVAC Piping."

D. Comply with requirements for butterfly valves specified in Section 230523.13 "Butterfly Valves for HVAC Piping."

E. Comply with requirements for check valves specified in Section 230523.14 "Check Valves for HVAC Piping."

F. Install continuous-thread hanger rods and elastomeric or spring hangers of size required to support equipment weight As directed.

1. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC." Fabricate brackets or supports as required.
2. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

G. Where installing piping and tubing adjacent to equipment, allow space for service and maintenance.

3.5 REFRIGERANT PIPING AND TUBING INSTALLATION

A. Refrigerant Tubing Kits:

1. Unroll and straighten tubing to suit installation. Deviations in straightness of exposed tubing shall be unnoticeable to observer.
2. Support tubing using hangers and supports indicated at intervals not to exceed 5 feet (1.5 m). Minimum rod size, 1/4 inch (6.4 mm).
3. Prepare tubing ends and make mating connections to provide a pressure tight and leak-free installation.

B. Install refrigerant piping according to ASHRAE 15 and governing codes.

C. Select system components with pressure rating equal to or greater than system operating pressure.

D. Install piping as short and direct as possible, with a minimum number of joints and fittings.

E. Arrange piping to allow inspection and service of equipment. Install valves and specialties in accessible locations to allow for service and inspection. Install access doors or panels as specified in Section 083113 "Access Doors and Frames" if valves or equipment requiring maintenance is concealed behind finished surfaces.

F. Install refrigerant piping and tubing in protective conduit where installed belowground.

G. Install refrigerant piping and tubing in rigid or flexible conduit in locations where exposed to mechanical damage.

H. Unless otherwise required by VRF HVAC system manufacturer, slope refrigerant piping and tubing as follows:

1. Install horizontal hot-gas discharge piping and tubing with a uniform slope downward away from compressor.
2. Install horizontal suction lines with a uniform slope downward to compressor.
3. Install traps to entrain oil in vertical runs.
4. Liquid lines may be installed level.

I. When brazing, remove or protect components that could be damaged by heat.

J. Before installation, clean piping, tubing, and fittings to cleanliness level required by VRF HVAC system manufacturer.

K. Joint Construction:

1. Ream ends of tubes and remove burrs.
2. Remove scale, slag, dirt, and debris from inside and outside of tube and fittings before assembly.
3. Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter.

    a. Use Type BCuP (copper-phosphorus) alloy for joining copper fittings with copper tubing.
    b. Use Type BAg (cadmium-free silver) alloy for joining copper with bronze.

3.6 PIPE AND TUBING INSULATION INSTALLATION

A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated. Installation to maintain a continuous vapor barrier.

B. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of pipe insulation.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed valve covers manufactured of same material as pipe insulation when available.
2. When preformed valve covers are unavailable, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Where PVC jackets are indicated, install with 1-inch (25-mm) overlap at longitudinal seams and end joints; for horizontal applications. Seal with manufacturer's recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

E. Where metal jackets are indicated, install with 2-inch (50-mm) overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches (300 mm) o.c. and at end joints.

3.7 DUCT, ACCESSORIES, AND AIR OUTLETS INSTALLATION

A. Where installing ductwork adjacent to equipment, allow space for service and maintenance.

B. Comply with requirements for metal ducts specified in Section 233113 "Metal Ducts."

C. Comply with requirements for nonmetal ducts specified in Section 233116 "Nonmetal Ducts."

D. Comply with requirements for air duct accessories specified in Section 233300 "Air Duct Accessories."

E. Comply with requirements for flexible ducts specified in Section 233346 "Flexible Ducts."

F. Comply with requirements for air diffusers specified in Section 233713.13 "Air Diffusers."

G. Comply with requirements for registers and grilles specified in Section 233713.23 "Registers and Grilles."

3.8 SOFTWARE

A. Cybersecurity:

1. Software:

a. Coordinate security requirements with IT department or CIO As directed.
b. Ensure that latest stable software release is installed and properly operating.
c. Disable or change default passwords to password using a combination of uppercase and lower letters, numbers, and symbols at least eight characters in length. Record passwords and turn over to party responsible for system operation and administration.

2. Hardware:

    a. Coordinate location and access requirements with IT department or CIO As directed.
    b. Enable highest level of wireless encryption that is compatible with Owner's ICT network.
    c. Disable dual network connections.

3.9 FIRESTOPPING

A. Comply with requirements in Section 078413 "Penetration Firestopping."

B. Comply with TIA-569-D, Annex A, "Firestopping."

C. Comply with BICSI TDMM, "Firestopping" Chapter.

3.10 IELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of manufacturer's service representative:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Refrigerant Tubing Positive Pressure Testing:

1. Comply with more stringent of VRF HVAC system manufacturer's requirements and requirements indicated.
2. After completion of tubing installation, pressurize tubing systems to a test pressure of not less than 1.2 or 1.5 times VRF HVAC system operating pressure As directed, but not less than 600 psig (4137 kPa), using dry nitrogen.
3. Successful testing shall maintain a test pressure for a continuous and uninterrupted period of 24 hours. Allowance for pressure changes attributed to changes in ambient temperature are acceptable.
4. Prepare test report to record the following information for each test:

    a. Name of person starting test, company name, phone number, and e-mail address.
    b. Name of manufacturer's service representative witnessing test, company name, phone number, and e-mail address.
    c. Detailed description of extent of tubing tested.
    d. Date and time at start of test.
    e. Test pressure at start of test.
    f. Outdoor temperature at start of test.

g. Name of person ending test, company name, phone number, and e-mail address.
h. Date and time at end of test.
i. Test pressure at end of test.
j. Outdoor temperature at end of test.
k. Remarks:

5. Submit test reports for Project record.

C. Refrigerant Tubing Evacuation Testing:

1. Comply with more stringent of VRF HVAC system manufacturer's requirements and requirements indicated.
2. After completion of tubing positive-pressure testing, evacuate tubing systems to a pressure of 500 microns.
3. Successful testing shall maintain a test pressure for a continuous and uninterrupted period of one hour(s) with no change.
4. Prepare test report to record the following information for each test:

a. Name of person starting test, company name, phone number, and e-mail address.
b. Name of manufacturer's service representative witnessing test, company name, phone number, and e-mail address.
c. Detailed description of extent of tubing tested.
d. Date and time at start of test.
e. Test pressure at start of test.
f. Outdoor temperature at start of test.
g. Name of person ending test, company name, phone number, and e-mail address.
h. Date and time at end of test.
i. Test pressure at end of test.
j. Outdoor temperature at end of test.
k. Remarks:

5. Submit test reports for Project record.
6. Upon successful completion of evacuation testing, system shall be charged with refrigerant.

D. System Refrigerant Charge:

1. Using information collected from the refrigerant tubing evacuation testing, system Installer shall consult variable refrigerant system manufacturer to determine the correct system refrigerant charge.
2. Installer shall charge system following VRF HVAC system manufacturer's written instructions.
3. System refrigerant charging shall be witnessed by system manufacturer's representative.
4. Total refrigerant charge shall be recorded and permanently displayed at the system's outdoor unit.

E. Products will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports.

3.11 STARTUP SERVICE

A. Engage a VRF HVAC system manufacturer's service representative to perform system(s) startup service.

1. Service representative shall be an employee or a factory-trained and -authorized service representative of VRF HVAC system manufacturer As directed.
2. Complete startup service of each separate system.
3. Complete system startup service according to manufacturer's written instructions.

B. Startup checks shall include, but not be limited to, the following:

1. Check control communications of equipment and each operating component in system(s).
2. Check each indoor unit's response to demand for cooling and heating.
3. Check each indoor unit's response to changes in airflow settings.
4. Check each indoor unit, HRCU, and outdoor unit for proper condensate removal.
5. Check sound levels of each indoor and outdoor unit.

C. Installer shall accompany manufacturer's service representative during startup service and provide manufacturer's service representative with requested documentation and technical support during startup service.

1. Installer shall correct deficiencies found during startup service for reverification.

D. System Operation Report:

1. After completion of startup service, manufacturer shall issue a report for each separate system.
2. Report shall include complete documentation describing each startup check, the result, and any corrective action required.
3. Manufacturer shall electronically record not less than two hours of continuous operation of each system and submit with report for historical reference.

    a. All available system operating parameters shall be included in the information submitted.

E. Witness:

1. As directed, Invite Architect, Owner and Commissioning Agent to witness startup service procedures.
2. Provide written notice not less than 20 business days before start of startup service.

3.12 ADJUSTING

A. Adjust equipment and components to function smoothly, and lubricate as recommended by manufacturer.

B. Adjust initial temperature and humidity set points. Adjust initial airflow settings and discharge airflow patterns.

C. Set field-adjustable switches and circuit-breaker trip ranges according to VRF HVAC system manufacturer's written instructions, and as indicated.

D. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.13 SOFTWARE SERVICE AGREEMENT

A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for two years.

B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.

1. Upgrade Notice: At least 30 days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

3.14 DEMONSTRATION

A. Engage a VRF HVAC system manufacturer's employed training instructor or factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain entire system.

END OF SECTION 238129

SECTION 238146 - WATER-SOURCE UNITARY HEAT PUMPS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes unitary heat pumps with refrigerant-to-water heat exchangers, refrigeration circuits, and refrigerant compressor(s).

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings:

1. Include plans, elevations, sections, and mounting and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Certificates: For water-source unitary heat pumps, accessories, and components, from manufacturer.

B. Field quality-control reports.

C. Sample Warranty: For manufacturer's warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of water-source unitary heat pumps that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, refrigeration components.
2. Warranty Period: Four years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. ASHRAE Compliance:

1. ASHRAE 15.

B. Comply with NFPA 70.

C. Comply with safety requirements in UL 484 for assembly of free-delivery, water-source heat pumps.

2.2 WATER-SOURCE UNITARY HEAT PUMPS, 6 TONS (21 kW) AND SMALLER

A. Description: Packaged water-source unitary heat pump with temperature controls; factory assembled, piped, wired, tested, and rated according to ASHRAE/ARI/ISO-13256-1.

1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Cabinet and Chassis: Galvanized-steel casing with the following features:

1. Access panel for access and maintenance of internal components.
2. Knockouts for electrical and piping connections.
3. Cabinet Insulation: As directed, Glass-fiber liner, minimum 1/2 inch (13 mm), 3/4 inch (19 mm) thick, complying with UL 181, ASTM C1071, and ASTM G21.

C. Water Circuits:

1. Refrigerant-to-Water Heat Exchangers:

a. As directed, source-side coaxial heat exchangers with copper, cupronickel or internal vented double wall water tube, with enhanced heat-transfer surfaces inside a steel shell; both shell and tube are leak tested to 450 psig (3102 kPa) on refrigerant side and 400 psig (2758 kPa) on water side.
b. As directed, load-side coaxial heat exchangers with copper or cupronickel water tube, with enhanced heat-transfer surfaces inside a steel shell; both shell and tube are leak tested to 450 psig (3102 kPa) on refrigerant side and 400 psig (2758 kPa) on water side.
c. Stainless-steel, brazed-plate heat exchanger is leak tested to 450 psig (3102 kPa) on refrigerant side and 400 psig (2758 kPa) on water side. Factory mount heat exchanger in unit on resilient rubber vibration isolators.
d. As directed, Hot-water generator, copper water tube or vented double wall copper tube with enhanced heat-transfer surfaces inside a steel shell; both shell and tube are leak tested to 450 psig (3102 kPa) on refrigerant side and 400 psig (2758 kPa) on water side, pump, circuit breaker, high water temperature and low water refrigerant cutoffs, and tank connection.

D. Refrigerant Circuit Components:

1. Sealed Refrigerant Circuit: Charge with R-410A refrigerant.
2. Filter-Dryer: Factory installed to clean and dehydrate the refrigerant circuit.
3. Charging Connections: Service fittings on suction and liquid for charging and testing on each circuit.
4. Reversing Valve: Four-way, solenoid-activated valve designed to be fail-safe in heating position with replaceable magnetic coil.
5. Compressor:

    a. Scroll.
    b. As directed, Single stage, Two stage or Variable speed.
    c. Installed on vibration isolators and mounted on a structural steel base plate and full-length channel stiffeners.
    d. Exterior of compressor shall be wrapped with a high-density sound-attenuating blanket and housed in an acoustically treated enclosure.
    e. Factory-Installed Safeties:

        1) Antirecycle timer.
        2) High-pressure cutout.
        3) Low-pressure cutout or loss of charge switch.
        4) Internal thermal-overload protection.
        5) Freezestat to stop compressor if water-loop temperature in refrigerant-to-water heat exchanger falls below 35 deg F (2 deg C).
        6) Water-coil, low-temperature switch.

6. Refrigerant Piping Materials: ASTM B743 copper tube with wrought-copper fittings and brazed joints.
7. Pipe Insulation: Refrigerant minimum 3/8-inch- (10-mm-) thick, flexible elastomeric insulation on piping exposed to airflow through the unit. Maximum 25/50 flame-spread/smoke-developed indexes according to ASTM E84.
8. Refrigerant Metering Device: Thermal-expansion valve.
9. Refrigerant Metering Device: Dual-port, thermal-expansion valve to allow specified operation with entering-water temperatures from 25 to 125 deg F (minus 4 to plus 52 deg C).

E. Controls: Control equipment and sequence of operation are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

F. Controls:

1. Basic Unit Control Modes and Devices:

    a. Unit shutdown on high or low refrigerant pressures.
    b. Unit shutdown on low water temperature.
    c. Low- and high-voltage protection.
    d. Overcurrent protection for compressor.
    e. Random time delay, three to 10 seconds, start on power-up.
    f. Time delay override for servicing.
    g. Control voltage transformer.

h. Water-coil freeze protection (selectable for water or antifreeze).
i. Automatic intelligent reset. Unit shall automatically reset five minutes after trip if the fault has cleared. Should a fault reoccur three times sequentially, lockout requiring manual reset occurs.
j. Ability to defeat time delays for servicing.
k. Digital display to indicate high pressure, low pressure, low voltage, and high voltage.
l. The low-pressure switch shall not be monitored for the first 90 seconds after a compressor start command to prevent nuisance safety trips.
m. Remote fault-type indication at thermostat.
n. Selectable 24-V dc or pilot duty dry contact alarm output.
o. 24-V dc output to cycle a motorized water valve with compressor contactor.
p. Service test mode for troubleshooting and service.
q. Unit-performance sentinel warns when heat pump is running inefficiently.
r. Compressor soft start.

2. Thermostat:

a. Wall-Mounted Thermostat:

1) Heat-cool-off switch.
2) As directed, Five day or Seven day, programmable.
3) As directed, Manual or Automatic changeover.
4) As directed, Concealed or Exposed temperature set point.
5) As directed, Concealed or Exposed temperature indication.
6) As directed, Deg F or C indication.

b. Wall-mounted temperature sensor.
c. Duct-mounted temperature sensor
d. Unoccupied period override push button.
e. Digital display to indicate fault condition at heat pump.
f. Data entry and access port.

1) Input data include room temperature and humidity set points for occupied and unoccupied periods.
2) Output data include room temperature and humidity, supply-air temperature, entering-water temperature, operating mode, and status.

3. Terminal Controller:

a. Scheduled operation for occupied and unoccupied periods on seven or 36-day clock As directed, with minimum of four programmable periods per day.
b. Two-hour unoccupied override period.
c. Remote-control panel to contain programmable timer and digital display for fault condition.
d. Compressor-disable relay to stop compressor operation for demand limiting or switch to unoccupied operation.
e. Automatic restart after five minutes if fault clears. Lockout after three attempts to restart following fault. Indicate fault for service technician.
f. Backup for volatile memory.

G. Electrical Connection: Single electrical connection with fused disconnect.

H. Capacities and Characteristics:

1. Source-Side Water Supply:

a. Water Flow: As directed.
b. Pressure Loss: As directed.
c. Entering-Water Temperature (Cooling): As directed.
d. Entering-Water Temperature (Heating): As directed.
e. Antifreeze Protection Chemical: As directed.
f. Antifreeze Concentration: As directed.

2. Load-Side Water Supply:

a. Water Flow: As directed.
b. Pressure Loss: As directed.
c. Entering-Water Temperature (Cooling): As directed.
d. Entering-Water Temperature (Heating): As directed.
e. Antifreeze Protection Chemical: As directed.
f. Antifreeze Concentration: As directed.

3. Cooling:

a. Total Capacity: As directed.
b. Sensible Capacity: As directed.
c. Minimum Energy-Efficiency Ratio (EER): As directed.

4. Heating:

a. Capacity: As directed.
b. Minimum Coefficient of Performance (COP): As directed.

5. Electrical Characteristics for Single Connection:

a. Volts: As directed, 120, 208 or 230 V.
b. Phase: As directed, Single or Three.
c. Hertz: 60.
d. Full-Load Amperes (FLA): As directed.
e. Maximum Circuit Amperage (MCA): As directed.
f. Maximum Overcurrent Protection (MOCP): As directed.

2.3 ACCESSORIES

A. Hose Kits: Tag hose kits to equipment designations.

1. Minimum Working Pressure: 400 psig (2758 kPa).
2. Operating Temperatures: From 33 to 211 deg F (1 to 100 deg C).
3. Hose Length: As directed, 24 inches (600 mm) or 36 inches (900 mm) As directed.
4. Minimum Hose Diameter: Equal to water-source unitary heat-pump piping connection.

5. Hose Material: Braided stainless steel with adapters for pipe connections.
6. Isolation Valves: Two-piece, bronze-body ball valves with stainless-steel ball and stem, standard-port threaded connections, and galvanized-steel lever handle. Valves shall be factory installed on supply and return connections of both load-side and source-side heat exchangers. If balancing valve is combination shutoff type with memory stop, the isolation valve may be omitted on the return.
7. Strainer: Y-pattern with blowdown valve in supply connections of both load and source side of heat exchangers.
8. Balancing Valves: Mount in return connection. Include meter ports to allow flow measurement with differential pressure gage.

    a. Automatic balancing valve, factory set to operate within 10 percent of design flow rate over a pressure range of 2 to 80 psig (13.8 to 552 kPa).
    b. Manual, calibrated-orifice balancing valve with memory stop.
    c. Manual, venturi-type balancing valve with memory stop.

9. Water-Regulating Valve Assemblies: A direct acting valve regulates discharge pressure during the cooling cycle, and a reverse acting valve regulates the suction pressure during the heating cycle. Valves shall close when heat-pump compressor is not running.
10. Motorized Water Valve: Stop water flow through the unit when compressor is off. Slow-acting, 24-V dc valve with threaded connections is installed between isolation valves and heat exchanger.

B. Hose Kit Assemblies:

1. Minimum Working Pressure: 400-psig (2758-kPa).
2. Operating Temperatures: From 33 to 211 deg F (1 to 100 deg C).
3. Hose Length: As directed, 24 inches (600 mm) or 36 inches (900 mm).
4. Minimum Hose Diameter: Equal to water-source unitary heat-pump piping connection.
5. Hose Material: Braided stainless steel with adapters for pipe connections.
6. Supply and return hoses having ball valve with pressure-temperature port.
7. Supply hose having ball valve with pressure-temperature port; return hose having automatic flow regulator valve with pressure-temperature ports and ball valve.
8. Supply hose having Y-pattern strainer with blowdown valve and ball valve with pressure-temperature port; return hose having automatic flow regulator with pressure-temperature ports and ball valve.
9. Supply hose having Y-pattern strainer with blowdown valve and ball valve with pressure-temperature port; return hose having ball valve with pressure-temperature port.

C. Loop Controller: Six stages; two stages for heating and four stages for cooling.

D. Pump Module:

1. As directed, minimum 1/6-hp, 230-V or 120-V, single-phase pump, rated for at least 16 gpm (1 L/s) at 20 feet of head (59 kPa).
2. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
3. Include pump module hose kit with thread to barb fittings, hose, and hose clamps.
4. Three-way brass shut-off/flushing/purging valve.
5. Include controls to operate pump as required to maintain room temperature and ventilation set points.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Equipment Mounting:

1. Install water-source, unitary heat pumps on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" As directed
2. Comply with requirements for vibration-isolation and seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration-isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

B. Suspend water-source, unitary heat pumps from structure with all-thread hanger rods and elastomeric hangers, spring hangers or spring hangers with vertical-limit stop As directed. Hanger rods and attachments to structure are specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment." Vibration hangers are specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" As directed.

C. Install wall-mounting thermostats and switch controls in electrical outlet boxes at heights to match lighting controls or as required in Section 230923 "Direct Digital Control (DDC) System for HVAC."

D. Drawings indicate general arrangement of piping, fittings, and specialties. Specific connection requirements are as follows:

1. Connect supply and return hydronic piping to heat pump with unions and shutoff valves or hose kits as directed.

E. Install electrical devices furnished by manufacturer but not specified to be factory mounted.

F. Install piping adjacent to machine to allow space for service and maintenance.

3.2 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections:

1. After installing water to water heat pumps and after electrical circuitry has been energized, test units for compliance with requirements.
2. Inspect for and remove shipping bolts, blocks, and tie-down straps.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Heat pumps will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 238146

SECTION 238146.13 - WATER-TO-AIR HEAT PUMPS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Concealed horizontal or vertical units, 6 tons (21 kW) and smaller.
2. Exposed, floor-mounted console units.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

B. Sample Warranty: For special warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data

1.5 QUALITY ASSURANCE

A. ASHRAE Compliance:

1. ASHRAE 15.
2. Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

B. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

C. Comply with NFPA 70.

D. Comply with safety requirements in UL 484 for assembly of free-delivery, water-source heat pumps.

E. Comply with safety requirements in UL 1995 for duct-system connections.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of water-source heat pumps that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, refrigeration components.
2. Warranty Period: Four years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 CONCEALED WATER-SOURCE HEAT PUMPS, 6 TONS (21 kW) AND SMALLER

A. Description: Packaged water-source heat pump with temperature controls; factory assembled, tested, and rated according to ASHRAE/ARI/ISO-13256-1.

1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.

B. Cabinet and Chassis: Galvanized-steel casing with the following features:

1. Access panel for access and maintenance of internal components.
2. Knockouts for electrical and piping connections.
3. Flanged duct connections.
4. Cabinet Insulation: Glass-fiber liner, minimum 1/2 inch (13 mm) thick, complying with UL 181, ASTM C1071, and ASTM G21.
5. Units field convertible for various discharge configurations.
6. Condensate Drainage: High-density polyethylene plastic or stainless-steel drain pan with condensate drain piping projecting through unit cabinet and complying with ASHRAE 62.1.

a. Condensate Overflow Protection Switch: Solid state electronic; mechanical float switch not permitted.

7. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

C. Fan: Direct driven, centrifugal, with multispeed motor resiliently mounted in fan inlet and with inlet rings to allow wheel removal from one side without removing housing.

1. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
2. Motor: As directed, Multispeed, permanently lubricated, permanent split capacitor or ECM motor.

D. Water Circuit:

1. Refrigerant-to-Water Heat Exchangers:

   a. As directed, coaxial heat exchangers with copper or cupronickel water tube with enhanced heat-transfer surfaces inside a steel shell; both shell and tube are leak tested to 450 psig (3102 kPa) on refrigerant side and 400 psig (2758 kPa) on water side. Factory mount heat exchanger in unit on resilient rubber vibration isolators.
   b. Stainless-steel, brazed-plate heat exchanger is leak tested to 450 psig (3102 kPa) on refrigerant side and 400 psig (2758 kPa) on water side. Factory mount heat exchanger in unit on resilient rubber vibration isolators.

2. Water-Regulating Valves: Limit water flow through refrigerant-to-water heat exchanger, and control head pressure on compressor during cooling and heating. Valves shall close when heat-pump compressor is not running.
3. Motorized Water Valve: Stop water flow through the unit when compressor is off.

E. Refrigerant-to-Air Coils: Copper tubes with aluminum fins, leak tested to 450 psig (3102 kPa).

F. Refrigerant Circuit Components:

1. Sealed Refrigerant Circuit: Charge with R-410A refrigerant.
2. Filter-Dryer: Factory installed to clean and dehydrate the refrigerant circuit.
3. Charging Connections: Service fittings on suction and liquid for charging and testing on each circuit.
4. Reversing Valve: Four-way, solenoid-activated valve designed to be fail-safe in heating position with replaceable magnetic coil.
5. Compressor: As directed, Hermetic rotary, reciprocating, scroll, single-stage or two-stage compressor installed on vibration isolators and housed in an acoustically treated enclosure with factory-installed safeties as follows:

   a. Antirecycle timer.
   b. High-pressure cutout.
   c. Low-pressure cutout or loss of charge switch.
   d. Internal thermal-overload protection.
   e. Freezestat to stop compressor if water-loop temperature in refrigerant-to-water heat exchanger falls below 35 deg F (2 deg C).
   f. Condensate overflow switch to stop compressor with high condensate level in condensate drain pan.
   g. Water-coil, low-temperature switch.
   h. Air-coil, low-temperature switch.

6. Refrigerant Piping Materials: ASTM B743 copper tube with wrought-copper fittings and brazed joints.
7. Pipe Insulation: Refrigerant minimum 3/8-inch- (10-mm-) thick, flexible elastomeric insulation on piping exposed to airflow through the unit. Maximum 25/50 flame-spread/smoke-developed indexes according to ASTM E84.
8. Refrigerant Metering Device: Thermal-expansion valve.
9. Refrigerant Metering Device: Dual-port, thermal-expansion valve to allow specified operation with entering-water temperatures from 25 to 125 deg F (minus 4 to plus 52 deg C).

10. Hot-Gas Reheat Valve: Pilot-operated, sliding-type valve with replaceable magnetic coil.

G. Electric Heating Coil: Helix-wound, nickel-chromium, wire-heating elements in ceramic insulators mounted on steel supports. As directed, energize on call for heating when entering-water-loop temperature is less than 25 deg F (minus 4 deg C), 40 deg F (5 deg C) or 60 deg F (15 deg C).

H. Hot-Gas Reheat: Reheat valve diverts refrigerant hot gas to reheat coil when remote humidistat calls for dehumidification.

I. Filters: Disposable, glass-fiber, flat type, 1 inch (25 mm) thick, treated with adhesive, and having a minimum efficiency reporting value of 5 according to ASHRAE 52.2.

J. Filters: Disposable, pleated type, 1 inch (25 mm) thick and with a minimum efficiency reporting value of 7 according to ASHRAE 52.2.

K. Controls:

1. Basic Unit Control Modes and Devices:

a. Dehumidification mode.
b. Unit shutdown on high or low refrigerant pressures.
c. Unit shutdown on low water temperature.
d. Low- and high-voltage protection.
e. Overcurrent protection for compressor and fan motor.
f. Random time delay, three to ten seconds, start on power-up.
g. Time delay override for servicing.
h. Control voltage transformer.
i. Water-coil freeze protection (selectable for water or antifreeze).
j. Air-coil freeze protection (check filter switch).
k. Condensate overflow shutdown switch.
l. Option to reset unit at thermostat or disconnect.
m. Fault type shall be retained in memory if reset at thermostat.
n. Automatic intelligent reset. Unit shall automatically reset five minutes after trip if the fault has cleared. Should a fault reoccur three times sequentially, lockout requiring manual reset occurs.
o. Ability to defeat time delays for servicing.
p. Light-emitting diodes (LED) to indicate high pressure, low pressure, low voltage, and high voltage.
q. The low-pressure switch SHALL NOT be monitored for the first 90 seconds after a compressor start command to prevent nuisance safety trips.
r. Remote fault-type indication at thermostat.
s. Selectable 24-V dc or pilot duty dry contact alarm output.
t. 24-V dc output to cycle a motorized water valve with compressor contactor.
u. Electric heat output to control two stages of electric heat (emergency heat).
v. Service test mode for troubleshooting and service.
w. Unit-performance sentinel warns when the heat pump is running inefficiently.

2. Thermostat:

a. Wall-Mounted Thermostat:

1) Heat-cool-off switch.
2) Fan on-auto switch.
3) As directed, Manual or Automatic changeover.
4) As directed, Concealed or Exposed temperature set point.
5) As directed, Concealed or Exposed temperature indication.
6) Deg F or C indication as directed.

b. Wall-Mounted Humidistat: As directed, Concealed or Exposed.

1) Temperature set point.
2) Temperature indication.

c. Wall-mounted temperature sensor.
d. Unoccupied period override push button.
e. LED to indicate fault condition at heat pump.
f. Data entry and access port.

1) Input data include room temperature and humidity set points for occupied and unoccupied periods.
2) Output data include room temperature and humidity, supply-air temperature, entering-water temperature, operating mode, and status.

3. Terminal Controller:

a. As directed, Scheduled operation for occupied and unoccupied periods on seven or 365-day clock with minimum of four programmable periods per day.
b. Two-hour unoccupied override period.
c. Remote-control panel to contain programmable timer and LED for fault condition.
d. Compressor disable relay to stop compressor operation for demand limiting or switch to unoccupied operation.
e. Automatic restart after five minutes if fault clears. Lockout after three attempts to restart following fault. Indicate fault for service technician.
f. Return-air temperature high-limit (firestat). Stop unit on high temperature.
g. Backup for volatile memory.
h. Differential pressure switch to indicate fan status. Fan failure alarm.
i. Differential pressure switch to indicate filter status. Dirty filter alarm.

L. Electrical Connection: Single electrical connection with fused disconnect.

M. Capacities and Characteristics:

1. Fan:

a. Airflow: As directed.
b. External Static Pressure: As directed.
c. Fan Speed: As directed.
d. Motor Speed: As directed.
e. Motor Horsepower: As directed.

2. Water Supply:

   a. Water Flow: As directed.
   b. Pressure Loss: As directed.
   c. Entering-Water Temperature (Cooling): As directed.
   d. Entering-Water Temperature (Heating): As directed.
   e. Antifreeze Protection Chemical: As directed.
   f. Antifreeze Concentration: As directed.

3. Cooling:

   a. Total Capacity: As directed.
   b. Sensible Capacity: As directed.
   c. Minimum Energy-Efficiency Ratio (EER): As directed.
   d. Entering-Air Temperature Dry Bulb: As directed.
   e. Entering-Air Temperature Wet Bulb: As directed.

4. Heating:

   a. Capacity: As directed.
   b. Entering-Air Temperature: As directed.
   c. Air Temperature Rise: As directed.
   d. Minimum Coefficient of Performance (COP): As directed.

5. Electric Heating Coil (Optional Feature):

   a. Capacity: As directed.
   b. Number of Steps: As directed.

6. Filters:

   a. Face Area: As directed.
   b. Maximum Face Velocity: As directed.

7. Electrical Characteristics for Single Connection:

   a. Volts: As directed, 120, 208 or 230.
   b. Phase: As directed, Single or Three.
   c. Hertz: 60.
   d. Full-Load Amperes (F.L.A.): As directed.
   e. Maximum Circuit Amperage (MCA): As directed.
   f. Maximum Overcurrent Protection (MOCP): As directed.

2.2 EXPOSED, CONSOLE WATER-SOURCE HEAT PUMPS

A. Description: Packaged water-source heat pump with temperature controls; factory assembled, tested, and rated according to ASHRAE/ARI/ISO-13256-1.

1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.

B. Cabinet and Chassis: As directed, Manufacturer's standard, low standard- and low-height, flat or sloped-top, extended galvanized-steel casing with the following features:

1. Access panel for access and maintenance of internal components.
2. Knockouts for electrical and piping connections.
3. Cabinet Insulation: Glass-fiber liner, minimum 1/2 inch (13 mm) thick, complying with UL 181, ASTM C1071, and ASTM G21.
4. Cabinet Insulation: Glass-fiber liner, minimum 1/2 inch (13 mm) thick, complying with ASTM C1071 and NAIMA AH124, "Fibrous Glass Duct Liner Standard."
5. Condensate Drainage: High-density polyethylene plastic or stainless-steel drain pan with condensate drain piping projecting to unit exterior and complying with ASHRAE 62.1.

    a. Condensate Overflow Protection: Solid state electronic; mechanical float switch not permitted.

6. Discharge Grille: Steel, aluminum, or plastic grille for adjustable discharge air pattern.
7. Color: As directed, Selected by Architect from manufacturer's standard or custom color selection.
8. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

C. Fan: Direct driven, centrifugal, with multispeed motor mounted on a removable fan-motor board.

1. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
2. Motor: As directed, Multispeed, permanently lubricated, permanent split capacitor or ECM.

D. Water Circuit:

1. Refrigerant-to-Water Heat Exchanger: As directed, Coaxial heat exchanger with copper or cupronickel water tube with enhanced heat-transfer surfaces inside a steel shell; both shell and tube are leak tested to 450 psig (3102 kPa) for refrigerant side and 400 psig (2758 kPa) for water side. Factory mount heat exchanger in unit on resilient rubber vibration isolators.
2. Water-Regulating Valves: Limit water flow through refrigerant-to-water heat exchanger and control head pressure on compressor during cooling and heating. Valves shall close when heat-pump compressor is not running.

E. Refrigerant-to-Air Coils: Copper tubes with aluminum fins, leak tested to 450 psig (3102 kPa).

F. Refrigerant Circuit Components:

1. Sealed Refrigerant Circuit: Charge with R-410A refrigerant.
2. Filter-Dryer: Factory installed to clean and dehydrate the refrigerant circuit.
3. Charging Connections: Service fittings on suction and liquid for charging and testing.

4. Reversing Valve: Four-way, solenoid-activated valve designed to be fail-safe in heating position with replaceable magnetic coil.
5. Compressor: Hermetic rotary compressor installed on vibration isolators housed in an acoustically treated enclosure with factory-installed safeties as follows:

    a. Antirecycle timer.
    b. High-pressure cutout.
    c. Low-pressure cutout or loss of charge switch.
    d. Internal thermal-overload protection.
    e. Freezestat to stop compressor if water-loop temperature in refrigerant-to-water heat exchanger falls below 35 deg F (2 deg C).
    f. Condensate overflow switch to stop compressor with high condensate level in condensate drain pan.
    g. Water-coil, low-temperature switch.
    h. Air-coil, low-temperature switch.

6. Refrigerant Piping Materials: ASTM B743 copper tube with wrought-copper fittings and brazed joints.
7. Pipe Insulation: Refrigerant minimum 3/8-inch- (10-mm-) thick, flexible elastomeric insulation on piping exposed to airflow through the unit. Maximum 25/50 flame-spread/smoke-developed indexes per ASTM E84.
8. Refrigerant Metering Device: Dual-port, thermal-expansion valve to allow specified operation with entering-water temperatures from 25 to 125 deg F (minus 4 to 52 deg C).
9. Hot-Gas Reheat Valve: Pilot-operated, sliding-type valve with replaceable magnetic coil.

G. Electric Heating Coil: Energized on call for heating when entering-water-loop temperature is less than 60 deg F (15 deg C).

H. Hot-Gas Reheat: As directed Reheat valve diverts refrigerant hot gas to reheat coil when remote or unit-mounted humidistat calls for dehumidification.

I. Outdoor-Air Damper: As directed Two-position, manual or motorized outdoor-air damper for fixed minimum intake up to 25 percent of fan capacity.

J. Filters: Disposable, glass-fiber, flat type, 1 inch (25 mm) thick, treated with adhesive, and having a minimum efficiency reporting value of 5 according to ASHRAE 52.2.

K. Filters: Disposable, pleated type, 1 inch (25 mm) thick and with a minimum efficiency reporting value of 7 according to ASHRAE 52.2.

L. Controls:

1. Basic Unit Control Modes and Devices:

    a. Dehumidification mode.
    b. Unit shutdown on high or low refrigerant pressures.
    c. Unit shutdown on low water temperature.
    d. Low- and high-voltage protection.
    e. Overcurrent protection for compressor and fan motor.
    f. Random time delay, three to ten seconds, start on power-up.
    g. Time delay override for servicing.

h. Control voltage transformer.
i. Water-coil freeze protection (selectable for water or antifreeze).
j. Air-coil freeze protection (check filter switch).
k. Condensate overflow shutdown switch.
l. Option to reset unit at thermostat or disconnect.
m. Fault type shall be retained in memory if reset at thermostat.
n. Automatic intelligent reset. Unit shall automatically reset five minutes after trip if the fault has cleared. Should a fault reoccur three times sequentially, lockout requiring manual reset occurs.
o. Ability to defeat time delays for servicing.
p. Light-emitting diodes (LED) to indicate high pressure, low pressure, low voltage, and high voltage.
q. The low-pressure switch SHALL NOT be monitored for the first 90 seconds after a compressor start command to prevent nuisance safety trips.
r. Remote fault-type indication at thermostat.
s. Selectable 24-V dc or pilot duty dry contact alarm output.
t. 24V dc output to cycle a motorized water valve with compressor contactor.
u. Electric heat output to control two stages of electric heat (emergency heat).
v. Service test mode for troubleshooting and service.
w. Unit-performance sentinel warns when the heat pump is running inefficiently.

2. Thermostat:

a. As directed Wall or Unit-Mounted Thermostat:

1) Heat-cool-off switch.
2) Fan on-auto switch.
3) As directed Manual or Automatic changeover.
4) As directed Concealed or Exposed temperature set point.
5) As directed Concealed or Exposed temperature indication.
6) As directed Deg F or C indication.

b. As directed Wall or Unit-Mounted Humidistat: As directed Concealed or Exposed.

1) Temperature set point.
2) Temperature indication.

c. As directed Wall or Unit-mounted temperature sensor.
d. Unoccupied period override push button.
e. LED to indicate fault condition at heat pump.
f. Data entry and access port.

1) Input data include room temperature and humidity set points for occupied and unoccupied periods.
2) Output data include room temperature and humidity, supply-air temperature, entering-water temperature, operating mode, and status.

3. Terminal Controller:

a. As directed Scheduled operation for occupied and unoccupied periods on seven or 365-day clock with minimum of four programmable periods per day.

b. Two-hour unoccupied override period.
c. Compressor disable relay to stop compressor operation for demand limiting or switch to unoccupied operation.
d. Automatic restart after five minutes if fault clears. Lockout after three attempts to restart following fault. Indicate fault for service technician.
e. Backup for volatile memory.
f. Differential pressure switch to indicate fan status. Fan failure alarm.
g. Differential pressure switch to indicate filter status. Dirty filter alarm.

M. Electrical Connection: Single electrical connection with fused disconnect.

N. Capacities and Characteristics:

1. Fan:

a. Airflow: As directed.
b. External Static Pressure: As directed.
c. Fan Speed: As directed.
d. Motor Speed: As directed.
e. Motor Horsepower: As directed.

2. Water Supply:

a. Water Flow: As directed.
b. Pressure Loss: As directed.
c. Entering-Water Temperature (Cooling): As directed.
d. Entering-Water Temperature (Heating): As directed.
e. Antifreeze Protection Chemical: As directed.
f. Antifreeze Concentration: As directed.

3. Cooling:

a. Total Capacity: As directed.
b. Sensible Capacity: As directed.
c. Minimum Energy-Efficiency Ratio (EER): As directed.
d. Entering-Air Temperature Dry Bulb: As directed.
e. Entering-Air Temperature Wet Bulb: As directed.

4. Heating:

a. Capacity: As directed.
b. Entering-Air Temperature: As directed.
c. Air Temperature Rise: As directed.
d. Minimum Coefficient of Performance (COP): As directed.

5. Electric Heating Coil (Optional Feature):

a. Capacity: As directed.
b. Number of Steps: As directed.

6. Filters:

a. Face Area: As directed.
b. Maximum Face Velocity: As directed.

7. Electrical Characteristics for Single Connection:

a. Volts/Phase/Hertz: As directed.
b. Full-Load Amperes (F.L.A.): As directed.
c. Maximum Circuit Amperage (MCA): As directed.
d. Maximum Overcurrent Protection (MOCP): As directed.

2.3 HOSE KITS

A. General: Hose kits shall be designed for minimum 400-psig (2758-kPa) working pressure and operating temperatures from 33 to 211 deg F (0.5 to 99 deg C). Tag hose kits to equipment designations.

B. Hose: As directed Length 24 inches (600 mm) or 36 inches (900 mm) braided stainless steel, complete with adapters, dimension As directed. Minimum diameter, equal to water-source, heat-pump connection size.

C. Isolation Valves: Two-piece, bronze-body ball valves with stainless-steel, standard-port ball and stem with normal pipe thread (NPT) connections, and galvanized-steel lever handle. Provide valve for supply and return. If balancing device is combination shutoff type with memory stop, the isolation valve may be omitted on the return.

D. Strainer: Y-type with blowdown valve in supply connection.

E. Balancing Device: Mount in return connection. Include meter ports to allow flow measurement with differential pressure gage.

1. Automatic balancing valve, factory set to operate within 10 percent of design flow rate over a 40:1 differential pressure range of 2 to 80 psig (13.8 to 552 kPa).
2. Manual, calibrated-orifice balancing valve.
3. Manual, venturi-type balancing valve.

F. Motorized Water Valve: Slow-acting, 24-V dc, with NPT connections.

2.4 HOSE KIT ASSEMBLIES

A. Supply and return hoses having ball valve with pressure temperature port.

B. Supply hose having ball valve with pressure temperature port; return hose having automatic flow regulator valve with pressure temperature ports, and ball valve.

C. Supply hose having "Y" strainer with blowdown valve, and ball valve with pressure temperature port; return hose having automatic flow regulator with PT ports, and ball valve.

D. Supply hose having "Y" strainer with blowdown valve, and ball valve with pressure temperature port.

E. Return hose having ball valve with pressure temperature port.

2.5 PUMP MODULE

A. Minimum 1/6-hp, 230-V, single-phase pump rated to move at least 16 gpm (1 L/s) at 20-feet wg (59-kPa) head pressure.

1. General requirements for motors are specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

B. Include pump module hose kit with thread to barb fittings, hose, and hose clamps.

C. Three-way brass shut-off/flushing/purging valve.

D. Include controls to operate pump as required to maintain room temperature and ventilation set points.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Floor Mounting: As directed Install water-source heat pumps using elastomeric pads, elastomeric mounts or restrained spring isolators. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment."

1. Minimum Deflection: As directed 1/4 inch (6 mm) or 1 inch (25 mm).

B. Suspended Units: As directed Install water-source heat pumps with continuous-thread hanger rods and elastomeric hangers, spring hangers or spring hangers with vertical-limit stop of size required to support weight of water-source heat pump unit.

1. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment."
2. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

C. Install wall-mounting thermostats, humidistats, and switch controls in electrical outlet boxes at heights to match lighting controls or as required in Section 230923.27 "Temperature Instruments," Section 230923.19 "Moisture Instruments," and Section 230923 "Direct Digital Control (DDC) System for HVAC."

D. Connect supply and return hydronic piping to heat pump.

E. Connect heat-pump condensate drain pan to indirect waste connection with condensate trap of adequate depth to seal against fan pressure. Install cleanouts in piping at changes of direction.

F. Connect supply and return ducts to water-source heat pumps with flexible duct connectors specified in Section 233300 "Air Duct Accessories."

G. Install electrical devices furnished by manufacturer but not specified to be factory mounted.

H. Install piping adjacent to machine to allow service and maintenance.

I. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

J. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.2 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections:

1. After installing water-source heat pumps and after electrical circuitry has been energized, test units for compliance with requirements.
2. Inspect for and remove shipping bolts, blocks, and tie-down straps.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Heat pumps will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 238146.13

SECTION 238213 - VALANCE HEATING AND COOLING UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Electric radiant heaters.
2. Hydronic heating and cooling panels.

1.2 ACTION SUBMITTALS

A. Product Data: Include rated capacities, specialties, and accessories for each product indicated.

B. Shop Drawings:

1. Include plans, elevations, sections, details, and attachments to other work. Detail equipment assemblies and suspension and attachment.
2. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

1.3 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 ELECTRIC RADIANT HEATERS

A. Quartz Lamp Heating Elements: Coiled tungsten-wire heating element enclosed in clear quartz tube.

B. Quartz Tube Heating Elements: Nickel-chromium-wire heating element enclosed in quartz tube.

C. Metal-Sheathed Heating Elements: Nickel-chromium-wire heating element embedded in magnesium oxide powder enclosed in metal sheath. Comply with UL 1030.

D. Comply with UL 499 and UL 2021.

E. Enclosures: As directed, Aluminized, Stainless or Painted-steel housing with anodized-aluminum reflector.

1. Finish: As directed, Baked-enamel finish in manufacturer's standard or custom paint color as selected by Architect.

F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

G. Unit Controls:

1. Line-voltage thermostat.
2. Enclosed contactor for remote thermostat.
3. Snow and ice detector with moisture sensor and integral temperature sensor.

H. Capacities and Characteristics:

1. Enclosure Length: As directed.
2. Mounting Height: As directed.
3. Heating Capacity: As directed.
4. Radiation Pattern: As directed, 30, 60 or 90 symmetric or asymmetric-degree-included angle.
5. Electrical Characteristics for Single-Point Connection:

    a. Volts: As directed.
    b. Phase: As directed.
    c. Hertz: As directed.
    d. Full-Load Amperes: As directed.
    e. Minimum Circuit Ampacity: As directed.
    f. Maximum Overcurrent Protection: As directed.

2.2 HYDRONIC HEATING AND COOLING PANELS

A. Description: As directed, Modular or Linear sheet-metal panel with serpentine water piping, suitable for lay-in installation flush with T-bar ceiling grid, surface mounting or recessed mounting.

1. Panels: As directed, Minimum 0.0336-inch- (0.86-mm-) thick, galvanized-steel or 0.0396-inch- (1.0-mm-) thick, aluminum sheet.
2. Backing Insulation: As directed, Minimum 1-inch- (25-mm-) or 2-inch- (50-mm-) thick, mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C612, Type IA or Type IB with factory-applied jacket.
3. Exposed-Side Panel Finish: Apply silk-screened finish to match appearance of acoustical ceiling tiles selected by Architect.
4. Exposed-Side Panel Finish: Factory prime coated, ready for field painting.
5. Exposed-Side Panel Finish: As directed, Baked-enamel finish in manufacturer's standard or custom paint color as selected by Architect.
6. Factory Piping: As directed, ASTM B88, Type L (ASTM B88M, Type B) or ASTM B88, Type M (ASTM B88M, Type C) copper tube with ASME B16.22 wrought-copper fittings and brazed joints. Piping shall be mechanically bonded to panel.
7. Surface-Mounted Trim: As directed, Sheet metal with baked-enamel finish in manufacturer's standard or custom paint color as selected by Architect.
8. Accessories:

a. As directed, 5-inch (127-mm), 6-inch (152-mm) or 8-inch (203-mm) panel with drape track recess.
b. 5-inch (127-mm) male bullnose panel.
c. 5-inch (127-mm) female bullnose panel.
d. 4-inch (102-mm) male corner panel.
e. 4-inch (102-mm) female corner panel.
f. Inside corner panel.
g. 1/2-inch (13-mm) filler panel.

B. Capacities and Characteristics:

1. Nominal Panel Size: As directed, 24 by 24 inches (600 by 600 mm), 24 by 36 inches (600 by 900 mm), 24 by 48 inches (600 by 1200 mm) or 24 by 60 inches (600 by 1500 mm).
2. Piping Inlet and Outlet: NPS 1/2 (DN 15).
3. Heating:

a. Capacity: As directed.
b. Room Temperature: As directed.
c. Entering-Water Temperature: As directed.
d. Average Water Temperature: As directed.
e. Water Flow: As directed.
f. Water-Side Pressure Loss: As directed.

4. Cooling:

a. Sensible Capacity: As directed.
b. Dry-Bulb Room Temperature: As directed.
c. Wet-Bulb Room Temperature: As directed.
d. Entering-Water Temperature: As directed.
e. Average Water Temperature: As directed.
f. Water Flow: As directed.
g. Water-Side Pressure Loss: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install radiant heating and cooling units level and plumb.

B. Suspend radiant heaters from structure.

C. Coordinate layout and installation of radiant heaters and suspension-system components with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, communications system, security system, and partition assemblies.

D. Support for Radiant Heating and Cooling Panels in or on Grid-Type Suspended Ceilings: Use grid as a support element.

1. Install a minimum of four ceiling support-system rods or wires for each panel. Locate not more than 6 inches (150 mm) from panel corners.
2. Support Clips: Fasten to panel and to ceiling grid members at or near each panel corner with clips designed for the application.
3. Panels of Sizes Less Than Ceiling Grid: Install as indicated on reflected ceiling plans, or center in acoustical panel and support panels independently with at least two 3/4-inch (19-mm) metal channels spanning and secured to ceiling tees.

E. Install devices As directed, 48 inches (1220 mm) or 60 inches (1525 mm above finished floor.

F. Piping installation requirements are specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties. "Section 15179 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

G. Unless otherwise indicated, install shutoff valve and union or flange at each connection.

H. Install piping adjacent to unit to allow service and maintenance.

I. Ground electric units according to Section 260526 "Grounding and Bonding for Electrical Systems."

J. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.2 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Operate electric heating elements through each stage to verify proper operation and electrical connections.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and units.

B. Remove and replace malfunctioning units and retest as specified above.

C. After installing panels, inspect unit cabinet for damage to finish. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish.

D. Prepare test and inspection reports.

END OF SECTION 238213

SECTION 238214 - CHILLED BEAMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes active chilled beams.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for chilled beams.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories for chilled beams.

B. Shop Drawings: For chilled beams.

1. As directed, include plans, elevations, sections, and mounting or attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Data: Certificates, for chilled beams, accessories, and components, from manufacturer.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Chilled beams shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 ACTIVE CHILLED BEAMS

A. Standards:

1. Comply with ASHRAE 55.

B. Description: Sheet metal with primary air plenum, secondary chilled-water coil and heating-water coil assembly, and mounting-bracket supports suitable for surface mounting, exposed hangers, recessed mounting or lay-in installation flush with T-bar ceiling grid.

C. Components:

1. Other building components integrated into chilled-beam configuration including the following:

    a. Lighting fixtures.
    b. Air inlets and outlets.
    c. Speakers.
    d. Sprinklers.
    e. Access panels.

2. Panel: Minimum 0.0375-inch- (0.95-mm-) thick, galvanized-steel sheet.
3. Factory Piping: As directed, ASTM B88, Type L (ASTM B88M, Type B) or ASTM B88, Type M (ASTM B88M, Type C) copper tube with ASME B16.22 wrought-copper fittings and brazed joints.
4. Hydronic Coils: Copper tube, with mechanically bonded 0.006-inch- (0.15-mm-) thick, aluminum fins spaced no closer than 0.1 inch (2.5 mm), rated for a minimum working pressure of 200 psig (1378 kPa) and a maximum entering-water temperature of 220 deg F (104 deg C). Include manual air vent and drain valve.

    a. Cooling Coil: NPS 1/2 (DN 15).
    b. Heating Coil: NPS 1/2 (DN 15).

5. Number of Nozzles: Four.
6. Electrical Connections: Nonheating, high-temperature, insulated-copper leads.

D. Exposed Metal Finish: As directed, Sheet metal with baked enamel, Silk-screened finish to match appearance of acoustical ceiling tiles as selected by Architect or Factory prime coated, ready for field painting.

1. Color: As directed, Manufacturer's standard or custom paint color as selected by Architect.
2. Surface-Mounted Trim: As directed, Sheet metal with baked-enamel finish in manufacturer's standard or custom paint color as selected by Architect.

E. Capacities and Characteristics:

1. Nominal Panel Size: As directed, 12 by 48 inches (300 by 1200 mm), 24 by 48 inches (600 by 1200 mm), 12 by 96 inches (300 by 2400 mm) or 12 by 118 inches (300 by 3000 mm).
2. Nominal Depth: As directed, 4 inches (100 mm) or 7 inches (180 mm).
3. Room Temperature for Cooling: 75 deg F (24 deg C).
4. Cooling Capacity: As directed.
5. Chilled-Water Inlet Temperature: As directed.

6. Average Chilled-Water Temperature: As directed.
7. Chilled-Water Flow: As directed.
8. Room Temperature for Heating: 72 deg F (21 deg C).
9. Heating Capacity: As directed.
10. Heating-Water Inlet Temperature: As directed.
11. Heating-Water Flow: As directed.
12. Average Heating-Water Temperature: As directed.

2.3 CONTROLS AND SAFETIES

A. Wall Thermostat: Bimetal sensing elements calibrated from 55 to 90 deg F (13 to 32 deg C); with contacts suitable for low or control-voltage circuit As directed, and manually operated on-off switch with contactors, relays, and control transformers.

B. Humidistat: As directed, Wall mounted or Unit mounted with concealed or exposed set point and contacts suitable for low or control-voltage circuit, and manually operated on-off switch with contactors, relays, and control transformers.

2.4 ACCESSORIES

A. Purging Nipple: Copper, with threaded end connection.

B. Chilled-Beam Unit Frame: As directed, Aluminum, Steel, clear anodized finish, silk-screened finish to match appearance of acoustical ceiling panels selected by Architect, factory prime coated, ready for field painting or baked-enamel finish.

1. Color: As directed, Manufacturer's standard or custom paint color, selected by Architect.

C. Flexible Water-Connector Hose: As directed, 20 inches (500 mm), 30 inches (750 mm) or 39 inches (1000 mm) long.

D. Access Door: Hinged with four spring-loaded cabinet roller latches.

2.5 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Finish chilled beams after assembly.

C. Appearance of Finished Work: Variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 INSTALLATION

A. As directed, Install surface-mounted, exposed hanger-mounted, recessed-mounted or lay-in ceiling-mounted chilled-beam units level and plumb.

B. Coordinate layout and installation of chilled beams and suspension-system components with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, communications system, security system, and partition assemblies.

C. Comply with requirements for pipe hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

D. Comply with requirements for general-duty valves specified in Section 230523.11 "Globe Valves for HVAC Piping," Section 230523.12 "Ball Valves for HVAC Piping," Section 230523.13 "Butterfly Valves for HVAC Piping," Section 230523.14 "Check Valves for HVAC Piping," and Section 230523.15 "Gate Valves for HVAC Piping."

E. Install continuous-thread hanger rods of size required to support chilled-beam weight.

F. Comply with NECA 1.

G. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters and except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Conceal raceways and cables except in unfinished spaces.

1. Install plenum cable in environmental air spaces, including plenum ceilings.
2. Comply with requirements for cable trays specified in Section 260536 "Cable Trays for Electrical Systems."
3. Comply with requirements for raceways and boxes specified in Section 260533 "Raceways and Boxes for Electrical Systems."

H. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

I. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

3.2 IDENTIFICATION

A. Identify electrical-system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

B. Identify hydronic piping and valves. Comply with requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."

3.3 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
2. Test and adjust thermostatic controls and equipment. Replace damaged and malfunctioning controls and equipment.

C. Chilled beam will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.4 ADJUSTING

A. Adjust initial temperature and humidity set points.

B. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

END OF SECTION 238214

SECTION 238216.11 - HYDRONIC AIR COILS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes hydronic heating and cooling air coils.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1.3 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 DESCRIPTION

A. ASHRAE Compliance: Comply with applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

2.2 COILS

A. Performance Ratings: Tested and rated according to AHRI 410 and ASHRAE 33.

B. Minimum Working-Pressure/Temperature Ratings: 200 psig (1380 kPa), 325 deg F (163 deg C).

C. Source Quality Control: Factory tested to 300 psig (2070 kPa).

D. Tubes: As directed, ASTM B743 copper, minimum 0.020 inch (0.508 mm), 0.035 inch (0.889 mm) or 0.049 inch (1.245 mm) thick.

E. Fins: As directed, Aluminum or Copper, minimum 0.006 inch (0.152 mm) or 0.010 inch (0.254 mm) thick.

F. Headers: As directed, cast iron with drain and air vent tappings, Cast iron with cleaning plugs and drain and air vent tappings, Seamless copper tube with brazed joints, prime coated or Steel with brazed joints, prime coated.

G. Frames: As directed, Galvanized-steel channel frame, minimum 0.052 inch (1.3 mm), 0.064 inch (1.6 mm) or 0.079 inch (2.0 mm) thick for slip-in or flanged mounting.

H. Hot-Water Coil Capacities and Characteristics:

1. Coil Face Dimensions:

    a. Finned Length: As directed.
    b. Finned Width: As directed.

2. Minimum Fin Spacing: As directed, 0.125 inch (3.18 mm), 0.091 inch (2.31 mm), 0.071 inch (1.81 mm), 0.067 inch (1.70 mm), 0.056 inch (1.41 mm) or 0.0075 inch (0.19 mm).
3. Tube Diameter: As directed, 0.375 inch (9.5 mm), 0.50 inch (12.7 mm), 0.625 inch (15.9 mm), 0.75 inch (19.0 mm) or 1.0 inch (25.4 mm).
4. Number of Rows: As directed.
5. Serpentine: As directed, Single, Half or Full.
6. Mounting: As directed, Slip in or Flanged.
7. Coating: As directed, Baked phenolic or Cathodic epoxy e-coat.
8. Air Side:

    a. Flow Rate: As directed.
    b. Finned Area Face Velocity: As directed.
    c. Static Pressure Drop: As directed.
    d. Total Capacity: As directed.
    e. Entering Temperature: As directed.
    f. Leaving Temperature: As directed.

9. Water Side:

    a. Flow Rate: As directed.
    b. Tube Velocity: As directed.
    c. Glycol Type: As directed, Ethylene or Propylene.
    d. Aqueous Glycol Solution Concentration: As directed.
    e. Pressure Drop: As directed.
    f. Entering Temperature: As directed.
    g. Leaving Temperature: As directed.

I. Chilled-Water Coil Capacities and Characteristics:

1. Coil Face Dimensions:

    a. Finned Length: As directed.
    b. Finned Width: As directed.

2. Minimum Fin Spacing: As directed, 0.125 inch (3.18 mm), 0.091 inch (2.31 mm), 0.071 inch (1.81 mm), 0.067 inch (1.70 mm), 0.056 inch (1.41 mm) or 0.0075 inch (0.19 mm).
3. Tube Diameter: As directed, 0.375 inch (9.5 mm), 0.50 inch (12.7 mm), 0.625 inch (15.9 mm), 0.75 inch (19.0 mm) or 1.0 inch (25.4 mm).
4. Number of Rows: As directed.
5. Serpentine: As directed, Half, Single or Double.

6. Mounting: As directed, Slip in or Flanged.
7. Coating: As directed, Baked phenolic or Cathodic epoxy e-coat.
8. Air Side:

    a. Flow Rate: As directed.
    b. Finned Area Face Velocity: As directed.
    c. Static Pressure Drop: As directed.
    d. Total Capacity: As directed.
    e. Sensible Capacity: As directed.
    f. Entering Dry-Bulb Temperature: As directed.
    g. Entering Wet-Bulb Temperature: As directed.
    h. Leaving Dry-Bulb Temperature: As directed.
    i. Leaving Wet-Bulb Temperature: As directed.

9. Water Side:

    a. Flow Rate: As directed.
    b. Tube Velocity: As directed.
    c. Glycol Type: As directed, Ethylene or Propylene.
    d. Aqueous Glycol Solution Concentration: As directed.
    e. Pressure Drop: As directed.
    f. Entering Temperature: As directed.
    g. Leaving Temperature: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install coils level and plumb.

B. Install coils in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."

C. As directed, Install galvanized or stainless-steel drain pan under each cooling coil.

1. Construct drain pans with connection for drain; insulated and complying with ASHRAE 62.1.
2. Construct drain pans to extend beyond coil length and width and to connect to condensate trap and drainage.
3. Extend drain pan upstream and downstream from coil face.
4. Extend drain pan under coil headers and exposed supply piping.

D. Install moisture eliminators for cooling coils. Extend drain pan under moisture eliminator.

E. Straighten bent fins on air coils.

F. Clean coils using materials and methods recommended in writing by manufacturers, and clean inside of casings and enclosures to remove dust and debris.

3.2 CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to coils to allow service and maintenance.

C. Connect water piping with unions and shutoff valves to allow coils to be disconnected without draining piping. Control valves are specified in Section 230923.11 "Control Valves," and other piping specialties are specified in Section 232116 "Hydronic Piping Specialties."

END OF SECTION 238216.11

SECTION 238216.12 - STEAM AIR COILS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes steam heating air coils.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.3 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 DESCRIPTION

A. ASHRAE Compliance: Comply with applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

2.2 COILS

A. Performance Ratings: Tested and rated according to AHRI 410 and ASHRAE 33.

B. Minimum Working-Pressure/Temperature Ratings: 100 psig (690 kPa), 400 deg F (204 deg C).

C. Source Quality Control: Factory tested to 300 psig (2070 kPa).

D. Tubes: As directed, ASTM B743 copper, minimum 0.025 inch (0.635 mm), 0.035 inch (0.889 mm) or 0.049 inch (1.245 mm) thick.

E. Fins: As directed, Aluminum or Copper, minimum 0.006 inch (0.152 mm) or 0.010 inch (0.254 mm) thick.

F. Headers: As directed, Cast iron with drain and air vent tappings, Cast iron with cleaning plugs, and drain and air vent tappings, Seamless copper tube with brazed joints, prime coated or Steel with brazed joints, prime coated.

G. Tube Type: Single or distributing as indicated.

H. Frames: As directed, Galvanized-steel channel frame, minimum 0.052 inch (1.3 mm), 0.064 inch (1.6 mm) or 0.079 inch (2.0 mm) thick for slip-in or flanged mounting.

I. Capacities and Characteristics:

1. Coil Face Dimensions:

   a. Finned Length: As directed.
   b. Finned Width: As directed.

2. Minimum Fin Spacing: As directed, 0.125 inch (3.18 mm), 0.091 inch (2.31 mm), 0.071 inch (1.81 mm), 0.067 inch (1.70 mm), 0.056 inch (1.41 mm) or 0.0075 inch (0.19 mm).
3. Tube Diameter: As directed, 0.375 inch (9.5 mm), 0.50 inch (12.7 mm), 0.625 inch (15.9 mm), 0.75 inch (19.0 mm) or 1.0 inch (25.4 mm).
4. Number of Rows: As directed.
5. Mounting: As directed, Slip in or Flanged.
6. Air Side:

   a. Flow Rate: As directed.
   b. Finned Area Face Velocity: As directed.
   c. Static Pressure Drop: As directed.
   d. Total Capacity: As directed.
   e. Entering Temperature: As directed.
   f. Leaving Temperature: As directed.

7. Steam Side:

   a. Inlet Pressure: As directed.
   b. Tube Type: As directed, Single or Distributing.
   c. Condensing Capacity: As directed.
   d. Pressure Drop: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install coils level and plumb.

B. Install coils in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."

C. Straighten bent fins on air coils.

D. Clean coils using materials and methods recommended in writing by manufacturers, and clean inside of casings and enclosures to remove dust and debris.

3.2 CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to coils to allow service and maintenance.

C. Connect steam piping with gate valve and union and steam condensate piping with union, strainer, trap, and gate valve to allow coils to be disconnected without draining piping. Control valves are specified in Section 230923.11 "Control Valves," and other piping specialties are specified in Section 232213 "Steam and Condensate Heating Piping."

END OF SECTION 238216.12

SECTION 238216.13 - REFRIGERANT AIR COILS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes refrigerant air coils.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1.3 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 DESCRIPTION

A. ASHRAE Compliance: Comply with applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

2.2 REFRIGERANT AIR COILS

A. Performance Ratings: Tested and rated according to AHRI 410 and ASHRAE 33.

B. Minimum Working-Pressure Rating: 300 psig (2070 kPa).

C. Source Quality Control: Factory tested to 450 psig (3105 kPa).

D. Tubes: As directed, ASTM B743 copper, minimum 0.020 inch (0.508 mm), 0.035 inch (0.889 mm) or 0.049 inch (1.245 mm) thick.

E. Fins: As directed, Aluminum or Copper, minimum 0.006 inch (0.152 mm) or 0.010 inch (0.254 mm) thick.

F. Suction and Distributor Piping: ASTM B88, Type L (ASTM B88M, Type B) copper tube with brazed joints.

G. Frames: Galvanized-steel channel frame, minimum 0.052 inch (1.3 mm), 0.064 inch (1.6 mm) or 0.079 inch (2.0 mm) thick for slip-in or flanged mounting.

H. Capacities and Characteristics:

1. Coil Face Dimensions:

   a. Finned Length: As directed.
   b. Finned Width: As directed.

2. Minimum Fin Spacing: As directed, 0.125 inch (3.18 mm), 0.091 inch (2.31 mm), 0.071 inch (1.81 mm), 0.067 inch (1.70 mm), 0.056 inch (1.41 mm) or 0.0075 inch (0.19 mm).
3. Tube Diameter: As directed, 0.375 inch (9.5 mm), 0.50 inch (12.7 mm), 0.625 inch (15.9 mm), 0.75 inch (19.0 mm) or 1.0 inch (25.4 mm).
4. Number of Rows: As directed.
5. Coil Split: As directed, Row, Face or Interlaced.
6. Mounting: As directed, Slip in or Flanged.
7. Coating: As directed, Baked phenolic or Cathodic epoxy e-coat.
8. Air Side:

   a. Flow Rate: As directed.
   b. Finned Area Face Velocity: As directed.
   c. Static Pressure Drop: As directed.
   d. Total Capacity: As directed.
   e. Sensible Capacity: As directed.
   f. Entering Dry-Bulb Temperature: As directed.
   g. Entering Wet-Bulb Temperature: As directed.
   h. Leaving Dry-Bulb Temperature: As directed.
   i. Leaving Wet-Bulb Temperature: As directed.

9. Refrigerant Side:

   a. Refrigerant Type: As directed, R-410A, HFC-134a or HFC refrigerant.
   b. Saturated Suction Temperature: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install coils level and plumb.

B. Install coils in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."

C. As directed, Install galvanized or stainless-steel drain pan under each cooling coil.

1. Construct drain pans with connection for drain; insulated and complying with ASHRAE 62.1.
2. Construct drain pans to extend beyond coil length and width and to connect to condensate trap and drainage.
3. Extend drain pan upstream and downstream from coil face.
4. Extend drain pan under coil headers and exposed supply piping.

D. Install moisture eliminators for cooling coils. Extend drain pan under moisture eliminator.

E. Straighten bent fins on air coils.

F. Clean coils using materials and methods recommended in writing by manufacturers, and clean inside of casings and enclosures to remove dust and debris.

G. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

H. Install piping adjacent to coils to allow service and maintenance.

I. Connect refrigerant piping according to Section 232300 "Refrigerant Piping."

END OF SECTION 238216.13

SECTION 238216.14 - ELECTRIC-RESISTANCE AIR COILS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes electric resistance air coils.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.3 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 DESCRIPTION

A. ASHRAE Compliance: Comply with applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

2.2 COILS

A. Testing Agency Listing and Labeling: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Coil Assembly: Comply with UL 1995.

C. Heating Elements: Coiled resistance wire of 80 percent nickel and 20 percent chromium; surrounded by compacted magnesium-oxide powder in tubular-steel sheath; with spiral-wound, copper-plated, steel fins continuously brazed to sheath.

D. High-Temperature Coil Protection: Disk-type, automatically reset, thermal-cutout, safety device; serviceable through terminal box without removing heater from duct or casing.

1. Secondary Protection: Load-carrying, manually reset or manually replaceable, thermal cutouts; factory wired in series with each heater stage.

E. Frames: As directed, Galvanized-steel channel frame, minimum 0.052 inch (1.3 mm), 0.064 inch (1.6 mm) or 0.079 inch (2.0 mm) thick for slip-in or flanged mounting.

F. Control Panel: As directed, Unit or Remote mounted with disconnecting means and overcurrent protection. Include the following controls:

1. Magnetic contactor.
2. Mercury contactor.
3. Toggle switches; one per step.
4. Step controller.
5. Time-delay relay.
6. Pilot lights; one per step.
7. Airflow proving switch.

G. See Section 230923.27 "Temperature Instruments" for thermostat.

H. Capacities and Characteristics:

1. Coil Face Dimensions:

   a. Length: As directed.
   b. Height: As directed.

2. Mounting: As directed, Slip in or Flanged.
3. Air Side:

   a. Flow Rate: As directed.
   b. Face Velocity: As directed.
   c. Static Pressure Drop: As directed.
   d. Total Capacity: As directed.
   e. Entering Temperature: As directed.
   f. Leaving Temperature: As directed.

4. Electrical Characteristics:

   a. Capacity: As directed.
   b. Number of Steps: As directed.
   c. Volts: As directed.
   d. Phase: As directed.
   e. Hertz: As directed.
   f. Full-Load Amperes: As directed.
   g. Minimum Circuit Ampacity: As directed.
   h. Maximum Overcurrent Protection: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install coils level and plumb.

B. Install coils in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."

C. Clean coils using materials and methods recommended in writing by manufacturers, and clean inside of casings and enclosures to remove dust and debris.

3.2 CONNECTIONS

A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

END OF SECTION 238216.14

SECTION 238219 - FAN COIL UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes ductless fan coil units and accessories.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed

C. Shop Drawings:

1. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Include diagrams for power, signal, and control wiring.

D. Samples: For units with factory-applied color finishes.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale and coordinated with each other based on input from installers of the items involved:

B. Seismic Qualification Certificates: For fan coil units, accessories, and components, from manufacturer.

C. Field quality-control reports.

D. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Comply with NFPA 70.

B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Factory-packaged and -tested units rated according to AHRI 440, ASHRAE 33, and UL 1995.

2.2 DUCTLESS FAN COIL UNITS

A. Fan Coil Unit Configurations: As directed, Row or Face split.

1. Number of Heating Coils: One with two-pipe system.
2. Number of Cooling Coils: One or Three with two or four-pipe system.

B. Coil Section Insulation: As directed, 1/2-inch- (13-mm-) or 1-inch- (25-mm-) thick, coated glass fiber, foil-covered, closed-cell foam or matte-finish, closed-cell foam complying with ASTM C1071 and attached with adhesive complying with ASTM C916.

1. Surface-Burning Characteristics: Insulation and adhesive shall have a combined maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E84 by a qualified testing agency.
2. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

C. Coil Section Insulation: Insulate coil section according to Section 230616 "HVAC Equipment Insulation."

1. Surface-Burning Characteristics: Insulation and adhesive shall have a combined maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E84 by a qualified testing agency.
2. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

D. As directed, Main and Auxiliary Drain Pans: As directed, Plastic, Stainless steel or Insulated galvanized steel with plastic liner. Fabricate pans and drain connections to comply with ASHRAE 62.1. Drain pans shall be removable.

E. Chassis: Galvanized steel where exposed to moisture, with baked-enamel finish and removable access panel, with powder-coat finish and removable access panel. Floor-mounting units shall have leveling screws.

F. Cabinet: As directed, Steel with factory prime coating, ready for field painting, baked-enamel finish in manufacturer's standard paint color as selected by Architect or baked-enamel finish in manufacturer's custom paint color as selected by Architect.

1. Vertical Unit Front Panels: As directed, Removable, steel, with integral stamped, polyethylene or steel discharge grille and channel-formed edges, cam fasteners, and insulation on back of panel.
2. Horizontal Unit Bottom Panels: Fastened to unit with cam fasteners and hinge and attached with safety chain; with integral stamped or cast-aluminum discharge grilles As directed.
3. Stack Unit Discharge and Return Grille: Aluminum double-deflection discharge grille, and louvered- or panel-type return grille; color as selected by Architect from manufacturer's standard or custom colors as directed. Return grille shall provide maintenance access to fan coil unit.
4. Steel recessing flanges for recessing fan coil units into ceiling or wall.

G. Filters: Minimum arrestance and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2 and all addendums.

1. MERV Rating: As directed, 6 or 13 when tested according to ASHRAE 52.2.
2. Washable Foam: 70 percent arrestance and MERV 3.
3. Glass Fiber Treated with Adhesive: 80 percent arrestance and MERV 5.
4. Pleated Cotton-Polyester Media: 90 percent arrestance and MERV 7.

H. Hydronic Coils: Copper tube with corrosion-resistant coating, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm), rated for a minimum working pressure of 200 psig (1378 kPa) and a maximum entering-water temperature of 220 deg F (104 deg C). Include manual air vent and drain valve.

I. Corrosion-Resistant Coating: Coat coils with a corrosion-resistant coating capable of withstanding a 3,000-hour salt-spray test according to ASTM B117.

1. Standards:

   a. ASTM B117 for salt spray.
   b. ASTM D2794 for minimum impact resistance of 100 in-lb (11.3 N-m).
   c. ASTM D3359 for cross hatch adhesion of 5B.

2. Application: As directed, Immersion or Spray.
3. Thickness: 1 mil.
4. Gloss: Minimum gloss of 50 gloss units on a single angle 60 degree meter.
5. UV Protection: Spray applied topcoat.

J. Electric-Resistance Heating Coils: Nickel-chromium heating wire, free of expansion noise and hum, mounted in ceramic inserts in a galvanized-steel housing; with fuses in terminal box for overcurrent protection and limit controls for high-temperature protection. Terminate elements in stainless-steel machine-staked terminals secured with stainless-steel hardware.

K. Fan and Motor Board: Removable.

1. Fan: Forward curved, double width, centrifugal; directly connected to motor. Thermoplastic or painted-steel wheels, and aluminum, painted-steel, or galvanized-steel fan scrolls.

2. Motor: Permanently lubricated, multispeed; resiliently mounted on motor board. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
3. Wiring Termination: Connect motor to chassis wiring with plug connection.

L. Factory, Hydronic Piping Package: As directed, ASTM B88, Type L (ASTM B88M, Type B) or ASTM B88, Type M (ASTM B88M Type C) copper tube with wrought-copper fittings and brazed joints. Label piping to indicate service, inlet, and outlet.

1. As directed, Two or Three-way, two-position or modulating control valve for dual-temperature coil.
2. As directed, Two or Three-way, two-position or modulating control valve for chilled-water coil.
3. As directed, Two or Three-way, two-position or modulating control valve for hot-water heating coil.
4. Hose Kits: Minimum 400-psig (2758-kPa) working pressure and operating temperatures from 33 to 211 deg F (0.5 to 99 deg C). Tag hose kits to equipment designations.

    a. Length: As directed, 24 inches (600 mm) or 36 inches (900 mm).
    b. Minimum Diameter: Equal to fan coil unit connection size.

5. Two-Piece Ball Valves: Bronze body with full-port, chrome-plated bronze ball; PTFE or TFE seats; and 600-psig (4140-kPa) minimum CWP rating and blowout-proof stem.
6. Calibrated-Orifice Balancing Valves: Bronze body, ball type; 125-psig (860-kPa) working pressure, 250 deg F (121 deg C) maximum operating temperature; with calibrated orifice or venturi, connections for portable differential pressure meter with integral seals, threaded ends, and a memory stop to retain set position.
7. Automatic Flow-Control Valve: Brass or ferrous-metal body; 300-psig (2070-kPa) working pressure at 250 deg F (121 deg C); with removable, corrosion-resistant, tamperproof, self-cleaning piston spring; factory set to maintain constant indicated flow with plus or minus 10 percent over differential pressure range of 2 to 80 psig (13.8 to 552 kPa).
8. Y-Pattern Hydronic Strainers: Cast-iron body (ASTM A126, Class B); 125-psig (860-kPa) working pressure; with threaded connections, bolted cover, perforated stainless-steel basket, and bottom drain connection. Include minimum NPS 1/2 (DN 15) hose-end, full-port, ball-type blowdown valve in drain connection.
9. Wrought-Copper Unions: ASME B16.22.
10. Risers: As directed, ASTM B88, Type L (ASTM B88M, Type B) or ASTM B88, Type M (ASTM B88M Type C) copper pipe with hose and ball valve for system flushing.

M. Control devices and operational sequences are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

N. Basic Unit Controls:

1. Control voltage transformer.
2. As directed, Wall-mounting or Unit-mounted thermostat with the following features:

    a. Heat-cool-off switch.
    b. Fan on-auto switch.

c. Fan-speed switch.
d. As directed, Manual or Automatic changeover.
e. Adjustable deadband.
f. As directed, Concealed or Exposed set point.
g. As directed, Concealed or Exposed indication.
h. As directed, Degree F or Degree C indication.

3. As directed, Wall-mounting or Unit-mounted humidistat.

a. As directed, Concealed or Exposed set point.
b. As directed, Concealed or Exposed indication.

4. As directed, wall-mounting or Unit-mounted temperature sensor.
5. Unoccupied-period-override push button.
6. Data entry and access port.

a. Input data includes room temperature, and humidity set points and occupied and unoccupied periods.
b. Output data includes room temperature and humidity, supply-air temperature, entering-water temperature, operating mode, and status.

O. DDC Terminal Controller:

1. Scheduled Operation: Occupied and unoccupied periods on seven-day clock with a minimum of four programmable periods per day.
2. Unoccupied-Period-Override Operation: Two hours.
3. Unit Supply-Air Fan Operation:

a. Occupied Periods: Fan runs continuously.
b. Unoccupied Periods: Fan cycles to maintain room setback temperature.

4. Hydronic-Cooling-Coil Operation:

a. Occupied Periods: As directed, Open or Modulate control valve to maintain room temperature.
b. Unoccupied Periods: Close control valve.

5. Supplemental Heating-Coil Operation:

a. Occupied Periods: As directed, Open control valve, Modulate control valve or Energize electric-resistance coil to provide heating if room temperature falls below thermostat set point.
b. Unoccupied Periods: As directed, Start fan and open control valve, modulate control valve or energize electric-resistance coil if room temperature falls below setback temperature.

6. Dual-Temperature Hydronic-Coil Operation:

a. Occupied Periods: When chilled water is available, As directed, open or modulate control valve if room temperature exceeds thermostat set point. When hot water is available, open control valve if temperature falls below thermostat set point.

b. Unoccupied Periods: When chilled water is available, close control valve. When hot water is available, As directed, open or modulate control valve if room temperature falls below thermostat setback temperature.

7. Controller shall have volatile-memory backup.

P. Electrical Connection: Factory wire motors and controls for a single electrical connection.

Q. Capacities and Characteristics:

1. Fan:

a. Airflow: As directed.
b. External Static Pressure: As directed.
c. Fan Speed: As directed.
d. Motor Speed: As directed.
e. Motor Horsepower: As directed.
f. Drive: As directed, Direct or Belt.

2. Cooling Capacity:

a. Total: As directed.
b. Sensible: As directed.
c. Entering-Air Dry-Bulb Temperature: As directed.
d. Entering-Air Wet-Bulb Temperature: As directed.

3. Chilled-Water Coil:

a. Water Flow: As directed.
b. Water-Side Pressure Loss: As directed.
c. Entering-Water Temperature: As directed.
d. Air-Side Pressure Drop: As directed.

4. Heating Capacity:

a. Output: As directed.
b. Entering-Air Temperature: As directed.
c. Air-Temperature Rise: As directed.

5. Hot-Water Heating Coil:

a. Water Flow: As directed.
b. Water-Side Pressure Loss: As directed.
c. Air-Side Pressure Drop: As directed.
d. Entering-Water Temperature: As directed.

6. Electric-Resistance Heating Coil:

a. Capacity: As directed.
b. Number of Steps: As directed.
c. Air-Side Pressure Drop: As directed.

7. Filters:

    a. Face Area: As directed.
    b. Thickness: As directed, 1 inch (25 mm) or 2 inches (50 mm).

8. Electrical Characteristics for Single-Point Connection:

    a. Voltage/Phase/Hertz: As directed.
    b. Full-Load Amperes: As directed.
    c. Maximum Circuit Amperes: As directed.
    d. Maximum Overcurrent Protection: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install fan coil units level and plumb.

B. Install fan coil units to comply with NFPA 90A.

C. Suspend fan coil units from structure with elastomeric hangers. Vibration isolators are specified in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment."

D. Verify locations of thermostats, humidistats, and other exposed control sensors with Drawings and room details before installation. As directed, Install devices 48 inches (1220 mm) or 60 inches (1525 mm) above finished floor.

E. Install new filters in each fan coil unit within two weeks after Substantial Completion.

F. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties. Specific connection requirements are as follows:

1. Install piping adjacent to machine to allow service and maintenance.
2. Connect piping to fan coil unit factory hydronic piping package. Install piping package if shipped loose.
3. Connect condensate drain to indirect waste.

    a. Install condensate trap of adequate depth to seal against fan pressure. Install cleanouts in piping at changes of direction.

G. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

H. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.2 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

B. Remove and replace malfunctioning units and retest as specified above.

C. Prepare test and inspection reports.

3.3 ADJUSTING

A. Adjust initial temperature and humidity set points.

B. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

END OF SECTION 238219

SECTION 238223 - UNIT VENTILATORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes unit ventilators and accessories with the following heating and cooling features:

1. As directed Hydronic or Electric heating coil.
2. As directed Hydronic or Electric reheat coil.
3. As directed Hydronic or Direct-expansion refrigerant cooling coil.

B. Related Requirements:

1. Section 238146.13 "Water-to-Air Heat Pumps" for ground-loop, water-source heat-pump-type unit ventilators.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product

B. Sustainable Design Submittals:
1.

C. Shop Drawings:

1. Include plans, elevations, sections, and details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Detail anchorages and attachments to structure and to supported equipment.
4. Include diagrams for power, signal, and control wiring.

D. Samples for Initial Selection: For units with factory-applied color finishes.

E. Samples for Verification: For each type of unit ventilator and auxiliary shelves and cabinets indicated.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale and coordinated with each other, based on input from installers of the items involved:

B. Seismic Qualification Certificates: For unit ventilators, accessories, and components, from manufacturer.

C. Field quality-control reports.

D. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Comply with NFPA 70.

B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.6 COORDINATION

A. Coordinate layout and installation of unit ventilators and suspension system components with other construction that penetrates or is supported by ceilings, including light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.

B. Coordinate size and location of wall sleeves for outdoor-air intake.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of condensing units that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

    a. Compressor failure.
    b. Condenser coil leak.

2. Warranty Period: As directed Four, Five or 10 years from date of Substantial Completion.
3. Warranty Period (Compressor Only): As directed Five or 10 years from date of Substantial Completion.
4. Warranty Period (Condenser Coil Only): Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Factory-packaged and -tested units rated according to AHRI 840, ASHRAE 33, and UL 1995.

2.2 MANUFACTURERS

2.3 MANUFACTURED UNITS

A. Description: Unit ventilators consisting of finished cabinet, filter, cooling coil, drain pan, supply-air fan and motor in blow- or draw-through configuration, and hydronic cooling coil.

1. Unit Ventilator Coil Configurations: As directed Row or Face split.

a. Number of Heating Coils: One with two-pipe system.
b. Number of Cooling Coils: As directed One or Three with two or four-pipe system.

2.4 CABINETS

A. Insulation: Minimum As directed 1/2-inch- (13-mm-) or 1-inch- (25-mm-) thick, coated glass fiber or foil-covered, closed-cell foam or matte-finish, closed-cell foam complying with ASTM C1071 and attached with adhesive complying with ASTM C916.

1. Surface-Burning Characteristics: Insulation and adhesive shall have a combined maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E84 by a qualified testing agency.
2. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Coil Section Insulation: Insulate coil section according to Section 230616 "HVAC Equipment Insulation."

1. Surface-Burning Characteristics: Insulation and adhesive shall have a combined maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E84 by a qualified testing agency.
2. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

C. Main and Auxiliary Drain Pans: As directed Plastic or Insulated galvanized steel with plastic liner, formed as required by ASHRAE 62.1. Drain pans shall be removable.

D. Cabinet Frame and Access Panels: Welded-steel frame with removable panels fastened with hex-head tamperproof fasteners and key-operated control and valve access doors.

1. As directed Steel components exposed to moisture shall be hot-dip galvanized after fabrication, baked-enamel finished or powder-coat finished.

E. Cabinet Finish: Baked-on primer ready for field painting.

F. Cabinet Finish: As directed Baked enamel or Powder coat, in manufacturer's standard or custom color as selected by Architect.

G. Indoor-Supply-Air Grille: As directed Steel, Aluminum, double deflection, adjustable or adjustable linear bar.

H. Return-Air Inlet: As directed Front toe space or Back inlet with top inlet grille.

I. End Panels: Matching material and finish of unit ventilator.

J. Outdoor-Air Wall Box: Minimum 0.1265-inch- (3.2-mm-) thick, aluminum, rain-resistant louver and box with integral eliminators and bird screen.

1. Louver Configuration: As directed Horizontal or Vertical, rain-resistant louver.
2. Louver Material: As directed Aluminum or Steel.
3. Bird Screen: 1/2-inch (13-mm) mesh screen on interior side of louver.
4. Decorative Grille: On outside of intake.
5. Finish: As directed Anodized aluminum or Baked enamel, color as selected by Architect from manufacturer's standard or custom colors.

2.5 COILS

A. Test and rate unit ventilator coils according to ASHRAE 33.

B. Hydronic Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm), rated for a minimum working pressure of 200 psig (1378 kPa) and a maximum entering-water temperature of 220 deg F (104 deg C). Include manual air vent and drain valve.

C. Electric-Resistance Heating Coils: Nickel-chromium heating wire or tubular elements in coil fins, free of expansion noise and hum, with fuses in terminal box for overcurrent protection and continuous limit controls for high-temperature protection. Terminate elements in stainless-steel machine-staked terminals secured with stainless-steel hardware.

D. Indoor Refrigerant Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm), and brazed joints at fittings. Comply with AHRI 210/240, and leak test to minimum 450 psig (3105 kPa) for a minimum 300-psig (2070-kPa) working pressure. Include thermal expansion valve.

2.6 INDOOR FAN

A. Fan and Motor Board: Removable.

1. Fan: Forward curved, double width, centrifugal; directly connected to motor. Thermoplastic or painted-steel wheels, and aluminum, painted-steel, or galvanized-steel fan scrolls.
2. Fan Shaft and Bearings: Hollow-steel shaft with permanently lubricated, resiliently mounted bearings.
3. Motor: Permanently lubricated, multispeed, resiliently mounted on motor board. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
4. Wiring Termination: Connect motor to chassis wiring with plug connection.

2.7 DAMPERS

A. Mixing Dampers: As directed Galvanized-steel blades with edge and end seals and nylon bearings; with electric or pneumatic actuator.

B. Outdoor-Air Dampers: As directed Galvanized-steel blades with edge and end seals and nylon bearings; with electric or pneumatic actuator.

C. Comply with ASHRAE/IES 90.1.

2.8 ACCESSORIES

A. Exhaust Shutter: As directed Barometric or Motorized, modulating type designed to limit room pressure to maximum 0.10-inch wg (25 kPa) with steel, aluminum or fabric damper blades, including edge and end seals, in galvanized-steel frame with outdoor and interior wall grille.

B. Subbase: Sheet metal floor-mounting base with leveling screws and black enamel finish.

C. Insulated false back with gasket seals on wall and outdoor-air plenum.

1. Insulation: Minimum As directed 1/2-inch- (13-mm-) or 1-inch- (25-mm-) thick, coated glass fiber, foil-covered, closed-cell foam or matte-finish, closed-cell foam complying with ASTM C1071 and attached with adhesive complying with ASTM C916.

    a. Surface-Burning Characteristics: Insulation and adhesive shall have a combined maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E84 by a qualified testing agency.
    b. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

D. Return-air plenum, 6 inches (150 mm) thick, designed to take return air from top inlet grilles in cabinets on both sides of unit ventilator with gasket seals on wall and outdoor-air plenum extension.

E. Duct flanges for supply-, return-, and outdoor-air connections.

F. Radiation Grille: As directed Steel, Aluminum, linear-bar or stamped grille with finish to match discharge-air grille.

G. Filters:

1. Minimum Efficiency Reporting Value and Average Arrestance: According to ASHRAE 52.2.
2. Minimum Efficiency Reporting Value: According to ASHRAE 52.2.
3. Material: Glass fiber, treated with adhesive, MERV 5.

2.9 FACTORY HYDRONIC PIPING PACKAGE

A. Piping: As directed ASTM B88, Type L (ASTM B88M, Type B) or ASTM B88, Type M (ASTM B88M Type C) copper tube with wrought-copper fittings and brazed joints. Label piping to indicate service, inlet, and outlet. As directed Crossover piping, NPS 1-1/2 (DN 40) or NPS 2 (DN 50) with shutoff valves.

B. Control Valves: As directed Electric or Pneumatic actuators compatible with terminal controller and building controls.

1. As directed Two or Three-way, two-position or modulating control valve for dual-temperature-water coil.
2. As directed Two or Three-way, two-position or modulating control valve for chilled-water coil.
3. As directed Two or Three-way, two-position or modulating control valve for hot-water heating coil.
4. As directed Two or Three-way, two-position or modulating control valve for hot-water reheat coil.

C. Hose Kits: Minimum 400-psig (2758-kPa) working pressure and operating temperatures from 33 to 211 deg F (0.5 to 99 deg C). Tag hose kits to equipment designations.

1. Length: As directed 24 inches (600 mm) or 36 inches (900 mm).
2. Minimum Diameter: Equal to unit ventilator connection size.

D. Isolation Valves, Strainers, Unions, and Balance Valves:

1. Two-Piece Ball Valves: Bronze body with stainless-steel ball and stem and galvanized-steel lever handle for each supply and return connection. If balancing device is combination shutoff type with memory stop, isolation valve may be omitted on the return.
2. Calibrated-Orifice Balancing Valves: Bronze body, ball type; 125-psig (860-kPa) working pressure, 250 deg F (121 deg C) maximum operating temperature; with calibrated orifice or venturi, connections for portable differential pressure meter with integral seals, threaded ends, and a memory stop to retain set position.
3. Automatic Flow-Control Valve: Brass or ferrous-metal body; 300-psig (2070-kPa) working pressure at 250 deg F (121 deg C); with removable, corrosion-resistant, tamperproof, self-cleaning piston spring; factory set to maintain constant indicated flow with plus or minus 10 percent over differential pressure range of 2 to 80 psig (13.8 to 552 kPa).
4. Y-Pattern Hydronic Strainers: Cast-iron body (ASTM A126, Class B); 125-psig (860-kPa) working pressure; with threaded connections, bolted cover, perforated stainless-steel basket, and bottom drain connection. Include minimum NPS 1/2 (DN 15) hose-end, full-port, ball-type blowdown valve in drain connection.
5. Wrought-Copper Unions: ASME B16.22.

2.10 INTEGRAL COOLING CHASSIS

A. Description: Assembly mounted within unit ventilator, factory assembled and tested; consisting of compressors, condenser coils, fans, motors, and refrigerant receivers; removable for maintenance, with plug and receptacle connections for control and power wiring. Construct, test, and rate condensing units according to AHRI 210/240 and ASHRAE 15.

B. Casing: Galvanized steel with removable panels for access to controls and refrigerant piping.

C. Exterior Louver: Extruded aluminum.

D. Compressor: As directed Hermetic, scroll or reciprocating type; internally isolated for vibration with factory-installed safety devices as follows:

1. Antirecycle timer.
2. High-pressure cutout.
3. Low-pressure cutout or loss-of-charge switch.
4. Internal thermal-overload protection.
5. Current- and voltage-sensitive safety devices.

E. Energy Efficiency: Equal to or greater than prescribed by ASHRAE/IES 90.1, "Energy Standard for Buildings except Low-Rise Residential Buildings."

F. Refrigerant Piping Materials:

1. Drawn-Temper Copper Tube: ASTM B88, Type L (ASTM B88M, Type B).
2. Annealed-Temper Copper Tube: As directed ASTM B88, Type L (ASTM B88M, Type B) or ASTM B88, Type K (ASTM B88M, Type A).
3. Wrought-Copper Fittings: ASME B16.22.

G. Refrigerant: R-407C or R-410A.

H. Low ambient controls to permit operation down to 45 deg F (7 deg C).

I. Crankcase heater.

J. Charging and service fittings.

K. Filter dryer.

L. Air-to-Air Heat Pump: Pilot-operated, sliding-type reversing valve with replaceable magnetic coil, and controls for air-to-air heat pump operation with supplemental heat.

M. HGBP, constant-pressure expansion valve and controls to maintain continuous refrigeration system operation at 10 percent of full load.

N. Condenser: Copper-tube, aluminum-fin coil, with liquid subcooler.

O. Direct-Driven Condenser Fan: Forward curved, double width, centrifugal; thermoplastic or painted-steel wheels and galvanized-steel fan scrolls.

1. Motor: Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."

2.11 BASIC UNIT CONTROLS

A. Control devices and operational sequences are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

B. Basic Unit Controls:

1. Control voltage transformer.
2. As directed Wall-mounting or Unit-mounted thermostat with the following features.

    a. Heat-cool-off switch.
    b. Fan on-auto switch.
    c. Fan-speed switch.
    d. As directed Manual or Automatic changeover.
    e. Adjustable deadband.
    f. As directed Concealed or Exposed set point.
    g. As directed Concealed or Exposed indication.
    h. As directed Degree F or Degree C indication.

3. As directed Wall-mounting or Unit-mounted humidistat.

    a. As directed Concealed or Exposed set point.
    b. As directed Concealed or Exposed indication.

4. As directed Wall-mounting or Unit-mounted temperature sensor.
5. Unoccupied-period-override push button.
6. Data entry and access port.

    a. Input data includes room temperature, and humidity set points and occupied and unoccupied periods.
    b. Output data includes room temperature and humidity, supply-air temperature, entering-water temperature, operating mode, and status.

C. DDC Terminal Controller:

1. Safety Controls Operation: Freezestat shall stop fan and close outdoor-air damper if air less than 38 deg F (3 deg C) enters coils.
2. Scheduled Operation: Occupied and unoccupied periods on seven-day clock with a minimum of four programmable periods per day.
3. Unoccupied-Period-Override Operation: Two hours.
4. Dual-Temperature Coil Operation:

    a. Occupied Periods: When chilled water is available, As directed open or modulate control valve if room temperature exceeds thermostat set point. When hot water is available, As directed open or modulate control valve if room temperature falls below thermostat set point.

b. Unoccupied Periods: When chilled water is available, close control valve. When hot water is available, As directed open or modulate control valve if room temperature falls below thermostat setback temperature.

5. Hydronic Cooling-Coil Operation:

   a. Occupied Periods: As directed Open or Modulate control valve to provide cooling if room temperature exceeds thermostat set point.
   b. Unoccupied Periods: Close control valve.

6. Refrigerant-Coil Operation:

   a. Occupied Periods: Start compressor to maintain room temperature.
   b. Unoccupied Periods: As directed Stop compressor cooling or Cycle compressor for heating to maintain setback temperature.

7. Supplemental Heating-Coil Operation:

   a. Occupied Periods: As directed Open control valve, Modulate control valve or Energize electric-resistance coil to provide heating if room temperature falls below thermostat set point.
   b. Unoccupied Periods: As directed Start fan and open control valve, modulate control valve or energize electric-resistance coil if room temperature falls below setback temperature.
   c. Switch refrigerant-reversing valve to operate supplemental coil for heating when outdoor temperature is below 25 deg F (4 deg C).

8. Reheat-Coil Operation:

   a. Humidity Control for Occupied Periods: As directed Humidistat opens control valve, modulates control valve or energizes electric-resistance coil to provide heating. As directed as room temperature rises above set point, cooling-coil valve opens or modulates to maintain room temperature.
   b. Humidity Control for Unoccupied Periods: As directed Close control valve or De-energize.

9. Outdoor-Air Damper Operation: Open to 25 percent fixed minimum intake during occupied periods, and close during unoccupied periods.
10. Outdoor-Air Damper Operation: Open to 25 percent fixed minimum intake, and maximum 100 percent of the fan capacity to comply with ASHRAE Cycle II during occupied periods, and close during unoccupied periods. Microprocessor controller shall permit air-side economizer operation when outdoor air is less than 60 deg F (15 deg C).
11. Carbon Dioxide Sensor Operation: During occupied periods, reset minimum outdoor-air ratio down to minimum 10 percent to maintain maximum 800-ppm concentration.
12. Cooling Lockout: During economizer cycle operation, block out cooling.
13. HGBP: Open HGBP solenoid valve to maintain minimum suction pressure at compressor.
14. Controller shall have volatile-memory backup.

D. Electrical Connection: Factory wire motors and controls for a single electrical connection.

2.12 METAL SHELVES AND CABINETS

A. Include manufacturer's standard cabinets to match unit ventilators with required installation hardware as indicated:

1. Open Shelving with Reinforced Shelves:

    a. As directed Return-air plenum or Radiation enclosure and aluminum bar grille with finish to match unit ventilator grille.
    b. Through-piping enclosure with solid top.

2. Closed Shelving with Reinforced Shelves:

    a. As directed Return-air plenum or Radiation enclosure and aluminum bar grille with finish to match unit ventilator grille.
    b. Through-piping enclosure with solid top.
    c. Two sliding doors with key-operated locks.

3. Utility compartment with access panel with key-operated lock.
4. Wall and corner filler sections, and end panels finished to match shelving.

B. Painted Finish: As directed Manufacturer's standard or custom baked enamel, in color selected by Architect, applied to shelving before shipping.

C. Cabinet Top: As directed Plastic-laminate top in color and pattern selected by Architect from manufacturer's standard or custom colors.

2.13 CAPACITIES AND CHARACTERISTICS

A. Fan:

1. Airflow: As directed.
2. External Static Pressure: As directed.
3. Fan Speed: As directed.
4. Motor Horsepower: As directed.
5. Drive: As directed Direct or Belt.

B. Cooling Capacity:

1. Total: As directed.
2. Sensible: As directed.
3. Entering-Air Dry-Bulb Temperature: As directed.
4. Entering-Air Wet-Bulb Temperature: As directed.

C. Chilled-Water Coil:

1. Water Flow: As directed.
2. Water-Side Pressure Loss: As directed.
3. Entering-Water Temperature: As directed.
4. Air-Side Pressure Drop: As directed.

D. Refrigerant Coil:

1. Suction Temperature: As directed.
2. Air-Side Pressure Drop: As directed.

E. Condensing Unit:

1. Ambient Temperature: As directed.
2. Compressor Power Input: As directed.
3. Cooling Energy Efficiency (EER) or (SEER) As directed: As directed.
4. Heating Coefficient of Performance: As directed.
5. Voltage/Phase/Hertz: As directed.
6. Full-Load Amperes: As directed.
7. Maximum Circuit Amperes: As directed.
8. Maximum Overcurrent Protection: As directed.

F. Heating Capacity:

1. Output: As directed.
2. Entering-Air Temperature: As directed.
3. Air-Temperature Rise: As directed.

G. Hot-Water Heating Coil:

1. Water Flow: As directed.
2. Water-Side Pressure Loss: As directed.
3. Air-Side Pressure Drop: As directed.
4. Entering-Water Temperature: As directed.

H. Electric-Resistance Heating Coil:

1. Capacity: As directed.
2. Number of Steps: As directed.
3. Air-Side Pressure Drop: As directed.

I. Reheat Capacity:

1. Output: As directed.
2. Entering-Air Temperature: As directed.
3. Air-Temperature Rise: As directed.

J. Electrical Characteristics for Single-Point Connection:

1. Voltage/Phase/Hertz: As directed.
2. Full-Load Amperes: As directed.
3. Maximum Circuit Amperes: As directed.
4. Maximum Overcurrent Protection: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install unit ventilators to comply with NFPA 90A.

B. As directed suspend horizontal unit ventilators from structure with threaded steel rods and minimum 0.25-inch (6.35-mm) static-deflection, elastomeric vibration isolation hanger or 1.0-inch (25-mm) static-deflection spring hangers. Vibration isolators are specified in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment."

C. Verify location of thermostats, humidistats, and other exposed control sensors with Drawings and room details before installation. As directed Install devices 48 inches (1220 mm) or 60 inches (1525 mm) above finished floor.

D. Comply with requirements in Section 236200 "Packaged Compressor and Condenser Units" for condensing units matched to refrigerant cooling coil packaged in unit ventilators.

3.2 CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties. Specific connection requirements are as follows:

1. Install piping adjacent to machine to allow service and maintenance.
2. Connect piping to unit ventilator factory hydronic piping package. Install piping package if shipped loose.
3. Connect condensate drain to indirect waste.

B. Install refrigerant piping as required by Section 232300 "Refrigerant Piping," and add refrigerant as required to compensate for length of piping.

C. Connect supply-air and return-air ducts to unit ventilators with flexible duct connectors specified in Section 233300 "Air Duct Accessories." Comply with safety requirements in UL 1995 for duct connections.

D. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

E. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

A. Testing Agency: As directed Owner will engage or Engage a qualified testing agency to perform tests and inspections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
4. Record temperatures entering and leaving energy recovery wheel when outdoor-air temperature is a minimum of 15 deg F (8.3 deg C) higher, or 20 deg F (11 deg C) lower, than room temperature.

C. Remove and replace malfunctioning units and retest as specified above.

D. Prepare test and inspection reports.

3.4 ADJUSTING

A. Adjust initial temperature and humidity set points.

B. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.5 DEMONSTRATION

A. As directed Engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain unit ventilators.

END OF SECTION 238223

SECTION 238229 - RADIATORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes flat-pipe steel radiators.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Shop Drawings:

1. Include plans, elevations, sections, and details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Indicate location and size of each field connection.
4. Indicate location and arrangement of piping valves and specialties.
5. Indicate location and arrangement of integral controls and other accessories.

C. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

PART 2 - PRODUCTS

2.1 FLAT-PIPE STEEL RADIATORS

A. Heating Elements: Steel, welded and formed into flat, square, steel header with minimum thickness of 0.109 inch (2.76 mm). Include threaded piping and air-vent connections.

1. Working Pressure: 56 psig (386 kPa); 0.048 inch (1.22 mm).
2. Working Pressure: 85 psig (585 kPa); 0.058 inch (1.47 mm).
3. Working Pressure: 128 psig (881 kPa); 0.078 inch (1.98 mm).
4. Tube Height: As directed.
5. Tube Depth: As directed.
6. Tube Length: As directed.
7. Number of Tubes High: As directed.
8. Number of Tubes Deep: As directed.

9. Room Air Temperature: 65 deg F (18 deg C).
10. Heat Output: As directed.
11. Average Water Temperature: 180 deg F (82 deg C).
12. Temperature Drop: As directed, 10 deg F (5.56 deg C), 20 deg F (11.1 deg C) or 30 deg F (16.6 deg C).
13. Pressure Loss: As directed.

B. Mounting: As directed, wall brackets or Floor pedestals with maximum spacing of 36 inches (914 mm).

C. Finish: Baked-enamel finish in manufacturer's standard or custom color as selected by Architect.

D. Accessories:

1. Steel piping covers finished to match radiator finish.
2. Flexible Expansion Compensation Hoses: Minimum 400-psig (2758-kPa) working pressure, and operating temperatures from 33 to 211 deg F (0.5 to 99.5 deg C).

a. Length: As directed, 24 inches (600 mm) or 36 inches (900 mm).
b. Minimum Diameter: Equal to connection size.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install units level and plumb.

B. Install expansion compensation hoses.

C. Install piping covers.

3.2 CONNECTIONS

A. Piping installation requirements are specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties. "Section 15179 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect radiators and components to piping according to Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties. "Section 15179 "Hydronic Piping Specialties."

1. Install shutoff valves on inlet and outlet, and balancing valve on outlet.

C. Install control valves as required by Section 230923.11 "Control Valves."

D. Install piping adjacent to radiators to allow service and maintenance.

3.3 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections:

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.

B. Units will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 238229

SECTION 238233 - CONVECTORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes hydronic or electric convectors as directed.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Shop Drawings:

1. Include plans, elevations, sections, and details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include details and dimensions of custom-fabricated enclosures.
4. Indicate location and size of each field connection.
5. Indicate location and arrangement of piping valves and specialties.
6. Indicate location and arrangement of integral controls.
7. Include enclosure joints, corner pieces, access doors, and other accessories.
8. Include diagrams for power, signal, and control wiring.

C. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

PART 2 - PRODUCTS

2.1 ELECTRIC CONVECTORS

A. Description: Factory-packaged units constructed according to UL 499, UL 1030, and UL 2021.

1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Heating Elements: Nickel-chromium-wire heating element enclosed in metallic sheath mechanically bonded to fins, with high-temperature cutout and sensor running the full length of element. Element supports shall eliminate thermal expansion noise.

1. Volts: As directed.
2. Phase: As directed.
3. Hertz: As directed.
4. Heat Output: As directed, 300, 500, 750, 1000, 1250, 1500, 1750, 2000, 2250 or 2500 W.

C. Front and Top Panel: As directed, Minimum 0.0528-inch- (1.35-mm-) or 0.0677-inch- (1.7-mm-) thick steel with exposed corners rounded; removable front panels with tamper-resistant fasteners braced and reinforced for stiffness.

D. Wall-Mounted Back and End Panels: Minimum 0.0428-inch- (1.1-mm-) thick steel.

E. Floor-Mounted Pedestals: Conceal conduit for power and control wiring at maximum 36-inch (914-mm) spacing. Pedestal-mounted back panel shall be solid panel matching front panel.

F. Support Brackets: Locate at maximum 36-inch (914-mm) spacing to support front panel and element.

G. Insulation: 1/2-inch- (13-mm-) thick, fibrous glass on inside of the back of the enclosure.

H. Finish: As directed, Baked-enamel finish in manufacturer's standard or custom color as selected by Architect.

I. Damper: Knob-operated internal damper.

J. Access Doors: Factory made, permanently hinged with tamper-resistant fastener, minimum size 6 by 7 inches (150 by 175 mm), integral with enclosure.

K. Enclosure Style: As directed, Sloped or Flat top.

1. Front Inlet Grille: Punched louver; painted to match enclosure.
2. Front Inlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.

    a. Mill-finish aluminum.
    b. As directed, Anodized finish, color as selected by Architect from manufacturer's standard or custom colors.
    c. Painted to match enclosure.

3. As directed, Top or Front Outlet Grille: Punched louver; painted to match enclosure.
4. As directed, Top or Front Outlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.

    a. Mill-finish aluminum.
    b. As directed, Anodized finish, color as selected by Architect from manufacturer's standard or custom colors.
    c. Painted to match enclosure.

5. Enclosure Height: As directed.

6. Enclosure Depth: As directed.
7. Enclosure Length: As directed.

L. Unit Controls: As directed, Integral line-voltage thermostat with minimum range of 60 to 90 deg F (15 to 32 deg C) or low-voltage relay and control transformer for remote thermostat.

M. Accessories: Integral disconnect switch, recessing flanges finished to match enclosure or overlapping front cover for fully recessed units, and rubber gaskets to seal cabinet at wall.

2.2 HOT-WATER CONVECTORS

A. Heating Elements: Seamless copper tubing mechanically expanded into evenly spaced aluminum fins and rolled into cast-iron or brass headers with inlet/outlet and air vent; steel side plates and supports. Factory-pressure-test element at minimum 100 psig (690 kPa).

1. Element Height: As directed.
2. Element Depth: As directed.
3. Element Length: As directed.
4. Entering-Air Temperature: 65 deg F (18 deg C).
5. Heat Output: As directed.
6. Average Water Temperature: 180 deg F (82 deg C).
7. Temperature Drop: As directed, 10 deg F (5.56 deg C), 20 deg F (11.1 deg C) or 30 deg F (16.6 deg C).
8. Pressure Loss: As directed.

B. Front and Top Panel: As directed, Minimum 0.0528-inch- (1.35-mm-) or 0.0677-inch- (1.7-mm) thick steel with exposed corners rounded; removable front panels with tamper-resistant fasteners braced and reinforced for stiffness.

C. Wall-Mounted Back and End Panels: Minimum 0.0428-inch- (1.1-mm-) thick steel.

D. Floor-Mounted Pedestals: Conceal conduit for power and control wiring at maximum 36-inch (914-mm) spacing. Pedestal-mounted back panel shall be solid panel matching front panel.

E. Support Brackets: Locate at maximum 36-inch (914-mm) spacing to support front panel and element.

F. Insulation: 1/2-inch- (13-mm-) thick, fibrous glass on inside of the back of the enclosure.

G. Finish: As directed, Baked-enamel finish in manufacturer's standard or custom color as selected by Architect.

H. Damper: Knob-operated internal damper.

I. Access Doors: Factory made, permanently hinged with tamper-resistant fastener, minimum size 6 by 7 inches (150 by 175 mm), integral with enclosure.

J. Enclosure Style: As directed, Sloped or Flat top.

1. Front Inlet Grille: Punched louver; painted to match enclosure.
2. Front Inlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.

a. Mill-finish aluminum.
b. Anodized finish, color as selected by Architect from manufacturer's standard or custom colors.
c. Painted to match enclosure.

3. As directed, Top or Front Outlet Grille: Punched louver; painted to match enclosure.
4. As directed, Top or Front Outlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.

a. Mill-finish aluminum.
b. As directed, Anodized finish, color as selected by Architect from manufacturer's standard or custom colors.
c. Painted to match enclosure.

5. Enclosure Height: As directed.
6. Enclosure Depth: As directed.
7. Enclosure Length: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install convectors level and plumb.

B. Install valves within reach of access door provided in enclosure.

C. Install air-seal gasket between wall and recessed flanges or front cover of fully recessed unit.

D. Install piping within pedestals for freestanding units.

3.2 CONNECTIONS

A. Piping installation requirements are specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect hot-water convectors and components to piping according to Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."

1. Install shutoff valves on inlet and outlet, and balancing valve on outlet.
2. Install shutoff valve on inlet; install strainer, steam trap, and shutoff valve on outlet.

C. Install control valves as required by Section 230923.11 "Control Valves."

D. Install piping adjacent to convectors to allow service and maintenance.

E. Ground electric convectors according to Section 260526 "Grounding and Bonding for Electrical Systems."

F. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections:

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
2. Operational Test: After electrical circuitry has been energized, start convectors to confirm proper operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Convectors will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 238233

SECTION 238236 - FINNED-TUBE RADIATION HEATERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes hydronic, electric, baseboard and finned-tube radiation heaters as directed.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Shop Drawings:

1. Include plans, elevations, sections, and details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include details and dimensions of custom-fabricated enclosures.
4. Indicate location and size of each field connection.
5. Indicate location and arrangement of piping valves and specialties.
6. Indicate location and arrangement of integral controls.
7. Include enclosure joints, corner pieces, access doors, and other accessories.
8. Include diagrams for power, signal, and control wiring.

C. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

PART 2 - PRODUCTS

2.1 ELECTRIC BASEBOARD RADIATION HEATERS

A. Description: Factory-packaged units constructed according to UL 499, UL 1030, and UL 2021.

1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Heating Elements: Nickel-chromium-wire heating element enclosed in metallic sheath mechanically bonded to fins, with high-temperature cutout and sensor running the full length of the element. Element supports shall eliminate thermal expansion noise.

1. Volts: As directed.
2. Phase: As directed.
3. Hertz: As directed.
4. Heat Output: As directed.

C. Enclosures: Minimum As directed, 0.0329-inch- (0.85-mm-) or 0.0428-inch- (1.1-mm-) thick steel, removable front cover.

1. Full-height back.
2. Full-length damper.
3. End panel.
4. As directed, Plastic end or End caps.
5. Inside and outside corners.
6. Joiner pieces to snap together.
7. Enclosure Height: As directed.
8. Enclosure Depth: As directed.
9. Finish: As directed, Baked-enamel finish in manufacturer's standard or custom color as selected by Architect.
10. Element Brackets: Primed and painted steel to support front panel and element.

D. Rust-Resistant Enclosures: As directed, Minimum 0.040-inch- (1.0-mm-) or 0.052-inch- (1.3-mm-) thick ASTM A653/A653M, G60 (Z180) galvanized-steel, removable front cover.

1. Full-height back.
2. Full-length damper.
3. End panel.
4. As directed, Plastic end or End caps.
5. Inside and outside corners.
6. Joiner pieces to snap together.
7. Enclosure Height: As directed.
8. Enclosure Depth: As directed.
9. Finish: As directed, Baked-enamel finish in manufacturer's standard or custom color as selected by Architect.
10. Element Brackets: Primed and painted steel to support front panel and element.

E. Unit Controls: As directed, Integral line-voltage thermostat, Integral electronic thermostat or Remote line-voltage thermostat.

F. Accessories:

1. Filler sections without a heating element matching the adjacent enclosure.
2. Straight-blade-type receptacles complying with DSCC W-C-596G/GEN, NEMA WD 1, NEMA WD 6, and UL 498; in color selected by Architect.

2.2 HOT-WATER BASEBOARD RADIATION HEATERS

A. Performance Ratings: Rate baseboard radiation heaters according to Hydronics Institute's "I=B=R Testing and Rating Standard for Baseboard Radiation."

B. Heating Elements: Copper tubing mechanically expanded into flanged collars of evenly spaced aluminum fins resting on polypropylene element glides. One end of tube shall be belled.

1. Tube Diameter: As directed, NPS 1/2 (DN 15), NPS 3/4 (DN 20), NPS 1 (DN 25) or NPS 1-1/4 (DN 32).
2. Fin Size: As directed, 2-1/2 by 2-1/2 inches (63 by 63 mm) or 3 by 3 inches (76 by 76 mm).
3. Fin Spacing: As directed, 40 per foot (131 per m), 50 per foot (164 per m) or 58 per foot (190 per m) As directed.
4. Number of Tiers: As directed.
5. Heat Output: As directed.
6. Entering-Air Temperature: 65 deg F (18 deg C).
7. Average Water Temperature: 180 deg F (82 deg C).
8. Minimum Water Velocity: 1/2 fps (0.15 m/s).

C. Heating Elements: Steel tubing mechanically expanded into flanged collars of evenly spaced steel fins resting on polypropylene element glides. Tube ends shall be threaded.

1. Tube Diameter: NPS 1-1/4 (DN 32).
2. Fin Size: 3 by 3 inches (76 by 76 mm).
3. Fin Spacing: 52 per foot (171 per m).
4. Number of Tiers: As directed.
5. Heat Output: As directed.
6. Entering-Air Temperature: 65 deg F (18 deg C).
7. Average Water Temperature: 180 deg F (82 deg C).
8. Minimum Water Velocity: 1/2 fps (0.15 m/s).

D. Enclosures: Minimum As directed, 0.0329-inch- (0.85-mm-) or 0.0428-inch- (1.1-mm-) thick steel, removable front cover.

1. Full-height back.
2. Full-length damper.
3. End panel.
4. End caps.
5. Inside and outside corners.
6. Valve access door.
7. Joiner pieces to snap together.
8. Enclosure Height: As directed.
9. Enclosure Depth: As directed.
10. Finish: Baked-enamel finish in manufacturer's standard or custom color as selected by Architect.
11. Element Brackets: Primed and painted steel to support front panel and element.

E. Rust-Resistant Enclosures: As directed, Minimum 0.040-inch- (1.0-mm-) or 0.052-inch- (1.3-mm-) thick ASTM A653/A653M, G60 (Z180) galvanized-steel, removable front cover.

1. Full-height back.
2. Full-length damper.
3. End panel.
4. End caps.
5. Inside and outside corners.
6. Valve access door.
7. Joiner pieces to snap together.
8. Enclosure Height: As directed.
9. Enclosure Depth: As directed.
10. Finish: As directed, Baked-enamel finish in manufacturer's standard or custom color as selected by Architect.
11. Element Brackets: Primed and painted steel to support front panel and element.

2.3 ELECTRIC FINNED-TUBE RADIATION HEATERS

A. Description: Factory-packaged units constructed according to UL 499, UL 1030, and UL 2021.

1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Heating Elements: Nickel-chromium-wire heating element enclosed in metallic sheath mechanically bonded to fins, with high-temperature cutout and sensor running the full length of the element. Element supports shall eliminate thermal expansion noise.

1. Volts: As directed.
2. Phase: As directed.
3. Hertz: As directed.
4. Heat Output: As directed.

C. Front Panel: As directed, Minimum 0.0428-inch- (1.1-mm-) or 0.0528-inch- (1.35-mm-) thick steel.

D. Rust-Resistant Front Panel: As directed, Minimum 0.052-inch- (1.3-mm-) or 0.064-inch- (1.6-mm-) thick, ASTM A653/A653M, G60 (Z180) galvanized steel.

E. Wall-Mounted Back Panel: Minimum 0.0329-inch- (0.85-mm-) thick steel, full height, with full-length channel support for front panel without exposed fasteners.

F. Floor-Mounted Pedestals: Conceal conduit for power and control wiring at maximum 36-inch (914-mm) spacing. Pedestal-mounted back panel shall be solid panel matching front panel.

G. Support Brackets: Locate at maximum 36-inch (914-mm) spacing to support front panel and element.

H. Finish: As directed, Baked-enamel or -epoxy finish in manufacturer's standard or custom color as selected by Architect.

I. Damper: Knob-operated internal damper at enclosure outlet.

J. Access Doors: Factory made, permanently hinged with tamper-resistant fastener, minimum size 6 by 7 inches (150 by 175 mm), integral with enclosure.

K. Enclosure Style: As directed, Sloped or Flat top.

1. Front Inlet Grille: Punched louver; painted to match enclosure.
2. Front Inlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.

    a. Mill-finish aluminum.
    b. As directed, Anodized finish, color as selected by Architect from manufacturer's standard or custom colors.
    c. Painted to match enclosure.

3. As directed, Top or Front Outlet Grille: Punched louver; painted to match enclosure.
4. As directed, Top or Front Outlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.

    a. Mill-finish aluminum.
    b. As directed, Anodized finish, color as selected by Architect from manufacturer's standard or custom colors.
    c. Painted to match enclosure.

5. Enclosure Height: As directed.
6. Enclosure Depth: As directed.

L. Unit Controls: As directed, Integral line-voltage thermostat with minimum range of 60 to 90 deg F (15 to 32 deg C) or low-voltage relay and control transformer for remote thermostat.

M. Accessories: Integral disconnect switch, filler sections, corners, relay sections, and splice plates all matching the enclosure and grille finishes.

2.4 HOT-WATER FINNED-TUBE RADIATION HEATERS

A. Performance Ratings: Rate finned-tube radiation heaters according to Hydronics Institute's "I=B=R Testing and Rating Standard for Finned-Tube (Commercial) Radiation."

B. Heating Elements: Copper tubing mechanically expanded into flanged collars of evenly spaced aluminum fins resting on element supports. One end of tube shall be belled.

1. Tube Diameter: As directed, NPS 3/4 (DN 20), NPS 1 (DN 25) or NPS 1-1/4 (DN 32).
2. Fin Size: As directed, 3 by 3 inches (76 by 76 mm) or 4 by 4 inches (102 by 102 mm).
3. Fin Spacing: As directed, 40 per foot (131 per m), 50 per foot (164 per m) or 58 per foot (190 per m).
4. Number of Tiers: As directed.
5. Heat Output: As directed.
6. Entering-Air Temperature: 65 deg F (18 deg C).
7. Average Water Temperature: 180 deg F (82 deg C).
8. Minimum Water Velocity: 1/2 fps (0.15 m/s).

C. Heating Elements: Steel tubing mechanically expanded into flanged collars of evenly spaced steel fins resting on element supports. Tube ends shall be threaded.

1. Tube Diameter: NPS 1-1/4 (DN 32).
2. Fin Size: 4 by 4 inches (102 by 102 mm) As directed.
3. Fin Spacing: 52 per foot (171 per m) As directed.
4. Number of Tiers: As directed.
5. Heat Output: As directed.
6. Entering-Air Temperature: 65 deg F (18 deg C).
7. Average Water Temperature: 180 deg F (82 deg C).
8. Minimum Water Velocity: 1/2 fps (0.15 m/s).

D. Element Supports: Ball-bearing cradle type to permit longitudinal movement on enclosure brackets.

E. Front Panel: As directed, Minimum 0.0428-inch- (1.1-mm-) or 0.0528-inch- (1.35-mm-) thick steel.

F. Rust-Resistant Front Panel: As directed, Minimum 0.052-inch- (1.3-mm-) or 0.064-inch- (1.6-mm-) thick, ASTM A653/A653M, G60 (Z180) galvanized steel.

G. Wall-Mounted Back Panel: Minimum 0.0329-inch- (0.85-mm-) thick steel, full height, with full-length channel support for front panel without exposed fasteners.

H. Floor-Mounted Pedestals: Conceal insulated piping at maximum 36-inch (914-mm) spacing. Pedestal-mounted back panel shall be solid panel matching front panel. Provide stainless-steel escutcheon for floor openings at pedestals.

I. Support Brackets: Locate at maximum 36-inch (914-mm) spacing to support front panel and element.

J. Finish: As directed, Baked-enamel or -epoxy finish in manufacturer's standard or custom color as selected by Architect.

K. Damper: Knob-operated internal damper at enclosure outlet.

L. Access Doors: Factory made, permanently hinged with tamper-resistant fastener, minimum size 6 by 7 inches (150 by 175 mm), integral with enclosure.

M. Enclosure Style: As directed, Sloped or Flat top.

1. Front Inlet Grille: Punched louver; painted to match enclosure.
2. Front Inlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.
    a. Mill-finish aluminum.
    b. As directed, Anodized finish, color as selected by Architect from manufacturer's standard or custom colors.
    c. Painted to match enclosure.
3. As directed, Top or Front Outlet Grille: Punched louver; painted to match enclosure.

4. As directed, Top or Front Outlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.

    a. Mill-finish aluminum.
    b. As directed, Anodized finish, color as selected by Architect from manufacturer's standard or custom colors.
    c. Painted to match enclosure.

5. Enclosure Height: As directed.
6. Enclosure Depth: As directed.

N. Accessories: Filler sections, corners, relay sections, and splice plates all matching the enclosure and grille finishes.

PART 3 - EXECUTION

3.1 BASEBOARD RADIATION HEATER INSTALLATION

A. Install units level and plumb.

B. Install enclosure continuously around corners, using outside and inside corner fittings.

C. Join sections with splice plates and filler pieces to provide continuous enclosure.

D. Install access doors for access to valves.

E. Install enclosure continuously from wall to wall.

F. Terminate enclosures with manufacturer's end caps except where enclosures are indicated to extend to adjoining walls.

G. Install valves within reach of access door provided in enclosure.

H. Install air-seal gasket between wall and recessed flanges or front cover of fully recessed unit.

I. Install piping within pedestals for freestanding units.

3.2 FINNED-TUBE RADIATION HEATER INSTALLATION

A. Install units level and plumb.

B. Install enclosure continuously around corners, using outside and inside corner fittings.

C. Join sections with splice plates and filler pieces to provide continuous enclosure.

D. Install access doors for access to valves.

E. Install enclosure continuously from wall to wall.

F. Terminate enclosures with manufacturer's end caps except where enclosures are indicated to extend to adjoining walls.

G. Install valves within reach of access door provided in enclosure.

H. Install air-seal gasket between wall and recessed flanges or front cover of fully recessed unit.

I. Install piping within pedestals for freestanding units.

3.3 CONNECTIONS

A. Piping installation requirements are specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect hot-water finned-tube radiation heaters and components to piping according to Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."

1. Install shutoff valves on inlet and outlet, and balancing valve on outlet.

C. Install control valves as required by Section 230923.11 "Control Valves."

D. Install piping adjacent to finned-tube radiation heaters to allow service and maintenance.

E. Ground electric finned-tube radiation heaters according to Section 260526 "Grounding and Bonding for Electrical Systems."

F. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections:

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
2. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Units will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 238236

SECTION 238239.13 - CABINET UNIT HEATERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes cabinet unit heaters with centrifugal fans and hot-water coils.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Sustainable Design Submittals: As directed

C. Shop Drawings:

1. Include plans, elevations, sections, and details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include location and size of each field connection.
4. Include details of anchorages and attachments to structure and to supported equipment.
5. Include equipment schedules to indicate rated capacities, operating characteristics, furnished specialties, and accessories.
6. Indicate location and arrangement of piping valves and specialties.
7. Indicate location and arrangement of integral controls.
8. Wiring Diagrams: Power, signal, and control wiring.

D. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Suspended ceiling components.
2. Structural members to which cabinet unit heaters will be attached.
3. Method of attaching hangers to building structure.
4. Size and location of initial access modules for acoustical tile.
5. Items penetrating finished ceiling, including the following:

a. Lighting fixtures.
b. Air outlets and inlets.
c. Speakers.

d. Sprinklers.
e. Access panels.

6. Perimeter moldings for exposed or partially exposed cabinets.

B. Seismic Qualification Data: Submit certification that cabinet unit heaters, accessories, and components will withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC."

C. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 DESCRIPTION

A. Factory-assembled and -tested unit complying with AHRI 440.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 PERFORMANCE REQUIREMENTS

A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

B. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

C. Seismic Performance: Cabinet unit heaters shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

2.4 COIL SECTION INSULATION

A. Insulation Materials: ASTM C1071; as directed, surfaces exposed to airstream shall have aluminum-foil facing or erosion-resistant coating to prevent erosion of glass fibers.

1. Thickness: As directed, 1/2 inch (13 mm), 1 inch (25 mm) or 1-1/2 inches (38 mm).
2. Thermal Conductivity (k-Value): 0.26 Btu x in./h x sq. ft. at 75 deg F (0.037 W/m x K at 24 deg C) mean temperature.
3. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E84.
4. Adhesive: Comply with ASTM C916 and with NFPA 90A or NFPA 90B.
5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Insulation Materials: Comply with NFPA 90A or NFPA 90B. Unicellular polyethylene thermal plastic, preformed sheet insulation complying with ASTM C534, Type II, except for density.

1. Thickness: As directed, 3/8 inch (9 mm), 1/2 inch (13 mm), 3/4 inch (19 mm) or 1 inch (25 mm).
2. Thermal Conductivity (k-Value): 0.24 Btu x in./h x sq. ft. at 75 deg F (0.034 W/m x K at 24 deg C) mean temperature.
3. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM C411.
4. Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A or NFPA 90B.
5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

2.5 CABINETS

A. Material: As directed, Steel with factory prime coating, ready for field painting, baked-enamel finish with manufacturer's standard paint, in color selected by Architect or baked-enamel finish with manufacturer's custom paint, in color selected by Architect.

1. Vertical Unit, Exposed Front Panels: As directed, Minimum 0.0528-inch- (1.35-mm-) or 0.0677-inch- (1.7-mm-) thick galvanized sheet steel, removable panels with channel-formed edges secured with tamperproof cam fasteners.
2. Horizontal Unit, Exposed Bottom Panels: As directed, Minimum 0.0528-inch- (1.35-mm-), 0.0677-inch- (1.7-mm-) thick galvanized sheet steel, removable panels secured with tamperproof cam fasteners and safety chain.
3. Recessed Flanges: Steel, finished to match cabinet.
4. Control Access Door: Key operated.
5. Base: As directed, Minimum 0.0528-inch- (1.35-mm-) thick steel, finished to match cabinet, 4 inches (100 mm) or 6 inches (150 mm) high with leveling bolts.
6. Extended Piping Compartment: 8-inch- (200-mm-) wide piping end pocket.
7. False Back: Minimum 0.0428-inch- (1.1-mm-) thick steel, finished to match cabinet.
8. Outdoor-Air Wall Box: Minimum 0.1265-inch- (3.2-mm-) thick, aluminum, rain-resistant louver and box with integral eliminators and bird screen; As directed, aluminum louver with anodized or baked-enamel finish in color selected by Architect from manufacturer's standard or custom colors.

    a. Outdoor-Air Damper: As directed, Galvanized-steel blades with edge and end seals and nylon bearings; with manual, electronic or pneumatic, two-position actuators.

2.6 FILTERS

A. Minimum Efficiency Reporting Value and Average Arrestance": According to ASHRAE 52.2.

B. Minimum Efficiency Reporting Value: According to ASHRAE 52.2.

C. Material: Washable foam, MERV 3.

D. Material: Glass fiber treated with adhesive, MERV 5.

E. Material: Pleated cotton-polyester media, MERV 7.

2.7 COILS

A. Hot-Water Coil: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm) and rated for a minimum working pressure of 200 psig (1378 kPa) and a maximum entering-water temperature of 220 deg F (104 deg C). Include manual air vent and drain.

2.8 CONTROLS

A. Fan and Motor Board: Removable.

1. Fan: Forward curved, high static, double width, centrifugal, directly connected to motor; thermoplastic or painted-steel wheels and aluminum, painted-steel, or galvanized-steel fan scrolls.
2. Motor: Permanently lubricated, multispeed; resiliently mounted on motor board. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
3. Wiring Terminations: Connect motor to chassis wiring with plug connection.

B. Factory, Hot-Water Piping Package: As directed, ASTM B88, Type L (ASTM B88M, Type B) or ASTM B88, Type M (ASTM B88M Type C) copper tube with wrought-copper fittings and brazed joints. Label piping to indicate service, inlet, and outlet.

1. As directed, Two or Three-way, two-position or modulating control valve. Three-way valve packages shall include bypass line with manually adjustable balance device.
2. Hose Kits: Minimum 400-psig (2758-kPa) working pressure, and operating temperatures from 33 to 211 deg F (0.5 to 99 deg C). Tag hose kits to equipment designations.

    a. Length: As directed, 24 inches (600 mm) or 36 inches (900 mm).
    b. Minimum Diameter: Equal to cabinet unit-heater connection size.

3. Two-Piece, Ball Valves: Bronze body with full-port, chrome-plated bronze ball; PTFE or TFE seats; and 600-psig (4140-kPa) minimum CWP rating and blowout-proof stem.
4. Calibrated-Orifice Balancing Valves: Bronze body, ball type, 125-psig (860-kPa) working pressure, 250 deg F (121 deg C) maximum operating temperature; with calibrated orifice or venture, connection for portable differential pressure meter with integral seals, threaded ends, and equipped with a memory stop to retain set position.

5. Automatic Flow-Control Valve: Brass or ferrous-metal body, 300-psig (2068-kPa) working pressure at 250 deg F (121 deg C), with removable, corrosion-resistant, tamperproof, self-cleaning piston spring; factory set to maintain constant indicated flow within plus or minus 10 percent of differential pressure range of 2 to 80 psig (13.8 to 552 kPa).
6. Y-Pattern, Hot-Water Strainers: Cast-iron body (ASTM A126, Class B); 125-psig (860-kPa) minimum working pressure; with threaded connections, bolted cover, perforated stainless-steel basket, and bottom drain connection. Include minimum NPS 1/2 (DN 15) threaded pipe and full-port ball valve in strainer drain connection.
7. Wrought-Copper Unions: ASME B16.22.

C. Control devices and operational sequences are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC."

D. Basic Unit Controls:

1. Control voltage transformer.
2. As directed, Wall or Unit-mounted thermostat with the following features:

    a. Heat-off switch.
    b. Fan on-auto switch.
    c. Manual fan-speed switch.
    d. Adjustable deadband.
    e. As directed, Concealed or Exposed set point.
    f. As directed, Concealed or Exposed indication.
    g. Deg F (Deg C) indication.

3. As directed, wall or Unit-mounted temperature sensor.
4. Unoccupied period override push button.
5. Data entry and access port.

    a. Input data includes room temperature and occupied and unoccupied periods.
    b. Output data includes room temperature, supply-air temperature, entering-water temperature, operating mode, and status.

E. DDC Terminal Controller:

1. Scheduled Operation: Occupied and unoccupied periods on seven-day clock with a minimum of four programmable periods per day.
2. Unoccupied Period Override: Two hours.
3. Unit Supply-Air Fan Operations:

    a. Occupied Periods: Fan runs continuously.
    b. Unoccupied Periods: Fan cycles to maintain setback room temperature.

4. Heating-Coil Operations:

    a. Occupied Periods: As directed, Open or Modulate control valve to provide heating if room temperature falls below thermostat set point.

b. Unoccupied Periods: As directed, Start fan and open or modulate control valve if room temperature falls below setback temperature.

5. Outdoor-Air Damper Operation:

a. Occupied Periods: Open dampers. Delay damper opening if room temperature is more than three degrees below set point.
b. Unoccupied Periods: Close damper.

6. Controller shall have volatile-memory backup.

F. Interface with DDC System for HVAC Requirements:

1. Interface relay for scheduled operation.
2. Interface relay to provide indication of fault at central workstation.
3. Interface shall be BAC-net or LonWorks compatible for central DDC system for HVAC workstation and include the following functions:

a. Adjust set points.
b. Cabinet unit-heater start, stop, and operating status.
c. Data inquiry, including outdoor-air damper position and supply-air and room-air temperature.
d. Occupied and unoccupied schedules.

G. Electrical Connection: Factory-wired motors and controls for a single field connection.

2.9 CAPACITIES AND CHARACTERISTICS

A. Cabinet:

1. Vertical, Surface Mounted: Upflow.

a. Top: As directed, Flat, Sloped or Flat or sloped.
b. Air Inlet: As directed, Open bottom, Front, punched louver or Front, extruded-aluminum bar grille.
c. Air Outlet: As directed, Front, Top, Front or top, quad louver, punched louver or extruded-aluminum bar grille.

2. Vertical, Surface Mounted: Downflow.

a. Top: As directed, Flat, Sloped or Flat or sloped.
b. Air Inlet: As directed, Front, Top, Front or top, punched louver or extruded-aluminum bar grille.
c. Air Outlet: As directed, Front, quad louver, punched louver or extruded-aluminum bar grille.

3. Vertical, Semirecessed: Upflow.

a. Air Inlet: As directed, Open bottom, Front, punched louver or Front, extruded-aluminum bar grille.

b. Air Outlet: As directed, Front, Top, Front or top, quad louver, punched louver or extruded-aluminum bar grille.

4. Vertical, Semirecessed: Downflow.

a. Air Inlet: As directed, Front, Top, Front or top, punched louver or extruded-aluminum bar grille.
b. Air Outlet: As directed, Front, quad louver, punched louver or extruded-aluminum bar grille.

5. Vertical, Fully Recessed: As directed, Upflow or Downflow.

a. Air Inlet: As directed, Front, Duct connection, punched louver or extruded-aluminum bar grille.
b. Air Outlet: As directed, Front, Duct connection, quad louver, punched louver or extruded-aluminum bar grille.

6. Horizontal, Surface Mounted:

a. Air Inlet: As directed, Bottom, Front, Bottom or front, punched louver or extruded-aluminum bar grille.
b. Air Outlet: As directed, Front, Top, Front or top, quad louver, punched louver or extruded-aluminum bar grille.

7. Horizontal, Semirecessed:

a. Air Inlet: As directed, Bottom, Front, Bottom or front, punched louver or extruded-aluminum bar grille.
b. Air Outlet: As directed, Front, Top, Front or top, quad louver, punched louver or extruded-aluminum bar grille.

8. Horizontal, Fully Recessed:

a. Air Inlet: As directed, Front, Duct connection, punched louver or extruded-aluminum bar grille.
b. Air Outlet: As directed, Front, Duct connection, quad louver, punched louver or extruded-aluminum bar grille.

B. Concealed Unit Heater:

1. Vertical: As directed, Upflow or Downflow.

a. Air Inlet: As directed, Open bottom, Front, punched louver or Front, extruded-aluminum bar grille.
b. Air Outlet: As directed, Front, Top, Front or top, quad louver, punched louver or extruded-aluminum bar grille.

2. Horizontal: Upflow.

a. Air Inlet: As directed, Open bottom, Front, punched louver or Front, extruded-aluminum bar grille.

b. Air Outlet: As directed, Front, Top, Front or top, quad louver, punched louver or extruded-aluminum bar grille.

C. Fan:

1. Airflow: As directed.
2. External Static Pressure: As directed.
3. Fan Speed: As directed.
4. Motor Horsepower: As directed.

D. Heating Capacity:

1. Output: As directed.
2. Entering-Air Temperature: As directed.
3. Air-Temperature Rise: As directed.

E. Hot-Water Heating Coil:

1. Water Flow: As directed.
2. Water-Side Pressure Loss: As directed.
3. Entering-Water Temperature: As directed.

F. Filters:

1. Face Area: As directed.
2. Thickness: As directed, 1/2 inch (13 mm) or 1 inch (25 mm).

G. Electrical Characteristics for Single-Point Connection:

1. Volts: As directed.
2. Phase: As directed.
3. Hertz: As directed.
4. Full-Load Amperes: As directed.
5. Minimum Circuit Ampacity: As directed.
6. Maximum Overcurrent Protection: As directed.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas to receive cabinet unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for piping and electrical connections to verify actual locations before unit-heater installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install wall boxes in finished wall assembly; seal and weatherproof. Joint-sealant materials and applications are specified in Section 079200 "Joint Sealants."

B. Install cabinet unit heaters to comply with NFPA 90A.

C. Suspend cabinet unit heaters from structure with elastomeric hangers. Vibration isolators are specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" As directed.

D. Install wall-mounted thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.

E. Install new filters in each fan-coil unit within two weeks of Substantial Completion.

3.3 CONNECTIONS

A. Piping installation requirements are specified in Section 232113 "Hydronic Piping," Section 232116 "Hydronic Piping Specialties," Section 232213 "Steam and Condensate Heating Piping," and Section 232216 "Steam and Condensate Heating Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to machine to allow service and maintenance.

C. Connect piping to cabinet unit heater's factory, hot-water piping package. Install the piping package if shipped loose.

D. Connect supply and return ducts to cabinet unit heaters with flexible duct connectors specified in Section 233300 "Air Duct Accessories."

E. Comply with safety requirements in UL 1995.

F. Unless otherwise indicated, install union and gate or ball valve on supply-water connection and union and calibrated balancing valve on return-water connection of cabinet unit heater. Hydronic specialties are specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."

G. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

H. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
2. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

B. Units will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 238239.13

SECTION 238239.16 - PROPELLER UNIT HEATERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes propeller unit heaters with hot-water coils.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings:

1. Include plans, elevations, sections, and details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include location and size of each field connection.
4. Include details of anchorages and attachments to structure and to supported equipment.
5. Include equipment schedules to indicate rated capacities, operating characteristics, furnished specialties, and accessories.
6. Indicate location and arrangement of piping valves and specialties.
7. Indicate location and arrangement of integral controls.
8. Wiring Diagrams: Power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Suspended ceiling components.
2. Structural members to which propeller unit heaters will be attached.
3. Method of attaching hangers to building structure.
4. Size and location of initial access modules for acoustical tile.
5. Items penetrating finished ceiling, including the following:

a. Lighting fixtures.
b. Air outlets and inlets.
c. Speakers.
d. Sprinklers.
e. Access panels.

B. Seismic Qualification Data: Submit certification that propeller unit heaters, accessories, and components will withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC."

C. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 DESCRIPTION

A. Assembly including casing, coil, fan, and motor in vertical and horizontal discharge configuration with adjustable discharge louvers.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 PERFORMANCE REQUIREMENTS

A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

B. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

C. Seismic Performance: Propeller unit heaters shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

2.4 HOUSINGS

A. Finish: As directed, Manufacturer's standard or custom baked enamel applied to factory-assembled and -tested propeller unit heaters before shipping.

B. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

C. Discharge Louver: Adjustable fin diffuser for horizontal units and conical diffuser for vertical units.

2.5 COILS

A. General Coil Requirements: Test and rate hot-water propeller unit-heater coils according to ASHRAE 33.

B. Hot-Water Coil: Copper tube, minimum 0.025-inch (0.635-mm) wall thickness, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm) and rated for a minimum working pressure of 200 psig (1380 kPa) and a maximum entering-water temperature of 325 deg F (163 deg C), with manual air vent. Test for leaks to 350 psig (2413 kPa) underwater.

C. Hot-Water Coil: Vertical steel tube, minimum 0.065-inch (1.65-mm) wall thickness, with mechanically bonded aluminum fins spaced no closer than 0.1 inch (2.5 mm) and rated for a minimum working pressure of 400 psig (2760 kPa) and a maximum entering-water temperature of 450 deg F (232 deg C), with steel headers at top and bottom. Test for leaks to 600 psig (4137 kPa) underwater.

2.6 FAN AND MOTOR

A. Fan: Propeller type with aluminum wheel directly mounted on motor shaft in the fan venturi.

B. Motor: As directed, permanently lubricated, explosion proof, multispeed or variable speed. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."

2.7 CONTROLS

A. Control Devices:

1. As directed, Unit, Wall-mounted, variable fan-speed switch.
2. As directed, Unit or Wall-mounted thermostat.

2.8 CAPACITIES AND CHARACTERISTICS

A. Heating Capacity:

1. Heat Output: As directed.
2. Length of Throw: As directed.
3. Mounting Height: As directed.

B. Water Coil:

1. Entering-Water Temperature: As directed.
2. Temperature Difference: As directed.
3. Water Flow: As directed.

4. Water-Side Pressure Drop: As directed.

C. Supply Air:

1. Airflow: As directed.
2. Leaving-Air Temperature: As directed.
3. Entering-Air Temperature: As directed.

D. Fan Motor:

1. High Speed: As directed.
2. Motor Size: As directed.

E. Electrical Characteristics for Single-Point Connection:

1. Volts: As directed.
2. Phase: As directed.
3. Hertz: As directed.
4. Full-Load Amperes: As directed.
5. Minimum Circuit Amperes: As directed.
6. Maximum Overcurrent Protection: As directed.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas to receive propeller unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for piping and electrical connections to verify actual locations before unit-heater installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install propeller unit heaters to comply with NFPA 90A.

B. Install propeller unit heaters level and plumb.

C. As directed, Suspend propeller unit heaters from structure with all-thread hanger rods and elastomeric hangers, spring hangers or spring hangers with vertical-limit stop. Hanger rods and attachments to structure are specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment." Vibration hangers are specified in Section 230548 "Vibration and Seismic Controls for HVAC" or Section 230548.13 "Vibration Controls for HVAC" As directed

D. Install wall-mounted thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.

3.3 CONNECTIONS

A. Piping installation requirements are specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to machine to allow service and maintenance.

C. Connect piping to propeller unit heater's factory, hot-water piping package. Install the piping package if shipped loose.

D. Comply with safety requirements in UL 1995.

E. Unless otherwise indicated, install union and gate or ball valve on supply-water connection and union and calibrated balancing valve on return-water connection of propeller unit heater. Hydronic specialties are specified in Section 232116 "Hydronic Piping Specialties."

F. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

G. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
2. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

B. Units will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 238239.16

SECTION 238239.19 - WALL AND CEILING UNIT HEATERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes wall and ceiling heaters with propeller fans and electric-resistance heating coils.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Shop Drawings:

1. Include plans, elevations, sections, and details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include details of anchorages and attachments to structure and to supported equipment.
4. Include equipment schedules to indicate rated capacities, operating characteristics, furnished specialties, and accessories.
5. Wiring Diagrams: Power, signal, and control wiring.

C. Samples: For each exposed product and for each color and texture specified.

1.3 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 DESCRIPTION

A. Assembly including chassis, electric heating coil, fan, motor, and controls. Comply with UL 2021.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 CABINET

A. Front Panel: As directed, stamped-steel louver or Extruded-aluminum bar grille, with removable panels fastened with tamperproof fasteners.

B. Finish: As directed, baked enamel over baked-on primer with manufacturer's standard or custom color selected by Architect, applied to factory-assembled and -tested wall and ceiling heaters before shipping.

C. Surface-Mounted Cabinet Enclosure: Steel with finish to match cabinet.

2.4 COIL

A. Electric-Resistance Heating Coil: Nickel-chromium heating wire, free from expansion noise and 60-Hz hum, embedded in magnesium oxide refractory and sealed in corrosion-resistant metallic sheath. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware, and limit controls for high-temperature protection. Provide integral circuit breaker for overcurrent protection.

2.5 FAN AND MOTOR

A. Fan: Aluminum propeller directly connected to motor.

B. Motor: Permanently lubricated, multispeed. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."

2.6 CONTROLS

A. Controls: Unit-mounted thermostat. Low-voltage relay with transformer kit.

B. Electrical Connection: Factory wire motors and controls for a single field connection with disconnect switch.

2.7 CAPACITIES AND CHARACTERISTICS

A. Airflow: As directed.

B. Fan Speed: As directed.

C. Heating Coil: As directed.

D. Electrical Characteristics for Single-Point Connection:

1. Volts: As directed.
2. Phase: As directed.
3. Hertz: As directed.
4. Full-Load Amperes: As directed.
5. Minimum Circuit Ampacity: As directed.

6. Maximum Overcurrent Protection: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install wall and ceiling unit heaters to comply with NFPA 90A.

B. Install wall and ceiling unit heaters level and plumb.

C. Install wall-mounted thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.

D. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

E. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

END OF SECTION 238239.19

SECTION 238313 - RADIANT-HEATING ELECTRIC CABLES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes electric heating cables for ceiling or floor radiant heating, snow and ice melting on pavement, and freezer-floor frost-heave prevention with the following electric heating cables:

1. Plastic insulated, series resistance.
2. Self-regulating, parallel resistance.

B. Related Requirements:

1. Section 210533 "Heat Tracing for Fire-Suppression Piping."
2. Section 220533 "Heat Tracing for Plumbing Piping."
3. Section 230533 "Heat Tracing for HVAC Piping."
4. Section 238213 "Valance Heating and Cooling Units" for factory-fabricated electric heating panels for ceiling and wall applications.
5. Section 238323 "Radiant-Heating Electric Panels."

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For electric heating cable. Include plans, sections, details, and attachments to other work.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, and coordinated with each other, using input from installers of the items involved.

B. Field quality-control reports.

C. Sample Warranty: For special warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace electric heating cable that fails in materials or workmanship within specified warranty period.

1. Warranty Period: As directed, 10 or 15 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR ELECTRIC HEATING CABLES

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 PLASTIC-INSULATED, SERIES-RESISTANCE HEATING CABLES

A. Comply with UL 1673.

B. Heating Element: Single resistor wire. Terminate with waterproof, factory-assembled, non-heating leads with connectors at both ends.

C. Electrical Insulating Jacket: Minimum 4.0-mil (0.10-mm) Kapton with silicone or Tefzel.

D. Cable Cover: As directed, Aluminum, Stainless-steel or Nickel braid with silicone or Hylar outer jacket.

E. Maximum Operating Temperature: 300 deg F (150 deg C).

F. Cable-Heated Mats: As directed, Factory-fabricated cable and fiberglass or plastic mesh with uniform 1-1/2-inch (38-mm) or 3-inch (76-mm) cable spacing, in 18-inch (457-mm) or 36-inch (914-mm) widths.

G. Capacities and Characteristics:

1. Maximum Heat Output (Cable): As directed, 6 W/ft. (19.7 W/m) or 7.5 W/ft. (24.6 W/m).
2. Maximum Heat Output (Mat): As directed, 12 W/sq. ft. (129 W/sq. m) or 16 W/sq. ft. (172 W/sq. m).
3. Spacing: As directed.
4. Electrical Characteristics for Single-Circuit Connection:

a. Volts: As directed, 120, 208, 240, 277 or 480.
b. Phase: As directed.
c. Hertz: As directed.
d. Full-Load Amperes: As directed.
e. Minimum Circuit Ampacity: As directed.
f. Maximum Overcurrent Protection: As directed.

2.3 SELF-REGULATING, PARALLEL-RESISTANCE HEATING CABLES

A. As directed, Comply with UL 1673.

B. Heating Element: As directed, Pair of parallel No. 16 or No. 18 AWG, tinned or nickel-coated, stranded copper bus wires embedded in crosslinked conductive polymer core, which varies heat output in response to temperature along its length. Terminate with waterproof, factory-assembled, non-heating leads with connectors at one end, and seal the opposite end watertight. Cable shall be capable of crossing over itself once without overheating.

C. Electrical Insulating Jacket: Flame-retardant polyolefin.

D. Cable Cover: As directed, Tinned-copper or Stainless-steel braid with polyolefin outer jacket with ultraviolet inhibitor.

E. Maximum Operating Temperature: 300 deg F (150 deg C).

F. Cable-Heated Mats: As directed, Factory-fabricated cable and fiberglass or plastic mesh with uniform 1-1/2-inch (38-mm) or 3-inch (76-mm) cable spacing, in 18-inch (457-mm) or 36-inch (914-mm) widths.

G. Capacities and Characteristics:

1. Maximum Heat Output (Cable): As directed, 3 W/ft. (9.8 W/m), 5 W/ft. (16.4 W/m), 8 W/ft. (26 W/m), 10 W/ft. (32.8 W/m) or 12 W/ft. (39.4 W/m).
2. Maximum Heat Output (Mat): As directed, 6 W/sq. ft. (65 W/sq. m), 12 W/sq. ft. (129 W/sq. m), 16 W/sq. ft. (172 W/sq. m) or 24 W/sq. ft. (260 W/sq. m).
3. Spacing: As directed.
4. Electrical Characteristics for Single-Circuit Connection:

    a. Volts: As directed, 120, 208, 240, 277 or 480.
    b. Phase: As directed.
    c. Hertz: As directed.
    d. Full-Load Amperes: As directed.
    e. Minimum Circuit Ampacity: As directed.
    f. Maximum Overcurrent Protection: As directed.

2.4 CONTROLS

A. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC DDC" for control devices and sequence of operations for radiant-heating electric cables.

B. Wall-Mounted Thermostats for Ceiling and Floor Heating Cables:

1. Minimum temperature range from 50 to 90 deg F (10 to 32 deg C).
2. Manually operated with on-off switch.

C. Precipitation and Temperature Sensor for Snow Melting on Pavement:

1. As directed, Microprocessor-based or Automatic control with manual on, automatic, and standby/reset switch.
2. Precipitation and temperature sensors shall sense the surface conditions of pavement and shall be programmed to energize the cable as follows:

    a. Temperature Span: 34 to 44 deg F (1 to 7 deg C).
    b. Adjustable Delay-Off Span: 30 to 90 minutes.
    c. Energize Cables: Following two-minute delay if ambient temperature is below set point and precipitation is detected.
    d. De-Energize Cables: On detection of a dry surface plus time delay.

3. Corrosion-proof and waterproof enclosure suitable for outdoor mounting, for controls and precipitation and temperature sensors.
4. Minimum 30-A contactor to energize cable or close other contactors.
5. Provide relay with contacts to indicate operational status, on or off, for interface with central HVAC control-system workstation.

2.5 ACCESSORIES

A. Cable Installation Accessories: Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer, or as recommended in writing by manufacturer.

B. Embedded Heating-Cable Identification:

1. Flush-mounted cast-iron boxes with identification on lid according to NFPA 70.
2. As directed, mechanically fastened metal or plastic signage with identification according to NFPA 70 and complying with requirements in Section 101416"Plaques," Section 101419 "Dimensional Letter Signage" or Section 101423 "Panel Signage."
3. As directed, mechanically fastened metal, plastic or concrete post-mounted signage with identification according to NFPA 70 and complying with requirements in Section 101416 "Plaques," Section 101419 "Dimensional Letter Signage" or Section 101423 "Panel Signage."

PART 3 - EXECUTION

3.1 APPLICATIONS

A. Install the following types of electric heating cable for the applications described:

1. Ceiling Radiant Heating: As directed, Plastic-insulated, series-resistance or Self-regulating, parallel-resistance heating cable.
2. Floor Radiant Heating: As directed, Plastic-insulated, series-resistance or Self-regulating, parallel-resistance heating cable.
3. Snow and Ice Melting on Pavement: As directed, Plastic-insulated, series-resistance or Self-regulating, parallel-resistance heating cable.
4. Freezer-Floor Frost-Heave Prevention: As directed, Plastic-insulated, series-resistance or Self-regulating, parallel-resistance heating cable.

3.2 INSTALLATION

A. Install electric heating cable or cable-heated mats across expansion, construction, and control joints according to manufacturer's written instructions; use cable-protection conduit and slack cable to allow movement without damage to cable.

B. Do not energize cables embedded in concrete or plaster until those assemblies are cured.

C. Electric Heating-Cable Installation for Ceiling Radiant Heating: Install heating cable or cable-heated mat with heat-conductive fill materials such as plaster to ensure direct contact with finished radiant surfaces.

D. Electric Heating-Cable Installation for Floor Radiant Heating: Install heating cable or cable-heated mat with heat-conductive fill materials such as concrete to ensure direct contact with finished radiant surfaces.

E. Electric Heating-Cable or Cable-Heated-Mat Installation for Snow and Ice Melting in Pavement:

1. Install heating cable or cable-heated mat with heat-conductive fill materials such as asphalt or concrete to ensure direct contact with finished radiant surfaces.
2. Install cables or cable-heated mats after applying bituminous binder course to lower base; ensure that second bituminous binder course is applied to cables or mats before pouring finish topping.
3. Install embedded electric heating-cable or cable-heated-mat identification box where indicated in pavement before pavement work is completed.
4. Stamp concrete with embedded electric heating-cable or cable-heated-mat identification according to NFPA 70 and complying with requirements in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete."
5. Mount precipitation sensor in pavement.

F. Electric Heating-Cable Installation for Freezer-Floor Frost-Heave Prevention: Install electric heating cable or cable-heated mat below insulation in subsoil.

1. Install embedded electric heating-cable or cable-heated-mat identification box where indicated.
2. Install embedded electric heating-cable or cable-heated-mat identification according to NFPA 70 on adjacent structure and complying with requirements in Section 101416 "Plaques," Section 101419 "Dimensional Letter Signage" or Section 101423 "Panel Signage" As directed.
3. As directed, install embedded electric heating-cable or cable-heated-mat identification according to NFPA 70 on metal, wood or concrete post and complying with requirements in Section 101416 "Plaques", Section 101419 "Dimensional Letter Signage" or Section 101423 "Panel Signage."
4. Stamp concrete with embedded electric heating-cable or cable-heated-mat identification according to NFPA 70 and complying with requirements in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" As directed

G. Set field-adjustable switches and circuit-breaker trip ranges.

H. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

I. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

A. As directed, Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.
2. Test cables for electrical continuity and insulation integrity before energizing.
3. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.

B. Repeat tests for continuity, insulation resistance, and input power after applying finished surface on heating cables.

C. Radiant-heating electric cables will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

E. Remove and replace damaged radiant-heating electric cables and cable-heated mats.

END OF SECTION 238313

SECTION 238316 - RADIANT-HEATING HYDRONIC PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes radiant-heating piping, including the following:

1. PEX pipe and fittings
2. PEX-AL-PEX pipe and fittings
3. Distribution manifolds
4. Piping specialties
5. Controls

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include data for piping, fittings, manifolds, specialties, and controls; include pressure and temperature ratings, oxygen-barrier performance, fire-performance characteristics, and water-flow and pressure-drop characteristics.

B. Shop Drawings: Show piping layout and details drawn to scale, including valves, manifolds, controls, and support assemblies, and their attachments to building structure.

1.3 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 PEX PIPE AND FITTINGS

A. Pipe Material: PEX plastic according to ASTM F876.

B. Oxygen Barrier: Limit oxygen diffusion through the tube to maximum 0.10 mg per cu. m/day at 104 deg F (40 deg C) according to DIN 4726.

C. Fittings: As directed, ASTM F1807, metal insert and copper crimp rings or ASTM F1960, cold expansion fittings and reinforcing rings.

D. Pressure/Temperature Rating: Minimum 100 psig (690 kPa) and 180 deg F (82 deg C).

2.2 PEX-AL-PEX PIPE AND FITTINGS

A. Pipe Material: PEX plastic bonded to the inside and outside of a welded aluminum tube according to ASTM F1281.

B. Oxygen Barrier: Limit oxygen diffusion through the pipe to maximum 0.10 mg per cu. m/day at 104 deg F (40 deg C) according to DIN 4726.

C. Fittings: ASTM F1974, metal insert fittings with split ring and compression nut (compression joint) or metal insert fittings with copper crimp rings (crimp joint).

D. Flame-Spread and Smoke-Developed Indices: 25 and 50 or less, respectively, tested according to ASTM E84.

E. Pressure/Temperature Rating: Minimum 100 psig (690 kPa) and 210 deg F (99 deg C).

2.3 DISTRIBUTION MANIFOLDS

A. Manifold: As directed, Minimum NPS 1 (DN 25), brass, copper, modular plastic or stainless steel.

B. Main Shutoff Valves:

1. Factory installed on supply and return connections.
2. As directed, Two or Three-piece body.
3. Body: Brass or bronze.
4. Ball: Chrome-plated bronze.
5. Seals: PTFE.
6. CWP Rating: 150 psig (1035 kPa).
7. Maximum Operating Temperature: 225 deg F (107 deg C).

C. Manual Air Vents:

1. Body: Bronze.
2. Internal Parts: Nonferrous.
3. Operator: Key furnished with valve, or screwdriver bit.
4. Inlet Connection: NPS 1/2 (DN 15).
5. Discharge Connection: NPS 1/8 (DN 6).
6. CWP Rating: 150 psig (1035 kPa).
7. Maximum Operating Temperature: 225 deg F (107 deg C).

D. Balancing Valves:

1. Body: Plastic or bronze, ball or plug, or globe cartridge type.
2. Ball or Plug: Brass or stainless steel.
3. Globe Cartridge and Washer: Brass with EPDM composition washer.
4. Seat: PTFE.
5. Visual Flow Indicator: Flowmeter with visible indication in a clear plastic cap at top of valve.

6. Differential Pressure Gage Connections: Integral seals for portable meter to measure loss across calibrated orifice.
7. Handle Style: Lever or knob, with memory stop to retain set position if used for shutoff.
8. CWP Rating: Minimum 125 psig (860 kPa).
9. Maximum Operating Temperature: 250 deg F (121 deg C).

E. Zone Control Valves:

1. Body: Plastic or bronze, ball or plug, or globe cartridge type.
2. Ball or Plug: Brass or stainless steel.
3. Globe Cartridge and Washer: Brass with EPDM composition washer.
4. Seat: PTFE.
5. Actuator: Replaceable electric motor.
6. CWP Rating: Minimum 125 psig (860 kPa).
7. Maximum Operating Temperature: 250 deg F (121 deg C).

F. Thermometers:

1. Mount on supply and return connections.
2. Case: Dry type, metal or plastic, 2-inch (50-mm) diameter.
3. Element: Bourdon tube or other type of pressure element.
4. Movement: Mechanical, connecting element and pointer.
5. Dial: Satin-faced, nonreflective aluminum with permanently etched scale markings.
6. Pointer: Black metal.
7. Window: Plastic.
8. Connector: Rigid, back type.
9. Thermal System: Liquid- or mercury-filled bulb in copper-plated steel, aluminum, or brass stem.
10. Accuracy: Plus or minus 1 percent of range or plus or minus 1 scale division to maximum of 1.5 percent of range.

G. Mounting Brackets: Copper, or plastic- or copper-clad steel, where in contact with manifold.

2.4 PIPING SPECIALTIES

A. Cable Ties:

1. Fungus-inert, self-extinguishing, one-piece, self-locking, Type 6/6 nylon cable ties.
2. Minimum Width: 1/8 inch (3 mm).
3. Tensile Strength: 20 lb (9 kg), minimum.
4. Temperature Range: Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C).

B. Floor Mounting Staples:

1. Steel, with corrosion-resistant coating and smooth finish without sharp edges.
2. Minimum Thickness: 3/32 inch (2.4 mm).
3. Width: Minimum, wider than tubing.

C. Floor Mounting Clamps:

1. Two bolts, steel, with corrosion-resistant coating and smooth finish without sharp edges.
2. Minimum Thickness: 3/32 inch (2.4 mm).
3. Width: Minimum, wider than tubing.

D. Floor Mounting Tracks:

1. Aluminum or plastic channel track with smooth finish and no sharp edges.
2. Minimum Thickness: 1/16 inch (1.6 mm).
3. Slot Width: Snap fit to hold tubing.
4. Slot Spacing: As directed, 2-inch (50-mm) or 3-inch (75-mm) intervals.

E. Channeled Subfloor:

1. Plywood, APA-rated subfloor panel, composed of premium, tongue-and-groove, seven-layer, Douglas fir structural subfloor panels.
2. Particleboard manufactured to comply with Federal Housing Authority standards of less than 0.3-ppm formaldehyde.
3. Clad panel with minimum 0.025-inch- (0.635-mm-) thick aluminum recessed in the grooves sized to maintain contact with radiant piping.

F. Modular Interlocking Blocks:

1. Polypropylene snap-together blocks with grooves to support piping.
2. Galvanized sheet metal or aluminum emission plates.
3. Natural mineralboard cover panel.

G. Heat-Emission Plates:

1. Formed aluminum suitable for radiant-heating piping.
2. Minimum Thickness: 1/16 inch (1.6 mm).
3. Slot Width: Snap fit to maintain pressure fit on tubing.

2.5 CONTROLS

A. Wall-Mounted Thermostat:

1. Minimum temperature range from 50 to 90 deg F (10 to 32 deg C).
2. Manually operated with on-off switch.
3. Day and night setback and clock program with minimum four periods per day.
4. Operate pumps or open zone control valves if room temperature falls below the thermostat setting and stop pumps or close zone control valves when room temperature rises above the thermostat setting.

B. Precipitation and Temperature Sensor:

1. As directed, Microprocessor-based or Automatic control with manual on, automatic, and standby/reset switch.
2. Precipitation and temperature sensors shall sense the surface conditions of pavement and shall be programmed to operate pump and zone control valves as follows:

a. Temperature Span: 34 to 44 deg F (1 to 7 deg C).
b. Adjustable Delay Off Span: 30 to 90 minutes.
c. Start Pump or Open Zone Control Valves: Following two-minute delay if ambient temperature is below set point and precipitation is detected.
d. Stop Pump or Close Zone Control Valves: On detection of a dry surface plus time delay.

3. Corrosion-proof and waterproof enclosure suitable for outdoor mounting, for controls and precipitation and temperature sensors.
4. Minimum 30-A contactor to start pump and open valves.
5. Precipitation sensor shall be mounted in pavement.
6. Provide relay with contacts to indicate operational status, on or off, for interface with central HVAC control-system workstation.

PART 3 - EXECUTION

3.1 APPLICATIONS

A. Install the following types of radiant-heating piping for the applications described:

1. Piping in Exterior Pavement: As directed, PEX or PEX/AL/PEX.
2. Piping in Interior Reinforced-Concrete Floors: As directed, PEX or PEX/AL/PEX.
3. Piping in Level Fill Concrete Floors (Not Reinforced): As directed, PEX or PEX/AL/PEX.
4. Piping in Ceilings: As directed, PEX or PEX/AL/PEX.
5. Piping in Subfloors: As directed, PEX or PEX/AL/PEX.
6. Piping below Wood Floors: As directed, PEX or PEX/AL/PEX.

3.2 INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicate piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings or coordination drawings.

B. Install radiant-heating piping continuous from the manifold through the heated panel and back to the manifold without piping joints in heated panels.

C. Connect radiant piping to manifold in a reverse-return arrangement.

D. Do not bend pipes in radii smaller than manufacturer's minimum bend radius dimensions.

E. Install manifolds in accessible locations or install access panels to provide maintenance access as required in Section 083113 "Access Doors and Frames."

F. See Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties" for pipes and connections to hydronic systems and for glycol-solution fill requirements.

G. Fire- and Smoke-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials according to Section 078413 "Penetration Firestopping."

H. Piping in Exterior Pavement:

1. Secure piping in concrete floors by attaching pipes to reinforcement using cable ties.
2. Space cable ties a maximum of 18 inches (457 mm) o.c. and at center of turns or bends.
3. Maintain 3-inch (75-mm) minimum cover.
4. Install a sleeve of 3/8-inch- (9.5-mm-) thick, foam-type insulation or PE pipe around tubing and extending for a minimum of 10 inches (250 mm) on each side of slab joints to protect the tubing passing through expansion or control joints. Anchor sleeve to slab form at control joints to provide maximum clearance for saw cut.
5. Maintain minimum 40-psig (275-kPa) pressure in piping during concrete placement and continue for 24 hours after placement.

I. Piping in Interior Reinforced-Concrete Floors:

1. Secure piping in concrete floors by attaching pipes to reinforcement using cable ties.
2. Space cable ties a maximum of 18 inches (457 mm) o.c. and at center of turns or bends.
3. Maintain 2-inch (50-mm) minimum cover.
4. Install a sleeve of 3/8-inch- (9.5-mm-) thick, foam-type insulation or PE pipe around tubing and extending for a minimum of 10 inches (250 mm) on each side of slab joints to protect the tubing passing through expansion or control joints. Anchor sleeve to slab form at control joints to provide maximum clearance for saw cut.
5. Maintain minimum 40-psig (275-kPa) pressure in piping during concrete placement and continue for 24 hours after placement.

J. Piping in Level Fill Concrete Floors (Not Reinforced):

1. Secure piping in concrete floors by attaching pipes to subfloor using tracks, clamps, or staples.
2. Space tracks, clamps, or staples a maximum of 18 inches (457 mm) o.c. and at center of turns or bends.
3. Maintain 3/4-inch (19-mm) minimum cover.
4. Install a sleeve of 3/8-inch- (9.5-mm-) thick, foam-type insulation or PE pipe around tubing and extending for a minimum of 10 inches (250 mm) on each side of slab joints to protect the tubing passing through expansion or control joints. Anchor sleeve to slab form at control joints to provide maximum clearance for saw cut.
5. Maintain minimum 40-psig (275-kPa) pressure in piping during the concrete pour and continue for 24 hours during curing.

K. Piping in Ceiling:

1. Secure piping by attaching pipes to ceiling substrate using clamps or staples.
2. Space clamps or staples a maximum of 18 inches (457 mm) o.c. and at center of turns or bends.
3. Maintain 1-1/2-inch (38-mm) minimum plaster cover.
4. Maintain minimum 40-psig (275-kPa) pressure in piping during the plaster application and continue for 24 hours during curing.

L. Piping in Subfloor:

1. Secure piping by laying in subfloor channels or modular interlocking blocks.
2. Use straight channel panels or blocks in the center and curved channel panels or blocks at the ends.
3. Finish floor with mineralboard panel cover or finished floor surface.

M. Piping below Wood Floor:

1. Secure piping by attaching pipes to subfloor using heat-emission plates, clamps, or staples.
2. Space heat-emission plates, clamps, or staples a maximum of 4 inches (100 mm) o.c. and at center of turns or bends.
3. Install heat-emission plates on underside of wood subfloor with maximum space between plates, as noted above, to maintain pipe contact with floor.

N. Revise locations and elevations from those indicated as required to suit field conditions and ensure integrity of piping and as approved by Architect.

O. After system balancing has been completed, mark balancing valves to permanently indicate final position.

P. Perform the following adjustments before operating the system:

1. Open valves to fully open position.
2. Check operation of automatic valves.
3. Set temperature controls so all zones call for full flow.
4. Purge air from piping.

Q. After concrete or plaster heating panel has cured as recommended by concrete or plaster supplier, operate radiant-heating system as follows:

1. Start system heating at a maximum of 10 deg F (6 deg C) above the ambient radiant-panel temperature and increase 10 deg F (6 deg C) each following day until design temperature is achieved.
2. For freeze protection, operate at a minimum of 60 deg F (16 deg C) supply-water temperature.

3.3 FIELD QUALITY CONTROL

A. Prepare radiant-heating piping for testing as follows:

1. Open all isolation valves and close bypass valves.
2. Open and verify operation of zone control valves.
3. Flush with clean water and clean strainers.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Leak Test: After installation, charge system and test for leaks. Subject piping to hydrostatic test pressure that is not less than 1.5 times the design pressure but not more than 100 psig (690 kPa). Repair leaks and retest until no leaks exist.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Radiant-heating piping will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

E. Protect hydronic piping system from damage during construction.

END OF SECTION 238316

SECTION 238323 - RADIANT-HEATING ELECTRIC PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes prefabricated radiant-heating electric panels.

B. Related Requirements:

1. Section 238213 "Valance Heating and Cooling Units" for factory-fabricated electric heating panels for ceiling and wall applications.
2. Section 238313 "Radiant-Heating Electric Cables."

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For electric heating panels. Include plans, sections, details, and attachments to other work.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, and coordinated with each other, using input from installers of the items involved.

B. Field quality-control reports.

C. Sample Warranty: For special warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace electric heating panels that fail in materials or workmanship within specified warranty period.

1. Warranty Period: As directed, Three or Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR RADIANT-HEATING ELECTRIC PANELS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 PREFABRICATED RADIANT-HEATING ELECTRIC PANELS

A. Description: As directed, Sheet-metal-enclosed panel with heating element suitable for lay-in installation flush with T-bar ceiling grid, surface mounting or recessed mounting. Comply with UL 2021.

1. Panel: Minimum 0.0276-inch- (0.7-mm-) thick, galvanized sheet steel back panel riveted to minimum 0.0396-inch- (1.0-mm-) thick, galvanized sheet steel front panel with fused-on crystalline surface.
2. Heating Element: Powdered graphite sandwiched between sheets of electric insulation.
3. Heating Element: Insulated resistive wires.
4. Electrical Connections: Nonheating, high-temperature, insulated-copper leads, factory connected to heating element.
5. Exposed-Side Panel Finish: Apply silk-screened finish to match appearance of Architect-selected acoustical ceiling tiles.
6. Exposed-Side Panel Finish: Factory prime coated, ready for field painting.
7. Exposed-Side Panel Finish: As directed, Baked-enamel finish in manufacturer's standard or custom paint color as selected by Architect.
8. Surface-Mounted Trim: As directed, Sheet metal with baked-enamel finish in manufacturer's standard or custom paint color as selected by Architect.

B. Wall Thermostat: As directed, Bimetal, sensing elements calibrated from 55 to 90 deg F (13 to 32 deg C); with contacts suitable for low or line-voltage circuit, and manually operated on-off switch with contactors, relays, and control transformers.

C. Capacities and Characteristics:

1. Nominal Panel Size: As directed, 24 by 24 inches (600 by 600 mm), 24 by 36 inches (600 by 900 mm), 24 by 48 inches (600 by 1200 mm) or 24 by 60 inches (600 by 1500 mm).
2. Heating Capacity: As directed, 250, 375, 500, 570, 625, 750 or 950 W.
3. Electrical Characteristics for Single-Point Connection:

    a. Volts: As directed.
    b. Phase: As directed.
    c. Hertz: As directed.
    d. Full-Load Amperes: As directed.
    e. Minimum Circuit Ampacity: As directed.
    f. Maximum Overcurrent Protection: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install radiant-heating panels level and plumb.

B. Support for Radiant-Heating Panels in or on Grid-Type Suspended Ceilings: Use grid as a support element.

1. Install a minimum of four ceiling-support-system rods or wires for each panel. Locate not more than 6 inches (150 mm) from panel corners.
2. Support Clips: Fasten to panel and to ceiling grid members at or near each panel corner with clips designed for the application.
3. Panels of Sizes Less Than Ceiling Grid: Install as indicated on reflected ceiling plans or center in acoustical panel, and support panels independently with at least two 3/4-inch (19-mm) metal channels spanning and secured to ceiling tees.
4. Install at least one independent support rod or wire from structure to a tab on panel. Wire or rod shall have breaking strength of the weight of the panel at a safety factor of 3.

C. Verify locations of thermostats with Drawings and room details before installation. As directed, Install devices 48 inches (1220 mm) or 60 inches (1525 mm) above finished floor.

D. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

E. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.2 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Operate electric-heating elements through each stage to verify proper operation and electrical connections.
2. Test and adjust controls and safeties.

B. Radiant-heating electric panels will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

D. Remove and replace damaged radiant-heating electric panels.

END OF SECTION 238323

SECTION 238413.16 - WETTED-ELEMENT HUMIDIFIERS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes wetted-element humidifiers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Shop Drawings: Detail fabrication and installation of humidifiers. Include piping details, plans, elevations, sections, details of components, manifolds, attachments to other work, and wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Detail humidifiers and adjacent equipment. Show support locations, type of support, weight on each support, required clearances, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

B. Seismic Qualification Data: Certificates, for humidifiers, accessories, and components from manufacturer.

C. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with AHRI 640.

C. Comply with UL 900, Class I or Class II.

D. Comply with standard as directed.

E. Seismic Performance: Wetted-element humidifiers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means the "unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: As directed, 1.5 or 1.0.

F. Capacities and Characteristics:

1. Humidification Rate: As directed.
2. Entering Dry-Bulb Air Temperature: As directed.
3. Entering Wet-Bulb Air Temperature: As directed.
4. Leaving Dry-Bulb Air Temperature: As directed.
5. Leaving Wet-Bulb Air Temperature: As directed.
6. Duct/Plenum Height: As directed.
7. Duct/Plenum Width: As directed.
8. Number of Media Control Stages: As directed.
9. Maximum Absorption Distance: As directed.
10. Cooling Efficiency Required: Percent As directed.
11. Media Water Pump:

    a. Number of Pumps: As directed.
    b. Motor Horsepower (Each): As directed.

12. Drain Pump:

    a. Number of Pumps: As directed.
    b. Motor Horsepower: As directed.

13. Electrical Characteristics: Single point of connection.

    a. Volts: As directed.
    b. Phase: As directed, Single or Three phase.
    c. Hertz: As directed, Hz.
    d. Full-Load Amperes: As directed.
    e. Minimum Circuit Ampacity: As directed
    f. Maximum Overcurrent Protection: As directed.

G. Water Type: As directed, Suitable for use with tap or softened water.

2.2 WETTED-ELEMENT HUMIDIFIER MANUFACTURERS

2.3 WETTED-ELEMENT HUMIDIFIERS

A. Piping and Fittings: As directed, ASTM A269 (ASTM A269M), Stainless-steel or Stainless-steel, type 304 pipe and fittings.

B. Piping and Fittings: ASTM B88 (ASTM B88M), type L copper pipe and wrought-copper fittings with brazed joints.

C. Media Water Pump:

1. As directed, Stainless-steel or Bronze pump body and single or variable-speed motor.
2. As directed, One pump, One solenoid valve or One pump or solenoid valve for each media stage.

D. Drain Pump: As directed, Stainless-steel or Bronze pump body and single-speed motor.

E. Media:

1. Inorganic and inflammable.

F. Reservoir, Header, and Frame:

1. Stainless steel.
2. Reservoir designed, so it drains and dries completely.

G. Water Treatment:

1. Silver-ion antibacterial cartridge.
2. 5-micron pre-filter.

H. Control Panel:

1. As directed, NEMA 250, type 3R or type 4X, to comply with environmental conditions at installed location.
2. Material: As directed, Galvanized, Powder-coated or Stainless steel.

I. Controls:

1. As directed, Cycle or Vary speed of motor and sequence solenoid valve stages to satisfy humidistat.
2. Multilevel probe and supply solenoid to maintain tank water level.

J. Accessories:

1. As directed, Humidistat or Humidity Sensor: As directed, Wall or Return duct mounted.
2. As directed, High-Limit Humidistat or Humidity Sensor: Supply duct mounted.
3. Airflow switch prevents humidifier operation without airflow.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine roughing-in for piping systems to verify actual locations of piping connections before humidifier installation.

B. Install humidifiers with required clearance for service and maintenance. Maintain path, downstream from humidifiers, clear of obstructions as required by ASHRAE 62.1.

C. Seal all duct and plenum penetrations with flange.

D. Install humidifier manifolds in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."

E. As directed, Install galvanized or stainless-steel drain pan under each manifold.

1. Construct drain pans with connection for drain; insulated and complying with ASHRAE 62.1.
2. Connect to condensate trap and drainage piping.
3. Extend drain pan upstream and downstream from manifold a minimum distance recommended by manufacturer but not less than that required by ASHRAE 62.1.

F. Equipment Mounting:

1. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
2. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

G. Install all manufacturer-furnished accessories in accordance with manufacturer's written installation instructions.

3.2 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

1. Install piping adjacent to humidifiers to allow service and maintenance.

B. Install devices and piping specialties furnished by manufacturer but not factory mounted.

3.3 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

3.4 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between humidity sensors, high-limit humidity sensors, and DDC control system.

C. Connect control wiring between humidistats and controlled devices.

D. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

3.5 FIELD QUALITY CONTROL

A. Testing Agency: As directed, Owner will engage or Engage a qualified testing agency to perform tests and inspections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Humidifier will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.6 DEMONSTRATION

A. As directed, engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain humidifiers.

END OF SECTION 238413.16

SECTION 238413.19 – ATOMIZING HUMIDIFIERS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes water-pressure atomizing humidifiers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product. Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Sustainable Design Submittals:

C. Shop Drawings: Detail fabrication and installation of humidifiers. Include piping details, plans, elevations, sections, details of components, manifolds, and attachments to other work.

1. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Detail humidifiers and adjacent equipment. Show support locations, type of support, weight on each support, required clearances, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

B. Seismic Qualification Data: Certificates, for humidifiers, accessories, and components from manufacturer.

C. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with AHRI 640.

C. Comply with standard as directed.

D. Seismic Performance: Wetted-element humidifiers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: As directed, 1.5 or 1.0.

2.2 WATER-PRESSURE ATOMIZING HUMIDIFIERS

A. Capacities and Characteristics:

1. Humidification Rate: As directed.
2. Dry-Bulb Air Temperature at Discharge: As directed.
3. Wet-Bulb Air Temperature at Discharge: As directed.
4. Number of Nozzles: As directed.
5. Nozzle Spacing: As directed.
6. Maximum Absorption Distance: As directed.
7. Minimum Makeup Water Supply Pressure: As directed.
8. Water Pump:
    a. Discharge Pressure: As directed, 1000 psig (6894 kPa), 1200 psig (13 790 kPa) or 1000 psig (6895 kPa) to 1200 psig (8274 kPa).
    b. Motor Horsepower: As directed.
9. Final Water Filter:
    a. Efficiency: Percent As directed.
    b. Maximum Size of Particles Retained: Number microns as directed.
    c. Pressure Drop, Clean: As directed.
    d. Pressure Drop, Dirty: As directed.
10. Electrical Characteristics: Single point of connection.
    a. Volts: As directed.
    b. Phase: As directed, Single or Three phase.
    c. Hertz: Hz as directed.
    d. Full-Load Amperes: As directed.
    e. Minimum Circuit Ampacity: As directed.
    f. Maximum Overcurrent Protection: As directed.

B. Water Type: As directed, Suitable for use with tap, softened, reverse osmosis or deionized water.

C. Atomizing Nozzles: As directed, Stainless-steel, Stainless-steel, type 304 or Stainless-steel, type 316 anti-drip.

D. Manifold: As directed, Stainless-steel, Stainless-steel, type 304 or Stainless-steel, type 316 piping.

E. Piping and Fittings: As directed, ASTM A269 (ASTM A269M), Stainless-steel, Stainless-steel, type 304 or Stainless-steel, type 316 pipe and fittings.

F. Piping and Fittings: ASTM B88 (ASTM B88M), type L copper pipe and wrought-copper fittings with brazed joints.

G. Droplet Separator: Located downstream from manifolds to eliminate nonevaporated droplets.

H. Water Pump:

1. As directed, Enclosed belt-drive or Direct-drive high-pressure stainless-steel, brass or ceramic piston pump.
2. As directed, Single or Variable-speed, totally enclosed, fan-cooled motor.
3. Mounting: As directed, Skid or Wall.

I. Control Panel:

1. As directed, NEMA 250, type 3R or type 4X, to comply with environmental conditions at installed location.
2. Material: As directed, Galvanized, Powder-coated or Stainless steel.

J. Controls:

1. As directed, Cycle or Vary speed of pump motor to satisfy humidity sensor or humidistat.
2. Provide a high-pressure, normally closed solenoid valve for each control zone shown on Drawings.
3. Flushing: Automatic flushing of piping upon system shutdown and upon no humidification demand for an extended time.

K. System Discharge Type:

1. Direct-area dispersion system.
2. Duct/plenum dispersion system.

L. Accessories:

1. As directed, Humidistat or Humidity Sensor: As directed, Wall or Return duct mounted.
2. As directed, Duct or Space-mounted, high-limit humidistat or humidity sensor.
3. Airflow switch for preventing humidifier operation without airflow.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine roughing-in for piping systems to verify actual locations of piping connections before humidifier installation.

B. Install humidifiers with required clearance for service and maintenance. Maintain path, downstream from humidifiers, clear of obstructions as required by ASHRAE 62.1.

C. Seal all duct and plenum penetrations with flange.

D. Install humidifier assemblies in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."

E. As directed, Install galvanized or stainless-steel drain pan under each manifold.

1. Construct drain pans with connection for drain; insulated and complying with ASHRAE 62.1.
2. Connect to condensate trap and drainage piping.
3. Extend drain pan upstream and downstream from manifold a minimum distance recommended by manufacturer but not less than required by ASHRAE 62.1.

F. Equipment Mounting:

1. Install floor-mounted humidifier pumping and air compressor component systems on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" As directed.
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

G. Install all manufacturer-furnished accessories in accordance with manufacturer's written installation instructions.

3.2 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

1. Install piping adjacent to humidifiers to allow service and maintenance.

B. Install devices and piping specialties furnished by manufacturer but not factory mounted.

3.3 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

3.4 CONTROLS CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between control devices.

C. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

3.5 FIELD QUALITY CONTROL

A. Testing Agency: As directed, Owner will engage or Engage a qualified testing agency to perform tests and inspections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Humidifier will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.6 DEMONSTRATION

A. As directed, engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain humidifiers.

END OF SECTION 238413.19

SECTION 238413.23 - DIRECT-STEAM-INJECTION HUMIDIFIERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Direct-steam-injection distributer tube humidifiers.
2. Direct-steam-injection panel distribution manifold humidifiers.
3. Direct-steam-injection area humidifiers.
4. Condensate drain coolers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: Detail fabrication and installation of humidifiers. Include piping details, plans, elevations, sections, details of components, distributer tubes/manifolds, and attachments to other work.

1. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Detail humidifiers and adjacent equipment. Show support locations, type of support, weight on each support, required clearances, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

B. Seismic Qualification Certificates: For humidifiers, accessories, and components, from manufacturer.

C. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with AHRI 640.

C. Seismic Performance: Direct-steam-injection humidifiers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: As directed, 1.5 or 1.0.

D. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 50 or less.

2.2 DIRECT-STEAM-INJECTION DISTRIBUTER TUBE HUMIDIFIERS

A. Capacities and Characteristics:

1. Humidification Rate: As directed.
2. Steam Supply Pressure: As directed.
3. Dry-Bulb Air Temperature at Discharge: As directed.
4. Wet-Bulb Air Temperature at Discharge: As directed.
5. Maximum Absorption Distance: As directed.
6. Number of Distributer Tubes: As directed.

B. Steam Distributer Tube(s): Single or multiple, steam-jacketed tubes suitable for pressurized steam applications.

C. Material: As directed, Stainless steel or Stainless steel, type 304.

D. Insulation: As directed, Uninsulated or Insulated.

E. Steam Separator: As directed, Cast iron or Stainless steel, type 304.

F. Humidifier Control Valve:

1. Actuator: As directed, Pneumatic or Electric modulating with spring return.
2. Actuator: As specified in Section 230923.11 "Control Valves."
3. Body: As directed, Bronze, Stainless steel or Stainless steel, type 304.

G. Steam Trap:

1. Material: As directed, Cast iron, Stainless steel or Stainless steel, type 304.
2. Type: Inverted-bucket or Float and thermostatic.
3. Capacity: Sized for a minimum of 3 times the maximum rated condensate flow of humidifier at 1/2-psig (3.4-kPa) differential pressure.

H. Accessories:

1. As directed, Humidistat or Humidity sensor: As directed, Wall or Return-duct mounted.
2. Duct-mounted high-limit humidistat or humidity sensor as directed.
3. As directed, Aquastat or Temperature sensor mounted on steam condensate return piping to prevent cold operation of humidifier.
4. In-Line Strainer, Y-Pattern: As directed, Stainless steel, Stainless steel, type 304 or Cast iron body with 20-mesh type 304 stainless-steel screen.
5. Airflow switch for preventing humidifier operation without airflow.
6. Humidifier Controller:

    a. Digital, with keypad and display.

2.3 DIRECT-STEAM-INJECTION PANEL DISTRIBUTION MANIFOLD HUMIDIFIERS

A. Capacities and Characteristics:

1. Humidification Rate: As directed.
2. Steam Supply Pressure: As directed.
3. Dry-Bulb Air Temperature at Discharge: As directed.
4. Wet-Bulb Air Temperature at Discharge: As directed.
5. Maximum Absorption Distance: As directed.
6. Number of Distribution Tubes: As directed.

B. Panel Distribution Manifold:

1. Pre-fabricated panel distribution manifold, steam dispersion grid assembly.
2. Designed for short absorption distance.
3. Suitable for pressurized steam applications.
4. Extending the full width and height of duct or plenum.
5. Horizontal or vertical header with multiple vertical or horizontal, nonsteam-jacketed or steam-jacketed tubes as directed, designed for dry-steam injection, within short absorption distance.
6. Nozzles/metered orifices in conjunction with nonsteam-jacketed manifolds or punched orifices/nozzles in conjunction with steam-jacketed manifolds spaced evenly along manifold tubes and providing dry and uniform steam distribution.
7. Headers and Distribution Tubes:

    a. Material: As directed, Stainless steel or Stainless steel, type 304.
    b. Insulation: As directed, Uninsulated or Insulated.

C. Steam Separator: External separator, or separator/baffles integral to header, to provide condensate-free steam to the distribution tubes.

1. Material: As directed, Stainless steel or Stainless steel, type 304.

D. Humidifier Control Valve:

1. Actuator: As directed, Pneumatic or Electric modulating with spring return.
2. Actuator: As specified in Section 230923.11 "Control Valves."
3. Body: As directed, Bronze, Stainless steel or Stainless steel, type 304.

E. Steam Trap:

1. Material: As directed, Cast iron, Stainless steel or Stainless steel, type 304.
2. Type: As directed, Inverted-bucket or Float and thermostatic
3. Capacity: Sized for a minimum of 3 times the maximum rated condensate flow of humidifier at 1/2-psig (3.4-kPa) differential pressure.

F. Accessories:

1. As directed, Humidistat or Humidity Sensor: As directed, Wall or Return-duct mounted.
2. Duct-mounted, high-limit humidistat or humidity sensor as directed.
3. As directed, Aquastat or Temperature sensor mounted on steam condensate return piping to prevent cold operation of humidifier.
4. In-Line Strainer, Y-Pattern: As directed, Stainless steel, Stainless steel, type 304 or Cast iron body with 20-mesh stainless steel or stainless steel, type 304 screen.
5. Airflow switch for preventing humidifier operation without airflow.
6. Humidifier Controller:

    a. Digital, with keypad and display.

2.4 DIRECT-STEAM-INJECTION AREA HUMIDIFIERS

A. Capacities and Characteristics:

1. Humidification Rate: As directed.
2. Steam Supply Pressure: As directed.
3. Dry-Bulb Air Temperature at Discharge: As directed.
4. Wet-Bulb Air Temperature at Discharge: As directed.
5. Maximum Absorption Distance: As directed.
6. Dispersion Fan:

    a. Airflow: As directed.
    b. Motor Horsepower: As directed.

7. Electrical Characteristics: Single point of connection.

    a. Volts: As directed.
    b. Phase: As directed, Single or Three phase.
    c. Hertz: 60 Hz.
    d. Full-Load Amperes: As directed.
    e. Minimum Circuit Ampacity: As directed.
    f. Maximum Overcurrent Protection: As directed.

B. Discharge Nozzle and Dispersion Fan:

1. Steam-jacketed discharge nozzle, aluminum blade propeller fan with finger guard, and motor interlocked to operate with humidifier.
2. Fan Mounting: Above and behind discharge outlet on bracket integral to discharge outlet.
3. Steam Separator: External separator, or separator/baffles integral to the nozzle assembly, to provide condensate-free steam to the discharge nozzle.
4. Dispersion Nozzle Material: As directed, Stainless steel or type 304.

C. Humidifier Control Valve:

1. Actuator: As directed, Pneumatic or Electric modulating with spring return.
2. Actuator: As specified in Section 230923.11 "Control Valves."
3. Body: As directed, Bronze, Stainless steel or Stainless steel, type 304.

D. Accessories:

1. As directed, Humidistat or Humidity Sensor: Wall mounted.
2. In-Line Strainer, Y-Pattern: As directed, Stainless steel, Stainless steel, type 304 or Cast iron body with 20-mesh stainless steel or stainless steel, type 304 screen.
3. Humidifier Controller:

    a. Digital, with keypad and display.

2.5 CONDENSATE DRAIN COOLERS

A. Capacities and Characteristics:

1. Hot Condensate in: As directed.
2. Hot Condensate Temperature: As directed.
3. Cold Water in as directed.
4. Cold Water Temperature: As directed.
5. Tempered Water out as directed.
6. Tempered Water Temperature: as directed.

B. Description: Mixes hot condensate with a cold water supply to reduce the drain temperature, as required by state and local codes.

C. Cold Water Tempering Valve: As directed, Bronze body, thermostatic self-actuated with aquastat or 24 V ac electric actuated with temperature sensor.

D. Drain Temperature Set Point Range: Field adjustable between 115 deg F (46 deg C) and 140 deg F (60 deg C).

E. Reservoir Body Material: As directed, Stainless steel, Stainless steel, type 304 or Cast iron or carbon steel.

F. Mounting: As directed, Suitable for wall, floor or suspended mounting.

G. Vacuum breaker or air vent connection.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine roughing-in for piping systems to verify actual locations of piping connections before humidifier installation.

3.2 INSTALLATION

A. Install humidifiers with required clearance for service and maintenance. Maintain path, downstream from humidifiers, clear of obstructions as required by ASHRAE 62.1.

B. Seal all penetrations of duct or plenum with flange.

C. Install humidifier assemblies in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."

D. As directed, Install galvanized or stainless-steel drain pan under each manifold mounted in duct.

1. Construct drain pans with connection for drain; insulated and complying with ASHRAE 62.1.
2. Connect to condensate trap and drainage piping.
3. Extend drain pan upstream and downstream from humidifier tube(s)/manifold a minimum distance recommended by manufacturer but not less than that required by ASHRAE 62.1.

E. Install drip leg upstream from steam trap a minimum of 12 inches (300 mm) tall for proper operation of trap.

F. Equipment Mounting:

1. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
2. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

G. Install all manufacturer-furnished accessories in accordance with manufacturer's written installation instructions.

3.3 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

1. Install piping adjacent to humidifiers to allow service and maintenance.
2. Where condensate drain cooler is used, install shutoff valve, strainer, backflow preventer, and union in tempering water makeup piping.

B. Install piping specialties furnished by manufacturer but not factory mounted.

3.4 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

3.5 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between humidity sensors, high-limit humidity sensors, condensate temperature sensors and DDC control system.

C. Connect control wiring between humidistats, thermostats, and control devices.

D. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

3.6 FIELD QUALITY CONTROL

A. Testing Agency: As directed, owner will engage or Engage a qualified testing agency to perform tests and inspections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Humidifier will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.7 DEMONSTRATION

A. As directed, engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain humidifiers.

END OF SECTION 238413.23

SECTION 238413.29 - SELF-CONTAINED STEAM HUMIDIFIERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Self-contained electric-resistance humidifiers.
2. Self-contained electrode humidifiers.
3. Condensate drain coolers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product. Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: Detail fabrication and installation of humidifiers. Include piping details, plans, elevations, sections, details of components, distributer tubes/manifolds, and attachments to other work.

1. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Detail humidifiers and adjacent equipment. Show support locations, type of support, weight on each support, required clearances, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

B. Seismic Qualification Data: Certificates, for humidifiers, accessories, and components from manufacturer.

C. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: An NRTL.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with AHRI 640.

C. Comply with UL 998.

D. Listed and labeled by CE, ETL, CSA, or as complying with applicable AGA/CGA standards.

E. Listed and labeled by ETL.

F. Seismic Performance: Self-contained steam humidifiers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: As directed, 1.5 or 1.0.

G. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 50 or less.

2.2 SELF-CONTAINED ELECTRIC-RESISTANCE HUMIDIFIERS

A. Capacities and Characteristics:

1. Humidification Rate: As directed.
2. Dry-Bulb Air Temperature at Discharge: As directed.
3. Wet-Bulb Air Temperature at Discharge: As directed.
4. Maximum Absorption Distance: As directed.
5. Minimum Makeup Water Supply Pressure: As directed.
6. Electric-Resistance Evaporation Chamber:

    a. Power Input per Chamber: kW.
    b. Number of Chambers: As directed.

7. Steam Distribution Method - Atmospheric Distributer Tube:

    a. Number of Distributer Tubes: As directed.

8. Steam Distribution Method - Atmospheric Panel Distribution Manifold:

    a. Number of Distribution Manifolds: As directed.

9. Steam Distribution Method - Area Dispersion:

    a. Number of Distributer Tubes: As directed.
    b. Fan Airflow: As directed.
    c. Fan Motor Horsepower: As directed.
    d. Fan Electrical Characteristics:

        1) Volts: As directed.
        2) Phase: As directed, Single or Three phase.
        3) Hertz: 60 Hz.
        4) Full-Load Amperes: As directed.
        5) Minimum Circuit Ampacity: As directed.
        6) Maximum Overcurrent Protection: As directed.

B. Water Type: As directed, Suitable for use with tap or softened water.

C. Immersion Heating:

1. Evaporation Chamber: Cleanable, stainless steel or stainless steel, type 304.
2. Elements: Incoloy-sheathed, stainless-steel sheathed, or alloy-sheathed aluminum.

D. Cabinet:

1. As directed, Stainless-steel or painted-steel enclosure, factory-insulated for safe operating surface temperature, for housing heater cylinder, electrical wiring, components, controls, and control panel.
2. Hinged or removable cover, keyed to restrict unauthorized access.
3. Plumbing and electrical components housed in separate parts of the cabinet.
4. Threaded outlet in bottom of cabinet for drain piping.

E. Weatherproof Outdoor Enclosure: Insulated, with automatically controlled heating and ventilating system to maintain minimum operating conditions within the enclosure.

F. Control Panel:

1. As directed, Microprocessor-based control system for modulating or cycling control.
2. Factory-wired disconnect switch.
3. Liquid-crystal display.
4. Programmable keypad.
5. Low-voltage control circuit, with fused transformer.
6. Diagnostic, maintenance, alarm, and status features.
7. Safety switch interlocked to shut off heaters when cabinet is open.
8. Internal electrical controls prewired to appropriately marked terminals for field connection.
9. Electrical terminals for connection to each controlling device and alarm.
10. NEMA 250, type 3R, type 4, type 4X or type 12, to comply with environmental conditions at installed locations.
11. Material: As directed, Galvanized, Powder-coated or Stainless steel.

G. Controls:

1. Solenoid Fill Valve Maintains Water Level: As directed, Stainless steel or Bronze, including fill tee with built-in air gap to prevent back siphoning. Include stainless-steel or bronze inlet strainer.
2. As directed, Field-adjustable timer or conductivity controller to control drain cycle for flush duration and interval.
3. Controls shall drain tanks if no demand for humidification for more than 72 hours.
4. Set-point adjustment.
5. Tri-conductivity sensor probes for water-level control.
6. Low-water switch shuts down heater to protect elements.
7. Over-temperature switch shuts down heater.
8. Aquastat maintains minimum water temperature in tank during short periods of no demand.

H. Area Dispersion Accessory: Stainless-steel tube, with integral fan that discharges vapor directly into occupied space. As directed, Designed for remote mounting or integral mounting onto humidifier cabinet.

I. Atmospheric Steam Distributer Tube(s): Single or multiple, atmospheric steam distributer tube extending across entire width of duct or plenum and equipped with mounting brackets on ends. Nozzles/metered orifices are spaced evenly along distributer tubes and provide dry and uniform steam distribution.

1. Material: As directed, Stainless steel or Stainless steel, type 304.
2. Insulation: As directed, Uninsulated or Insulated.

J. Atmospheric Steam Panel Distribution Manifold:

1. Prefabricated steam dispersion grid assembly.
2. Designed for short absorption distance.
3. Suitable for atmospheric steam applications.
4. Extending the full width and height of duct or plenum.
5. Horizontal or Vertical header with multiple vertical or horizontal tubes designed for dry steam injection within short absorption distance.
6. Nozzles/metered orifices, spaced evenly along distribution tubes, provide dry and uniform steam distribution.
7. Distribution panel extending the full width and height of duct or plenum.
8. Headers and Distribution Tubes:

    a. Material: As directed, Stainless steel or Stainless steel, type 304.
    b. Insulation: As directed, Uninsulated or Insulated.

9. Steam Separator: Separators/baffles, integral to the header, provide condensate-free steam to distribution tubes.

K. Accessories:

1. As directed, Humidistat or Humidity Sensor: As directed, Wall or Return-duct mounted.
2. As directed, Duct-mounted, high-limit humidistat or humidity sensor.
3. Airflow switch prevents humidifier operation without airflow.
4. Steam and Condensate Hoses: For interconnection of humidifier to distributer tube(s)/manifold.

2.3 SELF-CONTAINED ELECTRODE HUMIDIFIERS

A. Capacities and Characteristics:

1. Humidification Rate: As directed.
2. Dry-Bulb Air Temperature at Discharge: As directed.
3. Wet-Bulb Air Temperature at Discharge: As directed.
4. Maximum Absorption Distance: As directed.
5. Minimum Makeup Water Supply Pressure: As directed.
6. Electrode Cylinder:

    a. Power Input Cylinder: As directed, kW.
    b. Number of Cylinders: As directed.

7. Steam Distribution Method - Atmospheric Distributer Tube:

    a. Number of Distributer Tubes: As directed.

8. Steam Distribution Method - Atmospheric Panel Distribution Manifold:

    a. Number of Distribution Manifolds: As directed.

9. Steam Distribution Method - Area Dispersion:

    a. Number of Distributer Tubes: As directed.
    b. Fan Airflow: As directed.
    c. Fan Motor Horsepower: As directed.
    d. Fan Electrical Characteristics:

        1) Volts: As directed.
        2) Phase: As directed, Single or Three phase.
        3) Hertz: 60 Hz.
        4) Full-Load Amperes: As directed.
        5) Minimum Circuit Ampacity: As directed.
        6) Maximum Overcurrent Protection: As directed.

B. Water Type: Suitable for use with tap water.

C. Cylinders: Replaceable or Cleanable plastic humidifier water reservoir, steel electrode assembly, suitable for use with tap water.

D. Cabinet:

1. Baked-enamel, Powder-coated-steel, or stainless-steel enclosure houses heater cylinder, electrical wiring, components, controls, and control panel. Cabinet is factory insulated for safe operating surface temperature.
2. Hinged or removable cover, keyed to restrict unauthorized access.
3. Plumbing and electrical components housed in separate compartments of the cabinet.
4. Threaded outlet in bottom of cabinet for drain piping.

E. Weatherproof Outdoor Enclosure: Insulated, with automatically controlled heating and ventilating system to maintain minimum operating conditions within the enclosure.

F. Control Panel:

1. As directed, Microprocessor-based control system for modulating or cycling control.
2. Factory-wired disconnect switch.
3. Liquid-crystal display.
4. Programmable keypad.
5. Low-voltage control circuit.
6. Diagnostic, maintenance, alarm, and status features.
7. Safety switch interlocked to shut off heaters when cabinet is open.
8. Internal electrical controls prewired to appropriately marked terminals for field connection.
9. Electrical terminals for connection to each controlling device and alarm.
10. As directed, NEMA 250, type 3R, type 4, type 4X or type 12, to comply with environmental conditions at installed locations.

G. Controls:

1. Solenoid fill valve and automatic drain valve or drain pump maintain water level. Include bronze inlet strainer, bronze solenoid fill valve with flow regulator, bronze solenoid drain valve or drain pump, and fill tee with built-in air gap to prevent back siphoning.
2. Controls shall drain tanks if no demand for humidification for more than 72 hours.
3. Set-point adjustment.
4. Electrode current shutdown upon sensing unsafe condition (e.g., drain system malfunction, fill system malfunction, or overcurrent malfunction).
5. Tri-conductivity sensor probes for water-level control.

H. Area Dispersion Accessory: Stainless-steel tube, with integral fan that discharges vapor directly into occupied space. As directed, Designed for remote mounting or integral mounting onto humidifier cabinet.

I. Atmospheric Steam Distributer Tube(s): Single or multiple, atmospheric steam distributer tube extending across entire width of duct or plenum and equipped with mounting brackets on ends. Nozzles/metered orifices are spaced evenly along distributer tubes and provide dry and uniform steam distribution.

1. Material: As directed, Stainless steel or Stainless steel, type 304.
2. Insulation: As directed, Uninsulated or Insulated.

J. Atmospheric Steam Panel Distribution Manifold:

1. Prefabricated steam dispersion grid assembly.
2. Designed for short absorption distance.
3. Suitable for atmospheric steam applications
4. Extending the full width and height of duct or plenum.
5. Horizontal or Vertical header with multiple vertical or horizontal tubes designed for dry steam injection within short absorption distance.

6. Nozzles/metered orifices, spaced evenly along distribution tubes, provide dry and uniform steam distribution.
7. Distribution panel extending the full width and height of duct or plenum.
8. Headers and Distribution Tubes:

    a. Material: As directed, Stainless steel or Stainless steel, type 304.
    b. Insulation: As directed, Uninsulated or Insulated.

9. Steam Separator: Separators/baffles, integral to the header, provide condensate-free steam to distribution tubes.

K. Accessories:

1. As directed, Humidistat or Humidity Sensor: As directed, Wall or Return-duct mounted.
2. As directed, Duct-mounted, high-limit humidistat or humidity sensor.
3. Airflow switch prevents humidifier operation without airflow.
4. Steam and Condensate Hoses: For interconnection of humidifier to distributer tube(s)/manifold.
5. Diagnostic, maintenance, alarm, and status features.

2.4 CONDENSATE DRAIN COOLERS

A. Capacities and Characteristics:

1. Hot Condensate in: As directed.
2. Hot Condensate Temperature: As directed.
3. Cold Water in as directed.
4. Cold Water Temperature: As directed.
5. Tempered Water out As directed.
6. Tempered Water Temperature: As directed.

B. Description: Mixes hot condensate with a cold water supply to reduce the drain temperature as required by state and local codes.

C. Cold Water Tempering Valve: Bronze body, thermostatic self-actuated with aquastat or 24 VAC electric-actuated with temperature sensor.

D. Drain Temperature Set-Point Range: Field adjustable between 115 deg F (46 deg C.)and 140 deg F. (60 deg C.). Drain sensor to control cold water tempering valve to limit drain discharge temperature to set point.

E. Reservoir Body Material: As directed, Stainless steel, Cast iron or carbon steel or Stainless steel, type 304.

F. Mounting: As directed, Suitable for wall, floor or suspended mounting.

G. Vacuum breaker or air vent connection.

H. Condensate drain cooler built into the humidifier cabinet and offered as the humidifier manufacturer's standard product is acceptable in lieu of a separate product by the listed manufacturers.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine roughing-in for piping systems to verify actual locations of piping connections before humidifier installation.

B. Install humidifiers with required clearance for service and maintenance. Maintain path, downstream from humidifiers, clear of obstructions as required by ASHRAE 62.1.

C. Seal all duct and plenum penetrations with flange.

D. Install humidifier assemblies in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."

E. As directed, install galvanized or stainless-steel drain pan under each manifold mounted in duct.

1. Construct drain pans with connection for drain; insulated and complying with ASHRAE 62.1.
2. Connect to condensate trap and drainage piping.
3. Extend drain pan upstream and downstream from tube(s)/manifold a minimum distance recommended by manufacturer but not less than required by ASHRAE 62.1.

F. Install tube(s)/manifold supply piping pitched to drain condensate back to humidifier or as recommended by manufacturer.

G. Equipment Mounting:

1. Install floor-mounted humidifiers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" As directed.
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

H. Install all manufacturer-furnished accessories in accordance with manufacturer's written installation instructions.

3.2 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

1. Install piping adjacent to humidifiers to allow service and maintenance.
2. Install shutoff valve, strainer, backflow preventer, and union in humidifier makeup line.

B. Install piping specialties furnished by manufacturer but not factory mounted.

3.3 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

3.4 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between control devices.

C. Connect control wiring according to Section 260523 "Control Voltage Electrical Power Cables."

3.5 FIELD QUALITY CONTROL

A. Testing Agency: As directed, Owner will engage or Engage a qualified testing agency to perform tests and inspections.

B. Perform the following tests and inspection with the assistance of a factory-authorized service agent:

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Humidifier will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.6 DEMONSTRATION

A. As directed, engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain humidifiers.

END OF SECTION 238413.29

SECTION 238413.36 - HEAT EXCHANGER HUMIDIFIERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Heat-exchanger humidifiers.
2. Condensate drain coolers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product. Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: Detail fabrication and installation of humidifiers. Include piping details, plans, elevations, sections, details of components, manifolds, and attachments to other work.

1. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Detail humidifiers and adjacent equipment. Show support locations, type of support, weight on each support, required clearances, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

B. Seismic Qualification Data: Certificates, for humidifiers, accessories, and components from manufacturer.

C. Product Test Reports: For each humidifier, for tests performed by a qualified testing agency.

D. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: An NRTL.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with AHRI 640.

C. Listed and labeled by an NRTL for intended location and use.

D. Listed and labeled by ETL.

E. Seismic Performance: Heat-exchanger humidifiers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: As directed, 1.5 or 1.0.

F. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 50 or less.

2.2 HEAT-EXCHANGER HUMIDIFIERS

A. As directed.

B. Capacities and Characteristics:

1. Humidification Rate: As directed.
2. Dry-Bulb Air Temperature at Discharge: As directed.
3. Wet-Bulb Air Temperature at Discharge: As directed.
4. Distributer Tube/Manifold Steam Supply Pressure: As directed.
5. Maximum Absorption Distance: As directed.
6. Minimum Makeup Water Supply Pressure: As directed.
7. Steam to Heat Exchanger:
    a. Supply Pressure at Control Valve Inlet: As directed.
    b. Condensing Rate: As directed.
8. Steam Distribution Method - Atmospheric Steam Distributer Tube:
    a. Number of Distributer Tubes: As directed.
9. Steam Distribution Method - Atmospheric Steam Panel Distribution Manifold:

a. Number of Distribution Manifolds: As directed.

10. Steam Distribution Method -Area Dispersion:

a. Number of Distributer Tubes: As directed.
b. Fan Airflow: As directed.
c. Fan Motor Horsepower: As directed.
d. Fan Electrical Characteristics:

1) Volts: As directed.
2) Phase: As directed, Single or Three Phase.
3) Hertz: 60 Hz.
4) Full-Load Amperes: As directed.
5) Minimum Circuit Ampacity: As directed.
6) Maximum Overcurrent Protection: As directed.

C. Water Type: As directed, Suitable for use with tap or softened water.

1. Evaporation Chamber:

a. Designed for atmospheric steam output.
b. As directed, Chamber and lid constructed of stainless steel, stainless steel, type 304, factory insulated for safe operating surface temperature.
c. Removable lid for access to clean.
d. Provide overflow and drain fittings.

2. Heat Exchanger:

a. Material: Stainless steel, Stainless steel, type 304, Copper or Nickel-plated copper.
b. Pressure: Designed for maximum incoming steam pressure of 15 psig (103 kPa).

3. Hinged or removable cover, keyed to restrict unauthorized access.
4. Weatherproof Outdoor Enclosure. Insulated and with automatically controlled heating and ventilating system to maintain minimum operating conditions within the enclosure.

D. Control Panel:

1. As directed, Shipped loose or Factory mounted.
2. As directed, Microprocessor-based control system for modulating or cycling control.
3. Liquid-crystal display.
4. Programmable keypad.
5. Low-voltage control circuit, with fused transformer.
6. Diagnostic, maintenance, alarm, and status features.
7. Key-locked access doors to prevent unauthorized access.
8. Electrical terminals for connection to each controlling device and alarm.
9. As directed, NEMA 250, type 3R, type 4, type 4X or type 12, to comply with environmental conditions at installed locations.
10. As directed, Material: Galvanized, Powder-coated or Stainless steel.

E. Controls:

1. Solenoid Fill Valve to Maintain Water Level: Bronze, including fill tee with built-in air gap to prevent back siphoning.
2. Inlet Strainer, Y-Pattern: Bronze body with 20-mesh stainless-steel screen.
3. As directed, field-adjustable timer or conductivity controller to control drain cycle for flush duration and interval.
4. Controls shall drain tanks if no demand for humidification for more than 72 hours.
5. Set-point adjustment.
6. Tri-conductivity sensor probes for water-level control and to shut down heat exchanger upon low water condition.
7. Aquastat maintains minimum water temperature in tank during short periods of no demand.

F. Area Dispersion Accessory: Stainless-steel tube, with integral fan that discharges vapor directly into occupied space. Designed for remote mounting from humidifier.

G. Atmospheric Steam Distributer Tube(s): Single or multiple, atmospheric steam distributer tube extending across entire width of duct or plenum and equipped with mounting brackets on ends. Nozzles/metered orifices are spaced evenly along distributer tubes and provide dry and uniform steam distribution.

1. Material: As directed, Stainless steel or Stainless steel, type 304.
2. Insulation: As directed, Uninsulated or Insulated.

H. Atmospheric Steam Panel Distribution Manifold:

1. Prefabricated steam dispersion grid assembly.
2. Designed for short absorption distance.
3. Suitable for atmospheric steam applications.
4. Extending the full width and height of duct or plenum.
5. Horizontal or Vertical header with multiple vertical or horizontal tubes designed for dry steam injection within short absorption distance.
6. Nozzles/metered orifices, spaced evenly along distribution tubes, provide dry and uniform steam distribution.
7. Distribution panel extending the full width and height of duct or plenum.
8. Headers and Distribution Tubes:

    a. Material: As directed, Stainless steel or Stainless steel, type 304.
    b. Insulation: As directed, Uninsulated or Insulated.

9. Steam Separator: Separators/baffles, integral to the header, to provide condensate-free steam to the distribution tubes.

I. Humidifier Control Valve:

1. Actuator: As directed, Pneumatic or Electric modulating with spring return.
2. Actuator: As specified in Section 230923.11 "Control Valves."
3. Body: As directed, Bronze, Stainless steel or Stainless steel, type 304.

J. Steam Trap:

1. Material: As directed, Cast iron, Stainless steel or Stainless steel, type 304.

2. Type: Inverted-bucket type or float and thermostatic type.
3. Sized for a minimum of 3 times the maximum rated condensate flow of humidifier at 1/2-psig (3.4-kPa) differential pressure.

K. Accessories:

1. As directed, Humidistat or Humidity Sensor: As directed, Wall or Return-duct mounted.
2. As directed, Duct-mounted, high-limit humidistat or humidity sensor.
3. In-Line Strainer, Y-Pattern: As directed, Cast-iron, Stainless-steel or Stainless-steel, type 304 body with 20-mesh type 304 stainless-steel screen.
4. Airflow switch for preventing humidifier operation without airflow.
5. Steam and Condensate Hoses: For interconnection of humidifier to distributer tube(s)/manifold.

2.3 CONDENSATE DRAIN COOLERS

A. Capacities and Characteristics:

1. Hot Condensate in: As directed.
2. Hot Condensate Temperature: As directed.
3. Cold Water in As directed.
4. Cold Water Temperature: As directed.
5. Tempered Water out As directed.
6. Tempered Water Temperature: As directed.

B. Description: Mixes hot condensate with a cold water supply to reduce the drain temperature as required by state and local codes.

C. Cold Water Tempering Valve: As directed, Bronze body, thermostatic self-actuated with aquastat or 24-VAC electric-actuated with temperature sensor.

D. Drain Temperature Set-Point Range: Field adjustable between 115 deg F (46 deg C) and 140 deg F (60 deg C). Drain sensor to control cold water tempering valve to limit drain discharge temperature to set point.

E. Reservoir Body Material: As directed, Cast iron or carbon steel, Stainless steel or stainless steel, type 304.

F. Mounting: As directed, Suitable for wall, floor or suspended mounting.

G. Vacuum breaker or air vent connection.

H. Condensate drain cooler built into the humidifier cabinet and offered as the humidifier manufacturer's standard product is acceptable in lieu of a separate product by the listed manufacturers.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine roughing-in for piping systems to verify actual locations of piping connections before humidifier installation.

B. Install humidifiers with required clearance for service and maintenance. Maintain path, downstream from humidifiers, clear of obstructions as required by ASHRAE 62.1.

C. Seal all penetrations of duct or plenum with flange.

D. Install humidifier assemblies in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."

E. As directed, Install galvanized or stainless-steel drain pan under each manifold mounted in duct.

1. Construct drain pans with connection for drain; insulated and complying with ASHRAE 62.1.
2. Connect to condensate trap and drainage piping.
3. Extend drain pan upstream and downstream from humidifier tube(s)/manifold a minimum distance recommended by manufacturer but not less than required by ASHRAE 62.1.

F. Install drip leg upstream from steam trap a minimum of 12 inches (300 mm) tall for proper operation of trap.

G. Equipment Mounting:

1. Install floor-mounted humidifiers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" As directed.
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

H. Install all manufacturer-provided accessories in accordance with manufacturer's written installation instructions.

3.2 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

1. Install piping adjacent to humidifiers to allow service and maintenance.
2. Install shutoff valve, strainer, backflow preventer, and union in humidifier makeup line.

B. Install piping specialties furnished by manufacturer but not factory mounted.

3.3 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install electrical devices furnished by manufacturer but not factory mounted.

D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

3.4 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between control devices.

C. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

3.5 FIELD QUALITY CONTROL

A. Testing Agency: As directed, Owner will engage or Engage a qualified testing agency to perform tests and inspections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Humidifier will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.6 DEMONSTRATION

A. As directed, engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain humidifiers.

END OF SECTION 238413.36

SECTION 238416.13 - OUTDOOR, MECHANICAL DEHUMIDIFICATION UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes packaged, factory-assembled and -tested, refrigerant-type, outdoor, mechanical dehumidification units designed for outdoor installation.

B. Related Requirements:

1. Section 237223 "Air-to-Air Energy Recovery Equipment."

1.2 ACTION SUBMITTALS

A. Product Data: For each type of outdoor, mechanical dehumidification unit.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For each outdoor, mechanical dehumidification unit.

D. Delegated-Design Submittal: For outdoor, mechanical dehumidification units.

1. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
2. Include design calculations for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Data: For outdoor, mechanical dehumidification units, accessories, and components, from manufacturer.

B. Product test reports.

C. Field quality-control reports.

D. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: An NRTL.

1.6 COORDINATION

A. Coordinate sizes and locations of concrete bases. Cast anchor-bolt inserts into bases.

B. Coordinate installation of roof curbs, equipment supports, and roof penetrations.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of outdoor, mechanical dehumidification units that fail in materials or workmanship within specified warranty period.

1. As directed, Warranty Period for Compressors: Manufacturer's standard, but not less than two or five years from date of Substantial Completion.
2. Warranty Period for Refrigerant Coils: Manufacturer's standard, but not less than five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 OUTDOOR, MECHANICAL DEHUMIDIFICATION UNIT MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Seismic Performance: Dehumidification units shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: As directed, 1.5 or 1.0.

C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1.

D. ASHRAE 62.1 Compliance: Section 5, "Systems and Equipment" and Section 7, "Construction and System Start-up."

E. ASHRAE 15 Compliance: "Safety Standard for Refrigeration Systems."

F. Capacities and Characteristics:

1. Airflow through Unit:

a. Supply Air: As directed.
b. Outside Air: As directed.
c. Exhaust/Return Air: As directed.

2. Supply Fan:

a. Speed: rpm As directed.
b. External Static Pressure: As directed.
c. Motor Size: hp As directed.

3. As directed, Exhaust or Return Fan:

a. External Static Pressure: As directed.
b. Speed: rpm As directed.
c. Motor Size: hp As directed.

4. Refrigeration System:

a. Sensible Heat-Transfer Rate: As directed.
b. Total Heat-Transfer Rate: As directed.
c. Energy-Efficiency Ratio: As directed.
d. Dehumidification Capacity: As directed.
e. Evaporator Coil Conditions:

1) Entering-Air, Dry-Bulb Temperature:.
2) Entering-Air, Wet-Bulb Temperature: As directed.
3) Entering-Air, Dew-Point Temperature: As directed.
4) Leaving-Air, Dry-Bulb Temperature: As directed.
5) Leaving-Air, Wet-Bulb Temperature: As directed.
6) Leaving-Air, Dew-Point Temperature: As directed.

5. Energy Recovery Heat Exchanger (Pool Heater):

a. Water Flow Rate: As directed.
b. Water Pressure Loss: As directed.
c. Entering-Water Temperature: As directed.
d. Leaving-Water Temperature: As directed.

6. Filters:

a. Thickness or Depth: As directed.

7. Hydronic Heating Coil:

a. Heat-Transfer Rate: As directed.
b. Entering-Air Temperature: As directed.
c. Leaving-Air Temperature: As directed.
d. Water:

1) Water Flow: As directed.
2) Maximum Water Pressure Drop: As directed.

3) Entering-Water Temperature: As directed.
4) Leaving-Water Temperature: As directed.

8. Electric Heating Coil:

a. kW: As directed.
b. Volts: As directed, 120, 208 or 230 V ac.
c. Phase: As directed, Single or Three Ph.
d. Hertz: 60 Hz.
e. Full-Load Amperes: As directed.
f. Number of Steps: As directed.

9. Assembly Power Requirements:

a. Volts: As directed, 120, 208 or 230 V ac.
b. Phase: As directed, Single or Three phase.
c. Hertz: 60 Hz.
d. Full-Load Amperes: As directed.
e. Minimum Circuit Ampacity: As directed.
f. Maximum Overcurrent Protection: As directed.

2.3 CASINGS

A. Casing: As directed, Single or Double-wall construction with interior corrosion-resistant coating and exterior baked-enamel or powder-coated steel or aluminum, stainless-steel fasteners, knockouts for electrical and piping connections, condensate drain connection, and lifting lugs.

1. Access: Hinged access doors with neoprene compression gaskets and cam latches.
2. Insulation: Minimum 2-inch- (50-mm-) thick, glass-fiber-insulation fill or closed cell foam, with thermal breaks.
3. Fully weatherproof with cross-broken roof for drainage, rain hood or louver for outside air, and relief/exhaust air openings.
4. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Drain Pan and Connection: Stainless steel; insulated and complying with ASHRAE 62.1.

2.4 FANS

A. Supply Fans:

1. Blades: As directed, Forward curved or Backward inclined.
2. Type: As directed, Housed or Unhoused plenum type, centrifugal.
3. Blade and Housing Material: Galvanized steel with baked-enamel or powder-coated finish.
4. Drive: As directed, Direct-driven with keyed motor shaft or Belt-driven with adjustable sheaves and self-aligning, grease-lubricated ball bearings, with extended grease fittings easily accessible inside the casing of the dehumidification unit.

B. As directed, Exhaust or Return Fans:

1. Blades: As directed, Forward curved or Backward inclined.
2. Type: As directed, Housed or Unhoused plenum type, centrifugal.
3. Blade and Housing Material: As directed, Galvanized steel with baked-enamel or powder-coated finish.
4. Drive: As directed, Direct-driven with keyed motor shaft or Belt-driven with adjustable sheaves and self-aligning, grease-lubricated ball bearings, with extended grease fittings easily accessible inside the casing of the dehumidification unit.

C. Fan Motor: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Enclosure Type: Totally enclosed, fan cooled.

D. Variable-Frequency Motor Controller: Comply with Section 262923 "Variable-Frequency Motor Controllers."

E. Variable-Frequency Motor Controller:

1. Manufactured Units: Pulse-width modulated; constant torque and variable torque for Design A and Design B motors or inverter-duty motors As directed.
2. Output Rating: Three phase; As directed, 10 to 60 Hz, with voltage proportional to frequency throughout voltage range or 66 Hz, with torque constant as speed changes; maximum voltage equals input voltage.
3. Unit Operating Requirements:

a. Internal Adjustability:

1) Minimum Speed: 5 to 25 percent of maximum rpm.
2) Maximum Speed: 80 to 100 percent of maximum rpm.
3) Acceleration: 0.1 to 999.9 seconds.
4) Deceleration: 0.1 to 999.9 seconds.
5) Current Limit: 30 to minimum of 150 percent of maximum rating.

b. Self-Protection and Reliability Features:

1) Surge suppression.
2) Loss of input signal protection.
3) Under- and overvoltage trips.
4) Variable-frequency controller and motor-overload/overtemperature protection.
5) Critical frequency rejection.
6) Loss-of-phase protection.
7) Reverse-phase protection.
8) Motor-overtemperature fault.

c. Bidirectional autospeed search.
d. Torque boost.
e. Motor temperature compensation at slow speeds.

1) Panel-mounted operator station.
2) Historical logging information and displays.
3) Digital indicating devices.

f. Control Signal Interfaces: As directed, Electric or Pneumatic.
g. Proportional-integral-derivative control interface.
h. DDC system for HVAC Protocols for Network Communications: ASHRAE 135.

4. Line Conditioning:

a. Input line conditioning.
b. Output filtering.
c. EMI/RFI filtering.

5. Bypass Systems:

a. Bypass Mode: As directed, Manual operation only or Field-selectable automatic or manual.
b. Bypass Controller: Two-contactor style, with bypass and output isolating contactors and isolating switch.
c. Bypass Controller: Three-contactor style, with bypass and input and output isolating contactors and isolating switch.
d. Bypass Contactor Configuration: As directed, Full-voltage (across the line) or Reduced-voltage (autotransformer) type.

2.5 FILTERS

A. Pleated:

1. Thickness: As directed, 1 inch (25 mm), 2 inches (50 mm) or 4 inches (100 mm).
2. MERV Rating: As directed, MERV 6 or MERV 13, according to ASHRAE 52.2.

2.6 REFRIGERATION SYSTEM

A. Energy Efficiency: Equal to or greater than prescribed by ASHRAE/IES 90.1.

B. Refrigerant Coils with Multiple Refrigerant Circuits:

1. Tubes: Copper.
2. Fins:

a. Material: As directed, Aluminum or Copper.
b. Fin Spacing: Maximum As directed, 12, 10 or 8 fins per inch (mm).

3. Fin and Tube Joints: Mechanical bond.
4. Headers: Seamless-copper headers with brazed connections.
5. Frames: As directed, Galvanized-steel or Stainless-steel frame.
6. Coatings: As directed, None or Corrosion-resistant coating.
7. Ratings: Designed, tested, and rated according to ASHRAE 33 and AHRI 410.

8. Source Quality Control: Factory test to minimum 450-psig (3105-kPa) internal pressure and to minimum 300-psig (2070-kPa) internal pressure while underwater.

C. Compressors: Hermetic, scroll compressors with integral vibration isolators and crankcase heaters that de-energize during compressor operation; with thermal-expansion valves, filter-dryers, sight glasses, compressor service valves, and liquid- and suction-line service valves.

1. Minimum Number of Refrigerant Circuits: Two for compressor capacities of more than 7-1/2 tons (26.4 kW).
2. Refrigerant: As directed, R-134a, R-407C, R-410A or R-134a, R-407C, or R-401A.
3. Capacity Control:

    a. Hot-gas bypass valve and piping on one compressor.
    b. Cycle compressor.

4. Low-Pressure Cutout: Manual reset after three automatic-reset failures.
5. High-Pressure Cutout: Manual reset.
6. Compressor Motor Overload Protection: Manual reset.
7. Antirecycling Timing Device: Prevent compressor restart for five minutes after shutdown.
8. Defrost Cycle: Adjustable timer shuts off supply fan. Compressor cycles until suction-line temperature confirms thawed evaporator coil. Timer limits defrost time to 10 minutes.

D. Energy Recovery Heat Exchanger (Pool Heater): Cupronickel, coaxial, vented, double-wall construction for potable-water service.

2.7 INTEGRAL, AIR-COOLED CONDENSER

A. Description: Mounted on same framing skid as outdoor, mechanical dehumidification unit.

B. Casing: Steel, baked-enamel finish, with access doors or removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.

C. Refrigerant Coil:

1. Copper tube with mechanically bonded aluminum fins; with liquid subcooler.
2. Coating: As directed, None or Corrosion-resistant coating.

D. Fan: Aluminum-propeller type, directly connected to permanently lubricated motor with integral thermal-overload protection.

E. Adjustable, Low Ambient Head-Pressure Control: Designed to operate at temperatures as low as 0 deg F (minus 18 deg C) by cycling condenser fans and controlling speed of last fan of each circuit.

F. Mounting Base: Same material as unit base.

2.8 REMOTE-MOUNTED, AIR-COOLED CONDENSER UNIT

A. Casing: Steel, baked-enamel finish; with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.

B. Refrigerant Coil:

1. Copper tube with mechanically bonded aluminum fins; with liquid subcooler.
2. Coating: As directed, None or Corrosion-resistant coating.

C. Fan: Aluminum-propeller type, directly connected to permanently lubricated motor with integral thermal-overload protection.

D. Adjustable, Low Ambient Head-Pressure Control: Designed to operate at temperatures as low as 0 deg F (minus 18 deg C) by cycling condenser fans and controlling speed of last fan of each circuit.

E. Mounting Base: As directed, Polyethylene or Same material as unit base.

2.9 HEATING COILS

A. Hot-Water Coil: Continuous circuit coil.

1. Tubes: Copper.
2. Fins:

    a. Material: As directed, Aluminum or Copper.
    b. Fin Spacing: Maximum As directed, 12, 10 or 8 fins per inch (mm).

3. Fin and Tube Joints: Mechanical bond.
4. Headers: Cast iron with drain and air vent tappings.
5. Frames: Galvanized-steel channel, minimum 0.052 inch (1.3 mm).
6. Coatings: As directed, None or Corrosion-resistant coating.
7. Ratings: Designed, tested, and rated according to ASHRAE 33 and AHRI 410.

    a. Working-Pressure Ratings: 200 psig (1380 kPa), 325 deg F (163 deg C).

8. Source Quality Control: Test to 300 psig (2070 kPa).

B. Electric-Resistance Heating Coil: Comply with UL 1995.

1. Heating Element: Coiled resistance wire of 80 percent nickel and 20 percent chromium; surrounded by compacted magnesium oxide powder in tubular-steel sheath; with spiral-wound, copper-plated steel fins continuously brazed to sheath.
2. Heating Element: Open-coil resistance wire of 80 percent nickel and 20 percent chromium; supported and insulated by floating ceramic bushings recessed into casing openings; fastened to supporting brackets and mounted in galvanized-steel frame.
3. Coatings: As directed, None or Corrosion-resistant coating.
4. Overtemperature Protection: Disk-type, automatic-reset, thermal-cutout safety device; serviceable through terminal box without removing heater from unit.

5. Thermal Cutouts: Load carrying, manual reset or replaceable, and factory wired in series with each heater stage.
6. Control: Disconnecting means, overcurrent protection, and airflow proving switch.

2.10 DAMPERS

A. Outdoor-Air Dampers: As directed, Opposed-blade, galvanized-steel, aluminum or extruded-aluminum dampers with zinc-plated-steel operating rod rotating in sintered bronze or nylon bearings. Provide blade gaskets and edge seals, and mechanically fasten blades to operating rod. As directed, Size for 0 to 25 percent outdoor air, with manual or motorized operator and filter.

B. As directed, Outdoor- and Return-Air or Outdoor-, Return-, and Exhaust-Air Dampers:

1. As directed, Parallel-blade, galvanized-steel, aluminum or extruded-aluminum dampers.
2. Mechanically fastened to zinc-plated-steel operating rod in reinforced cabinet.
3. Connect operating rods with common linkage and interconnect linkages, so dampers operate simultaneously.

C. As directed, Outdoor- and Return-Air or Outdoor-, Return-, and Exhaust-Air Dampers:

1. As directed, Low-leakage, double-skin, airfoil-blade, galvanized-steel, aluminum or extruded-aluminum dampers.
2. As directed, Compressible jamb seals and extruded-vinyl blade edge seals in opposed or parallel-blade arrangement.
3. Zinc-plated-steel operating rods rotating in stainless-steel sleeve or sintered bronze or nylon bearings mounted in a single galvanized-steel, aluminum or extruded-aluminum frame As directed.
4. Operating rods connected with a common linkage.
5. Leakage rate shall not exceed 5 cfm/sq. ft. (0.22 L/s per sq. m) at 1-inch wg (250 Pa) and 9 cfm/sq. ft. (0.4 L/s per sq. m) at 4-inch wg (1.0 MPa).

D. Damper Operator: As directed, 115 or 24 V ac, close coupled, with gear train sealed in oil and with spring return.

2.11 CONTROLS

A. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC" for control equipment and in Section 230993.11 "Sequence of Operations for HVAC DDC."

B. Control Panel: Integral service compartment containing fan-motor thermal and overload cutouts, compressor thermal and overload cutouts, 115-V control transformer if required, magnetic contactors for fan and compressor motors, and a nonfused factory-mounted and -wired disconnect switch for single external electrical power connection.

C. Operating Control: Space humidistat cycles the compressor. Humidistat shall incorporate fan on-off-auto switch.

D. Operating Control: Factory-installed microprocessor controller, capable of being remotely mounted.

1. Display the following on the face of controller:

   a. System on.
   b. System dehumidifying mode.
   c. System air-conditioning mode.
   d. System outdoor-air (economizer) mode.
   e. System heating pool water.
   f. Auxiliary space heat is operating.
   g. Unit requires service.
   h. Return-air (space) temperature.
   i. Return-air (space) humidity.
   j. Pool-water temperature.
   k. Outdoor-air temperature.

2. Indicate the following sensor failures on panel:

   a. Airflow: Dirty air filter, blocked airflow, and fan failure.
   b. Refrigerant high and low pressure.
   c. High water temperature.
   d. High and low evaporator temperature.
   e. Low water flow.
   f. Communication fault.
   g. System off.
   h. Antishort cycle delay.
   i. Power failure.

3. Provide access to the following set points on panel:

   a. Space temperature.
   b. Space relative humidity.
   c. Outdoor ventilation/air-conditioning changeover temperature.
   d. Airflow alarm.

4. Provide the following displays on panel:

   a. Space temperature.
   b. Space relative humidity.
   c. Outdoor-air temperature.
   d. Supply-air temperature.
   e. Return-air temperature.
   f. Airflow rating.
   g. Air-off evaporator temperature.
   h. Return-air relative humidity.
   i. Service codes.

5. Provide the following controls on panel:

   a. System on-off, fan continues to run.

b. Fan on-off.
c. Service code access.
d. System dehumidifying mode.
e. System air-conditioning mode.
f. System outdoor-air (economizer) mode.
g. Auxiliary space heat is operating.
h. Outdoor-air-temperature, conditioned-space-temperature, and control set-point-temperature digital display.
i. Outdoor enthalpy digital display.
j. Filter pressure drop digital display.
k. Status: Airflow, fans, system, unit operation, and operating mode.
l. Alarm digital display.

2.12 ACCESSORIES

A. Water-Cooling Heat Exchanger: Coaxial, vented, double-wall construction; with three-way refrigerant control valve.

B. Smoke Detectors: Photoelectric detector located in return-air plenum, to de-energize unit.

1. Operating Voltage: 24 V dc, nominal.
2. Self-Restoring: Detectors do not require resetting or readjusting after actuation to restore them to normal operation.
3. Plug-in Arrangement: Detector and associated electronic components mounted in module with tamper-resistant connection to fixed base with twist-locking plug. Terminals in fixed base accept building wiring.
4. Integral Visual-Indicating Light: Digital-display type indicating detector operation.
5. Sensitivity can be tested and adjusted in place after installation.
6. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to the fire-alarm control panel.
7. Sensor: Digital display or infrared light source with matching silicon-cell receiver.
8. Detector Sensitivity: Between 2.5 and 3.5 percent/foot (0.008 and 0.011 percent/mm) of smoke obscuration when tested according to UL 268A.
9. Integral Thermal Detector: Fixed-temperature type with 135 deg F (57 deg C) setting.

C. Electrical Convenience Outlet: 125 V ac, duplex, straight-blade receptacles, separately fused and located inside control panel.

2.13 ROOF CURBS

A. Roof Curbs: Vibration isolation and wind or seismic restraint roof curbs are specified in Section 230548 "Vibration and Seismic Controls for HVAC."

B. Roof Curbs: Vibration isolation with no wind or seismic restraint roof curbs are specified in Section 230548.13 "Vibration Controls for HVAC."

C. Roof Curbs:

1. Materials: Galvanized steel with corrosion-protection coating, watertight gaskets, and factory-installed wood nailer; complying with NRCA standards.
2. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.

    a. Materials: ASTM C1071, Type I or II.
    b. Thickness: As directed, 1 inch (25 mm), 1-1/2 inches (38 mm) or 2 inches (50 mm).
    c. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.
    d. Liner Adhesive: Comply with ASTM C916, Type I.
    e. Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
    f. Liner materials applied in this location shall have airstream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric, depending on service-air velocity.
    g. Provide sheet metal liner to separate insulation from contact with the airstream.

D. Curb Height: As directed, 14 inches (355 mm), 24 inches (610 mm) or 36 inches (910 mm).

E. Wind and Seismic Restraints: Metal brackets compatible with the curb and casing, painted to match dehumidification unit; used to anchor unit to the curb and designed for loads at Project site. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC" for wind-load requirements.

2.14 MATERIALS

A. Steel:

1. ASTM A36/A36M for carbon structural steel.
2. ASTM A568/A568M for sheet steel.

B. Stainless Steel:

1. Manufacturer's standard grade for casing.
2. Manufacturer's standard type, ASTM A240/240M for bare steel exposed to airstream or moisture.

C. Galvanized Steel: ASTM A653/A653M.

D. Aluminum: ASTM B209.

E. Corrosion-Resistant Coating: Coat with a corrosion-resistant coating capable of withstanding a 3,000-hour salt-spray test according to ASTM B117.

1. Standards:

    a. ASTM B117 for salt spray.
    b. ASTM D2794 for minimum impact resistance of 100 in/lb (11.3 N/m).

c. ASTM B3359 for cross hatch adhesion of 5B.

2. Application: As directed, Immersion or Spray.
3. Thickness: 1 mil (0.025 mm).
4. Gloss: Minimum gloss of 60 on a 60-degree meter.

2.15 SOURCE QUALITY CONTROL

A. Verification of Performance: Factory test and rate dehumidification units according to AHRI 910.

B. Sound-Power-Level Ratings: Factory test and rate dehumidification units according to AHRI 575.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. As directed, examine roughing-in for hot-water or refrigerant piping systems to verify actual locations of piping connections before equipment installation.

3.2 INSTALLATION

A. Equipment Mounting:

1. Install dehumidification units on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" As directed
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

3.3 PIPING CONNECTIONS

A. Where piping is installed adjacent to dehumidification units, allow space for service and maintenance of dehumidification units.

B. Connect piping to dehumidification units mounted on vibration isolators with flexible connectors.

C. Connect condensate drain pans using minimum NPS 1-1/4 (DN 32) copper tubing. Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan and install cleanout at changes in direction.

D. Refrigerant Piping: Comply with requirements in Section 232300 "Refrigerant Piping." Connect to supply and return coil tappings with shutoff valve and union or flange at each connection.

E. Hot-Water Piping: Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Connect to supply coil tappings with shutoff valve, return coil tappings with balancing valve, and union or flange at each connection.

F. Duct installation requirements are specified in Section 233113 "Metal Ducts" or Section 233116" Nonmetal Ducts. Section 233113 "Metal Ducts" and Section 233116 "Nonmetal Ducts" As directed, Drawings indicate the general arrangement of ducts. The following are specific connection requirements:

1. Install ducts to termination in roof-mounted frames. Where indicated, terminate return-air duct through roof structure, and insulate the space between roof and bottom of dehumidification unit.

3.4 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.
3. Locate nameplate where easily visible.

3.5 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between control devices.

C. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

D. Connect smoke detector to fire alarm system.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform the following tests and inspections with the assistance of a factory-authorized service representative.

1. Leak Test: After installation, fill water coils with water, and test coils and connections for leaks. Repair leaks and retest until no leaks exist.
2. Charge refrigerant coils with refrigerant and test for leaks. Repair leaks and retest until no leaks exist.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Dehumidification unit will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.7 CLEANING

A. Clean dehumidification units internally, on completion of installation, according to manufacturer's written instructions. Clean fan interiors to remove foreign material and construction dirt and dust. Vacuum clean fan wheels, cabinets, and coils' entering-air face.

B. After completing system installation, testing, and startup service of dehumidification units, clean filter housings and install new filters.

3.8 ADJUSTING

A. Adjust damper linkages for proper damper operation.

B. Adjust initial temperature and humidity set points.

3.9 STARTUP SERVICE

A. As directed, Engage a factory-authorized service representative to perform or Perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.

B. Perform the following final checks before startup:

1. Verify that shipping, blocking, and bracing are removed.
2. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
3. Perform cleaning and adjusting specified in this Section.
4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify free fan wheel rotation and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.

5. Check lubrication of bearings, pulleys, belts, and other moving parts.
6. Set outside- and return-air mixing dampers to minimum outside-air setting.
7. Install clean filters.
8. Verify that manual and automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.

C. Starting procedures for dehumidification units include the following:

1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm. Replace malfunctioning motors, bearings, and fan wheels.
2. Measure and record motor's electrical values for voltage and amperage.
3. Manually operate dampers from fully closed to fully open position and record fan performance.

D. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing of dehumidification unit.

E. Startup Report: Report findings during startup. Identify startup steps, corrective measures taken, and final results.

3.10 DEMONSTRATION

A. As directed, engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain dehumidification units.

END OF SECTION 238416.13

SECTION 238416.16 - INDOOR, MECHANICAL DEHUMIDIFICATION UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes packaged, factory-assembled and -tested, refrigerant-type, indoor, mechanical dehumidification units designed for indoor installation.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of indoor, mechanical dehumidification unit.

B. Sustainable Design Submittals:

C. Shop Drawings: For each indoor, mechanical dehumidification unit.

D. Delegated-Design Submittal: For indoor, mechanical dehumidification units.

1. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
2. Include design calculations for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.

1.3 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Data: Certificates for indoor, mechanical dehumidification units, accessories, and components, from manufacturer.

B. Product test reports.

C. Field quality-control reports.

D. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: An NRTL.

1.6 COORDINATION

A. Coordinate sizes and locations of concrete bases. Cast anchor-bolt inserts into bases.

B. Coordinate installation of roof curbs, equipment supports, and roof penetrations.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of indoor, mechanical dehumidification units that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Compressors: As directed, Manufacturer's standard, but not less than two or five years from date of Substantial Completion.
2. Warranty Period for Refrigerant Coils: Manufacturer's standard, but not less than five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 INDOOR, MECHANICAL DEHUMIDIFICATION UNIT MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Seismic Performance: Dehumidification units shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Component Importance Factor: As directed, 1.5 or 1.0.

C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1.

D. ASHRAE 62.1 Compliance: Section 5, "Systems and Equipment" and Section 7, "Construction and System Start-up."

E. ASHRAE 15 Compliance: "Safety Standard for Refrigeration Systems."

F. Capacities and Characteristics:

1. Airflow through Unit:

a. Supply Air: As directed.
b. Outside Air: As directed.
c. Exhaust/Return Air: As directed.

2. Supply Fan:

    a. Speed: As directed, rpm.
    b. External Static Pressure: As directed.
    c. Motor Size: As directed, hp.

3. As directed, Exhaust or Return Fan:

    a. External Static Pressure: As directed.
    b. Speed: As directed, rpm.
    c. Motor Size: As directed, hp.

4. Refrigeration System:

    a. Sensible Heat-Transfer Rate: As directed.
    b. Total Heat-Transfer Rate: As directed.
    c. Energy-Efficiency Ratio: As directed.
    d. Dehumidification Capacity: As directed.
    e. Evaporator Coil Conditions:

        1) Entering-Air, Dry-Bulb Temperature: As directed.
        2) Entering-Air, Wet-Bulb Temperature: As directed.
        3) Entering-Air, Dew-Point Temperature: As directed.
        4) Leaving-Air, Dry-Bulb Temperature: As directed.
        5) Leaving-Air, Wet-Bulb Temperature: As directed.
        6) Leaving-Air, Dew-Point Temperature: As directed.

5. Energy Recovery Heat Exchanger (Pool Heater):

    a. Water Flow Rate: As directed.
    b. Water Pressure Loss: As directed.
    c. Entering-Water Temperature: As directed.
    d. Leaving-Water Temperature: As directed.

6. Filters:

    a. Thickness or Depth: As directed.

7. Hydronic Heating Coil:

    a. Heat-Transfer Rate: As directed.
    b. Entering-Air Temperature: As directed.
    c. Leaving-Air Temperature: As directed.
    d. Water:

        1) Water Flow: As directed.
        2) Maximum Water Pressure Drop: As directed.
        3) Entering-Water Temperature: As directed.
        4) Leaving-Water Temperature: As directed.

8. Electric Heating Coil:

a. kW: As directed, kW.
b. Volts: As directed, 120, 208 or 230 V ac.
c. Phase: As directed, Single or Three Ph.
d. Hertz: 60 Hz.
e. Full-Load Amperes: As directed.
f. Number of Steps: As directed.

9. Electrical Characteristics:

a. Volts: As directed, 120, 208 or 230 V ac.
b. Phase: As directed, Single or Three phase.
c. Hertz: 60 Hz.
d. Full-Load Amperes: As directed.
e. Minimum Circuit Ampacity: As directed.
f. Maximum Overcurrent Protection: As directed.

2.3 CASINGS

A. Casing: As directed, Single or Double-wall construction with interior corrosion-resistant coating and exterior baked-enamel or powder-coated steel or aluminum, stainless-steel fasteners, knockouts for electrical and piping connections, condensate drain connection, and lifting lugs.

1. Access: As directed, Removable panels or Hinged access doors with neoprene compression gaskets and cam latches.
2. Insulation: Minimum 2-inch- (50-mm-) thick, glass-fiber-insulation fill or closed cell foam, with thermal breaks.
3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

B. Drain Pan and Connection: Stainless steel; insulated and complying with ASHRAE 62.1.

2.4 FANS

A. Supply Fans:

1. Blades: As directed, Forward curved or Backward inclined.
2. Type: As directed, Housed or Unhoused plenum type, centrifugal.
3. Blade and Housing Material: V Galvanized steel with baked-enamel or powder-coated finish.
4. Drive: As directed, Direct-driven with keyed motor shaft or Belt-driven with adjustable sheaves and self-aligning, grease-lubricated ball bearings, with extended grease fittings easily accessible inside the casing of the dehumidification unit.

B. As directed, Exhaust or Return Fans:

1. Blades: As directed, Forward curved or Backward inclined.
2. Type: As directed, Housed or Unhoused plenum type, centrifugal.
3. Blade and Housing Material: As directed, Galvanized steel with baked-enamel or powder-coated finish.

4. Drive: Direct-driven with keyed motor shaft or Belt-driven with adjustable sheaves and self-aligning, grease-lubricated ball bearings, with extended grease fittings easily accessible inside the casing of the dehumidification unit.

C. Fan Motor: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Enclosure Type: Totally enclosed, fan cooled.

D. Variable-Frequency Motor Controller: Comply with Section 262923 "Variable-Frequency Motor Controllers."

E. Variable-Frequency Motor Controller:

1. Manufactured Units: Pulse-width modulated; constant torque and variable torque for Design A and Design B motors or inverter-duty motors.
2. Output Rating: Three phase; As directed, 10 to 60 Hz, with voltage proportional to frequency throughout voltage range or 66 Hz, with torque constant as speed changes; maximum voltage equals input voltage.
3. Unit Operating Requirements:

a. Internal Adjustability:

1) Minimum Speed: 5 to 25 percent of maximum rpm.
2) Maximum Speed: 80 to 100 percent of maximum rpm.
3) Acceleration: 0.1 to 999.9 seconds.
4) Deceleration: 0.1 to 999.9 seconds.
5) Current Limit: 30 to minimum of 150 percent of maximum rating.

b. Self-Protection and Reliability Features:

1) Surge suppression.
2) Loss of input signal protection.
3) Under- and overvoltage trips.
4) Variable-frequency controller and motor-overload/overtemperature protection.
5) Critical frequency rejection.
6) Loss-of-phase protection.
7) Reverse-phase protection.
8) Motor-overtemperature fault.

c. Bidirectional autospeed search.
d. Torque boost.
e. Motor temperature compensation at slow speeds.

1) Panel-mounted operator station.
2) Historical logging information and displays.
3) Digital indicating devices.

f. Control Signal Interfaces: As directed, Electric or Pneumatic.

g. Proportional-integral-derivative control interface.
h. DDC system for HVAC Protocols for Network Communications: ASHRAE 135.

4. Line Conditioning:

a. Input line conditioning.
b. Output filtering.
c. EMI/RFI filtering.

5. Bypass Systems:

a. Bypass Mode: As directed, Manual operation only or Field-selectable automatic or manual.
b. Bypass Controller: Two-contactor style, with bypass and output isolating contactors and isolating switch.
c. Bypass Controller: Three-contactor style, with bypass and input and output isolating contactors and isolating switch.
d. Bypass Contactor Configuration: As directed, Full-voltage (across the line) or Reduced-voltage (autotransformer) type.

2.5 FILTERS

A. Pleated:

1. Thickness: As directed, 1 inch (25 mm), 2 inches (50 mm), 4 inches (100 mm) or Manufacturer's standard depth.
2. MERV Rating: As directed, MERV 6 or MERV 13, according to ASHRAE 52.2.

2.6 REFRIGERATION SYSTEM

A. Energy Efficiency: Equal to or greater than prescribed by ASHRAE/IES 90.1.

B. Refrigerant Coils with Multiple Refrigerant Circuits:

1. Tubes: Copper.
2. Fins:

a. Material: As directed, Aluminum or Copper.
b. Fin Spacing: Maximum As directed, 12, 10 or 8 fins per inch (mm).

3. Fin and Tube Joints: Mechanical bond.
4. Headers: Seamless-copper headers with brazed connections.
5. Frames: As directed, Galvanized-steel or Stainless-steel frame.
6. Coatings: As directed, None or Corrosion-resistant coating.
7. Ratings: Designed, tested, and rated according to ASHRAE 33 and AHRI 410.
8. Source Quality Control: Factory test to minimum 450-psig (3105-kPa) internal pressure and to minimum 300-psig (2070-kPa) internal pressure while underwater.

C. Compressors: Hermetic, scroll compressors with integral vibration isolators and crankcase heaters that de-energize during compressor operation; with thermal-expansion valves, filter-dryers, sight glasses, compressor service valves, and liquid- and suction-line service valves.

1. Minimum Number of Refrigerant Circuits: Two for compressor capacities of more than 7-1/2 tons (26.4 kW).
2. Refrigerant: As directed, R-134a, R-407C, R-410A or R-134a, R-407C, or R-401A.
3. Capacity Control:

    a. Hot-gas bypass valve and piping on one compressor.
    b. Cycle compressor.

4. Low-Pressure Cutout: Manual reset after three automatic-reset failures.
5. High-Pressure Cutout: Manual reset.
6. Compressor Motor Overload Protection: Manual reset.
7. Antirecycling Timing Device: Prevent compressor restart for five minutes after shutdown.
8. Defrost Cycle: Adjustable timer shuts off supply fan. Compressor cycles until suction-line temperature confirms thawed evaporator coil. Timer limits defrost time to 10 minutes.

D. Energy Recovery Heat Exchanger (Pool Heater): Cupronickel, coaxial, vented, double-wall construction for potable-water service.

2.7 REMOTE-MOUNTED, AIR-COOLED CONDENSER UNIT

A. Casing: Steel, baked-enamel finish; with access doors or removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.

B. Refrigerant Coil:

1. Copper tube with mechanically bonded aluminum fins; with liquid subcooler.
2. Coating: As directed, None or corrosion-resistant coating.

C. Fan: Aluminum-propeller type, directly connected to permanently lubricated motor with integral thermal-overload protection.

D. Adjustable, Low Ambient Head-Pressure Control: Designed to operate at temperatures as low as 0 deg F (minus 18 deg C) by cycling condenser fans and controlling speed of last fan of each circuit.

E. Mounting Base: Same material as unit base.

2.8 HEATING COILS

A. Hot-Water Coil: Continuous circuit coil.

1. Tubes: Copper.

2. Fins:

   a. Material: As directed, Aluminum or Copper.
   b. Fin Spacing: Maximum As directed, 12, 10 or 8 fins per inch (mm).

3. Fin and Tube Joints: Mechanical bond.
4. Headers: Cast iron with drain and air vent tappings.
5. Frames: Galvanized-steel channel, minimum 0.052 inch (1.3 mm).
6. Coatings: As directed, None or Corrosion-resistant coating.
7. Ratings: Designed, tested, and rated according to ASHRAE 33 and AHRI 410.

   a. Working-Pressure Ratings: Minimum 200 psig (1380 kPa), 325 deg F (163 deg C).

8. Source Quality Control: Test to minimum 300 psig (2070 kPa) internal pressure.

B. Electric-Resistance Heating Coil: Comply with UL 1995.

1. Heating Element: Coiled resistance wire of 80 percent nickel and 20 percent chromium; surrounded by compacted magnesium oxide powder in tubular-steel sheath; with spiral-wound, copper-plated steel fins continuously brazed to sheath.
2. Heating Element: Open-coil resistance wire of 80 percent nickel and 20 percent chromium; supported and insulated by floating ceramic bushings recessed into casing openings; fastened to supporting brackets and mounted in galvanized-steel frame.
3. Coatings: As directed, None or Corrosion-resistant coating.
4. Overtemperature Protection: Disk-type, automatic-reset, thermal-cutout safety device; serviceable through terminal box without removing heater from unit.
5. Thermal Cutouts: Load carrying, manual reset or replaceable, and factory wired in series with each heater stage.
6. Control: Disconnecting means, overcurrent protection, and airflow proving switch.

2.9 DAMPERS

A. Outdoor-Air Dampers: As directed, Opposed-blade, galvanized-steel, aluminum or extruded-aluminum dampers with zinc-plated-steel operating rod rotating in sintered bronze or nylon bearings. Provide blade gaskets and edge seals, and mechanically fasten blades to operating rod. As directed, Size for 0 to 25 percent outdoor air, with manual or motorized operator and filter.

B. As directed, Outdoor- and Return-Air or Outdoor-, Return-, and Exhaust-Air Dampers:

1. As directed, Parallel-blade, galvanized-steel, aluminum or extruded-aluminum dampers.
2. Mechanically fastened to zinc-plated-steel operating rod in reinforced cabinet.
3. Connect operating rods with common linkage and interconnect linkages, so dampers operate simultaneously.

C. As directed, Outdoor- and Return-Air or Outdoor-, Return-, and Exhaust-Air Dampers:

1. Low-leakage, double-skin, airfoil-blade, galvanized-steel, aluminum or extruded-aluminum dampers.
2. As directed, Compressible jamb seals and extruded-vinyl blade edge seals in opposed or parallel-blade arrangement.

3. As directed, Zinc-plated-steel operating rods rotating in stainless-steel sleeve or sintered bronze or nylon bearings mounted in a single galvanized-steel, aluminum or extruded-aluminum frame.
4. Operating rods connected with a common linkage.
5. Leakage rate shall not exceed 5 cfm/sq. ft. (0.22 L/s per sq. m) at 1-inch wg (250 Pa) and 9 cfm/sq. ft. (0.4 L/s per sq. m) at 4-inch wg (1.0 MPa).

D. Damper Operator: As directed, 115 or 24 V ac, close coupled, with gear train sealed in oil and with spring return.

2.10 CONTROLS

A. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC" for control equipment and in Section 230993.11 "Sequence of Operations for HVAC DDC."

B. Control Panel: Integral service compartment containing fan-motor thermal and overload cutouts, compressor thermal and overload cutouts, 115-V control transformer if required, magnetic contactors for fan and compressor motors, and a nonfused factory-mounted and -wired disconnect switch for single external electrical power connection.

C. Operating Control: Space humidistat cycles the compressor. Humidistat shall incorporate fan on-off-auto switch.

D. Operating Control: Factory-installed microprocessor controller, capable of being remotely mounted.

1. Display the following on the face of controller:

   a. System on.
   b. System dehumidifying mode.
   c. System air-conditioning mode.
   d. System outdoor-air (economizer) mode.
   e. System heating pool water.
   f. Auxiliary space heat is operating.
   g. Unit requires service.
   h. Return-air (space) temperature.
   i. Return-air (space) humidity.
   j. Pool-water temperature.
   k. Outdoor-air temperature.

2. Indicate the following sensor failures on panel:

   a. Airflow: Dirty air filter, blocked airflow, and fan failure.
   b. Refrigerant high and low pressure.
   c. High water temperature.
   d. High and low evaporator temperature.
   e. Low water flow.
   f. Communication fault.
   g. System off.

h. Antishort cycle delay.
i. Power failure.

3. Provide access to the following set points on panel:

a. Space temperature.
b. Space relative humidity.
c. Outdoor ventilation/air-conditioning changeover temperature.
d. Airflow alarm.

4. Provide the following displays on panel:

a. Space temperature.
b. Space relative humidity.
c. Outdoor-air temperature.
d. Supply-air temperature.
e. Return-air temperature.
f. Airflow rating.
g. Air-off evaporator temperature.
h. Return-air relative humidity.
i. Service codes.

5. Provide the following controls on panel:

a. System on-off, fan continues to run.
b. Fan on-off.
c. Service code access.
d. System dehumidifying mode.
e. System air-conditioning mode.
f. System outdoor-air (economizer) mode.
g. Auxiliary space heat is operating.
h. Outdoor-air-temperature, conditioned-space-temperature, and control set-point-temperature digital display.
i. Outdoor enthalpy digital display.
j. Filter pressure drop digital display.
k. Status: Airflow, fans, system, unit operation, and operating mode.
l. Alarm digital display.

2.11 ACCESSORIES

A. Water-Cooling Heat Exchanger: Coaxial, vented, double-wall construction; with three-way refrigerant control valve.

B. Smoke Detectors: Photoelectric detector located in return-air plenum, to de-energize unit.

1. Operating Voltage: 24 V dc, nominal.
2. Self-Restoring: Detectors do not require resetting or readjusting after actuation to restore them to normal operation.

3. Plug-in Arrangement: Detector and associated electronic components mounted in module with tamper-resistant connection to fixed base with twist-locking plug. Terminals in fixed base accept building wiring.
4. Integral Visual-Indicating Light: Digital-display type indicating detector operation.
5. Sensitivity can be tested and adjusted in-place after installation.
6. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to the fire-alarm control panel.
7. Sensor: Digital display or infrared light source with matching silicon-cell receiver.
8. Detector Sensitivity: Between 2.5 and 3.5 percent/foot (0.008 and 0.011 percent/mm) of smoke obscuration when tested according to UL 268A.
9. Integral Thermal Detector: Fixed-temperature type with 135 deg F (57 deg C) setting.

C. Electrical Convenience Outlet: 115 V ac fused, duplex, straight-blade receptacles, separately fused and located inside control panel.

2.12 MATERIALS

A. Steel:

1. ASTM A36/A36M for carbon structural steel.
2. ASTM A568/A568M for steel sheet.

B. Stainless Steel:

1. Manufacturer's standard grade for casing.
2. Manufacturer's standard type, ASTM A240/240M for bare steel exposed to airstream or moisture.

C. Galvanized Steel: ASTM A653/A653M.

D. Aluminum: ASTM B209.

E. Corrosion-Resistant Coating: Coat with a corrosion-resistant coating capable of withstanding a 3,000-hour salt-spray test according to ASTM B117.

1. Standards:

a. ASTM B117 for salt spray.
b. ASTM D2794 for minimum impact resistance of 100 in/lb (11.3 N/m).
c. ASTM B3359 for cross hatch adhesion of 5B.

2. Application: As directed, Immersion or Spray.
3. Thickness: 1 mil (0.025 mm).
4. Gloss: Minimum gloss of 60 on a 60-degree meter.

2.13 SOURCE QUALITY CONTROL

A. Verification of Performance: Factory test and rate dehumidification units according to AHRI 910.

B. Sound-Power-Level Ratings: Factory test and rate dehumidification units according to AHRI 575.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. As directed, examine roughing-in for hot-water or refrigerant piping systems to verify actual locations of piping connections before equipment installation.

C. Examine walls, floors, and roofs for suitable conditions where dehumidification units will be installed.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Equipment Mounting:

1. Install dehumidification units on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" As directed.
2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

3.3 PIPING CONNECTIONS

A. Where piping is installed adjacent to dehumidification units, allow space for service and maintenance of dehumidification units.

B. Connect piping to dehumidification units mounted on vibration isolators with flexible connectors.

C. Connect condensate drain pans using minimum NPS 1-1/4 (DN 32) copper tubing. Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan, and install cleanout at changes in direction.

D. Refrigerant Piping: Comply with requirements in Section 232300 "Refrigerant Piping." Connect to supply and return coil tappings with shutoff valve and union or flange at each connection.

E. Hot-Water Piping: Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Connect to supply coil tappings with shutoff valve, return coil tappings with balancing valve, and union or flange at each connection.

F. Duct installation requirements are specified in Section 233113 "Metal Ducts," Section 233113 "Nonmetal Ducts, Section 233113 "Metal Ducts" and Section 233116 "Nonmetal Ducts" As directed. Drawings indicate the general arrangement of ducts. The following are specific connection requirements:

1. Install ducts to termination in roof-mounted frames. Where indicated, terminate return-air duct through roof structure, and insulate the space between roof and bottom of dehumidification unit.

3.4 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems".

C. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems".
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.
3. Locate nameplate where easily visible.

3.5 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between control devices.

C. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

D. Connect smoke detector to fire alarm system.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Leak Test: After installation, fill water coils with water, and test coils and connections for leaks. Repair leaks and retest until no leaks exist.

2. Charge refrigerant coils with refrigerant and test for leaks. Repair leaks and retest until no leaks exist.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Dehumidification unit will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.7 CLEANING

A. Clean dehumidification units internally, on completion of installation, according to manufacturer's written instructions. Clean fan interiors to remove foreign material and construction dirt and dust. Vacuum clean fan wheels, cabinets, and coils' entering-air face.

B. After completing system installation, testing, and startup service of dehumidification units, clean filter housings and install new filters.

3.8 ADJUSTING

A. Adjust damper linkages for proper damper operation.

B. Adjust initial temperature and humidity set points.

3.9 STARTUP SERVICE

A. As directed, engage a factory-authorized service representative to perform or Perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.

B. Perform the following final checks before startup:

1. Verify that shipping, blocking, and bracing are removed.
2. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
3. Perform cleaning and adjusting specified in this Section.
4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify free fan wheel rotation and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.
5. Check lubrication of bearings, pulleys, belts, and other moving parts.
6. Set outside- and return-air mixing dampers to minimum outside-air setting.
7. Install clean filters.
8. Verify that manual and automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.

C. Starting procedures for dehumidification units include the following:

1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm. Replace malfunctioning motors, bearings, and fan wheels.
2. Measure and record motor's electrical values for voltage and amperage.
3. Manually operate dampers from fully closed to fully open position and record fan performance.

D. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing of dehumidification unit.

E. Startup Report: Report findings during startup. Identify startup steps, corrective measures taken, and final results.

3.10 DEMONSTRATION

A. As directed, engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain dehumidification units.

END OF SECTION 238416.16

SECTION 260513 - MEDIUM-VOLTAGE CABLES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes cables and related cable splices, terminations, and accessories for medium-voltage (2001 to 35,000 V) electrical distribution systems.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of cable. Include splices and terminations for cables and cable accessories.

B. Samples: 16-inch (400-mm) lengths for each type of cable specified.

C. Sustainable Design Submittals: As directed.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with IEEE C2 and NFPA 70.

C. Source Limitations: Obtain cables and accessories from single source from single manufacturer.

2.2 CABLES

A. Cable Type: Type MV 90 or Type MV 105.

B. Conductor Insulation: Crosslinked polyethylene or Ethylene-propylene rubber.

1. Voltage Rating: 5, 8, 15, 25 or 35 kV as directed.
2. Insulation Thickness: 100 or 133 percent insulation level.

C. Conductor: Copper or Aluminum as directed.

D. Comply with UL 1072, AEIC CS8, ICEA S-93-639/NEMA WC 74, and ICEA S-97-682, and ICEA S-94-649 as directed.

E. Conductor Stranding: Compact round, concentric lay, Class B or Concentric lay, Class B.

F. Strand Filling: Conductor interstices are filled with impermeable compound.

G. Shielding: As directed, Copper tape or Solid copper wires, helically applied over semiconducting insulation shield.

H. Shielding and Jacket: Corrugated copper drain wires embedded in extruded, chlorinated, polyethylene jacket.

I. Three-Conductor Cable Assembly: Three insulated, shielded conductors cabled together with ground conductors.

J. Cable Jacket: Sunlight-resistant PVC or Chlorosulfonated polyethylene as directed.

2.3 CONNECTORS

A. Comply with ANSI C119.4 for connectors between aluminum conductors or for connections between aluminum to copper conductors.

B. Copper-Conductor Connectors: Copper barrel crimped, Aluminum barrel crimped or Copper shear bolt connectors as directed.

2.4 SOLID TERMINATIONS

A. Multiconductor Cable Sheath Seals: Type recommended by seal manufacturer for type of cable and installation conditions, including orientation.

1. Cold-shrink sheath seal kit with preformed sleeve openings sized for cable and insulated conductors.
2. Heat-shrink sheath seal kit with phase- and ground-conductor rejacketing tubes, cable-end sealing boot, and sealing plugs for unused ground-wire openings in boot.

B. Shielded-Cable Terminations: Comply with the following classes of IEEE 48. Insulation class shall be equivalent to that of cable. Include shield ground strap for shielded cable terminations.

1. Class 1 Terminations: Modular type, furnished as a kit, with stress-relief tube; multiple, molded-silicone-rubber, insulator modules; shield ground strap; and compression-type connector.
2. Class 2 Terminations, Indoors: Kit with stress-relief tube, non-tracking insulator tube, shield ground strap, and compression-type connector. Include cold-shrink-rubber sleeve moisture seal for end of insulation whether or not supplied with kits.

2.5 SEPARABLE INSULATED CONNECTORS

A. Description: Modular system with disconnecting, single-pole, cable terminators and with matching, stationary, plug-in, dead-front terminals designed for cable voltage and for sealing against moisture.

B. Standard: Comply with IEEE 386.

C. Terminations at Distribution Points: Modular type, consisting of terminators installed on cables and modular, dead-front, terminal junctions for interconnecting cables.

D. Load-Break Cable Terminators: Elbow-type units with 200-A-load make/break and continuous-current rating; coordinated with insulation diameter, conductor size, and material of cable being terminated. Include test point on terminator body that is capacitance coupled.

E. Dead-Break Cable Terminators: As directed, Elbow-type unit with 200 or 600-A continuous-current rating; designed for de-energized disconnecting and connecting; coordinated with insulation diameter, conductor size, and material of cable being terminated. Include test point on terminator body that is capacitance coupled.

F. Dead-Front Terminal Junctions: Modular bracket-mounted groups of dead-front stationary terminals that mate and match with above cable terminators. Two-, three-, or four-terminal units as indicated, with fully rated, insulated, watertight conductor connection between terminals and complete with grounding lug, manufacturer's standard accessory stands, stainless-steel mounting brackets, and attaching hardware.

1. Protective Cap: Insulating, electrostatic-shielding, water-sealing cap with drain wire.
2. Portable Feed-Through Accessory: Two-terminal, dead-front junction arranged for removable mounting on accessory stand of stationary terminal junction.
3. Grounding Kit: Jumpered elbows, portable feed-through accessory units, protective caps, test rods suitable for concurrently grounding three phases of feeders and carrying case.
4. Standoff Insulator: Portable, single dead-front terminal for removable mounting on accessory stand of stationary terminal junction. Insulators suitable for fully insulated isolation of energized cable-elbow terminator.

G. Test-Point Fault Indicators: Applicable current-trip ratings and arranged for installation in test points of load-break separable connectors, and complete with self-resetting indicators capable of being installed with shotgun hot stick and tested with test tool.

H. Tool Set: Shotgun hot stick with energized terminal indicator, fault-indicator test tool, and carrying case.

2.6 SPLICE KITS

A. Description: For splicing medium voltage cables; type as recommended by cable or splicing kit manufacturer for the application.

B. Standard: Comply with IEEE 404.

C. Splicing Products: As recommended, in writing, by splicing kit manufacturer for specific sizes, materials, ratings, and configurations of cable conductors. Include all components required for complete splice, with detailed instructions.

2.7 MEDIUM-VOLTAGE TAPES

A. Description: Electrical grade, insulating tape for medium voltage application.

B. Ethylene/propylene rubber-based, 30-mil (0.76-mm) splicing tape, rated for 130 deg C operation. Minimum 3/4 inch (20 mm) wide.

C. Silicone rubber-based, 12-mil (0.30-mm) self-fusing tape, rated for 130 deg C operation. Minimum 1-1/2 inches (38 mm) wide.

D. Insulating-putty, 125-mil (3.175-mm) elastic filler tape. Minimum 1-1/2 inches (38 mm) wide.

2.8 ARC-PROOFING MATERIALS

A. Tape for First Course on Metal Objects: 10-mil (250-micrometer) thick, corrosion-protective, moisture-resistant, PVC pipe-wrapping tape.

B. Arc-Proofing Tape: Fireproof tape, flexible, conformable, intumescent to 0.3 inch (8 mm) thick, and compatible with cable jacket.

C. Glass-Cloth Tape: Pressure-sensitive adhesive type, 1 inch (25 mm) wide.

2.9 FAULT INDICATORS

A. Indicators: As directed, Automatically or Manually reset fault indicator with inrush restraint feature, arranged to clamp to cable sheath and provide a display after a fault has occurred in cable. Instrument shall not be affected by heat, moisture, and corrosive conditions and shall be recommended by manufacturer for installation conditions.

B. Resetting Tool: Designed for use with fault indicators, with moisture-resistant storage and carrying case.

2.10 SOURCE QUALITY CONTROL

A. Test and inspect cables according to ICEA S-97-682 or ICEA S-94-649 before shipping as directed.

B. Test strand-filled cables for water-penetration resistance according to ICEA T-31-610, using a test pressure of 5 psig (35 kPa).

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install cables according to IEEE 576.

B. Proof conduits prior to conductor installation by passing a wire brush mandrel and then a rubber duct swab through the conduit. Separate the wire brush and the rubber swab by 48 to 72 inches (1200 to 1800 mm) on the pull rope.

1. Wire Brush Mandrel: Consists of a length of brush approximately the size of the conduit inner diameter with stiff steel bristles and an eye on each end for attaching the pull ropes. If an obstruction is felt, pull the brush back and forth repeatedly to break up the obstruction.
2. Rubber Duct Swab: Consists of a series of rubber discs approximately the size of the conduit inner diameter on a length of steel cable with an eye on each end for attaching the pull ropes. Pull the rubber duct swab through the duct to extract loose debris from the duct.

C. Pull Conductors: Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.

1. Where necessary, use manufacturer-approved pulling compound or lubricant that does not deteriorate conductor or insulation.
2. Use pulling means, including fish tape, cable, rope, and basket-weave cable grips, that do not damage cables and raceways. Do not use rope hitches for pulling attachment to cable.
3. Use pull-in guides, cable feeders, and draw-in protectors as required to protect cables during installation.
4. Do not pull cables with ends unsealed. Seal cable ends with rubber tape.

D. Install exposed cables parallel and perpendicular to surfaces of exposed structural members and follow surface contours where possible.

E. Support cables according to Section 260529 "Hangers and Supports for Electrical Systems."

F. Install direct-buried cables on leveled and tamped bed of 3-inch- (75-mm-) thick, clean sand. Separate cables crossing other cables or piping by a minimum of 2 inches (50 mm) of tamped earth, plus an additional 2 inches (50 mm) of sand. Install permanent markers at ends of cable runs, changes in direction, and buried splices.

G. Install "buried-cable" warning tape 12 inches (305 mm) above cables.

H. In manholes, handholes, pull boxes, junction boxes, and cable vaults, train cables around walls by the longest route from entry to exit; support cables at intervals adequate to prevent sag.

I. Install sufficient cable length to remove cable ends under pulling grips. Remove length of conductor damaged during pulling.

J. Install cable splices at pull points and elsewhere as indicated; use standard kits. Use dead-front separable watertight connectors in manholes and other locations subject to water infiltration.

K. Install terminations at ends of conductors, and seal multiconductor cable ends with standard kits.

L. Install separable insulated-connector components as follows:

1. Protective Cap: At each terminal junction, with one on each terminal to which no feeder is indicated to be connected.
2. Portable Feed-Through Accessory: At each terminal junction, with one on each terminal.
3. Standoff Insulator: At each terminal junction, with one on each terminal.

M. Arc Proofing: Unless otherwise indicated, arc proof medium-voltage cable at locations not protected by conduit, cable tray, direct burial, or termination materials. In addition to arc-proofing tape manufacturer's written instructions, apply arc proofing as follows:

1. Clean cable sheath.
2. Wrap metallic cable components with 10-mil (250-micrometer) pipe-wrapping tape.
3. Smooth surface contours with electrical insulation putty.
4. Apply arc-proofing tape in one half-lapped layer with coated side toward cable.
5. Band arc-proofing tape with two layers of 1-inch (25-mm) wide half-lapped, adhesive, glass-cloth tape at each end of the arc-proof tape.

N. Seal around cables passing through fire-rated elements according to Section 078413 "Penetration Firestopping."

O. Install fault indicators on each phase where indicated.

P. Ground shields of shielded cable at terminations, splices, and separable insulated connectors. Ground metal bodies of terminators, splices, cable and separable insulated-connector fittings, and hardware.

Q. Ground shields of shielded cable at one point only. Maintain shield continuity and connections to metal connection hardware at all connection points.

R. Identify cables according to Section 260553 "Identification for Electrical Systems." Identify phase and circuit number of each conductor at each splice, termination, pull point, and junction box. Arrange identification so that it is unnecessary to move the cable or conductor to read the identification.

3.2 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters.
2. After installing medium-voltage cables and before electrical circuitry has been energized, test for compliance with requirements.
3. Perform Partial Discharge test of each new conductor according to NETA ATS, Ch. 7.3.3 and to test equipment manufacturer's recommendations.

4. Perform Dissipation Factor test of each new conductor according to NETA ATS, Ch. 7.3.3 and to test equipment manufacturer's recommendations.

B. Prepare test and inspection reports.

END OF SECTION 260513

SECTION 260519 - LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Copper building wire rated 600 V or less.
2. Aluminum building wire rated 600 V or less.
3. Metal-clad cable, Type MC, rated 600 V or less.
4. Fire-alarm wire and cable.
5. Connectors, splices, and terminations rated 600 V and less.

B. Related Requirements:

1. Section 260513 "Medium-Voltage Cables" for single-conductor and multiconductor cables, cable splices, and terminations for electrical distribution systems with 601 to 35,000 V.
2. Section 260523 "Control-Voltage Electrical Power Cables" for control systems communications cables and Classes 1, 2, and 3 control cables.
3. Section 271500 "Communications Horizontal Cabling" for cabling used for voice and data circuits.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Product Schedule: Indicate type, use, location, and termination locations.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

PART 2 - PRODUCTS

2.1 COPPER BUILDING WIRE

A. Description: Flexible, insulated and uninsulated, drawn copper current-carrying conductor with an overall insulation layer or jacket, or both, rated 600 V or less.

B. Standards:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
2. RoHS compliant.
3. Conductor and Cable Marking: Comply with wire and cable marking according to UL's "Wire and Cable Marking and Application Guide."

C. Conductors: Copper, complying with ASTM B3 for bare annealed copper and with ASTM B8 or ASTM B496 for stranded conductors as directed.

D. Conductor Insulation:

1. Type NM: Comply with UL 83 and UL 719.
2. Type RHH and Type RHW-2: Comply with UL 44.
3. Type USE-2 and Type SE: Comply with UL 854.
4. Type THHN and Type THWN-2: Comply with UL 83.
5. Type THW and Type THW-2: Comply with NEMA WC-70/ICEA S-95-658 and UL 83.
6. Type XHHW-2: Comply with UL 44.

2.2 ALUMINUM BUILDING WIRE

A. Description: Flexible, insulated and uninsulated, drawn aluminum current-carrying conductor with an overall insulation layer or jacket, or both, rated 600 V or less.

B. Standards:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
2. RoHS compliant.
3. Conductor and Cable Marking: Comply with wire and cable marking according to UL's "Wire and Cable Marking and Application Guide."

C. Conductors: Aluminum, complying with ASTM B800 and ASTM B801.

D. Conductor Insulation:

1. Type NM: Comply with UL 83 and UL 719.
2. Type RHH and Type RHW-2: Comply with UL 44.
3. Type USE-2 and Type SE: Comply with UL 854.
4. Type THHN and Type THWN-2: Comply with UL 83.
5. Type THW and Type THW-2: Comply with NEMA WC-70/ICEA S-95-658 and UL 83.
6. Type XHHW-2: Comply with UL 44.

2.3 METAL-CLAD CABLE, TYPE MC

A. Description: A factory assembly of one or more current-carrying insulated conductors in an overall metallic sheath.

B. Standards:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
2. Comply with UL 1569.
3. RoHS compliant.
4. Conductor and Cable Marking: Comply with wire and cable marking according to UL's "Wire and Cable Marking and Application Guide."

C. Circuits:

1. Single circuit and multicircuit with color-coded conductors.
2. Power-Limited Fire-Alarm Circuits: Comply with UL 1424.

D. Conductors: Copper, complying with ASTM B3 for bare annealed copper and with ASTM B8 for stranded conductors or Aluminum, complying with ASTM B800 and ASTM B801 as directed.

E. Ground Conductor: Bare, Insulated or None as directed.

F. Conductor Insulation:

1. Type TFN/THHN/THWN-2: Comply with UL 83.
2. Type XHHW-2: Comply with UL 44.

G. Armor: As directed Steel or Aluminum, interlocked.

H. Jacket: PVC applied over armor.

2.4 FIRE-ALARM WIRE AND CABLE

A. General Wire and Cable Requirements: NRTL listed and labeled as complying with NFPA 70, Article 760.

B. Signaling Line Circuits: Twisted, shielded pair, not less than, No. 18 AWG or size as recommended by system manufacturer as directed.

1. Circuit Integrity Cable: Twisted shielded pair, NFPA 70, Article 760, Classification CI, for power-limited fire-alarm signal service Type FPL. NRTL listed and labeled as complying with UL 1424 and UL 2196 for a two-hour rating.

C. Non-Power-Limited Circuits: Solid-copper conductors with 600-V rated, 75 deg C, color-coded insulation, and complying with requirements in UL 2196 for a two-hour rating.

1. Low-Voltage Circuits: No. 16 AWG, minimum, in pathway.
2. Line-Voltage Circuits: No. 12 AWG, minimum, in pathway.
3. Multiconductor Armored Cable: NFPA 70, Type MC, copper conductors, Type TFN/THHN conductor insulation, copper drain wire, copper armor with outer jacket with red identifier stripe, NTRL listed for fire-alarm and cable tray installation, plenum rated.

2.5 CONNECTORS AND SPLICES

A. Description: Factory-fabricated connectors, splices, and lugs of size, ampacity rating, material, type, and class for application and service indicated; listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.

B. Jacketed Cable Connectors: For steel and aluminum jacketed cables, zinc die-cast with set screws, designed to connect conductors specified in this Section.

C. Lugs: One piece, seamless, designed to terminate conductors specified in this Section.

1. Material: Copper, Aluminum or Bronze.
2. Type: One or Two hole with standard or long barrels as directed.
3. Termination: Compression or Crimp as directed.

PART 3 - EXECUTION

3.1 CONDUCTOR MATERIAL APPLICATIONS

A. Feeders: Copper; solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

B. Feeders: Copper for feeders smaller than No. 4 AWG; copper or aluminum for feeders No. 4 AWG and larger. Conductors shall be solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

C. Branch Circuits: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

D. Branch Circuits: Copper. Solid for No. 12 AWG and smaller; stranded for No. 10 AWG and larger.

E. Power-Limited Fire Alarm and Control: Solid for No. 12 AWG and smaller.

3.2 CONDUCTOR INSULATION AND MULTICONDUCTOR CABLE APPLICATIONS AND WIRING METHODS

A. Service Entrance: Type THHN/THWN-2, single conductors in raceway, Type XHHW-2, single conductors in raceway, Type USE, single conductor in raceway or Multiconductor cable, Type SE as directed.

B. Exposed Feeders: Type THHN/THWN-2, single conductors in raceway, Type XHHW-2, single conductors in raceway, Metal-clad cable, Type MC or Nonmetallic-sheathed cable, Type NM as directed.

C. Feeders Concealed in Ceilings, Walls, Partitions, and Crawlspaces: Type THHN/THWN-2, single conductors in raceway, Metal-clad cable, Type MC or Nonmetallic-sheathed cable, Type NM as directed.

D. Feeders Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN/THWN-2, single conductors in raceway, Type XHHW-2, single conductors in raceway or Underground feeder cable, Type UF as directed.

E. Feeders in Cable Tray: Type THHN/THWN-2, single conductors in raceway, Type XHHW-2, single conductors larger than No. 1/0 AWG, Metal-clad cable, Type MC or Nonmetallic-sheathed cable, Type NM as directed.

F. Exposed Branch Circuits, Including in Crawlspaces: Type THHN/THWN-2, single conductors in raceway, Metal-clad cable, Type MC or Nonmetallic-sheathed cable, Type NM as directed.

G. Branch Circuits Concealed in Ceilings, Walls, and Partitions: Type THHN/THWN-2, single conductors in raceway, Metal-clad cable, Type MC or Nonmetallic-sheathed cable, Type NM as directed.

H. Branch Circuits Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN/THWN-2, single conductors in raceway, Type XHHW-2, single conductors in raceway or Underground branch-circuit cable, Type UF as directed.

3.3 INSTALLATION OF CONDUCTORS AND CABLES

A. Conceal cables in finished walls, ceilings, and floors unless otherwise indicated.

B. Complete raceway installation between conductor and cable termination points according to Section 260533 "Raceways and Boxes for Electrical Systems" prior to pulling conductors and cables.

C. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.

D. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.

E. Install exposed cables parallel and perpendicular to surfaces of exposed structural members and follow surface contours where possible.

F. Support cables according to Section 260529 "Hangers and Supports for Electrical Systems."

3.4 INSTALLATION OF FIRE-ALARM WIRING

A. Comply with NECA 1 and NFPA 72.

B. Wiring Method: Install wiring in metal pathway according to Section 280528 "Pathways for Electronic Safety and Security."

1. Install plenum cable in environmental airspaces, including plenum ceilings.
2. Fire-alarm circuits and equipment control wiring associated with fire-alarm system shall be installed in a dedicated pathway system. This system shall not be used for any other wire or cable.

C. Wiring Method:

1. Cables and pathways used for fire-alarm circuits, and equipment control wiring associated with fire-alarm system, may not contain any other wire or cable.
2. Fire-Rated Cables: Use of two-hour, fire-rated fire-alarm cables, NFPA 70, Types MI and CI, is not permitted.
3. Signaling Line Circuits: Power-limited fire-alarm cables may or shall not be installed in the same cable or pathway as signaling line circuits.

D. Wiring within Enclosures: Separate power-limited and non-power-limited conductors as recommended by manufacturer. Install conductors parallel with or at right angles to sides and back of the enclosure. Bundle, lace, and train conductors to terminal points with no excess. Connect conductors that are terminated, spliced, or interrupted in any enclosure associated with fire-alarm system to terminal blocks. Mark each terminal according to system's wiring diagrams. Make all connections with approved crimp-on terminal spade lugs, pressure-type terminal blocks, or plug connectors.

E. Cable Taps: Use numbered terminal strips in junction, pull, and outlet boxes, cabinets, or equipment enclosures where circuit connections are made.

F. Color-Coding: Color-code fire-alarm conductors differently from the normal building power wiring. Use one color-code for alarm circuit wiring and another for supervisory circuits. Color-code audible alarm-indicating circuits differently from alarm-initiating circuits. Use different colors for visible alarm-indicating devices. Paint fire-alarm system junction boxes and covers red.

G. Risers: Install at least two vertical cable risers to serve the fire-alarm system. Separate risers in close proximity to each other with a minimum one-hour-rated wall, so the loss of one riser does not prevent receipt or transmission of signals from other floors or zones.

H. Wiring to Remote Alarm Transmitting Device: 1-inch (25-mm) conduit between the fire-alarm control panel and the transmitter. Install number of conductors and electrical supervision for connecting wiring as needed to suit monitoring function.

3.5 CONNECTIONS

A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

B. Make splices, terminations, and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.

1. Use oxide inhibitor in each splice, termination, and tap for aluminum conductors.

C. Wiring at Outlets: Install conductor at each outlet, with at least 6 inches (150 mm) or 12 inches (300 mm) of slack as directed.

D. Comply with requirements in Section 283111 "Digital, Addressable Fire-Alarm System" or Section 283112 "Zoned (DC Loop) Fire-Alarm System" for connecting, terminating, and identifying wires and cables as directed.

3.6 IDENTIFICATION

A. Identify and color-code conductors and cables according to Section 260553 "Identification for Electrical Systems."

B. Identify each spare conductor at each end with identity number and location of other end of conductor and identify as spare conductor.

3.7 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.8 FIRESTOPPING

A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly according to Section 078413 "Penetration Firestopping."

END OF SECTION 260519

SECTION 260523 - CONTROL-VOLTAGE ELECTRICAL POWER CABLES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Backboards.
2. Category 5e balanced twisted pair cable.
3. Balanced twisted pair cabling hardware.
4. RS-485 cabling.
5. Low-voltage control cabling.
6. Control-circuit conductors.

1.2 DEFINITIONS

A. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control and signaling power-limited circuits.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency, RCDD, layout technician, installation supervisor, and field inspector.

B. Source quality-control reports.

C. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Accredited by NETA.

1. Testing Agency's Field Supervisor: Currently certified by BICSI as an RCDD.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Flame Travel and Smoke Density in Plenums: As determined by testing identical products according to NFPA 262, by a qualified testing agency. Identify products for installation in plenums with appropriate markings of applicable testing agency.

1. Flame Travel Distance: 60 inches (1520 mm) or less.
2. Peak Optical Smoke Density: 0.5 or less.
3. Average Optical Smoke Density: 0.15 or less.

C. Flame Travel and Smoke Density for Riser Cables in Non-Plenum Building Spaces: As determined by testing identical products according to UL 1666.

D. Flame Travel and Smoke Density for Cables in Non-Riser Applications and Non-Plenum Building Spaces: As determined by testing identical products according to UL 1685.

E. RoHS compliant.

2.2 BACKBOARDS

A. Description: Plywood, fire-retardant treated, 3/4 by 48 by 96 inches (19 by 1220 by 2440 mm). Comply with requirements for plywood backing panels in Section 061000 "Rough Carpentry."

B. Painting: Paint plywood on all sides and edges with flat, eggshell, black, latex or alkyd paint as directed. Comply with requirements in Section 099123 "Interior Painting."

2.3 CATEGORY 5e BALANCED TWISTED PAIR CABLE

A. Description: Four-pair, balanced-twisted pair cable, certified to meet transmission characteristics of Category 5e cable at frequencies up to 100 MHz.

B. Standard: Comply with ICEA S-90-661, NEMA WC 63.1, and TIA-568-C.2 for Category 5e cables.

C. Conductors: 100-ohm, 24 AWG solid copper.

D. Shielding/Screening: Unshielded twisted pairs (UTP), Shielded twisted pairs (FTP), Screened twisted pairs (F/UTP) or Screened and shielded twisted pairs (F/FTP) as directed.

E. Cable Rating: Riser or Plenum as directed.

F. Jacket: White or Gray thermoplastic as directed.

2.4 BALANCED TWISTED PAIR CABLE HARDWARE

A. Description: Hardware designed to connect, splice, and terminate balanced twisted pair copper communications cable.

B. General Requirements for Balanced Twisted Pair Cable Hardware:

1. Comply with the performance requirements of Category 5e, Category 6, Category 6a or Category 7 as directed.
2. Comply with TIA-568-C.2, IDC type, with modules designed for punch-down caps or tools.
3. Cables shall be terminated with connecting hardware of same category or higher.

C. Source Limitations: Obtain balanced twisted pair cable hardware from single source from single manufacturer or Obtain balanced twisted pair cable hardware from same manufacturer as balanced twisted pair cable, from single source as directed.

D. Connecting Blocks: 110-style IDC for Category 5e, 110-style IDC for Category 6 or 66-style IDC for Category 5e as directed. Provide blocks for the number of cables terminated on the block, plus 25 percent spare, integral with connector bodies, including plugs and jacks where indicated.

E. Cross-Connect: Modular array of connecting blocks arranged to terminate building cables and permit interconnection between cables.

1. Number of Terminals per Field: One for each conductor in assigned cables.

F. Patch Panel: Modular panels housing numbered jack units with IDC-type connectors at each jack location for permanent termination of pair groups of installed cables.

1. Features:

a. Universal T568A and T568B wiring labels.
b. Labeling areas adjacent to conductors.
c. Replaceable connectors.
d. 24 or 48 ports.

2. Construction: 16-gauge steel and mountable on 19-inch (483 mm) equipment racks.
3. Number of Jacks per Field: One for each four-pair cable indicated or conductor group of indicated cables, plus spares and blank positions adequate to suit specified expansion criteria as directed.

G. Patch Cords: Factory-made, four-pair cables in 36-inch (900-mm) or 48-inch (1200-mm) lengths as directed; terminated with an eight-position modular plug at each end.

1. Patch cords shall have bend-relief-compliant boots and color-coded icons to ensure performance. Patch cords shall have latch guards to protect against snagging.
2. Patch cords shall have color-coded boots for circuit identification.

H. Plugs and Plug Assemblies:

1. Male; eight position; color-coded modular telecommunications connector designed for termination of a single four-pair 100-ohm unshielded or shielded balanced twisted pair cable.
2. Comply with IEC 60603-7-1, IEC 60603-7-2, IEC 60603-7-3, IEC 60603-7-4, and IEC 60603-7.5.
3. Marked to indicate transmission performance.

I. Jacks and Jack Assemblies:

1. Female; eight position; modular; fixed telecommunications connector designed for termination of a single four-pair 100-ohm unshielded or shielded balanced twisted pair cable.
2. Designed to snap-in to a patch panel or faceplate.
3. Standards.

    a. Category 5e, unshielded balanced twisted pair cable shall comply with IEC 60603-7-2.
    b. Category 5e, shielded balanced twisted pair cable shall comply with IEC 60603-7-3.
    c. Category 6, unshielded balanced twisted pair cable shall comply with IEC 60603-7-4.
    d. Category 6, shielded balanced twisted pair cable shall comply with IEC 60603-7.5.
    e. Category 6a, unshielded balanced twisted pair cable shall comply with IEC 60603-7-41.
    f. Category 6a, shielded balanced twisted pair cable shall comply with IEC 60603-7.51.

4. Marked to indicate transmission performance.

J. Faceplate:

1. Two, Four or Six port as directed, vertical single gang faceplates designed to mount to single gang wall boxes.
2. Eight, Ten or Twelve port as directed, vertical double gang faceplates designed to mount to double gang wall boxes.
3. Plastic Faceplate: High-impact plastic. Coordinate color with Section 262726 "Wiring Devices."
4. Metal Faceplate: Stainless steel or Brass as directed, complying with requirements in Section 262726 "Wiring Devices."
5. For use with snap-in jacks accommodating any combination of balanced twisted pair, optical fiber, and coaxial work area cords.

    a. Flush mounting jacks, positioning the cord at a 45-degree angle.

K. Legend:

1. Machine printed, in the field, using adhesive-tape label.
2. Snap-in, clear-label covers and machine-printed paper inserts.

2.5 TWIN-AXIAL DATA HIGHWAY CABLE

A. Plenum-Rated Cable: NFPA 70, Type CMP.

1. Paired, number of pairs as directed, No. 20, No. 22 or No. 24 AWG, stranded (7x28), (7x30) or (7x32) tinned-copper conductors.
2. Plastic insulation.
3. Individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage.
4. Plastic jacket.
5. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned-copper drain wire.
6. Flame Resistance: Comply with NFPA 262.

2.6 RS-232 CABLE

A. PVC-Jacketed, TIA 232-F:

1. Three or Nine as directed, No. 22 AWG, stranded (7x30) tinned copper conductors.
2. Polypropylene insulation.
3. Aluminum foil-polyester tape shield with 100 percent shield coverage.
4. PVC jacket.
5. Conductors are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
6. NFPA 70 Type: Type CM.
7. Flame Resistance: Comply with UL 1581.

B. Plenum-Type, TIA 232-F:

1. Three or Nine, No. 22 AWG, stranded (7x30) tinned copper conductors.
2. PE insulation.
3. Aluminum foil-polyester tape shield with 100 percent shield coverage.
4. Fluorinated ethylene propylene jacket.
5. Conductors are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
6. Flame Resistance: Comply with NFPA 262.

2.7 RS-485 CABLE

A. Plenum-Rated Cable: NFPA 70, Type CMP.

1. Paired, one pair or two pairs as directed, No. 22 AWG, stranded (7x30) tinned-copper conductors.
2. Fluorinated ethylene propylene insulation.
3. Unshielded.
4. Fluorinated ethylene propylene jacket.
5. Flame Resistance: NFPA 262.

2.8 LOW-VOLTAGE CONTROL CABLE

A. Plenum-Rated, Paired Cable: NFPA 70, Type CMP.

1. One or Multi-pair, twisted, No. 16 AWG, stranded (19x29) or No. 18 AWG, stranded (19x30) tinned-copper conductors as directed.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with NFPA 262.

2.9 CONTROL-CIRCUIT CONDUCTORS

A. Class 1 Control Circuits: Stranded copper, Type THHN/THWN-2, complying with UL 83 in raceway.

B. Class 2 Control Circuits: Stranded copper, Type THHN/THWN-2, complying with UL 83 in raceway.

C. Class 3 Remote-Control and Signal Circuits: Stranded copper, Type THHN/THWN-2, complying with UL 83 in raceway.

D. Class 2 Control Circuits and Class 3 Remote-Control and Signal Circuits That Supply Critical Circuits: Circuit Integrity (CI) cable.

1. Smoke control signaling and control circuits.

2.10 FIRE-ALARM WIRE AND CABLE

A. General Wire and Cable Requirements: NRTL listed and labeled as complying with NFPA 70, Article 760.

B. Signaling Line Circuits: Twisted, shielded pair, not less than, No. 18 AWG or size as recommended by system manufacturer.

1. Circuit Integrity Cable: Twisted shielded pair, NFPA 70, Article 760, Classification CI, for power-limited fire-alarm signal service Type FPL. NRTL listed and labeled as complying with UL 1424 and UL 2196 for a two-hour rating.

C. Non-Power-Limited Circuits: Solid-copper conductors with 600-V rated, 75 deg C, color-coded insulation, and complying with requirements in UL 2196 for a two-hour rating.

1. Low-Voltage Circuits: No. 16 AWG, minimum, in pathway.
2. Line-Voltage Circuits: No. 12 AWG, minimum, in pathway.
3. Multiconductor Armored Cable: NFPA 70, Type MC, copper conductors, Type TFN/THHN conductor insulation, copper drain wire, copper armor with outer jacket with red identifier stripe, NTRL listed for fire-alarm and cable tray installation, plenum rated.

2.11 SOURCE QUALITY CONTROL

A. Factory test balanced twisted pair cables according to TIA-568-C.2.

B. Cable will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Test cables on receipt at Project site.

1. Test each pair of twisted pair cable for open and short circuits.

3.2 INSTALLATION OF RACEWAYS AND BOXES

A. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems" for raceway selection and installation requirements for boxes, conduits, and wireways as supplemented or modified in this Section.

1. Outlet boxes shall be no smaller than 2 inches (50 mm) wide, 3 inches (75 mm) high, and 2-1/2 inches (64 mm) deep.
2. Outlet boxes shall be no smaller than 4 inches (102 mm) square by 1-1/2 inches (38 mm) or 2-1/8 inches (53 mm) deep as directed, with extension ring sized to bring edge of ring to within 1/8 inch (3.1 mm) of the finished wall surface.
3. Flexible metal conduit shall not be used.

B. Comply with TIA-569-D for pull-box sizing and length of conduit and number of bends between pull points.

C. Install manufactured conduit sweeps and long-radius elbows if possible.

D. Raceway Installation in Equipment Rooms:

1. Position conduit ends adjacent to a corner on backboard if a single piece of plywood is installed, or in the corner of the room if multiple sheets of plywood are installed around perimeter walls of the room.
2. Install cable trays to route cables if conduits cannot be located in these positions.
3. Secure conduits to backboard if entering the room from overhead.
4. Extend conduits 3 inches (75 mm) above finished floor.
5. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.

E. Backboards: Install backboards with 96-inch (2440-mm) dimension vertical. Butt adjacent sheets tightly and form smooth gap-free corners and joints.

3.3 INSTALLATION OF CONDUCTORS AND CABLES

A. Comply with NECA 1.

B. General Requirements for Cabling:

1. Comply with TIA-568-C Series of standards.
2. Comply with BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems."
3. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, and cross-connect and patch panels.
4. Cables may not be spliced and shall be continuous from terminal to terminal. Do not splice cable between termination, tap, or junction points.
5. Cables serving a common system may be grouped in a common raceway. Install network cabling and control wiring and cable in separate raceway from power wiring. Do not group conductors from different systems or different voltages.
6. Secure and support cables at intervals not exceeding 30 inches (760 mm) and not more than 6 inches (150 mm) from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
7. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems." Install lacing bars and distribution spools.
8. Do not install bruised, kinked, scored, deformed, or abraded cable. Remove and discard cable if damaged during installation and replace it with new cable.
9. Cold-Weather Installation: Bring cable to room temperature before dereeling. Do not use heat lamps for heating.
10. Pulling Cable: Comply with BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems." Monitor cable pull tensions.
11. Support: Do not allow cables to lay on removable ceiling tiles.
12. Secure: Fasten securely in place with hardware specifically designed and installed so as to not damage cables.
13. Provide strain relief.
14. Keep runs short. Allow extra length for connecting to terminals. Do not bend cables in a radius less than 10 times the cable OD. Use sleeves or grommets to protect cables from vibration at points where they pass around sharp corners and through penetrations.
15. Ground wire shall be copper, and grounding methods shall comply with IEEE C2. Demonstrate ground resistance.

C. Balanced Twisted Pair Cable Installation:

1. Comply with TIA-568-C.2.
2. Install termination hardware as specified in Section 271513 "Communications Copper Horizontal Cabling" unless otherwise indicated.
3. Do not untwist UTP cables more than 1/2 inch (12 mm) at the point of termination to maintain cable geometry.

D. Installation of Control-Circuit Conductors:

1. Install wiring in raceways. Comply with requirements specified in Section 260533 "Raceways and Boxes for Electrical Systems."

E. Open-Cable Installation:

1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
2. Suspend copper cable not in a wireway or pathway a minimum of 8 inches (200 mm) above ceilings by cable supports not more than 30 inches (760 mm) apart.
3. Cable shall not be run through or on structural members or in contact with pipes, ducts, or other potentially damaging items. Do not run cables between structural members and corrugated panels.

F. Installation of Cable Routed Exposed under Raised Floors:

1. Install plenum-rated cable only.
2. Install cabling after the flooring system has been installed in raised floor areas.
3. Below each feed point, neatly coil a minimum of 72 inches (1830 mm) of cable in a coil not less than 12 inches (305 mm) in diameter.

3.4 REMOVAL OF CONDUCTORS AND CABLES

A. Remove abandoned conductors and cables. Abandoned conductors and cables are those installed that are not terminated at equipment and are not identified with a tag for future use.

3.5 CONTROL-CIRCUIT CONDUCTORS

A. Minimum Conductor Sizes:

1. Class 1 remote-control and signal circuits; No 14 AWG.
2. Class 2 low-energy, remote-control, and signal circuits; No. 16 AWG.
3. Class 3 low-energy, remote-control, alarm, and signal circuits; No 12 AWG.

3.6 FIRESTOPPING

A. Comply with requirements in Section 078413 "Penetration Firestopping."

B. Comply with TIA-569-D, Annex A, "Firestopping."

C. Comply with BICSI TDMM, "Firestopping" Chapter.

3.7 GROUNDING

A. For data communication wiring, comply with TIA-607-B and with BICSI TDMM, "Bonding and Grounding (Earthing)" Chapter.

B. For low-voltage control wiring and cabling, comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.8 IDENTIFICATION

A. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

B. Identify data and communications system components, wiring, and cabling according to TIA-606-B; label printers shall use label stocks, laminating adhesives, and inks complying with UL 969.

C. Identify each wire on each end and at each terminal with a number-coded identification tag. Each wire shall have a unique tag.

3.9 FIELD QUALITY CONTROL

A. Perform tests and inspections with the assistance of a factory-authorized service representative.

B. Tests and Inspections:

1. Visually inspect cable jacket materials for UL or third-party certification markings. Inspect cabling terminations to confirm color-coding for pin assignments and inspect cabling connections to confirm compliance with TIA-568-C.1.
2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.

C. End-to-end cabling will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

END OF SECTION 260523

SECTION 260526 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes grounding and bonding systems and equipment.

B. Section includes grounding and bonding systems and equipment, plus the following special applications:

1. Underground distribution grounding.
2. Ground bonding common with lightning protection system.
3. Foundation steel electrodes.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans showing dimensioned as-built locations of grounding features specified in "Field Quality Control" Article.

B. Qualification Data: For testing agency and testing agency's field supervisor.

C. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1. Plans showing as-built, dimensioned locations of system described in "Field Quality Control" Article, including the following:

a. Test wells.
b. Ground rods.
c. Ground rings.
d. Grounding arrangements and connections for separately derived systems.

2. As directed, Instructions for periodic testing and inspection of grounding features at test wells, ground rings or grounding connections for separately derived systems based on NETA MTS or NFPA 70B.

a. Tests shall determine if ground-resistance or impedance values remain within specified maximums, and instructions shall recommend corrective action if values do not.
b. Include recommended testing intervals.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Certified by NETA.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with UL 467 for grounding and bonding materials and equipment.

2.2 MANUFACTURERS

2.3 CONDUCTORS

A. Insulated Conductors: Copper or tinned-copper wire or cable insulated for 600 V unless otherwise required by applicable Code or authorities having jurisdiction.

B. Bare Copper Conductors:

1. Solid Conductors: ASTM B3.
2. Stranded Conductors: ASTM B8.
3. Tinned Conductors: ASTM B33.
4. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG conductor, 1/4 inch (6 mm) in diameter.
5. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.
6. Bonding Jumper: Copper tape, braided conductors terminated with copper ferrules; 1-5/8 inches (41 mm) wide and 1/16 inch (1.6 mm) thick.
7. Tinned Bonding Jumper: Tinned-copper tape, braided conductors terminated with copper ferrules; 1-5/8 inches (41 mm) wide and 1/16 inch (1.6 mm) thick.

C. Grounding Bus: Predrilled rectangular bars of annealed copper, 1/4 by 4 inches (6.3 by 100 mm) in cross section, with 9/32-inch (7.14-mm) holes spaced 1-1/8 inches (28 mm) apart. Stand-off insulators for mounting shall comply with UL 891 for use in switchboards, 600 V and shall be Lexan or PVC, impulse tested at 5000 V.

2.4 CONNECTORS

A. Listed and labeled by an NRTL acceptable to authorities having jurisdiction for applications in which used and for specific types, sizes, and combinations of conductors and other items connected.

B. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

C. Bus-Bar Connectors: As directed, Mechanical type, cast silicon bronze, solderless compression or exothermic-type wire terminals, and long-barrel, two-bolt connection to ground bus bar.

D. Bus-Bar Connectors: Compression type, copper or copper alloy, with two wire terminals.

E. Beam Clamps: Mechanical type, terminal, ground wire access from four directions, with dual, tin-plated or silicon bronze bolts.

F. Cable-to-Cable Connectors: Compression type, copper or copper alloy.

G. Cable Tray Ground Clamp: Mechanical type, zinc-plated malleable iron.

H. Conduit Hubs: Mechanical type, terminal with threaded hub.

I. Ground Rod Clamps: Mechanical type, copper or copper alloy, terminal with hex head bolt or socket set screw as directed.

J. Ground Rod Clamps: Mechanical type, copper or copper alloy, terminal with hex head bolt.

K. Lay-in Lug Connector: Mechanical type, aluminum or copper rated for direct burial terminal with set screw as directed.

L. Service Post Connectors: Mechanical type, bronze alloy terminal, in short- and long-stud lengths, capable of single and double conductor connections.

M. Signal Reference Grid Clamp: Mechanical type, stamped-steel terminal with hex head screw.

N. Straps: Solid copper, cast-bronze clamp or copper lugs as directed. Rated for 600 A.

O. Tower Ground Clamps: Mechanical type, copper or copper alloy, terminal one or two-piece clamp as directed.

P. U-Bolt Clamps: Mechanical type, copper or copper alloy, terminal listed for direct burial.

Q. Water Pipe Clamps:

1. Mechanical type, two pieces with zinc-plated or stainless-steel bolts as directed.

    a. Material: Tin-plated aluminum or Die-cast zinc alloy as directed.
    b. Listed for direct burial.

2. U-bolt type with malleable-iron clamp and copper ground connector or copper ground connector rated for direct burial as directed.

2.5 GROUNDING ELECTRODES

A. Ground Rods: Copper-clad steel, sectional type; 3/4 inch by 10 feet (19 mm by 3 m) or 5/8 by 96 inches (16 by 2400 mm) as directed.

B. Ground Plates: 1/4 inch (6 mm) thick, hot-dip galvanized.

PART 3 - EXECUTION

3.1 APPLICATIONS

A. Conductors: Install solid conductor for No. 8 AWG and smaller, and stranded conductors for No. 6 AWG and larger unless otherwise indicated.

B. Underground Grounding Conductors: Install bare tinned-copper conductor, No. 2/0 AWG minimum.

1. Bury at least 30 inches (750 mm) below grade.

C. Grounding Bus: Install in electrical equipment rooms, in rooms housing service equipment, and elsewhere as indicated.

1. Install bus horizontally, on insulated spacers 2 inches (50 mm) minimum from wall, 6 inches (150 mm) above finished floor unless otherwise indicated.
2. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, and down; connect to horizontal bus.

D. Conductor Terminations and Connections:

1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
2. Underground Connections: Welded connectors except at test wells and as otherwise indicated.
3. Connections to Ground Rods at Test Wells: Bolted connectors.
4. Connections to Structural Steel: Welded connectors.

3.2 GROUNDING AT THE SERVICE

A. Equipment grounding conductors and grounding electrode conductors shall be connected to the ground bus. Install a main bonding jumper between the neutral and ground buses.

3.3 GROUNDING SEPARATELY DERIVED SYSTEMS

A. Generator: Install grounding electrode(s) at the generator location. The electrode shall be connected to the equipment grounding conductor and to the frame of the generator.

3.4 GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS

A. Comply with IEEE C2 grounding requirements.

B. Grounding Manholes and Handholes: Install a driven ground rod through manhole or handhole floor, close to wall, and set rod depth so 4 inches (100 mm) will extend above finished floor. If necessary, install ground rod before manhole is placed and provide No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from 2 inches (50 mm) above to 6 inches (150 mm) below concrete. Seal floor opening with waterproof, non-shrink grout.

C. Grounding Connections to Manhole Components: Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with No. 4 AWG minimum, stranded, hard-drawn copper bonding conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields according to written instructions by manufacturer of splicing and termination kits.

D. Pad-Mounted Transformers and Switches: Install two ground rods and ground ring around the pad. Ground pad-mounted equipment and noncurrent-carrying metal items associated with substations by connecting them to underground cable and grounding electrodes. Install tinned-copper conductor not less than No. 2 AWG for ground ring and for taps to equipment grounding terminals. Bury ground ring not less than 6 inches (150 mm) from the foundation.

3.5 EQUIPMENT GROUNDING

A. Install insulated equipment grounding conductors with all feeders and branch circuits.

B. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:

1. Feeders and branch circuits.
2. Lighting circuits.
3. Receptacle circuits.
4. Single-phase motor and appliance branch circuits.
5. Three-phase motor and appliance branch circuits.
6. Flexible raceway runs.
7. Armored and metal-clad cable runs.
8. Busway Supply Circuits: Install insulated equipment grounding conductor from grounding bus in the switchgear, switchboard, or distribution panel to equipment grounding bar terminal on busway.
9. X-Ray Equipment Circuits: Install insulated equipment grounding conductor in circuits supplying x-ray equipment.

C. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.

D. Water Heater, Heat-Tracing, and Anti-frost Heating Cables: Install a separate insulated equipment grounding conductor to each electric water heater and heat-tracing cable. Bond conductor to heater units, piping, connected equipment, and components.

E. Poles Supporting Outdoor Lighting Fixtures: Install grounding electrode and a separate insulated equipment grounding conductor in addition to grounding conductor installed with branch-circuit conductors.

3.6 FENCE GROUNDING

A. Fence Grounding: Install at maximum intervals of 1500 feet (450 m) except as follows:

1. Fences within 100 Feet (30 m) of Buildings, Structures, Walkways, and Roadways: Ground at maximum intervals of 750 feet (225 m).

    a. Gates and Other Fence Openings: Ground fence on each side of opening.

B. Protection at Crossings of Overhead Electrical Power Lines: Ground fence at location of crossing and at a maximum distance of 150 feet (45 m) on each side of crossing.

C. Fences Enclosing Electrical Power Distribution Equipment: Ground as required by IEEE C2 unless otherwise indicated.

3.7 INSTALLATION

A. Grounding Conductors: Route along shortest and straightest paths possible unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.

B. Ground Bonding Common with Lightning Protection System: Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system. Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor and install in conduit.

C. Ground Rods: Drive rods until tops are 2 inches (50 mm) below finished floor or final grade unless otherwise indicated.

1. Interconnect ground rods with grounding electrode conductor below grade and as otherwise indicated. Make connections without exposing steel or damaging coating if any.

D. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance except where routed through short lengths of conduit.

1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.

3. Use exothermic-welded connectors for outdoor locations; if a disconnect-type connection is required, use a bolted clamp.

E. Grounding and Bonding for Piping:

1. Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes; use a bolted clamp connector or bolt a lug-type connector to a pipe flange by using one of the lug bolts of the flange. Where a dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
2. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with a bolted connector.
3. Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.

3.8 FIELD QUALITY CONTROL

A. Perform tests and inspections with the assistance of a factory-authorized service representative.

B. Tests and Inspections:

1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
2. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.
3. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal, at ground test wells, and at individual ground rods. Make tests at ground rods before any conductors are connected.

    a. Measure ground resistance no fewer than two full days after last trace of precipitation and without soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
    b. Perform tests by fall-of-potential method according to IEEE 81.

4. Prepare dimensioned Drawings locating each test well, ground rod and ground-rod assembly, and other grounding electrodes. Identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.

C. Grounding system will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

E. Report measured ground resistances that exceed the following values:

1. Power and Lighting Equipment or System with Capacity of 500 kVA and Less: 10 ohms.
2. Power and Lighting Equipment or System with Capacity of 500 to 1000 kVA: 5 ohms.
3. Power and Lighting Equipment or System with Capacity More Than 1000 kVA: 3 ohms.
4. Power Distribution Units or Panelboards Serving Electronic Equipment: 1 or 3 ohm(s).
5. Substations and Pad-Mounted Equipment: 5 ohms.
6. Manhole Grounds: 10 ohms.

F. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Architect promptly and include recommendations to reduce ground resistance.

END OF SECTION 260526

SECTION 260529 - HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Steel slotted support systems.
2. Conduit and cable support devices.
3. Support for conductors in vertical conduit.
4. Structural steel for fabricated supports and restraints.
5. Mounting, anchoring, and attachment components, including powder-actuated fasteners, mechanical expansion anchors, concrete inserts, clamps, through bolts, toggle bolts, and hanger rods.
6. Fabricated metal equipment support assemblies.

B. Related Requirements:

1. Section 260548.16 "Seismic Controls for Electrical Systems" for products and installation requirements necessary for compliance with seismic criteria.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Signed and sealed by a qualified professional engineer. For fabrication and installation details for electrical hangers and support systems.

1. Hangers. Include product data for components.
2. Slotted support systems.
3. Equipment supports.
4. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.

C. Delegated-Design Submittal: For hangers and supports for electrical systems.

1. Include design calculations and details of hangers.
2. Include design calculations for seismic restraints.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, and coordinated with each other, using input from installers of the items involved.

B. Seismic Qualification Data: Certificates, for hangers and supports for electrical equipment and systems, accessories, and components, from manufacturer.

C. Welding certificates.

1.4 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M or AWS D1.2/D1.2M as directed.

B. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M.
2. AWS D1.2/D1.2M.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design hanger and support system.

B. Seismic Performance: Hangers and supports shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the supported equipment and systems will remain in place without separation of any parts when subjected to the seismic forces specified and the supported equipment and systems will be fully operational after the seismic event."
2. Component Importance Factor: 1.5 or 1.0 as directed.

C. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame Rating: Class 1.
2. Self-extinguishing according to ASTM D635.

2.2 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

A. Steel Slotted Support Systems: Preformed steel channels and angles with minimum 13/32-inch (10-mm) diameter holes at a maximum of 8 inches (200 mm) o.c. in at least one surface.
1. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
2. Material for Channel, Fittings, and Accessories: Galvanized steel, Plain steel, Stainless steel, Type 304 or Stainless steel, Type 316 as directed.
3. Channel Width: Selected for applicable load criteria, 1-5/8 inches (41.25 mm), 1-1/4 inches (31.75 mm) or 13/16 inches (20.64 mm) as directed.
4. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.

5. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
6. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
7. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Conduit and Cable Support Devices: As directed, Steel or Steel and malleable-iron hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.

C. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for nonarmored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be made of malleable iron.

D. Structural Steel for Fabricated Supports and Restraints: ASTM A36/A36M steel plates, shapes, and bars; black and galvanized.

E. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:

1. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.

2. Mechanical-Expansion Anchors: As directed, Insert-wedge-type, zinc-coated or stainless steel, for use in hardened portland cement concrete, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.

3. Concrete Inserts: Steel or malleable-iron, slotted support system units are similar to MSS Type 18 units and comply with MFMA-4 or MSS SP-58.
4. Clamps for Attachment to Steel Structural Elements: MSS SP-58 units are suitable for attached structural element.
5. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM F3125/F3125M, Grade A325 (Grade A325M).
6. Toggle Bolts: All or Stainless-steel springhead type as directed.
7. Hanger Rods: Threaded steel.

2.3 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

A. Description: Welded or bolted structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.

B. Materials: Comply with requirements in Section 055000 "Metal Fabrications" for steel shapes and plates.

PART 3 - EXECUTION

3.1 APPLICATION

A. Comply with the following standards for application and installation requirements of hangers and supports, except where requirements on Drawings or in this Section are stricter:

1. NECA 1.
2. NECA 101
3. NECA 102.
4. NECA 105.
5. NECA 111.

B. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping materials and installation for penetrations through fire-rated walls, ceilings, and assemblies.

C. Comply with requirements for raceways and boxes specified in Section 260533 "Raceways and Boxes for Electrical Systems."

D. Maximum Support Spacing and Minimum Hanger Rod Size for Raceways: Space supports for EMT, IMC, and RMC as required by or scheduled in NECA 1, where its Table 1 lists maximum spacings that are less than those stated in NFPA 70. Minimum rod size shall be 1/4 inch (6 mm) in diameter as directed.

E. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted or other support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.

1. Secure raceways and cables to these supports with two-bolt conduit clamps, single-bolt conduit clamps or single-bolt conduit clamps using spring friction action for retention in support channel as directed.

F. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2-inch (38-mm) and smaller raceways serving branch circuits and communication systems above suspended ceilings, and for fastening raceways to trapeze supports.

3.2 SUPPORT INSTALLATION

A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this article.

B. Raceway Support Methods: In addition to methods described in NECA 1, EMT, IMC and RMC may be supported by openings through structure members, according to NFPA 70 as directed.

C. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb (90 kg).

D. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:

1. To Wood: Fasten with lag screws or through bolts.
2. To New Concrete: Bolt to concrete inserts.
3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
4. To Existing Concrete: Expansion anchor fasteners.
5. Instead of expansion anchors, powder-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete 4 inches (100 mm) thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches (100 mm) thick.
6. To Steel: Welded threaded studs complying with AWS D1.1/D1.1M, with lock washers and nuts, Beam clamps (MSS SP-58, Type 19, 21, 23, 25, or 27), complying with MSS SP-69 or Spring-tension clamps as directed.
7. To Light Steel: Sheet metal screws.
8. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate by means that comply with seismic-restraint strength and anchorage requirements.

E. Drill holes for expansion anchors in concrete at locations and to depths that avoid the need for reinforcing bars.

3.3 INSTALLATION OF FABRICATED METAL SUPPORTS

A. Comply with installation requirements in Section 055000 "Metal Fabrications" for site-fabricated metal supports.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.

C. Field Welding: Comply with AWS D1.1/D1.1M.

END OF SECTION 260529

SECTION 260533 - RACEWAYS AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metal conduits and fittings.
2. Nonmetallic conduits and fittings.
3. Metal wireways and auxiliary gutters.
4. Nonmetal wireways and auxiliary gutters.
5. Surface raceways.
6. Boxes, enclosures, and cabinets.
7. Handholes and boxes for exterior underground cabling.

B. Related Requirements:

1. Section 078413 "Penetration Firestopping" for firestopping at conduit and box entrances.
2. Section 260543 "Underground Ducts and Raceways for Electrical Systems" for exterior ductbanks, manholes, and underground utility construction.
3. Section 270528 "Pathways for Communications Systems" for conduits, wireways, surface pathways, innerduct, boxes, faceplate adapters, enclosures, cabinets, and handholes serving communications systems.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For custom enclosures and cabinets. Include plans, elevations, sections, and attachment details.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Conduit routing plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of items involved:

1. Structural members in paths of conduit groups with common supports.
2. HVAC and plumbing items and architectural features in paths of conduit groups with common supports.

B. Seismic Qualification Data: Certificates, for enclosures, cabinets, and conduit racks and their mounting provisions, including those for internal components, from manufacturer.

PART 2 - PRODUCTS

2.1 METAL CONDUITS AND FITTINGS

A. Metal Conduit:
   1. Listing and Labeling: Metal conduits, tubing, and fittings shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   2. GRC: Comply with ANSI C80.1 and UL 6.
   3. ARC: Comply with ANSI C80.5 and UL 6A.
   4. IMC: Comply with ANSI C80.6 and UL 1242.
   5. PVC-Coated Steel Conduit: PVC-coated rigid steel conduit or IMC.
      a. Comply with NEMA RN 1.
      b. Coating Thickness: 0.040 inch (1 mm), minimum.
   6. EMT: Comply with ANSI C80.3 and UL 797.
   7. FMC: Comply with UL 1; zinc-coated steel or aluminum as directed.
   8. LFMC: Flexible steel conduit with PVC jacket and complying with UL 360.

B. Metal Fittings: Comply with NEMA FB 1 and UL 514B.
   1. Listing and Labeling: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   2. Fittings, General: Listed and labeled for type of conduit, location, and use.
   3. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 1203 and NFPA 70.
   4. Fittings for EMT:
      a. Material: Steel or die cast.
      b. Type: Setscrew or compression.
   5. Expansion Fittings: PVC or steel to match conduit type, complying with UL 651, rated for environmental conditions where installed, and including flexible external bonding jumper.
   6. Coating for Fittings for PVC-Coated Conduit: Minimum thickness of 0.040 inch (1 mm), with overlapping sleeves protecting threaded joints.

C. Joint Compound for IMC, GRC, or ARC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.

2.2 NONMETALLIC CONDUITS AND FITTINGS

A. Nonmetallic Conduit:

B. Listing and Labeling: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   1. ENT: Comply with NEMA TC 13 and UL 1653.

2. RNC: Type EPC-40-PVC, complying with NEMA TC 2 and UL 651 unless otherwise indicated.
3. LFNC: Comply with UL 1660.

C. Nonmetallic Fittings:
1. Fittings, General: Listed and labeled for type of conduit, location, and use.
2. Fittings for ENT and RNC: Comply with NEMA TC 3; match to conduit or tubing type and material.
3. Fittings for LFNC: Comply with UL 514B.
4. Solvents and Adhesives: As recommended by conduit manufacturer.

2.3 METAL WIREWAYS AND AUXILIARY GUTTERS

A. Description: As directed, Sheet metal, complying with UL 870 and NEMA 250, Type 1, Type 3R, Type 4 or Type 12 unless otherwise indicated, and sized according to NFPA 70.

1. Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Fittings and Accessories: Include covers, couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.

2.4 NONMETALLIC WIREWAYS AND AUXILIARY GUTTERS

A. Listing and Labeling: Nonmetallic wireways and auxiliary gutters shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Description: PVC, extruded and fabricated to required size and shape, and having snap-on cover, mechanically coupled connections, and plastic fasteners.

C. Fittings and Accessories: Couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings shall match and mate with wireways as required for complete system.

D. Solvents and Adhesives: As recommended by conduit manufacturer.

2.5 BOXES, ENCLOSURES, AND CABINETS

A. General Requirements for Boxes, Enclosures, and Cabinets: Boxes, enclosures, and cabinets installed in wet locations shall be listed for use in wet locations.

B. Sheet Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.

C. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, ferrous alloy or aluminum, Type FD, with gasketed cover as directed.

D. Nonmetallic Outlet and Device Boxes: Comply with NEMA OS 2 and UL 514C.

E. Metal Floor Boxes:

1. Material: Cast metal or sheet metal.
2. Type: Fully adjustable or Semi-adjustable as directed.
3. Shape: Rectangular.
4. Listing and Labeling: Metal floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. Nonmetallic Floor Boxes: Nonadjustable, round or rectangular as directed.

1. Listing and Labeling: Nonmetallic floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

G. Luminaire Outlet Boxes: Nonadjustable, designed for attachment of luminaire weighing 50 lb (23 kg). Outlet boxes designed for attachment of luminaires weighing more than 50 lb (23 kg) shall be listed and marked for the maximum allowable weight.

H. Paddle Fan Outlet Boxes: Nonadjustable, designed for attachment of paddle fan weighing 70 lb (32 kg).

1. Listing and labeling: Paddle fan outlet boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

I. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.

J. Cast-Metal Access, Pull, and Junction Boxes: Comply with NEMA FB 1 and UL 1773, cast aluminum or galvanized, cast iron with gasketed cover as directed.

K. Box extensions used to accommodate new building finishes shall be of same material as recessed box.

L. Device Box Dimensions: 4 inches square by 2-1/8 inches deep (100 mm square by 60 mm deep) or 4 inches by 2-1/8 inches by 2-1/8 inches deep (100 mm by 60 mm by 60 mm deep) as directed.

M. Gangable boxes are allowed or prohibited as directed.

N. Hinged-Cover Enclosures: As directed, comply with UL 50 and NEMA 250, Type 1, Type 3R, Type 4 or Type 12 with continuous-hinge cover with flush latch unless otherwise indicated.

1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
2. Nonmetallic Enclosures: Plastic.
3. Interior Panels: Steel; all sides finished with manufacturer's standard enamel.

O. Cabinets:

1. As directed, NEMA 250, Type 1, Type 3R or Type 12 galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
2. Hinged door in front cover with flush latch and concealed hinge.
3. Key latch to match panelboards.
4. Metal barriers to separate wiring of different systems and voltage.
5. Accessory feet where required for freestanding equipment.
6. Nonmetallic cabinets shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.6 HANDHOLES AND BOXES FOR EXTERIOR UNDERGROUND WIRING

A. General Requirements for Handholes and Boxes:

1. Boxes and handholes for use in underground systems shall be designed and identified as defined in NFPA 70, for intended location and application.
2. Boxes installed in wet areas shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Polymer-Concrete Handholes and Boxes with Polymer-Concrete Cover: Molded of sand and aggregate, bound together with polymer resin, and reinforced with steel, fiberglass, or a combination of the two.
1. Standard: Comply with SCTE 77.
2. Configuration: Designed for flush burial with open, closed or integral closed bottom unless otherwise indicated as directed.
3. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and handhole location.
4. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
5. Cover Legend: Molded lettering, "ELECTRIC.".
6. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.

C. Fiberglass Handholes and Boxes: Molded of fiberglass-reinforced polyester resin, with frame and covers of polymer concrete, reinforced concrete, cast iron or hot-dip galvanized-steel diamond plate or fiberglass as directed.
1. Standard: Comply with SCTE 77.
2. Configuration: Designed for flush burial with open, closed or integral closed bottom unless otherwise indicated.
3. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and handhole location.
4. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
5. Cover Legend: Molded lettering, "ELECTRIC".
6. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.

PART 3 - EXECUTION

3.1 RACEWAY APPLICATION

A. Outdoors: Apply raceway products as specified below unless otherwise indicated:

1. Exposed Conduit: GRC, IMC, RNC, Type EPC-40-PVC or RNC, Type EPC-80-PVC as directed.
2. Concealed Conduit, Aboveground: GRC, IMC, EMT or RNC, Type EPC-40-PVC as directed.
3. Underground Conduit: RNC, Type EPC-40-PVC, Type EPC-80-PVC, direct buried or concrete encased as directed.
4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC or LFNC as directed.
5. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R or Type 4 as directed.

B. Indoors: Apply raceway products as specified below unless otherwise indicated.

1. Exposed, Not Subject to Physical Damage: EMT, ENT or RNC as directed.
2. Exposed, Not Subject to Severe Physical Damage: EMT or RNC identified for such use as directed.
3. Exposed and Subject to Severe Physical Damage: As directed, GRC or IMC. Raceway locations include the following:

    a. Loading dock.
    b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
    c. Mechanical rooms.
    d. Gymnasiums.

4. Concealed in Ceilings and Interior Walls and Partitions: EMT, ENT or RNC, Type EPC-40-PVC as directed.
5. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC, except use LFMC in damp or wet locations.
6. Damp or Wet Locations: GRC or IMC as directed.
7. Boxes and Enclosures: As directed, NEMA 250, Type 1, except use NEMA 250, Type 4 stainless steel or nonmetallic in institutional and commercial kitchens and damp or wet locations.

C. Minimum Raceway Size: 1/2-inch (16-mm) or 3/4-inch (21-mm) trade size as directed.

D. Raceway Fittings: Compatible with raceways and suitable for use and location.

1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.
2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with this type of conduit. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.

3. EMT: Use setscrew or compression, steel or cast-metal fittings as directed. Comply with NEMA FB 2.10.
4. Flexible Conduit: Use only fittings listed for use with flexible conduit. Comply with NEMA FB 2.20.

E. Do not install aluminum conduits, boxes, or fittings in contact with concrete or earth.

F. Install surface raceways only where indicated on Drawings.

G. Do not install nonmetallic conduit where ambient temperature exceeds 120 deg F (49 deg C).

3.2 INSTALLATION

A. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems" for hangers and supports.

B. Comply with NECA 1 and NECA 101 for installation requirements except where requirements on Drawings or in this article are stricter. Comply with NECA 102 for aluminum conduits. Comply with NFPA 70 limitations for types of raceways allowed in specific occupancies and number of floors.

C. Do not install raceways or electrical items on any "explosion-relief" walls or rotating equipment.

D. Do not fasten conduits onto the bottom side of a metal deck roof.

E. Keep raceways at least 6 inches (150 mm) away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.

F. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems" for hangers and supports.

G. Arrange stub-ups so curved portions of bends are not visible above finished slab.

H. Install no more than the equivalent of three 90-degree bends in any conduit run except for control wiring conduits, for which fewer bends are allowed. Support within 12 inches (300 mm) of changes in direction.

I. Make bends in raceway using large-radius preformed ells. Field bending shall be according to NFPA 70 minimum radii requirements. Use only equipment specifically designed for material and size involved.

J. Conceal conduit and EMT within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.

K. Support conduit within 12 inches (300 mm) of enclosures to which attached.

L. Raceways Embedded in Slabs:

1. Run conduit larger than 1-inch (27-mm) trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support. Secure raceways to reinforcement at maximum 10-foot (3-m) intervals.
2. Arrange raceways to cross building expansion joints at right angles with expansion fittings.
3. Arrange raceways to keep a minimum of 1 inch (25 mm) or 2 inches (50 mm) of concrete cover in all directions as directed.
4. Do not embed threadless fittings in concrete unless specifically approved by Architect for each specific location.
5. Change from ENT to RNC, Type EPC-40-PVC, GRC or IMC before rising above floor as directed.

M. Stub-ups to Above Recessed Ceilings:

1. Use EMT, IMC, or RMC for raceways.
2. Use a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.

N. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.

O. Coat field-cut threads on PVC-coated raceway with a corrosion-preventing conductive compound prior to assembly.

P. Raceway Terminations at Locations Subject to Moisture or Vibration: Use insulating bushings to protect conductors including conductors smaller than No. 4 AWG.

Q. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install bushings on conduits up to 1-1/4-inch (35-mm) trade size and insulated throat metal bushings on 1-1/2-inch (41-mm) trade size and larger conduits terminated with locknuts. Install insulated throat metal grounding bushings on service conduits.

R. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than 200-lb (90-kg) tensile strength. Leave at least 12 inches (300 mm) of slack at each end of pull wire. Cap underground raceways designated as spare above grade alongside raceways in use.

S. Surface Raceways:

1. Install surface raceway with a minimum 2-inch (50-mm) radius control at bend points.
2. Secure surface raceway with screws or other anchor-type devices at intervals not exceeding 48 inches (1200 mm) and with no less than two supports per straight raceway section. Support surface raceway according to manufacturer's written instructions. Tape and glue are not acceptable support methods.

T. Install raceway sealing fittings at accessible locations according to NFPA 70 and fill them with listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces.

U. Install devices to seal raceway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of all raceways at the following points:

1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
2. Where an underground service raceway enters a building or structure.
3. Conduit extending from interior to exterior of building.
4. Conduit extending into pressurized duct and equipment.
5. Conduit extending into pressurized zones that are automatically controlled to maintain different pressure set points.
6. Where otherwise required by NFPA 70.

V. Expansion-Joint Fittings:

1. Install in each run of aboveground RNC that is located where environmental temperature change may exceed 30 deg F (17 deg C) and that has straight-run length that exceeds 25 feet (7.6 m).
2. Install type and quantity of fittings that accommodate temperature change listed for each of the following locations:

    a. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F (70 deg C) temperature change.
    b. Outdoor Locations Exposed to Direct Sunlight: 155 deg F (86 deg C) temperature change.
    c. Indoor Spaces Connected with Outdoors without Physical Separation: 125 deg F (70 deg C) temperature change.
    d. Attics: 135 deg F (75 deg C) temperature change.

3. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per degree F (0.06 mm per meter of length of straight run per degree C) of temperature change for PVC conduits.
4. Install expansion fittings at all locations where conduits cross building or structure expansion joints.
5. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.

W. Flexible Conduit Connections: Comply with NEMA RV 3. As directed, Use a maximum of 36 inches (915 mm) or 72 inches (1830 mm) of flexible conduit for recessed and semi-recessed luminaires, equipment subject to vibration, noise transmission, or movement; and for transformers and motors.

1. Use LFMC in damp or wet locations subject to severe physical damage.
2. Use LFMC or LFNC in damp or wet locations not subject to severe physical damage.

X. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to center, top or bottom of box unless otherwise indicated.

Y. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block and install box flush with surface of wall. Prepare block surfaces to provide a flat surface for a raintight connection between the box and cover plate or the supported equipment and box.

Z. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel.

AA. Locate boxes so that cover or plate will not span different building finishes.

BB. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for the purpose.

CC. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.

DD. Set metal floor boxes level and flush with finished floor surface.

EE. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.

3.3 INSTALLATION OF UNDERGROUND CONDUIT

A. Direct-Buried Conduit:

1. Excavate trench bottom to provide firm and uniform support for conduit. Prepare trench bottom as specified in Section 312000 "Earth Moving" for pipe less than 6 inches (150 mm) in nominal diameter.
2. Install backfill as specified in Section 312000 "Earth Moving."
3. After installing conduit, backfill and compact. Start at tie-in point, and work toward end of conduit run, leaving conduit at end of run free to move with expansion and contraction as temperature changes during this process. Firmly hand tamp backfill around conduit to provide maximum supporting strength. After placing controlled backfill to within 12 inches (300 mm) of finished grade, make final conduit connection at end of run and complete backfilling with normal compaction as specified in Section 312000 "Earth Moving."
4. Install manufactured duct elbows for stub-up at poles and equipment and at building entrances through floor unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.
5. Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through floor.

    a. Couple steel conduits to ducts with adapters designed for this purpose and encase coupling with 3 inches (75 mm) of concrete for a minimum of 12 inches (300 mm) on each side of the coupling.
    b. For stub-ups at equipment mounted on outdoor concrete bases and where conduits penetrate building foundations, extend steel conduit horizontally a minimum of 60 inches (1500 mm) from edge of foundation or equipment base. Install insulated grounding bushings on terminations at equipment.

6. Underground Warning Tape: Comply with requirements in Section 260553 "Identification for Electrical Systems."

3.4 INSTALLATION OF UNDERGROUND HANDHOLES AND BOXES

A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting conduits to minimize bends and deflections required for proper entrances.

B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch (12.5-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.

C. Elevation: In paved areas, set so cover surface will be flush with finished grade. Set covers of other enclosures 1 inch (25 mm) above finished grade.

D. Install handholes with bottom below frost line, depth of frost line below grade as directed.

E. Field-cut openings for conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

3.5 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.6 FIRESTOPPING

A. Install firestopping at penetrations of fire-rated floor and wall assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

3.7 PROTECTION

A. Protect coatings, finishes, and cabinets from damage and deterioration.

1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 260533

SECTION 260536 - CABLE TRAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Ladder cable tray.
2. Wire-mesh cable tray.
3. Channel cable tray.
4. Fiberglass cable tray.
5. Fiberglass channel cable tray.
6. Cable tray accessories.
7. Warning signs.

B. Related Requirements:

1. Section 270536 "Cable Trays for Communications Systems" for cable trays and accessories serving communications systems.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For each type of cable tray.

1. Show fabrication and installation details of cable trays, including plans, elevations, and sections of components and attachments to other construction elements. Designate components and accessories, including clamps, brackets, hanger rods, splice-plate connectors, expansion-joint assemblies, straight lengths, and fittings.
2. Cable tray layout, showing cable tray route to scale, with relationship between the tray and adjacent structural, electrical, and mechanical elements. Include the following:

    a. Vertical and horizontal offsets and transitions.
    b. Clearances for access above and to sides of cable trays.
    c. Vertical elevation of cable trays above the floor or bottom of ceiling structure.
    d. Load calculations to show dead and live loads as not exceeding manufacturer's rating for tray and its support elements.

C. Delegated-Design Submittal: For seismic restraints.

1. Seismic-Restraint Details: Signed and sealed by a qualified professional engineer who is licensed in the state where Project is located and who is responsible for their preparation.
2. Design Calculations: Calculate requirements for selecting seismic restraints.
3. Detail fabrication, including anchorages and attachments to structure and to supported cable trays.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans and sections, drawn to scale, and coordinated with each other, using input from installers of the items involved:

B. Seismic Qualification Certificates: For cable trays, accessories, and components, from manufacturer.

C. Field quality-control reports.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design cable tray supports and seismic bracing.

B. Seismic Performance: Cable trays and supports shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "cable trays will remain in place without separation of any parts when subjected to the seismic forces specified."
2. Component Importance Factor: 1.5 or 1.0 as directed.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes in cable tray installed outdoors.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.2 GENERAL REQUIREMENTS FOR CABLE TRAY

A. Cable Trays and Accessories: Identified as defined in NFPA 70 and marked for intended location, application, and grounding.

B. Sizes and Configurations: See the Cable Tray Schedule on Drawings for specific requirements for types, materials, sizes, and configurations.

C. Structural Performance: See articles on individual cable tray types for specific values for the following parameters:

1. Uniform Load Distribution: Capable of supporting a uniformly distributed load on the indicated support span when supported as a simple span and tested according to NEMA VE 1.
2. Concentrated Load: A load applied at midpoint of span and centerline of tray.
3. Load and Safety Factors: Applicable to both side rails and rung capacities.

2.3 LADDER CABLE TRAY

A. Description: Two longitudinal side rails with transverse rungs swaged or welded to side rails, complying with NEMA VE 1.

B. Capacities and Characteristics:

1. Width: 6 inches (150 mm), 9 inches (225 mm), 12 inches (300 mm), 18 inches (450 mm), 24 inches (600 mm), 30 inches (750 mm) or 36 inches (900 mm) unless otherwise indicated on Drawings.
2. Minimum Usable Load Depth: 3 inches (75 mm), 4 inches (100 mm), 5 inches (125 mm) or 6 inches (150 mm) as directed.
3. Straight Section Lengths: 10 feet (3.0 m), 12 feet (3.7 m), 20 feet (6.0 m) or 24 feet (7.4 m), except where shorter lengths are required to facilitate tray assembly.
4. Rung Spacing: 6 inches (150 mm), 9 inches (225 mm), 12 inches (300 mm) or 18 inches (450 mm) o.c. as directed
5. Radius-Fitting Rung Spacing: 9 inches (225 mm) at center of tray's width.
6. Minimum Cable-Bearing Surface for Rungs: 7/8-inch (22-mm) width with radius edges.
7. No portion of the rungs shall protrude below the bottom plane of side rails.
8. Structural Performance of Each Rung: Capable of supporting a maximum cable load, with a safety factor of 1.5, plus a 200-lb (90-kg) concentrated load, when tested according to NEMA VE 1.
9. Fitting Minimum Radius: 12 inches (300 mm), 24 inches (600 mm), 36 inches (900 mm) or 48 inches (1200 mm) as directed.
10. Class Designation: Comply with NEMA VE 1, Class 5AA, Class 5A, Class 8AA, Class 8A, Class 10AA, Class 10A, Class 12AA, Class 12A, Class 20AA or Class 20A as directed.
11. Splicing Assemblies: Bolted type using serrated flange locknuts.
12. Splice-Plate Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.
13. Covers: As directed, Solid, Louvered, Ventilated-hat or 2-in-3 pitch type made of same materials and with same finishes as cable tray.

C. Materials and Finishes:

1. Steel:

a. Straight Section and Fitting Side Rails and Rungs: Steel complies with the minimum mechanical properties of ASTM A1011/A1011M, SS, Grade 33 or ASTM A1008/A1008M, Grade 33, Type 2 as directed.
b. Steel Tray Splice Plates: ASTM A1011/A1011M, HSLAS, Grade 50, Class 1.
c. Fasteners: Steel complies with the minimum mechanical properties of ASTM A510/A510M, Grade 1008.
d. Finish: Hot-dipped galvanized after fabrication, complying with ASTM A123/A123M, Class B2.

1) Hardware: Galvanized, ASTM B633, Chromium-zinc plated, ASTM F1136 or Stainless steel, Type 316 as directed.

e. Finish: Hot-dipped galvanized after fabrication, complying with ASTM A653/A653M, G90 (Z275).

1) Hardware: Galvanized, ASTM B633 or Chromium-zinc plated, ASTM F1136 as directed.

2. Aluminum:

a. Materials: Alloy 6063-T6 according to ANSI H35.1/H 35.1M for extruded components, and Alloy 5052-H32 or Alloy 6061-T6 according to ANSI H35.1/H 35.1M for fabricated parts.
b. Hardware: Chromium-zinc-plated steel, ASTM F1136 or Stainless steel, Type 316, ASTM F593 and ASTM F594 as directed.
c. Hardware for Aluminum Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM F593 and ASTM F594.

2.4 WIRE-MESH CABLE TRAY

A. Description: Galvanized-steel wire mesh, complying with NEMA VE 1.

B. Capacities and Characteristics:

1. Width: 2 inches (50 mm), 4 inches (100 mm), 6 inches (150 mm), 8 inches (200 mm), 12 inches (300 mm), 16 inches (400 mm), 18 inches (450 mm), 20 inches (500 mm) or 24 inches (600 mm) unless otherwise indicated on Drawings.
2. Minimum Usable Load Depth: 1 inch (25 mm), 2 inches (50 mm), 4 inches (100 mm) or 6 inches (150 mm) as directed.
3. Straight Section Lengths: 10 feet (3.0 m) or 12 feet (3.7 m), except where shorter lengths are required to facilitate tray assembly as directed.
4. Structural Performance: Capable of supporting a maximum cable load, with a safety factor of 1.5, plus a 200-lb (90-kg) concentrated load, when tested according to NEMA VE 1.
5. Class Designation: Comply with NEMA VE 1, Class 5AA, Class 5A, Class 8AA, Class 8A, Class 10AA, Class 10A, Class 12AA, Class 12A, Class 20AA or Class 20A as directed.
6. Splicing Assemblies: Bolted type using serrated flange locknuts.
7. Splice-Plate Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.

C. Materials and Finishes:

1. Steel:

a. Straight Sections and Fittings: Steel complies with the minimum mechanical properties of ASTM A1011/A1011M, SS, Grade 33 or ASTM A1008/A1008M, Grade 33, Type 2.
b. Steel Tray Splice Plates: ASTM A1011/A1011M, HSLAS, Grade 50, Class 1.
c. Fasteners: Steel complies with the minimum mechanical properties of ASTM A510/A510M, Grade 1008.
d. Finish: Hot-dipped galvanized after fabrication, complying with ASTM A123/A123M, Class B2.

1) Hardware: Galvanized, ASTM B633, Chromium-zinc plated, ASTM F1136 or Stainless steel, Type 316 as directed.

e. Finish: Hot-dipped galvanized after fabrication, complying with ASTM A653/A653M, G90 (Z275).

1) Hardware: Galvanized, ASTM B633 or Chromium-zinc plated, ASTM F1136 as directed.

2.5 CHANNEL CABLE TRAY

A. Description: Single, formed sheet with a solid or ventilated bearing surface, complying with NEMA VE 1 as directed.

B. Capacities and Characteristics:

1. Width: 3 inches (75 mm), 4 inches (100 mm) or 6 inches (150 mm) unless otherwise indicated on Drawings.
2. Minimum Usable Load Depth: 1-1/4 inches (30 mm) or 2 inches (50 mm) as directed.
3. Straight Section Lengths: 10 feet (3.0 m) or 12 feet (3.7 m), except where shorter lengths are required to facilitate tray assembly.
4. Structural Performance: Capable of supporting a maximum cable load, with a safety factor of 1.5, plus a 200-lb (90-kg) concentrated load, when tested according to NEMA VE 1.
5. Fitting Minimum Radius: 12 inches (300 mm), 24 inches (600 mm), 36 inches (900 mm) or 48 inches (1200 mm) as directed.
6. Class Designation: Comply with NEMA VE 1, Class 5AA, Class 5A, Class 8AA, Class 8A, Class 10AA, Class 10A, Class 12AA, Class 12A, Class 20AA or Class 20A as directed.
7. Splicing Assemblies: Bolted type using serrated flange locknuts.
8. Splicing Assembly Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.
9. Covers: As directed, Solid, Louvered, Ventilated-hat or 2-in-3 pitch type made of same materials and with same finishes as cable tray.

C. Materials and Finishes:

1. Steel:

a. Straight Section and Fitting Side Rails and Rungs: Steel complies with the minimum mechanical properties of ASTM A1011/A1011M, SS, Grade 33 or ASTM A1008/A1008M, Grade 33, Type 2 as directed.
b. Steel Tray Splice Plates: ASTM A1011/A1011M, HSLAS, Grade 50, Class 1.
c. Fasteners: Steel complies with the minimum mechanical properties of ASTM A510/A510M, Grade 1008.
d. Finish: Hot-dip galvanized after fabrication complying with ASTM A123/A123M, Class B2.

1) Hardware: Galvanized, ASTM B633, Chromium-zinc plated, ASTM F1136 or Stainless steel, Type 316 as directed.

e. Finish: Hot-dip mill galvanized before fabrication complying with ASTM A653/A653M, G90 (Z275).

1) Hardware: Galvanized, ASTM B633 or Chromium-zinc plated, ASTM F1136 as directed.

2. Aluminum:

a. Materials: Alloy 6063-T6 according to ANSI H35.1/H 35.1M for extruded components, and Alloy 5052-H32 or Alloy 6061-T6 according to ANSI H35.1/H 35.1M for fabricated parts.
b. Hardware: Chromium-zinc-plated steel, ASTM F1136 or Stainless steel, Type 316, ASTM F593 and ASTM F594 as directed.
c. Hardware for Aluminum Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM F593 and ASTM F594.

3. Stainless Steel:

a. Materials: Low-carbon, passivated stainless steel, Type 304L or Type 316L, ASTM F593 and ASTM F594 as directed.
b. Hardware for Stainless-Steel Cable Tray Used Outdoors: Stainless steel, Type 316, ASTM F593 and ASTM F594.

2.6 FIBERGLASS CABLE TRAY

A. Description: Two longitudinal members with rounded edges and smooth surfaces, supporting a bearing surface, complying with NEMA FG 1.

B. Capacities and Characteristics:

1. Materials: Straight section structural elements; side rails, rungs, and splice plates shall be pultruded from glass-fiber-reinforced polyester or vinyl ester resin, complying with NEMA FG 1 and UL 568.
2. Width: 6 inches (150 mm), 9 inches (225 mm), 12 inches (300 mm), 18 inches (450 mm), 24 inches (600 mm), 30 inches (750 mm) or 36 inches (900 mm) unless otherwise indicated on Drawings.
3. Minimum Usable Load Depth: 1 inch (25 mm), 2 inches (50 mm), 3 inches (75 mm), 5 inches (125 mm) or 7 inches (175 mm) according to NEMA FG 1.
4. Straight Section Lengths: 10 feet (3.0 m) or 20 feet (6.0 m).
5. Class Designation: Comply with NEMA VE 1, Class 5AA, Class 5A, Class 8AA, Class 8A, Class 10AA, Class 10A, Class 12AA, Class 12A, Class 20AA, Class 20A.
6. Temperature Rating: Reduce the load rating of trays exposed to temperatures above 75 deg F (24 deg C) according to Table 4-3, "Working Loads," in NEMA FG 1.
7. Fitting Minimum Radius: 12 inches (300 mm) or 24 inches (600 mm).
8. Splicing Assemblies: Minimum four nuts and bolts per plate. Splice plates shall be furnished with straight sections and fittings.
9. Splicing Assembly Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.
10. Fasteners: Fiberglass-encapsulated, ASTM F593 and ASTM F594 stainless steel, Type 316. Design fasteners so that no metal is visible when fully assembled and

tightened. Fastener encapsulation shall not be damaged when torqued to manufacturer's recommended value.

11. Covers: As directed, Solid, Louvered, Ventilated-hat or 2-in-3 pitch type made of same materials and with same finishes as cable tray.

2.7 FIBERGLASS CHANNEL CABLE TRAY

A. Description: Two longitudinal members with rounded edges and smooth surfaces, supporting a solid or ventilated bearing surface, complying with NEMA FG 1.

B. Capacities and Characteristics:

1. Materials: Straight section structural elements; side rails, rungs, and splice plates shall be pultruded from glass-fiber-reinforced polyester or vinyl ester resin, complying with NEMA FG 1 and UL 568.
2. Width: 3 inches (75 mm), 4 inches (100 mm) or 6 inches (150 mm) unless otherwise indicated on Drawings.
3. Minimum Usable Load Depth: 1-1/4 inches (30 mm) or 2 inches (50 mm) as directed.
4. Straight Section Lengths: 10 feet (3.0 m), 12 feet (3.7 m), except where shorter lengths are required to facilitate tray assembly.
5. Class Designation: Comply with NEMA VE 1, Class 5AA, Class 5A, Class 8AA, Class 8A, Class 10AA, Class 10A, Class 12AA, Class 12A, Class 20AA or Class 20A.
6. Temperature Rating: Reduce the load rating of trays exposed to temperatures above 75 deg F (24 deg C) according to Table 4-3, "Working Loads," in NEMA FG 1.
7. Fitting Minimum Radius: 12 inches (300 mm) or 24 inches (600 mm) as directed.
8. Splicing Assemblies: Minimum four nuts and bolts per plate. Splice plates shall be furnished with straight sections and fittings.
9. Splicing Assembly Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.
10. Fasteners: Fiberglass-encapsulated, ASTM F593 and ASTM F594 stainless steel, Type 316. Design fasteners so that no metal is visible when fully assembled and tightened. Fastener encapsulation shall not be damaged when torqued to manufacturer's recommended value.
11. Covers: Solid, Louvered, Ventilated-hat or 2-in-3 pitch type made of same materials and with same finishes as cable tray as directed.

2.8 CABLE TRAY ACCESSORIES

A. Fittings: Tees, crosses, risers, elbows, and other fittings as indicated, of same materials and finishes as cable tray.

B. Barrier Strips: Same materials and finishes as for cable tray.

C. Cable tray supports and connectors, including bonding jumpers, as recommended by cable tray manufacturer.

2.9 WARNING SIGNS

A. Lettering: 1-1/2-inch- (40-mm-) high, black letters on yellow background, with legend "WARNING! NOT TO BE USED AS WALKWAY, LADDER, OR SUPPORT FOR LADDERS OR PERSONNEL."

B. Comply with Section 260553 "Identification for Electrical Systems."

PART 3 - EXECUTION

3.1 CABLE TRAY INSTALLATION

A. Install cable tray and support systems according to NEMA FG 1 or NEMA VE 2 as directed.

B. Install cable tray as a complete system, including fasteners, hold-down clips, support systems, barrier strips, adjustable horizontal and vertical splice plates, elbows, reducers, tees, crosses, cable dropouts, adapters, covers, and bonding.

C. Install cable tray, so that the tray is accessible for cable installation and all splices are accessible for inspection and adjustment.

D. Remove burrs and sharp edges from cable trays.

E. Fasten cable tray supports to building structure and install seismic restraints.

F. Design fasteners and supports to carry cable tray, cables, and a concentrated load of 200 lb (90 kg). Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems." Comply with seismic-restraint details according to Section 260548.16 "Seismic Controls for Electrical Systems."

G. Place supports, so that spans do not exceed maximum spans on schedules, and provide clearances shown on Drawings. Install intermediate supports when cable weight exceeds the load-carrying capacity of tray rungs.

H. Construct supports from channel members, threaded rods, and other appurtenances furnished by cable tray manufacturer. Arrange supports in trapeze or wall-bracket form as required by application.

I. Do not install more than one cable tray splice between supports.

J. Make changes in direction and elevation using manufacturer's recommended fittings.

K. Make cable tray connections using manufacturer's recommended fittings.

L. Seal penetrations through fire and smoke barriers. Comply with requirements in Section 078413 "Penetration Firestopping."

M. Install capped metal sleeves for future cables through firestop-sealed cable tray penetrations of fire and smoke barriers.

N. Install cable trays with enough workspace to permit access for installing cables.

O. Install barriers to separate cables of different systems, such as power, communications, and data processing, or of different insulation levels, such as 600, 5000, and 15 000 V.

P. Install permanent covers and cover clamps, if used, after installing cable.

Q. Clamp covers on cable trays installed outdoors with heavy-duty clamps.

R. Install warning signs in visible locations on or near cable trays after cable tray installation.

3.2 CABLE TRAY GROUNDING

A. Ground cable trays according to NFPA 70 unless additional grounding is specified. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

B. Cable trays with electrical power conductors shall be bonded together with splice plates listed for grounding purposes or with listed bonding jumpers.

C. Cable trays with single-conductor power conductors shall be bonded together with a grounding conductor run in the tray along with the power conductors and bonded to the tray at 72-inch (1800-mm) intervals. The grounding conductor shall be sized according to NFPA 70, Article 250.122, "Size of Equipment Grounding Conductors," and Article 392, "Cable Trays."

D. When using epoxy- or powder-coat painted cable trays as a grounding conductor, completely remove coating at all splice contact points or ground connector attachment. After completing splice-to-grounding-bolt attachment, repair the coated surfaces with coating materials recommended by cable tray manufacturer.

E. Bond cable trays to power source for cables contained within with bonding conductors sized according to NFPA 70, Article 250.122, "Size of Equipment Grounding Conductors."

F. In existing construction, remove inactive or dead cables from cable trays.

3.3 CONNECTIONS

A. Remove paint from all connection points before making connections. Repair paint after the connections are completed.

B. Connect raceways to cable trays according to requirements in NEMA VE 2 and NEMA FG 1.

3.4 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. After installing cable trays and after electrical circuitry has been energized, survey for compliance with requirements.

2. Visually inspect cable insulation for damage. Correct sharp corners, protuberances in cable trays, vibrations, and thermal expansion and contraction conditions, which may cause or have caused damage.
3. Verify that the number, size, and voltage of cables in cable trays do not exceed that permitted by NFPA 70. Verify that communications or data-processing circuits are separated from power circuits by barriers or are installed in separate cable trays.
4. Verify that there are no intruding items, such as pipes, hangers, or other equipment, in the cable tray.
5. Remove dust deposits, industrial process materials, trash of any description, and any blockage of tray ventilation.
6. Visually inspect each cable tray joint and each ground connection for mechanical continuity. Check bolted connections between sections for corrosion. Clean and retorque in suspect areas.
7. Check for improperly sized or installed bonding jumpers.
8. Check for missing, incorrect, or damaged bolts, bolt heads, or nuts. When found, replace with specified hardware.
9. Perform visual and mechanical checks for adequacy of cable tray grounding; verify that all takeoff raceways are bonded to cable trays. Test entire cable tray system for continuity. Maximum allowable resistance is 1 ohm.

B. Prepare test and inspection reports.

3.5 PROTECTION

A. Protect installed cable trays and cables.

1. Install temporary protection for cables in open trays to safeguard exposed cables against falling objects or debris during construction. Temporary protection for cables and cable tray can be constructed of wood or metal materials and shall remain in place until the risk of damage is over.
2. Repair damage to galvanized finishes with zinc-rich paint recommended by cable tray manufacturer.
3. Repair damage to paint finishes with matching touchup coating recommended by cable tray manufacturer.

END OF SECTION 260536

SECTION 260539 - UNDERFLOOR RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Flat-top, single- or multichannel, underfloor raceways.
2. Flush, flat-top underfloor raceways.
3. Cellular metal underfloor raceways.
4. Trench-type underfloor raceways.
5. Supports, raceway fittings, and hardware.
6. Junction boxes.
7. Service fittings.

1.2 ACTION SUBMITTALS

A. Product Data: For underfloor raceway components, fittings, and accessories.

B. Shop Drawings: For underfloor raceways.

1. Include floor plans, elevations, sections, and details.
2. Identify components and accessories, such as expansion-joint assemblies, straight raceway lengths, preset and afterset inserts, and service fittings.
3. Provide dimensions locating raceway header and distribution elements. Include spacing between preset inserts and between preset inserts and ends of duct runs, walls, columns, junction boxes, and header duct connections.
4. Provide raceway fill charts for each duct size provided for each conductor size the duct is identified to accept.
5. Show connections between raceway elements and relationships between components and adjacent structural and architectural elements, including slab reinforcement, floor finish work, permanent partitions, expansion joints, architectural module lines, and pretensioning or post-tensioning components.
6. Indicate height of preset inserts, junction boxes, and raceways coordinated with depth of concrete slab and floor fill.
7. Indicate thickening of slabs where required for adequate encasement of raceway components.
8. Document coordination of exposed components with floor-covering materials to ensure that fittings and trim are suitable for indicated floor-covering material.
9. Revise locations from those indicated in the Contract Documents, as required to suit field conditions and to ensure a functioning layout. Identify proposed deviations from the Contract Documents.
10. Show details of connections and terminations of underfloor raceways at panelboards and communication terminal equipment in equipment rooms, wire closets, and similar spaces.
11. Identify those cells of cellular floor deck that are to be connected and fitted.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

B. Project record documents.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Member company of NETA or an NRTL.

1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

B. Comply with UL 884.

C. Comply with NFPA 70.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Jacks, Receptacles, and Fittings:

1. Comply with Section 262726 "Wiring Devices" for power outlets, faceplates, and connectors.
2. Comply with Section 271513 "Communications Copper Horizontal Cabling" for twisted pair jacks, outlets, assemblies, and faceplates.
3. Comply with Section 271523 "Communications Optical Fiber Horizontal Cabling" for optical fiber jacks, outlets, assemblies, and faceplates.
4. Comply with Section 271533 "Communications Coaxial Horizontal Cabling" for coaxial jacks, outlets, assemblies, and faceplates.

2.2 FLAT-TOP, STEEL UNDERFLOOR RACEWAYS

A. Description: Steel, rectangular, flat-top, single-channel raceways with premanufactured inserts.

B. Source Limitations: Obtain underfloor raceway components for each system through single source from single manufacturer.

C. Material: As directed, one-piece, continuous weld, minimum 0.0598-inch- (1.5-mm-) thick steel, with corrosion-resistant or galvanized coating inside and out after welding.

D. Cross-Section Shape: Rectangular, with rounded corners.

E. Number of Longitudinal Channels: As directed, Two, Three or Four, separated by steel wall(s).

F. Minimum Bending Radius for Communication Cables: Combination of raceways, fittings, inserts, junction boxes, service fittings, and mounting and connection arrangements for wiring devices and jacks shall provide a 2-inch- (50-mm-) minimum bending radius for communication cables.

G. Service Raceways: Fitted with preset inserts.

1. Nominal Multichannel Underfloor Raceway Dimensions:

   a. Depth: 1-3/8 inches (35 mm).
   b. Power Service Channel Width: 3-1/2 inches (88 mm) or 4-3/8 inches (110 mm) as directed.
   c. Communication Service Channel Width: 3-1/2 inches (88 mm), 4 inches (100 mm) or 6-1/2 inches (163 mm) as directed.

2. Nominal Single-Channel Underfloor Raceway Dimensions:

   a. Depth: 1-1/2 inches (38 mm).
   b. Power Service Raceway Width: 3-1/4 inches (81 mm).
   c. Communication Service Raceway Width: 3-1/4 inches (81 mm) or 6 inches (150 mm) as directed.
   d. Number of Single-Channel Raceways per Run: One, Two, Three, Four or Five unless otherwise indicated.

3. Preset Inserts: Rectangular or Round as directed.

   a. Spacing: 12 inches (300 mm) or 24 inches (600 mm) o.c. as directed
   b. Size: Rectangular dimensions as required to accommodate mounting and connection of flush- and surface-mounted, single- and multiple-outlet service fittings or to connect to wiring extensions for feeding wall outlets for power, communications or power and communications as directed.
   c. Size: 2 inches (50 mm) in diameter.
   d. Equip each insert with a disposable cover and select insert height so cover is 1/8 inch (3 mm) below surface of concrete.
   e. Arrange insert for optional attachment of flush-, surface-, or wiring-extension service fitting to replace disposable cover. Arrange brackets, mountings, barriers, and floor access covers to support, isolate, and provide access to flush or surface outlet-mounting connector, jack, and receptacle devices.

H. Header Raceways: Single- or Multi channel, without preset inserts (blank raceway) as directed.

1. Nominal Raceway Dimensions:

a. Depth: Same as service raceways, 2-1/2 inches (63 mm), 2-3/4 inches (69 mm), 3 inches (75 mm) or 3-1/2 inches (88 mm).
b. Power Header Raceway Width: 3-1/2 inches (88 mm) or 4-3/8 inches (110 mm) as directed.
c. Communication Header Raceway Width: 3-1/2 inches (88 mm), 4 inches (100 mm) or 6-1/2 inches (163 mm) as directed.

2. Arrangement: In same plane as or Below service raceways as directed.
3. Connections: Arranged to connect with service raceways at single or two-level junction boxes as directed.

2.3 FLUSH, FLAT-TOP UNDERFLOOR RACEWAYS

A. Description: Single or multichannel underfloor raceways installed on floor slab with top of raceway flush with concrete topping added hereafter, and then covered with finish material.

B. Source Limitations: Obtain underfloor raceway components for each system through single source from single manufacturer.

C. Material: Steel.

D. Cross-Section Shape: Rectangular, single channel and multichannel, separated by steel wall(s).

E. Listed and labeled for installation with top flush with concrete floor.

F. Number of Levels: One.

G. Service Raceways: Fitted with preset inserts.

1. Number of Longitudinal Channels per Multichannel Raceway: Two or Three as directed.
2. Number of Single-Channel Raceways per Run: One, Two or Three unless otherwise indicated.
3. Nominal Channel Dimensions: 3 inches (75 mm) wide by 1-1/4 inches (31 mm) deep.
4. Preset Inserts: Threaded opening with removable steel plug that is flush with top of raceway when screwed in place.

a. Spacing: As directed, 12 inches (300 mm) or 24 inches (600 mm) o.c., full length of each service raceway.
b. Arrangement: Stagger insert locations on parallel raceways or channels to accommodate placement of adjacent service fittings.
c. Size: 1-5/8-inch (41-mm) diameter.

H. Trench Duct Cross-under: Fitting attached to underside of trench duct.

1. Nominal Channel Dimensions: Same as service raceways.
2. Arrangement: Offset by depth of trench duct.
3. Connections: Arranged to connect trench duct to flush duct through factory-cut, grommeted openings.

I. Header Raceways: Raceways same as service raceways, except without preset inserts (blank raceway).

1. Nominal Channel Dimensions: Same as service raceways.
2. Arrangement: In same plane as service raceways.
3. Connections: Arranged to connect with service raceways at junction boxes.

2.4 CELLULAR METAL UNDERFLOOR RACEWAYS

A. Description: Multichannel, cellular, underfloor service raceways installed on floor slab with top of raceway flush concrete topping added hereafter, and then covered with finish material.

B. Source Limitations: Obtain underfloor raceway components for each system through single source from single manufacturer.

C. Material: Galvanized-steel sheet, ASTM A653/A653M, Structural Steel (SS), Grade 33 (230) minimum, G60 (Z180) or G90 (Z275) zinc coating as directed.

D. Material: Galvanized- and shop-primed steel sheet, ASTM A653/A653M, Structural Steel (SS), Grade 33 (230), G60 (Z180) zinc coating; with underside surface cleaned, pretreated, and primed with manufacturer's standard gray or white baked-on, rust-inhibitive primer as directed.

E. Number of Longitudinal Cells: Three, separated by steel walls.

F. Nominal Dimensions of Cells:

1. Overall Depth: 1-1/4 inches (31 mm) unless otherwise indicated.
2. Cross-Sectional Area of Cells: Power cells: 5-1/2 sq. in. (34.4 sq. cm); communication system cells: 16 sq. in. (100 sq. cm).

G. Minimum Bending Radius for Communication Cables: Combination of raceways, fittings, inserts, junction boxes, service fittings, and mounting and connection arrangements for wiring devices and jacks shall provide a 2-inch (50-mm) minimum bending radius for communication cables.

H. Service Raceways: Fitted with preset inserts.

1. Preset Inserts: Rectangular-shaped metal housing assemblies arranged to provide electrical outlet access to each cell of each raceway designated for service raceway use. Inserts shall be provided throughout the entire length of each such raceway.

    a. Spacing: 12 inches (300 mm), 24 inches (600 mm) or 30 inches (750 mm) o.c. as directed
    b. Include housing and connecting provisions for a flush or recessed, single-, double-, or triple-outlet service fitting.
    c. Include mounting and connecting provisions for a surface, single- or multiple-outlet service fitting.
    d. Include connecting provisions for a wiring-extension service fitting to feed wall outlets.

e. Equip each insert with a disposable cover plate arranged for installation with top 1/8 inch (3 mm) below surface of concrete. Arrange insert to receive a flush-, recessed-, or wiring-extension service fitting to replace disposable top.

I. Header Assembly: A junction box and raceway arrangement positioned to feed wires and cables to service raceways.

1. Three-compartment junction box connecting blank, multicell cellular or flat-top, multichannel header raceway (no inserts) with cellular service raceways at right angles to header raceway as directed.
2. Cellular header raceway shall be made of the same material and have the same nominal dimensions as service raceways.
3. Provide capability for service raceways to be run in both perpendicular directions at the intersection with header raceway.

2.5 TRENCH-TYPE UNDERFLOOR RACEWAYS

A. Description: Trench-type raceways used as header or feeder raceways to serve service raceways.

B. Source Limitations: Obtain underfloor raceway components for each system through single source from single manufacturer.

C. Trench: Steel, shop or factory welded and fabricated to indicated sizes. Include the following features:

1. Slab Depth Adjustment: Minimum of minus 1/8 inch (3 mm) to plus 5/8 inch (17 mm) before and during concrete placement.
2. Cover Supports: Height adjustable, with leveling screws to rigidly support cover assembly.
3. Screed Strip: Extruded aluminum along both edges at proper elevation without requiring shim material.
4. Trim Strip: Select to accommodate floor finish material.
5. Partitions: Arranged to separate channels and isolate wiring of different systems.
6. Grommeted openings in active floor cells or service raceways.
7. Manufacturer's standard corrosion-resistant finish, applied after fabrication.

D. Cover Plates: Removable, steel plates, 1/4 inch (6 mm) thick, each weighing 60 lb (27 kg) or less with full gasket attached to side units. Fabricate intermediate supports to limit unsupported spans to 15 inches (375 mm) or less. Fabricate covers with appropriate depth recess to receive indicated floor finish.

2.6 SUPPORTS, RACEWAY FITTINGS, AND HARDWARE

A. Source Limitations: Obtain underfloor raceway supports, fittings, and hardware components for each system through single source from single manufacturer.

B. Supports, fittings, and hardware shall be compatible with raceway and outlet system and shall be listed for use with raceway systems and components delivered.

C. Supports: Adjustable for height and arranged to maintain alignment and spacing of raceways during concrete placement. Include hold-down straps.

D. Raceway Fittings: Couplings, expansion-joint sleeves, cross-under offsets, vertical and horizontal elbows, grounding screws, adapters, end caps, and other fittings suitable for use with basic components to form a complete installation.

2.7 JUNCTION BOXES

A. Description: Raceway manufacturer's standard enclosure for indicated type, quantity, arrangement, and configuration of raceways at each raceway junction, intersection, and access location. Include the following accessories and features:

1. Mounting brackets.
2. Escutcheons and holders to accommodate surrounding floor covering.
3. Means for leveling and height adjustment more than 3/8 inch (10 mm) before and after concrete is placed.
4. Boxes shall withstand a minimum 300-lb (136-kg) concentrated load. Internal supports shall be provided as needed to meet this requirement.
5. All boxes shall provide 2-inch- (50-mm-) minimum bend radius for data and communication cables.
6. Raceway Openings: For underfloor raceways and conduits arranged to accommodate raceway layout.
7. Covers shall have appropriate depth recess to receive specific floor finish material.
8. Partitions to separate wiring of different systems.

2.8 SERVICE FITTINGS/ACTIVATIONS

A. Source Limitations: Obtain underfloor raceway service fittings and hardware for each system through single source from single manufacturer.

B. Exposed Parts Finish: Brass or Brushed aluminum as directed.

C. Flush, Single-System Service Fitting for Round Inserts: Include mounting and cover to support and provide access to single connector, jack, or receptacle device; mounted flush with floor within body of insert.

D. Flush, Single- or Multiple-System Service Fitting for Rectangular Inserts: Include mounting, hinged cover, and trim to support and provide access to connector, jack, or receptacle devices mounted flush with floor within insert.

1. Recess-Mounted Service Fitting: Modular fittings compatible with preset inserts. Include device plates for indicated systems and provisions for receptacles, jacks, and connectors. Include hinged flush covers with recessed depth to match thickness of floor finish material. Provide for internally mounted receptacle- and communication-jack and connector assemblies.

E. Surface-Mounted Service Fitting: Modular pedestal type, with locking attachment matched to insert floor opening.

1. Power-outlet, double-faced, surface-mounted unit for duplex receptacle on both sides.
2. Power-outlet, single-faced, surface-mounted unit for duplex receptacle on one side.
3. Communication-outlet, double-faced, surface-mounted unit.

    a. Include bushed openings on both sides; 1-inch (25-mm) minimum diameter; insulated with nonconducting material.
    b. Include provisions for modular dual fiber-optic connector assembly on both sides.
    c. Include provisions for modular dual jack-connector assembly, rated for Category 5, Category 5e or Category 6 on both sides as directed.

4. Communication-outlet, single-faced, surface-mounted unit with bushed opening on one side; 1-inch (25-mm) minimum diameter; insulated with nonconducting material.
5. Combination surface-mounted unit for duplex receptacle on one side and with communication cable connection provision on opposite side.
6. Flush-Mounted Service Fittings: Modular fittings compatible with preset inserts and shall include covers, provisions for receptacles jacks and connector assemblies and wiring extensions to wall-mounted outlets, and associated device plates for indicated systems. Include flush covers, recessed to suit floor finish material.
7. Indicate types and locations of devices on Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install raceways aligned and leveled and, unless otherwise indicated, parallel or perpendicular to floor supports.

B. Maintain arrangement of conductor services throughout the raceway system.

C. Install a concrete mud slab for support of cellular metal, flush duct, or trench duct raceway. Construct mud slab with wire mesh in the top 1 inch (25 mm) of concrete.

D. Install a vapor barrier between the cellular metal raceway and a substrate in contact with earth.

E. Arrange supports to attain proper elevation, alignment, and spacing of raceways. Fasten supports securely at ends and at intervals not to exceed 60 inches (1500 mm), to prevent movement during concrete pour.

F. Level raceway components with finished slab and make adjustments in raceway component elevation to accommodate indicated floor finishes.

G. Junction Boxes: Install tops level and flush with finished floor. Install blank closure plates or plugs to close unused junction-box openings. Grout boxes in place to prevent movement during construction. Place top covers in inverted position during construction to prevent damage to surface of cover. Reinstall covers in proper position prior to final acceptance of the Work.

H. Install preset inserts per manufacturer's instructions.

I. Adjust supports to maintain a 1/8- to 3/8-inch (3.0- to 10-mm) finished concrete cover over preset inserts.

J. Remove burrs, sharp edges, dents, and mechanical defects.

K. Cap or plug boxes, insert- and service-fitting openings, and open ends of raceways.

L. Install expansion fittings with suitable bonding jumper where raceways cross building expansion joints.

M. Bond underfloor raceway components to create a continuous bonding path.

N. Seal raceways, cells, junction boxes, and inserts, as recommended in writing by underfloor raceway manufacturer, to prevent water, concrete, or foreign matter from entering raceways before and during pouring slab or placing fill.

O. Install a marker at the center of the last insert of each cell and channel of each straight run of metal underfloor service raceway to locate the insert and identify the system.

1. Install markers at last inserts on both sides of permanent walls and at first inserts adjacent to each junction box.
2. Use slotted-head screw to identify electrical power; use Phillips-head screw to identify conventional communications and use another distinctive screw head to identify third system, such as special-purpose wiring.

P. Protect underfloor raceway system from damage. Do not use the installed duct system as working platforms or walkways. Do not allow equipment or heavy traffic over duct during construction period, without first installing ramps over the duct. Ramps shall be designed so that imposed loads are not transferred to the duct. Components of the system that are damaged during construction shall be replaced.

Q. Install concrete surrounding underfloor raceways according to Section 033000 "Cast-in-Place Concrete."

R. Afterset Inserts: Cut, hole saw, and drill slab and raceways to allow for installation at locations indicated on plans.

S. Wiring shall comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables" and NFPA 70 requirements for wet locations.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: As directed, Owner will engage or Engage a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Perform visual inspection of interior of each junction box or section of trench raceway to verify absence of dirt, dust, construction debris, and moisture. Replace damaged and malfunctioning components.
2. Prior to and after concrete pour, perform point-to-point tests of ground continuity and resistance of ground path between the most remote accessible fitting on each branch of each underfloor raceway system and the main electrical distribution grounding system.

    a. Determine cause and perform correction of any point-to-point resistance value that exceeds 0.05 ohms.
    b. Comply with NETA Acceptance Testing Specification about safety, suitability of test equipment, test instrument calibration, and test report and records.

D. Prepare test and inspection reports.

3.4 CLEANING

A. Clean and swab out underfloor raceways, inserts, and junction boxes after finish has been applied to floor slab, and remove foreign material, dirt, and moisture. Leave interiors clean and dry.

END OF SECTION 260539

SECTION 260543 - UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metal conduits and fittings, including GRC and PVC-coated steel conduit.
2. Rigid nonmetallic duct.
3. Flexible nonmetallic duct.
4. Duct accessories.
5. Precast concrete handholes.
6. Polymer concrete handholes and boxes with polymer concrete cover.
7. Fiberglass handholes and boxes with polymer concrete cover.
8. Fiberglass handholes and boxes.
9. High density plastic boxes.
10. Precast manholes.
11. Utility structure accessories.

1.2 DEFINITIONS

A. Direct Buried: Duct or a duct bank that is buried in the ground, without any additional casing materials such as concrete.

B. Duct: A single duct or multiple ducts. Duct may be either installed singly or as component of a duct bank.

C. Duct Bank:

1. Two or more ducts installed in parallel, with or without additional casing materials.
2. Multiple duct banks.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Precast or Factory-Fabricated Underground Utility Structures:

a. Include plans, elevations, sections, details, attachments to other work, and accessories.
b. Include duct entry provisions, including locations and duct sizes.
c. Include reinforcement details.
d. Include frame and cover design and manhole chimneys.

e. Include ladder or step details as directed.
f. Include grounding details.
g. Include dimensioned locations of cable rack inserts, pulling-in and lifting irons, and sumps.
h. Include joint details.

2. Factory-Fabricated Handholes and Boxes Other Than Precast Concrete:

a. Include dimensioned plans, sections, and elevations, and fabrication and installation details.
b. Include duct entry provisions, including locations and duct sizes.
c. Include cover design.
d. Include grounding details.
e. Include dimensioned locations of cable rack inserts, and pulling-in and lifting irons.

C. Sustainable Design Submittals:

1.4 INFORMATIONAL SUBMITTALS

A. Duct and Duct-Bank Coordination Drawings: Show duct profiles and coordination with other utilities and underground structures. Drawings shall be signed and sealed by a qualified professional engineer.

B. Qualification Data: For professional engineer and testing agency responsible for testing nonconcrete handholes and boxes.

C. Product Certificates: For concrete and steel used in precast concrete manholes and handholes, as required by ASTM C858.

D. Source quality-control reports.

E. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated.

PART 2 - PRODUCTS

2.1 METAL CONDUIT AND FITTINGS

A. GRC: Comply with ANSI C80.1 and UL 6.

B. Coated Steel Conduit: PVC-coated GRC or IMC.

1. Comply with NEMA RN 1.
2. Coating Thickness: 0.040 inch (1 mm), minimum.

C. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.

2.2 RIGID NONMETALLIC DUCT

A. Underground Plastic Utilities Duct: Type EPC-80-PVC and Type EPC-40-PVC RNC, complying with NEMA TC 2 and UL 651, with matching fittings complying with NEMA TC 3 by same manufacturer as duct.

B. Underground Plastic Utilities Duct: Type DB-60 PVC and Type DB-120 PVC RNC, complying with NEMA TC 6 & 8 and ASTM F512 for direct burial, with matching fittings complying with NEMA TC 9 by same manufacturer as duct.

C. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.

D. Solvents and Adhesives: As recommended by conduit manufacturer.

2.3 FLEXIBLE NONMETALLIC DUCTS

A. HDPE Duct: As directed, Type EPEC-40 HDPE or Type EPEC-80 HDPE, complying with NEMA TC 7 and UL 651A.

B. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.

2.4 DUCT ACCESSORIES

A. Duct Spacers: Factory-fabricated, rigid, PVC interlocking spacers; sized for type and size of duct with which used and selected to provide minimum duct spacing indicated while supporting duct during concreting or backfilling.

B. Underground-Line Warning Tape: Comply with requirements for underground-line warning tape specified in Section 260553 "Identification for Electrical Systems."

2.5 PRECAST CONCRETE HANDHOLES AND BOXES

A. Description: Factory-fabricated, reinforced-concrete, monolithically poured walls and bottom unless open-bottom enclosures are indicated. Frame and cover shall form top of enclosure and shall have load rating consistent with that of handhole or box.

B. Comply with ASTM C858 for design and manufacturing processes.

C. Frame and Cover: Weatherproof cast-iron frame, with cast-iron cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.

D. Frame and Cover: Weatherproof steel frame, with steel cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.

E. Frame and Cover: Weatherproof steel frame, with hinged steel access door assembly with tamper-resistant, captive, cover-securing bolts.

1. Cover Hinges: Concealed, with hold-open ratchet assembly.
2. Cover Handle: Recessed.

F. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.

G. Cover Legend: Molded lettering, "ELECTRIC" as indicated for each service.

H. Configuration: Units shall be designed for flush burial and have open, closed or integral closed bottom unless otherwise indicated as directed.

I. Extensions and Slabs: Designed to mate with bottom of enclosure. Same material as enclosure.

1. Extension shall provide increased depth of 12 inches (300 mm).
2. Slab: Same dimensions as bottom of enclosure and arranged to provide closure.

J. Joint Sealant: Asphaltic-butyl material with adhesion, cohesion, flexibility, and durability properties necessary to withstand maximum hydrostatic pressures at the installation location with the ground-water level at grade.

K. Knockout Panels: Precast openings in walls, arranged to match dimensions and elevations of approaching duct, plus an additional 12 inches (300 mm) vertically and horizontally to accommodate alignment variations.

L. Duct Entrances in Handhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.

M. Handholes 12 inches wide by 24 inches long (300 mm wide by 600 mm long) and larger shall have inserts for cable racks and pulling-in irons installed before concrete is poured.

2.6 POLYMER CONCRETE HANDHOLES AND BOXES WITH POLYMER CONCRETE COVER

A. Description: Molded of sand and aggregate, bound together with a polymer resin, and reinforced with steel or fiberglass or a combination of the two.

B. Standard: Comply with SCTE 77. Comply with tier requirements in "Underground Enclosure Application" Article.

C. Color: Gray or Green as directed.

D. Configuration: Units shall be designed for flush burial and have open, closed or integral closed bottom unless otherwise indicated.

E. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.

F. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.

G. Cover Legend: Molded lettering, "ELECTRIC" as indicated for each service.

H. Direct-Buried Wiring Entrance Provisions: Knockouts equipped with insulated bushings or end-bell fittings, selected to suit box material, sized for wiring indicated, and arranged for secure, fixed installation in enclosure wall.

I. Duct Entrance Provisions: Duct-terminating fittings shall mate with entering duct for secure, fixed installation in enclosure wall.

J. Handholes 12 inches wide by 24 inches long (300 mm wide by 600 mm long) and larger shall have factory-installed inserts for cable racks and pulling-in irons.

2.7 FIBERGLASS HANDHOLES AND BOXES WITH POLYMER CONCRETE FRAME AND COVER

A. Description: Sheet-molded, fiberglass-reinforced, polyester resin enclosure joined to polymer concrete top ring or frame.

B. Standard: Comply with SCTE 77. Comply with tier requirements in "Underground Enclosure Application" Article.

C. Color: Gray or Green as directed.

D. Configuration: Units shall be designed for flush burial and have open, closed or integral closed bottom unless otherwise indicated.

E. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.

F. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.

G. Cover Legend: Molded lettering, "ELECTRIC" as indicated for each service.

H. Direct-Buried Wiring Entrance Provisions: Knockouts equipped with insulated bushings or end-bell fittings, selected to suit box material, sized for wiring indicated, and arranged for secure, fixed installation in enclosure wall.

I. Duct Entrance Provisions: Duct-terminating fittings shall mate with entering duct for secure, fixed installation in enclosure wall.

J. Handholes 12 inches wide by 24 inches long (300 mm wide by 600 mm long) and larger shall have factory-installed inserts for cable racks and pulling-in irons.

2.8 FIBERGLASS HANDHOLES AND BOXES

A. Description: Molded of fiberglass-reinforced polyester resin, with covers made of polymer concrete, reinforced concrete, cast iron, hot-dip galvanized-steel diamond plate or fiberglass as directed.

B. Standard: Comply with SCTE 77. Comply with tier requirements in "Underground Enclosure Application" Article.

C. Color: Gray or Green as directed.

D. Configuration: Units shall be designed for flush burial and have open, closed or integral closed bottom unless otherwise indicated.

E. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.

F. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.

G. Cover Legend: Molded lettering, "ELECTRIC" as indicated for each service.

H. Direct-Buried Wiring Entrance Provisions: Knockouts equipped with insulated bushings or end-bell fittings, selected to suit box material, sized for wiring indicated, and arranged for secure, fixed installation in enclosure wall.

I. Duct Entrance Provisions: Duct-terminating fittings shall mate with entering duct for secure, fixed installation in enclosure wall.

J. Handholes 12 inches wide by 24 inches long (300 mm wide by 600 mm long) and larger shall have factory-installed inserts for cable racks and pulling-in irons.

2.9 HIGH-DENSITY PLASTIC BOXES

A. Description: Injection molded of HDPE or copolymer-polypropylene. Cover shall be made of polymer concrete or hot-dip galvanized-steel diamond plate or plastic.

B. Standard: Comply with SCTE 77. Comply with tier requirements in "Underground Enclosure Application" Article.

C. Color: Gray or Green as directed.

D. Configuration: Units shall be designed for flush burial and have open, closed or integral closed bottom unless otherwise indicated.

E. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.

F. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.

G. Cover Legend: Molded lettering, "ELECTRIC" as indicated for each service.

H. Direct-Buried Wiring Entrance Provisions: Knockouts equipped with insulated bushings or end-bell fittings, selected to suit box material, sized for wiring indicated, and arranged for secure, fixed installation in enclosure wall.

I. Duct Entrance Provisions: Duct-terminating fittings shall mate with entering duct for secure, fixed installation in enclosure wall.

J. Handholes 12 inches wide by 24 inches long (300 mm wide by 600 mm long) and larger shall have factory-installed inserts for cable racks and pulling-in irons.

2.10 PRECAST MANHOLES

A. Description: One-piece units and units with interlocking mating sections, complete with accessories, hardware, and features.

B. Comply with ASTM C858.

C. Structural Design Loading: Comply with requirements in "Underground Enclosure Application" Article.

D. Knockout Panels: Precast openings in walls, arranged to match dimensions and elevations of approaching duct, plus an additional 12 inches (300 mm) vertically and horizontally to accommodate alignment variations.

E. Duct Entrances in Manhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.

F. Ground Rod Sleeve: Provide a 3-inch (75-mm) PVC sleeve in manhole floors 2 inches (50 mm) from the wall adjacent to, but not underneath, the duct entering the structure.

G. Joint Sealant: Asphaltic-butyl material with adhesion, cohesion, flexibility, and durability properties necessary to withstand maximum hydrostatic pressures at the installation location with the ground-water level at grade.

2.11 UTILITY STRUCTURE ACCESSORIES

A. Accessories for Utility Structures: Utility equipment and accessory items used for utility structure access and utility support, listed and labeled for intended use and application.

B. Manhole Frames, Covers, and Chimney Components: Comply with structural design loading specified for manhole.

1. Frame and Cover: As directed, Weatherproof, gray cast iron complying with ASTM A48/A48M, Class 30B or cast aluminum with milled cover-to-frame bearing surfaces; diameter, 26 inches (660 mm) or 29 inches (725 mm).

    a. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.

2. Cover Legend: Cast in. Selected to suit system.

    a. Legend: "ELECTRIC-LV" for duct systems with power wires and cables for systems operating at 600 V and less.

3. Manhole Chimney Components: Precast concrete rings with dimensions matched to those of roof opening.

a. Mortar for Chimney Ring and Frame and Cover Joints: Comply with ASTM C270, Type M, except for quantities less than 2.0 cu. ft. (60 L) where packaged mix complying with ASTM C387, Type M, may be used.
b. Seal joints watertight using preformed plastic or rubber complying with ASTM C990. Install sealing material according to sealant manufacturers' written instructions.

C. Manhole Sump Frame and Grate: ASTM A48/A48M, Class 30B, gray cast iron.

D. Pulling Eyes in Concrete Walls: Eyebolt with reinforcing-bar fastening insert, 2-inch- (50-mm-) diameter eye, and 1-by-4-inch (25-by-100-mm) bolt.

1. Working Load Embedded in 6-Inch (150-mm), 4000-psi (27.6-MPa) Concrete: 13,000-lbf (58-kN) minimum tension.

E. Pulling Eyes in Nonconcrete Walls: Eyebolt with reinforced fastening, 1-1/4-inch- (31-mm-) diameter eye, rated 2500-lbf (11-kN) minimum tension.

F. Pulling-in and Lifting Irons in Concrete Floors: 7/8-inch- (22-mm-) diameter, hot-dip galvanized, bent steel rod; stress relieved after forming; and fastened to reinforcing rod. Exposed triangular opening.

1. Ultimate Yield Strength: 40,000-lbf (180-kN) shear and 60,000-lbf (270-kN) tension.

G. Bolting Inserts for Concrete Utility Structure Cable Racks and Other Attachments: Flared, threaded inserts of noncorrosive, chemical-resistant, nonconductive thermoplastic material; 1/2-inch (13-mm) ID by 2-3/4 inches (69 mm) deep, flared to 1-1/4 inches (31 mm) minimum at base.

1. Tested Ultimate Pullout Strength: 12,000 lbf (53 kN) minimum.

H. Ground Rod Sleeve: 3-inch (75-mm) PVC sleeve in manhole floors 2 inches (50 mm) from the wall adjacent to, but not underneath, the ducts routed from the facility.

I. Cable Rack Assembly: As directed, Steel, hot-rolled or hot-dip galvanized, except insulators.

1. Stanchions: T-section or channel with provisions to connect to other sections or channels to form a continuous unit; 1-1/2 inches (38 mm) in width by nominal 24 inches (600 mm) long; punched with 14 hook holes on 1-1/2-inch (38-mm) centers for cable-arm attachment.
2. Arms: 1-1/2 inches (38 mm) wide, lengths ranging from 3 inches (75 mm) with 450-lb (204-kg) minimum capacity to 18 inches (450 mm) with 250-lb (114-kg) minimum capacity. Arms shall have slots along full length for cable ties and be arranged for secure mounting in horizontal position at any vertical location on stanchions.
3. Insulators: High-glaze, wet-process porcelain arranged for mounting on cable arms.

J. Cable Rack Assembly: Nonmetallic. Components fabricated from nonconductive, fiberglass-reinforced polymer.

1. Stanchions: Nominal 36 inches (900 mm) high by 4 inches (100 mm) wide, with provisions to connect to other sections to form a continuous unit, with minimum of nine holes for arm attachment.
2. Arms: Arranged for secure, drop-in attachment in horizontal position at any location on cable stanchions, and capable of being locked in position. Arms shall be available in lengths ranging from 3 inches (75 mm) with 450-lb (204-kg) minimum capacity to 20 inches (500 mm) with 250-lb (114-kg) minimum capacity. Top of arm shall be nominally 4 inches (100 mm) wide, and arm shall have slots along full length for cable ties.

K. Duct-Sealing Compound: Nonhardening, safe for contact with human skin, not deleterious to cable insulation, and workable at temperatures as low as 35 deg F (2 deg C). Capable of withstanding temperature of 300 deg F (150 deg C) without slump and adhering to clean surfaces of plastic ducts, metallic conduit, conduit and duct coatings, concrete, masonry, lead, cable sheaths, cable jackets, insulation materials, and common metals.

L. Fixed Manhole Ladders: Arranged for attachment to roof or wall and floor of manhole. Ladder and mounting brackets and braces shall be fabricated from nonconductive, structural-grade, fiberglass-reinforced resin or hot-dip galvanized steel as directed.

M. Portable Manhole Ladders: UL-listed, heavy-duty wood or fiberglass specifically designed for portable use for access to electrical manholes. Minimum length equal to distance from deepest manhole floor to grade plus 36 inches (900 mm). One required.

N. Cover Hooks: Heavy duty, designed for lifts 60 lbf (270 N) and greater or Light duty, designed for lifts less than 60 lbf (270 N). Two.

2.12 SOURCE QUALITY CONTROL

A. Test and inspect precast concrete utility structures according to ASTM C1037.

B. Nonconcrete Handhole and Pull-Box Prototype Test: Test prototypes of manholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.

1. Tests of materials shall be performed by an independent testing agency.
2. Strength tests of complete boxes and covers shall be by an independent testing agency or manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.
3. Testing machine pressure gages shall have current calibration certification, complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

PART 3 - EXECUTION

3.1 PREPARATION

A. Coordinate layout and installation of duct, duct bank, manholes, handholes, and boxes with final arrangement of other utilities, site grading, and surface features as determined in the field. Notify Architect if there is a conflict between areas of excavation and existing structures or archaeological sites to remain.

B. Coordinate elevations of duct and duct-bank entrances into manholes, handholes, and boxes with final locations and profiles of duct and duct banks, as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations as required to suit field conditions and to ensure that duct and duct bank will drain to manholes and handholes, and as approved by Architect.

3.2 UNDERGROUND DUCT APPLICATION

A. Duct for Electrical Feeders 600 V and Less: RNC Type EPC-80-PVC or Type EPC-40-PVC, concrete-encased unless otherwise indicated.

B. Duct for Electrical Feeders 600 V and Less: RNC Type EPC-80-PVC or Type EPC-40-PVC, direct-buried unless otherwise indicated.

C. Duct for Electrical Branch Circuits: RNC Type EPC-80-PVC or Type EPC-40-PVC, direct-buried unless otherwise indicated.

D. Bored Underground Duct: Type EPEC-40 HDPE or Type EPEC-80-HDPE unless otherwise indicated.

E. Underground Ducts Crossing Paved Paths, Walks, and, Driveways, Roadways and Railroads as directed: RNC Type EPC-40 PVC, encased in reinforced concrete.

F. Stub-ups: Concrete-encased RNC, GRC or PVC-coated GRC as directed.

3.3 UNDERGROUND ENCLOSURE APPLICATION

A. Handholes and Boxes for 600 V and Less:

1. Units in Roadways and Other Deliberate Traffic Paths: Precast concrete. AASHTO HB 17, H-10 or H-20 structural load rating as directed.
2. Units in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Nondeliberate Loading by Heavy Vehicles: Precast concrete, AASHTO HB 17, H-20, Polymer concrete, SCTE 77, Tier 15, Fiberglass enclosures with polymer concrete frame and cover, SCTE 77, Tier 15, Fiberglass-reinforced polyester resin, SCTE 77, Tier 15 or High-density plastic, SCTE 77, Tier 15 structural load rating as directed.
3. Units in Sidewalk and Similar Applications with a Safety Factor for Nondeliberate Loading by Vehicles: Precast concrete, AASHTO HB 17, H-10, Polymer concrete units, SCTE 77, Tier 8, Heavy-duty fiberglass units with polymer concrete frame and cover, SCTE 77, Tier 8 or High-density plastic, SCTE 77, Tier 8 structural load rating as directed.
4. Units Subject to Light-Duty Pedestrian Traffic Only: As directed, Fiberglass-reinforced polyester resin or High-density plastic, structurally tested according to SCTE 77 with 3000-lbf (13 345-N) vertical loading.
5. Cover design load shall not exceed the design load of the handhole or box.

B. Manholes: Precast concrete.

1. Units Located in Roadways and Other Deliberate Traffic Paths by Heavy or Medium Vehicles: H-20 structural load rating according to AASHTO HB 17.
2. Units Not Located in Deliberate Traffic Paths by Heavy or Medium Vehicles: H-10 load rating according to AASHTO HB 17.

3.4 EARTHWORK

A. Excavation and Backfill: Comply with Section 312000 "Earth Moving," but do not use heavy-duty, hydraulic-operated, compaction equipment.

B. Restoration: Replace area immediately after backfilling is completed or after construction vehicle traffic in immediate area is complete.

C. Restore surface features at areas disturbed by excavation and re-establish original grades unless otherwise indicated. Replace removed sod immediately after backfilling is completed.

D. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Section 329200 "Turf and Grasses" and Section 329300 "Plants."

E. Cut and patch existing pavement in the path of underground duct, duct bank, and underground structures according to "Cutting and Patching" Article in Section 017300 "Execution."

3.5 DUCT AND DUCT-BANK INSTALLATION

A. Where indicated on Drawings, install duct, spacers, and accessories into the duct-bank configuration shown. Duct installation requirements in this Section also apply to duct bank.

B. Install duct according to NEMA TCB 2.

C. Slope: Pitch duct a minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope duct from a high point between two manholes, to drain in both directions.

D. Curves and Bends: Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of 48 inches (1200 mm), 12.5 feet (4 m) or 25 feet (7.5 m) as directed, both horizontally and vertically, at other locations unless otherwise indicated.

1. Duct shall have maximum of two 90 degree bends or the total of all bends shall be no more 180 degrees between pull points.

E. Joints: Use solvent-cemented joints in duct and fittings and make watertight according to manufacturer's written instructions. Stagger couplings so those of adjacent duct do not lie in same plane.

F. Installation Adjacent to High-Temperature Steam Lines: Where duct is installed parallel to underground steam lines, perform calculations showing the duct will not be subject to environmental temperatures above 40 deg C. Where environmental temperatures are calculated

to rise above 40 deg C, and anywhere the duct crosses above an underground steam line, install insulation blankets listed for direct burial to isolate the duct bank from the steam line.

G. End Bell Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 10 inches (250 mm) o.c. for 5-inch (125-mm) duct, and vary proportionately for other duct sizes.

H. Terminator Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use manufactured, cast-in-place duct terminators, with entrances into structure spaced approximately 6 inches (150 mm) o.c. for 4-inch (100-mm) duct and vary proportionately for other duct sizes.

I. Building Wall Penetrations: Make a transition from underground duct to GRC at least 10 feet (3 m) outside the building wall, without reducing duct line slope away from the building and without forming a trap in the line. Use fittings manufactured for RNC-to-GRC transition. Install GRC penetrations of building walls as specified in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

J. Sealing: Provide temporary closure at terminations of duct with pulled cables. Seal spare duct at terminations. Use sealing compound and plugs to withstand at least 15-psig (1.03-MPa) hydrostatic pressure.

K. Pulling Cord: Install 200-lbf (1000-N) test nylon cord in empty ducts.

L. Concrete-Encased Ducts and Duct Bank:

1. Excavate trench bottom to provide firm and uniform support for duct. Prepare trench bottoms as specified in Section 312000 "Earth Moving" for pipes less than 6 inches (150 mm) in nominal diameter.
2. Width: Excavate trench 12 inches (300 mm) wider than duct on each side.
3. Width: Excavate trench 3 inches (75 mm) wider than duct on each side.
4. Depth: Install so top of duct envelope is at least 24 inches (600 mm) below finished grade in areas not subject to deliberate traffic, and at least 30 inches (750 mm) below finished grade in deliberate traffic paths for vehicles unless otherwise indicated.
5. Support duct on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.
6. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than four or five spacers per 20 feet (6 m) of duct as directed. Place spacers within 24 inches (600 mm) of duct ends. Stagger spacers approximately 6 inches (150 mm) between tiers. Secure spacers to earth and to duct to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
7. Minimum Space between Duct: 3 inches (75 mm) between edge of duct and exterior envelope wall, 2 inches (50 mm) between ducts for like services, and 4 inches (100 mm) between power and communications ducts.
8. Elbows: Use manufactured duct elbows for stub-ups, at building entrances, and at changes of direction in duct unless otherwise indicated. Extend encasement throughout length of elbow.

9. Elbows: Use manufactured GRC elbows for stub-ups, at building entrances, and at changes of direction in duct run.
10. Reinforcement: Reinforce concrete-encased duct where crossing disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.
11. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.
12. Concrete Cover: Install a minimum of 3 inches (75 mm) of concrete cover between edge of duct to exterior envelope wall, 2 inches (50 mm) between duct of like services, and 4 inches (100 mm) between power and communications ducts.
13. Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.
14. Pouring Concrete: Comply with requirements in "Concrete Placement" Article in Section 033000 "Cast-in-Place Concrete." Place concrete carefully during pours to prevent voids under and between duct and at exterior surface of envelope. Do not allow a heavy mass of concrete to fall directly onto ducts. Allow concrete to flow around duct and rise up in middle, uniformly filling all open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-installation application.

M. Direct-Buried Duct and Duct Bank:

1. Excavate trench bottom to provide firm and uniform support for duct. Comply with requirements in Section 312000 "Earth Moving" for preparation of trench bottoms for pipes less than 6 inches (150 mm) in nominal diameter.
2. Width: Excavate trench 12 inches (300 mm) wider than duct on each side.
3. Width: Excavate trench 3 inches (75 mm) wider than duct on each side.
4. Depth: Install top of duct at least 36 inches (900 mm) below finished grade unless otherwise indicated.
5. Set elevation of bottom of duct bank below frost line.
6. Support ducts on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.
7. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than four or five spacers per 20 feet (6 m) of duct as directed. Place spacers within 24 inches (600 mm) of duct ends. Stagger spacers approximately 6 inches (150 mm) between tiers. Secure spacers to earth and to ducts to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
8. Install duct with a minimum of 3 inches (75 mm) between ducts for like services and 6 inches (150 mm) between power and communications duct.
9. Elbows: Install manufactured duct elbows for stub-ups, at building entrances, and at changes of direction in duct direction unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.
10. Install manufactured GRC elbows for stub-ups, at building entrances, and at changes of direction in duct.
11. After installing first tier of duct, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand place backfill to 4 inches (100 mm) over duct and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct

connections at end of run and complete backfilling with normal compaction. Comply with requirements in Section 312000 "Earth Moving" for installation of backfill materials.

a. Place minimum 3 inches (75 mm) of sand as a bed for duct. Place sand to a minimum of 6 inches (150 mm) above top level of duct.
b. Place minimum 6 inches (150 mm) of engineered fill above concrete encasement of duct.

N. Underground-Line Warning Tape: As directed, Bury nonconducting or conducting underground line specified in Section 260553 "Identification for Electrical Systems" no less than 12 inches (300 mm) above all concrete-encased duct and duct banks and approximately 12 inches (300 mm) below grade. Align tape parallel to and within 3 inches (75 mm) of centerline of duct bank. Provide an additional warning tape for each 12-inch (300-mm) increment of duct-bank width over a nominal 18 inches (450 mm). Space additional tapes 12 inches (300 mm) apart, horizontally.

3.6 INSTALLATION OF CONCRETE MANHOLES, HANDHOLES, AND BOXES

A. Precast Concrete Handhole and Manhole Installation:

1. Comply with ASTM C891 unless otherwise indicated.
2. Install units level and plumb and with orientation and depth coordinated with connecting duct, to minimize bends and deflections required for proper entrances.
3. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1-inch (25-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.

B. Elevations:

1. Manhole Roof: Install with rooftop at least 15 inches (375 mm) below finished grade.
2. Manhole Frame: In paved areas and trafficways, set frames flush with finished grade. Set other manhole frames 1 inch (25 mm) above finished grade.
3. Install handholes with bottom below frost line, as directed, below grade.
4. Handhole Covers: In paved areas and trafficways, set surface flush with finished grade. Set covers of other handholes 1 inch (25 mm) above finished grade.
5. Where indicated, cast handhole cover frame integrally with handhole structure.

C. Drainage: Install drains in bottom of manholes where indicated. Coordinate with drainage provisions indicated.

D. Manhole Access: Circular opening in manhole roof; sized to match cover size.

1. Manholes with Fixed Ladders: Offset access opening from manhole centerlines to align with ladder.
2. Install chimney, constructed of precast concrete collars and rings, to support cast-iron frame to connect cover with manhole roof opening. Provide moisture-tight masonry joints and waterproof grouting for frame to chimney.

E. Waterproofing: Apply waterproofing to exterior surfaces of manholes and handholes after concrete has cured at least three days. Waterproofing materials and installation are specified in Section 071353 "Elastomeric Sheet Waterproofing" or Section 071354 "Thermoplastic Sheet Waterproofing" After duct has been connected and grouted, and before backfilling, waterproof joints and connections, and touch up abrasions and scars. Waterproof exterior of manhole chimneys after mortar has cured at least three days.

F. Dampproofing: Apply dampproofing to exterior surfaces of manholes and handholes after concrete has cured at least three days. Dampproofing materials and installation are specified in Section 071113 "Bituminous Dampproofing." After ducts are connected and grouted, and before backfilling, dampproof joints and connections, and touch up abrasions and scars. Dampproof exterior of manhole chimneys after mortar has cured at least three days.

G. Hardware: Install removable hardware, including pulling eyes, cable stanchions, and cable arms, and insulators, as required for installation and support of cables and conductors and as indicated.

H. Fixed Manhole Ladders: Arrange to provide for safe entry with maximum clearance from cables and other items in manholes.

I. Field-Installed Bolting Anchors in Manholes and Concrete Handholes: Do not drill deeper than 3-7/8 inches (97 mm) for manholes and 2 inches (50 mm) for handholes, for anchor bolts installed in the field. Use a minimum of two anchors for each cable stanchion.

3.7 INSTALLATION OF HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting duct, to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of duct, and seal joint between box and extension as recommended by manufacturer.

B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch (12.5-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.

C. Elevation: In paved areas and trafficways, set cover flush with finished grade. Set covers of other handholes 1 inch (25 mm) above finished grade.

D. Install handholes and boxes with bottom below frost line, frost line below grade at Project as directed.

E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in enclosure.

F. Field cut openings for duct according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

G. For enclosures installed in asphalt paving and subject to occasional, nondeliberate, heavy-vehicle loading, form and pour a concrete ring encircling, and in contact with, enclosure and with top surface screeded to top of box cover frame. Bottom of ring shall rest on compacted earth.

1. Concrete: 3000 psi (20 kPa), 28-day strength, complying with Section 033000 "Cast-in-Place Concrete," with a troweled finish.
2. Dimensions: 10 inches wide by 12 inches deep (250 mm wide by 300 mm deep).

3.8 GROUNDING

A. Ground underground ducts and utility structures according to Section 260526 "Grounding and Bonding for Electrical Systems."

3.9 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:

1. Demonstrate capability and compliance with requirements on completion of installation of underground duct, duct bank, and utility structures.
2. Pull solid aluminum or wood test mandrel through duct to prove joint integrity and adequate bend radii, and test for out-of-round duct. Provide a minimum 12-inch- (300-mm-) long mandrel equal to duct size minus 1/4 inch (6 mm). If obstructions are indicated, remove obstructions and retest.
3. Test manhole and handhole grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Section 260526 "Grounding and Bonding for Electrical Systems."

B. Correct deficiencies and retest as specified above to demonstrate compliance.

C. Prepare test and inspection reports.

3.10 CLEANING

A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of duct until duct cleaner indicates that duct is clear of dirt and debris. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.

B. Clean internal surfaces of manholes, including sump.

1. Sweep floor, removing dirt and debris.
2. Remove foreign material.

END OF SECTION 260543

SECTION 260544 - SLEEVES AND SLEEVE SEALS FOR ELECTRICAL RACEWAYS AND CABLING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Sleeves for raceway and cable penetration of non-fire-rated construction walls and floors.
2. Sleeve-seal systems.
3. Sleeve-seal fittings.
4. Grout.
5. Silicone sealants.

B. Related Requirements:

1. Section 078413 "Penetration Firestopping" for penetration firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

PART 2 - PRODUCTS

2.1 SLEEVES

A. Wall Sleeves:

1. Steel Pipe Sleeves: ASTM A53/A53M, Type E, Grade B, Schedule 40, zinc coated, plain ends.
2. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.

B. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies: Galvanized-steel sheet; 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint, with tabs for screw-fastening the sleeve to the board.

C. Sleeves for Rectangular Openings:

1. Material: Galvanized sheet steel.
2. Minimum Metal Thickness:

a. For sleeve cross-section rectangle perimeter less than 50 inches (1270 mm) and with no side larger than 16 inches (400 mm), thickness shall be 0.052 inch (1.3 mm).
b. For sleeve cross-section rectangle perimeter 50 inches (1270 mm) or more and one or more sides larger than 16 inches (400 mm), thickness shall be 0.138 inch (3.5 mm).

2.2 SLEEVE-SEAL SYSTEMS

A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.
1. Sealing Elements: As directed, EPDM or Nitrile (Buna N) rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
2. Pressure Plates: As directed, Carbon steel, Plastic or Stainless steel.
3. Connecting Bolts and Nuts: As directed, Carbon steel, with corrosion-resistant coating, Stainless steel of length required to secure pressure plates to sealing elements.

2.3 SLEEVE-SEAL FITTINGS

A. Description: Manufactured plastic, sleeve-type, waterstop assembly made for embedding in concrete slab or wall. Unit shall have plastic or rubber waterstop collar with center opening to match piping OD.

2.4 GROUT

A. Description: Non-shrink; recommended for interior and exterior sealing openings in non-fire-rated walls or floors.

B. Standard: ASTM C1107/C1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.

C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

2.5 SILICONE SEALANTS

A. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below.

1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces that are not fire rated.

B. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, non-shrinking foam.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION FOR NON-FIRE-RATED ELECTRICAL PENETRATIONS

A. Comply with NECA 1.

B. Comply with NEMA VE 2 for cable tray and cable penetrations.

C. Sleeves for Conduits Penetrating Above-Grade Non-Fire-Rated Concrete and Masonry-Unit Floors and Walls:

1. Interior Penetrations of Non-Fire-Rated Walls and Floors:

a. Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 079200 "Joint Sealants."
b. Seal space outside of sleeves with mortar or grout. Pack sealing material solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect material while curing.

2. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
3. Size pipe sleeves to provide 1/4-inch (6.4-mm) annular clear space between sleeve and raceway or cable unless sleeve seal is to be installed or unless seismic criteria require different clearance.
4. Install sleeves for wall penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of walls. Cut sleeves to length for mounting flush with both surfaces of walls. Deburr after cutting.
5. Install sleeves for floor penetrations. Extend sleeves installed in floors 2 inches (50 mm) above finished floor level. Install sleeves during erection of floors.

D. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies:

1. Use circular metal sleeves unless penetration arrangement requires rectangular sleeved opening.
2. Seal space outside of sleeves with approved joint compound for gypsum board assemblies.

E. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.

F. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel or cast-iron pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.

G. Underground, Exterior-Wall and Floor Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch (25-mm) annular clear space between raceway or cable and sleeve for installing sleeve-seal system.

3.2 SLEEVE-SEAL-SYSTEM INSTALLATION

A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at raceway entries into building.

B. Install type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.3 SLEEVE-SEAL-FITTING INSTALLATION

A. Install sleeve-seal fittings in new walls and slabs as they are constructed.

B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.

C. Secure nailing flanges to concrete forms.

D. Using grout, seal the space around outside of sleeve-seal fittings.

END OF SECTION 260544

SECTION 260548.16 - SEISMIC CONTROLS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Restraint channel bracings.
2. Restraint cables.
3. Seismic-restraint accessories.
4. Mechanical anchor bolts.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of seismic-restraint component used.

    a. Tabulate types and sizes of seismic restraints, complete with report numbers and rated strength in tension and shear as evaluated by an evaluation service member of ICC-ES, OSHPD or an agency acceptable to authorities having jurisdiction as directed.
    b. Annotate to indicate application of each product submitted and compliance with requirements.

B. Delegated-Design Submittal: For each seismic-restraint device.

1. Include design calculations and details for selecting seismic restraints complying with performance requirements, design criteria, and analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
2. Design Calculations: Calculate static and dynamic loading caused by equipment weight, operation, and seismic and wind forces required to select seismic and wind restraints and for designing vibration isolation bases.

    a. Coordinate design calculations with wind load calculations required for equipment mounted outdoors. Comply with requirements in other Sections for equipment mounted outdoors.

3. Seismic- and Wind-Restraint Details:

    a. Design Analysis: To support selection and arrangement of seismic and wind restraints. Include calculations of combined tensile and shear loads.
    b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacings. Identify components, list their strengths, and indicate directions and

values of forces transmitted to the structure during seismic events. Indicate association with vibration isolation devices.

c. Coordinate seismic-restraint and vibration isolation details with wind-restraint details required for equipment mounted outdoors. Comply with requirements in other Sections for equipment mounted outdoors.

d. Preapproval and Evaluation Documentation: As directed, by an evaluation service member of ICC-ES, OSHPD or an agency acceptable to authorities having jurisdiction, showing maximum ratings of restraint items and the basis for approval (tests or calculations).

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Show coordination of seismic bracing for electrical components with other systems and equipment in the vicinity, including other supports and seismic restraints.

B. Qualification Data: For professional engineer and testing agency.

C. Welding certificates.

D. Field quality-control reports.

1.4 QUALITY ASSURANCE

A. Comply with seismic-restraint requirements in the IBC unless requirements in this Section are more stringent.

B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

C. Seismic-restraint devices shall have horizontal and vertical load testing and analysis. They shall bear anchorage preapproval from OSHPD in addition to preapproval, showing maximum seismic-restraint ratings, by ICC-ES or another agency acceptable to authorities having jurisdiction. Ratings based on independent testing are preferred to ratings based on calculations. If preapproved ratings are not available, submittals based on independent testing are preferred. Calculations (including combining shear and tensile loads) that support seismic-restraint designs must be signed and sealed by a qualified professional engineer.

D. Comply with NFPA 70.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Wind-Restraint Loading:

1. Basic Wind Speed: As directed.
2. Building Classification Category: I, II, III or IV as directed.

3. Minimum 10 lb/sq. ft. (48.8 kg/sq. m) multiplied by maximum area of component projected on vertical plane normal to wind direction and 45 degrees either side of normal.

B. Seismic-Restraint Loading:

1. Site Class as Defined in the IBC: A, B, C, D, E or F as directed.
2. Assigned Seismic Use Group or Building Category as Defined in the IBC: I, II or III as directed.

   a. Component Importance Factor: 1.0 or 1.5 as directed.
   b. Component Response Modification Factor: 1.5, 2.5, 3.5 or 5.0 as directed.
   c. Component Amplification Factor: 1.0 or 2.5 as directed.

3. Design Spectral Response Acceleration at Short Periods (0.2 Second): As directed.
4. Design Spectral Response Acceleration at 1.0-Second Period: As directed.

2.2 RESTRAINT CHANNEL BRACINGS

A. Description: MFMA-4, shop- or field-fabricated bracing assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end, with other matching components, and with corrosion-resistant coating; rated in tension, compression, and torsion forces.

2.3 RESTRAINT CABLES

A. Restraint Cables: As directed, ASTM A603 galvanized or ASTM A492 stainless-steel cables. End connections made of steel assemblies with thimbles, brackets, swivel, and bolts designed for restraining cable service; with a minimum of two clamping bolts for cable engagement.

2.4 SEISMIC-RESTRAINT ACCESSORIES

A. Hanger-Rod Stiffener: As directed, Steel tube or steel slotted-support-system sleeve with internally bolted connections or Reinforcing steel angle clamped to hanger rod.

B. Hinged and Swivel Brace Attachments: Multifunctional steel connectors for attaching hangers to rigid channel bracings and restraint cables.

C. Bushings for Floor-Mounted Equipment Anchor Bolts: Neoprene bushings designed for rigid equipment mountings and matched to type and size of anchor bolts and studs.

D. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings and matched to type and size of attachment devices used.

E. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.

2.5 MECHANICAL ANCHOR BOLTS

A. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E488.

PART 3 - EXECUTION

3.1 APPLICATIONS

A. Multiple Raceways or Cables: Secure raceways and cables to trapeze member with clamps approved for application by an evaluation service member of ICC-ES, OSHPD or an agency acceptable to authorities having jurisdiction as directed.

B. Hanger-Rod Stiffeners: Install hanger-rod stiffeners where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods caused by seismic forces.

C. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

3.2 SEISMIC-RESTRAINT DEVICE INSTALLATION

A. Coordinate the location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in Section 033000 "Cast-in-Place Concrete" or Section 033053 "Miscellaneous Cast-in-Place Concrete" as directed

B. Equipment and Hanger Restraints:

1. Install resilient, bolt-isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch (3.2 mm).
2. Install seismic-restraint devices using methods approved by an evaluation service member of ICC-ES, OSHPD or an agency acceptable to authorities having jurisdiction providing required submittals for component.

C. Install cables so they do not bend across edges of adjacent equipment or building structure.

D. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.

E. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.

F. Drilled-in Anchors:

1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.

2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
4. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
5. Set anchors to manufacturer's recommended torque using a torque wrench.
6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

3.3 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

A. Install flexible connections in runs of raceways, cables, wireways, cable trays, and busways where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where connection is terminated to equipment that is anchored to a different structural element from the one supporting them as they approach equipment.

3.4 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:

1. Obtain Architect's approval before transmitting test loads to structure. Provide temporary load-spreading members.
2. Test at least four of each type and size of installed anchors and fasteners selected by Architect.
3. Test to 90 percent of rated proof load of device.

B. Seismic controls will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 260548.16

SECTION 260553 - IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Color and legend requirements for raceways, conductors, and warning labels and signs.
2. Labels.
3. Bands and tubes.
4. Tapes and stencils.
5. Tags.
6. Signs.
7. Cable ties.
8. Paint for identification.
9. Fasteners for labels and signs.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples: For each type of label and sign to illustrate composition, size, colors, lettering style, mounting provisions, and graphic features of identification products.

C. Delegated-Design Submittal: For arc-flash hazard study.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Comply with ASME A13.1 and IEEE C2.

B. Comply with NFPA 70.

C. Comply with 29 CFR 1910.144 and 29 CFR 1910.145.

D. Comply with ANSI Z535.4 for safety signs and labels.

E. Comply with NFPA 70E and Section 260573.19 "Arc-Flash Hazard Analysis" requirements for arc-flash warning labels.

F. Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, shall comply with UL 969.

G. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.2 COLOR AND LEGEND REQUIREMENTS

A. Raceways and Cables Carrying Circuits at 600 V or Less:

1. Black letters on an orange field.
2. Legend: Indicate voltage and system or service type.

B. Color-Coding for Phase- and Voltage-Level Identification, 600 V or Less: Use colors listed below for ungrounded service, feeder and branch-circuit conductors as directed.

1. Color shall be factory applied or field applied for sizes larger than No. 8 AWG if authorities having jurisdiction permit.
2. Colors for 208/120-V Circuits:

a. Phase A: Black.
b. Phase B: Red.
c. Phase C: Blue.

3. Colors for 240-V Circuits:

a. Phase A: Black.
b. Phase B: Red.

4. Colors for 480/277-V Circuits:

a. Phase A: Brown.
b. Phase B: Orange.
c. Phase C: Yellow.

5. Color for Neutral: White or gray.
6. Color for Equipment Grounds: Bare copper, Green or Green with a yellow stripe.
7. Colors for Isolated Grounds: Green two or more yellow stripes.

C. Warning Label Colors:

1. Identify system voltage with black letters on an orange background.

D. Warning labels and signs shall include, but are not limited to, the following legends:

1. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
2. Workspace Clearance Warning: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 36 INCHES (915 MM)."

E. Equipment Identification Labels:

1. Black letters on a white field.

2.3 LABELS

A. Vinyl Wraparound Labels: Preprinted, flexible labels laminated with a clear, weather- and chemical-resistant coating and matching wraparound clear adhesive tape for securing label ends.

B. Snap-around Labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeves, with diameters sized to suit diameter and that stay in place by gripping action.

C. Self-Adhesive Wraparound Labels: As directed, Preprinted or Write-on, 3-mil- (0.08-mm-) thick, polyester or vinyl flexible label with acrylic pressure-sensitive adhesive.
1. Self-Lamination: Clear; UV-, weather- and chemical-resistant; self-laminating, protective shield over the legend. Labels sized such that the clear shield overlaps the entire printed legend.
2. Marker for Labels: Permanent, waterproof, black ink marker recommended by tag manufacturer.
3. Marker for Labels: Machine-printed, permanent, waterproof, black ink recommended by printer manufacturer.

D. Self-Adhesive Labels: As directed, Polyester or Vinyl, thermal, transfer-printed, 3-mil- (0.08-mm-) thick, multicolor, weather- and UV-resistant, pressure-sensitive adhesive labels, configured for intended use and location.
1. Minimum Nominal Size:

a. 1-1/2 by 6 inches (37 by 150 mm) for raceway and conductors.
b. 3-1/2 by 5 inches (76 by 127 mm) for equipment.
c. As required by authorities having jurisdiction.

2.4 BANDS AND TUBES

A. Snap-around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeves, 2 inches (50 mm) long, with diameters sized to suit diameter and that stay in place by gripping action.

B. Heat-Shrink Preprinted Tubes: Flame-retardant polyolefin tubes with machine-printed identification labels, sized to suit diameters of and shrunk to fit firmly around item being identified. Full shrink recovery occurs at a maximum of 200 deg F (93 deg C). Comply with UL 224.

2.5 TAPES AND STENCILS

A. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.

B. Self-Adhesive Vinyl Tape: Colored, heavy duty, waterproof, fade resistant; not less than 3 mils (0.08 mm) thick by 1 to 2 inches (25 to 50 mm) wide; compounded for outdoor use.

C. Tape and Stencil: 4-inch (100-mm) wide black stripes on 10-inch (250-mm) centers placed diagonally over orange background and is 12 inches (300 mm) wide. Stop stripes at legends.

D. Floor Marking Tape: 2-inch (50-mm) wide, 5-mil (0.125-mm) pressure-sensitive vinyl tape, with black and white or yellow and black stripes as directed, and clear vinyl overlay.

E. Underground-Line Warning Tape:
1. Tape:

a. Recommended by manufacturer for the method of installation and suitable to identify and locate underground electrical and communications utility lines.
b. Printing on tape shall be permanent and shall not be damaged by burial operations.
c. Tape material and ink shall be chemically inert and not subject to degradation when exposed to acids, alkalis, and other destructive substances commonly found in soils.

2. Color and Printing:

a. Comply with ANSI Z535.1, ANSI Z535.2, ANSI Z535.3, ANSI Z535.4, and ANSI Z535.5.
b. Inscriptions for Red-Colored Tapes: "ELECTRIC LINE, HIGH VOLTAGE".
c. Inscriptions for Orange-Colored Tapes: "TELEPHONE CABLE, CATV CABLE, COMMUNICATIONS CABLE, OPTICAL FIBER CABLE".

3. Tag: Type I:

a. Pigmented polyolefin, bright colored, continuous-printed on one side with the inscription of the utility, compounded for direct-burial service.
b. Width: 3 inches (75 mm).
c. Thickness: 4 mils (0.1 mm).
d. Weight: 18.5 lb/1000 sq. ft. (9.0 kg/100 sq. m).
e. Tensile according to ASTM D882: 30 lbf (133.4 N) and 2500 psi (17.2 MPa).

4. Tag: Type ID:

a. Detectable three-layer laminate, consisting of a printed pigmented polyolefin film, a solid aluminum-foil core, and a clear protective film that allows inspection of the continuity of the conductive core; bright colored, continuous-printed on one side with the inscription of the utility, compounded for direct-burial service.
b. Width: 3 inches (75 mm).
c. Overall Thickness: 5 mils (0.125 mm).
d. Foil Core Thickness: 0.35 mil (0.00889 mm).
e. Weight: 28 lb/1000 sq. ft. (13.7 kg/100 sq. m).
f. Tensile according to ASTM D882: 70 lbf (311.3 N) and 4600 psi (31.7 MPa).

F. Stenciled Legend: In nonfading, waterproof, black ink or paint. Minimum letter height shall be 1 inch (25 mm).

2.6 TAGS

A. Write-on Tags:
1. Polyester Tags: As directed, 0.010 inch (0.25 mm) or 0.015 inch (0.38 mm) thick, with corrosion-resistant grommet and cable tie for attachment.
2. Marker for Tags: Permanent, waterproof, black ink marker recommended by tag manufacturer.

3. Marker for Tags: Machine-printed, permanent, waterproof, black ink marker recommended by printer manufacturer.

2.7 SIGNS

A. Baked-Enamel Signs:
1. Preprinted aluminum signs, high-intensity reflective, punched or drilled for fasteners, with colors, legend, and size required for application.
2. 1/4-inch (6.4-mm) grommets in corners for mounting.
3. Nominal Size: 7 by 10 inches (180 by 250 mm).

B. Metal-Backed Butyrate Signs:
1. Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs, with 0.0396-inch (1-mm) galvanized-steel backing, punched and drilled for fasteners, and with colors, legend, and size required for application.
2. 1/4-inch (6.4-mm) grommets in corners for mounting.
3. Nominal Size: 10 by 14 inches (250 by 360 mm).

C. Laminated Acrylic or Melamine Plastic Signs:
1. Engraved legend.
2. Thickness:

a. For signs up to 20 sq. in. (129 sq. cm), minimum 1/16 inch (1.6 mm) thick.
b. For signs larger than 20 sq. in. (129 sq. cm), 1/8 inch (3.2 mm) thick.
c. Engraved legend with black letters on white face or white letters on a dark gray background as directed.
d. Punched or drilled for mechanical fasteners with 1/4-inch (6.4-mm) grommets in corners for mounting or Self-adhesive as directed.
e. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

2.8 CABLE TIES

A. General-Purpose Cable Ties: Fungus inert, self-extinguishing, one piece, self-locking, and Type 6/6 nylon.

1. Minimum Width: 3/16 inch (5 mm).
2. Tensile Strength at 73 Deg F (23 Deg C) according to ASTM D638: 12,000 psi (82.7 MPa).
3. Temperature Range: Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C).
4. Color: Black, except where used for color-coding.

B. UV-Stabilized Cable Ties: Fungus inert, designed for continuous exposure to exterior sunlight, self-extinguishing, one piece, self-locking, and Type 6/6 nylon.

1. Minimum Width: 3/16 inch (5 mm).
2. Tensile Strength at 73 Deg F (23 Deg C) according to ASTM D638: 12,000 psi (82.7 MPa).
3. Temperature Range: Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C).
4. Color: Black.

C. Plenum-Rated Cable Ties: Self-extinguishing, UV stabilized, one piece, and self-locking.

1. Minimum Width: 3/16 inch (5 mm).
2. Tensile Strength at 73 Deg F (23 Deg C) according to ASTM D638: 7000 psi (48.2 MPa).
3. UL 94 Flame Rating: 94V-0.
4. Temperature Range: Minus 50 to plus 284 deg F (Minus 46 to plus 140 deg C).
5. Color: Black.

2.9 MISCELLANEOUS IDENTIFICATION PRODUCTS

A. Paint: Comply with requirements in painting Sections for paint materials and application requirements. Retain paint system applicable for surface material and location (exterior or interior).

B. Fasteners for Labels and Signs: Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Verify and coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and operation and maintenance manual. Use consistent designations throughout Project.

B. Install identifying devices before installing acoustical ceilings and similar concealment.

C. Verify identity of each item before installing identification products.

D. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and operation and maintenance manual.

E. Apply identification devices to surfaces that require finish after completing finish work.

F. Install signs with approved legend to facilitate proper identification, operation, and maintenance of electrical systems and connected items.

G. Self-Adhesive Identification Products: Before applying electrical identification products, clean substrates of substances that could impair bond, using materials and methods recommended by manufacturer of identification product.

H. System Identification for Raceways and Cables under 600 V: Identification shall completely encircle cable or conduit. Place identification of two-color markings in contact, side by side.

1. Secure tight to surface of conductor, cable, or raceway.

I. System Identification for Raceways and Cables over 600 V: Identification shall completely encircle cable or conduit. Place adjacent identification of two-color markings in contact, side by side.

1. Secure tight to surface of conductor, cable, or raceway.

J. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, and signal connections.

K. Emergency Operating Instruction Signs: Install instruction signs with white legend on a red background with minimum 3/8-inch- (10-mm-) high letters for emergency instructions at equipment used for power transfer or load shedding as directed.

L. Elevated Components: Increase sizes of labels, signs, and letters to those appropriate for viewing from the floor.

M. Accessible Fittings for Raceways: Identify the covers of each junction and pull box of the following systems with the wiring system legend and system voltage. System legends shall be as follows:

1. "EMERGENCY POWER."
2. "POWER."
3. "UPS."

N. Vinyl Wraparound Labels:

1. Secure tight to surface at a location with high visibility and accessibility.
2. Attach labels that are not self-adhesive type with clear vinyl tape, with adhesive appropriate to the location and substrate.

O. Snap-around Labels: Secure tight to surface at a location with high visibility and accessibility.

P. Self-Adhesive Wraparound Labels: Secure tight to surface of raceway or cable at a location with high visibility and accessibility.

Q. Self-Adhesive Labels:

1. On each unit of equipment, install unique designation label that is consistent with wiring diagrams, schedules, and operation and maintenance manual.
2. Unless otherwise indicated, provide a single line of text with 1/2-inch- (13-mm-) high letters on 1-1/2-inch- (38-mm-) high label; where two lines of text are required, use labels 2 inches (50 mm) high.

R. Snap-around Color-Coding Bands: Secure tight to surface at a location with high visibility and accessibility.

S. Heat-Shrink, Preprinted Tubes: Secure tight to surface at a location with high visibility and accessibility.

T. Marker Tapes: Secure tight to surface at a location with high visibility and accessibility.

U. Self-Adhesive Vinyl Tape: Secure tight to surface at a location with high visibility and accessibility.

1. Field-Applied, Color-Coding Conductor Tape: Apply in half-lapped turns for a minimum distance of 6 inches (150 mm) where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding.

V. Tape and Stencil: Comply with requirements in painting Sections for surface preparation and paint application.

W. Floor Marking Tape: Apply stripes to finished surfaces following manufacturer's written instructions.

X. Underground Line Warning Tape:

1. During backfilling of trenches, install continuous underground-line warning tape directly above cable or raceway at 6 to 8 inches (150 to 200 mm) below finished grade. Use multiple tapes where width of multiple lines installed in a common trench or concrete envelope exceeds 16 inches (400 mm) overall.
2. Limit use of underground-line warning tape to direct-buried cables.
3. Install underground-line warning tape for direct-buried cables and cables in raceways.

Y. Write-on Tags:

1. Place in a location with high visibility and accessibility.
2. Secure using general-purpose, UV-stabilized or plenum-rated cable ties as directed.

Z. Baked-Enamel Signs:

1. Attach signs that are not self-adhesive type with mechanical fasteners appropriate to the location and substrate.
2. Unless otherwise indicated, provide a single line of text with 1/2-inch- (13-mm-) high letters on minimum 1-1/2-inch (38-mm) high sign; where two lines of text are required, use signs minimum 2 inches (50 mm) high.

AA. Metal-Backed Butyrate Signs:

1. Attach signs that are not self-adhesive type with mechanical fasteners appropriate to the location and substrate.
2. Unless otherwise indicated, provide a single line of text with 1/2-inch- (13-mm-) high letters on minimum 1-1/2-inch (38-mm) high sign; where two lines of text are required, use signs minimum 2 inches (50 mm) high.

BB. Laminated Acrylic or Melamine Plastic Signs:

1. Attach signs and plastic labels that are not self-adhesive type with mechanical fasteners appropriate to the location and substrate.
2. Unless otherwise indicated, provide a single line of text with 1/2-inch (13-mm) high letters on minimum 1-1/2-inch (38-mm) high sign; where two lines of text are required, use signs minimum 2 inches (50 mm) high.

CC. Cable Ties: General purpose, for attaching tags, except as listed below:

1. Outdoors: UV-stabilized nylon.
2. In Spaces Handling Environmental Air: Plenum rated.

3.2 IDENTIFICATION SCHEDULE

A. Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment. Install access doors or panels to provide view of identifying devices.

B. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, pull points, and locations of high visibility. Identify by system and circuit designation.

C. Accessible Raceways and Metal-Clad Cables, 600 V or Less, for Service, Feeder, and Branch Circuits, More Than 30A and 120V to Ground: Identify with self-adhesive raceway labels or vinyl tape applied in bands as directed.

1. Locate identification at changes in direction, at penetrations of walls and floors, at 50-foot (15-m) maximum intervals in straight runs, and at 25-foot (7.6-m) maximum intervals in congested areas.

D. Accessible Fittings for Raceways and Cables within Buildings: Identify the covers of each junction and pull box of the following systems with self-adhesive labels containing the wiring system legend and system voltage. System legends shall be as follows:

1. "EMERGENCY POWER."
2. "POWER."
3. "UPS."

E. Power-Circuit Conductor Identification, 600 V or Less: For conductors in vaults, pull and junction boxes, manholes, and handholes, use vinyl wraparound labels, self-adhesive wraparound labels, snap-around labels, snap-around color-coding bands or self-adhesive vinyl tape to identify the phase as directed.

1. Locate identification at changes in direction, at penetrations of walls and floors, at 50-foot (15-m) maximum intervals in straight runs, and at 25-foot (7.6-m) maximum intervals in congested areas.

F. Control-Circuit Conductor Identification: For conductors and cables in pull and junction boxes, manholes, and handholes, use write-on tags or self-adhesive wraparound labels as directed, with the conductor or cable designation, origin, and destination.

G. Control-Circuit Conductor Termination Identification: For identification at terminations, provide heat-shrink preprinted tubes or self-adhesive wraparound labels as directed, with the conductor designation.

H. Conductors to Be Extended in the Future: As directed, Attach write-on tags or marker tape to conductors and list source.

I. Auxiliary Electrical Systems Conductor Identification: Marker tape or Self-adhesive vinyl tape that is uniform and consistent with system used by manufacturer for factory-installed connections as directed.

1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.

J. Locations of Underground Lines: Underground-line warning tape for power, lighting, communication, and control wiring and optical-fiber cable.

K. Workspace Indication: Apply floor marking tape or tape and stencil to finished surfaces. Show working clearances in the direction of access to live parts. Workspace shall comply with NFPA 70

and 29 CFR 1926.403 unless otherwise indicated. Do not install at flush-mounted panelboards and similar equipment in finished spaces.

L. Instructional Signs: Self-adhesive labels, including the color code for grounded and ungrounded conductors.

M. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: Self-adhesive equipment labels, Baked-enamel warning signs or Metal-backed, butyrate warning signs as directed.

1. Apply to exterior of door, cover, or other access.
2. For equipment with multiple power or control sources, apply to door or cover of equipment, including, but not limited to, the following:

    a. Power-transfer switches.
    b. Controls with external control power connections.

N. Arc Flash Warning Labeling: Self-adhesive labels.

O. Operating Instruction Signs: Self-adhesive labels, Baked-enamel warning signs, Metal-backed, butyrate warning signs or Laminated acrylic or melamine plastic signs as directed.

P. Emergency Operating Instruction Signs: As directed, Self-adhesive labels, Baked-enamel warning signs, Metal-backed, butyrate warning signs or Laminated acrylic or melamine plastic signs with white legend on a red background with minimum 3/8-inch- (10-mm-) high letters for emergency instructions at equipment used for power transfer or load shedding.

Q. Equipment Identification Labels:

1. Indoor Equipment: Self-adhesive label, Baked-enamel signs, Metal-backed butyrate signs or Laminated acrylic or melamine plastic sign as directed.
2. Outdoor Equipment: Laminated acrylic or melamine sign or Stenciled legend 4 inches (100 mm) high as directed.

END OF SECTION 260553

SECTION 260573.13 - SHORT-CIRCUIT STUDIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes a computer-based, fault-current study to determine the minimum interrupting capacity of circuit protective devices.

1.2 ACTION SUBMITTALS

A. Product Data:

1. For computer software program to be used for studies.
2. Submit the following after the approval of system protective devices submittals. As directed, Submittals shall or may be in digital form.

    a. Short-circuit study input data, including completed computer program input data sheets.
    b. Short-circuit study and equipment evaluation report; signed, dated, and sealed by a qualified professional engineer.

        1) Submit study report for action prior to receiving final approval of distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Architect for preliminary submittal of sufficient study data to ensure that selection of devices and associated characteristics is satisfactory.
        2) Revised one-line diagram, reflecting field investigation results and results of short-circuit study.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data:

1. For Power Systems Analysis Software Developer.
2. For Power System Analysis Specialist.
3. For Field Adjusting Agency.

B. Product Certificates: For short-circuit study software, certifying compliance with IEEE 399.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Study shall be performed using commercially developed and distributed software designed specifically for power system analysis.

B. Software algorithms shall comply with requirements of standards and guides specified in this Section.

C. Manual calculations are unacceptable.

1. Power System Analysis Software Qualifications: Computer program shall be designed to perform short-circuit studies or have a function, component, or add-on module designed to perform short-circuit studies.
2. Computer program shall be developed under the charge of a licensed professional engineer who holds IEEE Computer Society's Certified Software Development Professional certification.

D. Power Systems Analysis Specialist Qualifications: Professional engineer licensed in the state where Project is located. All elements of the study shall be performed under the direct supervision and control of this professional engineer.

E. Short-Circuit Study Certification: Short-Circuit Study Report shall be signed and sealed by Power Systems Analysis Specialist.

F. Field Adjusting Agency Qualifications:

1. Employer of a NETA ETT-Certified Technician Level III or NICET Electrical Power Testing Level III certification responsible for all field adjusting of the Work.
2. A member company of NETA.
3. Acceptable to authorities having jurisdiction.

PART 2 - PRODUCTS

2.1 POWER SYSTEM ANALYSIS SOFTWARE DEVELOPERS

A. Comply with IEEE 399 and IEEE 551.

1. Analytical features of power systems analysis software program shall have capability to calculate "mandatory" features as listed in IEEE 399.

B. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output.

2.2 SHORT-CIRCUIT STUDY REPORT CONTENTS

A. Executive summary of study findings.

B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.

C. One-line diagram of modeled power system, showing the following:

1. Protective device designations and ampere ratings.
2. Conductor types, sizes, and lengths.
3. Transformer kilovolt ampere (kVA) and voltage ratings.
4. Motor and generator designations and kVA ratings.
5. Switchgear, switchboard, motor-control center, and panelboard designations and ratings.
6. Derating factors and environmental conditions.
7. Any revisions to electrical equipment required by the study.

D. Comments and recommendations for system improvements or revisions in a written document, separate from one-line diagram.

E. Protective Device Evaluation:

1. Evaluate equipment and protective devices and compare to available short-circuit currents. Verify that equipment withstand ratings exceed available short-circuit current at equipment installation locations.
2. Tabulations of circuit breaker, fuse, and other protective device ratings versus calculated short-circuit duties.
3. For 600-V overcurrent protective devices, ensure that interrupting ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
4. For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in standards to 1/2-cycle symmetrical fault current.

F. Short-Circuit Study Input Data:

1. One-line diagram of system being studied.
2. Power sources available.
3. Manufacturer, model, and interrupting rating of protective devices.
4. Conductors.
5. Transformer data.

G. Short-Circuit Study Output Reports:

1. Low-Voltage Fault Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:

    a. Voltage.
    b. Calculated fault-current magnitude and angle.
    c. Fault-point X/R ratio.
    d. Equivalent impedance.

2. Momentary Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:

    a. Voltage.
    b. Calculated symmetrical fault-current magnitude and angle.
    c. Fault-point X/R ratio.
    d. Calculated asymmetrical fault currents:

1) Based on fault-point X/R ratio.
2) Based on calculated symmetrical value multiplied by 1.6.
3) Based on calculated symmetrical value multiplied by 2.7.

3. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:

a. Voltage.
b. Calculated symmetrical fault-current magnitude and angle.
c. Fault-point X/R ratio.
d. No AC Decrement (NACD) ratio.
e. Equivalent impedance.
f. Multiplying factors for 2, 3, 5, and 8-cycle circuit breakers rated on a symmetrical basis.
g. Multiplying factors for 2, 3, 5, and 8-cycle circuit breakers rated on a total basis.

PART 3 - EXECUTION

3.1 POWER SYSTEM DATA

A. Obtain all data necessary for conduct of the study.

B. Gather and tabulate the required input data to support the short-circuit study. Comply with requirements in Section 017839 "Project Record Documents" for recording circuit protective device characteristics. Record data on a Record Document copy of one-line diagram. Comply with recommendations in IEEE 551 as to the amount of detail that is required to be acquired in the field. Field data gathering shall be under direct supervision and control of the engineer in charge of performing the study and shall be by the engineer or its representative who holds NETA ETT-Certified Technician Level III or NICET Electrical Power Testing Level III certification.

3.2 SHORT-CIRCUIT STUDY

A. Perform study following the general study procedures contained in IEEE 399.

B. Calculate short-circuit currents according to IEEE 551.

C. Base study on device characteristics supplied by device manufacturer.

D. Extent of electrical power system to be studied is indicated on Drawings.

E. Begin short-circuit current analysis at the service, extending down to system overcurrent protective devices as follows:

1. To normal system low-voltage load buses where fault current is 10 kA or less.
2. Exclude equipment rated 240 V ac or less when supplied by a single transformer rated less than 125 kVA.

F. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Study all cases of system-switching configurations and alternate operations that could result in maximum fault conditions.

G. Include the ac fault-current decay from induction motors, synchronous motors, and asynchronous generators and apply to low- and medium-voltage, three-phase ac systems. Also account for the fault-current dc decrement to address asymmetrical requirements of interrupting equipment.

H. Calculate short-circuit momentary and interrupting duties for a three-phase bolted fault and a single line-to-ground fault at each equipment indicated on one-line diagram.

1. For grounded systems, provide a bolted line-to-ground fault-current study for areas as defined for the three-phase bolted fault short-circuit study.

I. Include in the report identification of any protective device applied outside its capacity.

END OF SECTION 260573.13

SECTION 260573.16 - COORDINATION STUDIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes computer-based, overcurrent protective device coordination studies to determine overcurrent protective devices and to determine overcurrent protective device settings for selective tripping.

1.2 ACTION SUBMITTALS

A. Product Data:

1. For computer software program to be used for studies.
2. Submit the following after the approval of system protective devices submittals. As directed, Submittals shall or may be in digital form.

    a. Coordination-study input data, including completed computer program input data sheets.
    b. Study and equipment evaluation reports.

3. Overcurrent protective device coordination study report; signed, dated, and sealed by a qualified professional engineer.

    a. Submit study report for action prior to receiving final approval of distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Architect for preliminary submittal of sufficient study data to ensure that selection of devices and associated characteristics is satisfactory.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data:

1. For Power System Analysis Software Developer.
2. For Power Systems Analysis Specialist.
3. For Field Adjusting Agency.

B. Product Certificates: For overcurrent protective device coordination study software, certifying compliance with IEEE 399.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Studies shall be performed using commercially developed and distributed software designed specifically for power system analysis.

B. Software algorithms shall comply with requirements of standards and guides specified in this Section.

C. Manual calculations are unacceptable.

D. Power System Analysis Software Qualifications:

1. Computer program shall be designed to perform coordination studies or have a function, component, or add-on module designed to perform coordination studies.
2. Computer program shall be developed under the charge of a licensed professional engineer who holds IEEE Computer Society's Certified Software Development Professional certification.

E. Power Systems Analysis Specialist Qualifications: Professional engineer licensed in the state where Project is located. All elements of the study shall be performed under the direct supervision and control of this professional engineer.

F. Field Adjusting Agency Qualifications:

1. Employer of a NETA ETT-Certified Technician Level III responsible for all field adjusting of the Work.
2. A member company of NETA.
3. Acceptable to authorities having jurisdiction.

PART 2 - PRODUCTS

2.1 POWER SYSTEM ANALYSIS SOFTWARE DEVELOPERS

A. Comply with IEEE 242 and IEEE 399.

B. Analytical features of device coordination study computer software program shall have the capability to calculate "mandatory" features as listed in IEEE 399.

C. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices and shall demonstrate selective coordination by computer-generated, time-current coordination plots.

2.2 COORDINATION STUDY REPORT CONTENTS

A. Executive summary of study findings.

B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.

C. One-line diagram of modeled power system, showing the following:

1. Protective device designations and ampere ratings.
2. Conductor types, sizes, and lengths.
3. Transformer kilovolt ampere (kVA) and voltage ratings.
4. Motor and generator designations and kVA ratings.
5. Switchgear, switchboard, motor-control center, and panelboard designations.
6. Any revisions to electrical equipment required by the study.
7. Study Input Data: As described in "Power System Data" Article.

    a. Short-Circuit Study Output: As specified in "Short-Circuit Study Output Reports" Paragraph in "Short-Circuit Study Report Contents" Article in Section 260573.13 "Short-Circuit Studies."

D. Protective Device Coordination Study:

1. Report recommended settings of protective devices, ready to be applied in the field. Use manufacturer's data sheets for recording the recommended setting of overcurrent protective devices when available.

    a. Phase and Ground Relays:

        1) Device tag.
        2) Relay current transformer ratio and tap, time dial, and instantaneous pickup value.
        3) Recommendations on improved relaying systems, if applicable.

    b. Circuit Breakers:

        1) Adjustable pickups and time delays (long time, short time, and ground).
        2) Adjustable time-current characteristic.
        3) Adjustable instantaneous pickup.
        4) Recommendations on improved trip systems, if applicable.

    c. Fuses: Show current rating, voltage, and class.

E. Time-Current Coordination Curves: Determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series, including power utility company's upstream devices. Prepare separate sets of curves for the switching schemes and for emergency periods where the power source is local generation. Show the following information:

1. Device tag and title, one-line diagram with legend identifying the portion of the system covered.
2. Terminate device characteristic curves at a point reflecting maximum symmetrical or asymmetrical fault current to which the device is exposed.
3. Identify the device associated with each curve by manufacturer type, function, and, if applicable, tap, time delay, and instantaneous settings recommended.
4. Plot the following listed characteristic curves, as applicable:

    a. Power utility's overcurrent protective device.

b. Low-voltage fuses including manufacturer's minimum melt, total clearing, tolerance, and damage bands.
c. Low-voltage equipment circuit-breaker trip devices, including manufacturer's tolerance bands.
d. Transformer full-load current, magnetizing inrush current, and ANSI through-fault protection curves.
e. Ground-fault protective devices.
f. The largest feeder circuit breaker in each motor-control center and panelboard.

5. Maintain selectivity for tripping currents caused by overloads.
6. Provide adequate time margins between device characteristics such that selective operation is achieved.
7. Comments and recommendations for system improvements.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance of the Work. Devices to be coordinated are indicated on Drawings.

1. Proceed with coordination study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to coordination study may not be used in study.

3.2 POWER SYSTEM DATA

A. Obtain all data necessary for conduct of the overcurrent protective device study.

1. Verify completeness of data supplied in one-line diagram on Drawings. Call any discrepancies to Architect's attention.
2. For equipment included as Work of this Project, use characteristics submitted under provisions of action submittals and information submittals for this Project.

B. Gather and tabulate all required input data to support the coordination study. List below is a guide. Comply with recommendations in IEEE 551 for the amount of detail required to be acquired in the field. Field data gathering shall be under direct supervision and control of the engineer in charge of performing the study, and shall be by the engineer or its representative who holds NETA ETT-Certified Technician Level III or NICET Electrical Power Testing Level III certification.

3.3 COORDINATION STUDY

A. Comply with IEEE 242 for calculating short-circuit currents and determining coordination time intervals.

B. Comply with IEEE 399 for general study procedures.

C. Base study on device characteristics supplied by device manufacturer.

D. Extent of electrical power system to be studied is indicated on Drawings.

E. Begin analysis at the service, extending down to system overcurrent protective devices as follows:

1. To normal system low-voltage load buses where fault current is 10 kA or less.
2. Exclude equipment rated 240 V ac or less when supplied by a single transformer rated less than 125 kVA.

F. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Study all cases of system-switching configurations and alternate operations that could result in maximum fault conditions.

G. Transformer Primary Overcurrent Protective Devices:

1. Device shall not operate in response to the following:

   a. Inrush current when first energized.
   b. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
   c. Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.

2. Device settings shall protect transformers according to IEEE C57.12.00, for fault currents.

H. Motor Protection:

1. Select protection for low-voltage motors according to IEEE 242 and NFPA 70.
2. Select protection for motors served at voltages more than 600 V according to IEEE 620.

I. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and protection recommendations in IEEE 242. Demonstrate that equipment withstands the maximum short-circuit current for a time equivalent to the tripping time of the primary relay protection or total clearing time of the fuse. To determine temperatures that damage insulation, use curves from cable manufacturers or from listed standards indicating conductor size and short-circuit current.

J. Generator Protection: Select protection according to manufacturer's written instructions and to IEEE 242.

K. Include the ac fault-current decay from induction motors and apply to low- and medium-voltage, three-phase ac systems. Also account for fault-current dc decrement, to address asymmetrical requirements of interrupting equipment.

L. Calculate short-circuit momentary and interrupting duties for a three-phase bolted fault and a single line-to-ground fault at each equipment indicated on one-line diagram.

1. For grounded systems, provide a bolted line-to-ground fault-current study for areas as defined for the three-phase bolted fault short-circuit study.

M. Protective Device Evaluation:

1. Evaluate equipment and protective devices and compare to short-circuit ratings.
2. Adequacy of switchgear, motor-control centers, and panelboard bus bars to withstand short-circuit stresses.
3. Include in the report identification of any protective device applied outside its capacity.

3.4 LOAD-FLOW AND VOLTAGE-DROP STUDY

A. Perform a load-flow and voltage-drop study to determine the steady-state loading profile of the system. Analyze power system performance two times as follows:

1. Determine load flow and voltage drop based on full-load currents obtained in "Power System Data" Article.
2. Determine load flow and voltage drop based on 80 percent of the design capacity of load buses.
3. Prepare load-flow and voltage-drop analysis and report to show power system components that are overloaded or might become overloaded; show bus voltages that are less than as prescribed by NFPA 70.

3.5 MOTOR-STARTING STUDY

A. Prepare the motor-starting study report, noting light flicker for limits proposed by IEEE 141, and applicable standards as directed, and voltage sags so as not to affect operation of other utilization equipment on system supplying the motor.

3.6 FIELD ADJUSTING

A. Adjust relay and protective device settings according to recommended settings provided by the coordination study. Field adjustments shall be completed by the engineering service division of equipment manufacturer under the "Startup and Acceptance Testing" contract portion.

B. Make minor modifications to equipment as required to accomplish compliance with short-circuit and protective device coordination studies.

C. Testing and adjusting shall be by a full-time employee of the Field Adjusting Agency, who holds NETA ETT-Certified Technician Level III or NICET Electrical Power Testing Level III certification.

1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters. Perform NETA tests and inspections for all adjustable overcurrent protective devices.

3.7 DEMONSTRATION

A. Engage Power Systems Analysis Specialist to train Owner's maintenance personnel in the following:

1. Acquaint personnel in fundamentals of operating the power system in normal and emergency modes.
2. Hand-out and explain the coordination study objectives, study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpreting time-current coordination curves.
3. For Owner's maintenance staff certified as NETA ETT-Certified Technicians Level III or NICET Electrical Power Testing Level III Technicians, teach how to adjust, operate, and maintain overcurrent protective device settings.

END OF SECTION 260573.16

SECTION 260573.19 - ARC-FLASH HAZARD ANALYSIS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes a computer-based, arc-flash study to determine the arc-flash hazard distance and the incident energy to which personnel could be exposed during work on or near electrical equipment.

1.2 ACTION SUBMITTALS

A. Product Data: For computer software program to be used for studies.

B. Study Submittals: Submit the following submittals after the approval of system protective devices submittals. As directed, Submittals shall or may be in digital form:

1. Arc-flash study input data, including completed computer program input data sheets.
2. Arc-flash study report; signed, dated, and sealed by Power Systems Analysis Specialist.
3. Submit study report for action prior to receiving final approval of distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Architect for preliminary submittal of sufficient study data to ensure that selection of devices and associated characteristics is satisfactory.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data:

1. For Power Systems Analysis Software Developer.
2. For Power System Analysis Specialist.
3. For Field Adjusting Agency.

B. Product Certificates: For arc-flash hazard analysis software, certifying compliance with IEEE 1584 and NFPA 70E.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Study shall be performed using commercially developed and distributed software designed specifically for power system analysis.

B. Software algorithms shall comply with requirements of standards and guides specified in this Section.

C. Manual calculations are unacceptable.

D. Power System Analysis Software Qualifications: An entity that owns and markets computer software used for studies, having performed successful studies of similar magnitude on electrical distribution systems using similar devices.

1. Computer program shall be designed to perform arc-flash analysis or have a function, component, or add-on module designed to perform arc-flash analysis.
2. Computer program shall be developed under the charge of a licensed professional engineer who holds IEEE Computer Society's Certified Software Development Professional certification.

E. Power Systems Analysis Specialist Qualifications: Professional engineer in charge of performing the arc-flash study, analyzing the arc flash, and documenting recommendations, licensed in the state where Project is located. All elements of the study shall be performed under the direct supervision and control of this professional engineer.

F. Arc-Flash Study Certification: Arc-Flash Study Report shall be signed and sealed by Power Systems Analysis Specialist.

G. Field Adjusting Agency Qualifications:

1. Employer of a NETA ETT-Certified Technician Level III or NICET Electrical Power Testing Level III certification responsible for all field adjusting of the Work.
2. A member company of NETA.
3. Acceptable to authorities having jurisdiction.

PART 2 - PRODUCTS

2.1 COMPUTER SOFTWARE DEVELOPERS

A. Comply with IEEE 1584 and NFPA 70E.

B. Analytical features of device coordination study computer software program shall have the capability to calculate "mandatory" features as listed in IEEE 399.

2.2 ARC-FLASH STUDY REPORT CONTENT

A. Executive summary of study findings.

B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.

C. One-line diagram, showing the following:

1. Protective device designations and ampere ratings.

2. Conductor types, sizes, and lengths.
3. Transformer kilovolt ampere (kVA) and voltage ratings, including derating factors and environmental conditions.
4. Motor and generator designations and kVA ratings.
5. Switchgear, switchboard, motor-control center, panelboard designations, and ratings.

D. Study Input Data: As described in "Power System Data" Article.

E. Short-Circuit Study Output Data: As specified in "Short-Circuit Study Output Reports" Paragraph in "Short-Circuit Study Report Contents" Article in Section 260573.13 "Short-Circuit Studies."

F. Protective Device Coordination Study Report Contents: As specified in "Coordination Study Report Contents" Article in Section 260573.16 "Coordination Studies."

G. Arc-Flash Study Output Reports:

1. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each equipment location included in the report:

a. Voltage.
b. Calculated symmetrical fault-current magnitude and angle.
c. Fault-point X/R ratio.
d. No AC Decrement (NACD) ratio.
e. Equivalent impedance.
f. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a symmetrical basis.
g. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a total basis.

H. Incident Energy and Flash Protection Boundary Calculations:

1. Arcing fault magnitude.
2. Protective device clearing time.
3. Duration of arc.
4. Arc-flash boundary.
5. Restricted approach boundary.
6. Limited approach boundary.
7. Working distance.
8. Incident energy.
9. Hazard risk category.
10. Recommendations for arc-flash energy reduction.

I. Fault study input data, case descriptions, and fault-current calculations including a definition of terms and guide for interpretation of computer printout.

2.3 ARC-FLASH WARNING LABELS

A. Comply with requirements in Section 260553 "Identification for Electrical Systems" for self-adhesive equipment labels. Produce a 3.5-by-5-inch (76-by-127-mm) self-adhesive equipment label for each work location included in the analysis.

B. Label shall have an orange header with the wording, "WARNING, ARC-FLASH HAZARD," and shall include the following information taken directly from the arc-flash hazard analysis:

1. Location designation.
2. Nominal voltage.
3. Protection boundaries.
    a. Arc-flash boundary.
    b. Restricted approach boundary.
    c. Limited approach boundary.
4. Arc flash PPE category.
5. Required minimum arc rating of PPE in Cal/cm squared.
6. Available incident energy.
7. Working distance.
8. Engineering report number, revision number, and issue date.

C. Labels shall be machine printed, with no field-applied markings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine Project overcurrent protective device submittals. Proceed with arc-flash study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to arc-flash study may not be used in study.

3.2 ARC-FLASH HAZARD ANALYSIS

A. Comply with NFPA 70E and its Annex D for hazard analysis study.

B. Preparatory Studies: Perform the Short-Circuit and Protective Device Coordination study or studies prior to starting the Arc-Flash Hazard Analysis or obtain results from another source.

1. Short-Circuit Study Output: As specified in "Short-Circuit Study Output Reports" Paragraph in "Short-Circuit Study Report Contents" Article in Section 260573.13 "Short-Circuit Studies."
2. Coordination Study Report Contents: As specified in "Coordination Study Report Contents" Article in Section 260573.16 "Coordination Studies."

C. Calculate maximum and minimum contributions of fault-current size.

1. Maximum calculation shall assume a maximum contribution from the utility and shall assume motors to be operating under full-load conditions.
2. Calculate arc-flash energy at 85 percent of maximum short-circuit current according to IEEE 1584 recommendations.
3. Calculate arc-flash energy at 38 percent of maximum short-circuit current according to NFPA 70E recommendations.

4. Calculate arc-flash energy with the utility contribution at a minimum and assume no motor contribution.

D. Calculate the arc-flash protection boundary and incident energy at locations in electrical distribution system where personnel could perform work on energized parts.

E. Include low-voltage equipment locations, except equipment rated 240 V ac or less fed from transformers less than 125 kVA.

F. Calculate the limited, restricted, and prohibited approach boundaries for each location.

G. Incident energy calculations shall consider the accumulation of energy over time when performing arc-flash calculations on buses with multiple sources. Iterative calculations shall take into account the changing current contributions, as the sources are interrupted or decremented with time. Fault contribution from motors and generators shall be decremented as follows:

1. Fault contribution from induction motors shall not be considered beyond three to five cycles.

H. Arc-flash energy shall generally be reported for the maximum of line or load side of a circuit breaker. However, arc-flash computation shall be performed and reported for both line and load side of a circuit breaker as follows:

1. When the circuit breaker is in a separate enclosure.
2. When the line terminals of the circuit breaker are separate from the work location.

I. Base arc-flash calculations on actual overcurrent protective device clearing time. Cap maximum clearing time at two seconds based on IEEE 1584, Section B.1.2.

3.3 POWER SYSTEM DATA

A. Obtain all data necessary for conduct of the arc-flash hazard analysis.

1. Verify completeness of data supplied on one-line diagram on Drawings and under "Preparatory Studies" Paragraph in "Arc-Flash Hazard Analysis" Article. Call discrepancies to Architect's attention.
2. For new equipment, use characteristics from approved submittals under provisions of action submittals and information submittals for this Project.

3.4 LABELING

A. Apply one arc-flash label on the front cover of each section of the equipment and on side or rear covers with accessible live parts and hinged doors or removable plates for each equipment included in the study. Base arc-flash label data on highest values calculated at each location.

B. Each piece of equipment listed below shall have an arc-flash label applied to it:

1. Motor-control center.
2. Low-voltage switchboard.

3. Switchgear.
4. Medium-voltage switch.
5. Medium voltage transformers
6. Low voltage transformers. Exclude transformers with high voltage side 240 V or less and less than 125 kVA.
7. Panelboard and safety switch over 250 V.
8. Applicable panelboard and safety switch under 250 V.
9. Control panel.

C. Note on record Drawings the location of equipment where the personnel could be exposed to arc-flash hazard during their work.

1. Indicate arc-flash energy.
2. Indicate protection level required.

3.5 APPLICATION OF WARNING LABELS

A. Install arc-flash warning labels under the direct supervision and control of Power System Analysis Specialist.

3.6 DEMONSTRATION

A. Engage Power Systems Analysis Specialist to train Owner's maintenance personnel in potential arc-flash hazards associated with working on energized equipment and the significance of arc-flash warning labels.

END OF SECTION 260573.19

SECTION 260800 - COMMISSIONING OF ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes Cx process requirements for the following electrical components, systems, assemblies, and equipment:

1. Electrical equipment connected to Normal power systems.
2. Electrical equipment connected to Essential power systems that provide an alternative source of power in the absence of power from the Normal power system.
3. Controls and instrumentation.
4. Systems testing and verification, including Normal and Essential power systems, and transitions from Normal to Essential power systems and back.

1.2 DEFINITIONS

A. BoD: Basis-of-Design Document, as defined in Section 019113 "General Commissioning Requirements."

B. Cx: Commissioning, as defined in Section 019113 "General Commissioning Requirements."

C. CxA: Commissioning Authority, as defined in Section 019113 "General Commissioning Requirements."

D. Essential Power Systems: A power system that a facility transitions to in the absence of Normal power. This power includes all systems classified as "standby" or "emergency," including "legally required."

E. Low Voltage: 600 V and below.

F. Medium Voltage: 601 V and above.

G. Normal Power Systems: A power system that provides primary power to a facility.

H. OPR: Owner's Project Requirements, as defined in Section 019113 "General Commissioning Requirements."

I. "Systems," "Assemblies," "Subsystems," "Equipment," and "Components": Where these terms are used together or separately, they shall mean "as-built" systems, assemblies, subsystems, equipment, and components.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data: For BAS and electrical testing technician.

B. Construction Checklists: Draft construction checklists will be created by CxA for Contractor review.

C. Construction Checklists: Include construction checklists for Normal and Essential power systems, and include controls and instrumentation that comply with requirements in Section 019113 "General Commissioning Requirements" for construction checklists:

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Electrical Testing Technician Qualifications: Technicians to perform electrical Construction Checklist verification tests, Construction Checklist verification test demonstrations, Cx tests, and Cx test demonstrations shall have the following minimum qualifications:

1. Journey level or equivalent skill level. Vocational school four-year-program graduate or an Associate's degree in electrical systems, or similar field.
2. Minimum three years' experience installing, servicing, and operating systems manufactured by approved manufacturer.

B. Testing Equipment and Instrumentation Quality and Calibration: For test equipment and instrumentation required to perform electrical Cx work, perform the following:

1. Submit test equipment and instrumentation list. For each equipment or instrument, identify the following:

    a. Equipment/instrument identification number.
    b. Planned Cx application or use.
    c. Manufacturer, make, model, and serial number.
    d. Calibration history, including certificates from agencies that calibrate the equipment and instrumentation.

2. Test equipment and instrumentation shall meet the following criteria:

    a. Capable of testing and measuring performance within the specified acceptance criteria.
    b. Be calibrated at manufacturer's recommended intervals with current calibration tags permanently affixed to the instrument being used.
    c. Be maintained in good repair and operating condition throughout duration of use on Project.
    d. Be recalibrated/repaired if dropped or damaged in any way since last calibrated.

C. Proprietary Test Instrumentation and Tools:

1. Equipment Manufacturer's Proprietary Instrumentation and Tools: For installed equipment included in the Cx process, test instrumentation and tools manufactured or prescribed by equipment manufacturer to service, calibrate, adjust, repair, or otherwise

work on its equipment or required as a condition of equipment warranty, perform the following:

a. Submit proprietary instrumentation and tools list. For each instrument or tool, identify the following:

   1) Instrument or tool identification number.
   2) Equipment schedule designation of equipment for which the instrument or tool is required.
   3) Manufacturer, make, model, and serial number.
   4) Calibration history, including certificates from agencies that calibrate the instrument or tool, where appropriate.

b. Include a separate list of proprietary test instrumentation and tools in operation and maintenance manuals.

c. Electrical proprietary test instrumentation and tools become property of Owner at the time of Substantial Completion.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 CONSTRUCTION CHECKLISTS

A. Prepare detailed construction checklists for electrical systems, subsystems, equipment, and components. Complete and submit construction checklists.

3.2 CONSTRUCTION CHECKLIST REVIEW

A. Review and provide written comments on draft construction checklists. CxA will create required draft construction checklists and provide them to Contractor.

B. Return draft Construction Checklist review comments within 10 days of receipt.

C. When review comments have been resolved, CxA will provide final construction checklists, marked "Approved for Use, (date)."

D. Use only construction checklists, marked "Approved for Use, (date)."

3.3 GENERAL TESTING REQUIREMENTS

A. Certify that electrical systems, subsystems, and equipment have been installed, calibrated, and started and that they are operating according to the Contract Documents and approved Shop Drawings and submittals.

B. Certify that electrical instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents and approved Shop Drawings and submittals, and that pretest set points have been recorded.

C. Set systems, subsystems, and equipment into operating mode to be tested according to approved test procedures (for example, normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).

D. Measure capacities and effectiveness of systems, assemblies, subsystems, equipment, and components, including operational and control functions to verify compliance with acceptance criteria.

E. Test systems, assemblies, subsystems, equipment, and components operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and response according to acceptance criteria.

F. Construction Checklists: Prepare and submit detailed construction checklists for electrical systems, subsystems, equipment, and components.

G. Perform tests using design conditions, whenever possible.

H. If tests cannot be completed because of a deficiency outside the scope of the electrical system, document the deficiency and report it to Owner. After deficiencies are resolved, reschedule tests.

I. If seasonal testing is specified, complete appropriate initial performance tests and documentation and schedule seasonal tests.

J. Coordinate schedule with and perform Cx activities at the direction of the CxA.

K. Comply with Construction Checklist requirements, including material verification, installation checks, startup, and performance tests requirements specified in Sections specifying electrical systems and equipment.

L. Provide technicians, instrumentation, tools, and equipment to complete and document the following:

1. Performance tests.
2. Demonstration of a sample of performance tests.
3. Cx tests.
4. Cx test demonstrations.

3.4 Cx TESTS FOR ELECTRICAL SYSTEMS

A. Verification of Normal Power System Operation:

1. Prerequisites: Acceptance of results for construction checklists for Division 26 electrical components associated with Normal power system.
2. Equipment and Systems to Be Tested: Division 26 electrical equipment.
3. Test Purpose: Verify operation of Normal power system.

4. Test Conditions: Energize components of Normal power system, one at a time.
5. Acceptance Criteria: Proper operation of Normal power system over a 24 or 48-hour period as directed.

B. Verification of Essential Power System Operation:

1. Prerequisites:

   a. Acceptance of results for construction checklists for Division 26 electrical components associated with Essential power system.
   b. Completion of "Verification of Normal Power System Operation" tests.

2. Equipment and Systems to Be Tested: Division 26 electrical equipment.
3. Test Purpose: Verify operation of Essential power system.
4. Test Conditions:

   a. Energize components of Normal power system.
   b. Simulate a failure of Normal power system.

5. Acceptance Criteria: Transfer of power from Normal to Essential power system within OPR.

C. Verification of Control and Instrumentation:

1. Prerequisites: Acceptance of results for construction checklists.

D. Test Purpose: Verify operation of control and monitoring systems for Normal and Essential power systems.

E. Test Conditions:

1. Energize components of Normal power system.
2. Test operation of equipment.

F. Acceptance Criteria: Operation of equipment according to OPR.

END OF SECTION 260800

SECTION 260913 - ELECTRICAL POWER MONITORING AND CONTROL

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes equipment and systems used to monitor and control electrical consumption:

1. Multifunction meters.
2. Power meters.
3. Circuit meters and monitors.
4. Electrical power monitoring system software.
5. Electrical power monitoring and control software.
6. Network configuration software.
7. Monitoring and control of power distribution equipment.
8. System operator interfaces.
9. Desktop workstations.
10. Raceways and boxes.
11. Wires and cables.
12. Identification.

B. Related Requirements:

1. Section 230923.13 "Energy Meters" for electricity meters for HVAC equipment.
2. Section 262713 "Electricity Metering" for equipment to meter electricity consumption and demand for tenant submetering.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For power monitoring and control equipment.

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, method of field assembly, components, and location and size of each field connection.

    a. Attach copies of approved Product Data submittals for products (such as switchboards, switchgear, and motor-control centers) that describe the following:

        1) Location of the meters and gateways, and routing of the connecting wiring.
        2) Details of power monitoring and control features to illustrate coordination among related equipment and power monitoring and control.

3. Block Diagram: Show interconnections between components specified in this Section and devices furnished with power distribution system components. Indicate data

communication paths and identify networks, data buses, data gateways, concentrators, and other devices to be used. Describe characteristics of network and other data communication lines.

4. Include diagrams for power, signal, and control wiring.
5. Surge Suppressors: Data for each device used and where applied.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

B. Design Data:

1. Manufacturer's system installation and setup guides, with data forms to plan and record options and setup decisions.

    a. Project Record Drawings of as-built versions of submittal Shop Drawings provided in electronic PDF format on compact disk or portable storage device with a USB interface.
    b. Testing and commissioning reports and checklists of completed final versions of reports, checklists, and trend logs.
    c. As-built versions of submittal Product Data.
    d. Names, addresses, e-mail addresses, and 24-hour telephone numbers of Installer and service representatives for the system and products.
    e. Operator's manual with procedures for operating control systems including logging on and off, handling alarms, producing point reports, trending data, overriding computer control, and changing set points and variables.
    f. Programming manuals with description of programming language and syntax, of statements for algorithms and calculations used, of point database creation and modification, of program creation and modification, and of editor use.
    g. Engineering, installation, and maintenance manuals that explain how to do the following:

        1) Design and install new points, panels, and other hardware.
        2) Perform preventive maintenance and calibration.
        3) Debug hardware problems.
        4) Repair or replace hardware.

    h. Documentation of all programs created using custom programming language including set points, tuning parameters, and object database.
    i. Backup copy of graphic files, programs, and database on compact disk or portable storage device with a USB interface.
    j. Complete original-issue documentation, installation, and maintenance information for furnished third-party hardware including computer equipment and sensors.
    k. Complete original-issue copies of furnished software, including operating systems, custom programming language, workstation software, and graphics software on compact disk or portable storage device with a USB interface.
    l. Recommended preventive maintenance procedures for system components, including schedule of tasks such as inspection, cleaning, and calibration; time between tasks; and task descriptions.
    m. Owner training materials.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

B. Software and firmware operational documentation.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

1.6 COORDINATION

A. Coordinate features of distribution equipment and power monitoring and control components to form an integrated interconnection of compatible components.

1. Match components and interconnections for optimum performance of specified functions.

B. Coordinate Work of this Section with those in Sections specifying distribution components that are monitored or controlled by power monitoring and control equipment.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Microprocessor-based monitoring and control of electrical power distribution system(s) that includes the following:

1. Electrical meters that monitor, control, and connect to the data transmission network.
2. LAN: High-speed, multi-access, open, nonproprietary, industry-standard communication protocols.
3. As directed, Include PC-based workstation or multiple PC-based workstations with web access, with its operating system and application software, connected to data transmission network.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. UL Compliance: Listed and labeled as complying with UL 61010-1.

2.2 PERFORMANCE REQUIREMENTS

A. Surge Protection: For external wiring of each conductor entry connection to components to protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads.

1. Minimum Protection for Power Lines 120 V and More: SPDs complying with UL 1449, listed and labeled for intended use by an NRTL acceptable to authorities having jurisdiction. Auxiliary panel suppressors complying with requirements in Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."
2. Minimum Protection for Communication, Signal, Control, and Low-Voltage Power Lines: Comply with requirements as recommended by manufacturer for type of line being protected.

B. Addressable Devices: All transmitters and receivers shall communicate unique device identification and status reports to monitoring and control clients.

C. Interface with DDC System for HVAC: Provide factory-installed hardware and software to enable the DDC system for HVAC to monitor, display, and record data for use in processing reports.

1. Hardwired Monitoring Points: Electrical power demand (kilowatts), electrical power consumption (kilowatt-hours), power factor.
2. As directed, ASHRAE 135 (BACnet), LonTalk, Modbus or Industry-accepted, open-protocol communication interface with the DDC system for HVAC shall enable the DDC system for HVAC operator to remotely monitor meter information from a DDC system for HVAC operator workstation. Control features and monitoring points displayed locally at metering panel shall be available through the DDC system for HVAC.

D. Backup Power Source:

1. Electrical power distribution equipment served by a backup power source for controls shall have associated power monitoring and control system products that monitor and control such systems and equipment also served from a backup power source.

2.3 MULTIFUNCTION ENERGY METERS

A. Multifunction Energy Meter: Separately mounted, modular, permanently installed, solid-state, digital I/O instrument for power and energy metering and monitoring; complying with UL 61010-1.

1. Capable of metering 4-wire Y, 3-wire Y, 3-wire delta, and single-phase power systems.
2. Equipped with security lock to protect revenue related metering from unauthorized and accidental changes.

B. Environment: System components shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

1. As directed, indoor installation in non-air-conditioned or nontemperature-controlled spaces that have environmental controls to maintain ambient conditions of minus 4 deg to 158 deg F (minus 20 to plus 70 deg C) dry bulb and 5 to 95 percent relative humidity, noncondensing.
2. Comply with IEC 60529 degree of protection code of IP65 for the front of the meter, and code of IP30 for the body.

C. Overvoltage: Comply with UL 61010-1 overvoltage withstand rating for CAT III.

D. Accuracy:

1. Comply with ANSI C12.20, Class 0.5.
2. Neutral Current Measurement: Not more than 0.65 percent.
3. Power Factor: 1.0 percent.
4. Frequency: 0.1 percent.
5. THD: 1.0 percent.
6. Waveform Sampling: 64 per cycle.

E. Data Link:

F. Meter Physical Characteristics:

1. Display: Backlit LCD with antiglare and scratch-resistant lens.
2. Display of Metered Values:

a. One screen to show at least three user-selected values displayed at the same time. Selections available to display shall include the following:

1) All meters.
2) Measurements.
3) THD.
4) Energy.
5) Demand.
6) Minimum and maximum values.
7) Power demand.

G. Sampling Rate: Continuously sample and record voltage and current at a rate not less than 64 samples per cycle, simultaneously on all voltage and current channels of the meter.

H. Meters:

1. Instantaneous, rms:

a. Current: Each phase, neutral and three-phase average.
b. Voltage: L-L each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
c. Active Power (kW): Each phase and three-phase total.
d. Reactive Power (kVAR): Each phase and three-phase total.
e. Apparent Power (kVA): Each phase and three-phase total.
f. Power Factor: Each phase and three-phase total.

2. Energy:

a. Active Energy (kWh): Three-phase total.

3. Demand, Derived from Instantaneous rms Meters:

a. Current: Present and maximum.

b. Active: Present and maximum.
c. Reactive: Present and maximum.
d. Apparent: Present and maximum.

4. Power Quality Measurements:

a. THD: Current and voltage from measurements simultaneously from the same cycle, as can be calculated from the specified sampling rate.

I. I/O: Two optically isolated digital outputs for KY pulsing or control. Output signal characteristics shall be 150 mA at 200 V.

1. KY Pulse: Generate standard KY pulses for a user-defined increment of metered active energy as follows:

a. User-defined pulse output, associated with kWh.
b. User-defined pulse output, associated with kVARh.

J. Capacities and Characteristics:

1. Power Supply: 120-V ac, 60 Hz.
2. Circuit Connections:

a. Voltage: Measurement autoranging, 60- to 400-V ac L-N. Connect directly to low-voltage (600 V and less) without using voltage transformers. Connect to instrument grade potential transformers secondary at 120 V. Meter impedance shall be 2-megohm L-L or greater. Overload Tolerance: 1500-V ac, rms, continuously.
b. Current: Connect to instrument grade current transformer with a metering range of 5 mA to 6 A. Overcurrent tolerance of the instrument shall be 10 A continuous, 50 A for 10 seconds once per hour, and 120 A for one second per hour.
c. Frequency: 45 to 65 Hz.
d. Time: Input from a GPS receiver to synchronize the internal clock of the instrument and to time-synchronize this instrument with the network to a deviation of not greater than 1 ms.

2.4 POWER METERS

A. Description: Separately mounted, modular, permanently installed, solid-state, digital I/O instrument for power monitoring and control; complying with UL 61010-1.

1. Capable of metering 4-wire Y, 3-wire Y, 3-wire delta, and single-phase power systems.
2. Equipped with security lock to protect revenue related metering from unauthorized and accidental changes.

B. Environment: System components shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

1. As directed, indoor installation in non-air-conditioned or nontemperature-controlled spaces that have environmental controls to maintain ambient conditions of minus 13 to

158 deg F (minus 25 to plus 70 deg C) dry bulb and 20 to 90 percent relative humidity, noncondensing.

2. Comply with IEC 60529 degree of protection code of IP51 for the front of the meter, and code of IP30 for the body.

C. Overvoltage: Comply with UL 61010-1 overvoltage withstand rating for CAT III.

D. Accuracy:

1. Comply with ANSI C12.20, Class 0.5.
2. Neutral Current Measurement: Not more than 0.65 percent.
3. Power: 0.6 percent.
4. Power Factor: 0.5 percent.
5. Active Energy: 0.6 percent.
6. Reactive Energy: 2.5 percent.
7. Frequency: 0.05 percent.
8. THD: 1.0 percent.
9. Waveform Sampling: 32 per cycle.

E. Data Link:

1. Provide for firmware and software updates through the communications port.

F. Meter Physical Characteristics:

1. Display: Backlit LCD with antiglare and scratch-resistant lens.
2. Display of Metered Values: One screen to show at least four lines of user-selected values on one screen at the same time. Provide graphical representation of user-selected values. The screen selections available at the display shall include the following:

    a. All meters, including those listed under the following:

        1) Measurements.
        2) THD.
        3) Energy.
        4) Demand.
        5) Minimum and maximum values.
        6) Power demand.

G. Sampling Rate: Continuously sample and record voltage and current at a rate not less than 32 samples per cycle, simultaneously on all voltage and current channels of the meter.

H. Meters:

1. Measurements: Instantaneous, in real time, rms to the 15th harmonic.

    a. Voltage: L-L each phase, L-N each phase, and three-phase average.
    b. Current: Each phase, three-phase average, and neutral.
    c. Unbalanced current, L-L V ac and L-N V ac.
    d. Active Power (+/- kW): Each phase and three-phase total.
    e. Reactive Power (+/- kVAR): Each phase and three-phase total.

f. Apparent Power (+/- kVA): Each phase and three-phase total.
g. Displacement Power Factor: Each phase and three-phase total.
h. Distortion Power Factor: Each phase and three-phase total.
i. Frequency.

2. THD from measurements simultaneously from the same cycle, through 15th harmonic.

a. Voltage THD: L-L each phase, L-N each phase, and three-phase average.
b. Current THD: Each phase and three-phase average.
c. Total demand distortion.

3. Energy: Accumulated, indicate whether in-flow or out-flow, net and absolute values. Store the values in instrument's nonvolatile memory.

a. Active kWh.
b. Reactive kVARh.
c. Apparent kVAh.

4. Demand: Present, last, predicted, peak.

a. Three-phase average current.
b. Three-phase total active power (kW).
c. Reactive power (kVAR).
d. Apparent power (kVA).

5. Minimum and Maximum Values:

a. L-L and L-N voltages.
b. Current in each phase.
c. Power factor.
d. Active power total.
e. Reactive power total.
f. Apparent power total.
g. THD L-L and L-N voltages.
h. THD current in each phase.
i. Frequency.

I. Power Demand, User Selectable:

1. Thermal Demand: Sliding window updated every second for the present demand and at end of the interval for the last interval. Adjustable window that can be set in 1-minute intervals, from 1 to 60 minutes.
2. Block Interval with Optional Subintervals: Adjustable for 1-minute intervals, from 1 to 60 minutes. User-defined parameters for the following block intervals:

a. Sliding block that calculates demand every second, with intervals less than 15 minutes, and every 15 seconds with an interval between 15 and 60 minutes.
b. Fixed block that calculates demand at end of the interval.
c. Rolling block subinterval that calculates demand at end of each subinterval and displays it at end of the interval.

3. Demand Calculation Initiated by a Synchronization Signal:

    a. Signal is a pulse from an external source. Demand period begins with every pulse. Calculation shall be configurable as either a block or rolling block calculation.
    b. Signal is a communication signal. Calculation shall be configurable as either a block or rolling block calculation.
    c. Provide for synchronizing the demand with the internal of this instrument.

J. Data Recording: Store the listed values in instrument's nonvolatile memory, indicate which of the three phases relates to the value. Attach a date and time stamp to the peak values and the alarms.

1. Minimum and maximum of real-time rms measurement.
2. Energy.
3. Demand values.
4. Alarms store the last 40 events.

K. Alarms: Transmit a digital output and show on display when alarmed. Provide for no fewer than 15 metered items. Each alarm shall be user configured, by using the following options:

1. Date and time stamp.
2. Enable-disable (default) or enable.
3. Pickup magnitude.
4. Pickup time delay.
5. Dropout magnitude.
6. Dropout time delay.
7. Alarm type.
8. Alarm label.

L. Output Signals: Provide two mechanical relays, rated not less than 250-V ac, 2-A resistive, and rated for 200-k cycles or more. The relays shall be user configurable in one of the following listed modes:

1. Normal contact closure where the contacts change state for as long as the signal exists.
2. Latched mode when the contacts change state when a pickup signal is received and are held until a dropout signal is received.
3. Timed mode when the contacts change state when a pickup signal is received and are held for a preprogrammed duration.

M. Meter Face:

1. Display: Backlit LCD display, six lines, with antiglare and scratch-resistant lens.
2. Display of Metered Values: One screen to show at least four user-selected values on one screen at the same time.
3. Provide for the reset of metered peak values.

N. Capacities and Characteristics:

1. Power Supply: 120-V ac, 60 Hz.
2. Circuit Connections:

a. Voltage: Measurements autoranging, 60- to 400-V ac L-N. Connect directly to low-voltage (600 V and less) without using voltage transformers. Connect to instrument grade potential transformers secondary at 120 V. Meter impedance shall be 2-megohm L-L or greater. Overload Tolerance: 1500-V ac, rms, continuously.
b. Current: Connect to instrument grade current transformer with a metering range of 5 mA to 6 A. Overcurrent tolerance of the instrument shall be 10 A continuous, 50 A for 10 seconds once per hour, and 120 A for one second per hour.
c. Frequency: 45 to 65 Hz.
d. Time: Input from a GPS receiver to synchronize the internal clock of the instrument and to time-synchronize this instrument with the network to a deviation of not greater than 1 ms.

2.5 CIRCUIT METERS AND MONITORS

A. Description: Separately mounted, modular, permanently installed, solid-state, digital I/O instrument for power monitoring and control; complying with UL 61010-1. Capable of metering 4-wire Y, 3-wire Y, 3-wire delta, and single-phase power systems.

1. Equipped with security lock to protect revenue related metering from unauthorized and accidental changes.

B. Environmental Conditions: System components shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

1. As directed, indoor installation in non-air-conditioned or non-temperature-controlled spaces that have environmental controls to maintain ambient conditions of 14 to 122 deg F (minus 10 to plus 50 deg C) dry bulb and 20 to 90 percent relative humidity, noncondensing.
2. Comply with IEC 60529 degree of protection code of IP52 for the front of the meter, and code of IP30 for the back.

C. Overvoltage: Comply with UL 61010-1 overvoltage withstand rating for CAT III.

D. Accuracy:

1. Comply with ANSI C12.20, Class 0.5.
2. For Voltage and Current: 0.5 percent of reading.
3. For Active Power: 0.2 percent.
4. For Active and Reactive Energy: ANSI 12.20, Class 0.2.
5. For Frequency: 0.01 Hz in the range of 45 to 65 Hz.
6. For Power Factor: 0.2 percent from 0.5 leading to 0.5 lagging.

E. Data Link:

1. Modbus TCP:

a. 10/100BaseTX balanced twisted-pair cabling. RJ-45 connector, 100-m link.

b. Optical fiber 100BaseFX, LC duplex connector, 1300-m link. Multimode 62.5/125-microsecond, 2000-m link.
c. Provide for firmware and software updates through the communications port.
d. Ethernet 10/100BaseTX balanced twisted-pair cabling port.
e. Ethernet 10/100BaseTX balanced twisted-pair cabling port, Ethernet to serial line gateway, and embedded web server.

F. Meter Physical Characteristics:

1. Display: Backlit LCD screen with antiglare and scratch-resistant lens.
2. Display of Metered Values: One screen to show at least four lines of user-selected values on one screen at the same time. Provide graphical representation of user-selected values.
3. Allow user to select a date/time format and the ability to create additional screens for user-specified views and custom quantities without overwriting existing standard screens.

G. Sampling Rate:

1. Continuously sample and record voltage and current at a rate not less than 128 samples per cycle, simultaneously on all voltage and current channels of the meter.

H. Meters shall measure, record with time stamp, calculate, and on request display the following:

1. Measurements: Instantaneous, in real time, rms to the 31st or 63rd harmonic as directed:

a. Voltage: L-L each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
b. Current: Each phase, three-phase average, and neutral.
c. Active Power (kW): Each phase and three-phase total.
d. Reactive Power (kVAR): Each phase and three-phase total.
e. Apparent Power (kVA): Each phase and three-phase total.
f. Displacement Power Factor: Each phase and three-phase total.
g. Distortion Power Factor: Each phase and three-phase total.
h. Frequency.

2. THD from measurements simultaneously from the same cycle, through 31st or 63rd harmonic as directed:

a. Voltage: L-L each phase, L-L three-phase average, L-N each phase, and L-N three-phase average.
b. Current: Each phase, three-phase average, and neutral.

3. Energy: Accumulated, indicate in-flow or out-flow, net and absolute values. Store the values in instrument's nonvolatile memory. Provide for storing accumulated energy at user-defined intervals, up to three intervals per day.

a. Active kWh.
b. Reactive kVARh.
c. Apparent kVAh.

4. Demand: Three-phase totals, present, predicted, peak.

a. Average current.
b. Active power (kW).
c. Reactive power (kVAR).
d. Apparent power (kVA).

5. Average, Minimum and Maximum Values:

a. Record, date and time stamp, and save the minimum and maximum values of all rms metered values since the last reset.

I. Power Demand, User Selectable:

1. Thermal Demand: Sliding window updated every second for the present demand and at end of the interval for the last interval. Adjustable window that can be set in 1-minute intervals, from 1 to 60 minutes.
2. Block Interval with Optional Subintervals: Adjustable for 1-minute intervals, from 1 to 60 minutes. User-defined parameters for the following block intervals:

a. Sliding block that calculates demand every second, with intervals less than 15 minutes, and every 15 seconds with an interval between 15 and 60 minutes.
b. Fixed block that calculates demand at end of the interval.
c. Rolling block subinterval that calculates demand at end of each subinterval and displays it at end of the interval.

3. Demand Calculation Initiated by a Synchronization Signal:

a. Synchronize demand with receipt of a signal pulse from an external source. Demand period begins with every pulse. Calculation shall be configurable as either a block or rolling block calculation.
b. Synchronize demand with receipt of a communication signal. Calculation shall be configurable as either a block or rolling block calculation.
c. Provide for synchronization to the clock in the instrument.

J. Trend Curves: Provide for recording four trend curves at intervals of one minute, one hour, one day, or one month; and forecast values for the trended parameters.

1. Record minimum, maximum, and average values of eight user-selected parameters as follows:

a. Every second for one minute for the one-minute curve.
b. Every minute for one hour for the one-hour curve.
c. Every hour for one day for the one-day curve.
d. Every day for one month for the one-month curve.

2. Forecast the trended parameters for the following:

a. The next four hours.
b. The next four days.

K. Waveform Capture:

1. Steady State Waveform Capture: Manually initiated.

    a. Capture, record with time stamp, and store voltage and current waveforms for two cycles.
    b. Capture, record with time stamp, and store 128 digitally sampled data points for each cycle of each phase voltage. The number of waveform captures stored onboard shall be user configurable.
    c. Harmonic analysis performed on the captured waveforms shall resolve harmonics through the 63rd.
    d. Captured waveforms shall be recorded from actual circuit performance.

2. Disturbance Waveform Capture:

    a. Capture, record with time stamp, and store 128 digitally sampled data points for each cycle of each phase voltage. Disturbance waveform capture may be initiated manually, by an external contact closure, or by an alarm. The waveform captures shall be user configurable from 185 cycles on 1 channel at 16 points per cycle, to 3 cycles on 6 channels at 128 points per cycle.

L. Disturbance Detection and Alarm:

1. Detect and initiate alarm when detecting voltage or current sag and swell.

    a. Detect disturbance events of less than half-cycle in length, by monitoring and calculating rms magnitude of each half-cycle.
    b. Event detection shall be with user-defined parameters of threshold and delay. The threshold shall be user defined as a fixed or relative set point. With relative set point, the instrument will alarm based on the nominal current or voltage equal to its present average value. The instrument shall automatically adjust the nominal current and voltage values to avoid nuisance alarms caused by gradual daily variations of currents and voltages.
    c. When detecting an alarm condition:

        1) Initiate disturbance waveform capture.
        2) Record the disturbance parameters into an onboard alarm log with a date and time stamp to the millisecond.
        3) Alarm on shall be visible on the display and be transmitted over the data link.
        4) Display the voltage sag/swell events on ITIC or SEMI graphs to quantify the event for accepted industry standards.

M. Harmonics Information:

1. Calculate the harmonic magnitudes and angles for each phase voltage and current through the 63rd harmonic. Provide harmonic power flows up to the 41st harmonic for active, reactive, and apparent power.
2. The current and voltage information for all phases shall be obtained simultaneously from the same cycle.
3. Report harmonic information as a percentage of the fundamental or as a percentage of the rms values, as selected by the user.

N. Alarms: Alarm events shall be user definable. Provide a minimum of 40 user-defined alarm conditions.

1. User Configuration Options:

   a. Date and time stamp.
   b. Enable-disable (default) or enable.
   c. Pickup magnitude.
   d. Pickup time delay.
   e. Dropout magnitude.
   f. Dropout time delay.
   g. Alarm type.
   h. Alarm label.

2. The following classes of events shall be available to be programmed as alarm events:

   a. Over/under current.
   b. Over/undervoltage.
   c. Current imbalance.
   d. Phase loss, current.
   e. Phase loss, voltage.
   f. Voltage imbalance.
   g. Over kVA.
   h. Over kW or kVAR into/out of load.
   i. Over/under frequency.
   j. Under power factor, true or displacement.
   k. Over THD.
   l. Over demand, current or power.
   m. Reverse power.
   n. Phase reversal.
   o. Status input change.
   p. End of incremental energy interval.
   q. End of demand interval.
   r. Over/under analog inputs.
   s. Current sag/swell.
   t. Voltage sag/swell.

3. For each over/under metered alarm value, provide for the user to define a pickup, dropout, and delay.
4. The circuit meter and monitor alarms response time shall be not less than one second.
5. Provide for up to four alarms to be combined to give a single result using Boolean algebra operations.

O. EN 50160 Evaluation: Report EN 50160 evaluation data in the following formats: summary of active evaluations, summary of evaluation status, detailed information for each evaluated parameter, and detailed information for each abnormal event.

P. I/O Module: Modular, with multiple I/O options to accomplish specified performance and one or more spare positions for future.

1. KY Pulse: Generate a standard KY pulses for a user-defined increment of metered active energy as follows:

    a. User-defined pulse output, associated with kWh.
    b. Alarm pulse output, which turns on the pulsing at user-defined point.

2. Digital Inputs: As follows:

    a. One input connection rated 24- to 125-V ac or -V dc, +/- 10 percent, less than 5-mA burden, 1350-V rms isolation.
    b. Six input connections rated 19- to 30-V dc, 5 mA maximum at 24-V dc. Provide an onboard 24-V dc power supply.
    c. Two input connections rated 20- to 150-V dc or -V ac, 2 mA maximum.

3. Analog inputs, no fewer than two, adjustable from 0- to 5-V dc or 4 to 20 mA.
4. Outputs to operate field-installed relays, no fewer than two, providing 6- to 240-V ac or 6- to 30-V dc, 2 A rms. 5 A maximum for 10 seconds per hour.
5. Analog outputs, no fewer than two, 4- to 20-mA dc into 600 ohms maximum.

Q. Data Recording: Store the listed values in instrument's nonvolatile memory, indicate which of the three phases relates to the value. Attach a date and time stamp to the peak values and the alarms.

1. Data Logs, General: User configurable. Automatically stamp each entry to the millisecond with date and time.

    a. Each log entry shall hold data of up to 96 parameters each.
    b. Each log shall be user configurable to log data at a different user-defined schedule interval.
    c. Provide each log with user-defined event or a minimum/maximum condition that will trigger log file entries.
    d. Configure log entries to be recorded as Fill & Hold or Circular (First in, First out, or FIFO), as defined by the user.

2. Minimum/Maximum Logs:

    a. Minimum/Maximum/Average interval log also logs minimum/maximum/average of selected parameters on a selected interval from a user-selected interval length from 1 to 1440 seconds.
    b. Minimum/Maximum log shall include the time, date, and value for the minimum and maximum of each of the real-time metered values.

3. Alarm Log: Record time, date, event information, and coincident information for each user-defined and automatically initiated alarm or event. Record selected parameters at 100-ms intervals during events and alarms. Automatically stamp each entry to the millisecond with date and time.
4. Waveform Logs: Capture and store waveforms, from 185 cycles on one channel at 16 samples per cycle, up to 3 cycles on six channels at 128 samples per cycle as defined by the user. Waveform log entries shall be externally triggered or forced in response to a user-defined event. Configure log entries to be recorded as Fill & Hold or Circular (FIFO), as defined by the user.

R. Capacities and Characteristics:

1. Power Supply: 120-V ac, 60 Hz.
2. Circuit Connections:

   a. Voltage: Measurement autoranging, 0- to 600-V ac L-L, 0- to 347-V ac L-N. Connect directly to low-voltage (600 V and less) without using voltage transformers. Connect to instrument grade potential transformers secondary at 120 V. Meter impedance shall be 2-megohm L-L or greater. Overload Tolerance: 1500-V ac, rms, continuously.
   b. Current: Connect to instrument grade current transformer with a metering range of 5 mA to 6 A. Overcurrent tolerance of the instrument shall be 10 A continuous, 50 A for 10 seconds once per hour, and 120 A for one second per hour.
   c. Frequency: 45 to 65 Hz.
   d. Time: Input from a GPS receiver to synchronize the internal clock of the instrument and to time-synchronize this instrument with the network to a deviation of not greater than 1 ms.

2.6 PC OPERATING SYSTEM SOFTWARE

A. Description: System software shall monitor, analyze, display, control, and save all the parameters and features available at the connected meter.

B. Software: Configured to run on a portable laptop computer, a single PC, or a tablet computer, with capability for accessing a single meter at a time, at the location of the meter. System is not connected to LAN.

C. Minimum Requirements:

1. Real-time multitasking and multiuser 32 or 64-bit operating system that allows execution of multiple real-time programs and custom program development.
2. Operating system shall be capable of operating Microsoft Windows applications.
3. Scheduling software shall schedule centrally based time and event, temporary, and exception day programs.

2.7 NETWORK CONFIGURATION SOFTWARE

A. Network Management Graphical Interface Features:

1. Add and remove devices in the power monitoring and control network.
2. Application for naming devices based on a user-defined naming scheme.
3. Add and remove I/O servers in the power monitoring and control network.
4. Edit communication properties for devices including timeouts and delays.
5. Display mandatory fields when adding a new device.
6. Allow to manually connect and disconnect serial, Ethernet, modem, and Ethernet gateway sites.
7. Enable and disable devices and sites in the power monitoring and control network without interruption to other devices or sites.
8. Pool modem resources so that the software uses any available modem.

9. Monitor the following diagnostics:

    a. Communication request/response and error rates, and timeouts.
    b. Log acquisition services.

B. Web Reporter: Allow viewing historical data in preformatted report templates via a web browser.

1. Features:

    a. User-configurable report generator to trigger on event, based on a schedule, or manual initiation.
    b. Format reports in HTML, PDF, TIF, Excel, XML, or user-selected printer, or network folder.
    c. Distribution of reports via email.

2. Report on power and demand profiles.
3. Power quality report with CBEMA evaluation.
4. EN 50160 compliance report.
5. 100-ms PQ report.
6. Energy over Period Report:

    a. User-defined rollup interval by day, week, month, or year.
    b. Compare daily energy to the following:

        1) Previous day.
        2) Same day, previous week.
        3) Same day, previous month.
        4) User-defined specific day.

    c. Compare weekly energy to the following:

        1) Previous week.
        2) Same week from previous month.
        3) Same week from previous year.
        4) User-defined specific week.

    d. Compare monthly energy to the following:

        1) Previous month.
        2) Same month from previous year.
        3) User-defined specific month.

    e. Compare annual energy to the following:

        1) Previous year.
        2) User-defined specific year.

7. Energy by daily period report for the user-defined periods. Aggregate consumption of the periods by the day, week, and year.

8. Tabular Report: Show values for multiple measurements and measurements from multiple devices in tabular format.
9. System Configuration Report:

    a. Device name.
    b. Device type.
    c. Device address.
    d. Connection status.
    e. Device protocol.
    f. Device description.

10. Each default report shall include the following:

    a. Summary aggregation of data from the selected devices.
    b. Individual device information.
    c. Raw data.

11. The reporting tool shall provide a graphical interface to create and manage multiple Time of Use schedules:

    a. Tariffs including energy cost rates per kWh, kVARh, and kVAh, and demand charges per kW, kVAR, and kVA.
    b. Off-peak and on-peak times.

2.8 MONITORING AND CONTROL OF POWER DISTRIBUTION EQUIPMENT

A. Power Distribution Equipment: Web-enabled, direct connected to the LAN or intranet.

B. Instrument Transformers: Comply with IEEE C57.13.

1. Potential Transformers: Secondary voltage rating of 120 V and NEMA C12.11 accuracy class of 0.3 with burdens of W, X, and Y.
2. Current Transformers: Burden and accuracy class suitable for connected relays, meters, and instruments.

C. Ethernet Connectivity:

1. Serial communications network shall be wired to an Ethernet server in the incoming section of the equipment. Hardware and cabling required for the connection to the network shall be included within the power distribution equipment.
2. Serial communications devices within the equipment shall be factory addressed and tested to verify reliable communications to the equipment's Ethernet Server.

D. Ethernet Gateways:

1. User configurable; complying with UL 60950-1, and IEEE 802.3, Class 3 PoE.
2. Include provisions to set initial Ethernet parameters via a local operator interface, or standard (RJ-45) Ethernet port, that is accessible from the front of the equipment. Initial setup shall be limited to basic Ethernet addressing parameters, as assigned by Owner.
3. Common Gateway Features:

a. User configurable, with secure password-protected login process.
b. Include communications diagnostic information for serial and Ethernet ports as well as internal health status and memory management information through embedded HTML web pages for viewing using a standard web browser.
c. Allow firmware upgrades through the communications port.

4. Include a "Quick-Start" guide with the equipment to describe the commissioning process for setting the equipment's Ethernet network address and for ensuring trouble-free data access from any PC on the network, using a standard web browser.
5. Implement a common user interface ("look and feel") across all styles of power equipment.

E. Distribution Equipment Monitoring:

1. Main menu and summary pages, factory configured, to display data for each communicating device within the power equipment lineup.
2. Display Data:

a. Circuit summary page to display circuit name, three-phase average rms current, real power (kW), power factor, and breaker status (if applicable).
b. Load current summary page to display circuit name, and phase a, b, and c rms current values.
c. Demand current summary page to display circuit name, and phase a, b, and c average demand current values.
d. Power summary page to display circuit name, present demand power (kW), peak demand power (kW), and recorded time and date.
e. Energy summary page to display circuit name, real energy (kWh), reactive energy (kVARh), and time/date of last reset.
f. For unit substations equipped with dry-type transformer(s) and microbased temperature controller(s), the circuit summary web page listed above shall be augmented with transformer coil temperatures, phase a, b and c current values, and cooling fan status (on/off).
g. For motor-control centers, the circuit summary web page shall be tailored specifically for this application, to display circuit name, three-phase average rms current, thermal capacity (percentage), drive output frequency (in Hertz, where applicable), and contactor status.

2.9 SYSTEM OPERATOR INTERFACES

A. Operator means of system access shall be through the following:

1. Desktop workstation with hardwired connection through LAN port.
2. Remote connection using outside of system PC, tablet, or phone using an internet portal.

2.10 DESKTOP WORKSTATIONS

A. Performance Requirements:

1. Performance requirements may dictate equipment exceeding minimum requirements indicated.
2. Capable of running Microsoft Windows.
3. ENERGY STAR compliant.

B. Personal Computer:

1. Minimum Processor Speed: As directed, Core i3, Core i5 or Core i7.
2. RAM:

    a. Capacity: As directed, 2, 4 or 8 GB.
    b. Speed and Type: 1333 MHz.

3. Primary Hard Drive:

    a. Media: As directed, Solid state, Rotating disc, nominal rotational speed of 7200 rpm or Hybrid solid-state and rotating disc.
    b. Number of Hard Drives: One or Two as directed.
    c. Capacity: As directed.
    d. Minimum Average Seek Time: As directed.
    e. Cache Buffer Size: As directed

4. Second Hard Drive:

    a. Media: As directed, Solid state, Rotating disc, nominal rotational speed of 7200 rpm or Hybrid solid-state and rotating disc.
    b. Capacity: As directed.
    c. Minimum Average Seek Time: As directed.
    d. Cache Buffer Size: As directed.

5. Optical Drive:

    a. Type: As directed.
    b. Minimum Average Access Time: As directed.
    c. Data Transfer Speed: As directed, MB or TB/s.
    d. Reading Formats: Data, audio, recordable, and rewritable as directed.

6. Video Card:

    a. Capable of supporting one, two, three or four monitors as directed.
    b. Resolution: 1920 by 1200 pixels minimum for each monitor.
    c. RAM: As directed, GB or TB.

7. Sound Card: High-resolution 16-bit stereo digital audio recording and playback with user-selectable sample rates up to 48,000 Hz.
8. Network Interface Card: Include card with connection, as applicable.

    a. 10-100-1000 base TX Ethernet with RJ45 connector port.

9. Wireless Ethernet, 802.11 a/b/g/n.
10. Optical Modem: Full duplex link for connection to optical fiber cable provided.

11. I/O Ports:

    a. Two USB 3.0 ports on front panel, six on back panel, and three internal on motherboard.
    b. One RJ-45.
    c. One stereo line-in and line-out on back panel.
    d. One microphone and headphone connector on front panel.
    e. One IEEE 1394 on front and back panel with PCI-e card.
    f. One ESATA port on back panel.

12. Battery: Life of at least three years to maintain system clock/calendar and ROM, as a minimum.

C. Keyboard:

1. 101-key enhanced keyboard.
2. Full upper- and lowercase ASCII keyset, numeric keypad, dedicated cursor control keypad, and 12 programmable function keys.

D. Pointing Device:

1. Either a two- or three-button mouse.

E. Flat Panel Display Monitor:

1. Number of Displays: As directed, One or Two.

    a. Display Support: Individual tilt adjustable base. Desk mounted, adjustable bracket capable of supporting number of monitors specified above with integral power and display cable organization. Wall mounted, adjustable bracket capable of supporting number of monitors specified above with integral power and display cable organization.

2. Color display with inches (mm) diagonal as directed, viewable area.
3. Aspect Ratio: 16 to 9.
4. Resolution: 1920 by 1080 pixels at 60 Hz with pixel size of 0.277 mm or smaller.
5. Digital or analog input signal.
6. ENERGY STAR compliant.
7. Antiglare display.

F. Speakers: Two, with individual controls for volume, bass, and treble.

G. I/O Cabling: Include applicable cabling to connect I/O devices.

H. Software:

1. Factory-installed operating system.

2.11 RACEWAYS AND BOXES

A. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems" for electrical power wiring and NFPA 70 Class 1 remote-control and signaling circuits.

B. Comply with requirements in Section 270528 "Pathways for Communications Systems" for control wiring, and NFPA 70 Class 2 remote-control and signaling circuits.

2.12 WIRES AND CABLES

A. Electrical Power Wiring: Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

1. Copper conductors are Type THHN/THWN-2.

B. Control Wiring:

1. Copper: Comply with requirements in Section 260523 "Control-Voltage Electrical Power Cables."
2. Optical Fiber: Comply with requirements in Section 271323 "Communications Optical Fiber Backbone Cabling" and 271523 "Communications Optical Fiber Horizontal Cabling."

C. Optical-Fiber Cable: Multimode, 50/125-micrometer OM3, six-fiber, nonconductive, tight-buffer, optical-fiber cable, with aqua jacket.

D. Balanced Twisted-Pair Cable: 100-ohm, four-pair balanced twisted-pair cable, Category 5e or Category 6.

E. Low-Voltage Control Cable: Multiple conductor, color-coded, No. 20 AWG copper, minimum.

1. Sheath: PVC; except in plenum-type spaces, use sheath listed for plenums.
2. Ordinary Switching Circuits: Three conductors unless otherwise indicated.
3. Switching Circuits with Pilot Lights or Locator Feature: Five conductors unless otherwise indicated.

2.13 SURGE PROTECTION DEVICES

A. SPDs: As directed, Comply with UL 1449, Type 1 or Type 2.

1. Include LED indicator lights for power and protection status.
2. Internal thermal protection that disconnects the SPD before damaging internal suppressor components.
3. Include Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status. Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.

B. Peak Surge Current Rating: The minimum single-pulse surge current withstand rating per phase shall not be less than 100 kA. The peak surge current rating shall be the arithmetic sum of the ratings of the individual metal-oxide varistors in a given mode.

C. Comply with UL 1283.

D. Protection modes and UL 1449 SPD for grounded wye circuits with 480Y/277 V or 208Y/120 V as directed, three-phase, four-wire circuits shall not exceed the following:

1. L-N: As directed, 1200 V for 480Y/277 V or 700 V for 208Y/120 V
2. L-G: As directed, 1200 V for 480Y/277 V or 700 V for 208Y/120 V.
3. N-G: As directed, 1200 V for 480Y/277 V or 700 V for 208Y/120 V.
4. L-L: As directed, 2000 V for 480Y/277 V or 1200 V for 208Y/120 V.

E. Protection modes and UL 1449 SPD for 240/120-V, single-phase, three-wire circuits shall not exceed the following:

1. L-N: 700 V.
2. L-G: 700 V.
3. N-G: 700 V.
4. L-L: 1200 V.

F. SCCR: As directed, Equal or exceed 100 or 200 kA.

G. Nominal Rating: As directed, 20 or 10 kA.

H. Indoor Enclosures: NEMA 250, Type 1.

I. Outdoor Enclosures: NEMA 250, Type 3R, Type 4 or Type 4X as directed.

PART 3 - EXECUTION

3.1 POWER MONITORING AND CONTROL SYSTEM INSTALLATION

A. Comply with NECA 1.

B. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters. Conceal raceway and cables except in unfinished spaces.

C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

D. Wiring and Cabling Installation:

1. Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical power wiring.
2. Comply with Section 260523 "Control-Voltage Electrical Power Cables" for control wiring.

E. Raceways Installation:

1. Comply with Section 260533 "Raceways and Boxes for Electrical Systems" for electrical power wiring and NFPA 70 Class 1 remote-control and signaling circuits.
2. Comply with Section 270528 "Pathways for Communications Systems" for control wiring, and NFPA 70 Class 2 remote-control and signaling circuits.

F. Identification Installation:

1. Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical power wiring.
2. Comply with Section 271513 "Communications Copper Horizontal Cabling" for identification products and cable management system requirements for UTP and low-voltage control cable.
3. Comply with Section 271523 "Communications Optical Fiber Horizontal Cabling" for identification products and cable management system requirements for optical-fiber cable.

3.2 WORKSTATION INSTALLATION

A. Desktop Workstations Installation:

1. Install workstation(s) at location(s) directed by Owner.
2. Install multiple-receptacle power strip with cord for use in connecting multiple workstation components to a single, duplex electrical power receptacle.
3. Power each workstation through a dedicated UPS unit. Locate UPS adjacent to workstation.
4. Install software on workstation(s) and verify that software functions properly.
5. Develop Project-specific graphics, trends, reports, logs, and historical database.

B. Graphics Application:

1. Use system schematics indicated as starting point to create graphics.
2. Develop Project-specific library of symbols for representing system equipment and products.
3. Incorporate digital images of Project-completed installation into graphics where beneficial to enhance effect.
4. Submit sketch of graphic layout with description of all text for each graphic for Owner's and Architect's review before creating graphic using graphics software.
5. Seek Owner input in graphics development once using graphics software.
6. Final editing shall be done on-site with Owner's review and feedback.
7. Refine graphics as necessary for Owner acceptance.
8. On receiving Owner acceptance, print a hard copy to include in operation and maintenance manual. Prepare a scanned copy PDF file of each graphic and include with softcopy of the system operation and maintenance manual.

3.3 NETWORK NAMING AND NUMBERING

A. Coordinate with Owner and provide unique naming and addressing for networks and devices.

3.4 GROUNDING

A. For data communication wiring, comply with NECA/BICSI 568.

B. For low-voltage control wiring and cabling, comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.5 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
2. Visually inspect balanced twisted-pair cabling and optical-fiber cable jacket materials for UL or third-party certification markings. Inspect cabling terminations to confirm color-coding for pin assignments and inspect cabling connections to confirm compliance with TIA-568-C.1.
3. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
4. Test balanced twisted-pair cabling for direct-current loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination, but not after cross-connection.

    a. Test instruments shall meet or exceed applicable requirements in TIA-568-C.2. Perform tests with a tester that complies with performance requirements in its "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in its "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
    b. Document data for each measurement. Print data for submittals in a summary report that is formatted using Table 10.1 in BICSI TDMM as a guide, or transfer the data from the instrument to the computer, save as text files, print, and submit.

5. Optical-Fiber Cable Tests:

    a. Test instruments shall meet or exceed applicable requirements in TIA-568-C.0. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
    b. Link End-to-End Attenuation Tests:

        1) Multimode Link Measurements: Test at 850 or 1300 nm in one direction according to IEC 61280-4-1.

2) Attenuation test results for links shall be less than 2.0 dB or that calculated according to equation in TIA-568-C.0.

c. Document data for each measurement. Print data for submittals in a summary report that is formatted using Table 10.1 in BICSI TDMM as a guide or transfer the data from the instrument to the computer, save as text files, print, and submit.

6. Power Monitoring and Control System Tests.

a. Test Analog Signals:

1) Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
2) Check analog current signals using a precision current meter at zero, 50, and 100 percent.
3) Check resistance signals for temperature sensors at zero, 50, and 100 percent of operating span using a precision-resistant source.

b. Test Digital Signals:

1) Check digital signals using a jumper wire.
2) Check digital signals using an ohmmeter to test for contact making or breaking.

c. I/O Control Loop Tests:

1) Test every I/O point to verify that safety and operating control set points are as indicated and as required to operate controlled system safely and at optimum performance.
2) Test every I/O point throughout its full operating range.
3) Test every control loop to verify that operation is stable and accurate.
4) Adjust control loop proportional, integral, and derivative settings to achieve optimum performance while complying with performance requirements indicated. Document testing of each control loop's precision and stability via trend logs.
5) Test and adjust every control loop for proper operation according to sequence of operation.
6) Test software and hardware interlocks for proper operation.
7) Operate each analog point at the following:

a) Upper quarter of range.
b) Lower quarter of range.
c) At midpoint of range.

8) Exercise each binary point.
9) For every I/O point in the system, read and record each value at operator workstation, at controller, and at field instrument simultaneously. Value displayed at operator workstation and at field instrument shall match.

10) Prepare and submit a report documenting results for each I/O point in the system, and include in each I/O point a description of corrective measures and adjustments made to achieve desire results.

C. Wiring and cabling will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.6 FINAL REVIEW

A. Submit written request to Architect and Construction Manager when the power monitoring and control system is ready for final review. Written request shall state the following:

1. The system has been thoroughly inspected for compliance with Contract Documents and found to be in full compliance.
2. The system has been calibrated, adjusted, and tested and found to comply with requirements of operational stability, accuracy, speed, and other performance requirements indicated.
3. The system monitoring and control of electrical distribution systems results in operation according to sequences of operation indicated.
4. The system is complete and ready for final review.

B. Review by Architect and Construction Manager will be made after receipt of written request. A field report shall be issued to document observations and deficiencies.

C. Take prompt action to remedy deficiencies indicated in field report and submit a second written request when all deficiencies have been corrected. Repeat process until no deficiencies are reported.

D. Final review shall include a demonstration to parties participating in final review.

E. as directed, beginning at Substantial Completion, maintenance service shall include three, six, nine or 12 months' full maintenance by manufacturer's authorized service representative. As directed, include quarterly, semiannual or annual preventive maintenance, repair or replacement of defective components, cleaning, and adjusting as required for proper system operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.7 SOFTWARE SERVICE AGREEMENT

A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for two years.

B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.

1. Upgrade Notice: At least 30 days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

3.8 DEMONSTRATION

A. As directed, engage a factory-authorized service representative to train or train Owner's maintenance personnel to adjust, operate, and maintain the power monitoring and control system.

B. Extent of Training:

1. Base extent of training on scope and complexity of power monitoring and control system indicated and training requirements indicated. Provide extent of training required to satisfy requirements indicated even if more than minimum training requirements are indicated.
2. Inform Owner of anticipated training requirements if more than minimum training requirements are indicated.
3. Minimum Training Requirements:

    a. Provide no fewer than two days of training total.
    b. Stagger training over multiple training classes to accommodate Owner's requirements. All training shall occur before end of warranty period.
    c. Total days of training shall be broken into not more than two, three or four separate training classes as directed.
    d. Each training class shall be no fewer than one, two or three consecutive day(s) as directed.

C. Training Outline: Submit training outline for Owner review at least 10 business days before scheduling training. Outline shall include a detailed agenda for each training day that is broken down into each training session that day, training objectives for each training session, and synopses for each lesson planned.

D. On-Site Training:

1. Owner will provide conditioned classroom or workspace with ample desks or tables, chairs, power, and data connectivity for instructor and each attendee.
2. Instructor shall provide training materials, projector, and other audiovisual equipment used in training.
3. Provide as much of training located on-site as deemed feasible and practical by Owner.
4. On-site training shall include regular walk-through tours, as required, to observe each unique product type installed with hands-on review of operation, calibration, and service requirements.
5. The operator workstation provided with the system shall be used in training. If operator workstation is not indicated, provide a temporary workstation to convey training content.

E. Off-Site Training:

1. Provide conditioned training rooms and workspace with ample tables, chairs, power, and data connectivity for each attendee.

2. Provide capability to remotely access to Project monitoring and control system for use in training.
3. Provide a workstation for use by each attendee.

END OF SECTION 260913

SECTION 260923 - LIGHTING CONTROL DEVICES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Time switches.
2. Photoelectric switches.
3. Standalone daylight-harvesting switching and dimming controls.
4. Indoor occupancy and vacancy sensors.
5. Switchbox-mounted occupancy and vacancy sensors
6. Digital timer light switches.
7. High-bay occupancy and vacancy sensors.
8. Outdoor motion sensors.
9. Lighting contactors.

B. Related Requirements:

1. Section 262726 "Wiring Devices" for wall-box dimmers, non-networkable wall-switch occupancy sensors, and manual light switches.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Show installation details for the following:

a. Occupancy sensors.
b. Vacancy sensors.

2. Interconnection diagrams showing field-installed wiring.
3. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plan(s) and elevations, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Field quality-control reports.

C. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

B. Software and firmware operational documentation.

1.5 WARRANTY

A. Manufacturer's Warranty: Manufacturer and Installer agree to repair or replace lighting control devices that fail(s) in materials or workmanship within specified warranty period.

1. Warranty Period: Two year(s) from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 TIME SWITCHES

A. Electronic Time Switches: Solid state, programmable, with alphanumeric display; complying with UL 917.

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Contact Configuration: SPST, DPST or DPDT as directed.
3. Contact Rating: As directed, 30-A inductive or resistive, 240-V ac or 20-A ballast load, 120-/240-V ac.
4. Programs: Eight on-off set points on a 24-hour schedule and an annual holiday schedule that overrides the weekly operation on holidays.
5. Programs: Two on-off set points on a 24-hour schedule, allowing different set points for each day of the week and an annual holiday schedule that overrides the weekly operation on holidays.
6. Programs: Number of channels as directed; each channel is individually programmable with eight on-off set points on a 24-hour schedule.
7. Programs: Number of channels as directed; each channel is individually programmable with two on-off set points on a 24-hour schedule with a skip-a-day weekly schedule.
8. Programs: Number of channels as directed; each channel is individually programmable with two on-off set points on a 24-hour schedule, allowing different set points for each day of the week.
9. Programs: Number of channels as directed; each channel is individually programmable with 40 on-off operations per week and an annual holiday schedule that overrides the weekly operation on holidays.
10. Programs: Number of channels as directed; each channel is individually programmable with 40 on-off operations per week, plus four seasonal schedules that modify the basic program and an annual holiday schedule that overrides the weekly operation on holidays.
11. Programs: As directed, Configuration and an annual holiday schedule that overrides the weekly operation on holidays.
12. Circuitry: Allow connection of a photoelectric relay as substitute for on-off function of a program on selected channels.
13. Astronomic Time: All or Selected channels. As directed

14. Automatic daylight savings time changeover.
15. Battery Backup: Not less than seven days reserve, to maintain schedules and time clock.

B. Electromechanical-Dial Time Switches: Comply with UL 917.

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Contact Configuration: SPST, DPST, SPDT or DPDT as directed.
3. Contact Rating: 30-A inductive or resistive, 240-V ac or 20-A ballast load, 120-/240-V ac as directed.
4. Circuitry: Allows connection of a photoelectric relay as a substitute for the on-off function of a program.
5. Astronomic time dial.
6. Eight-Day Program: Uniquely programmable for each weekday and holidays.
7. Skip-a-day mode.
8. Wound-spring reserve carryover mechanism to keep time during power failures, minimum of 16 hours.

2.2 OUTDOOR PHOTOELECTRIC SWITCHES

A. Description: As directed, Solid state, with SPST or DPST dry contacts rated for 1000 W incandescent or 1800 VA inductive, to operate connected relay, contactor coils, or microprocessor input; complying with UL 773A, and compatible with ballasts and LED lamps.

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Light-Level Monitoring Range: 1.5 to 10 fc (16.14 to 108 lux), with an adjustment for turn-on and turn-off levels within that range, and a directional lens in front of the photocell to prevent fixed light sources from causing turn-off.
3. Time Delay: Fifteen-second minimum, to prevent false operation.
4. Surge Protection: Metal-oxide varistor.
5. Mounting: Twist lock complies with NEMA C136.10, with base-and-stem mounting or stem-and-swivel mounting accessories as required to direct sensor to the north sky exposure.
6. Failure Mode: Luminaire stays ON.

B. Description: As directed, Solid state; one set of NO dry contacts rated for 24 V dc at 1 A or 24 V ac at 1 A, to operate connected load, complying with UL 773, and compatible with luminaire, power pack or lighting control panelboard as directed.

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Light-Level Monitoring Range: 1.5 to 10 fc (16.14 to 108 lux), with an adjustment for turn-on and turn-off levels within that range.
3. Time Delay: Thirty-second minimum, to prevent false operation.
4. Mounting: 1/2-inch (13-mm) threaded male conduit.
5. Failure Mode: Luminaire stays ON.

6. Power Pack: As directed, Dry contacts rated for 20-A, ballast or LED load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Sensor has 24-V dc, 150-mA, Class 2 power source, as defined by NFPA 70.

    a. LED status lights to indicate load status.
    b. Plenum rated.

7. Power Pack: As directed, Digital controller capable of accepting three or four RJ45 inputs with one or two outputs rated for 20-A incandescent or LED load at 120- and 277-V ac, for 13-A or 16-A, ballast or LED at 120- and 277-V ac, and for 1 hp at 120-V ac. Sensor has 24-V dc, Class 2 power source, as defined by NFPA 70.

    a. With integral current monitoring
    b. Compatible with digital addressable lighting interface.
    c. Plenum rated.

2.3 INDOOR OCCUPANCY AND VACANCY SENSORS

A. General Requirements for Sensors:

1. Wall or Ceiling-mounted, solid-state indoor occupancy and vacancy sensors as directed.
2. Passive infrared, Ultrasonic or Dual technology as directed.
3. Integrated or Separate power pack as directed.
4. Hardwired or Wireless connection to switch and BAS; and BAS and lighting control system as directed.
5. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
6. Operation:

    a. Occupancy Sensor: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn them off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
    b. Vacancy Sensor: Unless otherwise indicated, lights are manually turned on and sensor turns lights off when the room is unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
    c. Combination Sensor: Unless otherwise indicated, sensor shall be programmed to turn lights on when coverage area is occupied and turn them off when unoccupied, or to turn off lights that have been manually turned on; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.

7. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A, Sensor is powered from the power pack or Wireless.
8. Power: Line voltage or Integral photovoltaic collector as directed.
9. Power Pack: As directed, Dry contacts rated for 20-A ballast or LED load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Sensor has 24-V dc, 150-mA, Class 2 power source, as defined by NFPA 70.
10. Mounting:

    a. Sensor: Suitable for mounting in any position on a standard outlet box.

b. Relay: Externally mounted through a 1/2-inch (13-mm) knockout in a standard electrical enclosure.
c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.

11. Indicator: Digital display, to show when motion is detected during testing and normal operation of sensor.
12. Bypass Switch: Override the "on" function in case of sensor failure.
13. Automatic Light-Level Sensor: Adjustable from 2 to 200 fc (21.5 to 2152 lux); turn lights off when selected lighting level is present.

B. PIR Type: As directed, Wall or Ceiling mounted; detect occupants in coverage area by their heat and movement.

1. Detector Sensitivity: Detect occurrences of 6-inch (150-mm) minimum movement of any portion of a human body that presents a target of not less than 36 sq. in. (232 sq. cm).
2. Detection Coverage (Room, Ceiling Mounted): Detect occupancy anywhere in a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96-inch (2440-mm) high ceiling.
3. Detection Coverage (Corridor, Ceiling Mounted): Detect occupancy within 90 feet (27.4 m) when mounted on a 10-foot (3-m) high ceiling.
4. Detection Coverage (Room, Wall Mounted): As directed, detect occupancy anywhere within a 180-degree pattern centered on the sensor over an area of 1000 square feet (110 square meters), 2000 square feet (220 square meters) or 3000 square feet (330 square meters) when mounted 48 inches (1200 mm) above finished floor.

C. Ultrasonic Type: As directed, Wall or Ceiling mounted; detect occupants in coverage area through pattern changes of reflected ultrasonic energy.

1. Detector Sensitivity: Detect a person of average size and weight moving not less than 12 inches (305 mm) in either a horizontal or a vertical manner at an approximate speed of 12 inches/s (305 mm/s).
2. Detection Coverage (Small Room): Detect occupancy anywhere within a circular area of 600 sq. ft. (56 sq. m) when mounted on a 96-inch (2440-mm) high ceiling.
3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96-inch (2440-mm) high ceiling.
4. Detection Coverage (Large Room): Detect occupancy anywhere within a circular area of 2000 sq. ft. (186 sq. m) when mounted on a 96-inch (2440-mm) high ceiling.
5. Detection Coverage (Corridor): Detect occupancy anywhere within 90 feet (27.4 m) when mounted on a 10-foot (3-m) high ceiling in a corridor not wider than 14 feet (4.3 m).
6. Detection Coverage (Room, Wall Mounted): As directed, occupants in coverage area using PIR and ultrasonic detection methods. The particular technology or combination of technologies that control on-off functions is selectable in the field by operating controls on unit.

7. Sensitivity Adjustment: Separate for each sensing technology.
8. Detector Sensitivity: Detect occurrences of 6-inch (150-mm) minimum movement of any portion of a human body that presents a target of not less than 36 sq. in. (232 sq. cm), and detect a person of average size and weight moving not less than 12 inches (305 mm) in either a horizontal or a vertical manner at an approximate speed of 12 inches/s (305 mm/s).

9. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96-inch (2440-mm) high ceiling.
10. Detection Coverage (Room, Wall Mounted): As directed, detect occupancy anywhere within a 180-degree pattern centered on the sensor over an area of 1000 square feet (110 square meters), 2000 square feet (220 square meters) or 3000 square feet (330 square meters) when mounted 48 inches (1200 mm) above finished floor.

2.4 SWITCHBOX-MOUNTED OCCUPANCY SENSORS

A. General Requirements for Sensors: Automatic-wall-switch occupancy sensor with manual on-off switch, suitable for mounting in a single gang switchbox, with provisions for connection to BAS, using hardwired connection or using wireless connection.
