32 90 Planting *(32)*

Note: Plant installation includes the initial watering only. The extended watering period for the establishment of lawns, plants and trees is addressed on a per plant per amount per occurrence basis as directed in the specification. cvs = cultivar or cultivated varities. See CSI section 32 01 90 26-0000 for additional "extended watering period" tasks.

33 01 10 71-0137 Lining Pipe With Resin Impregnated CIPP/ Cured In-Place Pipe Structural Potable Watermain Lining *(33 01 10 71)*

Note: CIPP/ Cured in-place pipe lining excludes the following: excavation of access pits, excavation for temporary water connections for services between 1" to 12" diameter, temporary bypass, CCTV inspection, pipe cleaning, pressure testing, any water main appurtenances and required water main connections, reinstating service connecgtions, soft and hard restorations, emergency after hours response for residents. All Excluded Items require additional payment. To comply with this specification: the CIPP lining must: (i) be NSF 61 approved for use in potable / drinking water and meet standards of a Class IV structural liner; (ii) be fully structural liner according to the AWWA M28 Manual or ASTM F1216-09, ASTM F1743-08, ASTM F2994-18 or ASTM F2019-03(2009) and sized properly to ensure tight fit between liner and host pipe; (iii) be able to be hot-tapped (live tapped); (iv) require no additional seals or fittings to achieve adhesion to the host main; (v) have an internal design pressure of 150psi; (vi) the water service connections shall be reinstated from inside of the line pipe, using a mechanical robot equipped with a camera and activated by an operator using a remote control and television unit; (vii) the inside diameter of the watermain to be lined shall be accurately measured thoughout the length of the lining run using a suitable device such as a laser measuring device that will travel along the inside of the exisitng watermain and the final installed liner shall leave no gap or annular space between the liner and the watermain at any location around the perimeter of the watermain along the full length; (viii) the service shall be opened to the full pre-existing flow opening size, including the removal of any resin slugging in or up the service connection that will impede flow; and (ix) after opening the connections, the lined watermain shall be flushed clean, disinfected and restored to service. (x) the general contractor (or installer) must have a minimum of five-years of potable CIPP lining experience and have previously installed a minimum of 100,000 ft of potable CIPP lining in compliance with the preceding items (i)-(ix). If unable to reinstate a service connection from the inside, a suitable excavation will be required to access the main stop and to disconnect the existing copper pipe and reconnect the copper piping with the Contract Administrator's approved fittings. See CSI section 31 23 16 00-0000 for excavation, 33 01 10 54-0000 for watermain pipe cleaning.
