B. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish.

1. Color and Gloss: As indicated by manufacturer's designations, match Architect's sample or as selected by Architect from manufacturer's full range.

2.7 STEEL FINISHES

A. Factory Prime Finish: After surface preparation and pretreatment, apply manufacturer's standard, fast-curing, lead- and chromate-free, universal primer.

B. Baked-Enamel or Power-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish.

1. Color and Gloss: As indicated by manufacturer's designations, match Architect's sample or as selected by Architect from manufacturer's full range.

2.8 STAINLESS-STEEL FINISHES

A. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Directional Satin Finish: No. 4.

2.9 ACCESSORIES

A. Recessed Deal Trays: Formed from stainless steel with sliding stainless-steel cover; fabricated in curved shape with exposed flanges for recessed installation into horizontal surface.

1. Clear Opening Size: As directed.

B. Recessed, Nonricochet Deal Trays: Formed from stainless steel; fabricated with recessed bullet trap to ricochet bullets away from secure side, with exposed flanges for recessed installation into horizontal surface, and with sliding stainless-steel cover.

1. Clear Opening Size: As directed.
2. Bullet Trap Location: Secure side or Both sides.
3. Ballistics Resistance: UL Level 1, UL Level 3 or same as security window.
4. Listed and labeled as bullet resisting according to UL 752.

C. Transaction Drawers: Formed from stainless steel, steel or bullet-resistant armoring; with ball-bearing, telescoping sliding mechanism; with cover on secure side of top of drawer that automatically closes when drawer is extended to attack side.

1. Inside Dimensions: As directed.
2. Operation: Manual.
3. Operation: Electric, with sliding handle for emergency manual operation during lack of power. Provide individual switches for power and drawer movement on secure side and call button on attack side.
4. Ballistics Resistance: UL Level 1, UL Level 3 or same as security window.
5. Listed and labeled as bullet resisting according to UL 752.

D. Speaking Apertures: Fabricate from stainless steel or security glazing, designed to allow passage of speech at normal speaking volume without distortion.

1. Shape: Circular or Square.
2. Ballistics Resistance: UL Level 1, UL Level 3 or same as security window.
3. Listed and labeled as bullet resisting according to UL 752.

E. Concealed Bolts: ASTM A307, Grade A unless otherwise indicated.

F. Cast-in-Place Anchors in Concrete: Fabricated from corrosion-resistant materials capable of sustaining, without failure, a load equal to four times the load imposed, as determined by testing according to ASTM E488/E488M, conducted by a qualified testing agency; of type indicated below.

1. Threaded or wedge type; galvanized ferrous castings, either ASTM A27/A27M cast steel or ASTM A47/A47M malleable iron. Provide bolts, washers, and shims as required; hot-dip galvanized according to ASTM A153/A153M or ASTM F2329/F2329M.

G. Embedded Plate Anchors: Fabricated from mild steel shapes and plates, minimum 3/16 inch (4.8 mm) thick; with minimum 1/2-inch (12.7-mm) diameter, headed studs welded to back of plate.

H. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

I. Glazing Strips and Weather Stripping: Manufacturer's standard replaceable components.

1. Compression Type: Molded EPDM or neoprene gaskets complying with ASTM D2000, Designations 2BC415 to 3BC620; molded PVC gaskets complying with ASTM D2287; or molded, expanded EPDM or neoprene gaskets complying with ASTM C509, Grade 4.
2. Sliding Type: AAMA 701/702, made of wool, polypropylene, or nylon woven pile with nylon-fabric backing.

J. Miscellaneous Glazing Materials: Provide material, size, and shape complying with requirements of glass manufacturers and with a proven record of compatibility with surfaces contacted in installation.

K. Anchors, Clips, and Window Accessories: Stainless steel; hot-dip, zinc-coated steel or iron, complying with ASTM B633; provide sufficient strength to withstand design pressures indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine roughing-in for embedded and built-in anchors to verify actual locations of security window connections before security window installation.

B. Inspect built-in and cast-in anchor installations, before installing security windows, to verify that anchor installations comply with requirements. Prepare inspection reports.

3.2 INSTALLATION

A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing security windows to in-place construction. Include threaded fasteners for inserts, security fasteners, and other connectors.

B. Glazed Framing: Provide sealant or gasket glazed framing. Comply with installation requirements in Section 088853 "Security Glazing."

C. Removable Glazing Stops and Trim: Fasten components with security fasteners.

D. Fasteners: Install security windows using fasteners recommended by manufacturer with head style appropriate for installation requirements, strength, and finish of adjacent materials. Provide stainless-steel fasteners in stainless-steel materials.

E. Sealants: Comply with requirements in Section 079200 "Joint Sealants" for installing sealants, fillers, and gaskets.

1. Set continuous sill members and flashing in a full sealant bed to provide weathertight construction unless otherwise indicated.
2. Seal frame perimeter with sealant to provide weathertight construction unless otherwise indicated.

3.3 FIELD QUALITY CONTROL

A. Inspect installed products to verify compliance with requirements. Prepare inspection reports and indicate compliance with and deviations from the Contract Documents.

B. Prepare field quality-control certification that states installed products and their installation comply with requirements in the Contract Documents.

3.4 CLEANING AND PROTECTION

A. Lubricate sliding security window hardware.

B. Lubricate transaction drawer hardware.

3.5 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain operable security windows and security windows with transaction drawers.

END OF SECTION 085653

SECTION 085663 - DETENTION WINDOWS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Awning detention windows.
2. Casement detention windows.
3. Fixed detention windows.
4. Air-vent detention windows.

1.2 COORDINATION

A. Detention Specialist: Coordinate with Section 013513.16 "Special Project Procedures for Detention Facilities" for requirements of this Section that are to be performed by a Detention Specialist or other entity.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: Include plans, elevations, sections, and attachment details.

D. Samples: For units with factory-applied color finishes.

1.5 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Material Certificates: For homogeneous tool-resisting steel.

C. Material test reports.

D. Product test reports.

E. Anchor inspection reports.

F. Field quality-control reports.

1. Field quality-control certification signed by Contractor and Detention Specialist.

G. Sample warranties.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

B. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace detention windows that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Three years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Attack Resistance: Grade 1, Grade 2, Grade 3 or Grade 4 when tested according to ASTM F1592.

1. Ballistics Resistance: Test glazed window assembly for bullet penetration according to UL 752, Performance Level 3.
2. Dual Certification: Provide window assemblies with Grade 1, Grade 2, Grade 3 or Grade 4 glazing panels, when tested according to ASTM F1915.

B. Windborne-Debris Impact Resistance: Passes ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone 1, 2, 3 or 4 for basic or enhanced protection.

1. Large-Missile Test: For glazing located within 30 feet (9.1 m) of grade.
2. Small-Missile Test: For glazing located between 30 feet (9.1 m) and 60 feet (18.3 m) above grade.

2.2 AWNING DETENTION WINDOWS

A. Steel Framing: Fabricate perimeter framing, removable covers, and ventilator head rails from 0.105-inch (2.66-mm) nominal-thickness, metallic-coated, cold-rolled steel sheet; ventilator jamb and sill framing from hot-rolled steel sections weighing not less than 1.93 lb/linear foot (2.87 kg/linear m); and 0.055-inch (1.40-mm) thick glazing stops from extruded aluminum.

B. Detention Bars:

1. Tool-Resisting-Steel Bar Grid: 1-inch (25-mm) or 7/8-inch (22-mm) diameter, tool-resisting-steel, round bars concealed within muntins at center of window or 6 inches (152 mm) o.c., oriented along length of window unless otherwise indicated, with 3/8-by-2-1/2-inch (9.6-by-63.5-mm), 5/16-by-2-1/4-inch (7.9-by-57.2-mm) or 1/4-by-2-inch (6-by-50-mm) tool-resisting-steel, flat bars concealed within perimeter frame.

    a. Steel: Composite, tool-resisting steel, Grade 1 or Grade 2 according to ASTM A627.
    b. Steel: Homogeneous, tool-resisting steel, Grade 3 or Grade 4 according to ASTM A627.

2. Mild-Steel Detention Bar Grid: 1-inch (25-mm) or 7/8-inch (22-mm) diameter, mild-steel round bars concealed within muntins at center of window or 6 inches (152 mm) o.c., oriented along length of window unless otherwise indicated, with 3/8-by-2-1/2-inch (9.6-by-63.5-mm), 5/16-by-2-1/4-inch (7.9-by-57.2-mm) or 1/4-by-2-inch (6-by-50-mm) mild-steel, flat bars concealed within perimeter frame.

C. Hardware:

1. Four-Bar Friction Hinges: Provide adjustable friction shoes of bronze, brass, nylon, or other nonabrasive, nonstaining, noncorrosive, durable material.
2. Gear-Type, Rotary, Ventilator Operators: Manufacturer's security-grade ventilator control; consisting of manual operator with worm gear, self-locking, bronze bearings, and steel linkage arms on both jambs; maximum opening of 50 degrees, with nonremovable operable knob or removable crank.

    a. Operator shall turn all ventilators simultaneously, securely closing them at both jambs without using additional manually controlled locking devices.
    b. Conceal operator, which shall be removable as a unit, within subframe.
    c. Provide one removable crank for every 10 windows.

D. Screens:

1. Fixed Angle-Frame Screens: Fabricate angle frames and removable clamp strips from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel. Match window-frame finish.
2. Wire-Fabric Screen Cloth: Manufacturer's standard mesh of 0.047-inch (1.19-mm) diameter, stainless-steel wire, complying with FS RR-W-365A.

2.3 CASEMENT DETENTION WINDOWS

A. Steel Framing: Fabricate perimeter framing and removable covers from 0.105-inch (2.66-mm) nominal-thickness, metallic-coated, cold-rolled steel sheet; ventilator head, jamb, and sill framing from hot-rolled steel sections weighing not less than 1.93 lb/linear foot (1.3 kg/linear m); vertical muntins from 0.120-inch (3.04-mm) nominal-thickness, metallic-coated, cold-rolled steel sheet; ventilator bedding angles from 0.060-inch (1.52-mm) nominal-thickness, metallic-coated, cold-rolled steel sheet; and 0.055-inch 1.40-mm) thick glazing stops from extruded aluminum.

B. Detention Bars:

1. Tool-Resisting-Steel Bar Grid: 1-inch (25-mm) or 7/8-inch- (22-mm) diameter, tool-resisting-steel, round bars concealed within muntins at center of window or 6 inches (152 mm) o.c., oriented along length of window unless otherwise indicated, with 3/8-by-2-1/2-inch (9.6-by-63.5-mm), 5/16-by-2-1/4-inch (7.9-by-57.2-mm) or 1/4-by-2-inch (6-by-50-mm) tool-resisting-steel, flat bars concealed within perimeter frame.

    a. Steel: Composite, tool-resisting steel, Grade 1 or Grade 2 according to ASTM A627.
    b. Steel: Homogeneous, tool-resisting steel, Grade 3 or Grade 4 according to ASTM A627.

2. Mild-Steel Detention Bar Grid: 1-inch (25-mm) or 7/8-inch (22-mm) diameter, mild-steel, round bars concealed within muntins at center of window or 6 inches (152 mm) o.c., oriented along length of window unless otherwise indicated, with 3/8-by-2-1/2-inch (9.6-by-63.5-mm), 5/16-by-2-1/4-inch (7.9-by-57.2-mm) or 1/4-by-2-inch (6-by-50-mm) mild-steel, flat bars concealed within perimeter frame.

C. Hardware:

1. Four-Bar Friction Hinges: Provide adjustable friction shoes of bronze, brass, nylon, or other nonabrasive, nonstaining, noncorrosive, durable material.
2. Gear-Type, Rotary, Ventilator Operators: Manufacturer's security-grade ventilator control; consisting of manual operator with worm gear, self-locking, bronze bearings, and steel linkage arms on both jambs; maximum opening of 50 degrees, with nonremovable operable knob or removable crank.

    a. Operator shall turn all ventilators simultaneously, securely closing them at both jambs without using additional manually controlled locking devices.
    b. Conceal operator, which shall be removable as a unit, within subframe.
    c. Provide one removable crank for every 10 windows.

D. Screens:

1. Fixed Angle-Frame Screens: Fabricate angle frames and removable clamp strips from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel. Match window-frame finish.
2. Wire-Fabric Screen Cloth: Manufacturer's standard mesh of 0.047-inch (1.19-mm) diameter, stainless-steel wire, complying with FS RR-W-365A.

2.4 FIXED DETENTION WINDOWS

A. Steel Framing: Fabricate perimeter framing, removable covers, and muntins or mullions from 0.105-inch (2.66-mm) nominal-thickness, metallic-coated, cold-rolled steel sheet. Provide thermally improved construction or provide thermally broken construction.

B. Detention Bars:

1. Tool-Resisting-Steel Bar Grid: 1-inch (25-mm) or 7/8-inch (22-mm) diameter, tool-resisting-steel, round bars concealed within muntins at center of window or 6 inches (152 mm) o.c., oriented along length of window unless otherwise indicated, with 3/8-by-2-1/2-inch (9.6-by-63.5-mm), 5/16-by-2-1/4-inch (7.9-by-57.2-mm) or 1/4-by-2-inch (6-by-50-mm) tool-resisting-steel, flat bars concealed within perimeter frame.

    a. Steel: Composite, tool-resisting steel, Grade 1 or Grade 2 according to ASTM A627.
    b. Steel: Homogeneous, tool-resisting steel, Grade 3 or Grade 4 according to ASTM A627.

2. Mild-Steel Detention Bar Grid: 1-inch (25-mm) or 7/8-inch (22-mm) diameter, mild-steel, round bars concealed within muntins at center of window or 6 inches (152 mm) o.c., oriented along length of window unless otherwise indicated, with 3/8-by-2-1/2-inch (9.6-by-63.5-mm), 5/16-by-2-1/4-inch (7.9-by-57.2-mm) or 1/4-by-2-inch (6-by-50-mm) mild-steel, flat bars concealed within perimeter frame.

2.5 AIR-VENT DETENTION WINDOWS

A. Steel Framing: Fabricate perimeter framing, removable covers, integral perforated grille, ventilator frame, vent damper, and muntins or mullions from 0.105-inch (2.66-mm) nominal-thickness, metallic-coated, cold-rolled steel sheet; and glazing stops from 0.060-inch (1.5-mm) thick, extruded aluminum. Provide 10-by-10 (2.5-by-2.5-mm) stainless-steel mesh behind perforated grille.

B. Detention Bars:

1. Tool-Resisting-Steel Bar Grid: 1-inch (25-mm) or 7/8-inch (22-mm) diameter, tool-resisting-steel, round bars concealed within muntins at center of window or 6 inches (152 mm) o.c., oriented along length of window unless otherwise indicated, with 3/8-by-2-1/2-inch (9.6-by-63.5-mm), 5/16-by-2-1/4-inch (7.9-by-57.2-mm) or 1/4-by-2-inch (6-by-50-mm) tool-resisting-steel, flat bars concealed within perimeter frame.

    a. Steel: Composite, tool-resisting steel, Grade 1 or Grade 2 according to ASTM A627.
    b. Steel: Homogeneous, tool-resisting steel, Grade 3 or Grade 4 according to ASTM A627.

2. Mild-Steel Detention Bar Grid: 1-inch (25-mm) or 7/8-inch (22-mm) diameter, mild-steel, round bars concealed within muntins at center of window or 6 inches (152 mm) o.c., oriented along length of window unless otherwise indicated, with 3/8-by-2-1/2-inch

(9.6-by-63.5-mm), 5/16-by-2-1/4-inch (7.9-by-57.2-mm) or 1/4-by-2-inch (6-by-50-mm) mild-steel, flat bars concealed within perimeter frame.

C. Hardware:

1. Gear-Type, Rotary, Ventilator Operators: Manufacturer's security-grade ventilator control; consisting of manual operator with worm gear, self-locking, bronze bearings, and steel linkage arms on both jambs; maximum opening of 50 degrees, with nonremovable operable knob or removable crank.

   a. Operator shall turn all ventilators simultaneously, securely closing them at both jambs without using additional manually controlled locking devices.
   b. Conceal operator, which shall be removable as a unit, within subframe.
   c. Provide one removable crank for every 10 windows.

D. Screens:

1. Fixed Angle-Frame Screens: Fabricate angle frames and removable clamp strips from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel. Match window-frame finish.
2. Wire-Fabric Screen Cloth: Manufacturer's standard mesh of 0.047-inch (1.19-mm) diameter, stainless-steel wire, complying with FS RR-W-365A.

2.6 FABRICATION

A. Provide units that are reglazable from the exterior without dismantling ventilator framing.

B. Fabricate detention window frames of one-piece construction, except where removable covers are indicated.

C. Form removable covers to profiles indicated on Drawings.

D. Anchors for In-Place-Construction Installation: 3/16-inch (4.8-mm) thick steel angles or formed-steel plates, 4 inches (100 mm) long, welded to back of detention window frames as required to secure detention windows to adjacent construction.

1. Provide two anchors per side of window plus one additional anchor for every 18 inches (457 mm) or fraction thereof more than 36 inches (914 mm) in height or width.

E. Anchors for Built-in Installation: 1/2-inch (13-mm) diameter, headed studs welded to back side of frames as required to secure detention windows to adjacent construction.

1. Provide two anchors per side of window plus one additional anchor for every 18 inches (457 mm) or fraction thereof more than 36 inches (914 mm) in height or width.

F. Glazing Stop Heights: Minimum 1.25 inches (32 mm) to provide minimum 1-inch (25-mm) glass engagement.

G. Provide weep holes and internal water passages to conduct infiltrating water to the exterior.

H. Thermally Improved or Thermally Broken Construction: Fabricate framing with an integral, concealed, low-conductance thermal barrier, located between exterior materials and members exposed on interior in a manner that eliminates direct metal-to-metal contact. Attach with security fasteners.

I. Window and Screen Frames: Miter or cope corners the full depth of frame; weld and dress smooth.

J. Detention Bars: Fabricate flat bar perimeter frame to allow round bars to penetrate and create a secure grid. Weld round bars to back side of flat bars. Conceal detention bars within window framing.

K. Muntins: Attach muntins to perimeter framing with concealed welds.

L. Welding: Weld components to comply with referenced AWS standard.

M. Metal Protection: Separate dissimilar metals to protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.

N. Preglazed Fabrication: Preglaze window units at factory. Installation orientation of glazing to meet performance requirements. Comply with requirements in Section 088853 "Security Glazing."

O. Glazing Stops: Provide glazing stops applied with security fasteners or rivets and coordinated with glazing indicated. Finish glazing stops to match window units.

P. Weather Stripping: Factory applied.

Q. Security Screens: Secure screen to frame with security fasteners or stainless-steel rivets.

R. Security Fasteners: Fabricate detention windows using security fasteners with head style appropriate for fabrication requirements, strength, and finish of adjacent materials, except that a maximum of two different sets of tools shall be required to operate security fasteners for Project.

2.7 METALLIC-COATED STEEL SHEET FINISHES

A. Factory Prime Finish: After cleaning and pretreating, apply an air-dried primer compatible with the coating to be applied over it.

B. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish.

1. Color and Gloss: As indicated by manufacturer's designations, match Architect's sample or as selected by Architect from manufacturer's full range.

2.8 STEEL FINISHES

A. Factory Prime Finish: After surface preparation and pretreatment, apply manufacturer's standard, fast-curing, lead- and chromate-free, universal primer.

B. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish.

1. Color and Gloss: As indicated by manufacturer's designations, match Architect's sample or as selected by Architect from manufacturer's full range.

2.9 SECURITY FASTENERS

A. Operable only by tools produced by fastener manufacturer or other licensed fabricator for use on specific type of fastener.

1. Drive-System Type: Pinned Torx-Plus or Pinned Torx.

2.10 SECURITY SEALANTS

A. Polyurethane Security Sealants: Manufacturer's standard, nonsag, tamper-resistant sealant for joints with low movement.

B. Epoxy Security Sealants: Manufacturer's standard, nonsag, tamper-resistant sealant for joints with no movement.

2.11 ACCESSORIES

A. Concealed Bolts: ASTM A307, Grade A unless otherwise indicated.

B. Cast-in-Place Anchors in Concrete: Fabricated from corrosion-resistant materials capable of sustaining, without failure, a load equal to four times the load imposed, as determined by testing according to ASTM E488/E488M, conducted by a qualified testing agency; of type indicated below.

1. Threaded or wedge type; galvanized ferrous castings, either ASTM A47/A47M malleable iron or ASTM A27/A27M cast steel. Provide bolts, washers, and shims as needed; hot-dip galvanized according to ASTM A153/A153M or ASTM F2329/F2329M.

C. Embedded Plate Anchors: Fabricated from mild-steel shapes and plates, minimum 3/16 inch (4.8 mm) thick; with minimum 1/2-inch (13-mm) diameter, headed studs welded to back of plate.

D. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welding.

E. Anchors, Clips, and Window Accessories: Stainless steel; hot-dip, zinc-coated steel or iron, complying with ASTM B633; provide sufficient strength to withstand design pressures indicated.

F. Grout: ASTM C476.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine roughing-in for embedded and built-in anchors to verify actual locations of detention window connections before detention window installation.

B. In-Place-Construction Anchor Installation: Weld angle anchors to embedded anchors to match locations of detention window-frame anchors. Detach removable covers from detention window frames and set frames into opening until detention window-frame anchors contact and match embedded anchors. Weld detention window-frame anchors to embedded anchors with continuous welds or minimum 1-inch (25-mm) long welds with spacing not to exceed 18 inches (457 mm). Reinstall removable covers.

C. Built-in Frame Installation: Build-in or cast-in detention window frames or subframes integral with construction of walls. Fully engage detention window-frame anchors with wall reinforcement.

D. Grout: Fill spaces between detention windows and adjacent substrate with grout.

E. Removable Covers, Glazing Stops, and Trim: Fasten components with security fasteners.

F. Security Fasteners: Install detention windows using security fasteners with head style appropriate for installation requirements, strength, and finish of adjacent materials, except that a maximum of two different sets of tools shall be required to operate security fasteners for Project.

G. Sealants: Comply with requirements in Section 079200 "Joint Sealants" for installing sealants, fillers, and gaskets.

1. Seal frame perimeter with sealant to provide weathertight construction unless otherwise indicated.
2. Security Sealant: At inmate side, apply polyurethane or epoxy security sealant between detention window frame and adjacent construction.

H. Metal Protection: Where dissimilar metals will contact each other, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended in writing by manufacturer for this purpose.

I. Glazing: Comply with installation requirements in Section 088853 "Security Glazing" unless otherwise indicated.

J. Detention Screens: Secure screens to the interior side of window frames using security fasteners.

K. Adjust operating ventilators and hardware to provide a tight fit at contact points and weather stripping, for smooth operation and a weathertight enclosure.

3.2 FIELD QUALITY CONTROL

A. Prepare field quality-control certification endorsed by Detention Specialist that states installed products and their installation comply with requirements in the Contract Documents.

END OF SECTION 085663

SECTION 086100 - ROOF WINDOWS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Fixed (nonoperable) roof windows.
2. Venting (with operable sash) roof windows.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For roof windows.

1. Include plans, elevations, sections, and installation details.
2. Include diagrams for power, signal, and control wiring for motorized operation.

D. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Product test reports.

B. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 QUALITY ASSURANCE: As directed.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace roof windows that fail in materials or workmanship within specified warranty period.

1. Warranty Period:

a. Roof Window: Five or 10 years from date of Substantial Completion, as directed.

b. Insulating-Glass Units: 10 or 20 years from date of Substantial Completion, as directed.
c. Accessories and Electronic Controls: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Product Standard: Comply with AAMA/WDMA/CSA 101/I.S.2/A440 for definitions and minimum standards of performance, materials, components, accessories, and fabrication unless more stringent requirements are indicated.

1. Window Certification: WDMA certified, with label attached to each roof window.

B. Minimum Performance Grade: AAMA/WDMA/CSA 101/I.S.2/A440 PG30, PG35, PG40, PG45 or as indicated on Drawings.

C. Thermal Transmittance: NFRC 100 maximum whole-unit U-factor of 0.55 Btu/sq. ft. x h x deg F (3.12 W/sq. m x K), 0.57 Btu/sq. ft. x h x deg F (3.24 W/sq. m x K) or 0.70 Btu/sq. ft. x h x deg F (3.97 W/sq. m x K).

D. Solar Heat-Gain Coefficient (SHGC): NFRC 200 maximum whole-window SHGC of 0.40 or 0.30.

E. Windborne-Debris Impact Resistance: Passes ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone 1, 2, 3 or 4 for basic or enhanced protection.

1. Large-Missile Test: For glazing located within 30 feet (9.1 m) of grade.
2. Small-Missile Test: For glazing located between 30 feet (9.1 m) and 60 feet (18.3 m) above grade.

2.2 ROOF WINDOWS

A. Curb/Frame: Wood, Aluminum, Thermally broken aluminum, Aluminum-clad wood, Copper-clad wood, Vinyl or Manufacturer's standard.

1. Flashing: Self-flashing frame, Manufacturer's standard aluminum or Manufacturer's standard copper.

B. Sash: Wood, Aluminum, Aluminum and wood, Copper and wood, Aluminum and vinyl, Vinyl or Manufacturer's standard.

C. Insulating-Glass Units: ASTM E2190.

1. Exterior Lite: Fully tempered glass with Low-E coating.
2. Interior Lite: Laminated glass; heat-strengthened glass and 0.03-inch (0.76-mm) thick polyvinyl butyral interlayer, Fully tempered glass, Laminated glass; heat-strengthened

glass with 0.090-inch (2.29-mm-) polyvinyl butyral interlayer or Laminated glass; fully tempered glass with 0.03-inch (0.76-mm) thick polyvinyl butyral interlayer.

3. Filling: Fill space between glass lites with air or argon.

D. Glazing System: Manufacturer's standard factory-glazing system that produces weathertight seal.

E. Operating Hardware:

1. Hardware Finish: Manufacturer's standard or Match cladding appearance.
2. Operators and Controls: Gear-type rotary operator with manufacturer's standard, cable or arm control device with latching/locking mechanism.

    a. Crank-Handle Operator: Manufacturer's standard for manually operating venting units that are less than 72 inches (1800 mm) above floor.
    b. Pole Operator: Manufacturer's standard manual or motorized pole for operating venting units that are more than 72 inches (1800 mm) above floor.
    c. Remote-Control Motor Operator: Manufacturer's standard for operating venting units that are more than 72 inches (1800 mm) above floor.

        1) Electric or Solar-powered battery motor.
        2) Wireless remote or Keypad control.
        3) Provide rain sensor that automatically closes venting unit when water is detected.

3. Hinges: Continuous; Pivots, two per sash or Manufacturer's standard.

F. Exposed Finishes:

1. Exposed: Unfinished, Manufacturer's standard transparent finish in color selected by Architect from manufacturer's full range, Manufacturer's standard prime-painted finish or Manufacturer's standard opaque finish in color selected by Architect from manufacturer's full range.
2. Aluminum: Manufacturer's standard, Match Architect's sample or as selected by Architect from manufacturer's full range.
3. Copper: Manufacturer's standard, Match Architect's sample or as selected by Architect from manufacturer's full range.
4. Vinyl: Manufacturer's standard color or in color selected by Architect from manufacturer's full range.

2.3 ACCESSORIES

A. Insect Screens: Manufacturer's standard removable screen; aluminum or vinyl frame with mitered or coped joints and with ASTM D3656 mesh of plastic-coated glass-fiber threads. Provide frame in manufacturer's standard finish and mesh in manufacturer's standard color.

B. Blinds: In color and pattern selected by Architect from manufacturer's full range.

1. Type: Pleated; Roll up, light filtering; Roll up, blackout, Venetian or Manufacturer's standard.
2. Pole Operation: Provide manual or motorized pole for operating blinds that are more than 72 inches (1800 mm) above floor.
3. Motor Operator: Manufacturer's standard for blinds that are more than 72 inches (1800 mm) above floor.

    a. Electric or Solar-powered battery motor.
    b. Wireless remote or Keypad control.

C. Mull Kit: Manufacturer's standard for installing two units side by side or inline; finished to match roof window units.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Comply with manufacturer's written installation instructions for installing roof windows and accessories.

B. Install roof windows square, true, and without distortion, warp, or rack of frames and sash. Securely anchor windows to structural support without impeding thermal movement.

C. Install flashing to provide a watertight and weathertight seal.

D. Separate aluminum, copper, and other corrodible surfaces from sources of corrosion or electrolytic action at points of contact with other materials according to recommendations in ASTM E2112.

END OF SECTION 086100

SECTION 086200 - UNIT SKYLIGHTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Self-flashing unit skylights with integral curbs.
2. Unit skylights mounted on prefabricated or site-erected curbs.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of unit skylight.

B. Shop Drawings: For unit skylight work. Include plans, elevations, sections, details, and connections to supporting structure and other adjoining work.

C. Samples: For each type of exposed finish required and each type of glazing.

D. Product Schedule: For unit skylights. Use same designations indicated on Drawings.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification data.

B. Product test reports.

C. Field quality-control reports.

D. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of unit skylights that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS: As directed.

2.2 PERFORMANCE REQUIREMENTS

A. Unit Skylight Standard: Comply with AAMA/WDMA/CSA 101/I.S.2/A440 for definitions and minimum standards of performance, materials, components, accessories, and fabrication unless more stringent requirements are indicated.

1. Performance Class and Grade: Class R-PG 15, 20, 25, 30 or 35.
2. Performance Class and Grade: Class CW-PG 30, 35, 40, 45 or 50.
3. Certification: AAMA-, WDMA-, or CSA-certified unit skylights with label attached to each.

B. Thermal Transmittance: NFRC 100 maximum U-factor of 0.30 Btu/sq. ft. x h x deg F (1.71 W/sq. m x K), 0.32 Btu/sq. ft. x h x deg F (1.83 W/sq. m x K), 0.35 Btu/sq. ft. x h x deg F (2.0 W/sq. m x K), 0.50 Btu/sq. ft. x h x deg F (2.83 W/sq. m x K), 0.55 Btu/sq. ft. x h x deg F (3.12 W/sq. m x K), 0.60 Btu/sq. ft. x h x deg F (3.43 W/sq. m x K) or 0.75 Btu/sq. ft. x h x deg F (4.26 W/sq. m x K).

C. Windborne-Debris Impact Resistance: Passes ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone 1, 2, 3 or 4 for basic or enhanced protection.

1. Large-Missile Test: For glazing located within 30 feet (9.1 m) of grade.
2. Small-Missile Test: For glazing located between 30 feet (9.1 m) and 60 feet (18.3 m) above grade.

2.3 UNIT SKYLIGHTS

A. Unit Shape and Size: As indicated, Square, 40-by-40-inch (1016-by-1016-mm) inside curb, Rectangular, 40-by-48-inch (1016-by-1220-mm) inside curb or Circular, 40-inch (1016-mm) diameter inside curb.

B. Acrylic Glazing: ASTM D4802, thermoformable, monolithic sheet, category as standard with manufacturer, Finish 1 (smooth or polished), Type UVF (formulated with UV absorber).

1. Single-Glazing Profile: Dome, 25 percent rise or Pyramid, 30-degree slope.

a. Thickness: As indicated or Not less than thickness required to exceed performance requirements.
b. Color: Colorless, transparent; White, translucent; Bronze tinted, transparent; or Gray tinted, transparent.

2. Double-Glazing Profile: Dome, 25 percent rise or Pyramid, 30-degree slope.

a. Thicknesses: As indicated or Not less than thicknesses required to exceed performance requirements.

b. Outer Glazing Color: Colorless, transparent; White, translucent; Bronze tinted, transparent; or Gray tinted, transparent.
c. Inner Glazing Color: Colorless, transparent; White, translucent; Bronze tinted, transparent; or Gray tinted, transparent.

3. Self-Ignition Temperature: 650 deg F (343 deg C) or more for plastic sheets in thickness indicated when tested according to ASTM D1929.
4. Smoke-Production Characteristics: Smoke-developed index of 450 or less when tested according to ASTM E84, and smoke density of 75 or less when tested according to ASTM D2843
5. Burning Characteristics: Tested according to ASTM D635. Class CC2, burning rate of 2-1/2 inches (64 mm) per minute or less for nominal thickness of 0.060 inch (1.5 mm) or thickness indicated for use.

C. Polycarbonate Glazing: Thermoformable, extruded monolithic sheets, UV resistant, burglar-resistance rated according to UL 972, and with average impact strength of 12 to 16 ft-lb/in. (640 to 854 J/m) of width when tested according to ASTM D256, Test Method A (Izod).

1. Single-Glazing Profile: Dome, 25 percent rise or Pyramid, 30-degree slope.

a. Thickness: As indicated or Not less than thickness required to exceed performance requirements.
b. Color: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from full range of industry colors.

2. Double-Glazing Profile: Dome, 25 percent rise or Pyramid, 30-degree slope.

a. Thicknesses: As indicated or Not less than thicknesses required to exceed performance requirements.
b. Inner Glazing Color: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from full range of industry colors.
c. Outer Glazing Color: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from full range of industry colors.

3. Self-Ignition Temperature: 650 deg F (343 deg C) or more for plastic sheets in thickness indicated when tested according to ASTM D1929.
4. Smoke-Production Characteristics: Smoke-developed index of 450 or less when tested according to ASTM E84, and smoke density of 75 or less when tested according to ASTM D2843
5. Burning Characteristics: Tested according to ASTM D635. Class CC1, burning extent of 1 inch (25 mm) or less for nominal thickness of 0.060 inch (1.5 mm) or thickness indicated for use.

D. Insulating Glass: Clear, sealed units that comply with Section 088000 "Glazing," in manufacturer's standard overall thickness.

1. Exterior Lite: 6-mm clear, tinted, heat-strengthened or fully tempered glass.
2. Interior Lite: Laminated glass; two plies of 3-mm clear heat-strengthened glass with 0.030-inch (0.762-mm) clear polyvinyl butyral interlayer.
3. Interspace Content: Air or Argon.
4. Low-Emissivity Coating: Manufacturer's standard.

E. Glazing Gaskets: Manufacturer's standard or EPDM, neoprene, partially vulcanized butyl tape, or liquid-applied elastomeric sealant.

F. Integral Curb: Extruded-aluminum, Vinyl or Reinforced-thermoset-fiberglass profile, self-flashing type.

1. Extruded-Aluminum Shapes: ASTM B221 (ASTM B221M).
2. Height: As indicated, 8 inches (200 mm), 9 inches (225 mm) or 12 inches (300 mm).
3. Construction: Single or Double wall.
4. Insulation: Manufacturer's standard rigid or semirigid type.

a. Exposed Insulation: Cover face of insulation exposed to interior of building with aluminum or vinyl liner.

G. Prefabricated Curb: As specified in Section 077200 "Roof Accessories."

H. Condensation Control: Fabricate unit skylights with integral internal gutters and nonclogging weeps to collect and drain condensation to the exterior.

I. Thermal Break: Fabricate unit skylights with thermal barrier separating exterior and interior metal framing.

J. Fasteners: Same metal as metal being fastened, nonmagnetic stainless steel, or other noncorrosive metal as recommended by manufacturer. Finish exposed fasteners to match material being fastened. Provide nonremovable fastener heads.

2.4 ALUMINUM FINISHES

A. Mill Finish: Manufacturer's standard.

B. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm, AA-M12C22A31, Class II, 0.010 mm or thicker.

C. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm, AA-M12C22A32/A34, Class II, 0.010 mm or thicker.

1. Color: Light bronze, Medium bronze, Dark bronze, Black, Champagne, Match Architect's sample or as selected by Architect from full range of industry colors and color densities.

D. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm).

1. Color and Gloss: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from manufacturer's full range.

E. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2604 or AAMA 2605 and containing not less than 50 or 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from manufacturer's full range.

F. High-Performance Organic Finish: Three or Four-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 50 or 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Coordinate installation of unit skylight with installation of substrates, vapor retarders, roof insulation, roofing membrane, and flashing as required to ensure that each element of the Work performs properly and that combined elements are waterproof and weathertight.

B. Comply with recommendations in AAMA 1607 and with manufacturer's written instructions for installing unit skylights.

3.2 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage or Engage a qualified testing agency to perform tests and inspections.

B. After completion of installation and nominal curing of sealant and glazing compounds but before installation of interior finishes, test for water leaks according to AAMA 501.2.

C. Perform test for total area of each unit skylight.

D. Work will be considered defective if it does not pass tests and inspections.

E. Additional testing and inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.3 CLEANING

A. Clean exposed unit skylight surfaces according to manufacturer's written instructions. Touch up damaged metal coatings and finishes.

END OF SECTION 086200

SECTION 086300 - METAL-FRAMED SKYLIGHTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes skylights with metal framing.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For metal-framed skylights. Include plans, elevations, sections, and attachment details.

D. Samples: For each type of exposed finish required, in manufacturer's standard sizes.

1.4 INFORMATIONAL SUBMITTALS

A. Product test reports.

B. Field quality-control reports.

C. Sample warranties.

1.5 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace components of metal-framed skylights that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Two, Five or 10 years from date of Substantial Completion, as directed.

B. Special Aluminum-Finish Warranty: Manufacturer agrees to repair or replace components on which finishes fail within specified warranty period. Warranty does not include normal weathering.

1. Warranty Period: Five, 10 or 20 years from date of Substantial Completion, as directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Loads: As indicated on Drawings.

B. Deflection of Framing Members: At design wind pressure, as follows:

1. Deflection Normal to Glazing Plane: Limited to edge of glass in a direction perpendicular to glass plane not exceeding L/175 of the glass edge length for each individual glazing lite or 1/175 of clear span for spans up to 13 feet 6 inches (4.1 m) and to 1/240 of clear span plus 1/4 inch (6.35 mm) for spans more than 13 feet 6 inches (4.1 m) or an amount that restricts edge deflection of individual glazing lites to 3/4 inch (19.1 mm), whichever is less.
2. Deflection Parallel to Glazing Plane: Limited to L/360 of clear span or 1/8 inch (3.2 mm), whichever is smaller or amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch (3.2 mm).

C. Lateral Bracing of Framing Members: Compression flanges of flexural members are laterally braced by cross members with minimum depth equal to 50 percent of flexural member that is braced. Glazing does not provide lateral support.

D. Structural-Test Performance: Metal-framed skylights tested according to ASTM E330, as follows:

1. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified deflection limits.
2. When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, and permanent deformation of main framing members exceeding 0.2 percent of span.
3. Test Durations: As required by design wind velocity, but not less than 10 seconds.

E. Windborne-Debris Impact Resistance: Passes ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone 1, 2, 3 or 4 for basic or enhanced protection.

1. Large-Missile Test: For glazing located within 30 feet (9.1 m) of grade.
2. Small-Missile Test: For glazing located between 30 feet (9.1 m) and 60 feet (18.3 m) above grade.

F. Air Infiltration: Metal-framed skylights with maximum air leakage through fixed glazing and framing areas of 0.06 cfm/sq. ft. (0.03 L/s per sq. m) of when tested according to ASTM E283 at a minimum static-air-pressure difference of 1.57 lbf/sq. ft. (75 Pa) or 6.24 lbf/sq. ft. (300 Pa).

G. Water Penetration under Static Pressure: Metal-framed skylights that do not evidence water penetration through fixed glazing and framing areas when tested according to ASTM E331 at a minimum static-air-pressure difference of 20 percent of positive wind-load design pressure, but not less than 6.24 lbf/sq. ft. (300 Pa).

H. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

I. Condensation Resistance: Metal-framed skylights with fixed glazing and framing areas having condensation-resistance factor (CRF) of not less than 45 or 53, as directed, when tested according to AAMA 1503.

1. Haze Factor: Greater than 90 percent when tested according to ASTM D1003.

J. Energy Performance: Provide metal-framed skylights with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below and certified and labeled according to NFRC:

1. Thermal Transmittance (U-Factor): Fixed glazing and framing areas shall have U-factor of not more than 0.80 Btu/sq. ft. x h x deg F (4.54 W/sq. m x K) or 0.65 Btu/sq. ft. x h x deg F (3.69 W/sq. m x K) as determined according to NFRC 100.
2. Solar Heat Gain Coefficient: Fixed glazing and framing areas shall have a solar heat gain coefficient of no greater than 0.6 or 0.7 as determined according to NFRC 200.

2.2 METAL-FRAMED SKYLIGHTS

A. Metal-Framed Skylights: Glazed skylight assemblies supported by aluminum framing.

B. Aluminum Framing Systems: Manufacturer's standard extruded-aluminum members of thickness required and reinforced as required to support imposed loads.

C. Aluminum: Alloy and temper as recommended in writing by manufacturer for type of use and finish indicated.

1. Sheet and Plate: ASTM B209 (ASTM B209M).
2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221 (ASTM B221M).
3. Extruded Structural Pipe and Tubes: ASTM B429/B429M.
4. Structural Profiles: ASTM B308/B308M.

D. Pressure Caps: Manufacturer's standard aluminum components that mechanically retain glazing.

1. Include snap-on aluminum trim that conceals fasteners.

E. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning skylight components.

F. Fasteners and Accessories: Manufacturer's standard, corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

G. Concealed Flashing: Manufacturer's standard, corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.

H. Exposed Flashing and Closures: Manufacturer's standard aluminum components not less than 0.030 inch (0.762 mm), 0.040 inch (1.016 mm) or 0.060 inch (1.524 mm) thick.

I. Framing Sealants: As recommended in writing by manufacturer or specified in Section 079200 "Joint Sealants."

J. Corrosion-Resistant Coating: Cold-applied asphalt mastic.

2.3 GLAZING

A. Glazing: As specified in Section 088000 "Glazing" or Section 088400 "Plastic Glazing."

B. Glazing Gaskets: Manufacturer's standard sealed-corner pressure-glazing system of black, resilient elastomeric glazing gaskets, setting blocks, and shims or spacers.

C. Spacers and Setting Blocks: Manufacturer's standard elastomeric types, as specified in Section 088000 "Glazing" or as specified in Section 088400 "Plastic Glazing."

D. Glazing Sealants: As recommended in writing by manufacturer.

2.4 FABRICATION

A. Fabricate aluminum components that, when assembled, have the following characteristics:

1. Profiles that are sharp, straight, and free of defects or deformations.
2. Accurately fitted joints with ends coped or mitered.
3. Physical and thermal isolation of glazing from framing members.
4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.

B. Fabricate aluminum sill closures with weep holes and for installation as continuous component.

C. Reinforce aluminum components as required to receive fastener threads.

D. Factory-Glazed, Metal-Framed Skylights: Comply with requirements in Section 088000 "Glazing" or Section 088400 "Plastic Glazing."

E. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.5 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm, AA-M12C22A31, Class II, 0.010 mm or thicker.

B. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm, AA-M12C22A32/A34, Class II, 0.010 mm or thicker.

1. Color: Light bronze, Medium bronze, Dark bronze, Black, match Architect's sample or as selected by Architect from full range of industry colors and color densities.

C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm).

1. Color and Gloss: As indicated by manufacturer's designations, match Architect's sample or as selected by Architect from manufacturer's full range.

D. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2604 or AAMA 2605 and containing not less than 50 or 70 percent PVDF resin by weight in color coat.

1. Color and Gloss: As indicated by manufacturer's designations, match Architect's sample or as selected by Architect from manufacturer's full range.

E. High-Performance Organic Finish: Three or Four coat fluoropolymer finish complying with AAMA 2605 and containing not less than 50 or 70 percent PVDF resin by weight in both color coat and clear topcoat.

1. Color and Gloss: As indicated by manufacturer's designations, match Architect's sample or as selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Comply with manufacturer's written instructions.

1. Do not install damaged components.
2. Fit joints between aluminum components to produce hairline joints free of burrs and distortion.
3. Rigidly secure nonmovement joints.
4. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
5. Seal joints watertight unless otherwise indicated.

B. Metal Protection: Where aluminum will contact dissimilar materials, protect against galvanic action by painting contact surfaces with protective coating or by installing nonconductive spacers as recommended in writing by manufacturer for this purpose.

C. Install continuous aluminum sill closure with weatherproof expansion joints and locked and sealed or welded corners. Locate weep holes at rafters.

D. Install components to drain water passing joints, and moisture migrating within skylight to exterior.

E. Install components plumb and true in alignment with established lines and elevations.

F. Glazing: Install glazing as specified in Section 088000 "Glazing" or Section 088400 "Plastic Glazing."

G. Erection Tolerances: Install metal-framed skylights to comply with the following maximum tolerances:

1. Alignment: Limit offset from true alignment to 1/32 inch (0.8 mm) where surfaces abut in line, edge to edge, at corners, or where a reveal or protruding element separates aligned surfaces by less than 3 inches (76 mm); otherwise, limit offset to 1/8 inch (3.2 mm).
2. Location and Plane: Limit variation from true location and plane to 1/8 inch in 12 feet (3.2 mm in 3.7 m) but no greater than 1/2 inch (13 mm) over total length.

3.2 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage or engage a qualified testing agency to perform tests and inspections.

1. Water-Spray Test: Before installation of interior finishes has begun, skylights shall be tested according to AAMA 501.2 and shall not evidence water penetration.

B. Repair or remove work where test results and inspections indicate that it does not comply with specified requirements.

C. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

D. Prepare test and inspection reports.

END OF SECTION 086300

SECTION 087100 - DOOR HARDWARE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Mechanical door hardware for the following:

   a. Swinging doors.
   b. Sliding doors.
   c. Folding doors.

2. Cylinders for door hardware specified in other Sections.
3. Electrified door hardware.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

B. Keying Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For electrified door hardware.

1. Include diagrams for power, signal, and control wiring.
2. Include details of interface of electrified door hardware and building safety and security systems.

C. Samples: For each exposed product in each finish specified.

D. Door hardware schedule.

E. Keying schedule.

1.4 INFORMATIONAL SUBMITTALS

A. Sample warranty.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Supplier of products and an employer of workers trained and approved by product manufacturers and of an Architectural Hardware Consultant who is available during the course of the Work to consult Contractor, Architect, and Owner about door hardware and keying.

1. Scheduling Responsibility: Preparation of door hardware and keying schedule.
2. Engineering Responsibility: Preparation of data for electrified door hardware, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.

B. Architectural Hardware Consultant Qualifications: A person who is experienced in providing consulting services for door hardware installations that are comparable in material, design, and extent to that indicated for this Project and who is currently certified by DHI as an Architectural Hardware Consultant (AHC), Architectural Hardware Consultant (AHC) and an Electrified Hardware Consultant (EHC) or Architectural Openings Consultant (AOC).

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of door hardware that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Three years from date of Substantial Completion unless otherwise indicated below:

a. Electromagnetic and Delayed-Egress Locks: Five years from date of Substantial Completion.
b. Exit Devices: Two years from date of Substantial Completion.
c. Manual Closers: 10 years from date of Substantial Completion.
d. Concealed Floor Closers: Five, 10 or 25 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Rated Door Assemblies: Where fire-rated doors are indicated, provide door hardware complying with NFPA 80 that is listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.

B. Smoke- and Draft-Control Door Assemblies: Where smoke- and draft-control door assemblies are required, provide door hardware that complies with requirements of assemblies tested according to UL 1784 and installed in compliance with NFPA 105.

1. Air Leakage Rate: Maximum air leakage of 0.3 cfm/sq. ft. (3 cu. m per minute/sq. m) at the tested pressure differential of 0.3-inch wg (75 Pa) of water.

C. Electrified Door Hardware: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Means of Egress Doors: Latches do not require more than 15 lbf (67 N) to release the latch. Locks do not require use of a key, tool, or special knowledge for operation.

E. Accessibility Requirements: For door hardware on doors in an accessible route, comply with the DOJ's "2010 ADA Standards for Accessible Design", the DOT's "ADA Standards for Transportation Facilities", the ABA standards of the Federal agency having jurisdiction, ICC A117.1 or HUD's "Fair Housing Accessibility Guidelines", as directed.

2.2 SCHEDULED DOOR HARDWARE

A. Provide products for each door that comply with requirements indicated in Part 2 and door hardware schedule.

1. Door hardware is scheduled in Part 3 or on Drawings.

2.3 HINGES

A. Hinges: BHMA A156.1. Provide template-produced hinges for hinges installed on hollow-metal doors and hollow-metal frames.

2.4 SELF-CLOSING HINGES AND PIVOTS: As directed.

2.5 CENTER-HUNG AND OFFSET PIVOTS

A. Center-Hung and Offset Pivots: BHMA A156.4.

2.6 CONTINUOUS HINGES

A. Continuous Hinges: BHMA A156.26; minimum 0.120-inch (3.0-mm) thick, hinge leaves with minimum overall width of 4 inches (102 mm); fabricated to full height of door and frame and to template screw locations; with components finished after milling and drilling are complete.

B. Pin-and-Barrel-Type Hinges: As directed.

C. Continuous, Gear-Type Hinges: Extruded-aluminum, pinless, geared hinge leaves joined by a continuous extruded-aluminum channel cap; with concealed, self-lubricating thrust bearings.

2.7 MECHANICAL LOCKS AND LATCHES

A. Lock Functions: As indicated in door hardware schedule.

B. Lock Throw: Comply with testing requirements for length of bolts required for labeled fire doors, and as follows:

1. Bored Locks: Minimum 1/2-inch (13-mm) latchbolt throw.
2. Mortise Locks: Minimum 3/4-inch (19-mm) latchbolt throw.
3. Deadbolts: Minimum 1-inch (25-mm) or 1.25-inch (32-mm) bolt throw.

C. Lock Backset: 2-3/4 inches (70 mm) unless otherwise indicated.

D. Lock Trim:

1. Description: As indicated on Drawings.
2. Levers: Wrought, Forged or Cast.

    a. As directed.

3. Escutcheons (Roses): Wrought, Forged or Cast.
4. Dummy Trim: Match lever lock trim and escutcheons.

E. Strikes: Provide manufacturer's standard strike for each lock bolt or latchbolt complying with requirements indicated for applicable lock or latch and with strike box and curved lip extended to protect frame; finished to match lock or latch.

1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
3. Aluminum-Frame Strike Box: Manufacturer's special strike box fabricated for aluminum framing.
4. Rabbet Front and Strike: Provide on locksets for rabbeted meeting stiles.

F. Bored Locks: BHMA A156.2; Grade 1 or Grade 2; Series 4000.

G. Mortise Locks: BHMA A156.13; Operational Grade 1, Security Grade 1, Operational Grade 2 or Security Grade 2; stamped steel case with steel or brass parts; Series 1000.

2.8 AUXILIARY LOCKS

A. Bored Auxiliary Locks: BHMA A156.36: Grade 1 or Grade 2; with strike that suits frame.

B. Mortise Auxiliary Locks: BHMA A156.36; Grade 1 or Grade 2; with strike that suits frame.

C. Narrow Stile Auxiliary Locks: BHMA A156.36; Grade 1 or Grade 2; with strike that suits frame.

D. Push-Button Combination Locks: BHMA A156.36; cylindrical; Grade 1; lock opens by entering a one- to five-digit code by pushing correct buttons in correct sequence; automatically relocks when door is closed; with strike that suits frame.

2.9 ELECTRIC STRIKES

A. Electric Strikes: BHMA A156.31; Grade 1 or Grade 2; with faceplate to suit lock and frame.

2.10 ELECTROMAGNETIC LOCKS

A. Electromagnetic Locks: BHMA A156.23; electrically powered; with electromagnet attached to frame and armature plate attached to door; full-exterior or full-interior type, as required by application indicated.

B. Delayed-Egress Electromagnetic Locks: BHMA A156.24, electrically powered, with electromagnet attached to frame and armature plate attached to door; depressing push bar for more than three seconds initiates irreversible alarm and adjustable time delay for egress. When integrated with fire alarm, fire alarm voids time delay.

2.11 ELECTROMECHANICAL LOCKS

A. Electromechanical Locks: BHMA A156.25; Grade 1 or Grade 2; motor or solenoid driven; with strike that suits frame.

1. Type: Bored, Mortise latchbolt, Mortise deadbolt or Mortise deadlocking latchbolt.

2.12 SELF-CONTAINED ELECTRONIC LOCKS

A. Self-Contained Electronic Locks: BHMA A156.25, bored or mortise; with internal, battery-powered, self-contained electronic locks; consisting of complete lockset, motor-driven lock mechanism, and actuating device; enclosed in zinc-dichromate-plated, wrought-steel case, and strike that suits frame. Provide key override, low-battery detection and warning, LED status indicators, and ability to program at the lock.

2.13 EXIT LOCKS AND EXIT ALARMS

A. Exit Locks and Alarms: BHMA A156.29, Grade 1.

2.14 SURFACE BOLTS

A. Surface Bolts: BHMA A156.16.

2.15 MANUAL FLUSH BOLTS

A. Manual Flush Bolts: BHMA A156.16; minimum 3/4-inch (19-mm) throw; designed for mortising into door edge.

2.16 AUTOMATIC AND SELF-LATCHING FLUSH BOLTS

A. Automatic Flush Bolts: BHMA A156.3, Type 25; minimum 3/4-inch (19-mm) throw; with dust-proof strikes; designed for mortising into door edge. Include wear plates.

B. Self-Latching Flush Bolts: BHMA A156.3, Type 27; minimum 3/4-inch (19-mm) throw; with dust-proof strikes designed for mortising into door edge. Include wear plates.

2.17 EXIT DEVICES AND AUXILIARY ITEMS

A. Exit Devices and Auxiliary Items: BHMA A156.3.

2.18 LOCK CYLINDERS

A. Lock Cylinders: Tumbler type, constructed from brass or bronze, stainless steel, or nickel silver. Provide cylinder from same manufacturer of locking devices.

B. Standard Lock Cylinders: BHMA A156.5; Grade 1, Grade 1A or Grade 2 permanent cores; face finished to match lockset.

1. Core Type: Interchangeable or Removable.

C. High-Security Lock Cylinders: BHMA A156.30; Grade 1, Grade 2 or Grade 3 permanent cores that are removable; face finished to match lockset.

1. Type: M, mechanical or E, electrical.

D. Construction Master Keys: Provide cylinders with feature that permits voiding of construction keys without cylinder removal. Provide 10 construction master keys.

E. Construction Cores: Provide construction cores that are replaceable by permanent cores. Provide 10 construction master keys.

2.19 KEYING

A. Keying System: Factory registered, complying with guidelines in BHMA A156.28, appendix. Provide one extra key blank for each lock. Incorporate decisions made in keying conference.

1. No Master Key System: Only change keys operate cylinders.

a. Provide three cylinder change keys.

2. Master Key System: Change keys and a master key operate cylinders.

a. Provide three cylinder change keys and five master keys.

3. Grand Master Key System: Change keys, a master key, and a grand master key operate cylinders.

    a. Provide three cylinder change keys and five each of master and grand master keys.

4. Great-Grand Master Key System: Change keys, a master key, a grand master key, and a great-grand master key operate cylinders.

    a. Provide three cylinder change keys and five each of master, grand master, and great-grand master keys.

5. Existing System:

    a. Master key or grand master key locks to Owner's existing system.
    b. Re-key Owner's existing master key system into new keying system.

6. Keyed Alike: Key all cylinders to same change key.

B. Keys: Nickel silver or Brass.

1. Stamping: Permanently inscribe each key with a visual key control number and include the following notation:

    a. Notation: "DO NOT DUPLICATE" or Information to be furnished by Owner.

2.20 KEY CONTROL SYSTEM

A. Key Control Cabinet: BHMA A156.28; metal cabinet with baked-enamel finish; containing key-holding hooks, labels, two sets of key tags with self-locking key holders, key-gathering envelopes, and temporary and permanent markers; with key capacity of 150 percent of the number of locks.

1. Multiple-Drawer Cabinet: Grade 1 or Grade 2 cabinet with drawers equipped with key-holding panels and key envelope storage, and progressive-type ball-bearing suspension slides. Include single cylinder lock to lock all drawers.
2. Wall-Mounted Cabinet: Grade 1 or Grade 2 cabinet with hinged-panel door equipped with key-holding panels and pin-tumbler cylinder door lock.
3. Portable Cabinet: Grade 1 or Grade 2 tray for mounting in file cabinet, equipped with key-holding panels, envelopes, and cross-index system.

2.21 OPERATING TRIM

A. Operating Trim: BHMA A156.6; aluminum, brass, bronze or stainless steel unless otherwise indicated.

2.22 ACCESSORIES FOR PAIRS OF DOORS

A. Coordinators: BHMA A156.3; consisting of active-leaf, hold-open lever and inactive-leaf release trigger; fabricated from steel with nylon-coated strike plates; with built-in, adjustable safety release; and with internal override.

B. Carry-Open Bars: BHMA A156.3; prevent the inactive leaf from opening before the active leaf; provide polished brass or bronze carry-open bars with strike plate for inactive leaves of pairs of doors unless automatic or self-latching bolts are used.

C. Astragals: BHMA A156.22.

2.23 SURFACE CLOSERS

A. Surface Closers: BHMA A156.4; rack-and-pinion hydraulic type with adjustable sweep and latch speeds controlled by key-operated valves and forged-steel main arm. Comply with manufacturer's written instructions for size of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Provide factory-sized closers, adjustable to meet field conditions and requirements for opening force.

2.24 CONCEALED CLOSERS

A. Concealed Closers: BHMA A156.4; rack-and-pinion hydraulic type with adjustable sweep and latch speeds controlled by key-operated valves. Comply with manufacturer's written instructions for size of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Provide factory-sized closers, adjustable to meet field conditions and requirements for opening force.

2.25 CLOSER HOLDER RELEASE DEVICES

A. Closer Holder Release Devices: BHMA A156.15; Grade 1; closer connected with separate or integral releasing and fire- or smoke-detecting devices. Door shall become self-closing on interruption of signal to release device. Automatic release is activated by smoke detection system or loss of power.

2.26 MECHANICAL STOPS AND HOLDERS

A. Wall- and Floor-Mounted Stops: BHMA A156.16.

2.27 ELECTROMAGNETIC STOPS AND HOLDERS

A. Electromagnetic Door Holders: BHMA A156.15, Grade 1; wall-mounted electromagnetic single, floor-mounted electromagnet single or floor-mounted electromagnet double unit with strike plate attached to swinging door; coordinated with fire detectors and interface with fire-alarm system for labeled fire-rated door assemblies.

2.28 OVERHEAD STOPS AND HOLDERS

A. Overhead Stops and Holders: BHMA A156.8.

2.29 DOOR GASKETING

A. Door Gasketing: BHMA A156.22; with resilient or flexible seal strips that are easily replaceable and readily available from stocks maintained by manufacturer.

B. Maximum Air Leakage: When tested according to ASTM E283 with tested pressure differential of 0.3-inch wg (75 Pa), as follows:

1. Smoke-Rated Gasketing: 0.3 cfm/sq. ft. (3 cu. m per minute/sq. m) of door opening.
2. Gasketing on Single Doors: 0.3 cfm/sq. ft. (3 cu. m per minute/sq. m) of door opening.
3. Gasketing on Double Doors: 0.50 cfm per foot (0.000774 cu. m/s per m) of door opening.

2.30 THRESHOLDS

A. Thresholds: BHMA A156.21; fabricated to full width of opening indicated.

2.31 SLIDING DOOR HARDWARE

A. Sliding Door Hardware: BHMA A156.14; consisting of complete sets including rails, hangers, supports, bumpers, floor guides, and accessories indicated.

2.32 FOLDING DOOR HARDWARE

A. General: BHMA A156.14; complete sets including overhead rails, hangers, supports, bumpers, floor guides, and accessories indicated.

2.33 METAL PROTECTIVE TRIM UNITS

A. Metal Protective Trim Units: BHMA A156.6; fabricated from 0.050-inch (1.3-mm) thick aluminum, brass, bronze or stainless steel; with manufacturer's standard machine or self-tapping screw fasteners.

2.34 AUXILIARY DOOR HARDWARE

A. Auxiliary Hardware: BHMA A156.16.

2.35 AUXILIARY ELECTRIFIED DOOR HARDWARE

A. Auxiliary Electrified Door Hardware:

2.36 FINISHES

A. Provide finishes complying with BHMA A156.18 as indicated in door hardware schedule.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Mounting Heights: Mount door hardware units at heights indicated on Drawings or to comply with the following unless otherwise indicated or required to comply with governing regulations.

1. Standard Steel Doors and Frames: ANSI/SDI A250.8.
2. Custom Steel Doors and Frames: HMMA 831.
3. Wood Doors: DHI's "Recommended Locations for Architectural Hardware for Wood Flush Doors."

B. Install each door hardware item to comply with manufacturer's written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work. Do not install surface-mounted items until finishes have been completed on substrates involved.

C. Hinges: Install types and in quantities indicated in door hardware schedule, but not fewer than the number recommended by manufacturer for application indicated or one hinge for every 30 inches (750 mm) of door height, whichever is more stringent, unless other equivalent means of support for door, such as spring hinges or pivots, are provided.

D. Intermediate Offset Pivots: Where offset pivots are indicated, provide intermediate offset pivots in quantities indicated in door hardware schedule, but not fewer than one intermediate offset pivot per door and one additional intermediate offset pivot for every 30 inches (750 mm) of door height greater than 90 inches (2286 mm).

E. Lock Cylinders: Install construction cores to secure building and areas during construction period.

1. Replace construction cores with permanent cores as indicated in keying schedule or directed by Owner.
2. Furnish permanent cores to Owner for installation.

F. Key Control Cabinet: Tag keys and place them on markers and hooks in key control system cabinet, as determined by final keying schedule.

G. Boxed Power Supplies: Locate power supplies as indicated or, if not indicated, above accessible ceilings or in equipment room. Verify location with Architect.

1. Configuration: Provide one power supply for each door opening or least number of power supplies required to adequately serve doors with electrified door hardware.

H. Thresholds: Set thresholds for exterior doors and other doors indicated in full bed of sealant complying with requirements specified in Section 079200 "Joint Sealants."

I. Stops: Provide floor stops for doors unless wall or other type stops are indicated in door hardware schedule. Do not mount floor stops where they will impede traffic.

J. Perimeter Gasketing: Apply to head and jamb, forming seal between door and frame.

1. Do not notch perimeter gasketing to install other surface-applied hardware.

K. Meeting Stile Gasketing: Fasten to meeting stiles, forming seal when doors are closed.

L. Door Bottoms: Apply to bottom of door, forming seal with threshold when door is closed.

3.2 ADJUSTING

A. Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.3 DOOR HARDWARE SCHEDULE

END OF SECTION 087100

SECTION 087111 - DOOR HARDWARE (DESCRIPTIVE SPECIFICATION)

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Mechanical door hardware for the following:

   a. Swinging doors.
   b. Sliding doors.
   c. Folding doors.

2. Cylinders for door hardware specified in other Sections.
3. Electrified door hardware.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

B. Keying Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For electrified door hardware.

1. Include diagrams for power, signal, and control wiring.
2. Include details of interface of electrified door hardware and building safety and security systems.

C. Samples: For each exposed product in each finish specified.

D. Door hardware schedule.

E. Keying schedule.

1.4 INFORMATIONAL SUBMITTALS

A. Sample warranty.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Supplier of products and an employer of workers trained and approved by product manufacturers and of an Architectural Hardware Consultant who is available during the course of the Work to consult Contractor, Architect, and Owner about door hardware and keying.

1. Scheduling Responsibility: Preparation of door hardware and keying schedule.
2. Engineering Responsibility: Preparation of data for electrified door hardware, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.

B. Architectural Hardware Consultant Qualifications: A person who is experienced in providing consulting services for door hardware installations that are comparable in material, design, and extent to that indicated for this Project and who is currently certified by DHI as an Architectural Hardware Consultant (AHC), Architectural Hardware Consultant (AHC) and an Electrified Hardware Consultant (EHC) or Architectural Openings Consultant (AOC).

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of door hardware that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Three years from date of Substantial Completion unless otherwise indicated below:

a. Electromagnetic and Delayed-Egress Locks: Five years from date of Substantial Completion.
b. Exit Devices: Two years from date of Substantial Completion.
c. Manual Closers: 10 years from date of Substantial Completion.
d. Concealed Floor Closers: Five, 10 or 25 years from date of Substantial Completion, as directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Rated Door Assemblies: Where fire-rated doors are indicated, provide door hardware complying with NFPA 80 that is listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.

B. Smoke- and Draft-Control Door Assemblies: Where smoke- and draft-control door assemblies are required, provide door hardware that complies with requirements of assemblies tested according to UL 1784 and installed in compliance with NFPA 105.

1. Air Leakage Rate: Maximum air leakage of 0.3 cfm/sq. ft. (3 cu. m per minute/sq. m) at the tested pressure differential of 0.3-inch wg (75 Pa) of water.

C. Electrified Door Hardware: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Means of Egress Doors: Latches do not require more than 15 lbf (67 N) to release the latch. Locks do not require use of a key, tool, or special knowledge for operation.

E. Accessibility Requirements: For door hardware on doors in an accessible route, comply with the DOJ's "2010 ADA Standards for Accessible Design", the DOT's "ADA Standards for Transportation Facilities", the ABA standards of the Federal agency having jurisdiction, ICC A117.1 or HUD's "Fair Housing Accessibility Guidelines" as directed.

2.2 SCHEDULED DOOR HARDWARE

A. Provide products for each door that comply with requirements indicated in Part 2 and door hardware schedule.

1. Door hardware is scheduled in Part 3 or on Drawings.

2.3 HINGES

A. Hinges: BHMA A156.1. Provide template-produced hinges for hinges installed on hollow-metal doors and hollow-metal frames.

B. Antifriction-Bearing Hinges:

1. Mounting: Full mortise (butts), Half mortise, Full surface or Half surface.
2. Bearing Material: Manufacturer's standard antifriction bearing or Ball bearing.
3. Grade: 1 (heavy weight) or 2 (standard weight).
4. Base and Pin Metal:

    a. Exterior Hinges: Stainless steel with stainless-steel pin or Brass with stainless-steel pin body and brass protruding heads.
    b. Interior Hinges: Brass with stainless-steel pin body and brass protruding heads, Steel with steel pin or Stainless steel with stainless-steel pin.
    c. Hinges for Fire-Rated Assemblies: Steel with steel pin or Stainless steel with stainless-steel pin.

5. Pins: Non-rising loose unless otherwise indicated, Maximum security or Nonremovable.

    a. Outswinging Exterior Doors: Maximum security or Nonremovable.
    b. Outswinging Corridor Doors with Locks: Maximum security or Nonremovable.

6. Tips: Flat button, Hospital, Oval, Ball, Steeple, Urn or Acorn.
7. Corners: Square, 5/32-inch (4-mm) radius, 1/4-inch (6-mm) radius or 5/8-inch (16-mm) radius.
8. Features: Raised barrel, Reverse safety stud or Safety stud.

C. Electrified Antifriction-Bearing Hinges: Full-mortise mounting.

1. Bearing Material: Manufacturer's standard antifriction bearing or Ball bearing.
2. Grade: 1 (heavy weight) or 2 (standard weight).
3. Base and Pin Metal:

    a. Exterior Hinges: Stainless steel with stainless-steel pin or Brass with stainless-steel pin body and brass protruding heads.
    b. Interior Hinges: Brass with stainless-steel pin body and brass protruding heads, Steel with steel pin or Stainless steel with stainless-steel pin.
    c. Hinges for Fire-Rated Assemblies: Steel with steel pin or Stainless steel with stainless-steel pin.

4. Pins: Non-rising loose unless otherwise indicated, Maximum security or Nonremovable.

    a. Outswinging Exterior Doors: Maximum security or Nonremovable.
    b. Outswinging Corridor Doors with Locks: Maximum security or Nonremovable.

5. Tips: Flat button, Hospital, Oval, Ball, Steeple, Urn or Acorn.
6. Corners: Square.
7. Features: Raised barrel, Reverse safety stud or Safety stud.
8. Electric Feature: Concealed electric through wires, Concealed electric through wires with monitor, Concealed electric monitor, Concealed air transfer, Concealed switch, Exposed electric switch or Exposed electric contacts.

D. Plain-Bearing Hinges: Grade 3 (standard weight).

1. Mounting: Full mortise (butts), Half mortise, Full surface or Half surface.
2. Base and Pin Metal: Brass with stainless-steel pin body and brass protruding heads or Steel with steel pin.
3. Pins: Non-rising loose unless otherwise indicated, Maximum security or Nonremovable.

    a. Outswinging Corridor Doors with Locks: Maximum security or Nonremovable.

4. Tips: Flat button, Hospital, Oval, Ball, Steeple, Urn or Acorn.
5. Corners: Square, 5/32-inch (4-mm) radius, 1/4-inch (6-mm) radius or 5/8-inch (16-mm) radius.
6. Features: Raised barrel or as directed.

E. Swing-Clear Hinges: Reversible.

1. Mounting: Full mortise (butts), Half mortise, Full surface or Half surface.
2. Bearing and Grade: Antifriction bearing, Grade 1 (heavy weight), Antifriction bearing, Grade 2 (standard weight) or Plain bearing, Grade 3 (standard weight).
3. Base Metal: Wrought brass or bronze, Stainless steel or Wrought, forged, or cast steel, or malleable iron.

4. Pins: Non-rising loose unless otherwise indicated, Maximum security or Nonremovable.

    a. Outswinging Exterior Doors: Maximum security or Nonremovable.
    b. Outswinging Corridor Doors with Locks: Maximum security or Nonremovable.

5. Tips: Flat button or Hospital.
6. Corners: Square, 5/32-inch (4-mm) radius, 1/4-inch (6-mm) radius or 5/8-inch (16-mm) radius.
7. Features: Raised barrel, Reverse safety stud, Safety stud or as directed.

2.4 SELF-CLOSING HINGES AND PIVOTS

A. Self-Closing Hinges and Pivots: BHMA A156.17.

B. Spring Hinges: Grade 1 or Grade 2; wrought steel, with torsion spring.

1. Type: Single or Double acting.
2. Mounting: Full mortise (butts), Half mortise, Full surface or Half surface.

2.5 CENTER-HUNG AND OFFSET PIVOTS

A. Center-Hung and Offset Pivots: BHMA A156.4.

B. Center-Hung Pivot Sets: Grade 1.

1. Top Pivots: Walking-beam type with retractable pin and oil-impregnated bronze bearing; mortised into door and frame.
2. Bottom Pivots: Surface floor mounted, Recessed in floor in cement case, Mortised into jamb, and mortised into door.

    a. Bearing: Thrust ball or Needle.

3. Base Metal: Brass, Bronze or Steel.

C. Offset Pivot Sets: Grade 1 or Grade 2.

1. Offset: 3/4 inch (19 mm) or 1-1/2 inches (38 mm).
2. Top Pivot: Full-mortise, Half-surface or Full-surface mounting; walking-beam type with retractable pin and oil-impregnated bronze bearing.

    a. Knuckle: Standard or Asylum type.
    b. Feature: With screw holes designed to straddle lead in center of lead-lined door.

3. Bottom Pivot: Surface floor mounted, Recessed in floor in cement case, Mortised into jamb, and mortised into door; with thrust ball or needle bearing.
4. Base Metal: Brass, Bronze, Stainless steel or Steel.

D. Offset Intermediate Pivots: Grade 1; for use with offset pivot sets; with oil-impregnated bronze bearings.

1. Mounting: Full mortise, 3/4-inch (19-mm) offset, Full mortise, 1-1/2-inch (38-mm) offset, Half mortise, Half surface or Full surface.
2. Knuckle: Standard or Asylum type.
3. Feature: With screw holes designed to straddle lead in center of lead-lined door.
4. Electric Feature: Concealed monitoring, Concealed power transfer or Concealed power transfer for use with electrical panic devices and locks.
5. Base Metal: Brass, Bronze, Stainless steel or Steel.

2.6 CONTINUOUS HINGES

A. Continuous Hinges: BHMA A156.26; minimum 0.120-inch (3.0-mm) thick, hinge leaves with minimum overall width of 4 inches (102 mm); fabricated to full height of door and frame and to template screw locations; with components finished after milling and drilling are complete.

B. Pin-and-Barrel-Type Hinges:

1. Grade: 1-150, 1-300, 1-600, 2-150, 2-300, 2-600, 3-150 or 3-300.
2. Exterior Hinges: Stainless steel.
3. Interior Hinges: Stainless steel, Steel or Aluminum.
4. Hinges for Fire-Rated Assemblies: Stainless steel with steel fire pins to hold fire-rated doors in place if required by tested listing or Steel.
5. Type: Concealed leaf, Swing clear, Full surface with removable continuous caps over fasteners, Half mortise, concealed door leaf and with removable continuous cap over fasteners on jamb leaf or Half surface, concealed jamb leaf and with removable continuous cap over fasteners on door leaf.
6. Electric Feature: Electric monitoring switch, Electric through wires and monitor, Electric through wires, Concealed power transfer or Exposed power transfer contact switch.

C. Continuous, Gear-Type Hinges: Extruded-aluminum, pinless, geared hinge leaves joined by a continuous extruded-aluminum channel cap; with concealed, self-lubricating thrust bearings.

1. Grade: 1-150, 1-300, 1-600, 2-150, 2-300, 2-600, 3-150 or 3-300.
2. Hinges for Fire-Rated Assemblies: With steel fire pins to hold fire-rated doors in place if required by tested listing.
3. Mounting: Concealed leaf, Swing clear, Full surface, with removable continuous caps over fasteners or Half surface, concealed jamb leaf and with removable continuous cap over fasteners on door leaf.
4. Electric Feature: Electric monitor, Electric through wires and monitor, Electric through wires, Electric power transfer, Exposed switch, Exposed contact or Removable electric through wires.

2.7 MECHANICAL LOCKS AND LATCHES

A. Lock Functions: As indicated in door hardware schedule.

B. Lock Throw: Comply with testing requirements for length of bolts required for labeled fire doors, and as follows:

1. Bored Locks: Minimum 1/2-inch (13-mm) latchbolt throw.
2. Mortise Locks: Minimum 3/4-inch (19-mm) latchbolt throw.
3. Deadbolts: Minimum 1-inch (25-mm) or 1.25-inch (32-mm) bolt throw.

C. Lock Backset: 2-3/4 inches (70 mm) unless otherwise indicated.

D. Lock Trim:

1. Description: As indicated on Drawings.
2. Levers: Wrought, Forged or Cast.

    a. Construction: Solid, Tube, Freewheeling vandal resistant or Breakaway vandal resistant.

3. Escutcheons (Roses): Wrought, Forged or Cast.
4. Dummy Trim: Match lever lock trim and escutcheons.

E. Strikes: Provide manufacturer's standard strike for each lock bolt or latchbolt complying with requirements indicated for applicable lock or latch and with strike box and curved lip extended to protect frame; finished to match lock or latch.

1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
3. Aluminum-Frame Strike Box: Manufacturer's special strike box fabricated for aluminum framing.
4. Rabbet Front and Strike: Provide on locksets for rabbeted meeting stiles.

F. Bored Locks: BHMA A156.2; Grade 1 or Grade 2; Series 4000.

G. Mortise Locks: BHMA A156.13; Operational Grade 1, Security Grade 1, Operational Grade 2 or Security Grade 2; stamped steel case with steel or brass parts; Series 1000.

2.8 AUXILIARY LOCKS

A. Bored Auxiliary Locks: BHMA A156.36: Grade 1 or Grade 2; with strike that suits frame.

1. Backset: 2-3/8 inches (60 mm) or 2-3/4 inches (70 mm).
2. Material: Aluminum, Brass, Bronze, Stainless steel or Zinc alloy.
3. Deadlatches: Deadlocking latchbolt operated by key either side, key outside and turn inside or turn inside with no cylinder.
4. Deadlocks: Deadbolt operated by key either side, key outside and turn inside, turn inside with no cylinder or key outside, no trim inside.

B. Mortise Auxiliary Locks: BHMA A156.36; Grade 1 or Grade 2; with strike that suits frame.

1. Backset: 2-3/4 inches (70 mm).
2. Material: Aluminum, Brass, Bronze, Stainless steel or Zinc alloy.

3. Deadlocks: Deadbolt operated by key either side, outside and turn inside or one side.
4. Deadlatches: Latchbolt and auxiliary deadlatch operated by key either side, outside and turn inside.
5. Deadlocks for Sliding Doors: Expanding- or interlocking-type deadbolt operated by key either side, outside and turn inside or one side.
6. Deadlatches for Sliding Doors: Hook-type latchbolt operated by key either side or outside and handle inside.

C. Narrow Stile Auxiliary Locks: BHMA A156.36; Grade 1 or Grade 2; with strike that suits frame.

1. Backset: 0.98 inch (25 mm), 1.125 inches (29 mm), 1.25 inches (32 mm), 1.5 inches (38 mm), 1.75 inches (44 mm), 2 inches (51 mm), 2.25 inches (57 mm) or 2.5 inches (64 mm).
2. Strike: Flat, Flat with extra-long lip, Radius, Radius with weatherstrip or Bevel.
3. Case Material: Steel or Stainless steel.
4. Armored Front and Strike Material: Aluminum, Brass, Bronze or Stainless steel.
5. Deadlock: Deadlocking bolt.

    a. Operation: Key both sides or outside and operating trim inside.
    b. Door Application: Swinging or Sliding door.

6. Deadlatch: Latchbolt with auxiliary deadlatch operated by key outside and paddle or lever inside; for single swinging doors.
7. Multipoint Lock: Deadlocking bolt for pairs of swinging doors.

    a. Operation: Key both sides or outside and turn, lever, or knob inside.
    b. Type: Two or Three point.

8. Latch/Lock: Deadbolt and latchbolt; both operated by key both sides; inside handle operates only latchbolt.

D. Push-Button Combination Locks: BHMA A156.36; cylindrical; Grade 1; lock opens by entering a one- to five-digit code by pushing correct buttons in correct sequence; automatically relocks when door is closed; with strike that suits frame.

1. Auxiliary Lock Configuration: Deadbolt, Deadlocking latch or Deadlocking rim latch.
2. Override: By key cylinder.

2.9 ELECTRIC STRIKES

A. Electric Strikes: BHMA A156.31; Grade 1 or Grade 2; with faceplate to suit lock and frame.

1. Material: Steel, Stainless steel or Zinc-aluminum alloy.
2. Mounting: Mortised, Semirim mounted or Rim mounted.
3. Fire-Rated Door Assemblies: Use fail-secure electric strikes with fire-rated devices.

4. Monitoring: Mechanical latchbolt, Infrared latchbolt, Mechanical strike or Infrared strike.
5. Features: Lip extension kit or Open-back strike.

2.10 ELECTROMAGNETIC LOCKS

A. Electromagnetic Locks: BHMA A156.23; electrically powered; with electromagnet attached to frame and armature plate attached to door; full-exterior or full-interior type, as required by application indicated.

1. Direct-Hold Type: Lock mounted on bottom of header; strike flush mounted on door push side, face of header; strike angle mounted on door pull side or side of jamb; strike flush mounted on door push side.
2. Shear Type: Lock mounted on face of header; strike angle mounted on door, mortised in header; strike mortised in top of door, mortised in jamb; strike mortised in edge of door, mortised in bottom of door; strike mortised in floor or mortised in floor; strike mortised in bottom of door.
3. Strength Ranking: 1500 lbf (6672 N), 1000 lbf (4448 N) or 500 lbf (2224 N).
4. Inductive Kickback Peak Voltage: Not more than 53 or 0 V.
5. Residual Magnetism: Not more than 4 lbf (18 N) or 0 lbf (0 N) to separate door from magnet.
6. Features:

    a. Magnetic bond sensor.
    b. Continuous housing for full width of door.
    c. Continuous housing for full height of door.
    d. Single LED indicators.
    e. Double LED indicators.
    f. Adjustable time delay with automatic relock.
    g. Integral door position switch.

B. Delayed-Egress Electromagnetic Locks: BHMA A156.24, electrically powered, with electromagnet attached to frame and armature plate attached to door; depressing push bar for more than three seconds initiates irreversible alarm and adjustable time delay for egress. When integrated with fire alarm, fire alarm voids time delay.

1. Grade: Security grade, activated from secure side of door by initiating device or Movement grade, activated by door movement as initiating device.

2.11 ELECTROMECHANICAL LOCKS

A. Electromechanical Locks: BHMA A156.25; Grade 1 or Grade 2; motor or solenoid driven; with strike that suits frame.

1. Type: Bored, Mortise latchbolt, Mortise deadbolt or Mortise deadlocking latchbolt.

2.12 SELF-CONTAINED ELECTRONIC LOCKS

A. Self-Contained Electronic Locks: BHMA A156.25, bored or mortise; with internal, battery-powered, self-contained electronic locks; consisting of complete lockset, motor-driven lock mechanism, and actuating device; enclosed in zinc-dichromate-plated, wrought-steel case, and strike that suits frame. Provide key override, low-battery detection and warning, LED status indicators, and ability to program at the lock.

1. Actuating Device: Digital keypad, Magnetic-stripe card reader or Smart-card reader.

    a. Card: Manufacturer's standard, 0.030-inch (0.76-mm) thick PVC or polyester or Custom.
    b. Accessory: Card encoder and software.

2. Faceplate Material: Wrought brass, Wrought bronze or Stainless steel.
3. Lock Trim: Lever, Knob or Match trim specified for mechanical locks.
4. Function: Latch with Deadbolt, Latch without or Deadbolt without key.

2.13 EXIT LOCKS AND EXIT ALARMS

A. Exit Locks and Alarms: BHMA A156.29, Grade 1.

B. Exit Locks: Surface mounted; battery powered, housed in metal case; with manufacturer's standard strike that suits frame; with red-and-white lettering reading "EMERGENCY EXIT PUSH TO OPEN - ALARM WILL SOUND."

1. Single-Door or Pairs-of-Door Type: Activated by arm, push plate, or paddle or horizontal bar.
2. Features:

    a. Low-battery alert.
    b. Outside key control.
    c. Audible alarm that sounds when unauthorized use of door occurs.
    d. Silent alarm with remote signal capability for connection to remote indicating panel.
    e. Strike: Surface or Mortise.

C. Standalone Exit Alarms: Surface mounted on door or Mounted separate from door and activated by door movement switch.

1. Features:

    a. Low-battery alert.
    b. Outside key control.
    c. Audible alarm that sounds when unauthorized use of door occurs.
    d. Automatic rearming after authorized use, with adjustable time delay.
    e. Remote signal capability for connection to remote indicating panel.

2.14 SURFACE BOLTS

A. Surface Bolts: BHMA A156.16.

B. Half-Round Surface Bolts: Grade 1 or Grade 2, 6-inch (152-mm) polished-brass or burnished-steel, half-round rod and knob; minimum 7/8-inch (22-mm) throw; with universal strike.

C. Interlocking Surface Bolts: Grade 1 or Grade 2, 6-inch (152-mm) extruded-brass or aluminum, interlocking track and rod; minimum 15/16-inch (24-mm) throw; with universal or mortise strike.

D. Fire-Rated Surface Bolts: Grade 1 or Grade 2, 8-inch (203-mm) steel bolt with 2 steel guides; minimum 1-inch (25-mm) throw; listed and labeled for use in fire-rated assemblies; with universal strike.

2.15 MANUAL FLUSH BOLTS

A. Manual Flush Bolts: BHMA A156.16; minimum 3/4-inch (19-mm) throw; designed for mortising into door edge.

B. Manual-Extension Flush Bolts: Grade 1 or Grade 2, fabricated from extruded brass or aluminum, with 12-inch (305-mm) rod actuated by flat lever.

1. Strike: Matching or Dustproof.
2. Fire Rated: Listed and labeled for use in fire-rated assemblies.

C. Top-Bolt Extension Rod Length: As required to locate operating mechanism at not more than 72 inches (1829 mm) above the finished floor at all times.

D. Dustproof Strikes: Locking type, Grade 1, polished wrought brass, with 3/4-inch (19-mm) diameter, spring-tension plunger.

2.16 AUTOMATIC AND SELF-LATCHING FLUSH BOLTS

A. Automatic Flush Bolts: BHMA A156.3, Type 24; minimum 3/4-inch (19-mm) throw; designed for mortising into door edge. Include wear plates.

B. Self-Latching Flush Bolts: BHMA A156.3, Type 27; minimum 3/4-inch (19-mm) throw; designed for mortising into door edge. Include wear plates.

C. Automatic Flush Bolts: Grade 1 or Grade 2, fabricated from steel and brass components, with spring-activated bolts that automatically retract when active leaf is opened and that automatically engage when active door depresses bolt trigger. Provide brass or stainless-steel cover plate, top and bottom strikes, guides, guide supports, wear plates, and shims.

1. Strikes: Matching or Dustproof.
2. Fire Rated: Listed and labeled for use in fire-rated assemblies.

D. Self-Latching Flush Bolts: Grade 1 or Grade 2, fabricated from steel and brass components, with spring-activated bolts that automatically engage when active door depresses trigger. Bolts

are manually retracted by a slide in the bolt face. Provide brass or stainless-steel cover plate, top and bottom strikes, guides, guide supports, wear plates, and shims.

1. Strikes: Matching or Dustproof.
2. Fire Rated: Listed and labeled for use in fire-rated assemblies.

E. Dustproof Strikes: Locking type, Grade 1, polished wrought brass, with 3/4-inch (19-mm) diameter, spring-tension plunger.

2.17 EXIT DEVICES AND AUXILIARY ITEMS

A. Exit Devices and Auxiliary Items: BHMA A156.3.

B. Panic Exit Devices: Listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for panic protection, based on testing according to UL 305.

C. Fire Exit Devices: Devices complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire and panic protection, based on testing according to UL 305 and NFPA 252.

D. Rim Exit Devices: Grade 1 or Grade 2.

1. Type: 1, rim; 4, narrow stile or 28, incorporating a deadbolt.
2. Actuating Bar: Cross bar, Push pad or Narrow-stile push pad.
3. Material: Brass, Bronze, Stainless steel, Aluminum or Wrought steel.
4. Electrified Features:

    a. Push pad monitor switch.
    b. Double push pad monitor switch.
    c. Electric locking and unlocking.
    d. Fail-secure electric latch retraction (dogging) that engages latch when fire-alarm system is activated.
    e. Delayed egress.
    f. Alarm.

E. Mortise Exit Devices: Grade 1 or Grade 2.

1. Type: 3 or 10, narrow stile.
2. Actuating Bar: Cross bar, Push pad or Narrow-stile push pad.
3. Material: Brass, Bronze, Stainless steel, Aluminum or Wrought steel.
4. Electrified Features:

    a. Push pad monitor switch.
    b. Double push pad monitor switch.
    c. Electric locking and unlocking.
    d. Fail-secure electric latch retraction (dogging) that engages latch when fire-alarm system is activated.
    e. Delayed egress.
    f. Alarm.

F. Surface Vertical-Rod Exit Devices: Grade 1 or Grade 2.

1. Type: 2 or 5, narrow stile.
2. Actuating Bar: Cross bar, Push pad or Narrow-stile push pad.
3. Material: Brass, Bronze, Stainless steel, Aluminum or Wrought steel.
4. Configuration: Top and bottom rods or Top rod.
5. Electrified Features:

    a. Push pad monitor switch.
    b. Double push pad monitor switch.
    c. Electric locking and unlocking.
    d. Fail-secure electric latch retraction (dogging) that engages latch when fire-alarm system is activated.
    e. Delayed egress.
    f. Alarm.

G. Concealed Vertical-Rod Exit Devices: Grade 1 or Grade 2.

1. Type: 6, narrow stile, 7, for wood doors or 8, for metal doors.
2. Actuating Bar: Cross bar, Push pad or Narrow-stile push pad.
3. Material: Brass, Bronze, Stainless steel, Aluminum or Wrought steel.
4. Configuration: Top and bottom rods or Top rod.
5. Electrified Features:

    a. Push pad monitor switch.
    b. Double push pad monitor switch.
    c. Electric locking and unlocking.
    d. Fail-secure electric latch retraction (dogging) that engages latch when fire-alarm system is activated.
    e. Delayed egress.
    f. Alarm.

H. Combination Exit Devices: Grade 1 or Grade 2.

1. Type: 9, rim and surface vertical rod, 11, mortise and surface vertical rod or 12, mortise and concealed vertical rod.
2. Actuating Bar: Cross bar, Push pad or Narrow-stile push pad.
3. Material: Brass, Bronze, Stainless steel, Aluminum or Wrought steel.
4. Electrified Features:

    a. Push pad monitor switch.
    b. Double push pad monitor switch.
    c. Electric locking and unlocking.
    d. Fail-secure electric latch retraction (dogging) that engages latch when fire-alarm system is activated.
    e. Delayed egress.
    f. Alarm.

I. Automatic Latching Two-Point Bolts: Grade 1.

1. Type: 23, concealed or 24, surface.

2. Material: Brass, Bronze or Stainless steel.

J. Extension Flush Bolt Sets: BHMA A156.3; Grade 1.

1. Type: 25, automatic or 27, self-latching.
2. Material: Brass, Bronze or Stainless steel.

K. Electronic Exit Bars: Nonlatching electronic actuating (releasing) device activated by an adjustable capacitance sensor and with no moving parts; listed and labeled as panic exit hardware. Fabricate bar from extruded aluminum and provide door and frame transfer device and 16 feet (4.9 m) of cord to route wiring off the door frame.

L. Extruded-Aluminum Removable Mullions: With malleable-iron top and bottom retainers, and prepared for strikes as follows:

1. Strikes: Two standard recessed strikes or One standard and one electric strike with disconnect for wiring harness at top of mullion.

M. Tube-Steel Removable Mullions: With malleable-iron top and bottom retainers, and prepared for strikes as follows:

1. Strikes: Two standard recessed strikes or One standard and one electric strike with disconnect for wiring harness at top of mullion.

N. Fire-Exit Removable Mullions: Provide removable mullions for use with fire exit devices complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire and panic protection, based on testing according to UL 305 and NFPA 252. Use mullions only with exit devices for which they have been tested.

O. Dummy Push Bar: Nonfunctioning push bar matching functional push bar.

1. Operation: Rigid, Movable or Movable with monitor switch.

P. Exit Device Outside Trim: Lever, Lever with cylinder, Knob, Knob with cylinder, Pull, Pull with cylinder or Thumb turn with cylinder; material and finish to match locksets unless otherwise indicated.

1. Match design for lock trim unless otherwise indicated.

Q. Through-Bolt Fasteners: For exit devices and trim on metal doors, non-fire-rated wood doors or fire-rated wood doors.

2.18 LOCK CYLINDERS

A. Lock Cylinders: Tumbler type, constructed from brass or bronze, stainless steel, or nickel silver. Provide cylinder from same manufacturer of locking devices.

B. Standard Lock Cylinders: BHMA A156.5; Grade 1, Grade 1A or Grade 2 permanent cores; face finished to match lockset.

1. Core Type: Interchangeable or Removable.
2. Number of Pins: Five, Six or Seven.
3. Lock Type: Mortise, Rim or Bored-lock type.

C. High-Security Lock Cylinders: BHMA A156.30; Grade 1, Grade 2 or Grade 3 permanent cores that are removable; face finished to match lockset.

1. Type: M, mechanical or E, electrical.
2. Number of Pins: Six or Seven.
3. Lock Type: Mortise, Rim or Bored-lock type.

D. Construction Master Keys: Provide cylinders with feature that permits voiding of construction keys without cylinder removal. Provide 10 construction master keys.

E. Construction Cores: Provide construction cores that are replaceable by permanent cores. Provide 10 construction master keys.

2.19 KEYING

A. Keying System: Factory registered, complying with guidelines in BHMA A156.28, appendix. Provide one extra key blank for each lock. Incorporate decisions made in keying conference.

1. No Master Key System: Only change keys operate cylinders.

   a. Provide three cylinder change keys.

2. Master Key System: Change keys and a master key operate cylinders.

   a. Provide three cylinder change keys and five master keys.

3. Grand Master Key System: Change keys, a master key, and a grand master key operate cylinders.

   a. Provide three cylinder change keys and five each of master and grand master keys.

4. Great-Grand Master Key System: Change keys, a master key, a grand master key, and a great-grand master key operate cylinders.

   a. Provide three cylinder change keys and five each of master, grand master, and great-grand master keys.

5. Existing System:

   a. Master key or grand master key locks to Owner's existing system.
   b. Re-key Owner's existing master key system into new keying system.

6. Keyed Alike: Key all cylinders to same change key.

B. Keys: Nickel silver or Brass.

1. Stamping: Permanently inscribe each key with a visual key control number and include the following notation:

a. Notation: "DO NOT DUPLICATE" or Information to be furnished by Owner.

2.20 KEY CONTROL SYSTEM

A. Key Control Cabinet: BHMA A156.28; metal cabinet with baked-enamel finish; containing key-holding hooks, labels, two sets of key tags with self-locking key holders, key-gathering envelopes, and temporary and permanent markers; with key capacity of 150 percent of the number of locks.

1. Multiple-Drawer Cabinet: Grade 1 or Grade 2 cabinet with drawers equipped with key-holding panels and key envelope storage, and progressive-type ball-bearing suspension slides. Include single cylinder lock to lock all drawers.
2. Wall-Mounted Cabinet: Grade 1 or Grade 2 cabinet with hinged-panel door equipped with key-holding panels and pin-tumbler cylinder door lock.
3. Portable Cabinet: Grade 1 or Grade 2 tray for mounting in file cabinet, equipped with key-holding panels, envelopes, and cross-index system.

2.21 OPERATING TRIM

A. Operating Trim: BHMA A156.6; aluminum, brass, bronze or stainless steel unless otherwise indicated.

B. Flat Push Plates: With square corners and beveled edges; secured with exposed screws.

1. Thickness: 0.050 inch (1.3 mm) or 1/8 inch (3.2 mm).
2. Size: 4 inches wide by 16 inches high (102 mm wide by 406 mm high).

C. Push-Pull Plates: With square corners, beveled edges, and raised integral lip; secured with exposed screws.

1. Thickness: 1/8 inch (3.2 mm).
2. Size: 3-1/2 inches wide by 15-3/4 inches high (89 mm wide by 400 mm high).

D. Straight Door Pulls:

1. Type: 3/4-inch (19-mm) constant-diameter, variable-diameter, flattened-round or hospital-type pull.
2. Mounting: Surface applied with concealed fasteners, Through bolted with oval-head machine screws and countersunk washers or Back to back with threaded sleeves.
3. Minimum Clearance: 1-1/2 inches (38 mm) from face of door.
4. Overall Length: 9 inches (229 mm).

E. Offset Door Pulls: 1-inch (25-mm) constant-diameter pull.

1. Mounting: Surface applied with concealed fasteners, Through bolted with oval-head machine screws and countersunk washers or Back to back with threaded sleeves.
2. Offset: 2 inches (51 mm).
3. Minimum Clearance: 2-1/4 inches (57 mm) from face of door.
4. Overall Length: 9 inches (229 mm).

F. Flush Door Pulls: Mortised 1/2 inch (13 mm) deep; secured with screws.

1. Shape: Rectangular with rectangular recess.
2. Size: 3-1/2 inches wide by 4-3/4 inches high (89 mm wide by 121 mm high).

G. Straight Pull-Plate Door Pulls: Pull fixed to 0.050-inch (1.3-mm) thick plate, 4 inches wide by 16 inches high (102 mm wide by 406 mm high) with square corners and beveled edges.

1. Type: 3/4-inch (19-mm) constant-diameter, variable-diameter, flattened-round or hospital-type pull.
2. Mounting: Surface applied with concealed fasteners, Through bolted with oval-head machine screws and countersunk washers or Back to back with threaded sleeves.
3. Minimum Pull Clearance: 1-1/2 inches (38 mm) from face of door.
4. Overall Pull Length: 9 inches (229 mm).

H. Offset Push-Pull Door Pulls: Pull fixed to 0.050-inch (1.3-mm) thick plate, 4 inches wide by 16 inches high (102 mm wide by 406 mm high) with square corners and beveled edges.

1. Pull Diameter: 1-inch (25-mm) constant diameter.
2. Pull Offset: 2 inches (51 mm).
3. Minimum Pull Clearance: 2-1/4 inches (57 mm) from face of door.
4. Overall Pull Length: 9 inches (229 mm).

I. Single Push Bar: Horizontal-bar type.

1. Mounting: Surface applied with concealed fasteners or Through bolted with oval-head machine screws and countersunk washers.
2. Shape and Size: 1-inch (25-mm) constant-diameter round bar or Minimum 3/8-by-1-1/4-inch (10-by-32-mm) flat bar.
3. Minimum Clearance: 1-1/2 inches (38 mm) from face of door.

J. Double Pull Bar: Two horizontal bars connected by matching vertical pull bar and spaced at 8 inches (200 mm) o.c.

1. Mounting: Surface applied with concealed fasteners or Through bolted with oval-head machine screws and countersunk washers.
2. Shape and Size: 1-inch (25-mm) constant-diameter round bars or Minimum 3/8-by- 1-1/4-inch (10-by-32-mm) flat bars.
3. Minimum Clearance: 1-1/2 inches (38 mm) from face of door.

2.22 ACCESSORIES FOR PAIRS OF DOORS

A. Coordinators: BHMA A156.3; consisting of active-leaf, hold-open lever and inactive-leaf release trigger; fabricated from steel with nylon-coated strike plates; with built-in, adjustable safety release; and with internal override.

B. Carry-Open Bars: BHMA A156.3; prevent the inactive leaf from opening before the active leaf; provide polished brass or bronze carry-open bars with strike plate for inactive leaves of pairs of doors unless automatic or self-latching bolts are used.

C. Flat Overlapping Astragals: BHMA A156.22; flat primed steel, zinc-plated steel, aluminum, stainless-steel or brass metal bar, surface mounted on face of door with screws; minimum 1/8 inch (3.2 mm) thick by 2 inches (51 mm) wide by full height of door.

D. Rigid, Housed Astragals: BHMA A156.22; gasket material held in place by metal housing; fastened to face of door with screws.

1. Gasket Material: Closed-cell sponge silicone, Closed-cell sponge neoprene, Neoprene or Silicone bulb.
2. Housing Material: Aluminum or Copper alloy (brass or bronze).

E. Overlapping-with-Gasket Astragals: BHMA A156.22; T-shaped metal, surface mounted on edge of door with screws.

1. Base Metal: Primed steel, Zinc-plated steel, Aluminum or Stainless steel.
2. Gasket Material: Vinyl, Silicone, Sponge neoprene, Brush pile or Polypropylene.

2.23 SURFACE CLOSERS

A. Surface Closers: BHMA A156.4; rack-and-pinion hydraulic type with adjustable sweep and latch speeds controlled by key-operated valves and forged-steel main arm. Comply with manufacturer's written instructions for size of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Provide factory-sized closers, adjustable to meet field conditions and requirements for opening force.

B. Cast-Aluminum Surface Closers: Grade 1 or Grade 2; Traditional type with mechanism enclosed in cast-aluminum alloy shell.

1. Mounting: Hinge side, Opposite hinge side, Parallel arm or Bracket.
2. Type: Regular arm, Fusible-link holder arm, Two-point hold-open arm or Delayed action closing.
3. Backcheck: Factory preset or adjustable, effective between 60 and 85 degrees of door opening.

C. Surface Closer without Cover: Grade 1 or Grade 2; Modern type.

1. Mounting: Hinge side, Opposite hinge side, Parallel arm, Bracket, Hinge side top jamb or Opposite side top jamb.
2. Type: Regular arm, hold open, fusible-link holder arm, Slide track arm, Dead stop, Dead stop hold open or Delayed action closing.

3. Backcheck: Factory preset or adjustable, effective between 60 and 85 degrees of door opening.
4. Closing Power Adjustment: At least 50, 35 or 15 percent more than minimum tested value.

D. Surface Closer with Cover: Grade 1 or Grade 2; Modern type with mechanism enclosed in cover.

1. Mounting: Hinge side, Opposite hinge side, Parallel arm, Bracket, Hinge side, top jamb or Opposite side, top jamb.
2. Type: Regular arm, hold open, Fusible-link holder arm, Slide track arm, Dead stop, Dead stop hold open or Delayed action closing.
3. Backcheck: Factory preset or adjustable, effective between 60 and 85 degrees of door opening.
4. Cover Material: Aluminum, Plated steel or Molded plastic.
5. Closing Power Adjustment: At least 50, 35 or 15 percent more than minimum tested value.

2.24 CONCEALED CLOSERS

A. Concealed Closers: BHMA A156.4; rack-and-pinion hydraulic type with adjustable sweep and latch speeds controlled by key-operated valves. Comply with manufacturer's written instructions for size of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Provide factory-sized closers, adjustable to meet field conditions and requirements for opening force.

B. Concealed-in-Door Closer: Grade 1 or Grade 2; mortised into top rail of minimum 1-3/4-inch (44-mm) thick doors and track mortised into head frame; with double lever arm indicated.

1. Type: Surface shoe or Mortised soffit plate.
2. Arm: Regular or Hold open.
3. Closing Power Adjustment: At least 50, 35 or 15 percent more than minimum tested value.

C. Concealed Overhead Closer: Grade 1 or Grade 2; mortised into head frame; with cast-metal body and exposed cover plate.

1. Type: Exposed arm with surface shoe, single acting, Concealed arm and track, butt or pivot hung, single acting, Concealed arm and track, center pivoted, single acting or Concealed arm and track, center pivoted, double acting.
2. Arm: Regular, Automatic hold open, manually selected hold open or Fusible-link holder arm.
3. Track: Regular, Automatic hold open or manually selected hold open.
4. Cover Plate Material: Aluminum or Plated steel.
5. Backcheck: Factory preset or Adjustable.
6. Closing Power Adjustment: At least 50 or 35 percent more than minimum tested value.

D. Concealed Floor Closer: Grade 1 or Grade 2; with cement case and cast-iron closer body case and top pivot.

1. Closer Type: Center pivoted; include top pivot, offset pivoted; include top pivot or Independently hung.
2. Door-Swing Type: Single or Double acting.
3. Fire Rated: Listed for use in labeled fire-rated assemblies where indicated.
4. Function: Regular, Automatic hold open, manually selected hold open or Delayed action closing.
5. Backcheck: Factory preset or Adjustable.
6. Closing Power Adjustment: At least 50 or 35 percent more than minimum tested value.
7. Case Depth: Regular, 4 inches (100 mm) or Shallow, 2 inches (50 mm).
8. Floor Plates: Provide flush cover plates matching door hardware finish or recessed floor plates with insert of floor finish material and extended closer spindle to accommodate thickness of floor finish unless thresholds are indicated.

    a. Material: Aluminum or Plated steel.

2.25 CLOSER HOLDER RELEASE DEVICES

A. Closer Holder Release Devices: BHMA A156.15; Grade 1; closer connected with separate or integral releasing and fire- or smoke-detecting devices. Door shall become self-closing on interruption of signal to release device. Automatic release is activated by smoke detection system or loss of power.

1. Type: Single-point hold open, Multiple-point hold open or Free-swinging release.
2. Mounting: Surface mounted on face of door, Surface mounted on face of top jamb, Surface mounted on stop, mortised into top rail of door, mortised into top jamb or Recessed into floor.
3. Features:

    a. Adjustable backcheck.
    b. Integral smoke detector.
    c. Adjustable spring power.
    d. Adjustable hold-open manual release force.

2.26 MECHANICAL STOPS AND HOLDERS

A. Wall- and Floor-Mounted Stops: BHMA A156.16; polished cast brass, bronze, or aluminum base metal.

B. Rigid-Type Floor Stop: Grade 1 or Grade 2; with rubber bumper.

1. Installation: Surface-screw or Expansion-shield installation.

C. Dome-Type Floor Stop: Grade 1 or Grade 2; with minimum 1-inch (25-mm) high bumper for doors without threshold and 1-3/8-inch (35-mm) high bumper for doors with threshold.

1. Provide with extruded-aluminum riser for carpet installations.

D. Combination Floor Stop and Holder: Grade 1 or Grade 2.

1. Installation: Surface-screw or Expansion-shield installation.
2. Hold Open: Semiautomatic or Automatic with release by pushing door.

E. Manual Combination Floor Stop and Holder: Grade 1 or Grade 2; 3-1/2 inches (89 mm) long, with holder, keeper, and rubber bumper.

1. Installation: Surface-screw or Expansion-shield installation.

F. Wall Bumpers: Grade 1 or Grade 2; with rubber bumper; 2-1/2-inch (64-mm) diameter, minimum 3/4-inch (19-mm) projection from wall; with backplate for concealed fastener installation.

1. Bumper Configuration: Convex or Concave.

G. Roller-Type Wall Bumpers: Grade 1 or Grade 2; minimum 4-3/8-inch (111-mm) projection from wall; for surface-screw application.

2.27 ELECTROMAGNETIC STOPS AND HOLDERS

A. Electromagnetic Door Holders: BHMA A156.15, Grade 1; wall-mounted electromagnetic single, floor-mounted electromagnet single or floor-mounted electromagnet double unit with strike plate attached to swinging door; coordinated with fire detectors and interface with fire-alarm system for labeled fire-rated door assemblies.

2.28 OVERHEAD STOPS AND HOLDERS

A. Overhead Stops and Holders: BHMA A156.8.

B. Overhead Concealed Slide Holders: Type 1; Grade 1 or Grade 2; hold open and release by push and pull of door unless control is set in inactive position; with stop, shock absorber, and adjustable holding pressure; for doors opening 110 degrees.

1. Door Swing Type: Single or Double acting.

C. Overhead Concealed Slide Stops: Type 1; Grade 1 or Grade 2; release by push and pull of door unless control is set in inactive position; with stop, shock absorber, and adjustable holding pressure; for doors opening 110 degrees.

1. Door Swing Type: Single or Double acting.

D. Overhead Surface-Mounted Slide Holders: Type 2; Grade 1 or Grade 2; hold open and release by push and pull of door unless control is set in inactive position; with stop, shock absorber, and adjustable holding pressure; for single-acting doors opening 110 degrees.

E. Overhead Surface-Mounted, Concealed Slide Stops: Type 2; Grade 1 or Grade 2; release by push and pull of door unless control is set in inactive position; with stop, shock absorber, and adjustable holding pressure; for single-acting doors opening 110 degrees.

F. Overhead Concealed, Friction Slide Holders: Type 4; Grade 1 or Grade 2; with frictional element held under adjustable pressure, free-acting shoulder pivots, and shock absorber; for doors opening 110 degrees.

1. Door Swing Type: Single or Double acting.

G. Overhead Concealed, Nonfriction Slide Stops: Type 4; Grade 1 or Grade 2; with nonfrictional element held under adjustable pressure and shock absorber; for single or double-acting doors opening 110 degrees.

H. Overhead Concealed, Nonfriction Slide Holders: Type 4; Grade 1 or Grade 2; with nonfrictional element held under adjustable pressure, automatic hold-open, and shock absorber; for doors opening 110 degrees.

1. Door Swing Type: Single or Double acting.

I. Overhead Surface-Mounted, Friction Slide Holders: Type 5; Grade 1 or Grade 2; with frictional element held under adjustable pressure, free-acting shoulder pivots, and shock absorber; for single-acting doors opening 110 degrees.

J. Overhead Surface-Mounted, Nonfriction Slide Stops: Type 5; Grade 1 or Grade 2; with nonfrictional element held under adjustable pressure and shock absorber; for single-acting doors opening 110 degrees.

K. Overhead Surface-Mounted, Nonfriction Slide Holders: Type 5; Grade 1 or Grade 2; with nonfrictional element held under adjustable pressure, automatic hold-open, and shock absorber; for single-acting doors opening 110 degrees.

2.29 DOOR GASKETING

A. Door Gasketing: BHMA A156.22; with resilient or flexible seal strips that are easily replaceable and readily available from stocks maintained by manufacturer.

B. Maximum Air Leakage: When tested according to ASTM E283 with tested pressure differential of 0.3-inch wg (75 Pa), as follows:

1. Smoke-Rated Gasketing: 0.3 cfm/sq. ft. (3 cu. m per minute/sq. m) of door opening.
2. Gasketing on Single Doors: 0.3 cfm/sq. ft. (3 cu. m per minute/sq. m) of door opening.
3. Gasketing on Double Doors: 0.50 cfm per foot (0.000774 cu. m/s per m) of door opening.

C. Adhesive-Backed Perimeter Gasketing: Vinyl bulb, Sponge silicone, Silicone, Neoprene bulb or Sponge neoprene gasket material applied to frame rabbet with self-adhesive.

D. Rigid, Housed, Perimeter Gasketing: Sponge silicone, Sponge neoprene, Silicone bulb, Polyurethane bulb, Vinyl bulb, Vinyl brush, Nylon brush or Thermoplastic elastomer gasket material held in place by housing; fastened to frame stop with screws.

1. Housing Material: Aluminum, (Brass or bronze) or Stainless steel.

E. Adjustable, Housed, Perimeter Gasketing: Screw-adjustable, sponge silicone, sponge neoprene, silicone bulb, polyurethane bulb, vinyl bulb, vinyl brush, nylon brush or thermoplastic elastomer gasket material held in place by housing; fastened to frame stop with screws.

1. Housing Material: Aluminum, (Brass or bronze) or Stainless steel.

F. Overlapping Astragals for Meeting Stiles: EPDM strip, Vinyl strip or Nylon brush gasket material held in place by housing and overlapping when doors are closed; mounted to face of meeting stile with screws.

1. Housing Material: Aluminum or Bronze.
2. Mounting: Surface mounted on face of each or one door.

G. Meeting Astragals for Meeting Stiles: Silicone bulb, Neoprene bulb, Vinyl bulb, Nylon brush, Brush pile or Thermoplastic elastomer gasket material held in place by housing; mounted with screws.

1. Housing Material: Aluminum or Bronze.
2. Mounting: Surface mounted on face of each door, Surface mounted on face of one door, Semimortised into edge of each door, Semimortised into edge of one door, mortised into edge of each door or Mortised into edge of one door.

H. Adjustable Astragals for Meeting Stiles: Screw-adjustable, silicone, neoprene, vinyl, vinyl-covered magnet, brush pile or thermoplastic elastomer gasket material held in place by housing; mounted with screws.

1. Housing Material: Aluminum or Bronze.
2. Mounting: Surface mounted on face, Semimortised into edge or Mortised into edge of each door.

I. Door Sweeps: Neoprene, Vinyl, Nylon brush, Polyurethane or Silicone gasket material held in place by flat housing or flange; surface mounted to face of door with screws.

1. Housing or Flange Material: Aluminum or Bronze.

J. Door Shoes: Vinyl, Thermoplastic elastomer, Neoprene or Brush pile gasket material held in place by housing; mounted to bottom edge of door with screws.

1. Housing Material: Aluminum or Bronze.
2. Extended Housing: One side or both sides of door.
3. Mounting: Surface mounted on or mortised into bottom edge of door.

K. Automatic Door Bottoms: Sponge neoprene, Sponge silicone, Thermoplastic elastomer or Nylon brush gasket material held in place by housing that automatically drops to form seal when door is closed; mounted to bottom edge of door with screws.

1. Housing Material: Aluminum, Bronze or Aluminum lined with 0.047-inch (1.2-mm) thick lead.
2. Mounting: Semimortised into bottom or Mortised into bottom of door.
3. Type: Low-closing-force type for doors required to meet accessibility requirements.

2.30 THRESHOLDS

A. Thresholds: BHMA A156.21; fabricated to full width of opening indicated.

B. Compressing-Top Thresholds: Metal member with compressible vinyl seal on top of threshold that seals against bottom of door; and base metal of aluminum, extruded bronze or stainless steel.

C. Saddle Thresholds:

1. Type: Smooth top, Fluted top, Fluted top and offset, Thermal break and fluted top, Applied gasketed stop and fluted top, Carpet separator with fluted top or Fluted top, barrier free.
2. Base Metal: Aluminum, Extruded bronze or Stainless steel.

D. Half-Saddle Thresholds: Fluted-top metal member; and base metal of aluminum or extruded bronze.

E. Interlocking Thresholds: Fluted-top metal member with integral lip designed to engage a hook strip applied to door.

1. Type: Single lip, Double lip, Double-lip water return, Double-lip water return with aluminum pan or Single lip with thermal barrier.
2. Base Metal: Aluminum or Extruded bronze.

F. Latching/Rabbeted Thresholds:

1. Type: Fluted, Smooth or Offset with fluted top.
2. Base Metal: Aluminum or Extruded bronze.

G. Latching/Rabbeted Thresholds with Gasket: Fluted-top metal member with gasket.

1. Type: Offset or Thermal barrier.
2. Base Metal: Aluminum or Extruded bronze.
3. Gasket Material: Vinyl, Silicone, Neoprene, Brush pile or Closed-cell sponge neoprene.

H. Latching/Rabbeted Panic Thresholds:

1. Type: Fluted, barrier free or Fluted with gasket top.
2. Base Metal: Aluminum or Extruded bronze.

I. Plate Thresholds: Solid metal plate.

1. Top Surface: Fluted with slip-resistant abrasive.
2. Base Metal: Aluminum, Extruded brass or bronze or Stainless steel.

J. Ramped Thresholds: Modular, interlocking, sloped, fluted-top metal assemblies with closed return ends; 1:12 slope.

1. Top Surface: Fluted with slip-resistant abrasive.
2. Base Metal: Aluminum or Extruded bronze.

K. Saddle Thresholds for Floor Closers: Fluted top.

1. Type: A, for center-hung doors; ends not mitered; B, for offset-hung doors; ends not mitered; C, for center-hung doors; ends mitered; or D, for offset-hung doors; ends mitered.
2. Base Metal: Aluminum or Extruded bronze.

2.31 SLIDING DOOR HARDWARE

A. Sliding Door Hardware: BHMA A156.14; consisting of complete sets including rails, hangers, supports, bumpers, floor guides, and accessories indicated.

B. Horizontal Sliding Door Hardware: Grade 1; rated for minimum door weight of 240 lb (109 kg), 320 lb (145 kg), 450 lb (205 kg), 560 lb (254 kg), 640 lb (290 kg), 800 lb (363 kg), 1000 lb (455 kg) or 1500 lb (681 kg).

1. Material: Wrought steel, Galvanized steel or anodized aluminum.
2. Rail: Box without mounting brackets, Box with attached mounting brackets, Box with attached flashing, Round without mounting brackets or Round with attached mounting brackets.
3. Rail Supports: Single sidewall, Double sidewall, Triple sidewall, Single overhead, Single overhead parallel, Single overhead cross-ear, Double overhead cross-ear or Triple overhead cross-ear style.

    a. Provide intermediate-, end-, and splice-type track supports as required by rail configuration and door weight indicated.

4. Hanger Configuration: Four-wheel truck, hanger assembly with top mounting plate, hanger assembly with drop bolt, hanger assembly with single drop strap or hanger assembly with double drop strap.

    a. Wheel Assembly: Steel wheels with ball bearings.

5. Accessories:

    a. Continuous bottom guide.
    b. Guide rail and guide rail brackets as required by rail configuration.
    c. Bow handle, minimum 6 inches (150 mm) in overall length.
    d. Flush pull, minimum 4 by 5-1/2 by 3/4 inch (100 by 140 by 19 mm), mortised into door.
    e. Cane bolt, minimum 1/2-inch (13-mm) diameter by 12 inches (305 mm) long.
    f. Stay roller, minimum 2-inch (50-mm) diameter wheel.
    g. Floor center stop of cast iron.
    h. End guide and stop.
    i. Parallel door floor guides.
    j. Door stop.
    k. Sliding door latch.
    l. Bumper shoe, minimum 0.0598-inch (1.5-mm) thickness.
    m. Cremone bolt with lever handle, minimum 1/2-inch (13-mm) diameter oval or round rod, and rod guides at 24 inches (610 mm) o.c.

n. Top spring bolt, minimum 6 inches (150 mm) or 8 inches (200 mm); malleable iron and with angle or surface strike and 24-inch (610-mm) chain.
o. Foot bolt minimum 6 inches (150 mm) or 8 inches (200 mm); wrought steel, cast iron, or malleable iron.

C. Bypassing Sliding Door Hardware: Rails and door hardware that allow vertical adjustment and rated for doors weighing up to 120 lb (54 kg) Grade 1, 80 lb (36 kg) Grade 1 or 40 lb (18 kg) Grade 2.

1. Rail Material: Galvanized wrought steel or Extruded aluminum.
2. Rail Configuration: V-grooved double leg, V-grooved double leg with fascia or I-beam.
3. Mounting: Top hung or Bottom supporting with overhead guide.
4. Wheel Assembly: Two wheel or four wheel, with roller bearings.
5. Pulls: Flush, mortised into door, Cast, forged, or extruded brass or bronze surface-applied type, wrought brass or bronze edge type, mortised into edge of door, Sliding door latch or Sliding door lock with emergency release.
6. Accessories:

a. Bumper stops; wrought steel.
b. Floor guides.

D. Pocket Sliding Door Hardware: Grade 1; rated for doors weighing up to 120 lb (54 kg) or 80 lb (36 kg), overhead box rails and door hardware that allows vertical adjustment.

1. Rail Material: Galvanized wrought steel or Extruded aluminum.
2. Door Type: Single or Biparting.
3. Rail Configuration: V-grooved double leg or I-beam.
4. Wheel Assembly: Two wheel or four wheel, with roller bearings.
5. Pulls: Flush, mortised into door, Cast, forged, or extruded brass or bronze surface-applied type, wrought brass or bronze edge type, mortised into edge of door, Sliding door latch or Sliding door lock with emergency release.
6. Accessories:

a. Bumper stops; wrought steel.
b. Floor guides installed within pocket.

2.32 FOLDING DOOR HARDWARE

A. General: BHMA A156.14; complete sets including overhead rails, hangers, supports, bumpers, floor guides, and accessories indicated.

B. Bifolding Door Hardware: Rated for door panels weighing up to 50 lb (23 kg) Grade 1 or 30 lb (14 kg) Grade 2; with rails and door hardware that allow horizontal and vertical adjustment.

1. Rail Material: Galvanized wrought steel or Extruded aluminum.
2. Rail Configuration: V-grooved double leg, V-grooved double leg with fascia or I-beam.
3. Mounting: Surface mounted overhead or Top and bottom hung.
4. Wheel Assembly: Two wheel or four wheel, with roller bearings.

C. Multiple Folding Door Hardware: Rated for door panels weighing up to 50 lb (23 kg) Grade 1 or 30 lb (14 kg) Grade 2; with rails and door hardware that allows horizontal and vertical adjustment.

1. Rail Material: Galvanized wrought steel or Extruded aluminum.
2. Rail Configuration: V-grooved double leg, V-grooved double leg with fascia or I-beam.
3. Mounting: Surface mounted overhead or Top and bottom hung.
4. Wheel Assembly: Two wheel or four wheel, with roller bearing.

2.33 METAL PROTECTIVE TRIM UNITS

A. Metal Protective Trim Units: BHMA A156.6; fabricated from 0.050-inch (1.3-mm) thick aluminum, brass. Bronze or stainless steel; with manufacturer's standard machine or self-tapping screw fasteners.

B. Armor Plates: 36 inches (914 mm), 40 inches (1016 mm) or 42 inches (1067 mm) high by door width with allowance for frame stops.

C. Kick Plates: 8 inches (203 mm), 10 inches (254 mm) or 12 inches (305 mm) high by door width with allowance for frame stops.

D. Mop Plates: 4 inches (102 mm) or 6 inches (152 mm) high by 1 inch (25 mm) less than door width.

2.34 AUXILIARY DOOR HARDWARE

A. Auxiliary Hardware: BHMA A156.16.

B. Chain Door Guards: Grade 1, Grade 2 or Grade 3; polished cast brass or bronze or extruded brass; with plate slotted to receive 6-inch (150-mm) long welded chain secured to an anchor plate. Guard allows door to be opened 3 inches (75 mm) with chain engaged in slotted plate. Equip with chain holder.

C. Rod-Type Door Guards: Grade 1, Grade 2 or Grade 3; straight door-mounted rod that engages U-shaped, jamb-mounted rod. U-shaped rod can swing 180 degrees away from door; rod limits door opening when engaged.

1. Material: Brass, Bronze or Aluminum.

D. Coat Hooks: Grade 1, Grade 2 or Grade 3; two curved hooks with rounded ends; 3-inch (75-mm) projection from wall; for surface-screw application.

1. Material: Polished cast brass, Polished cast bronze or Burnished cast aluminum.

E. Garment Hooks: Grade 1, Grade 2 or Grade 3; one long hat hook and one small coat hook; 3-3/4-inch (95-mm) projection from wall with 7-inch (178-mm) overall height; for surface-screw application.

1. Material: Polished cast brass or Burnished cast aluminum.

F. Door Knockers: Grade 1; solid brass with engraved number and nameplates.

G. Wide-Angle Door Viewers: Grade 1, Grade 2 or Grade 3; solid brass with optical glass lenses; adjustable to door thickness and permitting one-way observation with minimum 190-degree viewing angle.

H. Fire-Rated Door Viewers: Solid brass with optical glass lenses; listed and labeled for use in fire-rated assemblies; adjustable to door thickness and permitting one-way observation with minimum 120, 150 or 190-degree viewing angle.

I. House Numbers: Grade 1; wrought, cast, or forged brass; 4 inches (102 mm) high; for screw application.

J. Silencers for Wood Door Frames: Grade 1; neoprene or rubber; minimum 5/8 by 3/4 inch (16 by 19 mm); fabricated for drilled-in application to frame.

K. Silencers for Metal Door Frames: Grade 1; neoprene or rubber; minimum diameter 1/2 inch (13 mm); fabricated for drilled-in application to frame.

2.35 AUXILIARY ELECTRIFIED DOOR HARDWARE

A. Auxiliary Electrified Door Hardware:

B. Boxed Power Supplies: Modular unit in NEMA ICS 6, Type 4 enclosure; filtered and regulated; voltage rating and type matching requirements of door hardware served; listed and labeled for use with fire-alarm systems.

C. Door Position Switches: Magnetically operated reed switch designed for concealed mounting.

D. Door and Frame Transfer Devices: Steel housing for mortise in hinge stile of door, with flexible tube for wiring bundle; accommodating doors that swing open to 120 degrees.

2.36 FINISHES

A. Provide finishes complying with BHMA A156.18 as indicated in door hardware schedule.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Mounting Heights: Mount door hardware units at heights indicated on Drawings or to comply with the following unless otherwise indicated or required to comply with governing regulations.

1. Standard Steel Doors and Frames: ANSI/SDI A250.8.
2. Custom Steel Doors and Frames: HMMA 831.
3. Wood Doors: DHI's "Recommended Locations for Architectural Hardware for Wood Flush Doors."

B. Install each door hardware item to comply with manufacturer's written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work. Do not install surface-mounted items until finishes have been completed on substrates involved.

C. Hinges: Install types and in quantities indicated in door hardware schedule, but not fewer than the number recommended by manufacturer for application indicated or one hinge for every 30 inches (750 mm) of door height, whichever is more stringent, unless other equivalent means of support for door, such as spring hinges or pivots, are provided.

D. Intermediate Offset Pivots: Where offset pivots are indicated, provide intermediate offset pivots in quantities indicated in door hardware schedule, but not fewer than one intermediate offset pivot per door and one additional intermediate offset pivot for every 30 inches (750 mm) of door height greater than 90 inches (2286 mm).

E. Lock Cylinders: Install construction cores to secure building and areas during construction period.

1. Replace construction cores with permanent cores as indicated in keying schedule or as directed by Owner.
2. Furnish permanent cores to Owner for installation.

F. Key Control Cabinet: Tag keys and place them on markers and hooks in key control system cabinet, as determined by final keying schedule.

G. Boxed Power Supplies: Locate power supplies as indicated or, if not indicated, above accessible ceilings or in equipment room. Verify location with Architect.

1. Configuration: Provide one power supply for each door opening or least number of power supplies required to adequately serve doors with electrified door hardware.

H. Thresholds: Set thresholds for exterior doors and other doors indicated in full bed of sealant complying with requirements specified in Section 079200 "Joint Sealants."

I. Stops: Provide floor stops for doors unless wall or other type stops are indicated in door hardware schedule. Do not mount floor stops where they will impede traffic.

J. Perimeter Gasketing: Apply to head and jamb, forming seal between door and frame.

1. Do not notch perimeter gasketing to install other surface-applied hardware.

K. Meeting Stile Gasketing: Fasten to meeting stiles, forming seal when doors are closed.

L. Door Bottoms: Apply to bottom of door, forming seal with threshold when door is closed.

3.2 ADJUSTING

A. Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended.

Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.3 DOOR HARDWARE SCHEDULE

END OF SECTION 087111

SECTION 087113 - AUTOMATIC DOOR OPERATORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Low-energy door operators for swinging doors.
2. Power-assist door operators for swinging doors.

1.2 DEFINITIONS

A. AAADM: American Association of Automatic Door Manufacturers.

B. Double-Egress (Doors): A pair of doors that simultaneously swing, with the two doors moving in opposite directions with no mullion between them.

C. Double-Swing (Doors): A pair of doors that swing, with the two doors moving in opposite directions with a mullion between them; each door functioning as a single-swing door.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For automatic door operators.

1. Include plans, elevations, sections, hardware mounting heights, and attachment details.
2. Include diagrams for power, signal, and control wiring.

C. Samples: For each exposed product and for each color and texture specified.

1.5 INFORMATIONAL SUBMITTALS

A. Product certificates.

B. Field quality-control reports.

C. Sample warranties.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer for installation and maintenance of units required for this Project and who employs a Certified Inspector.

B. Certified Inspector Qualifications: Certified by AAADM.

1.8 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of automatic door operators that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS: As directed.

2.2 AUTOMATIC DOOR OPERATORS, GENERAL

A. General: Provide operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for long-term, maintenance-free operation under normal traffic load for occupancy type indicated; and in accordance with UL 325. Coordinate operator mechanisms with door operation, hinges, and activation and safety devices.

1. Emergency Breakaway: Where indicated for center-pivoted doors, provide emergency breakaway feature for reverse swing of doors. Equip system to discontinue power to automatic door operator when door is in emergency breakaway position, to return door to closed position after breakaway, and to automatically reset.
2. Fire-Rated Doors: Provide door operators for fire-rated door assemblies that comply with NFPA 80 for fire-rated door components and are listed and labeled by a qualified testing agency.
3. Wind Load: Provide door operators on exterior doors that will open and close doors and maintain them in fully closed position when subjected to wind load of, as directed.

B. Electromechanical Operating System: Self-contained unit powered by permanent-magnet dc motor; with closing speed controlled mechanically by gear train and dynamically by braking action of electric motor, connections for power and activation- and safety-device wiring, and manual operation, including spring closing when power is off.

C. Electrohydraulic Operating System: Self-contained, low-pressure unit; with separate cylinders for power and checking, connections for power and activation- and safety-device wiring, and manual operation, including spring closing when power is off.

D. Housing for Overhead Concealed Operators: Fabricated from minimum 0.125-inch (3.2-mm) thick, extruded or formed aluminum and extending full width of door opening, including door jambs, to conceal door operators and controls. Provide hinged or removable access panels for service and adjustment of door operators and controls. Secure panels to prevent unauthorized access.

E. Cover for Surface-Mounted Operators: Fabricated from 0.125-inch (3.2-mm) thick, extruded or formed aluminum; manufacturer's standard width; continuous over full width of operator-controlled door opening; continuous over full width of door opening, including door jambs; with enclosed end caps, provision for maintenance access, and fasteners concealed when door is in closed position.

F. Brackets and Reinforcements: Fabricated from aluminum with nonstaining, nonferrous shims for aligning system components.

G. Fire-Door Package: Consisting of UL-listed latch mechanism, power-reset box, and caution signage for fire-rated doors. Latch mechanism shall allow door to swing free during automatic operation; when fire is detected, latch actuator shall cause exit hardware to latch when door closes. Provide latch actuators with fail-secure design.

H. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 LOW-ENERGY DOOR OPERATORS FOR SWINGING DOORS

A. Standard: BHMA A156.19.

B. Performance Requirements:

1. Opening Force if Power Fails: Not more than 15 lbf (67 N) required to release latch if provided, not more than 30 lbf (133 N) required to manually set door in motion, and not more than 15 lbf (67 N) required to fully open door.
2. Entrapment-Prevention Force: Not more than 15 lbf (67 N) required to prevent stopped door from closing or opening.

C. Configuration: Operator to control single swinging door.

1. Traffic Pattern: One or Two way.
2. Operator Mounting: Surface or Overhead concealed.

D. Configuration: Operator to control pair of swinging doors.

1. Traffic Pattern: One way, Two way, Double egress or Double swing.
2. Operator Mounting: Surface or Overhead concealed.

E. Operation: Power opening and power-assisted spring closing. When not in automatic mode, door operator shall function as manual door closer, with or without electrical power.

F. Operating System: Electromechanical or Electrohydraulic.

G. Microprocessor Control Unit: Solid-state controller.

H. Features:

1. Adjustable opening and closing speed.
2. Adjustable opening and closing force.
3. Adjustable backcheck.
4. Adjustable hold-open time from zero to 30 seconds.
5. Adjustable time delay.
6. Adjustable acceleration.
7. Obstruction recycle.
8. On-off/hold-open switch to control electric power to operator; key operated.

I. Activation Device: Push-plate switch, Touchless switch or Push-button switch on each side of door to activate door operator.

J. Exposed Finish: Class I, clear anodic finish, Class II, clear anodic finish, Class I, color anodic finish, Class II, color anodic finish, Baked-enamel or powder-coat finish, finish matching door and frame or Finish matching door hardware.

1. Color: Light bronze, Medium bronze, Dark bronze, Black, as indicated by manufacturer's designations, match Architect's sample or as selected by Architect from full range of industry colors and color densities.

2.4 POWER-ASSIST DOOR OPERATORS FOR SWINGING DOORS

A. Standard: BHMA A156.19.

B. Performance Requirements:

1. Opening Force:

a. Opening Force if Power Fails: Not more than 15 lbf (67 N) required to release latch if provided, not more than 30 lbf (133 N) required to manually set door in motion, and not more than 15 lbf (67 N) required to fully open door.
b. Accessible Interior Doors: Not more than 5 lbf (22 N) to push or pull door to fully open position.

2. Entrapment-Prevention Force: Not more than 15 lbf (67 N) required to prevent stopped door from closing or opening.

C. Configuration: Operator to control single swinging door.

1. Traffic Pattern: One or Two way.
2. Operator Mounting: Surface or Overhead concealed.

D. Configuration: Operator to control pair of swinging doors.

1. Traffic Pattern: One way, Two way, Double egress or Double swing.
2. Operator Mounting: Surface or Overhead concealed.

E. Operation: Power-assisted opening that reduces the force to open door and power-assisted spring closing. Pushing or pulling on door activates operator. When not in automatic mode, door operator shall function as manual door closer, with or without electrical power.

F. Operating System: Electromechanical or Electrohydraulic.

G. Microprocessor Control Unit: Solid-state controller.

H. Features:

1. Adjustable opening and closing speed.
2. Adjustable opening and closing force.
3. Adjustable backcheck.
4. Adjustable hold-open time from zero to 30 seconds.
5. Adjustable time delay.
6. Adjustable acceleration.
7. Obstruction recycle.
8. On-off/hold-open switch to control electric power to operator: key operated.

I. Exposed Finish: Class I, clear anodic finish, Class II, clear anodic finish, Class I, color anodic finish, Class II, color anodic finish, Baked-enamel or powder-coat finish, finish matching door and frame or Finish matching door hardware.

1. Color: Light bronze, Medium bronze, Dark bronze, Black, as indicated by manufacturer's designations, match Architect's sample or as selected by Architect from full range of industry colors and color densities.

2.5 MATERIALS

A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

1. Extrusions: ASTM B221 (ASTM B221M).
2. Sheet: ASTM B209 (ASTM B209M).

B. Fasteners and Accessories: Corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

2.6 CONTROLS

A. General: Provide controls in accordance with BHMA standards; for condition of exposure; and for long-term, maintenance-free operation under normal traffic load for occupancy type indicated. Coordinate devices with door operation and door operator mechanisms.

B. Push-Plate Switch: Momentary-contact door control switch with flat push-plate actuator with contrasting-colored, engraved message.

1. Configuration: Round or Square push plate with 4-by-4-inch (100-by-100-mm) junction box.

    a. Mounting: As indicated on Drawings, Recess mounted, semiflush in wall or Surface mounted on wall.

2. Configuration: Rectangular push plate with 2-by-4-inch (50-by-100-mm) junction box.

    a. Mounting: As indicated on Drawings, Recess mounted, semiflush in wall, Recess mounted in door jamb, Surface mounted on wall or Surface mounted on post.

3. Push-Plate Material: Stainless steel or Plastic as selected by Architect from manufacturer's full range.
4. Message: Plain face with no message, "Push to Open", International symbol of accessibility or International symbol of accessibility and "Push to Open."

C. Touchless Switch: Hands-free activation door-control switch with flat motion sensor face-plate with contrasting-colored, engraved message.

1. Configuration: 6-inch (152.4-mm) round, 4.56-by-4.56-inch (115.8-by-115.8-mm) (double gang) square, 2.77-by-4.56-inch (70-by-115.8-mm) (single gang) rectangular or 1.68-by-4.56-inch (42.6-by-115.8-mm) jamb-style face plate.

    a. Mounting: As indicated on Drawings, Recess mounted in wall, Recess mounted in door jamb or Surface mounted on wall.

2. Face-Plate Material: Stainless steel, Plastic, Stainless steel with backlight acrylic window or as selected by Architect from manufacturer's full range of options.
3. Message: "Wave to Open", "Wave to Open" and wave symbol, International symbol of accessibility or International symbol of accessibility and "Wave to Open" and wave symbol.

D. Push-Button Switch: Momentary-contact door control switch with one red-button actuator; enclosed in nominal 2-by-4-inch (50-by-100-mm) or 4-by-4-inch (100-by-100-mm) junction box.

1. Provide faceplate engraved with "Press to Open" text and international symbol of accessibility in contrasting color.
2. Provide blue plastic cover engraved with "Press Button to Open" in white text and with international symbol of accessibility.
3. Mounting: As indicated on Drawings, Surface mounted on wall, Surface mounted on post, Surface mounted on guide rail or Recess mounted in wall.
4. Faceplate Material: Stainless steel or Painted metal as selected by Architect from manufacturer's full range.

E. Electrical Interlocks: Unless units are equipped with self-protecting devices or circuits, provide electrical interlocks to prevent activation of operator when door is locked, latched, or bolted.

2.7 ACCESSORIES

A. Signage: As required by cited BHMA standard for type of door and its operation.

1. Application Process: Decals, Silk-screened or Operator manufacturer's standard process.
2. Provide sign materials with instructions for field application when operators are installed.

2.8 FABRICATION

A. Factory fabricate automatic door operators to comply with indicated standards.

B. Fabricate exterior components to drain condensation and water-passing joints within operator enclosure to the exterior.

C. Use concealed fasteners to greatest extent possible. Where exposed fasteners are required, use countersunk Phillips flat-head machine screws, finished to match operator.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Install automatic door operators in accordance with manufacturer's written instructions and cited BHMA standard for type of door operation and direction of pedestrian travel, including signage, controls, wiring, remote power units if any, and connection to building's power supply.

B. Verify that full-height finger guards are installed at each door with pivot hinges, where door has a clearance at hinge side greater than 1/4 inch (6 mm) and less than 3/4 inch (19 mm) with door in any position.

C. Controls: Install devices in accordance with manufacturer's written instructions and cited BHMA standard for operator type and direction of pedestrian travel.

D. Signage: Apply on both sides of each door as required by cited BHMA standard for type of door operator and direction of pedestrian travel.

E. Adjusting: Adjust automatic door operators to function smoothly, and lubricate as recommended by manufacturer; comply with requirements of applicable BHMA standards.

1. Adjust operators on exterior doors for tight closure.
2. Readjust automatic door operators and controls after repeated operation of completed installation equivalent to three days' use by normal traffic (100 to 300 cycles).

F. Demonstration: Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain automatic door operators.

3.2 FIELD QUALITY CONTROL

A. Certified Inspector: Owner will engage or engage a Certified Inspector to test and inspect components, assemblies, and installations, including connections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Test and inspect each automatic door operator installation, using AAADM inspection forms, to determine compliance of installed systems with applicable BHMA standards.

C. Automatic door operators will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

END OF SECTION 087113

SECTION 087163 - DETENTION DOOR HARDWARE

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes detention door hardware.

B. Related Requirements:

1. Section 013513.16 "Special Project Procedures for Detention Facilities" for general requirements for detention work.

1.2 COORDINATION

A. Templates: Obtain and distribute, to the parties involved, templates for detention doors, frames, and other work specified to be factory prepared for installing detention door hardware.

1.3 PREINSTALLATION MEETINGS

A. Detention Keying Conference: Conduct conference at Project site.

B. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For each type of detention door hardware. Include plans, elevations, sections, and attachment details.

1. Wiring Diagrams: For power, signal, and control wiring; differentiate between manufacturer-installed and field-installed wiring for detention door hardware.

C. Detention Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware as well as installation procedures and wiring diagrams. Coordinate the Detention Door Hardware Schedule with detention doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of detention door hardware.

1. Integrate detention door hardware indicated in "Detention Door Hardware Schedule" Article into Project's final Detention Door Hardware Schedule, and indicate complete designations of every item required for each detention door and opening.
2. Keying Schedule: Coordinate detention keying with other door hardware in Project's final Keying Schedule.

3. Indicate each detention lock and type of key cylinder using the following prefixes: "P" for paracentric, "M" for mogul, "HS" for high security, and "C" for commercial.
4. Indicate security level of each item.

1.5 INFORMATIONAL SUBMITTALS

A. Product test reports.

B. Field quality-control reports.

1. Field quality-control certification signed by Contractor and Detention Specialist.

C. Sample Warranties: For special warranties.

1.6 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of detention door hardware.

B. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Detention Door Hardware: As directed.
2. Electrical Parts: As directed.
3. Security Fasteners: Furnish not less than one box for every 50 boxes or fraction thereof, of each type and size of security fastener installed.
4. Tools: Provide two sets of tools for installing and removing security fasteners.

1.8 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer and an authorized representative of detention door hardware manufacturer for installation and maintenance of units required for this Project.

B. Supplier Qualifications: Detention door hardware supplier with warehousing facilities in Project's vicinity who is, or employs, a qualified Architectural Hardware Consultant, available during the course of the Work to consult with Contractor, Architect, and Owner about detention door hardware and keying.

1. Detention Door Hardware Supplier Qualifications: An experienced detention door hardware supplier who has completed projects with electrically powered detention door hardware similar in material, design, and extent to that indicated for this Project, whose

work has resulted in construction with a record of successful in-service performance, and who is acceptable to manufacturer of primary materials.

a. Engineering Responsibility: Prepare data for electrically powered detention door hardware, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.
b. Scheduling Responsibility: Preparation of Detention Door Hardware and Keying schedules.

C. Architectural Hardware Consultant Qualifications: A person who is currently certified by DHI as an Architectural Hardware Consultant and who is experienced in providing consulting services for detention door hardware installations that are comparable in material, design, and extent to that indicated for this Project.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver detention door keys to Owner by registered mail or overnight package service, addressed as follows:

1. As directed by Owner.

1.10 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of detention door hardware that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures including excessive deflection, cracking, or breakage.
b. Faulty operation of operators and detention door hardware.
c. Deterioration of metals, metal finishes, and other materials beyond normal weathering or detention use.

2. Warranty Period: Three years from date of Substantial Completion.
3. Warranty Period for Security Door Closers: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Swinging Detention Door Assemblies: Provide detention door hardware as part of a detention door assembly that complies with security grade indicated, when tested according to ASTM F1450, based on testing manufacturer's standard units in assemblies similar to those indicated for this Project.

1. Bullet Resistance: Comply with Level 3 rating when tested according to UL 752; where indicated on Drawings, in door schedule or as directed.

    a. Listed and labeled as bullet resistant by a testing agency acceptable to authorities having jurisdiction.

2. Tool-Attack Resistance: Comply with small-tool-attack-resistance rating when tested according to UL 1034 and UL 437; where indicated on Drawings, in door schedule or as directed.

2.2 DETENTION DOOR HARDWARE, GENERAL

A. Regulatory Requirements:

1. Fire-Rated Detention Door Assemblies: Provide detention door hardware for assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.
2. Where indicated to comply with accessibility requirements, comply with the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines, ICC A117.1 and as directed.

2.3 DETENTION HINGES

A. Standard for Electric Detention Hinges: UL 634.

B. Utility-Door Detention Hinges: Heavy weight, plain bearing; fabricated from cast iron or steel; 3/8-inch (9.5-mm) diameter, case-hardened, fully welded, steel hinge pin; full surface.

1. Leaves: Drilled for countersunk security fasteners or Solid.
2. Size: Minimum 3 by 4 by 0.200 inch (75 by 102 by 5 mm).
3. Security Grade: 1, 2, 3 or 4 according to ASTM F1758.
4. Finish: BHMA 600.

C. Food-Pass Detention Hinges: Heavy weight, plain bearing; fabricated from cast iron or steel; 3/8-inch (9.5-mm) diameter, case-hardened, fully welded, steel hinge pin; with applied stop preventing door from opening more than 90 degrees and supporting door in horizontal position as a shelf; full surface.

1. Leaves: Drilled for countersunk security fasteners or Solid.
2. Size: Minimum 3 by 4 by 0.200 inch (75 by 102 by 5 mm).
3. Security Grade: 1, 2, 3 or 4 according to ASTM F1758.
4. Finish: BHMA 600.

D. Full-Surface Detention Hinges: Extra heavy weight; two heavy-duty thrust bearings with hardened-steel ball bearings; fabricated from steel plate; 3/4-inch (19-mm) diameter, case-hardened, fully welded, steel hinge pin.

1. Leaves: Drilled for countersunk security fasteners or Solid.

2. Size: Minimum 5 by 5-1/4 by 1/2 inch (127 by 133 by 13 mm).
3. Security Grade: 1, 2, 3 or 4 according to ASTM F1758.
4. Finish: BHMA 600.

E. Half-Surface Detention Hinges: Extra heavy weight; two heavy-duty thrust bearings with hardened-steel ball bearings; fabricated from steel plate; 3/4-inch (19-mm) diameter, case-hardened, fully welded, steel hinge pin.

1. Leaves: Drilled for countersunk security fasteners or Solid.
2. Size: Minimum 5 by 5-1/4 by 1/2 inch (127 by 133 by 13 mm).
3. Security Grade: 1, 2, 3 or 4 according to ASTM F1758.
4. Finish: BHMA 600.

F. Gap-Mounted Detention Hinges: Extra heavy weight; two heavy-duty thrust bearings with hardened-steel ball bearings; fabricated from steel plate; 3/4-inch (19-mm) diameter, case-hardened, fully welded, steel hinge pin.

1. Leaves: Drilled for countersunk security fasteners or Solid.
2. Size: Minimum 5 by 6 by 1/2 inch (127 by 152 by 13 mm).
3. Security Grade: 1, 2, 3 or 4 according to ASTM F1758.
4. Finish: BHMA 600.

2.4 MECHANICAL DETENTION LOCKS AND LATCHES

A. Lock Mountings:

1. Hollow-Metal Detention Doors: Mount detention lock to back of 0.179-inch (4.56-mm) nominal-thickness steel or 0.183-inch (4.65-mm) nominal-thickness, galvanized-steel cover plate for installation in lock pocket fabricated into detention door. Attach cover plate to hollow-metal detention door with security fasteners.
2. Bar-Grille Detention Doors: Mount detention lock to back of galvanized-steel enclosure welded to flat horizontal bars of bar-grille detention door; cover with 0.179-inch (4.56-mm) nominal-thickness steel or 0.183-inch (4.65-mm) nominal-thickness, galvanized-steel plate. Attach plate with security fasteners.
3. Steel-Plate Detention Doors: Mount detention lock to inside surface of 0.179-inch (4.56-mm) nominal-thickness steel, 0.134-inch (3.42-mm) nominal-thickness steel, 0.183-inch (4.65-mm) nominal-thickness, galvanized-steel or 0.138-inch (3.50-mm) nominal-thickness, galvanized-steel enclosure with integrally formed mounting flanges. Attach enclosure to steel-plate detention door with security fasteners or rivets.

B. Utility-Door Mechanical Deadlocks, Paracentric Cylinder:

1. Function: Lockbolt retracted and extended by five or six-tumbler paracentric cylinder; keyed one side or two sides.
2. Lockbolt: 1-1/2 inches high by 3/4 inch (38 mm high by 19 mm) thick; 5/8-inch (16-mm) throw.
3. Security Grade: 1, 2, 3 or 4 according to ASTM F1577.

C. Utility-Door Mechanical Deadlocks, Mogul Cylinder:

1. Function: Lockbolt retracted and extended by mogul cylinder; keyed one side or two sides.
2. Lockbolt: 1-1/2 inches high by 3/4 inch (38 mm high by 19 mm) thick; 5/8-inch (16-mm) throw.
3. Security Grade: 1, 2, 3 or 4 according to ASTM F1577.

D. Utility-Door Mechanical Snaplatches, Paracentric Cylinder:

1. Function: Automatic snaplatch when door is closed; latchbolt retracted by five or six-tumbler paracentric cylinder; keyed one side or two sides.
2. Latchbolt: 1 inch high by 7/16 inch (25 mm high by 11 mm) thick; 5/16-inch (8-mm) throw.
3. Security Grade: 1, 2, 3 or 4 according to ASTM F1577.

E. Utility-Door Mechanical Snaplatches, Mogul Cylinder:

1. Function: Automatic snaplatch when door is closed; latchbolt retracted by mogul cylinder; keyed one side or two sides.
2. Latchbolt: 1 inch high by 7/16 inch (25 mm high by 11 mm) thick; 5/16-inch (8-mm) throw.
3. Security Grade: 1, 2, 3 or 4 according to ASTM F1577.

F. Mechanical Concealed Snaplatches, Paracentric Cylinder:

1. Function: Automatic snaplatch when door is closed; latchbolt retracted by five-tumbler paracentric cylinder; keyed one side. When closed, latch is concealed within lock case.
2. Latchbolt: 1 inch high by 7/16 inch (25 mm high by 11 mm) thick; 7/16-inch (11-mm) throw.
3. Provide angled strike.
4. Security Grade: 1, 2, 3 or 4 according to ASTM F1577.

G. Mechanical Snaplatches, Paracentric Cylinder:

1. Function: Automatic snaplatch when door is closed (slam locking); latchbolt retracted by half turn and extended by full turn in opposite direction of five or six-tumbler paracentric cylinder; keyed one side or two sides.

    a. Knob operation retracts latchbolt unless deadlocked. Locate knobs on one side or two sides.

2. Latchbolt: 2-inch-high by 3/4-inch (51-mm-high by 19-mm) thick steel, with two case-hardened-steel insert pins; 3/4-inch (19-mm) throw; 1/2-inch (13-mm) or 1-1/4-inch (32-mm) bolt projection when retracted.
3. Listed and labeled for use on fire doors.
4. Security Grade: 1, 2, 3 or 4 according to ASTM F1577.

H. Mechanical Deadlatches/Deadlocks, Paracentric Cylinder:

1. Function: Automatic snaplatch and automatic deadlock through action of actuator when door is closed (slam locking); latchbolt retracted by five or six-tumbler paracentric cylinder; keyed one side or two sides.

2. Latchbolt: 2-inch-high by 3/4-inch (51-mm-high by 19-mm) thick steel, with two case-hardened-steel insert pins; 3/4-inch (19-mm) throw; 1/2-inch (13-mm) or 1-1/4-inch (32-mm) bolt projection when retracted.
3. Deadlock Actuator: 3/4-inch-high by 3/4-inch (19-mm-high by 19-mm-) thick steel; 1/2-inch (13-mm) throw.
4. Listed and labeled for use on fire doors.
5. Security Grade: 1, 2, 3 or 4 according to ASTM F1577.

I. Mechanical Deadlocks, Paracentric Cylinder:

1. Function: Deadlocked in both locked and unlocked position; latchbolt retracted and extended by five or six-tumbler paracentric cylinder; keyed one side or two sides.
2. Latchbolt: 2-inch-high by 3/4-inch (51-mm-high by 19-mm) thick steel, with two case-hardened-steel insert pins; 3/4-inch (19-mm) throw; 1/2-inch (13-mm) or 1-1/4-inch (32-mm) bolt projection when retracted.
3. Security Grade: 1, 2, 3 or 4 according to ASTM F1577.

2.5 ELECTROMECHANICAL DETENTION LOCKS AND LATCHES

A. Connectors: Provide electromechanical detention locks and latches with factory-wired plug connector with 6-inch (152-mm) wire pigtail.

1. Provide security ring for installation of electromechanical detention lock in hollow-metal detention frame, welded to frame or access cover.
2. Equip direct-current, solenoid-operated detention locks and latches with diode transient voltage protection at each locking device.

B. Solenoid-Operated Deadlatches, Paracentric Cylinder:

1. Function: Remote switch activates electric solenoid that retracts latchbolt; automatic latching and deadlocking when door is closed (slam locking). Latchbolt can be mechanically retracted by five or six-tumbler paracentric cylinder; keyed one side or two sides; if latchbolt is retracted by key, it remains retracted until relocked by key.

    a. Latchback: Latchbolt remains retracted until door is opened 2 inches (51 mm), then releases or as long as control switch is activated; latchbolt extends when power is discontinued.
    b. If power fails, latchbolt automatically deadlocks (fail secure).

2. Latchbolt: 2-inch-high by 3/4-inch (51-mm-high by 19-mm) thick hardened steel; 3/4-inch (19-mm) throw.
3. Provide internal deadlock indicator switch.
4. Provide roller-type deadlock actuator.
5. Voltage: 120-V ac.
6. Listed and labeled for use on fire doors.
7. Security Grade: 1, 2, 3 or 4 according to ASTM F1577.

C. Motor-Operated Deadlatches, Paracentric Cylinder:

1. Function: Remote switch activates electric motor that retracts latchbolt; automatic latching and deadlocking when door is closed (slam locking). Latchbolt can be mechanically retracted by five or six-tumbler paracentric cylinder; keyed one side or two sides; if latchbolt is retracted by key, it remains retracted until relocked by key.

    a. Latchback: Latchbolt remains retracted until door is opened 2 inches (51 mm), then releases or as long as control switch is activated; latchbolt extends when power is discontinued.
    b. If power fails, latchbolt automatically deadlocks (fail secure).

2. Latchbolt: 2-inch-high by 3/4-inch (51-mm-high by 19-mm) thick hardened steel; 3/4-inch (19-mm) throw.
3. Provide internal deadlock indicator switch.
4. Provide roller-type deadlock actuator.
5. Voltage: 120-V ac or 24-V dc.
6. Listed and labeled for use on fire doors.
7. Security Grade: 1, 2, 3 or 4 according to ASTM F1577.

D. Solenoid-Operated Deadlatches, Mogul Cylinder:

1. Function: Remote switch activates electric solenoid that retracts latchbolt; automatic latching and deadlocking when door is closed (slam locking). Latchbolt can be mechanically retracted by mogul cylinder; keyed one side or two sides.

    a. Latchback: Latchbolt remains retracted until door is opened 2 inches (51 mm), then releases or as long as control switch is activated; latchbolt extends when power is discontinued.
    b. Local Electric Key (LEK): Inmate key operates lock electrically when enabled; staff key always operates lock manually and electrically.
    c. Key Holdback: If latchbolt is retracted by key, it remains retracted until relocked by key.
    d. Knob operation retracts latchbolt; always active.
    e. If power fails, latchbolt automatically deadlocks (fail secure).

2. Latchbolt: 1-1/2-inch-high by 3/4-inch (38-mm-high by 19-mm) thick hardened steel; 1-inch (25-mm) throw.
3. Provide internal deadlock indicator switch.
4. Provide roller-type deadlock actuator.
5. Voltage: 120-V ac.
6. Listed and labeled for use on fire doors.
7. Security Grade: 1, 2, 3 or 4 according to ASTM F1577.

E. Motor-Operated Deadlatches, Mogul Cylinder:

1. Function: Remote switch activates electric motor that retracts latchbolt; automatic latching and deadlocking when door is closed (slam locking). Latchbolt can be mechanically retracted by mogul cylinder; keyed one side or two sides.

a. Latchback: Latchbolt remains retracted until door is opened 2 inches (51 mm), then releases or as long as control switch is in open position; latchbolt extends when control switch is moved to locked position.
b. Local Electric Key (LEK): Inmate key operates lock electrically when enabled; staff key always operates lock manually and electrically.
c. Key Holdback: If latchbolt is retracted by key, it remains retracted until relocked by key.
d. Knob operation retracts latchbolt; always active.
e. If power fails, latchbolt automatically deadlocks (fail secure).

2. Latchbolt: 1-1/2-inch-high by 3/4-inch (38-mm-high by 19-mm) thick hardened steel; 1-inch (25-mm) throw.
3. Provide internal deadlock indicator switch.
4. Provide roller-type deadlock actuator.
5. Voltage: 120-V ac or 24-V dc.
6. Listed and labeled for use on fire doors.
7. Security Grade: 1, 2, 3 or 4 according to ASTM F1577.

F. Solenoid-Operated Deadlatches, Commercial Cylinder:

1. Function: Remote switch activates electric solenoid that retracts latchbolt; automatic latching and deadlocking when door is closed (slam locking). Latchbolt can be mechanically retracted by high-security commercial cylinder; keyed one side or two sides.

a. Latchback: Latchbolt remains retracted until door is opened 2 inches (51 mm), then releases or as long as control switch is activated; latchbolt extends when power is discontinued.
b. Local Electric Key (LEK): Inmate key operates lock electrically when enabled; staff key always operates lock manually and electrically.
c. If power fails, latchbolt automatically deadlocks (fail secure).

2. Latchbolt: 1-1/2-inch-high by 5/8-inch (38-mm-high by 16-mm) thick hardened steel; 3/4-inch (19-mm) throw.
3. Provide internal deadlock indicator switch.
4. Deadlock Actuator: Stainless steel.
5. Strike: Stainless steel.
6. Voltage: 24-V dc.
7. Listed and labeled for use on fire doors.
8. Security Grade: 1, 2, 3 or 4 according to ASTM F1577.

G. Motor-Operated Deadlatches, Commercial Cylinder:

1. Function: Remote switch activates electric motor that retracts latchbolt; automatic latching and deadlocking when door is closed (slam locking). Latchbolt can be mechanically retracted by high-security commercial cylinder; keyed one side or two sides.

a. Latchback: Latchbolt remains retracted until door is opened 2 inches (51 mm), then releases or as long as control switch is in open position; latchbolt extends when control switch is moved to locked position.

b. Local Electric Key (LEK): Inmate key operates lock electrically when enabled; staff key always operates lock manually and electrically.
c. If power fails, latchbolt automatically deadlocks (fail secure).

2. Latchbolt: 1-1/2-inch-high by 5/8-inch (38-mm-high by 16-mm) thick hardened steel; 3/4-inch (19-mm) throw.
3. Provide internal deadlock indicator switch.
4. Deadlock Actuator: Stainless steel.
5. Strike: Stainless steel.
6. Voltage: 24-V dc.
7. Listed and labeled for use on fire doors.
8. Security Grade: 1, 2, 3 or 4 according to ASTM F1577.

2.6 DETENTION LOCK TRIM

A. Levers: Solid stainless steel.

B. Knobs: Stainless steel or Brass.

C. Escutcheons for Paracentric Locks: 0.125-inch (3.18-mm-) thick, 3-inch- (75-mm) diameter stainless steel with BHMA 630 or brass with BHMA 606 finish. Attach with security fasteners.

1. Style: Single wing, Double wing, Single or double wing as required by lock function or as indicated.

D. Cylinder Shields for Paracentric Locks: 0.125-inch (3.18-mm) thick, 3-inch (75-mm) diameter stainless steel with BHMA 630 or brass with BHMA 606 finish and swinging cover to protect keyhole. Attach with security fasteners.

1. Style: Single wing, Double wing, Single or double wing as required by lock function or as indicated.

2.7 DETENTION CYLINDERS AND KEYING

A. Source Limitations: Subject to compliance with requirements, provide cylinders and keying for paracentric and mogul cylinders by same manufacturer as for detention locks and latches.

B. Paracentric Cylinders: Manufacturer's standard lever-tumbler type, constructed from one-piece spring-tempered brass; with tumblers activated by phosphor bronze springs; five tumblers per lock.

C. Mogul Cylinders: Manufacturer's standard pin-tumbler type, minimum 2-inch (51-mm) diameter; body constructed from brass or bronze, stainless steel, or nickel silver; with stainless-steel tumblers and engaging cylinder balls; complying with the following:

1. Number of Pins: Five, Six, Seven or as directed.
2. Mortise Type: Threaded cylinders with rings and straight- or clover-type cam.

a. High-Security Grade: Listed and labeled as complying with pick- and drill-resistant testing requirements in UL 437 (Suffix A).

3. Finish: BHMA 606, BHMA 626, BHMA 630 or as directed.

D. Keying System: Provide a factory-registered keying system complying with the following requirements:

1. Paracentric cylinders operated by change keys only.
2. No Master Key System: Mogul cylinders operated by change keys only.
3. Master Key System: Mogul cylinders operated by a change key and a master key.
4. Grand Master Key System: Mogul cylinders operated by a change key, a master key, and a grand master key.
5. Great-Grand Master Key System: Mogul cylinders operated by a change key, a master key, a grand master key, and a great-grand master key.
6. Existing System: Master key or grand master key mogul-cylinder locks to Owner's existing system.
7. Existing System: Re-key Owner's existing master key system for mogul-cylinder locks into new keying system.

E. Keys: Provide cast silicon-bronze copper alloy keys complying with the following:

1. Stamping: Permanently inscribe each key with a visual key-control number and include the following notation:

a. "DO NOT DUPLICATE" or Information to be furnished by Owner.

2. Quantity: In addition to one extra blank key for each lock, provide the following:

a. Cylinder Change Keys: Three or as directed.
b. Master Key(s): One or as directed.
c. Grand Master Key(s): One or as directed.
d. Great-Grand Master Key(s): One or as directed.

2.8 SWITCHES

A. General: Provide switches configured with contact type required for functions indicated, including multiple circuiting where required by functional performance of Section 285211 "Detention Monitoring and Control Systems."

B. Concealed, Magnetic Door Position Switches: Consist of actuating magnet mortised into detention door and switch mortised into frame; with stainless-steel faceplates; 24-V dc, factory wired with plug connector. Wire in series with lock monitors. Attach with security fasteners.

C. Concealed, Mechanical Door Position Switches: Consist of metal track mortised into head of detention door connected by steel actuator arm to steel actuator mortised into frame; switch fully concealed when door is in closed position; with stainless-steel faceplate; 120-V ac; factory wired with plug connector. Action of door mechanically activates switch. Wire in series with lock monitors. Attach with security fasteners.

D. Surface-Mounted Door Position Switches: Switch enclosed in 0.134-inch (3.42-mm) nominal-thickness steel enclosure, factory primed for painting; 120-V ac; factory wired with plug connector. Wire in series with lock monitors. Attach with security fasteners.

1. Galvanize enclosure for exterior locations and where indicated.

E. Strike Indicator Switches: Designed to be mortised behind strike and to indicate whether door is locked or unlocked; enclosed in metal strike box. Wire in series with door position switches. Attach with security fasteners.

1. Voltage: 120-V dc, 240-V ac or as indicated.
2. Locations: At doors with mechanical detention lock or Where indicated.
3. Manufacturer: Same as detention lock.

F. Inmate Door-Control Switches: Momentary or Maintained-contact push-button switch with metal faceplate. Attach with security fasteners.
1.
2. Material and Finish: Brass with BHMA 606, Brass with BHMA 626 or Stainless steel with BHMA 630 finish.
3. Operation: When activated from remote location, switch allows inmate operation of electric cell door lock.

G. Push-Button, Inmate Door-Control Switches: Momentary or Maintained-contact push-button switch for installation without faceplate. Attach with security fasteners.

1. Material and Finish: Brass with BHMA 606, Brass with BHMA 626 or Stainless steel with BHMA 630 finish.
2. Operation: When activated from remote location, switch allows inmate operation of electric cell door lock.

2.9 DETENTION OPERATING TRIM

A. Standard: BHMA A156.6, Grade 1.

B. Surface-Mounted Door Pulls: 8-3/4-inch (222-mm) overall length and 2-1/4-inch (57-mm) projection; attach to door with two security fasteners.

1. Material: Cast bronze with BHMA 606 or BHMA 626 finish.
2. Material: Cast stainless steel with BHMA 630 finish.

C. Round, Surface-Mounted Door Pulls: 7-inch (178-mm) overall length by 1-inch (25-mm) diameter solid bar, with 2-1/4-inch (57-mm) projection; attach to door with two security through bolts.

1. Material: Cast or extruded bronze with BHMA 606 or BHMA 626 finish.
2. Material: Cast stainless steel with BHMA 630 finish.

D. Flush Door Pulls: 5 inches high by 4 inches wide by 1 inch deep (127 mm high by 102 mm wide by 25 mm deep), with 1/8-inch (3-mm) thick faceplate; attach to door with four security fasteners.

1. Material: Formed, wrought, or cast brass/bronze with BHMA 606 or BHMA 626 finish.
2. Material: Formed or cast stainless steel with BHMA 630 finish.

E. Knob Pulls: 2-inch (51-mm) diameter; fabricated from solid brass with BHMA 606 or BHMA 626 finish. Attach with security fasteners.

2.10 SECURITY DOOR CLOSERS

A. Standard: BHMA A156.4, Grade 1.

1. Certified Products: Provide security door closers listed in BHMA's "Directory of Certified Door Products."

B. Surface-Mounted Security Door Closers:

1. Arms: Minimum 3/8-inch (9.5-mm) thick by 1-1/8-inch (29-mm) wide, rectangular steel main arm; 5/16-inch (8-mm) thick by 1-inch (25-mm) wide, rectangular steel secondary arm; full rack-and-pinion type; fabricated with orbital-riveted, pinned, or welded elbow and arm shoe/soffit plate joints designed to prevent disassembly with ordinary hand tools.
2. Cover: Heavy-duty metal, attached with four security fasteners.
3. Mounting: Attach security door closer with security fasteners.

C. Concealed Security Door Closers:

1. Construction: Forged-steel arm; security roller; with track concealed in head of detention door, designed to eject foreign objects during opening and closing; fabricated with joints designed to prevent disassembly with ordinary hand tools. Closer arm and track fully concealed when door is closed.
2. Cover Plates: Heavy-duty metal, attached with security fasteners.
3. Provide door position switch integral to closer.

D. Unit Size: Comply with manufacturer's written recommendations for size of security door closers depending on size of door, exposure to weather, and anticipated frequency of use. Provide factory-sized closers, adjustable to comply with field conditions and requirements for opening force.

2.11 DETENTION DOOR STOPS

A. Detention Floor Stops: 1-1/2-inch-high by 2-inch (38-mm-high by 51-mm) diameter, rubber bumper mounted on steel lag bolt; BHMA A156.16; install in floor with nonshrink grout; for detention doors unless wall or other type stops are indicated. Do not mount floor stops where they can impede traffic.

B. Silencers for Detention Door Frames: BHMA A156.16, Grade 1; neoprene or rubber, minimum 1/2-inch (13-mm) diameter; fabricated for drilled-in application to detention door frame. Attach with security fasteners.

2.12 KEY-CONTROL SYSTEM

A. Security Key Cabinets: Metal cabinet for mounting 150 or 300 paracentric or mogul keys.

1. Cabinet: Minimum 16 inches (406 mm) wide by 24 inches (610 mm) high by 6-1/2 inches (165 mm) deep; formed from 0.134-inch (3.42-mm) nominal-thickness steel sheet. Provide 0.060-inch (1.52-mm) nominal-thickness, steel-sheet interior panels, supported on pivots.
2. Doors: Formed from same material as cabinet, supported by heavy-duty, continuous, side hinge welded to cabinet and door; with tumbler deadlock.
3. Cross-Index System: Set up by detention key-control manufacturer; include labels, two sets of key tags with self-locking key holders, key-gathering envelopes, temporary and permanent markers, and the following:

    a. Card Index: Furnish four sets of index cards for recording key information. Include three receipt forms for each key-holding hook.
    b. Computer Software: Furnish cross-index software for recording and reporting key-holder listings, tracking keys and lock and key history, and printing receipts for transactions. Include instruction manual.

B. Finishes: Prime or Factory finish.

1. Color and Gloss: As directed.

2.13 FABRICATION

A. Base Metals: Produce detention door hardware units of base metal, fabricated by forming method indicated, using manufacturer's standard metal alloy, composition, temper, and hardness. Furnish metals of a quality equal to or greater than that of specified detention door hardware units and BHMA A156.18 finishes.

B. Fasteners: Provide flat-head security fasteners with finished heads to match surface of detention door hardware.

1. Security Fasteners: Fabricate detention door hardware using security fasteners with head style appropriate for fabrication requirements, strength, and finish of adjacent materials. Provide stainless-steel security fasteners in stainless-steel materials.
2. Concealed Fasteners: For detention door hardware units that are exposed when detention door is closed, except for units already specified with concealed fasteners. Do not use through bolts for installation where bolt head or nut on opposite face is exposed unless it is the only means of securely attaching detention door hardware. Where using through bolts on hollow-metal detention door and frame construction, provide sleeves for each through bolt.

2.14 HARDWARE FINISHES

A. Standard: Comply with BHMA A156.18.

2.15 SECURITY FASTENERS

A. Operable only by tools produced by fastener manufacturer or other licensed fabricator for use on specific fastener type.

1. Drive-System Type: Pinned Torx-Plus or Pinned Torx.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine detention doors and frames, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance of the Work.

B. Examine roughing-in for embedded and built-in anchors to verify actual locations of detention door hardware connections before detention door hardware installation.

C. Inspect built-in and cast-in anchor installations, before installing detention door hardware, to verify that anchor installations comply with requirements. Prepare inspection reports.

D. Examine roughing-in for electrical power systems to verify actual locations of connections before detention door hardware installation.

3.2 PREPARATION

A. Steel Detention Doors and Frames: Comply with BHMA A156.115 Series.

1. Surface-Applied Detention Door Hardware: Drill and tap detention doors and frames according to SDI A250.6.

3.3 INSTALLATION

A. Mounting Heights: DHI's "Recommended Locations for Builders' Hardware for Custom Steel Doors and Frames."

B. Where cutting and fitting are required to install detention door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work. Do not install surface-mounted items until finishes have been completed on substrates involved.

1. Set units level, plumb, and true to line and location. Adjust and reinforce attachment substrates as necessary for proper installation and operation.
2. Drill and countersink units that are not factory prepared for anchorage fasteners. Space fasteners and anchors according to industry standards.

C. Install interconnecting wiring and connectors between detention door hardware devices. Terminate device wiring for detention door hardware installed in swinging doors at a plug-type connector located in lock pocket or door frame junction box.

D. Security Fasteners: Install detention door hardware using security fasteners with head style appropriate for installation requirements, strength, and finish of adjacent materials.

3.4 FIELD QUALITY CONTROL

A. Inspect installed products to verify compliance with requirements. Prepare inspection reports and indicate compliance with and deviations from the Contract Documents.

B. Perform the following tests and inspections:

1. After installing electrically powered detention door hardware and after electrical circuitry has been energized, test detention door hardware for compliance with requirements.

    a. Test: Operate lock of each door and group of doors in normal remote, normal local, and emergency operating modes. Verify that remote controls operate correct door locks and in correct sequence.

2. Verify that lock bolts engage strikes with required bolt projection.

C. Prepare field quality-control certification endorsed by Detention Specialist that states installed products comply with requirements in the Contract Documents.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain detention door hardware and detention door hardware finishes.

3.6 DETENTION DOOR HARDWARE SCHEDULE

A. General: Provide detention door hardware for each detention door to comply with requirements in this Section and with detention door hardware sets.

END OF SECTION 087163

SECTION 088000 - GLAZING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Glass for windows, doors, interior borrowed lites, storefront framing, glazed curtain walls, sloped glazing or skylights.
2. Glazing sealants and accessories.

1.2 COORDINATION

A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Glass Samples: For each type of glass product other than clear monolithic vision glass; 12 inches (300 mm) square.

D. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

E. Delegated-Design Submittal: For glass indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

A. Preconstruction adhesion and compatibility test report.

1.5 QUALITY ASSURANCE

A. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C1021 to conduct the testing indicated.

1.6 PRECONSTRUCTION TESTING

A. Preconstruction Adhesion and Compatibility Testing: Test each glass product, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.

1. Testing is not required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.

1.7 WARRANTY

A. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.

1. Warranty Period: 10 years from date of Substantial Completion.

B. Manufacturer's Special Warranty for Laminated Glass: Manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1. Warranty Period: As directed Five or 10 years from date of Substantial Completion.

C. Manufacturer's Special Warranty for Insulating Glass: Manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design glazing.

B. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated determined according to the International Building Code and ASTM E1300.

1. Design Wind Pressures: As indicated on Drawings.
2. Design Snow Loads: As indicated on Drawings.
3. Thickness of Patterned Glass: Base design of patterned glass on thickness at thinnest part of the glass.
4. Differential Shading: Design glass to resist thermal stresses induced by differential shading within individual glass lites.

C. Windborne-Debris Impact Resistance: As directed Exterior glazing shall pass ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone 1, 2, 3 or 4 for basic or enhanced protection.

1. Large-Missile Test: For glazing located within 30 feet (9.1 m) of grade.
2. Small-Missile Test: For glazing located between 30 feet (9.1 m) and 60 feet (18.3 m) above grade.

D. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II.

E. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:

1. U-Factors: Center-of-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as Btu/sq. ft. x h x deg F (W/sq. m x K).
2. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
3. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

2.3 GLASS PRODUCTS, GENERAL

A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below unless more stringent requirements are indicated. See these publications for glazing terms not otherwise defined in this Section or in referenced standards.

1. GANA Publications: "Laminated Glazing Reference Manual" and "Glazing Manual."
2. AAMA Publications: AAMA GDSG-1, "Glass Design for Sloped Glazing," and AAMA TIR A7, "Sloped Glazing Guidelines."
3. IGMA Publication for Sloped Glazing: IGMA TB-3001, "Guidelines for Sloped Glazing."
4. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."

B. Safety Glazing Labeling: As directed Where safety glazing is indicated, permanently mark glazing with certification label of the SGCC, the SGCC or another certification agency acceptable to authorities having jurisdiction or manufacturer. Label shall indicate

manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.

C. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IGCC.

D. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass that complies with performance requirements and is not less than the thickness indicated.

E. Strength: Where annealed float glass is indicated, provide annealed float glass, heat-strengthened float glass, or fully tempered float glass as needed to comply with "Performance Requirements" Article. Where heat-strengthened float glass is indicated, provide heat-strengthened float glass or fully tempered float glass as needed to comply with "Performance Requirements" Article. Where fully tempered float glass is indicated, provide fully tempered float glass.

2.4 GLASS PRODUCTS

A. Clear Annealed Float Glass: ASTM C1036, Type I, Class 1 (clear), Quality-Q3.

B. Ultraclear Float Glass: ASTM C1036, Type I, Class I (clear), Quality-Q3; and with visible light transmission of not less than 91 percent and solar heat gain coefficient of not less than 0.87.

C. Tinted Annealed Float Glass: ASTM C1036, Type I, Class 2 (tinted), Quality-Q3.

D. Fully Tempered Float Glass: ASTM C1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.

E. Heat-Strengthened Float Glass: ASTM C1048, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.

F. Pyrolytic-Coated, Low-Maintenance Glass: Clear float glass with a coating on first surface having both photocatalytic and hydrophilic properties that act to loosen dirt and to cause water to sheet evenly over the glass instead of beading.

G. Ceramic-Coated Vision Glass: ASTM C1048, Condition C, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3; and complying with Specification No. 95-1-31 in GANA's "Engineering Standards Manual."

H. Reflective-Coated Vision Glass: ASTM C1376.

I. Ceramic-Coated Spandrel Glass: ASTM C1048, Type I, Condition B, Quality-Q3.

J. Silicone-Coated Spandrel Glass: ASTM C1048, Type I, Condition C, Quality-Q3.

K. Reflective-Coated Spandrel Glass: ASTM C1376, Kind CS.

2.5 LAMINATED GLASS

A. Laminated Glass: ASTM C1172. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.

1. Construction: Laminate glass with polyvinyl butyral interlayer, ionomeric polymer interlayer or cast-in-place and cured-transparent-resin interlayer to comply with interlayer manufacturer's written instructions.
2. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
3. Interlayer Color: Clear unless otherwise indicated.

B. Windborne-Debris-Impact-Resistant Laminated Glass: Comply with requirements specified above for laminated glass except laminate glass with one of the following to comply with interlayer manufacturer's written instructions:

1. Polyvinyl butyral interlayer.
2. Polyvinyl butyral interlayers reinforced with polyethylene terephthalate film.
3. Ionomeric polymer interlayer.
4. Cast-in-place and cured-transparent-resin interlayer.
5. Cast-in-place and cured-transparent-resin interlayer reinforced with polyethylene terephthalate film.

2.6 INSULATING GLASS

A. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified according to ASTM E2190.

1. Sealing System: Dual seals.
2. Perimeter Spacer: Manufacturer's standard spacer material and construction, Aluminum with mill or clear anodic finish, Aluminum with black, color anodic finish, Aluminum with bronze, color anodic finish, Aluminum with powdered metal paint finish in color selected by Architect, Galvanized steel, Stainless steel, Polypropylene-covered stainless steel in color selected by Architect, Thermally broken aluminum, Nonmetallic laminate, Nonmetallic tube or Silicone with integral desiccant and vapor barrier.

2.7 GLAZING SEALANTS

A. General:

1. Compatibility: Compatible with one another and with other materials they contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.

3. Colors of Exposed Glazing Sealants: As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.

B. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 100/50, Use NT.
1. Applications: As directed.

C. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 50, Use NT.
1. Applications: As directed.

D. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 25, Use NT.
1. Applications: As directed.

E. Glazing Sealant: Acid-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 25, Use NT.
1. Applications: As directed.

2.8 GLAZING TAPES

A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C1281 and AAMA 800 for products indicated below:

1. AAMA 804.3 tape, where indicated.
2. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
3. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.

B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:

1. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

2.9 MISCELLANEOUS GLAZING MATERIALS

A. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.

B. Setting Blocks:

1. As directed EPDM, Silicone, Neoprene or Santoprene with a Shore A durometer hardness of 85, plus or minus 5.
2. Type recommended by sealant or glass manufacturer.

C. Spacers:

1. Neoprene blocks or continuous extrusions of hardness required by glass manufacturer to maintain glass lites in place for installation indicated.
2. Type recommended by sealant or glass manufacturer.

D. Edge Blocks:

1. As directed EPDM, Silicone, Neoprene or Santoprene with a Shore A durometer hardness per manufacturer's written instructions.
2. Type recommended by sealant or glass manufacturer.

E. Cylindrical Glazing Sealant Backing: ASTM C1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

PART 3 - EXECUTION

3.1 GLAZING, GENERAL

A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.

B. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass includes glass with edge damage or other imperfections that, when installed, could weaken glass, impair performance, or impair appearance.

C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.

D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.

E. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.

F. Provide spacers for glass lites where length plus width is larger than 50 inches (1270 mm).

G. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

3.2 TAPE GLAZING

A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.

B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.

C. Cover vertical framing joints by applying tapes to heads and sills first, then to jambs. Cover horizontal framing joints by applying tapes to jambs, then to heads and sills.

D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.

E. Apply heel bead of elastomeric sealant.

F. Center glass lites in openings on setting blocks, and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.

G. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.3 GASKET GLAZING (DRY)

A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.

B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.

C. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks, and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

D. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks, and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

E. Install gaskets so they protrude past face of glazing stops.

3.4 SEALANT GLAZING (WET)

A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.

B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.

C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.5 CLEANING AND PROTECTION

A. Immediately after installation remove nonpermanent labels and clean surfaces.

B. Protect glass from contact with contaminating substances resulting from construction operations. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.

1. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer. Remove and replace glass that cannot be cleaned without damage to coatings.

C. Remove and replace glass that is damaged during construction period.

3.6 MONOLITHIC GLASS SCHEDULE

A. Glass Type GL-#: As directed Clear annealed, heat-strengthened or fully tempered float glass.

1. Minimum Thickness: 6 mm.
2. Safety glazing required.

B. Glass Type GL-#: As directed Ultraclear annealed, heat-strengthened or fully tempered float glass.

1. Basis-of-Design Product: As directed AGC Glass Company North America, Inc.; Krystal Klear, Guardian Industries Corp.; Ultrawhite, Pilkington North America Inc.; Optiwhite, PPG Industries, Inc.; Starphire or Saint-Gobain Corporation; Diamant.
2. Minimum Thickness: 6 mm.
3. Safety glazing required.

C. Glass Type GL-#: As directed Pyrolytic-coated, self-cleaning, low-maintenance, clear annealed, heat-strengthened or fully tempered float glass.

1. Basis-of-Design Product: As directed Cardinal Glass Industries; Neat, Pilkington North America Inc.; Activ, Saint-Gobain Corporation; Bioclean.
2. Minimum Thickness: 6 mm.
3. Safety glazing required.

D. Glass Type GL-#: As directed Tinted annealed, heat-strengthened or fully tempered float glass.

1. Basis-of-Design Product:.
2. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
3. Minimum Thickness: 6 mm.
4. Visible Light Transmittance: Percent minimum As directed.
5. Solar Heat Gain Coefficient: Maximum As directed.
6. Safety glazing required.

E. Glass Type GL-#: Ceramic-coated vision glass; heat-strengthened or fully tempered float glass.

1. Basis-of-Design Product: As directed.
2. Glass: As directed Clear, Ultraclear or Tinted float glass.
3. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
4. Ceramic Coating Color and Pattern: As selected by Architect from manufacturer's full range or Match Architect's samples.
5. Minimum Thickness: 6 mm.
6. Coating Location: Second surface.
7. Visible Light Transmittance: Percent minimum As directed.
8. Solar Heat Gain Coefficient: Maximum As directed.
9. Safety glazing required.

F. Glass Type GL-#: As directed Reflective-coated vision glass; annealed, heat-strengthened or fully tempered float glass.

1. Basis-of-Design Product: As directed
2. Kind: Kind CV (coated vision glass), except that Kind CO (coated overhead glass) may be used where the lower edge of the glass is more than 6 feet (1.8 m) above the adjacent floor level or cannot be approached closer than 10 feet (3.0 m).
3. Coating Type: As directed Pyrolytic or Sputter-coating (vacuum deposition process).
4. Coating Color: As directed Gold, Pewter or Silver.
5. Glass: As directed Clear or Tinted float glass.
6. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
7. Minimum Thickness: 6 mm.
8. Coating Location: As directed First or Second surface.
9. Outdoor Visible Reflectance: Percent maximum As directed.
10. Visible Light Transmittance: Percent minimum As directed.
11. Solar Heat Gain Coefficient: Maximum As directed.
12. Safety glazing required.

G. Glass Type GL-#: As directed Ceramic-coated spandrel glass; heat-strengthened or fully tempered float glass.

1. Basis-of-Design Product: As directed.
2. Glass: As directed Clear, Ultraclear or Tinted float glass.
3. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
4. Coating Color: As selected by Architect from manufacturer's full range or Match Architect's samples.
5. Minimum Thickness: 6 mm.
6. Coating Location: Second surface.

H. Glass Type GL-#: As directed Silicone-coated spandrel glass; heat-strengthened or fully tempered float glass.

1. Basis-of-Design Product: As directed.
2. Glass: As directed Clear, Ultraclear or Tinted float glass.
3. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
4. Coating Color: As selected by Architect from manufacturer's full range or Match Architect's samples.

5. Minimum Thickness: 6 mm.
6. Coating Location: Second surface.

I. Glass Type GL-#: Reflective-coated spandrel glass; heat-strengthened or fully tempered float glass.

1. Basis-of-Design Product: As directed.
2. Coating Type: As directed Pyrolytic or Sputter-coating (vacuum deposition process).
3. Coating Color: As directed Gold, Pewter or Silver.
4. Glass: As directed Clear, Ultraclear or Tinted float glass.
5. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
6. Minimum Thickness: 6 mm.
7. Coating Location: As directed First or Second surface.
8. Outdoor Visible Reflectance: Percent maximum As directed.
9. Factory apply manufacturer's standard opacifier to coated second surface of lites, with resulting products complying with Specification No. 89-1-6 in GANA's "Engineering Standards Manual":

3.7 LAMINATED GLASS SCHEDULE

A. Glass Type GL-#: As directed Clear laminated glass with two plies of annealed or heat-strengthened, fully tempered, ultraclear annealed, ultraclear heat-strengthened or ultraclear fully tempered float glass.

1. Basis-of-Design Product: As directed.
2. Minimum Thickness of Each Glass Ply: 3 mm, 4 mm, 5 mm, 6 mm or As indicated.
3. Interlayer Thickness: As directed 0.030 inch (0.76 mm), 0.060 inch (1.52 mm) or 0.090 inch (2.29 mm).
4. Safety glazing required.

B. Glass Type GL-#: As directed Tinted laminated glass with two plies of annealed, heat-strengthened or fully tempered float glass with outer ply tinted and inner ply clear.

1. Basis-of-Design Product: As directed.
2. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
3. Minimum Thickness of Each Glass Ply: 3 mm, 4 mm, 5 mm, 6 mm or As indicated.
4. Interlayer Thickness: As directed 0.030 inch (0.76 mm), 0.060 inch (1.52 mm) or 0.090 inch (2.29 mm).
5. Visible Light Transmittance: Percent minimum As directed.
6. Solar Heat Gain Coefficient: Maximum As directed.
7. Safety glazing required.

C. Glass Type GL-#: As directed Tinted laminated glass with two plies of clear annealed, heat-strengthened or fully tempered float glass and tinted interlayer.

1. Basis-of-Design Product: As directed.
2. Minimum Thickness of Each Glass Ply: 3 mm, 4 mm, 5 mm, 6 mm or As indicated.
3. Interlayer Thickness: As directed 0.030 inch (0.76 mm), 0.060 inch (1.52 mm) or 0.090 inch (2.29 mm).
4. Interlayer Color: As directed Blue-green, Bronze light or Gray.

5. Visible Light Transmittance: Percent minimum As directed.
6. Solar Heat Gain Coefficient: Maximum As directed.
7. Safety glazing required.

D. Glass Type GL-#: As directed Ceramic-coated, laminated vision glass with two plies of heat-strengthened or fully tempered float glass.

1. Basis-of-Design Product: As directed.
2. Outer Ply: As directed Clear, Ultraclear or Tinted float glass.
3. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
4. Inner Ply: As directed Clear or Ultraclear float glass.
5. Ceramic Coating Color and Pattern: As selected by Architect from manufacturer's full range or Match Architect's samples.
6. Minimum Thickness of Each Glass Ply: 3 mm, 4 mm, 5 mm, 6 mm or As indicated.
7. Interlayer Thickness: As directed 0.030 inch (0.76 mm), 0.060 inch (1.52 mm) or 0.090 inch (2.29 mm).
8. Coating Location: As directed Second, Third or Fourth surface.
9. Visible Light Transmittance: Percent minimum As directed.
10. Solar Heat Gain Coefficient: Maximum As directed.
11. Safety glazing required.

E. Glass Type GL-#: Reflective-coated, laminated vision glass with two plies of heat-strengthened or fully tempered float glass with inner ply clear.

1. Basis-of-Design Product: As directed.
2. Kind: Kind CV (coated vision glass), except that Kind CO (coated overhead glass) may be used where the lower edge of the glass is more than 6 feet (1.8 m) above the adjacent floor level or cannot be approached closer than 10 feet (3.0 m).
3. Coating Type: As directed Pyrolytic or Sputter-coating (vacuum deposition process).
4. Coating Color: As directed Gold, Pewter or Silver.
5. Outer Ply: As directed Clear or Tinted float glass.
6. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
7. Minimum Thickness of Each Glass Ply: 3 mm, 4 mm, 5 mm, 6 mm or As indicated.
8. Interlayer Thickness: As directed 0.030 inch (0.76 mm), 0.060 inch (1.52 mm) or 0.090 inch (2.29 mm).
9. Coating Location: As directed First, Second or Third surface.
10. Outdoor Visible Reflectance: Percent maximum As directed.
11. Visible Light Transmittance: Percent minimum As directed.
12. Solar Heat Gain Coefficient: Maximum As directed.
13. Low-Maintenance Coating: Pyrolytic coating on first surface.
14. Safety glazing required.

F. Glass Type GL-#: As directed Low-E-coated, laminated vision glass with two plies of clear annealed, heat-strengthened or fully tempered float glass.

1. Basis-of-Design Product: As directed.
2. Minimum Thickness of Each Glass Ply: 3 mm, 4 mm, 5 mm, 6 mm or As indicated.
3. Interlayer Thickness: As directed 0.030 inch (0.76 mm), 0.060 inch (1.52 mm) or 0.090 inch (2.29 mm).
4. Low-E Coating: As directed Pyrolytic on second, Pyrolytic on third, Sputtered on second, Sputtered on third or Pyrolytic or sputtered on second or third surface.

5. Visible Light Transmittance: Percent minimum As directed.
6. Solar Heat Gain Coefficient: Maximum As directed.
7. Safety glazing required.

G. Glass Type GL-#: Reflective-coated, laminated spandrel glass with two plies of heat-strengthened or fully tempered float glass with inner ply clear.

1. Basis-of-Design Product: As directed.
2. Coating Type: As directed Pyrolytic or Sputter-coating (vacuum deposition process).
3. Coating Color: As directed Gold, Pewter or Silver.
4. Outer Ply: As directed Clear or Tinted float glass.
5. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
6. Minimum Thickness of Each Glass Ply: 3 mm, 4 mm, 5 mm, 6 mm or As indicated.
7. Interlayer Thickness: As directed 0.030 inch (0.76 mm), 0.060 inch (1.52 mm) or 0.090 inch (2.29 mm).
8. Coating Location: As directed First, Second or Third surface.
9. Outdoor Visible Reflectance: Percent maximum As directed.

3.8 INSULATING GLASS SCHEDULE

A. Glass Type GL-#: Clear insulating glass.

1. Basis-of-Design Product: As directed.
2. Overall Unit Thickness: As directed 1 inch (25 mm) or 5/8 inch (16 mm).
3. Minimum Thickness of Each Glass Lite: As directed 3 mm, 4 mm, 5 mm or 6 mm.
4. Outdoor Lite: As directed Annealed, Heat-strengthened or Fully tempered float glass.
5. Interspace Content: As directed Air or Argon.
6. Indoor Lite: As directed Annealed, Heat-strengthened or Fully tempered float glass.
7. Winter Nighttime U-Factor: Maximum As directed.
8. Summer Daytime U-Factor: Maximum As directed.
9. Safety glazing required.

B. Glass Type GL-#: Ultraclear insulating glass.

1. Basis-of-Design Product: As directed.
2. Overall Unit Thickness: As directed 1 inch (25 mm) or 5/8 inch (16 mm).
3. Minimum Thickness of Each Glass Lite: As directed 3 mm, 4 mm, 5 mm or 6 mm.
4. Outdoor Lite: As directed Ultraclear annealed, heat-strengthened or fully tempered float glass.
5. Interspace Content: As directed Air or Argon.
6. Indoor Lite: As directed Ultraclear annealed, heat-strengthened or fully tempered float glass.
7. Winter Nighttime U-Factor: Maximum As directed.
8. Summer Daytime U-Factor: Naximum As directed.
9. Safety glazing required.

C. Glass Type GL-#: Pyrolytic-coated, self-cleaning, low-maintenance, clear insulating glass.

1. Basis-of-Design Product: As directed Cardinal Glass Industries; Neat, Pilkington North America Inc.; Activ or Saint-Gobain Corporation; Bioclean.

2. Overall Unit Thickness: As directed 1 inch (25 mm) or 5/8 inch (16 mm).
3. Minimum Thickness of Each Glass Lite: As directed 3 mm, 4 mm, 5 mm or 6 mm.
4. Outdoor Lite: Pyrolytic-coated, self-cleaning, low-maintenance, clear annealed, heat-strengthened or fully tempered float glass.
5. Interspace Content: As directed Air or Argon.
6. Indoor Lite: As directed Annealed, Heat-strengthened or Fully tempered float glass.
7. Winter Nighttime U-Factor: Maximum As directed.
8. Summer Daytime U-Factor: Maximum As directed.
9. Safety glazing required.

D. Glass Type GL-#: Low-E-coated, clear insulating glass.

1. Basis-of-Design Product: As directed.
2. Overall Unit Thickness: As directed 1 inch (25 mm) or 5/8 inch (16 mm).
3. Minimum Thickness of Each Glass Lite: As directed 3 mm, 4 mm, 5 mm or 6 mm.
4. Outdoor Lite: As directed Annealed, Heat-strengthened, Fully tempered, Ultraclear annealed, Ultraclear heat-strengthened or Ultraclear fully tempered float glass.
5. Interspace Content: As directed Air or Argon.
6. Indoor Lite: As directed Annealed, Heat-strengthened, Fully tempered, Ultraclear annealed, Ultraclear heat-strengthened or Ultraclear fully tempered float glass.
7. Low-E Coating: As directed Pyrolytic on second, Pyrolytic on third, Sputtered on second, Sputtered on third or Pyrolytic or sputtered on second or third surface.
8. Winter Nighttime U-Factor: Maximum As directed.
9. Summer Daytime U-Factor: Maximum As directed.
10. Visible Light Transmittance: Percent minimum As directed.
11. Solar Heat Gain Coefficient: Maximum As directed.
12. Safety glazing required.

E. Glass Type GL-#: Pyrolytic-coated, self-cleaning, low-maintenance, low-E coated, clear insulating glass.

1. Basis-of-Design Product: Cardinal Glass Industries; Neat LoE Pilkington North America Inc.; Activ Energy Advantage Saint-Gobain Corporation; Bioclean Cool-Lite.
2. Overall Unit Thickness: As directed 1 inch (25 mm) or 5/8 inch (16 mm).
3. Minimum Thickness of Each Glass Lite: As directed 3 mm, 4 mm, 5 mm or 6 mm.
4. Outdoor Lite: As directed Pyrolytic-coated, self-cleaning, low-maintenance, clear annealed, heat-strengthened or fully tempered float glass.
5. Interspace Content: As directed Air or Argon.
6. Indoor Lite: As directed Annealed, Heat-strengthened or Fully tempered float glass.
7. Low-E Coating: As directed Pyrolytic on third, Sputtered on second, Sputtered on third or Pyrolytic or sputtered on second or third surface.
8. Winter Nighttime U-Factor: Maximum As directed.
9. Summer Daytime U-Factor: As directed aximum As directed.
10. Visible Light Transmittance: Percent minimum As directed.
11. Solar Heat Gain Coefficient: Maximum As directed.
12. Safety glazing required.

F. Glass Type GL-#: Tinted insulating glass.

1. Basis-of-Design Product: As directed.

2. Overall Unit Thickness: As directed 1 inch (25 mm) or 5/8 inch (16 mm).
3. Minimum Thickness of Each Glass Lite: As directed 3 mm, 4 mm, 5 mm or 6 mm.
4. Outdoor Lite: Tinted annealed, heat-strengthened or fully tempered float glass.
5. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
6. Interspace Content: As directed Air or Argon.
7. Indoor Lite: Clear annealed, heat-strengthened or fully tempered float glass.
8. Winter Nighttime U-Factor: Maximum As directed.
9. Summer Daytime U-Factor: Maximum As directed.
10. Visible Light Transmittance: Percent minimum As directed.
11. Solar Heat Gain Coefficient: Maximum As directed.
12. Safety glazing required.

G. Glass Type GL-#: Low-E-coated, tinted insulating glass.

1. Basis-of-Design Product: As directed.
2. Overall Unit Thickness: As directed 1 inch (25 mm) or 5/8 inch (16 mm).
3. Minimum Thickness of Each Glass Lite: As directed 3 mm, 4 mm, 5 mm or 6 mm.
4. Outdoor Lite: Tinted As directed annealed, heat-strengthened or fully tempered float glass.
5. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
6. Interspace Content: As directed Air or Argon.
7. Indoor Lite: As directed Clear annealed, heat-strengthened or fully tempered float glass.
8. Low-E Coating: As directed Pyrolytic on second, Pyrolytic on third, Sputtered on second, Sputtered on third or Pyrolytic or sputtered on second or third surface.
9. Winter Nighttime U-Factor: Maximum As directed.
10. Summer Daytime U-Factor: Maximum As directed.
11. Visible Light Transmittance: Percent minimum As directed.
12. Solar Heat Gain Coefficient: Maximum As directed.
13. Safety glazing required.

H. Glass Type GL-#: Ceramic-coated, insulating vision glass.

1. Basis-of-Design Product: As directed.
2. Ceramic Coating Color and Pattern: As selected by Architect from manufacturer's full range or Match Architect's samples.
3. Overall Unit Thickness: As directed 1 inch (25 mm) or 5/8 inch (16 mm).
4. Minimum Thickness of Each Glass Lite: As directed 3 mm, 4 mm, 5 mm or 6 mm.
5. Outdoor Lite: As directed Clear, Ultraclear, annealed, heat-strengthened or fully tempered float glass.
6. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
7. Interspace Content: As directed Air or Argon.
8. Indoor Lite: As directed Clear, Ultraclear, annealed, heat-strengthened or fully tempered float glass.
9. Coating Location: As directed Second, Third or Fourth surface.
10. Winter Nighttime U-Factor: Maximum As directed.
11. Summer Daytime U-Factor: Maximum As directed.
12. Visible Light Transmittance: Percent minimum As directed.
13. Solar Heat Gain Coefficient: Maximum As directed.
14. Safety glazing required.

I. Glass Type GL-#: Reflective-coated, insulating glass.

1. Basis-of-Design Product: As directed.
2. Kind: Kind CV (coated vision glass), except that Kind CO (coated overhead glass) may be used where the lower edge of the glass is more than 6 feet (1.8 m) above the adjacent floor level or cannot be approached closer than 10 feet (3.0 m).
3. Coating Type: As directed Pyrolytic or Sputter-coating (vacuum deposition process).
4. Coating Color: As directed Gold, Pewter or Silver.
5. Overall Unit Thickness: As directed 1 inch (25 mm) or 5/8 inch (16 mm).
6. Minimum Thickness of Each Glass Lite: As directed 3 mm, 4 mm, 5 mm or 6 mm.
7. Outdoor Lite: As directed Clear, Tinted, annealed, heat-strengthened or fully tempered float glass.
8. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
9. Interspace Content: As directed Air or Argon.
10. Indoor Lite: As directed Clear annealed, heat-strengthened or fully tempered float glass.
11. Coating Location: As directed First, Second or Third surface.
12. Outdoor Visible Reflectance: Percent maximum.
13. Winter Nighttime U-Factor: Maximum As directed.
14. Summer Daytime U-Factor: Maximum As directed.
15. Visible Light Transmittance: Percent minimum As directed.
16. Solar Heat Gain Coefficient: Maximum As directed.
17. Low-Maintenance Coating: Pyrolytic coating on first surface.
18. Safety glazing required.

J. Glass Type GL-#: As directed Ceramic or Silicone-coated, insulating spandrel glass.

1. Basis-of-Design Product: As directed.
2. Coating Color: As selected by Architect from manufacturer's full range or Match Architect's samples.
3. Overall Unit Thickness: 1 inch (25 mm).
4. Minimum Thickness of Each Glass Lite: As directed 5 mm or 6 mm.
5. Outdoor Lite: As directed Clear, Ultraclear, annealed, heat-strengthened or fully tempered float glass.
6. Interspace Content: As directed Air or Argon.
7. Indoor Lite: As directed Clear, Ultraclear, annealed, heat-strengthened or fully tempered float glass.
8. Coating Location: Fourth surface.
9. Winter Nighttime U-Factor: Maximum As directed.
10. Summer Daytime U-Factor: Maximum As directed.

K. Glass Type GL-#: As directed Ceramic or Silicone-coated, low-E, insulating spandrel glass.

1. Basis-of-Design Product: As directed.
2. Coating Color: As selected by Architect from manufacturer's full range, Match Architect's samples.
3. Overall Unit Thickness: 1 inch (25 mm).
4. Minimum Thickness of Each Glass Lite: As directed 5 mm or 6 mm.
5. Outdoor Lite: As directed Annealed, Heat-strengthened, Fully tempered, Ultraclear annealed, Ultraclear heat-strengthened or Ultraclear fully tempered float glass.
6. Interspace Content: As directed Air or Argon.

7. Indoor Lite: As directed Annealed, Heat-strengthened, Fully tempered, Ultraclear annealed, Ultraclear heat-strengthened or Ultraclear fully tempered float glass.
8. Low-E Coating: As directed Pyrolytic on second, Pyrolytic on third, Sputtered on second, Sputtered on third or Pyrolytic or sputtered on second or third surface.
9. Opaque Coating Location: Fourth surface.
10. Winter Nighttime U-Factor: Maximum As directed.
11. Summer Daytime U-Factor: Maximum As directed.

L. Glass Type GL-#: As directed Ceramic-coated or Silicone-coated, tinted, insulating spandrel glass.

1. Basis-of-Design Product: As directed.
2. Coating Color: As selected by Architect from manufacturer's full range or Match Architect's samples.
3. Overall Unit Thickness: 1 inch (25 mm).
4. Minimum Thickness of Each Glass Lite: As directed 5 mm or 6 mm.
5. Outdoor Lite: Tinted As directed annealed, heat-strengthened or fully tempered float glass.
6. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
7. Interspace Content: As directed Air or Argon.
8. Indoor Lite: Clear annealed, heat-strengthened or fully tempered float glass.
9. Coating Location: Fourth surface.
10. Winter Nighttime U-Factor: Maximum As directed.
11. Summer Daytime U-Factor: Maximum As directed.

3.9 INSULATING-LAMINATED-GLASS SCHEDULE

A. Glass Type GL-#: Clear insulating laminated glass.

1. Basis-of-Design Product: As directed.
2. Overall Unit Thickness: As directed 1-3/16 inch (30 mm), 1 inch (25 mm) or 3/4 inch (19 mm).
3. Minimum Thickness of Outdoor Lite: As directed 3 mm, 4 mm, 5 mm or 6 mm.
4. Outdoor Lite: As directed Heat-strengthened or Fully tempered float glass.
5. Interspace Content: As directed Air or Argon.
6. Indoor Lite: Clear laminated glass with two plies of annealed, heat-strengthened or fully tempered float glass.
    a. Minimum Thickness of Each Glass Ply: As directed 3 mm, 4 mm, 5 mm, 6 mm or As indicated.
    b. Interlayer Thickness: As directed 0.030 inch (0.76 mm), 0.060 inch (1.52 mm) or 0.090 inch (2.29 mm).
7. Winter Nighttime U-Factor: Maximum As directed.
8. Summer Daytime U-Factor: Maximum As directed.
9. Solar Heat Gain Coefficient: Maximum As directed.
10. Safety glazing required.

B. Glass Type GL-#: Low-E-coated, clear insulating laminated glass.

1. Basis-of-Design Product: As directed.
2. Overall Unit Thickness: As directed 1-3/16 inch (30 mm), 1 inch (25 mm) or 3/4 inch (19 mm).
3. Minimum Thickness of Outdoor Lite: As directed 3 mm, 4 mm, 5 mm or 6 mm.
4. Outdoor Lite: As directed Heat-strengthened or Fully tempered float glass.
5. Interspace Content: As directed Air or Argon.
6. Indoor Lite: As directed Clear laminated glass with two plies of annealed, heat-strengthened, fully tempered float glass.

    a. Minimum Thickness of Each Glass Ply: 3 mm, 4 mm, 5 mm, 6 mm or As indicated.
    b. Interlayer Thickness: As directed 0.030 inch (0.76 mm), 0.060 inch (1.52 mm) or 0.090 inch (2.29 mm).

7. Low-E Coating: As directed Pyrolytic on second, Pyrolytic on third, Sputtered on second, Sputtered on third or Pyrolytic or sputtered on second or third surface.
8. Winter Nighttime U-Factor: Maximum As directed.
9. Summer Daytime U-Factor: Maximum As directed.
10. Visible Light Transmittance: Percent minimum As directed.
11. Solar Heat Gain Coefficient: Maximum As directed.
12. Safety glazing required.

C. Glass Type GL-#: Tinted, insulating laminated glass.

1. Basis-of-Design Product: As directed.
2. Overall Unit Thickness: As directed 1-3/16 inch (30 mm), 1 inch (25 mm) or 3/4 inch (19 mm).
3. Minimum Thickness of Outdoor Lite: As directed 3 mm, 4 mm, 5 mm or 6 mm.
4. Outdoor Lite: As directed Tinted heat-strengthened or fully tempered float glass.
5. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
6. Interspace Content: As directed Air or Argon.
7. Indoor Lite: Clear laminated glass with two plies of annealed, heat-strengthened or fully tempered float glass.

    a. Minimum Thickness of Each Glass Ply: 3 mm, 4 mm, 5 mm or 6 mm or As indicated.
    b. Interlayer Thickness: As directed 0.030 inch (0.76 mm), 0.060 inch (1.52 mm) or 0.090 inch (2.29 mm).

8. Winter Nighttime U-Factor: Maximum As directed.
9. Summer Daytime U-Factor: Maximum As directed.
10. Visible Light Transmittance: Percent minimum As directed.
11. Solar Heat Gain Coefficient: Maximum As directed.
12. Safety glazing required.

D. Glass Type GL-#: Low-E-coated, tinted, insulating laminated glass.

1. Basis-of-Design Product: As directed.
2. Overall Unit Thickness: As directed 1-3/16 inch (30 mm), 1 inch (25 mm) or 3/4 inch (19 mm).
3. Minimum Thickness of Outdoor Lite: As directed 3 mm, 4 mm, 5 mm or 6 mm.

4. Outdoor Lite: As directed Tinted heat-strengthened or fully tempered float glass.
5. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
6. Interspace Content: As directed Air or Argon.
7. Indoor Lite: Clear laminated glass with two plies of annealed, heat-strengthened or fully tempered float glass.

    a. Minimum Thickness of Each Glass Ply: 3 mm, 4 mm, 5 mm, 6 mm or As indicated.
    b. Interlayer Thickness: As directed 0.030 inch (0.76 mm), 0.060 inch (1.52 mm) or 0.090 inch (2.29 mm).

8. Low-E Coating: As directed Pyrolytic on second, Pyrolytic on third, Sputtered on second, Sputtered on third or Pyrolytic or sputtered on second or third surface.
9. Winter Nighttime U-Factor: Maximum As directed.
10. Summer Daytime U-Factor: Maximum As directed.
11. Visible Light Transmittance: Percent minimum As directed.
12. Solar Heat Gain Coefficient: Maximum As directed.
13. Safety glazing required.

E. Glass Type GL-#: Reflective-coated, insulating laminated glass.

1. Basis-of-Design Product: As directed.
2. Kind: Kind CV (coated vision glass), except that Kind CO (coated overhead glass) may be used where the lower edge of the glass is more than 6 feet (1.8 m) above the adjacent floor level or cannot be approached closer than 10 feet (3.0 m).
3. Coating Type: As directed Pyrolytic or Sputter-coating (vacuum deposition process).
4. Coating Color: As directed Gold, Pewter or Silver.
5. Overall Unit Thickness: As directed 1-3/16 inch (30 mm) or 1 inch (25 mm).
6. Minimum Thickness of Outdoor Lite: 6 mm.
7. Outdoor Lite: As directed Clear, Tinted, heat-strengthened or fully tempered float glass.
8. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
9. Interspace Content: As directed Air or Argon.
10. Indoor Lite: Clear laminated glass with two plies of annealed, heat-strengthened or fully tempered float glass.

    a. Minimum Thickness of Each Glass Ply: 3 mm, 4 mm, 5 mm, 6 mm or As indicated.
    b. Interlayer Thickness: As directed 0.030 inch (0.76 mm), 0.060 inch (1.52 mm) or 0.090 inch (2.29 mm).

11. Coating Location: As directed First, Second or Third surface.
12. Outdoor Visible Reflectance: Percent maximum As directed.
13. Winter Nighttime U-Factor: Maximum As directed.
14. Summer Daytime U-Factor: Maximum As directed.
15. Visible Light Transmittance: Percent minimum As directed.
16. Solar Heat Gain Coefficient: Maximum As directed.
17. Low-Maintenance Coating: Pyrolytic coating on first surface.
18. Safety glazing required.

END OF SECTION 088000

SECTION 088113 - DECORATIVE GLASS GLAZING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Patterned glass.
2. Coated glass.
3. Acid-etched glass.
4. Sandblasted glass.
5. Laminated glass.
6. Glass with decorative film overlay.
7. Glass with finished edges.

1.2 COORDINATION

A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For decorative glass. Show fabrication and installation details.

C. Glass Samples: For each type of decorative glass, 12 inches (300 mm) square.

D. Decorative Glazing Schedule: List decorative glass types for each location. Use same designations indicated on Drawings.

E. Delegated-Design Submittal: For decorative glass indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

A. Product Certificates: For each type of decorative glass.

B. Preconstruction adhesion and compatibility test report.

C. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under NGA's Certified Glass Installer Program.

B. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C1021 to conduct the testing indicated.

1.7 PRECONSTRUCTION TESTING

A. Preconstruction Adhesion and Compatibility Testing: Test each laminated decorative glass product, glass with decorative film overlay, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.

1. Testing is not required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.

1.8 WARRANTY

A. Special Warranty on Laminated Glass: Manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1. Warranty Period: As directed Five or 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. General Performance: Installed glazing systems shall withstand normal thermal movement and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; deterioration of glazing materials; or other defects in construction.

B. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design decorative glass.

C. Structural Performance: Decorative glass installed adjacent to walking surfaces shall withstand the following design loads within limits and under conditions indicated:

1. Differential deflection of adjacent unsupported edges shall not exceed glass thickness when subjected to 50 lbf/ft. (730 N/m) applied horizontally to one panel at any point up to 42 inches (1067 mm) above the adjacent walking surface.
2. Base design on thickness at thinnest part of the glass.

D. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II.

2.3 GLASS PRODUCTS, GENERAL

A. Glazing Publications: Comply with published recommendations of glass product manufacturers, GANA's "Laminated Glazing Reference Manual," and "GANA's "Glazing Manual" unless more stringent requirements are indicated. See these publications for glazing terms not otherwise defined in this Section or in referenced standards.

B. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the SGCC, the SGCC or another certification agency acceptable to authorities having jurisdiction, or manufacturer. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.

C. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass lites in thicknesses as needed to comply with requirements indicated.

D. Strength: Where annealed float glass is indicated, provide annealed float glass, heat-strengthened float glass, or fully tempered float glass as needed to comply with requirements indicated. Where heat-strengthened glass is indicated, provide heat-strengthened float glass or fully tempered float glass as needed to comply with requirements indicated. Where fully tempered glass is indicated, provide fully tempered float glass.

2.4 GLASS PRODUCTS

A. Clear Annealed Float Glass: ASTM C1036, Type I, Class 1 (clear), Quality-Q3.

B. Ultraclear Float Glass: ASTM C1036, Type I, Class I, Quality-Q3, and with visible light transmission not less than 91 percent.

C. Tinted Annealed Float Glass: ASTM C1036, Type I, Class 2 (tinted), Quality-Q3.

D. Fully Tempered Glass: ASTM C1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.

E. Heat-Strengthened Glass: ASTM C1048, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.

F. Patterned Glass: ASTM C1036, Type II, Class 1 (clear) or Class 2 (tinted) as indicated, Form 3; finish, pattern, and quality as indicated.

G. Tempered Patterned Glass: ASTM C1048, Kind FT (fully tempered), Type II, Class 1 (clear) or Class 2 (tinted) as indicated, Form 3; finish, pattern, and quality as indicated.

H. Patterned Ultraclear Glass: ASTM C1036, Type II, Class 1 (clear), Form 3, with visible light transmission not less than 91 percent; finish, pattern, and quality as indicated.

I. Tempered Patterned Ultraclear Glass: ASTM C1048, Kind FT (fully tempered), Type II, Class 1 (clear), Form 3, with visible light transmission not less than 91 percent; finish, pattern, and quality as indicated.

J. Ceramic-Coated Glass: ASTM C1048, Condition C, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3; and complying with Specification No. 95-1-31 in GANA's "Engineering Standards Manual."

K. Laminated Glass: ASTM C1172. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.

L. Decorative Film Overlay: Translucent, dimensionally stable, cast PVC film, 2-mil- (0.05-mm-) minimum thickness, with pressure-sensitive, clear adhesive back for adhering to glass and releasable protective backing.

2.5 GLAZING MATERIALS

A. Glazing Sealants, Tapes, and Miscellaneous Glazing Materials: As specified in Section 088000 "Glazing."

1. Colors: As selected by Architect from manufacturer's full range.

2.6 HARDWARE FOR GLASS INSTALLATION

A. Hardware: As directed Edge grips, Glass panel to ceiling clamps/connectors, Glass panel to floor clamps/connectors, Glass panel to wall clamps/connectors, Glass to glass panel clamp/connectors, Panel support bars, Stand-off display system with caps, Swivel fittings, Continuous top track or Continuous floor track.
1. Dimensions: As directed.
2. Material and Finish: As directed

B. Fasteners: Fabricated of same basic metal and alloy as fastened metal and matching it in finished color and texture where fasteners are exposed.

C. Gaskets: Manufacturer's standard, compatible with decorative glass type indicated.

D. Anchors and Inserts: Provide devices as required for hardware installation. Provide metal expansion-bolt devices for drilled-in-place anchors. As directed Provide galvanized or stainless-steel anchors and inserts for applications on inside face of exterior walls and where indicated.

2.7 DECORATIVE-GLASS FABRICATION

A. Edge Finishing: Finish edges smooth and polished, without chips, scratches, or warps.

1. Finished Edge: As directed Clean cut, Chamfered/Seamed/Swiped, Flat polished, Rounded polished, Beveled polished edge of width shown or Clean cut or flat grind vertical edges of butt-glazed lites in a manner that produces square edges with slight kerfs.

B. Lite Treatment: As directed Drilled, Notched, Cut out or Surface cut as indicated on Drawings with smooth, uniform edge.

C. Decorative Film Overlay: Apply squarely aligned to glass edges, uniformly smooth, and free from tears, air bubbles, wrinkles, and rough edges, in single sheet completely overlaying, in pattern indicated on Drawings to or with graphic image as indicated on Drawings to the back face of clean glass, according to manufacturer's written instructions, including surface preparation and application temperature limitations.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

3.2 INSTALLATION

A. Set decorative-glass units in each series true in line with uniform orientation, pattern, draw, bow, and similar characteristics.

B. Set glass lites with proper orientation so that each outer surface faces the direction indicated on Drawings.

C. Install glass with hardware and accessories according to hardware manufacturer's written instructions. Attach hardware securely to mounting surfaces and building structure.

3.3 GLAZING, GENERAL

A. Decorative Glass: Install glazing as specified in Section 088000 "Glazing."

3.4 CLEANING AND PROTECTION

A. Immediately after installation, remove nonpermanent labels and clean surfaces.

B. Protect glass from contact with contaminating substances resulting from construction operations. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer.

C. Remove and replace glass that is damaged during construction period.

3.5 DECORATIVE GLASS SCHEDULE

A. Decorative Glass Type GL-#: As directed Clear, Ultraclear, Tinted, patterned or tempered patterned glass, Finish F1 (patterned one side) or Finish F2 (patterned both sides), Quality-Q5 or 6.

1. Basis-of-Design Product: As directed.
2. Glass Thickness: As directed 4 mm, 5 mm or 6 mm.
3. Pattern: P1 (linear), P2 (geometric), P3 (random), P4 (special), As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.
4. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
5. Safety glazing required.

B. Decorative Glass Type GL-#: As directed Coated glass with decorative ceramic frit applied and heat-fused to glass surface or glass paint or ink applied to glass surface and cured.

1. Basis-of-Design Product: As directed.
2. Glass Type: As directed Clear, Ultraclear, Tinted, annealed, heat-strengthened or fully tempered float glass.
3. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
4. Glass Thickness: As directed 4 mm, 5 mm, 6 mm.
5. Safety glazing required.
6. Coating Colors: As indicated by manufacturer's designations, Match Architect's samples, As selected by Architect from manufacturer's full range or As indicated.
7. Pattern: Solid color, As indicated by manufacturer's designations, Match Architect's samples, As selected by Architect from manufacturer's full range or As indicated.

C. Decorative Glass Type GL-#: Acid-etched glass with decorative pattern evenly etched into glass.

1. Basis-of-Design Product: As directed.
2. Glass Type: As directed Clear, Ultraclear, Tinted, annealed or fully tempered float glass.
3. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
4. Glass Thickness: As directed 4 mm, 5 mm or 6 mm.
5. Pattern: As indicated by manufacturer's designations, Match Architect's samples, As selected by Architect from manufacturer's full range or As indicated.
6. Silicone Back Coating: Recommended by glass fabricator for shop application.
    a. Color: As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.

D. Decorative Glass Type GL-#: Sandblasted glass with decorative pattern applied uniformly.

1. Basis-of-Design Product: As directed.
2. Glass Type: As directed Clear, Ultraclear, Tinted, annealed or fully tempered float glass.
3. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
4. Glass Thickness: As directed Not less than, 4 mm, 5 mm, 6 mm, 8 mm, 10 mm or 12 mm.
5. Pattern: As indicated by manufacturer's designations, Match Architect's samples, As selected by Architect from manufacturer's full range or As indicated.
6. Antifingerprint Coating: Protective coating recommended and provided by glass fabricator.
7. Acid-Etched Finish: Acid etching the glass evenly, maintaining detail of sandblasted pattern.

E. Decorative Glass Type GL-#: Laminated glass.

1. Basis-of-Design Product:.
2. Construction: Two plies of As directed clear, ultraclear, tinted, annealed, heat-strengthened or fully tempered float glass.
3. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
4. Thickness of Each Glass Ply: As directed 3 mm, 4 mm, 5 mm or 6 mm.
5. Construction: Laminate glass with PVB interlayer orcast-in-place and cured, transparent, resin interlayer to comply with interlayer manufacturer's written instructions.
6. Interlayer Thickness: As directed 0.030 inch (0.76 mm), 0.060 inch (1.52 mm) or 0.090 inch (2.29 mm).
7. Interlayer Color and Pattern: As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.
8. Safety glazing required.
9. Visible Light Transmittance of Interlayer: Percent minimum As directed.
10. Sound Transmission Requirements: Sound transmission loss performance is tested according to ASTM E90, determined by ASTM E413, and rated for Sound Transmission Class (STC) plus or minus 1 of 35 or 40 As directed.

F. Decorative Glass Type GL-#: Glass with decorative film overlay.

1. Basis-of-Design Product: As directed.
2. Glass Type: As directed Clear, Ultraclear, Tinted, annealed, heat-strengthened or fully tempered float glass.
3. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
4. Glass Thickness: As directed 4.0 mm, 5.0 mm or 6.0 mm.
5. Safety glazing required.
6. Use: Suitable for exterior and interior applications.
7. Outdoor Durability: Not less than five years.
8. Patterns: As indicated by manufacturer's designations, Match Architect's samples, As selected by Architect from manufacturer's full range or As indicated.

END OF SECTION 088113

SECTION 088300 - MIRRORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes the following types of silvered flat glass mirrors:

1. Annealed monolithic glass mirrors.
2. Film-backed, Laminated or Tempered glass mirrors qualifying as safety glazing.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. As directed.

C. Shop Drawings: Include mirror elevations, edge details, mirror hardware, and attachment details.

D. Samples: For each type of the following:

1. Mirrors: 12 inches (300 mm) square, including edge treatment on two adjoining edges.
2. Mirror Clips: Full size.
3. Mirror Trim: 12 inches (300 mm) long.

1.3 INFORMATIONAL SUBMITTALS

A. Preconstruction test report.

B. Sample Warranty: For special warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For mirrors to include in maintenance manuals.

1.5 PRECONSTRUCTION TESTING

A. Preconstruction Mirror Mastic Compatibility Test: Submit mirror mastic products to mirror manufacturer for testing to determine compatibility of mastic with mirror backing.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to replace mirrors that deteriorate within specified warranty period. Deterioration of mirrors is defined as defects developed from normal use that are not attributed to mirror breakage or to maintaining and cleaning mirrors contrary to manufacturer's written instructions. Defects include discoloration, black spots, and clouding of the silver film.

1. Warranty Period: Five years from date of Substantial Completion or manufacture.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. As directed.

2.2 SILVERED FLAT GLASS MIRRORS

A. Mirrors, General: ASTM C1503; manufactured using copper-free, low-lead mirror coating process.

B. Annealed Monolithic Glass Mirrors: As directed Mirror Select or Glazing Quality, clear, ultraclear (low-iron) float glass with a minimum 91 percent visible light transmission.

1. Nominal Thickness: 3.0 mm, 4.0 mm, 5.0 mm, 6.0 mm or As indicated.

C. Tempered Glass Mirrors: Mirror Glazing Quality for blemish requirements and complying with ASTM C1048 for Kind FT, Condition A, tempered float glass before silver coating is applied.

1. Nominal Thickness: 3.0 mm, 4.0 mm, 5.0 mm, 6.0 mm or As indicated.

D. Laminated Mirrors: ASTM C1172, Type II.

1. Glass for Outer Lite: As directed Annealed float glass, Mirror Select or Glazing Quality, clear or ultraclear (low-iron) float glass with a minimum 91 percent visible light transmission.
2. Nominal Thickness for Outer Lite: 3.0 mm, 4.0 mm, 5.0 mm, 6.0 mm or As indicated.
3. Glass for Inner Lite: Annealed float glass; ASTM C1036, Type I (transparent flat glass), Quality-Q3; Class 1 (clear).
4. Nominal Thickness: 3.0 mm, 4.0 mm, 5.0 mm, 6.0 mm or As indicated.
5. Interlayer: 0.030-inch- (0.76-mm-) thick, clear polyvinyl-butyral.

E. Safety Glazing Products: As directed For film-backed, laminated or tempered mirrors, provide products that comply with 16 CFR 1201, Category II.

2.3 MISCELLANEOUS MATERIALS

A. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.

B. Edge Sealer: Coating approved by mirror manufacturer.

C. Mirror Mastic: An adhesive setting compound, asbestos-free, produced specifically for setting mirrors.

D. Film Backing for Safety Mirrors: Film backing and pressure-sensitive adhesive; both compatible with mirror backing paint as certified by mirror manufacturer.

2.4 MIRROR HARDWARE

A. Aluminum J-Channels: Aluminum extrusions with a return deep enough to produce a glazing channel to accommodate mirrors of thickness indicated and in lengths required to cover edges of mirrors in a single piece.

1. Bottom and Side Trim: J-channels formed with front leg and back leg not less than 3/8 and 7/8 inch (9.5 and 22 mm) in height, respectively, and a thickness of not less than 0.04 inch (1.0 mm).

2. Top Trim: J-channels formed with front leg and back leg not less than 5/8 and 1 inch (16 and 25 mm) in height, respectively, and a thickness of not less than 0.04 inch (1.0 mm).

3. Finish: As directed Clear or Gold bright anodized.

B. Mirror Bottom Clips: As indicated.

C. Mirror Top Clips: As indicated.

D. Fasteners: Fabricated of same basic metal and alloy as fastened metal and matching it in finished color and texture where fasteners are exposed.

2.5 FABRICATION

A. Fabricate cutouts for notches and holes in mirrors without marring visible surfaces. Locate and size cutouts so they fit closely around penetrations in mirrors.

B. Mirror Edge Treatment: As directed Flat polished, Rounded polished, Flat high-polished, Rounded high-polished or Beveled polished edge of width shown. Seal edges of mirrors with edge sealer.

C. Film-Backed Safety Mirrors: Apply film backing with adhesive coating over mirror backing paint, as recommended in writing by film-backing manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, over which mirrors are to be mounted, with Installer present, for compliance with installation tolerances, substrate preparation, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected and surfaces are dry.

3.2 PREPARATION

A. Comply with mastic manufacturer's written installation instructions for preparation of substrates, including coating substrates with mastic manufacturer's special bond coating where applicable.

3.3 INSTALLATION

A. General: Install mirrors to comply with mirror manufacturer's written instructions and with referenced GANA publications. Mount mirrors accurately in place in a manner that avoids distorting reflected images.

B. Install mirrors with mastic and mirror hardware. Attach mirror hardware securely to mounting surfaces with mechanical fasteners installed with anchors or inserts as applicable. Install fasteners so heads do not impose point loads on backs of mirrors.

1. Apply mastic to comply with mastic manufacturer's written instructions for coverage and to allow air circulation between back of mirrors and face of mounting surface.

C. Clean exposed surface of mirrors not more than four days before date scheduled for inspections that establish date of Substantial Completion. Clean mirrors as recommended in writing by mirror manufacturer.

END OF SECTION 088300

SECTION 088400 - PLASTIC GLAZING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Monolithic acrylic glazing.
2. Monolithic polycarbonate glazing.
3. Multiwalled structured polycarbonate glazing.

1.2 COORDINATION

A. Coordinate glazing channel dimensions to provide necessary bite on plastic glazing, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Plastic Glazing Samples: For each color and finish of plastic glazing indicated.

D. Glazing Accessory Samples: For gaskets and sealants.

E. Plastic Glazing Schedule: Use same designations indicated on Drawings.

1.4 INFORMATIONAL SUBMITTALS

A. Preconstruction adhesion and compatibility test report.

B. Research/Evaluation Reports: For plastic glazing.

C. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For plastic glazing to include in maintenance manuals.

1.6 PRECONSTRUCTION TESTING

A. Preconstruction Adhesion and Compatibility Testing: Test each plastic glazing type, tape sealant, gasket, glazing accessory, and glazing-framing member for adhesion to and compatibility with elastomeric glazing sealants.

1. Testing is not required if data are submitted based on previous testing of current sealant products and plastic glazing matching those submitted.

1.7 WARRANTY

A. Manufacturer's Special Warranty for Abrasion- and UV-Resistant, Monolithic or Multiwalled Structured Polycarbonate As directed: Manufacturer agrees to replace polycarbonate products that break or develop defects from normal use that are attributable to manufacturing process and not to practices for maintaining and cleaning plastic glazing contrary to manufacturer's written instructions. Defects include coating delamination, haze, excessive yellowing, and loss of light transmission beyond the limits stated in plastic glazing manufacturer's standard form.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Windborne-Debris Impact Resistance: As directed Exterior plastic glazing shall pass ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone 1, 2, 3 or 4 for basic or enhanced protection.

1. Large-Missile Test: For glazing located within 30 feet (9.1 m) of grade.
2. Small-Missile Test: For glazing located between 30 feet (9.1 m) and 60 feet (18.3 m) above grade.

B. Safety Glazing: Plastic glazing shall comply with 16 CFR 1201, Category II.

1. Labeling: Permanently mark plastic glazing with certification label of an agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, type of plastic, thickness, and safety glazing standard with which plastic glazing complies.

C. Fire-Test-Response Characteristics of Plastic Glazing: As determined by testing plastic glazing by a qualified testing agency acceptable to authorities having jurisdiction.

1. Self-ignition temperature of 650 deg F (343 deg C) or higher when tested according to ASTM D1929 on plastic sheets in thicknesses indicated for the Work.
2. Smoke density of 75 or less when tested according to ASTM D2843 on plastic sheets in thicknesses indicated for the Work.
3. Burning extent of 1 inch (25 mm) or less when tested according to ASTM D635 at a nominal thickness of 0.060 inch (1.52 mm) or thickness indicated for the Work, where Class CC1 is indicated.

4. Burning rate of 2.5 in./min. (1.06 mm/s) or less when tested according to ASTM D635 at a nominal thickness of 0.060 inch (1.52 mm) or thickness indicated for the Work, where Class CC2 is indicated.
5. Flame-spread index of not less than that indicated when tested according to ASTM E84.

2.2 PLASTIC GLAZING, GENERAL

A. Glazing Publication: Comply with published instructions of plastic glazing manufacturers and with GANA's "Glazing Manual" unless more stringent requirements are indicated.

B. Plastic Glazing Labeling: Identify plastic sheets with appropriate markings of applicable testing and inspecting agency, indicating compliance with required fire-test-response characteristics.

2.3 MONOLITHIC ACRYLIC GLAZING

A. Plastic Glazing Type PG-#: As directed Transparent acrylic sheet; ASTM D4802, Category A-1 (cell cast), Category A-2 (continuously cast) or Category B-1 (continuously manufactured), Finish 1 (smooth or polished), Type UVF (UV filtering).
1. Nominal Thickness: As directed 0.093 inch (2.5 mm), 0.118 inch (3 mm), 0.177 inch (4.5 mm) or 0.236 inch (6 mm).
2. Color: Colorless or As selected by Architect from manufacturer's full range.
3. Combustibility Class: CC2.

B. Plastic Glazing Type PG-#: As directed Coated, transparent acrylic sheet; ASTM D4802, Category A-1 (cell cast), Category A-2 (continuously cast) or Category B-1 (continuously manufactured), Finish 3 (abrasion-resistant coating) with coating on one side or both sides, Type UVF (UV filtering).
1. Nominal Thickness: As directed 0.093 inch (2.5 mm), 0.118 inch (3 mm), 0.177 inch (4.5 mm) or 0.236 inch (6 mm).
2. Color: Colorless or As selected by Architect from manufacturer's full range.
3. Combustibility Class: CC2.

C. Plastic Glazing Type PG-#: As directed Translucent acrylic sheet; ASTM D4802, Category A-1 (cell cast), Category A-2 (continuously cast) or Category B-1 (continuously manufactured), Finish 1 (smooth or polished), Type UVF (UV filtering).
1. Nominal Thickness: As directed 0.093 inch (2.5 mm), 0.118 inch (3 mm), 0.177 inch (4.5 mm) or 0.236 inch (6 mm).
2. Color: White, with visible light transmittance of not more than 50 percent for 0.117-inch-(2.9-mm-) thick sheet, measured according to ASTM D1003 or As selected by Architect from manufacturer's full range.
3. Combustibility Class: CC2.

D. Plastic Glazing Type PG-#: Patterned acrylic sheet; ASTM D4802, Category A-1 (cell cast), Finish 2 (patterned), Type UVF (UV filtering).
1. Nominal Thickness: As directed 0.093 inch (2.5 mm), 0.118 inch (3 mm), 0.177 inch (4.5 mm) or 0.236 inch (6 mm).
2. Pattern: Matte finish or As selected by Architect from manufacturer's full range.
3. Color: Transparent colorless, Translucent white or As selected by Architect from manufacturer's full range.

4. Combustibility Class: CC2.

2.4 MONOLITHIC POLYCARBONATE GLAZING

A. Plastic Glazing Type PG-#: Polycarbonate sheet; ASTM C1349, Appendix X1, Type I (standard, UV stabilized), with a polished finish.
   1. Nominal Thickness: As directed 0.093 inch (2.5 mm), 0.118 inch (3 mm), 0.177 inch (4.5 mm) or 0.236 inch (6 mm).
   2. Color: Transparent colorless or As selected by Architect from manufacturer's full range.
   3. Combustibility Class: CC1.
   4. Flame-Spread Index: As directed 25, 75 or 200 or less.

B. Plastic Glazing Type PG-#: Coated polycarbonate sheet; ASTM C1349, Appendix X1, Type II (coated mar-resistant, UV stabilized), with coating on both sides.
   1. Nominal Thickness: As directed 0.093 inch (2.5 mm), 0.118 inch (3 mm), 0.177 inch (4.5 mm) or 0.236 inch (6 mm).
   2. Color: Transparent colorless or As selected by Architect from manufacturer's full range.
   3. Combustibility Class: CC1.
   4. Flame-Spread Index: As directed 25, 75 or 200 or less.

2.5 MULTIWALLED STRUCTURED POLYCARBONATE GLAZING

A. Multiwalled Structured Polycarbonate Sheet: Manufacturer's standard polycarbonate extruded shape with smooth, flat exterior surfaces and internal ribbing.
   1. Nominal Thickness: As directed 5/16 inch (8 mm), 3/8 inch (10 mm), 5/8 inch (16 mm), 3/4 inch (20 mm) or 1 inch (25 mm).
   2. UV Resistance: As directed Not required, On outer surface or On both surfaces.
   3. Color: Transparent colorless or As selected by Architect from manufacturer's full range.
   4. Combustibility Class: As directed CC1 or CC2.
   5. Flame-Spread Index: As directed 25, 75 or 200 or less.

2.6 GLAZING GASKETS

A. Dense Compression Gaskets: Molded or extruded gaskets, EPDM, ASTM C864 or silicone, ASTM C1115; and of profile and hardness required to maintain watertight seal.

B. Soft Compression Gaskets: Extruded or molded, closed-cell, integral-skinned EPDM or silicone gaskets complying with ASTM C509, Type II, black; and of profile and hardness required to maintain watertight seal.

2.7 GLAZING SEALANTS

A. General:

   1. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they contact, including plastic glazing products and glazing channel

substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.

2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
3. Colors of Exposed Glazing Sealants: As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.

B. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 100/50, Use NT.
1. Applications: As directed.

C. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 50, Use NT.
1. Applications: As directed.

D. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 25, Use NT.
1. Applications: As directed.

E. Glazing Sealant: Acid-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 25, Use NT.
1. As directed Applications: As directed.

2.8 GLAZING TAPES

A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C1281 and AAMA 800 for products indicated below:

1. AAMA 804.3 tape, where indicated.
2. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
3. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.

B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:

1. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

2.9 MISCELLANEOUS GLAZING MATERIALS

A. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.

B. Setting Blocks: EPDM or silicone as required for compatibility with glazing sealant and plastic glazing, and of hardness recommended by plastic glazing manufacturer for application indicated.

C. Compressible Filler Rods: Closed cell of waterproof-jacketed rod stock of synthetic rubber or plastic foam, flexible and resilient, with 5- to 10-psi (35- to 70-kPa) compression strength for 25 percent deflection.

PART 3 - EXECUTION

3.1 EXAMINATION

3.2 GLAZING, GENERAL

A. Comply with combined written instructions of manufacturers of plastic glazing materials, sealants, gaskets, and other glazing materials unless more stringent requirements are indicated, including those in referenced glazing publication.

B. Glazing channel dimensions indicated on Drawings are designed to provide the necessary bite on plastic glazing, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances. Adjust plastic glazing lites during installation to ensure that bite is equal on all sides.

C. Sand or scrape cut edges of plastic glazing to provide smooth edges, free of chips and hairline cracks.

D. Remove burrs and other projections from glazing channel surfaces.

E. Protect plastic glazing surfaces from abrasion and other damage during handling and installation, according to the following requirements:

1. Retain plastic glazing manufacturer's protective covering or protect by other methods according to plastic glazing manufacturer's written instructions.
2. Remove covering at border of each piece before glazing; remove remainder of covering immediately after installation where plastic glazing is exposed to sunlight or where other conditions make later removal difficult.

F. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction sealant-substrate testing.

G. Install elastomeric setting blocks in sill channels, sized and located to comply with referenced glazing publication, unless otherwise instructed by plastic glazing manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.

H. Provide edge blocking to comply with referenced glazing publication unless otherwise instructed by plastic glazing manufacturer.

3.3 TAPE GLAZING

A. Install tapes continuously, but not in one continuous length. Do not stretch tapes to make them fit opening.

B. Cover vertical framing joints by applying tapes to heads and sills first, then to jambs. Cover horizontal framing joints by applying tapes to jambs, then to heads and sills.

C. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant recommended by tape manufacturer.

D. Apply heel bead of glazing sealant.

E. Center plastic glazing lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.

F. Apply cap bead of glazing sealant over exposed edge of tape.

3.4 GASKET GLAZING (DRY)

A. Fabricate compression gaskets in lengths recommended in writing by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.

B. Insert soft compression gasket between plastic glazing and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.

C. Center plastic glazing lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in plastic glazing. Seal gasket joints with sealant recommended by gasket manufacturer.

D. Install gaskets so they protrude past face of glazing stops.

3.5 SEALANT GLAZING (WET)

A. Install continuous spacers between plastic glazing lites and glazing stops to maintain plastic glazing face clearances and to prevent sealant from extruding into glazing channel weep systems until sealants cure. Secure spacers in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.

B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to plastic glazing and channel surfaces.

C. Tool exposed surfaces of sealants to provide a substantial wash away from plastic glazing.

3.6 CLEANING AND PROTECTION

A. Protect plastic glazing from contact with contaminating substances from construction operations. If, despite such protection, contaminating substances do come into contact with plastic glazing, remove immediately and wash plastic glazing according to plastic glazing manufacturer's written instructions.

B. Remove and replace plastic glazing that is damaged during construction period.

END OF SECTION 088400

SECTION 088813 - FIRE-RESISTANT GLAZING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Fire-protection-rated glazing.
2. Fire-resistance-rated glazing.

1.2 COORDINATION

A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Glass Samples: For each type of glass product; 12 inches (300 mm) square.

D. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

1.4 WARRANTY

A. Manufacturer's Special Warranty on Laminated Glass: Manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1. Warranty Period: As directed Five or 10 years from date of Substantial Completion.

B. Manufacturer's Special Warranty on Double Glazing Units with Clear Gel Fill: Manufacturer agrees to replace units that deteriorate within specified warranty period. Deterioration of double glazing units with clear gel fill is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning glass contrary to manufacturer's written instructions. Evidence of failure is the leakage of gel fill from units, air bubbles within units, or obstruction of vision by contamination or deterioration of gel.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 GLASS PRODUCTS, GENERAL

A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organization below unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.

1. GANA Publications: "Laminated Glazing Reference Manual" and "Glazing Manual."

B. Safety Glazing Labeling: Permanently mark glazing with certification label of the Safety Glazing Certification Council, the Safety Glazing Certification Council or another certification agency acceptable to authorities having jurisdiction or the manufacturer. Label shall indicate manufacturer's name, type of glass, glass thickness, and safety glazing standard with which glass complies.

2.2 GLASS PRODUCTS

A. Float Glass: ASTM C1036, Type I, Quality-Q3, Class I (clear) unless otherwise indicated.

B. Ultraclear Float Glass: ASTM C1036, Type I, Quality-Q3, Class I (clear), with visible light transmission not less than 91 percent.

C. Tempered Float Glass: ASTM C1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class I (clear) unless otherwise indicated, Quality-Q3.

D. Laminated Glass: ASTM C1172. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.

2.3 FIRE-PROTECTION-RATED GLAZING

A. Fire-Protection-Rated Glazing: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on positive-pressure testing according to NFPA 257 or UL 9, including the hose-stream test, and shall comply with NFPA 80.

1. Fire-protection-rated glazing required to have a fire-protection rating of 20 minutes shall be exempt from the hose-stream test.

B. Fire-Protection-Rated Glazing Labeling: Permanently mark fire-protection-rated glazing with certification label of a testing agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name; test standard; whether glazing is permitted to be used in doors or openings; if permitted in openings, whether or not glazing has passed the hose-stream test; whether or not glazing meets 450 deg F (250 deg C) temperature-rise limitation; and the fire-resistance rating in minutes.

C. Fire-Protection-Rated Tempered Glass: As directed 6-mm, 10-mm or 12-mm thickness, fire-protection-rated tempered glass; and complying with 16 CFR 1201, Category II.

D. Film-Faced Ceramic Glazing: Clear, ceramic flat glass; 5-mm thickness; faced on one surface with a clear glazing film; and complying with 16 CFR 1201, Category II.

E. Laminated Ceramic Glazing: Laminated glass made from two plies of clear, ceramic glass; 8-mm total thickness; and complying with 16 CFR 1201, Category II.

F. Laminated Glass with Intumescent Interlayers: Laminated glass made from multiple plies of uncoated, ultraclear float glass; with intumescent interlayers; and complying with 16 CFR 1201, Category II.

2.4 FIRE-RESISTANCE-RATED GLAZING

A. Fire-Resistance-Rated Glazing: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire-resistance ratings indicated, based on testing according to ASTM E119 or UL 263.

B. Fire-Resistance-Rated Glazing Labeling: Permanently mark fire-resistance-rated glazing with certification label of a testing agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, test standard, that the glazing is approved for use in walls, and the fire-resistance rating in minutes.

C. Laminated Glass with Intumescent Interlayers: Laminated glass made from multiple plies of uncoated, ultraclear float glass; with intumescent interlayers; and complying with 16 CFR 1201, Category II.

D. Double Glazing Units with Clear Gel Fill: Double glazing units made from two lites of uncoated, fully tempered, ultraclear float glass; with a perimeter edge seal enclosing a cavity filled with optically clear, intumescent gel; and complying with 16 CFR 1201, Category II.

2.5 GLAZING ACCESSORIES

A. Provide glazing gaskets, glazing sealants, glazing tapes, setting blocks, spacers, edge blocks, and other glazing accessories that are compatible with glazing products and each other and are approved by testing agencies that listed and labeled fire-resistant glazing products with which products are used for applications and fire-protection ratings indicated.

B. Glazing Sealants for Fire-Rated Glazing Products: Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 50, Use NT. Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated.
   1. Colors of Exposed Glazing Sealants: As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 GLAZING

A. Use methods approved by testing agencies that listed and labeled fire-resistant glazing products.

B. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials unless more stringent requirements are indicated, including those in referenced glazing publications.

C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.

D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.

E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.

F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.

G. Provide spacers for glass lites where length plus width is larger than 50 inches (1270 mm).

H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

3.2 CLEANING AND PROTECTION

A. Immediately after installation, remove nonpermanent labels and clean surfaces.

B. Protect glass from contact with contaminating substances resulting from construction operations. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.

1. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer.

C. Remove and replace glass that is damaged during construction period.

3.3 FIRE-PROTECTION-RATED GLAZING SCHEDULE

A. Glass Type FPGL-#: 20-minute fire-protection-rated glazing without hose-stream test; fire-protection-rated tempered glass, film-faced ceramic glazing, laminated ceramic glazing or laminated glass with intumescent interlayers.

B. Glass Type FPGL-#: As directed 20-minute fire-protection-rated glazing with hose-stream test; film-faced ceramic glazing, laminated ceramic glazing or laminated glass with intumescent interlayers.

C. Glass Type FPGL-#: As directed 45-minute fire-protection-rated glazing; film-faced ceramic glazing, laminated ceramic glazing or laminated glass with intumescent interlayers.

D. Glass Type FPGL-#: As directed 45-minute, 60-minute or 90-minute fire-protection-rated glazing with 450 deg F (250 deg C) temperature-rise limitation; laminated glass with intumescent interlayers.

3.4 FIRE-RESISTANCE-RATED GLAZING SCHEDULE

A. Glass Type FRGL-#: As directed 60-minute, 90-minute or 120-minute fire-resistance-rated glazing with 450 deg F (250 deg C) temperature-rise limitation; laminated glass with intumescent interlayers, or double glazing units with clear gel fill.

END OF SECTION 088813

SECTION 088853 - SECURITY GLAZING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes monolithic polycarbonate, laminated glass, laminated polycarbonate, glass-clad polycarbonate, laminated glass and polycarbonate, insulating security glazing and air-gap security glazing.

1.2 COORDINATION

A. Coordinate glazing channel dimensions to provide necessary bite on security glazing, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. As directed

C. Security Glazing Samples: For each type of security glazing; 12 inches (300 mm) square.

D. Security Glazing Schedule: List security glazing types and thicknesses for each size opening and location. Use same designations indicated on Drawings. Indicate coordinated dimensions of security glazing and construction that receives security glazing, including clearances and glazing channel dimensions.

E. Delegated-Design Submittal: For security glazing indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

A. Product Test Reports: For each type of security glazing, for tests performed by a qualified testing agency.

B. Preconstruction adhesion and compatibility test reports.

1.5 PRECONSTRUCTION TESTING

A. Preconstruction Adhesion and Compatibility Testing: Test each security glazing type, tape sealant, gasket, glazing accessory, and glazing-framing member for adhesion to and compatibility with elastomeric glazing sealants.

1. Testing will not be required if data based on previous testing of current sealant products and glazing materials match those submitted.

1.6 WARRANTY

A. Manufacturer's Special Warranty for Coated Glass: Manufacturer agrees to replace coated glass that deteriorates within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.

1. Warranty Period: 10 years from date of Substantial Completion.

B. Manufacturer's Special Warranty on Laminated Glass: Manufacturer agrees to replace laminated glass that deteriorates within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1. Warranty Period: As directed Five or 10 years from date of Substantial Completion.

C. Manufacturer's Special Warranty for Polycarbonate Sheet: Manufacturer agrees to replace polycarbonate sheet that deteriorates within specified warranty period. Deterioration of polycarbonate sheet is defined as defects developed from normal use that are not attributed to maintaining and cleaning polycarbonate sheet contrary to manufacturer's written instructions. Defects include yellowing and loss of light transmission.

1. Warranty Period: 10 years from date of Substantial Completion.

D. Manufacturer's Special Warranty for Laminated Polycarbonate: Manufacturer agrees to replace laminated polycarbonate that deteriorates within specified warranty period. Deterioration of laminated polycarbonate is defined as defects developed from normal use that are not attributed to maintaining and cleaning laminated polycarbonate contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glazing, blemishes exceeding those allowed by referenced standard, yellowing, and loss of light transmission.

1. Warranty Period: As directed Five or 10 years from date of Substantial Completion.

E. Manufacturer's Special Warranty for Glass-Clad Polycarbonate: Manufacturer agrees to replace glass-clad polycarbonate that deteriorates within specified warranty period. Deterioration of glass-clad polycarbonate is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning glass-clad polycarbonate contrary to

manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glazing, blemishes exceeding those allowed by referenced glass-clad polycarbonate standard, yellowing, and loss of light transmission.

1. Warranty Period: As directed Five or 10 years from date of Substantial Completion.

F. Manufacturer's Special Warranty for Laminated Glass and Polycarbonate: Manufacturer agrees to replace laminated glass and polycarbonate that deteriorates within specified warranty period. Deterioration of laminated glass and polycarbonate is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass and polycarbonate contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glazing, blemishes exceeding those allowed by referenced glass-clad polycarbonate standard, yellowing, and loss of light transmission.

1. Warranty Period: As directed Five or 10 years from date of Substantial Completion.

G. Manufacturer's Special Warranty on Insulating Security Glazing: Manufacturer agrees to replace insulating security glazing that deteriorates within specified warranty period. Deterioration of insulating security glazing is defined as defects in individual lites developed from normal use or failure of hermetic seal under normal use. Deterioration does not include defects in individual lites or failure of hermetic seal that is attributed to glass breakage or to maintaining and cleaning insulating security glazing contrary to manufacturer's written instructions.

1. Defects in coated-glass lites include peeling, cracking, and other indications of deterioration in coating.
2. Defects in laminated-glass lites include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
3. Defects in glass-clad polycarbonate lites include edge separation, delamination materially obstructing vision through glazing, blemishes exceeding those allowed by referenced glass-clad polycarbonate standard, yellowing, and loss of light transmission.
4. Evidence of hermetic seal failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glazing.
5. Warranty Period: As directed Five or 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design security glazing.

B. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated.

1. Design Procedure for Glass: ASTM E1300 and ICC's International Building Code.
2. Design Wind Pressures: As indicated on Drawings.

3. Design Snow Loads: As indicated on Drawings.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on glazing framing members and glazing components.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

D. Windborne-Debris Impact Resistance: As directed Exterior security glazing shall pass ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone 1, 2, 3 or 4 for basic or enhanced protection.

1. Large-Missile Test: For glazing located within 30 feet (9.1 m) of grade.
2. Small-Missile Test: For glazing located between 30 feet (9.1 m) and 60 feet (18.3 m) above grade.

E. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II.

2.2 SECURITY GLAZING, GENERAL

A. Glazing Publications: Comply with published recommendations of security glazing and glazing material manufacturers and organizations below unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.

1. GANA Publications: "Laminated Glazing Reference Manual" and "Glazing Manual."
2. AAMA Publications: AAMA GDSG-1, "Glass Design for Sloped Glazing," and AAMA TIR-A7, "Sloped Glazing Guidelines."
3. IGMA Publication for Sloped Glazing: IGMA TB-3001, "Guidelines for Sloped Glazing."
4. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."

B. Plastic Glazing Labeling: Identify plastic sheets with appropriate markings of applicable testing and inspecting agency, indicating compliance with required fire-test-response characteristics.

C. Safety Glazing Labeling: As directed Where safety glazing is indicated, permanently mark glazing with certification label of the Safety Glazing Certification Council, the Safety Glazing Certification Council or another certification agency acceptable to authorities having jurisdiction or manufacturer. Label shall indicate manufacturer's name, type of glazing, glass thickness, and safety glazing standard with which glazing complies.

D. Insulating Glazing Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of the Insulating Glass Certification Council.

E. Fire-Test-Response Characteristics of Polycarbonate Sheets: As determined by testing polycarbonate sheets identical to those used in security glazing products by a qualified testing agency acceptable to authorities having jurisdiction.

1. Self-ignition temperature of 650 deg F (343 deg C) or more when tested according to ASTM D1929 on plastic sheets in thicknesses indicated for the Work.
2. Smoke-Developed Index of 450 or less when tested according to ASTM E84, or smoke density of 75 or less when tested according to ASTM D2843 on plastic sheets in thicknesses indicated for the Work.
3. Burning extent of 1 inch (25 mm) or less when tested according to ASTM D635 at a nominal thickness of 0.060 inch (1.52 mm) or thickness indicated for the Work.

F. Thermal and Optical Performance Properties: Provide security glazing with performance properties specified, as indicated in manufacturer's published test data, based on construction products indicated and on procedures indicated below:

1. U-Factors: Center-of-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as Btu/sq. ft. x h x deg F (W/sq. m x K).
2. Solar-Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
3. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

2.3 GLASS PRODUCTS

A. Float Glass: ASTM C1036, Type I, Quality-Q3, Class I (clear) unless otherwise indicated.

B. Heat-Treated Float Glass: ASTM C1048; Type I; Quality-Q3; Class I (clear) unless otherwise indicated; of kind and condition indicated.

C. Chemically Strengthened Glass: As directed Annealed float glass is chemically strengthened to comply with ASTM C1422, Surface Compression Level 1, Level 2, Level 3, Level 4 or Level 5 and Case Depth Level A, Level B, Level C, Level D, Level E or Level F.

D. Reflective-Coated Vision Glass: As directed ASTM C1376, Kind CV (coated vision glass), coated by pyrolytic process or vacuum deposition (sputter-coating) process, and complying with other requirements specified.

2.4 LAMINATED GLASS

A. Laminated Glass: ASTM C1172. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.

1. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
2. Interlayer Color: Clear unless otherwise indicated.

2.5 POLYCARBONATE SECURITY GLAZING

A. Polycarbonate Sheet: ASTM C1349, Appendix X1, Type II, coated, mar-resistant, UV-stabilized polycarbonate with coating on exposed surfaces and Type I, standard, UV-stabilized polycarbonate where no surfaces are exposed.

B. Laminated Polycarbonate: Polycarbonate sheets laminated with clear urethane interlayer that complies with ASTM C1349, Appendix X2, and has a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation. Provide laminated units that comply with requirements of ASTM C1349 for maximum allowable laminating process blemishes and haze.

C. Glass-Clad Polycarbonate: ASTM C1349.

D. Laminated Glass and Polycarbonate: ASTM C1349.

2.6 INSULATING SECURITY GLAZING

A. Insulating Security Glazing: Factory-assembled units, consisting of sealed lites of glazing material indicated separated by a dehydrated interspace, qualified according to ASTM E2190

1. Sealing System: Dual seal.
2. Spacer: As directed Manufacturer's standard spacer material and construction, Aluminum with mill or clear anodic finish, Aluminum with black, color anodic finish, Aluminum with bronze, color anodic finish, Aluminum with powdered metal paint finish in color selected by Architect, Galvanized steel, Stainless steel, Polypropylene-covered stainless steel in color selected by Architect, Thermally broken aluminum, Nonmetallic laminate or Nonmetallic tube.

2.7 AIR-GAP SECURITY GLAZING

A. Air-Gap Security Glazing: Factory-assembled units, consisting of sealed lites of glazing material indicated separated by a dehydrated interspace.

1. Sealing System: Dual seal, with manufacturer's standard primary and secondary sealants.
2. Spacer Specifications: Manufacturer's standard rigid spacer material and construction.

2.8 SPALL-RESISTANT FILM

A. Spall-Resistant Film: Composite of clear polyvinyl butyral film and clear abrasion-resistant polyester film.

B. Laminating Process: Factory laminate spall-resistant film to glazing assemblies to produce laminated lites free of foreign substances, air, and glass pockets.

2.9 GLAZING SEALANTS

A. General:

1. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they contact, including security glazing, seals of insulating security glazing and air-gap security glazing, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.

2. Suitability: Comply with sealant and security glazing manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
3. Colors of Exposed Glazing Sealants: As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.

B. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 100/50, Use NT.
1. Applications: As directed.

C. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 50, Use NT.
1. Applications: As directed.

D. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 25, Use NT.
1. Applications: As directed.

E. Glazing Sealant: Acid-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 25, Use NT.
1. As directed Applications: As directed.

F. Security Sealant: Manufacturer's standard, nonsag, tamper-resistant sealant for joints with low movement complying with ASTM C920, Grade NS, Class 12.5 or 25, Use NT, and with a Shore A hardness of at least 45 when tested according to ASTM C661.

2.10 GLAZING TAPES

A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and security glazing manufacturers for application indicated; and complying with ASTM C1281 and AAMA 800 for products indicated below:

1. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
2. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.

B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:

1. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

2.11 MISCELLANEOUS GLAZING MATERIALS

A. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.

B. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.

C. Spacers: Elastomeric blocks or continuous extrusions of hardness required by security glazing manufacturer to maintain security glazing lites in place for installation indicated.

D. Edge Blocks: Elastomeric material of hardness needed to limit security glazing lateral movement (side walking).

E. Cylindrical Glazing Sealant Backing: ASTM C1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

2.12 FABRICATION OF SECURITY GLAZING

A. Fabricate security glazing in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

PART 3 - EXECUTION

3.1 GLAZING, GENERAL

A. Comply with combined written instructions of manufacturers of security glazing, sealants, gaskets, and other glazing materials unless more stringent requirements are indicated, including those in referenced glazing publications.

B. Protect edges of security glazing from damage during handling and installation. Remove damaged security glazing from Project site and legally dispose of off Project site. Damaged security glazing includes units with edge or face damage or other imperfections that, when installed, could weaken security glazing and impair performance and appearance.

C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.

D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications unless otherwise required by glazing unit manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.

E. Do not exceed edge pressures stipulated by security glazing manufacturers for installing lites.

F. Provide spacers for security glazing lites where the length plus width is larger than 50 inches (1270 mm).

G. Provide edge blocking where indicated or needed to prevent security glazing from moving sideways in glazing channel, as recommended in writing by security glazing manufacturer and according to requirements in referenced glazing publications.

3.2 TAPE GLAZING

A. Position tapes on fixed stops so that, when compressed by security glazing, their exposed edges are flush with or protrude slightly above sightline of stops.

B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.

C. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.

D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.

E. Do not remove release paper from tape until just before each glazing unit is installed.

F. Apply heel bead of elastomeric sealant.

G. Center security glazing in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.

H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.3 GASKET GLAZING (DRY)

A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.

B. Insert soft compression gasket securely in place between glazing unit and frame or fixed stop, so it is securely in place with joints miter cut and bonded together at corners.

C. Installation with Drive-in Wedge Gaskets: Center security glazing in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in security glazing. Seal gasket joints with sealant recommended by gasket manufacturer.

D. Installation with Pressure-Glazing Stops: Center security glazing in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in security glazing. Seal gasket joints with sealant recommended by gasket manufacturer.

E. Install gaskets so they protrude past face of glazing stops.

3.4 SEALANT GLAZING (WET)

A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between security glazing and glazing stops to maintain face clearances and to prevent sealant from extruding into glazing channel and blocking weep systems. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.

B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to security glazing and channel surfaces.

C. Tool exposed surfaces of sealants to provide a substantial washaway from security glazing.

3.5 CLEANING AND PROTECTION

A. Immediately after installation remove nonpermanent labels and clean surfaces.

B. Protect security glazing from contact with contaminating substances resulting from construction operations, including weld splatter.

1. If, despite such protection, contaminating substances do come into contact with security glazing, remove substances immediately as recommended in writing by security glazing manufacturer. Remove and replace security glazing that cannot be cleaned without damage.

3.6 LAMINATED-GLASS SECURITY GLAZING SCHEDULE

A. Security Glazing Type SG- As directed, Clear laminated glass, Tinted laminated glass, Clear reflective-coated laminated glass or Tinted reflective-coated laminated glass.

1. Products: Subject to compliance with requirements, provide the following, provide one of the following or available products that may be incorporated into the Work include, but are not limited to, the following:

2. Forced-Entry Resistance: As directed Class I, Class II, Class III, Class IV or Class V according to ASTM F1233.
3. Forced-Entry Resistance: As directed Level I, Level II, Level III, Level IV or Level V according to HPW-TP-0500.03.
4. Ballistic Resistance: As directed Class/Level HG1, Class/Level HG2, Class/Level HG3, Class/Level HG4, Class/Level SMG, Class/Level R1, Class/Level R2, Class/Level R3, Class/Level R4-AP, Class/Level SH1 or Class/Level SH2 according to ASTM F1233.
5. Ballistic Resistance: As directed Level 1, Level 2, Level 3, Level 4, Level 5, Level 6, Level 7, Level 8, Level 1-SG, Level 2-SG, Level 3-SG, Level 4-SG, Level 5-SG, Level 6-SG, Level 7-SG, Level 8-SG according to UL 752.
6. Blast Resistance:

    a. Hazard Rating: As directed No hazard, Minimal hazard, Very low hazard, Low hazard or High hazard according to ASTM F1642.
    b. Performance Condition: As directed 1, 2, 3a, 3b, 4 or 5 according to GSA-TS01.

c. Peak Pressure: As directed.
d. Positive Phase Impulse: As directed.

7. Maximum Overall Unit Thickness: As directed.
8. Glass Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
9. Tinted Glass Location: Outer ply.
10. Coating Color: As directed Gold, Pewter or Silver.
11. Coating Location: As directed Second, Third or Fifth surface.
12. Overall Visible Light Transmittance: As directed.
13. Outdoor Visible Reflectance: Percent maximum As directed.
14. Winter Nighttime U-Factor: Maximum value As directed.
15. Summer Daytime U-Factor: Maximum value As directed.
16. Solar-Heat-Gain Coefficient: Maximum value As directed.
17. Provide safety glazing labeling.

B. Security Glazing Type SG-#: Tinted reflective-coated laminated glass with clear glass and tinted interlayer.

1. Products: Subject to compliance with requirements, provide the following, provide one of the following or available products that may be incorporated into the Work include, but are not limited to, the following:

2. Forced-Entry Resistance: As directed Class I, Class II, Class III, Class IV or Class V according to ASTM F1233.
3. Forced-Entry Resistance: As directed Level I, Level II, Level III, Level IV or Level V according to HPW-TP-0500.03.
4. Ballistic Resistance: As directed Class/Level HG1, Class/Level HG2, Class/Level HG3, Class/Level HG4, Class/Level SMG, Class/Level R1, Class/Level R2, Class/Level R3, Class/Level R4-AP, Class/Level SH1 or Class/Level SH2 according to ASTM F1233.
5. Ballistic Resistance: As directed Level 1, Level 2, Level 3, Level 4, Level 5, Level 6, Level 7, Level 8, Level 1-SG, Level 2-SG, Level 3-SG, Level 4-SG, Level 5-SG, Level 6-SG, Level 7-SG or Level 8-SG according to UL 752.
6. Blast Resistance:

   a. Hazard Rating: As directed No hazard, Minimal hazard, Very low hazard, Low hazard or High hazard according to ASTM F1642.
   b. Performance Condition: As directed 1, 2, 3a, 3b, 4 or 5 according to GSA-TS01.
   c. Peak Pressure: As directed.
   d. Positive Phase Impulse: As directed.

7. Maximum Overall Unit Thickness: As directed.
8. Interlayer Color: As directed Clear, Blue-green, Bronze light or Gray.
9. Coating Color: As directed Gold, Pewter or Silver.
10. Coating Location: As directed Second, Third or Fifth surface.
11. Overall Visible Light Transmittance: As directed.
12. Outdoor Visible Reflectance: Percent maximum As directed.
13. Winter Nighttime U-Factor: Maximum value As directed.
14. Summer Daytime U-Factor: Maximum value As directed.
15. Solar-Heat-Gain Coefficient: Maximum value As directed.
16. Provide safety glazing labeling.

3.7 MONOLITHIC POLYCARBONATE SECURITY GLAZING SCHEDULE

A. Security Glazing Type SG-#: Monolithic polycarbonate with mar-resistant coating on both surfaces.

1. Products: Subject to compliance with requirements, provide the following, provide one of the following or available products that may be incorporated into the Work include, but are not limited to, the following:

    a. As directed.

2. Detention Security Grade: As directed Grade 4 according to ASTM F1915 cold-temperature impact test, warm-temperature impact test and torch and small blunt impactor test.
3. Thickness: As directed 3/8 inch (9.25 mm) or 1/2 inch (12.7 mm).

3.8 LAMINATED-POLYCARBONATE SECURITY GLAZING SCHEDULE

A. Security Glazing Type SG-#: Laminated polycarbonate.

1. Products: Subject to compliance with requirements, provide the following, provide one of the following or available products that may be incorporated into the Work include, but are not limited to, the following:

    a. As directed.

2. Detention Security Grade: As directed Grade 1, Grade 2, Grade 3 or Grade 4 according to ASTM F1915 cold-temperature impact test or warm-temperature impact test and torch and small blunt impactor test.
3. Forced-Entry Resistance: As directed Class I, Class II, Class III, Class IV or Class V according to ASTM F1233.
4. Forced-Entry Resistance: As directed Level I, Level II, Level III, Level IV or Level V according to HPW-TP-0500.03.
5. Blast Resistance:

    a. Hazard Rating: As directed No hazard, Minimal hazard, Very low hazard, Low hazard or High hazard according to ASTM F1642.
    b. Performance Condition: As directed 1, 2, 3a, 3b, 4 or 5 according to GSA-TS01.
    c. Peak Pressure: As directed.
    d. Positive Phase Impulse: As directed.

6. Maximum Overall Unit Thickness: As directed.

3.9 GLASS-CLAD POLYCARBONATE SECURITY GLAZING SCHEDULE

A. Security Glazing Type SG-#: As directed Clear symmetrical glass-clad polycarbonate, Tinted symmetrical glass-clad polycarbonate, Clear reflective-coated symmetrical glass-clad polycarbonate or Tinted reflective-coated symmetrical glass-clad polycarbonate.

1. Products: Subject to compliance with requirements, provide the following, provide one of the following or available products that may be incorporated into the Work include, but are not limited to, the following:

    a. As directed.

2. Detention Security Grade: As directed Grade 1, Grade 2, Grade 3 or Grade 4 according to ASTM F1915 cold-temperature impact test, warm-temperature impact test and torch and small blunt impactor test.
3. Forced-Entry Resistance: As directed Class I, Class II, Class III, Class IV or Class V according to ASTM F1233.
4. Forced-Entry Resistance: As directed Level I, Level II, Level III, Level IV or Level V according to HPW-TP-0500.03.
5. Ballistic Resistance: As directed Class/Level HG1, Class/Level HG2, Class/Level HG3, Class/Level HG4, Class/Level SMG, Class/Level R1, Class/Level R2, Class/Level R3, Class/Level R4-AP, Class/Level SH1 or Class/Level SH2 according to ASTM F1233.
6. Ballistic Resistance: As directed Level 1, Level 2, Level 3, Level 4, Level 5, Level 6, Level 7, Level 8, Level 1-SG, Level 2-SG, Level 3-SG, Level 4-SG, Level 5-SG, Level 6-SG, Level 7-SG or Level 8-SG according to UL 752.
7. Blast Resistance:

    a. Hazard Rating: As directed No hazard, Minimal hazard, Very low hazard, Low hazard or High hazard according to ASTM F1642.
    b. Performance Condition: As directed 1, 2, 3a, 3b, 4 or 5 according to GSA-TS01.
    c. Peak Pressure: As directed.
    d. Positive Phase Impulse: As directed.

8. Maximum Overall Unit Thickness: As directed.
9. Glass Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
10. Tinted Glass Location: Outer ply.
11. Coating Color: As directed Gold, Pewter or Silver.
12. Coating Location: As directed Second, Third or Fifth surface.
13. Overall Visible Light Transmittance: As directed.
14. Outdoor Visible Reflectance: Percent maximum as directed.
15. Winter Nighttime U-Factor: Maximum value as directed.
16. Summer Daytime U-Factor: Maximum value as directed.
17. Solar-Heat-Gain Coefficient: Maximum value as directed.
18. Provide safety glazing labeling.

3.10 LAMINATED-GLASS-AND-POLYCARBONATE SECURITY GLAZING SCHEDULE

A. Security Glazing Type SG-#: As directed Nonsymmetrical clear, tinted or reflective-coated laminated glass and polycarbonate with glass plies on the attack or threat side and polycarbonate plies on the witness side.

1. Products: Subject to compliance with requirements, provide the following, provide one of the following or available products that may be incorporated into the Work include, but are not limited to, the following:

    a. As directed.

2. Detention Security Grade: As directed Grade 1, Grade 2, Grade 3 or Grade 4 according to ASTM F1915 cold-temperature impact test, warm-temperature impact test and torch and small blunt impactor test.
3. Forced-Entry Resistance: As directed Class I, Class II, Class III, Class IV or Class V according to ASTM F1233.
4. Forced-Entry Resistance: As directed Level I, Level II, Level III, Level IV or Level V according to HPW-TP-0500.03.
5. Ballistic Resistance: As directed Class/Level HG1, Class/Level HG2, Class/Level HG3, Class/Level HG4, Class/Level SMG, Class/Level R1, Class/Level R2, Class/Level R3, Class/Level R4-AP, Class/Level SH1 or Class/Level SH2 according to ASTM F1233.
6. Ballistic Resistance: As directed Level 1, Level 2, Level 3, Level 4, Level 5, Level 6, Level 7, Level 8, Level 1-SG, Level 2-SG, Level 3-SG, Level 4-SG, Level 5-SG, Level 6-SG, Level 7-SG or Level 8-SG according to UL 752.
7. Blast Resistance:

    a. Hazard Rating: As directed No hazard, Minimal hazard, Very low hazard, Low hazard or High hazard according to ASTM F1642.
    b. Performance Condition: As directed 1, 2, 3a, 3b, 4 or 5 according to GSA-TS01.
    c. Peak Pressure: As directed.
    d. Positive Phase Impulse:.

8. Maximum Overall Unit Thickness: As directed.
9. Glass Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
10. Tinted Glass Location: Outer glass ply.
11. Coating Color: As directed Gold, Pewter or Silver.
12. Coating Location: As directed Second, Third or Fifth surface.
13. Overall Visible Light Transmittance: As directed.
14. Outdoor Visible Reflectance: Percent maximum as directed.
15. Winter Nighttime U-Factor: Maximum value as directed.
16. Summer Daytime U-Factor: Maximum value as directed.
17. Solar-Heat-Gain Coefficient: Maximum value as directed.
18. Provide safety glazing labeling.

3.11 INSULATING SECURITY GLAZING SCHEDULE

A. Security Glazing Type SG-#: As directed Clear insulating security glazing, Tinted insulating security glazing, Reflective-coated, clear insulating security glazing or Reflective-coated, tinted insulating security glazing. Outdoor lite is made of monolithic glass and indoor lite is made of glass-clad polycarbonate.

1. Products: Subject to compliance with requirements, provide the following, provide one of the following or available products that may be incorporated into the Work include, but are not limited to, the following:

    a. As directed.

2. Detention Security Grade: As directed Grade 1, Grade 2, Grade 3 or Grade 4 according to ASTM F1915 cold-temperature impact test, warm-temperature impact test and torch and small blunt impactor test.
3. Interspace Content: As directed Air or Argon.

4. Glass Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
5. Tinted Glass Location: Outdoor lite.
6. Coating Color: As directed Gold, Pewter or Silver.
7. Coating Location: As directed Second, Third or Fifth surface.
8. Overall Visible Light Transmittance: Percent minimum As directed.
9. Outdoor Visible Reflectance: Percent maximum As directed.
10. Winter Nighttime U-Factor: Maximum value As directed.
11. Summer Daytime U-Factor: Maximum value As directed.
12. Solar-Heat-Gain Coefficient: Maximum value As directed.
13. Provide safety glazing labeling.

B. Security Glazing Type SG-#: As directed Low-e-coated, clear insulating security glazing or Low-e-coated, tinted insulating security glazing. Outdoor lite is made of monolithic glass and indoor lite is made of glass-clad polycarbonate.

1. Products: Subject to compliance with requirements, provide the following, provide one of the following or available products that may be incorporated into the Work include, but are not limited to, the following:

2. Detention Security Grade: As directed Grade 1, Grade 2, Grade 3 or Grade 4 according to ASTM F1915 cold-temperature impact test, warm-temperature impact test and torch and small blunt impactor test.
3. Interspace Content: As directed Air or Argon.
4. Glass Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
5. Tinted Glass Location: Outer lite.
6. Low-E Coating: As directed Pyrolytic on second surface, Pyrolytic on third surface, Sputtered on second surface or Sputtered on third surface.
7. Overall Visible Light Transmittance: Percent minimum As directed.
8. Winter Nighttime U-Factor: Maximum As directed.
9. Summer Daytime U-Factor: Maximum As directed.
10. Solar-Heat-Gain Coefficient: Maximum As directed.
11. Provide safety glazing labeling.

C. Security Glazing Type SG-#: As directed Clear insulating security glazing, Tinted insulating security glazing, Reflective-coated, clear insulating security glazing or Reflective-coated, tinted insulating security glazing. Outdoor lite is made of laminated glass and indoor lite made of is glass-clad polycarbonate with spall-resistant film on inside face.

1. Products: Subject to compliance with requirements, provide the following, provide one of the following or available products that may be incorporated into the Work include, but are not limited to, the following:

2. Detention Security Grade: As directed Grade 1, Grade 2, Grade 3 or Grade 4 according to ASTM F1915 cold-temperature impact test, warm-temperature impact test and torch and small blunt impactor test.
3. Forced-Entry Resistance: As directed Class I, Class II, Class III, Class IV or Class V according to ASTM F1233.
4. Forced-Entry Resistance: As directed Level I, Level II, Level III, Level IV or Level V according to HPW-TP-0500.03.

5. Ballistic Resistance: As directed Class/Level HG1, Class/Level HG2, Class/Level HG3, Class/Level HG4, Class/Level SMG, Class/Level R1, Class/Level R2, Class/Level R3, Class/Level R4-AP, Class/Level SH1 or Class/Level SH2 according to ASTM F1233.
6. Ballistic Resistance: As directed Level 1, Level 2, Level 3, Level 4, Level 5, Level 6, Level 7, Level 8, Level 1-SG, Level 2-SG, Level 3-SG, Level 4-SG, Level 5-SG, Level 6-SG, Level 7-SG or Level 8-SG according to UL 752.
7. Blast Resistance:

    a. Hazard Rating: As directed No hazard, Minimal hazard, Very low hazard, Low hazard or High hazard according to ASTM F1642.
    b. Performance Condition: As directed 1, 2, 3a, 3b, 4 or 5 according to GSA-TS01.
    c. Peak Pressure: As directed.
    d. Positive Phase Impulse: As directed.

8. Interspace Content: As directed Air or Argon.
9. Glass Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
10. Tinted Glass Location: As directed Outer or Inner ply of outdoor lite.
11. Coating Color: As directed Gold, Pewter or Silver.
12. Coating Location: As directed Second, Third or Fifth surface.
13. Overall Visible Light Transmittance: Percent minimum As directed.
14. Outdoor Visible Reflectance: Percent maximum As directed.
15. Winter Nighttime U-Factor: Maximum As directed.
16. Summer Daytime U-Factor: Maximum As directed.
17. Solar-Heat-Gain Coefficient: Maximum As directed.
18. Provide safety glazing labeling.

D. Security Glazing Type SG-#: Low-e-coated, clear insulating security glazing or Low-e-coated, tinted insulating security glazing. Outdoor lite is made of laminated glass and indoor lite is made of glass-clad polycarbonate with spall-resistant film on inside face.

1. Products: Subject to compliance with requirements, provide the following, provide one of the following or available products that may be incorporated into the Work include, but are not limited to, the following:

2. Detention Security Grade: As directed Grade 1, Grade 2, Grade 3 or Grade 4 according to ASTM F1915 cold-temperature impact test, warm-temperature impact test and torch and small blunt impactor test.
3. Forced-Entry Resistance: As directed Class I, Class II, Class III, Class IV or Class V according to ASTM F1233.
4. Forced-Entry Resistance: As directed Level I, Level II, Level III, Level IV or Level V according to HPW-TP-0500.03.
5. Ballistic Resistance: As directed Class/Level HG1, Class/Level HG2, Class/Level HG3, Class/Level HG4, Class/Level SMG, Class/Level R1, Class/Level R2, Class/Level R3, Class/Level R4-AP, Class/Level SH1 or Class/Level SH2 according to ASTM F1233.
6. Ballistic Resistance: As directed Level 1, Level 2, Level 3, Level 4, Level 5, Level 6, Level 7, Level 8, Level 1-SG, Level 2-SG, Level 3-SG, Level 4-SG, Level 5-SG, Level 6-SG, Level 7-SG or Level 8-SG according to UL 752.
7. Blast Resistance:

a. Hazard Rating: As directed No hazard, Minimal hazard, Very low hazard, Low hazard or High hazard according to ASTM F1642.
b. Performance Condition: As directed 1, 2, 3a, 3b, 4 or 5 according to GSA-TS01.
c. Peak Pressure: As directed.
d. Positive Phase Impulse: As directed.

8. Interspace Content: As directed Air or Argon.
9. Glass Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
10. Tinted Glass Location: Outer lite.
11. Low-E Coating: As directed Pyrolytic on second surface, Pyrolytic on third surface, Sputtered on second surface or Sputtered on third surface.
12. Overall Visible Light Transmittance: Percent minimum As directed.
13. Winter Nighttime U-Factor: Maximum As directed.
14. Summer Daytime U-Factor: Maximum As directed.
15. Solar-Heat-Gain Coefficient: Maximum As directed.
16. Provide safety glazing labeling.

3.12 AIR-GAP SECURITY GLAZING SCHEDULE

A. Security Glazing Type SG-#: As directed Clear air-gap security glazing, Tinted air-gap security glazing, Clear reflective-coated air-gap security glazing or Tinted reflective-coated air-gap security glazing. Outdoor lite is made of laminated glass and indoor lite is made of laminated polycarbonate.

1. Products: As directed Subject to compliance with requirements, provide the following, provide one of the following or available products that may be incorporated into the Work include, but are not limited to, the following:

2. Forced-Entry Resistance: As directed Class I, Class II, Class III, Class IV or Class V according to ASTM F1233.
3. Forced-Entry Resistance: As directed Level I, Level II, Level III, Level IV or Level V according to HPW-TP-0500.03.
4. Ballistic Resistance: As directed Class/Level HG1, Class/Level HG2, Class/Level HG3, Class/Level HG4, Class/Level SMG, Class/Level R1, Class/Level R2, Class/Level R3, Class/Level R4-AP, Class/Level SH1 or Class/Level SH2 according to ASTM F1233.
5. Ballistic Resistance: As directed Level 1, Level 2, Level 3, Level 4, Level 5, Level 6, Level 7, Level 8, Level 1-SG, Level 2-SG, Level 3-SG, Level 4-SG, Level 5-SG, Level 6-SG, Level 7-SG or Level 8-SG according to UL 752.
6. Blast Resistance:

a. Hazard Rating: As directed No hazard, Minimal hazard, very low hazard, Low hazard or High hazard according to ASTM F1642.
b. Performance Condition: As directed 1, 2, 3a, 3b, 4 or 5 according to GSA-TS01.
c. Peak Pressure: As directed.
d. Positive Phase Impulse: As directed.

7. Glass Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
8. Tinted Glass Location: As directed Outer or Inner ply of outdoor lite.
9. Coating Color: As directed Gold, Pewter or Silver.
10. Coating Location: As directed Second, Third or Fifth surface.

11. Overall Visible Light Transmittance: Percent minimum As directed.
12. Outdoor Visible Reflectance: Percent maximum As directed.
13. Winter Nighttime U-Factor: Maximum As directed.
14. Summer Daytime U-Factor: Maximum As directed.
15. Solar-Heat-Gain Coefficient: Maximum As directed.
16. Provide safety glazing labeling.

B. Security Glazing Type SG-#: As directed Low-e-coated, clear air-gap security glazing or Low-e-coated, tinted air-gap security glazing. Outdoor lite is made of laminated glass and indoor lite is made of laminated polycarbonate.

1. Products: Subject to compliance with requirements, provide the following, provide one of the following or available products that may be incorporated into the Work include, but are not limited to, the following:

2. Forced-Entry Resistance: As directed Class I, Class II,Class III, Class IV, Class V according to ASTM F1233.
3. Forced-Entry Resistance: As directed Level I, Level II, Level III, Level IV or Level V according to HPW-TP-0500.03.
4. Ballistic Resistance: As directed Class/Level HG1, Class/Level HG2, Class/Level HG3, Class/Level HG4, Class/Level SMG, Class/Level R1, Class/Level R2, Class/Level R3, Class/Level R4-AP, Class/Level SH1 or Class/Level SH2 according to ASTM F1233.
5. Ballistic Resistance: As directed Level 1, Level 2, Level 3, Level 4, Level 5, Level 6, Level 7, Level 8, Level 1-SG, Level 2-SG, Level 3-SG, Level 4-SG, Level 5-SG, Level 6-SG, Level 7-SG or Level 8-SG according to UL 752.
6. Blast Resistance:

    a. Hazard Rating: As directed No hazard, Minimal hazard, Very low hazard, Low hazard or High hazard according to ASTM F1642.
    b. Performance Condition: As directed 1, 2, 3a, 3b, 4 or 5 according to GSA-TS01.
    c. Peak Pressure: As directed.
    d. Positive Phase Impulse: As directed.

7. Glass Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.
8. Tinted Glass Location: As directed Outer or Inner ply of outdoor lite.
9. Low-E Coating: As directed Pyrolytic on second surface, Pyrolytic on third surface, Sputtered on second surface or Sputtered on third surface.
10. Overall Visible Light Transmittance: Percent minimum As directed.
11. Winter Nighttime U-Factor: Maximum As directed.
12. Summer Daytime U-Factor: Maximum As directed.
13. Solar Heat-Gain Coefficient: Maximum As directed.
14. Provide safety glazing labeling.

END OF SECTION 088853

SECTION 089116 - OPERABLE WALL LOUVERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes operable, extruded-aluminum and formed-metal louvers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

1. For louvers specified to bear AMCA seal, include printed catalog pages showing specified models with appropriate AMCA Certified Ratings Seals.

B. Sustainable Design Submittals:
1. As directed.

C. Shop Drawings: For louvers and accessories. Include plans, elevations, sections, details, and attachments to other work. Show frame profiles and blade profiles, angles, and spacing.

1. Wiring Diagrams: For power, signal, and control wiring for motorized operable louvers.

D. Samples: For each type of metal finish required.

E. Delegated-Design Submittal: For louvers indicated to comply with structural and seismic performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.3 INFORMATIONAL SUBMITTALS

A. Product Test Reports: Based on tests performed according to AMCA 500-L.

B. Sample warranties.

1.4 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.2/D1.2M.
2. AWS D1.3/D1.3M.
3. AWS D1.6/D1.6M.

1.5 WARRANTY

A. Special Finish Warranty: Manufacturer agrees to repair or replace components on which finishes fail in materials or workmanship within specified warranty period.

1. Warranty Period: As directed Five, 10 or 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design louvers, including comprehensive engineering analysis by a qualified professional engineer, using structural and seismic performance requirements and design criteria indicated.

B. Structural Performance: Louvers shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of louver components, noise or metal fatigue caused by louver-blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures to the face of the building shall be considered to act normal.

1. Wind Loads: Determine loads based on pressures as indicated on Drawings.
2. Wind Loads: As directed Determine loads based on a uniform pressure of 20 lbf/sq. ft. (957 Pa) or 30 lbf/sq. ft. (1436 Pa), acting inward or outward.
3. Wind Loads: Determine loads based on pressures indicated below:

    a. Corner Zone: As directed Within a certain distance of building corners, uniform pressure of As directed, acting inward, and As directed acting outward.
    b. Other Than Corner Zone: As directed Uniform pressure As directed, acting inward, and As directed acting outward.

C. Seismic Performance: As indicated on Drawings.

D. Seismic Performance: Louvers, including attachments to other construction, shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. Design earthquake spectral response acceleration, short period (Sds) for Project As directed.
2. Component Importance Factor: As directed 1.5 or 1.0.

E. Louver Performance Ratings: Provide louvers complying with requirements specified, as demonstrated by testing manufacturer's stock units identical to those provided, except for length and width according to AMCA 500-L.

F. UL and NEMA Compliance: Provide motors and related components for motor-operated louvers that are listed and labeled by UL and comply with applicable NEMA standards.

2.2 OPERABLE EXTRUDED-ALUMINUM LOUVERS

A. Louver Construction and Operation: Provide operable louvers with extruded-aluminum frames and blades of not less than 0.080-inch (2.03-mm) nominal thickness, and with operating mechanisms to suit louver sizes.

1. Hand operation with push bars.
2. Crank operation with removable-crank operator in sill or jamb.
3. Chain operation with tension spring, wall clip, pull chain, and 160 deg F (71 deg C) fusible link.
4. As directed Motor operation with two-position, spring-return application (with power on, motor opens louver; with power off, spring closes louver); 110-V, 60-Hz motor and limit switch or two-direction, 110-V, 60-Hz motor and limit switches; equipped with frame-mounted switch, remote-mounted switch with indicator light or terminals for controlling devices.
5. As directed Pneumatic piston operation for use with 80- to 100-psi (550- to 690-kPa) compressed air for two-position or modulating operation; power open, power close with spring-return fail-safe.

B. Single-Blade Operable Louver:
1. Louver Depth: As directed 4 inches (100 mm) or 6 inches (150 mm).
2. Blade Type: As directed Drainable or Plain.
3. Accessories: Equip louvers as follows:

    a. Vinyl blade-edge gaskets for each louver blade.
    b. As directed Stainless-steel jamb seals or vinyl blade-end gaskets.

4. Louver Performance Ratings:

    a. Free Area: As directed Not less than 6.5 sq. ft. (0.60 sq. m), 7.0 sq. ft. (0.65 sq. m), 7.5 sq. ft. (0.70 sq. m) or 8.0 sq. ft. (0.74 sq. m) for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
    b. Point of Beginning Water Penetration: As directed Not less than 500 fpm (2.5 m/s), 600 fpm (3.0 m/s), 700 fpm (3.6 m/s), 800 fpm (4.1 m/s), 900 fpm (4.6 m/s) or 1000 fpm (5.1 m/s).
    c. Air Performance: As directed Not more than 0.10-inch wg (25-Pa) static pressure drop at 500-fpm (2.5-m/s), 600-fpm (3.0-m/s), 700-fpm (3.6-m/s), 800-fpm (4.1-m/s) or 900-fpm (4.6-m/s) free-area exhaust or intake velocity.
    d. Air Leakage: Not more than 3.5 cfm/sq. ft. (17.8 L/s per sq. m) of louver gross area at a differential static pressure of 0.15-inch wg (37 Pa) with operable louver blades closed.

5. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

C. Dual-Blade Operable Louver: Fixed drainable blades and operable plain blades combined in single frame.
1. Louver Depth: As directed 4 inches (100 mm) or 6 inches (150 mm), overall.
2. Fixed Drainable-Blade Angle: As directed 30, 35, 37.5 or 45 degrees.
3. Louver Performance Ratings:

a. Free Area: As directed Not less than 6.0 sq. ft. (0.56 sq. m), 6.5 sq. ft. (0.60 sq. m), 7.0 sq. ft. (0.65 sq. m), 7.5 sq. ft. (0.70 sq. m) or 8.0 sq. ft. (0.74 sq. m) for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
b. Point of Beginning Water Penetration: As directed Not less than 750 fpm (3.8 m/s), 800 fpm (4.1 m/s), 850 fpm (4.3 m/s), 900 fpm (4.6 m/s), 950 fpm (4.8 m/s) or 1000 fpm (5.1 m/s).
c. Air Performance: As directed Not more than 0.10-inch wg (25-Pa) static pressure drop at 750-fpm (3.8-m/s), 800-fpm (4.1-m/s), 850-fpm (4.3-m/s) or 900-fpm (4.6-m/s) free-area exhaust or intake velocity.
d. Air Leakage: Not more than 1.5 cfm/sq. ft. (7.6 L/s per sq. m) of louver gross area at a differential static pressure of 0.15-inch wg (37 Pa) with operable louver blades closed.

4. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

2.3 OPERABLE FORMED-METAL LOUVERS

A. Louver Operation: Provide operable louvers with operating mechanisms to suit louver sizes.

1. Hand operation with push bars.
2. Crank operation with removable-crank operator in sill or jamb.
3. Chain operation with tension spring, wall clip, pull chain, and 160 deg F (71 deg C) fusible link.
4. As directed Motor operation with two-position, spring-return application (with power on, motor opens louver; with power off, spring closes louver); 110-V, 60-Hz motor and limit switch or two-direction, 110-V, 60-Hz motor and limit switches; equipped with frame-mounted switch, remote-mounted switch with indicator light or terminals for controlling devices.
5. Pneumatic piston operation for use with 80- to 100-psi (550- to 690-kPa) compressed air for two-position or modulating operation; power open, power close with spring-return fail-safe.

B. Single-Blade Operable Louver:
1. Louver Depth: As directed 4 inches (100 mm) or 6 inches (150 mm).
2. Blade Type: As directed Drainable or Plain.
3. Frame and Blade Material and Nominal Thickness: As directed Galvanized-steel sheet, not less than 0.052 inch (1.32 mm) for frames and 0.040 inch (1.02 mm) for blades, 0.052 inch (1.32 mm) or 0.064 inch (1.63 mm).
4. Frame and Blade Material and Nominal Thickness: As directed Stainless-steel sheet, not less than 0.050 inch (1.27 mm) or 0.062 inch (1.59 mm).
5. Accessories: Equip louvers as follows:

a. Vinyl blade-edge gaskets for each louver blade.
b. Stainless-steel jamb seals or vinyl blade-end gaskets.

6. Louver Performance Ratings:

a. Free Area: As directed Not less than 6.5 sq. ft. (0.60 sq. m), 7.0 sq. ft. (0.65 sq. m), 7.5 sq. ft. (0.70 sq. m) or 8.0 sq. ft. (0.74 sq. m) for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.

b. Point of Beginning Water Penetration: As directed Not less than 500 fpm (2.5 m/s), 600 fpm (3.0 m/s), 700 fpm (3.6 m/s), 800 fpm (4.1 m/s), 900 fpm (4.6 m/s) or 1000 fpm (5.1 m/s).
c. Air Performance: As directed Not more than 0.10-inch wg (25-Pa) static pressure drop at 500-fpm (2.5-m/s), 600-fpm (3.0-m/s), 700-fpm (3.6-m/s), 800-fpm (4.1-m/s) or 900-fpm (4.6-m/s) free-area exhaust or intake velocity.
d. Air Leakage: Not more than 3.5 cfm/sq. ft. (17.8 L/s per sq. m) of louver gross area at a differential static pressure of 0.15-inch wg (37 Pa) with operable louver blades closed.

7. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

C. Dual-Blade Operable Louver: Fixed drainable blades and operable plain blades combined in single frame.
1. Louver Depth: As directed 4 inches (100 mm) or 6 inches (150 mm), overall.
2. Fixed Drainable-Blade Angle: As directed 30, 35, 37.5 or 45 degrees.
3. Frame and Blade Material and Nominal Thickness: As directed Galvanized-steel sheet, not less than 0.052 inch (1.32 mm) for frames and 0.040 inch (1.02 mm) for blades, 0.052 inch (1.32 mm) or 0.064 inch (1.63 mm).
4. Frame and Blade Material and Nominal Thickness: As directed Stainless-steel sheet, not less than 0.050 inch (1.27 mm) or 0.062 inch (1.59 mm).
5. Louver Performance Ratings:

a. Free Area: Not less than As directed for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
b. Point of Beginning Water Penetration: Not less than As directed.
c. Air Performance: Not more than As directed static pressure drop at As directed free-area exhaust or intake velocity.
d. Air Leakage: Not more than 1.5 cfm/sq. ft. (7.6 L/s per sq. m) of louver gross area at a differential static pressure of 0.15-inch wg (37 Pa) with operable louver blades closed.

6. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

2.4 LOUVER SCREENS

A. General: Provide screen at each exterior louver or louvers indicated.

1. Screen Location: Interior or Exterior face unless otherwise indicated.
2. Screening Type: As directed Bird screening, Bird screening, except where insect screening is indicated or Insect screening.

B. Louver Screen Frames: Same type and form of metal as indicated for louver to which screens are attached.

C. Louver Screening for Aluminum Louvers:

1. Bird Screening: Aluminum, 1/2-inch- (13-mm-) square mesh, 0.063-inch (1.60-mm) wire.

2. Bird Screening: Stainless steel, 1/2-inch- (13-mm-) square mesh, 0.047-inch (1.19-mm) wire.
3. Bird Screening: Flattened, expanded aluminum, 3/4 by 0.050 inch (19 by 1.27 mm) thick.
4. Insect Screening: Aluminum, 18-by-16 (1.4-by-1.6-mm) mesh, 0.012-inch (0.30-mm) wire.
5. Insect Screening: Stainless steel, 18-by-18 (1.4-by-1.4-mm) mesh, 0.009-inch (0.23-mm) wire.

D. Louver Screening for Galvanized-Steel Louvers:

1. Bird Screening: Galvanized steel, 1/2-inch- (13-mm-) square mesh, 0.041-inch (1.04-mm) wire.
2. Bird Screening: Stainless steel, 1/2-inch- (13-mm-) square mesh, 0.047-inch (1.19-mm) wire.
3. Insect Screening: Galvanized steel, 18-by-14 (1.4-by-1.8-mm) mesh, 0.011-inch (0.28-mm) wire.
4. Insect Screening: Stainless steel, 18-by-18 (1.4-by-1.4-mm) mesh, 0.009-inch (0.23-mm) wire.

E. Louver Screening for Stainless-Steel Louvers:

1. Bird Screening: Stainless steel, 1/2-inch- (13-mm-) square mesh, 0.047-inch (1.19-mm) wire.
2. Insect Screening: Stainless steel, 18-by-18 (1.4-by-1.4-mm) mesh, 0.009-inch (0.23-mm) wire.

2.5 MATERIALS

A. Aluminum Extrusions: ASTM B221 (ASTM B221M), Alloy 6063-T5, T-52, or T6.

B. Aluminum Sheet: ASTM B209 (ASTM B209M), Alloy 3003 or 5005, with temper as required for forming, or as otherwise recommended by metal producer for required finish.

C. Galvanized-Steel Sheet: As directed ASTM A653/A653M, G60 (Z180) or G90 (Z275) zinc coating, mill phosphatized.

D. Stainless-Steel Sheet: As directed ASTM A240/A240M, Type 304, No. 2B finish, No. 2D finish, No. 4 finish, with grain running parallel to length of blades and frame members, No. 4 finish, with grain running perpendicular to length of blades and frame members, No. 4 finish, with grain running perpendicular to length of blades and parallel to length of frame members or No. 6 finish.

E. Fasteners: Use types and sizes to suit unit installation conditions.

1. As directed Use Phillips flat-head, hex-head or Phillips pan-head or tamper-resistant screws for exposed fasteners unless otherwise indicated.
2. For fastening aluminum, use aluminum or 300 series stainless-steel fasteners.
3. For fastening galvanized steel, use hot-dip-galvanized-steel or 300 series stainless-steel fasteners.
4. For fastening stainless steel, use 300 series stainless-steel fasteners.

5. For color-finished louvers, use fasteners with heads that match color of louvers.

F. Postinstalled Fasteners for Concrete and Masonry: Torque-controlled expansion anchors, fabricated from stainless-steel components, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing according to ASTM E488/E488M conducted by a qualified testing agency.

G. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.6 FABRICATION

A. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.

B. As directed Join frame members to each other and to fixed louver blades with fillet welds concealed from view, threaded fasteners, or both, as standard with louver manufacturer unless otherwise indicated or size of louver assembly makes bolted connections between frame members necessary.

2.7 ALUMINUM FINISHES

A. Clear Anodic Finish: As directed AAMA 611, AA-M12C22A41, Class I, 0.018 mm or AA-M12C22A31, Class II, 0.010 mm or thicker.

B. Color Anodic Finish: As directed AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or AA-M12C22A32/A34, Class II, 0.010 mm or thicker.

1. Color: As directed Champagne, Light bronze, Medium bronze, Dark bronze or Black.

C. High-Performance Organic Finish: As directed Two-coat fluoropolymer finish complying with AAMA 2604 or AAMA 2605 and containing not less than 50 or 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

D. High-Performance Organic Finish: As directed Three or Four coat fluoropolymer finish complying with AAMA 2605 and containing not less than 50 or 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

2.8 GALVANIZED-STEEL SHEET FINISHES

A. Finish louvers after assembly.

B. Surface Preparation: Clean surfaces of oil and other contaminants. Use cleaning methods that do not leave residue. After cleaning, apply a conversion coating compatible with the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas and apply galvanizing repair paint, complying with SSPC-Paint 20, to comply with ASTM A780/A780M.

C. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of 2 mils (0.05 mm).

1. Color and Gloss: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

2.9 STAINLESS-STEEL SHEET FINISHES

A. Repair sheet finish by grinding and polishing irregularities, weld spatter, scratches, and forming marks to match surrounding finish.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Locate and place louvers level, plumb, and at indicated alignment with adjacent work.

B. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.

C. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.

D. Protect unpainted galvanized- and nonferrous-metal surfaces that are in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.

3.2 ADJUSTING

A. Test operable louvers and adjust as needed to produce fully functioning units that comply with requirements.

B. Restore louvers damaged during installation and construction, so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.

END OF SECTION 089116

SECTION 089119 - FIXED LOUVERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes fixed extruded-aluminum and formed-metal louvers.

B. Related Requirements:

1. Section 081113 "Hollow Metal Doors and Frames" for louvers in hollow-metal doors.
2. Section 081416 "Flush Wood Doors" for louvers in flush wood doors.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. For louvers specified to bear AMCA seal, include printed catalog pages showing specified models with appropriate AMCA Certified Ratings Seals.

B. Sustainable Design Submittals:
1. As directed.

C. Shop Drawings: For louvers and accessories. Include plans, elevations, sections, details, and attachments to other work. Show frame profiles and blade profiles, angles, and spacing.

D. Samples: For each type of metal finish required.

E. Delegated-Design Submittal: For louvers indicated to comply with structural and seismic performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.3 INFORMATIONAL SUBMITTALS

A. Product Test Reports: Based on tests performed according to AMCA 500-L.

B. Sample warranties.

1.4 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

1.5 WARRANTY

A. Special Finish Warranty: Manufacturer agrees to repair or replace components on which finishes fail in materials or workmanship within specified warranty period.

1. Warranty Period: As directed Five, 10 or 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design louvers, including comprehensive engineering analysis by a qualified professional engineer, using structural and seismic performance requirements and design criteria indicated.

B. Structural Performance: Louvers shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of louver components, noise or metal fatigue caused by louver-blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures shall be considered to act normal to the face of the building.

1. Wind Loads: Determine loads based on pressures as indicated on Drawings.
2. Wind Loads: As directed Determine loads based on a uniform pressure of 20 lbf/sq. ft. (957 Pa) or 30 lbf/sq. ft. (1436 Pa), acting inward or outward.
3. Wind Loads: Determine loads based on pressures indicated below:

a. Corner Zone: As directed Within a certain distance of building corners, uniform pressure, acting inward, and acting outward.
b. Other Than Corner Zone: Uniform pressure As directed, acting inward, and acting outward.

C. Seismic Performance: As indicated on drawings.

D. Seismic Performance: Louvers, including attachments to other construction, shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. Design earthquake spectral response acceleration, short period (Sds) for Project As directed.
2. Component Importance Factor: As directed 1.5 or 1.0.

E. Louver Performance Ratings: Provide louvers complying with requirements specified, as demonstrated by testing manufacturer's stock units identical to those provided, except for length and width according to AMCA 500-L.

2.2 FIXED EXTRUDED-ALUMINUM LOUVERS

A. Horizontal Nondrainable-Blade Louver:
1. Louver Depth: As directed 2 inches (50 mm), 4 inches (100 mm) or 6 inches (150 mm).
2. Blade Profile: As directed Plain blade without or Blade with center baffle.

3. Frame and Blade Nominal Thickness: Not less than As directed 0.080 inch (2.03 mm) or 0.060 inch (1.52 mm) for blades and 0.080 inch (2.03 mm) for frames.
4. Mullion Type: As directed Exposed, Semirecessed or Fully recessed.
5. Louver Performance Ratings:

    a. Free Area: As directed Not less than 7.5 sq. ft. (0.70 sq. m), 8.0 sq. ft. (0.74 sq. m) or 8.5 sq. ft. (0.79 sq. m) for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
    b. Point of Beginning Water Penetration: As directed Not less than 700 fpm (3.6 m/s), 750 fpm (3.8 m/s), 800 fpm (4.1 m/s), 850 fpm (4.3 m/s), 900 fpm (4.6 m/s) or 950 fpm (4.8 m/s).
    c. Air Performance: As directed Not more than 0.10-inch wg (25-Pa) static pressure drop at 650-fpm (3.3-m/s), 700-fpm (3.6-m/s) or 750-fpm (3.8-m/s) free-area exhaust or intake velocity.

6. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

B. Horizontal Drainable-Blade Louver:
1. Louver Depth: As directed 4 inches (100 mm) or 6 inches (150 mm).
2. Frame and Blade Nominal Thickness: As directed Not less than 0.080 inch (2.03 mm) or 0.060 inch (1.52 mm) for blades and 0.080 inch (2.03 mm) for frames.
3. Mullion Type: Exposed.
4. Louver Performance Ratings:

    a. Free Area: As directed Not less than 7.0 sq. ft. (0.65 sq. m), 7.5 sq. ft. (0.70 sq. m), 8.0 sq. ft. (0.74 sq. m) or 8.5 sq. ft. (0.79 sq. m) for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
    b. Point of Beginning Water Penetration: As directed Not less than 900 fpm (4.6 m/s), 950 fpm (4.8 m/s), 1000 fpm (5.1 m/s), 1050 fpm (5.3 m/s) or 1100 fpm (5.6 m/s).
    c. Air Performance: As directed Not more than 0.10-inch wg (25-Pa) static pressure drop at 700-fpm (3.6-m/s), 750-fpm (3.8-m/s), 800-fpm (4.1-m/s) or 850-fpm (4.3-m/s) free-area exhaust or intake velocity.
    d. Air Performance: As directed Not more than 0.15-inch wg (37-Pa) static pressure drop at 900-fpm (4.6-m/s), 950-fpm (4.8-m/s) or 1000-fpm (5.1-m/s) free-area exhaust or intake velocity.

5. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

C. Horizontal, Continuous-Line, Drainable-Blade Louver: Drainable-blade louver with blade gutters (drains) in rear two-thirds of blades only.
1. Louver Depth: 6 inches (150 mm).
2. Frame and Blade Nominal Thickness: Not less than 0.080 inch (2.03 mm).
3. Mullion Type: Semirecessed.
4. Louver Performance Ratings:

    a. Free Area: Not less than 7.8 sq. ft. (0.72 sq. m) for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
    b. Point of Beginning Water Penetration: Not less than 850 fpm (4.3 m/s).

c. Air Performance: Not more than 0.10-inch wg (25-Pa) static pressure drop at 800-fpm (4.1-m/s) free-area exhaust or intake velocity.

5. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

D. Horizontal, Wind-Driven-Rain-Resistant Louver:
1. Louver Depth: As directed 4 inches (100 mm), 5 inches (125 mm), 7 inches (175 mm), 8 inches (200 mm) or 9 inches (225 mm).
2. Frame and Blade Nominal Thickness: As directed Not less than 0.080 inch (2.03 mm) or 0.060 inch (1.52 mm) for blades and 0.080 inch (2.03 mm) for frames.
3. Louver Performance Ratings:

a. Free Area: As directed Not less than 5.0 sq. ft. (0.46 sq. m), 6.0 sq. ft. (0.56 sq. m) or 7.0 sq. ft. (0.65 sq. m) for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
b. Air Performance: As directed Not more than 0.10-inch wg (25-Pa) static pressure drop at 600-fpm (3.0-m/s), 700-fpm (3.6-m/s) or 800-fpm (4.1-m/s) free-area exhaust or intake velocity.
c. Wind-Driven Rain Performance: As directed Not less than 99, 95 or 80 percent effectiveness when subjected to a rainfall rate of 3 inches (75 mm) per hour and a wind speed of 29 mph (13 m/s) or 8 inches (200 mm) per hour and a wind speed of 50 mph (22.4 m/s) at a core-area intake velocity of 300 fpm (1.5 m/s), 400 fpm (2.0 m/s) or 500 fpm (2.5 m/s).

4. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

E. Vertical, Wind-Driven-Rain-Resistant Louver:
1. Louver Depth: As directed 4 inches (100 mm), 6 inches (150 mm), 8 inches (200 mm), 9 inches (225 mm) or 12 inches (300 mm).
2. Frame and Blade Nominal Thickness: As directed Not less than 0.080 inch (2.03 mm) or 0.060 inch (1.52 mm) for blades and 0.080 inch (2.03 mm) for frames.
3. Louver Performance Ratings:

a. Free Area: As directed Not less than 5.0 sq. ft. (0.46 sq. m), 6.0 sq. ft. (0.56 sq. m) or 7.0 sq. ft. (0.65 sq. m) for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
b. Air Performance: As directed Not more than 0.10-inch wg (25-Pa) static pressure drop at 600-fpm (3.0-m/s), 700-fpm (3.6-m/s) or 800-fpm (4.1-m/s) free-area exhaust or intake velocity.
c. Wind-Driven Rain Performance: Not less than 99 percent effectiveness when subjected to a rainfall rate of 3 inches (75 mm) per hour and a wind speed of 29 mph (13 m/s), 8 inches (200 mm) per hour and a wind speed of 50 mph (22.4 m/s) at a core-area intake velocity of 300 fpm (1.5 m/s), 400 fpm (2.0 m/s) or 500 fpm (2.5 m/s) As directed.

4. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

2.3 FIXED FORMED-METAL LOUVERS

A. Horizontal Nondrainable-Blade Louver:

1. Louver Depth: As directed 4 inches (100 mm) or 6 inches (150 mm).
2. Blade Profile: As directed Plain blade without or Blade with center baffle.
3. Frame and Blade Material and Nominal Thickness: As directed Galvanized-steel sheet, not less than 0.052 inch (1.32 mm) for frames and 0.040 inch (1.02 mm) for blades, 0.052 inch (1.32 mm) or 0.064 inch (1.63 mm).
4. Frame and Blade Material and Nominal Thickness: Stainless-steel sheet, not less than 0.050 inch (1.27 mm) or 0.062 inch (1.59 mm).
5. Mullion Type: As directed Exposed, Semirecessed or Fully recessed.
6. Louver Performance Ratings:

    a. Free Area: As directed Not less than 6.5 sq. ft. (0.60 sq. m), 7.0 sq. ft. (0.65 sq. m), 7.5 sq. ft. (0.70 sq. m) or 8.0 sq. ft. (0.74 sq. m) for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
    b. Point of Beginning Water Penetration: As directed Not less than 550 fpm (2.8 m/s), 600 fpm (3.0 m/s), 650 fpm (3.3 m/s) or 700 fpm (3.6 m/s).
    c. Air Performance: As directed Not more than 0.10-inch wg (25-Pa) static pressure drop at 550-fpm (2.8-m/s), 600-fpm (3.0-m/s), 650-fpm (3.3-m/s) or 700-fpm (3.6-m/s) free-area exhaust or intake velocity.

7. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

B. Horizontal Drainable-Blade Louver:
1. Louver Depth: As directed 4 inches (100 mm) or 6 inches (150 mm).
2. Frame and Blade Material and Nominal Thickness: As directed Galvanized-steel sheet, not less than 0.052 inch (1.32 mm) for frames and 0.040 inch (1.02 mm) for blades, 0.052 inch (1.32 mm) or 0.064 inch (1.63 mm).
3. Frame and Blade Material and Nominal Thickness: As directed Stainless-steel sheet, not less than 0.050 inch (1.27 mm) or 0.062 inch (1.59 mm).
4. Mullion Type: Exposed.
5. Louver Performance Ratings:

    a. Free Area: As directed Not less than 7.0 sq. ft. (0.65 sq. m), 7.5 sq. ft. (0.70 sq. m), 8.0 sq. ft. (0.74 sq. m) or 8.5 sq. ft. (0.79 sq. m) for 48-inch- (1220-mm-) wide by 48-inch- (1220-mm-) high louver.
    b. Point of Beginning Water Penetration: As directed Not less than 800 fpm (4.1 m/s), 850 fpm (4.3 m/s), 900 fpm (4.6 m/s), 950 fpm (4.8 m/s) or 1000 fpm (5.1 m/s).
    c. Air Performance: As directed Not more than 0.10-inch wg (25-Pa) static pressure drop at 700-fpm (3.6-m/s), 750-fpm (3.8-m/s), 800-fpm (4.1-m/s) or 850-fpm (4.3-m/s) free-area exhaust or intake velocity.
    d. Air Performance: As directed Not more than 0.15-inch wg (37-Pa) static pressure drop at 900-fpm (4.6-m/s), 950-fpm (4.8-m/s) or 1000-fpm (5.1-m/s) free-area velocity.

6. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

2.4 LOUVER SCREENS

A. General: As directed Provide screen at each exterior louver or louvers indicated.

1. Screen Location for Fixed Louvers: Interior face.
2. Screening Type: As directed Bird screening, Bird screening, except where insect screening is indicated or Insect screening.

B. Louver Screen Frames: Same type and form of metal as indicated for louver to which screens are attached.

C. Louver Screening for Aluminum Louvers:

1. Bird Screening: Aluminum, 1/2-inch- (13-mm-) square mesh, 0.063-inch (1.60-mm) wire.
2. Bird Screening: Stainless steel, 1/2-inch- (13-mm-) square mesh, 0.047-inch (1.19-mm) wire.
3. Bird Screening: Flattened, expanded aluminum, 3/4 by 0.050 inch (19 by 1.27 mm) thick.
4. Insect Screening: Aluminum, 18-by-16 (1.4-by-1.6-mm) mesh, 0.012-inch (0.30-mm) wire.
5. Insect Screening: Stainless steel, 18-by-18 (1.4-by-1.4-mm) mesh, 0.009-inch (0.23-mm) wire.

D. Louver Screening for Galvanized-Steel Louvers:

1. Bird Screening: Galvanized steel, 1/2-inch- (13-mm-) square mesh, 0.041-inch (1.04-mm) wire.
2. Bird Screening: Stainless steel, 1/2-inch- (13-mm-) square mesh, 0.047-inch (1.19-mm) wire.
3. Insect Screening: Galvanized steel, 18-by-14 (1.4-by-1.8-mm) mesh, 0.011-inch (0.28-mm) wire.
4. Insect Screening: Stainless steel, 18-by-18 (1.4-by-1.4-mm) mesh, 0.009-inch (0.23-mm) wire.

E. Louver Screening for Stainless-Steel Louvers:

1. Bird Screening: Stainless steel, 1/2-inch- (13-mm-) square mesh, 0.047-inch (1.19-mm) wire.
2. Insect Screening: Stainless steel, 18-by-18 (1.4-by-1.4-mm) mesh, 0.009-inch (0.23-mm) wire.

2.5 MATERIALS

A. Aluminum Extrusions: ASTM B221 (ASTM B221M), Alloy 6063-T5, T-52, or T6.

B. Aluminum Sheet: ASTM B209 (ASTM B209M), Alloy 3003 or 5005, with temper as required for forming, or as otherwise recommended by metal producer for required finish.

C. Galvanized-Steel Sheet: As directed ASTM A653/A653M, G60 (Z180) or G90 (Z275) zinc coating, mill phosphatized.

D. Stainless-Steel Sheet: As directed ASTM A240/A240M, Type 304, No. 2B finish, No. 2D finish, No. 4 finish, with grain running parallel to length of blades and frame members, No. 4 finish, with grain running perpendicular to length of blades and frame members, No. 4 finish,

with grain running perpendicular to length of blades and parallel to length of frame members or No. 6 finish.

E. Fasteners: Use types and sizes to suit unit installation conditions.

F. First option in first subparagraph below specifies flush heads; second option specifies raised heads.

1. As directed Use Phillips flat-head, hex-head or Phillips pan-head or tamper-resistant screws for exposed fasteners unless otherwise indicated.
2. For fastening aluminum, use aluminum or 300 series stainless-steel fasteners.
3. For fastening galvanized steel, use hot-dip-galvanized-steel or 300 series stainless-steel fasteners.
4. For fastening stainless steel, use 300 series stainless-steel fasteners.
5. For color-finished louvers, use fasteners with heads that match color of louvers.

G. Postinstalled Fasteners for Concrete and Masonry: Torque-controlled expansion anchors, fabricated from stainless-steel components, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing according to ASTM E488/E488M conducted by a qualified testing agency.

H. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.6 FABRICATION

A. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.

B. Join frame members to each other and to fixed louver blades with fillet welds concealed from view, threaded fasteners, or both, as standard with louver manufacturer unless otherwise indicated or size of louver assembly makes bolted connections between frame members necessary.

2.7 ALUMINUM FINISHES

A. Clear Anodic Finish: As directed AAMA 611, AA-M12C22A41, Class I, 0.018 mm or AA-M12C22A31, Class II, 0.010 mm or thicker.

B. Color Anodic Finish: As directed AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or AA-M12C22A32/A34, Class II, 0.010 mm or thicker.

1. Color: As directed Champagne, Light bronze, Medium bronze, Dark bronze or Black.

C. High-Performance Organic Finish: As directed Two-coat fluoropolymer finish complying with AAMA 2604 or AAMA 2605 and containing not less than 50 or 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

D. High-Performance Organic Finish: As directed Three or Four-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 50 or 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

2.8 GALVANIZED-STEEL SHEET FINISHES

A. Finish louvers after assembly.

B. Surface Preparation: Clean surfaces with nonpetroleum solvent, so surfaces are free of oil and other contaminants. After cleaning, apply a conversion coating compatible with the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas and repair according to ASTM A780/A780M.

C. Baked-Enamel or Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of 2 mils (0.05 mm).

1. Color and Gloss: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

2.9 STAINLESS-STEEL SHEET FINISHES

A. Repair sheet finish by grinding and polishing irregularities, weld spatter, scratches, and forming marks to match surrounding finish.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Locate and place louvers level, plumb, and at indicated alignment with adjacent work.

B. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.

C. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.

D. Protect unpainted galvanized- and nonferrous-metal surfaces that are in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.

3.2 ADJUSTING

A. Restore louvers damaged during installation and construction, so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.

END OF SECTION 089119

SECTION 089516 - WALL VENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes wall vents.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:
   1. As directed.

C. Samples: For each type of metal finish required.

1.3 INFORMATIONAL SUBMITTALS

A. Research reports.

B. Sample warranties.

1.4 WARRANTY

A. Special Finish Warranty: Manufacturer agrees to repair or replace components on which finishes fail in materials or workmanship within specified warranty period.

   1. Warranty Period: As directed Five, 10, 15 or 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 WALL VENTS (BRICK VENTS)

A. Extruded-Aluminum Wall Vents:
   1. Extruded-aluminum louvers and frames, not less than 0.125-inch (3.18-mm) nominal thickness, assembled by welding; with 18-by-14- (1.4-by-1.8-mm-) mesh, aluminum insect screening on inside face.
   2. Dampers: Aluminum blades and frames mounted on inside of wall vents.
   3. Finish: Mill.

B. Cast-Aluminum Wall Vents:

1. One-piece, cast-aluminum louvers and frames; with 18-by-14- (1.4-by-1.8-mm-) mesh, aluminum insect screening on inside face.
2. Dampers: Aluminum blades and frames mounted on inside of wall vents.
3. Finish: Mill.

2.2 MATERIALS

A. Aluminum Extrusions: ASTM B221 (ASTM B221M), Alloy 6063-T5, T-52, or T6.

B. Aluminum Sheet: ASTM B209 (ASTM B209M), Alloy 3003 or 5005 with temper as required for forming, or as otherwise recommended by metal producer for required finish.

C. Aluminum Castings: ASTM B26/B26M, Alloy 319.

D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Protect unpainted surfaces that are in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint.

B. Build vents into masonry work as construction progresses; comply with requirements in Section 042000 "Unit Masonry."

END OF SECTION 089516

SECTION 090190.52 - MAINTENANCE REPAINTING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes maintenance repainting as follows:

1. Removing existing paint.
2. Patching substrates.
3. Repainting, including staining and varnishing of wood.

B. Related Requirements:

1. Section 013516 "Alteration Project Procedures" for general remodeling, renovation, repair, and maintenance requirements.
2. Section 040110 "Masonry Cleaning" for cleaning and removing paint from masonry.
3. Section 050170.51 "Decorative Metal Cleaning" for cleaning and removing paint from decorative metal.

1.2 DEFINITIONS

A. Gloss Level 1: Not more than 5 units at 60 degrees and 10 units at 85 degrees, according to ASTM D523.

B. Gloss Level 2: Not more than 10 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.

C. Gloss Level 3: 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.

D. Gloss Level 4: 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, according to ASTM D523.

E. Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D523.

F. Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D523.

G. Gloss Level 7: More than 85 units at 60 degrees, according to ASTM D523.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Samples: For each type of paint system and each pattern, color, and gloss.

1. For each painted color being matched to a standardized color-coding system, include the color chips from the color-coding-system company with Samples.
2. Label each Sample for location and application.

D. Product List: Printout of current "MPI Approved Products List" for each MPI-product category specified in paint systems, with the proposed product highlighted.

1.5 INFORMATIONAL SUBMITTALS

A. Color Matching Certificate: For computer-matched colors.

1.6 QUALITY ASSURANCE

A. Color Matching: Custom computer-match paint colors to colors indicated in maintenance repainting schedule(s) at the end of Part 3 or on Drawings. For colors indicated by a standardized coding system, obtain a color chip for each color indicated from the color-coding-system company; computer match paint colors to the color chips.

B. Mockups: Prepare mockups of maintenance repainting processes for each type of coating system and substrate indicated and each color and finish required to demonstrate aesthetic effects and to set quality standards for materials and execution. Duplicate appearance of approved Sample submittals.

1. Surface-preparation mockups using applicable specified methods of cleaning and other surface preparation.
2. Coating mockups to represent surfaces and conditions for application of each type of coating system.

PART 2 - PRODUCTS

2.1 PREPARATORY CLEANING MATERIALS

A. Water: Potable.

B. Hot Water: Water heated to a temperature of 140 to 160 deg F (60 to 71 deg C).

C. Detergent Solution: Solution prepared by mixing 2 cups (0.5 L) of tetrasodium pyrophosphate (TSPP), 1/2 cup (125 mL) of laundry detergent that contains no ammonia, 5 quarts (5 L) of 5 percent sodium hypochlorite bleach, and 15 quarts (15 L) of warm water for every 5 gal. (20 L) of solution required.

D. Mildewcide: Commercial proprietary mildewcide or a job-mixed solution prepared by mixing 1/3 cup (80 mL) of household detergent that contains no ammonia, 1 quart (1 L) of 5 percent sodium hypochlorite bleach, and 3 quarts (3 L) of warm water.

E. Abrasives for Ferrous Metal Cleaning: Aluminum oxide paper, emery paper, fine steel wool, steel scrapers, and steel-wire brushes of various sizes.

F. Rust Remover: Manufacturer's standard phosphoric acid-based gel formulation, also called "naval jelly," for removing corrosion from iron and steel.

2.2 PAINT REMOVERS

A. Alkaline Paste Paint Remover: Manufacturer's standard alkaline paste or gel formulation for removing paint from masonry, stone, wood, plaster, or metal as required to suit Project; and containing no methylene chloride.

B. Low-Odor, Solvent-Type Paste Paint Remover: Manufacturer's standard low-odor, water-rinsable, solvent-type paste, gel, or foamed emulsion formulation for removing paint from masonry, stone, wood, plaster, or metal as required to suit Project; and containing no methanol or methylene chloride.

2.3 PAINT, GENERAL

A. Material Compatibility:

1. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, provide products recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.

B. Colors: As indicated with each paint system in maintenance repainting schedule(s) at the end of Part 3, Match Architect's samples or As selected by Architect from full range of industry colors.

2.4 PAINT MATERIALS, GENERAL

A. MPI Standards: Provide products that comply with MPI standards indicated and that are listed in its "MPI Approved Products List."

B. Transition Coat: Paint manufacturer's recommended coating for use where a residual existing coating is incompatible with the paint system.

2.5 PAINT MATERIAL MANUFACTURERS

2.6 PAINT MATERIALS

A. Primers and Sealers:

1. Primer Sealer, Latex, Interior: MPI #50.
    a. Basis-of-Design Product: As directed.
2. Primer, Latex, for Interior Wood: MPI #39.
    a. Basis-of-Design Product: As directed
3. Primer Sealer, Alkyd, Interior: MPI #45.
    a. Basis-of-Design Product: As directed.
4. Undercoat, Enamel, Interior: MPI #46.
    a. Basis-of-Design Product: As directed.
5. Primer, Stain Blocking, Water Based: MPI #137.
    a. Basis-of-Design Product: As directed.
6. Alkyd, Sanding Sealer, Clear: MPI #102.
    a. Basis-of-Design Product: As directed.
7. Shellac: MPI #88.
    a. Basis-of-Design Product: As directed.
8. Stain, Semi-Transparent, for Interior Wood: MPI #90.
    a. Basis-of-Design Product: As directed.

B. Metal Primers:

1. Primer, Metal, Surface Tolerant: MPI #23.
    a. Basis-of-Design Product: As directed.
2. Primer, Alkyd, Anti-Corrosive for Metal: MPI #79.
    a. Basis-of-Design Product: As directed.
3. Primer, Rust-Inhibitive, Water Based: MPI #107.
    a. Basis-of-Design Product: As directed.

C. Wood Primers:

1. Primer, Latex for Exterior Wood: MPI #6.

a. Basis-of-Design Product: As directed.

2. Primer, Alkyd for Exterior Wood: MPI #5.

a. Basis-of-Design Product: As directed.

D. Water-Based Paints:

1. Latex, Exterior Flat (Gloss Level 1): MPI #10.

a. Basis-of-Design Product: As directed.

2. Latex, Exterior Low Sheen (Gloss Levels 3-4): MPI #15.

a. Basis-of-Design Product: As directed.

3. Latex, Exterior Semigloss (Gloss Level 5): MPI #11.

a. Basis-of-Design Product: As directed.

4. Latex, Exterior, Gloss (Gloss Level 6): MPI #119.

a. Basis-of-Design Product: As directed.

5. Latex, Interior, Flat, (Gloss Level 1): MPI #53.

a. Basis-of-Design Product: As directed.

6. Latex, Interior, (Gloss Level 2): MPI #44.

a. Basis-of-Design Product: As directed.

7. Latex, Interior, (Gloss Level 3): MPI #52.

a. Basis-of-Design Product: As directed.

8. Latex, Interior, (Gloss Level 4): MPI #43.

a. Basis-of-Design Product: As directed.

9. Latex, Interior, Semigloss, (Gloss Level 5): MPI #54.

a. Basis-of-Design Product: As directed.

10. Latex, Interior, Gloss, (Gloss Level 6, except Minimum Gloss of 65 Units at 60 Degrees): MPI #114.

a. Basis-of-Design Product: As directed.

11. Latex, Interior, Institutional Low Odor/VOC, Flat (Gloss Level 1): MPI #143.

    a. Basis-of-Design Product: As directed.

12. Latex, Interior, Institutional Low Odor/VOC (Gloss Level 2): MPI #144.

    a. Basis-of-Design Product: As directed.

13. Latex, Interior, Institutional Low Odor/VOC (Gloss Level 3): MPI #145.

    a. Basis-of-Design Product: As directed.

14. Latex, Interior, Institutional Low Odor/VOC (Gloss Level 4): MPI #146.

    a. Basis-of-Design Product: As directed.

15. Latex, Interior, Institutional Low Odor/VOC, Semigloss (Gloss Level 5): MPI #147.

    a. Basis-of-Design Product: As directed.

16. Latex, Interior, Institutional Low Odor/VOC, Gloss (Gloss Level 6): MPI #148.

    a. Basis-of-Design Product: As directed.

E. Solvent-Based Paints:

1. Alkyd, Exterior Flat (Gloss Level 1): MPI #8.

    a. Basis-of-Design Product: As directed.

2. Alkyd, Exterior, Semigloss (Gloss Level 5): MPI #94.

    a. Basis-of-Design Product: As directed.

3. Alkyd, Exterior Gloss (Gloss Level 6): MPI #9.

    a. Basis-of-Design Product: As directed.

4. Alkyd, Interior, Flat (Gloss Level 1): MPI #49.

    a. Basis-of-Design Product: As directed.

5. Alkyd, Interior, (Gloss Level 3): MPI #51.

    a. Basis-of-Design Product: As directed.

6. Alkyd, Interior, Semigloss (Gloss Level 5): MPI #47.

    a. Basis-of-Design Product: As directed.

7. Alkyd, Interior, Gloss (Gloss Level 6): MPI #48.

a. Basis-of-Design Product: As directed.

F. Floor Coatings:

1. Floor Paint, Latex, Low Gloss (Maximum Gloss Level 3): MPI #60.

a. Basis-of-Design Product: As directed.

2. Floor Paint, Latex, Gloss MPI #68.

a. Basis-of-Design Product: As directed.

3. Floor Paint, Alkyd, Low Gloss (Gloss Level 6): MPI #59.

a. Basis-of-Design Product: As directed.

4. Floor Enamel, Alkyd, Gloss (Gloss Level 6): MPI #27.

a. Basis-of-Design Product: As directed.

G. Solvent-Based Varnishes:

1. Varnish, with UV Inhibitor, Exterior, Semigloss (Gloss Level 5): MPI #30.

a. Basis-of-Design Product: As directed.

2. Varnish, with UV Inhibitor, Exterior, Gloss (Gloss Level 6): MPI #29.

a. Basis-of-Design Product: As directed.

3. Varnish, Marine Spar, Exterior, Gloss (Gloss Level 7): MPI #28.

a. Basis-of-Design Product: As directed.

4. Varnish, Interior, Flat (Gloss Level 1): MPI #73.

a. Basis-of-Design Product: As directed.

5. Varnish, Interior, Semigloss (Gloss Level 5): MPI #74.

a. Basis-of-Design Product: As directed.

6. Varnish, Interior, Gloss (Gloss Level 6): MPI #75.

a. Basis-of-Design Product: As directed.

H. Polyurethane Varnishes:

1. Varnish, Interior, Polyurethane, Oil-Modified, Gloss (Gloss Level 6): MPI #56.

a. Basis-of-Design Product: As directed.

2. Varnish, Polyurethane, Moisture-Cured, Gloss (Gloss Level 6): MPI #31.

    a. Basis-of-Design Product: As directed.

2.7 PATCHING MATERIALS

A. Wood-Patching Compound: Two-part, epoxy-resin, wood-patching compound; knife-grade formulation as recommended in writing by manufacturer for type of wood repair indicated, tooling time required for the detail of work, and site conditions. Compound shall be designed for filling voids in damaged wood materials that have deteriorated from weathering and decay. Compound shall be capable of filling deep holes and spreading to feather edge.

B. Metal-Patching Compound: Two-part, polyester-resin, metal-patching compound; knife-grade formulation as recommended in writing by manufacturer for type of metal repair indicated, tooling time required for the detail of work, and site conditions. Compound shall be produced for filling metal that has deteriorated from corrosion. Filler shall be capable of filling deep holes and spreading to feather edge.

C. Cementitious Patching Compounds: Cementitious patching compounds and repair materials specifically manufactured for filling cementitious substrates and for sanding or tooling prior to repainting; formulation as recommended in writing by manufacturer for type of cementitious substrate indicated, exposure to weather and traffic, the detail of work, and site conditions.

D. Gypsum-Plaster Patching Compound: Finish coat plaster and bonding compound according to ASTM C842 and manufacturer's written instructions.

PART 3 - EXECUTION

3.1 MAINTENANCE REPAINTING, GENERAL

A. Execution of the Work: In repainting surfaces, disturb them as minimally as possible and as follows:

1. Remove failed coatings and corrosion and repaint.
2. Verify that substrate surface conditions are suitable for repainting.
3. Allow other trades to repair items in place before repainting.

B. Mechanical Abrasion: Where mechanical abrasion is needed for the work, use gentle methods, such as scraping and lightly hand sanding, that will not abrade softer substrates, reducing clarity of detail.

C. Heat Processes: Do not use torches, heat guns, or heat plates.

3.2 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of painting work. Comply with paint manufacturer's written instructions for inspection.

B. Maximum Moisture Content of Substrates: Do not begin application of coatings unless moisture content of exposed surface is below the maximum value recommended in writing by paint manufacturer and not greater than the following maximum values when measured with an electronic moisture meter appropriate to the substrate material:

1. Concrete: 12 percent.
2. Gypsum Board: 12 percent.
3. Gypsum Plaster: 12 percent.
4. Masonry (Clay and CMU): 12 percent.
5. Portland Cement Plaster: 12 percent.
6. Wood: 15 percent.

C. Alkalinity: Do not begin application of coatings unless surface alkalinity is within range recommended in writing by paint manufacturer. Conduct alkali testing with litmus paper on exposed plaster, cementitious, and masonry surfaces.

3.3 PREPARATORY CLEANING

A. General: Use the gentlest, appropriate method necessary to clean surfaces in preparation for painting. Clean all surfaces, corners, contours, and interstices.

B. Detergent Cleaning: Wash surfaces by hand using clean rags, sponges, and bristle brushes. Scrub surface with detergent solution and bristle brush until soil is thoroughly dislodged and can be removed by rinsing. Use small brushes to remove soil from joints and crevices. Dip brush in solution often to ensure that adequate fresh detergent is used and that surface remains wet. Rinse with water applied by clean rags or sponges.

C. Solvent Cleaning: Use solvent cleaning to remove oil, grease, smoke, tar, and asphalt from painted or unpainted surfaces before other preparation work. Wipe surfaces with solvent using clean rags and sponges. If necessary, spot-solvent cleaning may be employed just prior to commencement of paint application, provided enough time is allowed for complete evaporation. Use clean solvent and clean rags for the final wash to ensure that all foreign materials have been removed. Do not use solvents, including primer thinner and turpentine, that leave residue.

D. Mildew: Clean off existing mildew, algae, moss, plant material, loose paint, grease, dirt, and other debris by scrubbing with bristle brush or sponge and detergent solution. Scrub mildewed areas with mildewcide. Rinse with water applied by clean rags or sponges.

E. Chemical Rust Removal:

1. Remove loose rust scale with specified abrasives for ferrous-metal cleaning.
2. Apply rust remover with brushes or as recommended in writing by manufacturer.
3. Allow rust remover to remain on surface for period recommended in writing by manufacturer or as determined by preconstruction testing. Do not allow extended dwell time.
4. Wipe off residue with mineral spirits and either steel wool or soft rags, or clean with method recommended in writing by manufacturer to remove residue.
5. Dry immediately with clean, soft cloths. Follow direction of grain in metal.
6. Prime immediately to prevent rust. Do not touch cleaned metal surface until primed.

F. Mechanical Rust Removal:

1. Remove rust with specified abrasives for ferrous-metal cleaning. Clean to bright metal.
2. Wipe off residue with mineral spirits and either steel wool or soft rags.
3. Dry immediately with clean, soft cloths. Follow direction of grain in metal.
4. Prime immediately to prevent rust. Do not touch cleaned metal surface until primed.

3.4 PAINT REMOVAL

A. General: Remove paint where indicated. Where cleaning methods have been attempted and further removal of the paint is required because of incompatible or unsatisfactory surfaces for repainting, remove paint to extent required by conditions.

1. Brushes: Use brushes that are resistant to chemicals being used.

   a. Metal Substrates: If using wire brushes on metal, use brushes of same metal composition as metal being treated.
   b. Wood Substrates: Do not use wire brushes.

2. Spray Equipment: Use spray equipment that provides controlled application at volume and pressure indicated, measured at nozzle. Adjust pressure and volume to ensure that spray methods do not damage surfaces.

   a. Equip units with pressure gages.
   b. Unless otherwise indicated, hold spray nozzle at least 6 inches (150 mm) from surface and apply material in horizontal, back-and-forth sweeping motion, overlapping previous strokes to produce uniform coverage.
   c. For chemical spray application, use low-pressure tank or chemical pump suitable for chemical indicated, equipped with nozzle having a cone-shaped spray.
   d. For water-spray application, use fan-shaped spray tip that disperses water at an angle of 25 to 50 degrees.
   e. For heated water-spray application, use equipment capable of maintaining temperature between 140 and 160 deg F (60 and 71 deg C) at flow rates indicated.

B. Paint Removal with Hand Tools: Remove paint manually using hand-held scrapers, wire brushes, sandpaper, and metallic wool as appropriate for the substrate material.

C. Paint Removal with Alkaline Paste Paint Remover:

1. Remove loose and peeling paint using water, scrapers, stiff brushes, or a combination of these. Let surface dry thoroughly.
2. Apply paint remover to dry, painted surface with brushes.
3. Allow paint remover to remain on surface for period recommended in writing by manufacturer or as determined by preconstruction testing.
4. As directed rinse with cold or hot water applied by low or medium-pressure spray to remove chemicals and paint residue.
5. Use mechanical methods recommended in writing by manufacturer to remove chemicals and paint residue.
6. Repeat process if necessary to remove all paint.

D. Paint Removal with Low-Odor, Solvent-Type Paste Paint Remover:

1. Remove loose and peeling paint using water, scrapers, stiff brushes, or a combination of these. Let surface dry thoroughly.
2. Apply thick coating of paint remover to dry, painted surface with natural-fiber cleaning brush, deep-nap roller, or large paintbrush. Apply in one or two coats according to manufacturer's written instructions.
3. Allow paint remover to remain on surface for period recommended in writing by manufacturer or as determined by preconstruction testing.
4. As directed Rinse with cold or hot water applied by low or medium-pressure spray to remove chemicals and paint residue.
5. Use mechanical methods recommended in writing by manufacturer to remove chemicals and paint residue.
6. Repeat process if necessary to remove all paint.

3.5 SUBSTRATE REPAIR

A. General: Repair substrate surface defects that are inconsistent with the surface appearance of adjacent materials and finishes.

B. Wood Substrate:

1. As directed repair wood defects including dents and gouges more than 1/8 inch (3 mm) or 1/4 inch (6 mm) in size and all holes and cracks by filling with wood-patching compound and sanding smooth. Reset or remove protruding fasteners.
2. Where existing paint is allowed to remain, sand irregular buildup of paint, runs, and sags to achieve a uniformly smooth surface.

C. Cementitious Material Substrate:

1. General: As directed repair defects including dents and chips more than 1/4 inch (6 mm) or 1/2 inch (13 mm) in size and all holes and cracks by filling with cementitious patching compound and sanding smooth. Remove protruding fasteners.
2. New and Bare Plaster: Neutralize surface of plaster with mild acid solution as recommended in writing by paint manufacturer. In lieu of acid neutralization, follow manufacturer's written instruction for primer or transition coat over alkaline plaster surfaces.
3. Concrete, Cement Plaster, and Other Cementitious Products: Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents. If surfaces are too alkaline to paint, correct this condition before painting.

D. Gypsum-Plaster and Gypsum-Board Substrates:

1. As directed repair defects including dents and chips more than 1/8 inch (3 mm) or 1/4 inch (6 mm) in size and all holes and cracks by filling with gypsum-plaster patching compound and sanding smooth. Remove protruding fasteners.
2. Rout out surface cracks to remove loose, unsound material; fill with patching compound and sand smooth.

E. Metal Substrate:

1. Preparation: Treat repair locations by wire-brushing and solvent cleaning. Use chemical or mechanical rust removal method to clean off rust.
2. Defects in Metal Surfaces: As directed repair non-load-bearing defects in existing metal surfaces, including dents and gouges more than 1/16 inch (6 mm) or 1/8 inch (3 mm) deep or 1/2 inch (13 mm) or 1 inch (25 mm) across and all holes and cracks by filling with metal-patching compound and sanding smooth. Remove burrs and protruding fasteners.
3. Priming: Prime iron and steel surfaces immediately after repair to prevent flash rusting. Stripe paint corners, crevices, bolts, welds, and sharp edges. Apply two coats to surfaces that are inaccessible after completion of the Work.

3.6 PAINT APPLICATION, GENERAL

A. Prepare surfaces to be painted according to the Surface-Preparation Schedule and with manufacturer's written instructions for each substrate condition.

B. Apply a transition coat over incompatible existing coatings.

C. Metal Substrate: Stripe paint corners, crevices, bolts, welds, and sharp edges before applying full coat. Apply two coats to surfaces that are inaccessible after completion of the Work. Tint stripe coat different than the main coating and apply with brush.

D. Blending Painted Surfaces: When painting new substrates patched into existing surfaces or touching up missing or damaged finishes, apply coating system specified for the specific substrate. Apply final finish coat over entire surface from edge to edge and corner to corner.

3.7 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage paint-remover manufacturer's factory-authorized service representative for consultation and Project-site inspection and to provide on-site assistance when requested by Architect.

3.8 CLEANING AND PROTECTION

A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.

B. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.

C. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.9 SURFACE-PREPARATION SCHEDULE

A. General: Before painting, prepare surfaces where indicated on Drawings for painting according to applicable requirements specified in this schedule.

1. Examine surfaces to evaluate each surface condition according to paragraphs below.
2. Where existing degree of soiling prevents examination, preclean surface and allow it to dry before making an evaluation.
3. Repair substrate defects according to "Substrate Repair" Article.

B. Surface Preparation for MPI DSD 0 Degree of Surface Degradation:

1. Surface Condition: Existing paint film in good condition and tightly adhered.
2. Paint Removal: Not required.
3. Preparation for Painting: Wash surface by detergent cleaning; use solvent cleaning where needed. Roughen or degloss cleaned surfaces to ensure paint adhesion according to paint manufacturer's written instructions.

C. Surface Preparation for MPI DSD 1 Degree of Surface Degradation:

1. Surface Condition: Paint film cracked or broken but adhered.
2. Paint Removal: Scrape by hand-tool cleaning methods to remove loose paint until only tightly adhered paint remains.
3. Preparation for Painting: Wash surface by detergent cleaning; use other cleaning methods for small areas of bare substrate if required. Roughen, degloss, and sand the cleaned surfaces to ensure paint adhesion and a smooth finish according to paint manufacturer's written instructions.

D. Surface Preparation for MPI DSD 2 Degree of Surface Degradation:

1. Surface Condition: Paint film loose, flaking, or peeling.
2. Paint Removal: Remove loose, flaking, or peeling paint film by hand-tool or chemical paint-removal methods.
3. Preparation for Painting: Wash surface by detergent cleaning; use solvent cleaning where needed. Use other cleaning methods for small areas of bare substrate if required. Sand surfaces to smooth remaining paint film edges. Prepare bare cleaned surface to be painted according to paint manufacturer's written instructions for substrate construction materials.

E. Surface Preparation for MPI DSD 3 Degree of Surface Degradation:

1. Surface Condition: As directed Paint film severely deteriorated, obscuring fine architectural detail work because of paint-layer buildup and surface indicated to have paint completely removed.
2. Paint Removal: Completely remove paint film by hand-tool or chemical paint-removal methods. Remove rust.
3. Preparation for Painting: Prepare bare cleaned surface according to paint manufacturer's written instructions for substrate construction materials.

F. Surface Preparation for MPI DSD 4 Degree of Surface Degradation:

1. Surface Condition: Missing material, small holes and openings, and deteriorated or corroded substrate.
2. Substrate Preparation: Repair, replace, and treat substrate according to "Substrate Repair" Article and requirements in other Specification Sections.

3. Preparation for Painting: Sand substrate surfaces to smooth remaining paint film edges and prepare according to paint manufacturer's written instructions for substrate construction materials. Remove rust.
4. Painting: Paint as required for MPI DSD 2 degree of surface degradation.

3.10 EXTERIOR MAINTENANCE REPAINTING SCHEDULE

A. Ferrous Metal Substrates: Iron railing and gate:

1. Alkyd System: MPI REX 5.1D system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Metal, Surface Tolerant, MPI #23.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Metal, Surface Tolerant, MPI #23.
d. Intermediate Coat: Alkyd, exterior, matching topcoat.
e. Topcoat: Alkyd, exterior, semigloss (Gloss Level 5), MPI #94.
f. Topcoat: Alkyd, exterior, gloss (Gloss Level 6), MPI #9.
g. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

B. Wood Columns, Beams, Ceilings, Siding and Fencing as directed:

1. Latex System: MPI REX 6.2A system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd for Exterior Wood, MPI #5.
c. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Latex for Exterior Wood, MPI #6.
d. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd for Exterior Wood, MPI #5.
e. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Latex for Exterior Wood, MPI #6.
f. Intermediate Coat: Latex, exterior, matching topcoat.
g. Topcoat: Latex, exterior flat (Gloss Levels 1-2), MPI #10.
h. Topcoat: Latex, exterior, low sheen (Gloss Levels 3-4), MPI #15.
i. Topcoat: Latex, exterior semigloss (Gloss Level 5), MPI #11.
j. Topcoat: Latex, exterior gloss (Gloss Level 6), MPI #119.
k. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

2. Alkyd System: MPI REX 6.2C system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd for Exterior Wood, MPI #5.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd for Exterior Wood, MPI #5.

d. Intermediate Coat: Latex, exterior, matching topcoat.
e. Topcoat: Alkyd, exterior flat (Gloss Level 1), MPI #8.
f. Topcoat: Alkyd, exterior semigloss (Gloss Level 5), MPI #94.
g. Topcoat: Alkyd, exterior gloss (Gloss Level 6), MPI #9.
h. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

C. Wood Doors, Windows, Frames, Casings and Smooth Fasciae as directed:

1. Latex System: MPI REX 6.3A system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd for Exterior Wood, MPI #5.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd for Exterior Wood, MPI #5.
d. Intermediate Coat: Latex, exterior, matching topcoat.
e. Topcoat: Latex, exterior flat (Gloss Levels 1-2), MPI #10.
f. Topcoat: Latex, exterior, low sheen (Gloss Levels 3-4), MPI #15.
g. Topcoat: Latex, exterior semigloss (Gloss Level 5), MPI #11.
h. Topcoat: Latex, exterior gloss (Gloss Level 6), MPI #119.
i. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

2. Alkyd System: MPI REX 6.3B system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd for Exterior Wood, MPI #5.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd for Exterior Wood, MPI #5.
d. Intermediate Coat: Alkyd, exterior, matching topcoat.
e. Topcoat: Alkyd, exterior flat (Gloss Level 1), MPI #8.
f. Topcoat: Alkyd, exterior semigloss (Gloss Level 5), MPI #94.
g. Topcoat: Alkyd, exterior gloss (Gloss Level 6), MPI #9.
h. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399,existing colors or colors indicated on Drawings.

3. Varnish System (Clear): MPI REX 6.3F.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with topcoat.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with topcoat.
d. Intermediate Coat: Exterior varnish matching topcoat.
e. Topcoat: Varnish, with UV inhibitor, exterior, semigloss (Gloss Level 5), MPI #30.
f. Topcoat: Varnish, with UV inhibitor, exterior, gloss (Gloss Level 6), MPI #29.
g. Topcoat: Varnish, marine spar, exterior, gloss (Gloss Level 6), MPI #28.

D. Wood Deck and Stairs:

1. Latex Porch and Floor System over Alkyd Primer: MPI REX 6.5A system over a transition coat.

   a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
   b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd/Oil for Exterior Wood, MPI #5.
   c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd/Oil for Exterior Wood, MPI #5.
   d. Intermediate Coat: Floor Paint, Latex, matching topcoat.
   e. Topcoat: Floor paint, latex, low gloss, MPI #60.
   f. Topcoat: Floor paint, latex, gloss, MPI #68.
   g. Topcoat Additive: Manufacturer's standard additive to increase skid resistance of painted surface.
   h. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

2. Alkyd Floor Enamel System: MPI REX 6.5B system over a transition coat.

   a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
   b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with topcoat.
   c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with topcoat.
   d. Intermediate Coat: Floor enamel matching topcoat.
   e. Topcoat: Floor paint, alkyd, low gloss, MPI #59.
   f. Topcoat: Floor enamel, alkyd, gloss (Gloss Level 6), MPI #27.
   g. Topcoat Additive: Manufacturer's standard additive to increase skid resistance of painted surface.
   h. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

E. Wood Shingle or Shake Siding as directed:

1. Latex System: MPI REX 6.6A system over a transition coat.

   a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
   b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd for Exterior Wood, MPI #5.
   c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd for Exterior Wood, MPI #5.
   d. Intermediate Coat: Latex, exterior, matching topcoat.
   e. Topcoat: Latex, exterior flat (Gloss Levels 1-2), MPI #10.
   f. Topcoat: Latex, exterior, low sheen (Gloss Levels 3-4), MPI #15.
   g. Topcoat: Latex, exterior semigloss (Gloss Level 5), MPI #11.
   h. Topcoat: Latex, exterior gloss (Gloss Level 6), MPI #119.
   i. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

2. Alkyd System: MPI REX 6.6B system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd for Exterior Wood, MPI #5.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd for Exterior Wood, MPI #5.
d. Intermediate Coat: Latex, exterior, matching topcoat.
e. Topcoat: Alkyd, exterior flat (Gloss Level 1), MPI #8.
f. Topcoat: Alkyd, exterior semigloss (Gloss Level 5), MPI #94.
g. Topcoat: Alkyd, exterior gloss (Gloss Level 6), MPI #9.
h. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

3.11 INTERIOR MAINTENANCE REPAINTING SCHEDULE

A. Ferrous Metal Substrates: Iron railing:

1. Latex System: MPI RIN 5.1N system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Metal, Surface Tolerant, MPI #23.
c. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd, Anti-Corrosive for Metal, MPI #79.
d. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Rust-Inhibitive, Water Based, MPI #107.
e. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Metal, Surface Tolerant, MPI #23.
f. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd, Anti-Corrosive for Metal, MPI #79.
g. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Rust-Inhibitive, Water Based, MPI #107.
h. Intermediate Coat: Latex matching topcoat.
i. Topcoat: Latex, interior, flat (Gloss Level 1), MPI #53.
j. Topcoat: Latex, interior (Gloss Level 2), MPI #44.
k. Topcoat: Latex, interior (Gloss Level 3), MPI #52.
l. Topcoat: Latex, interior (Gloss Level 4), MPI #43.
m. Topcoat: Latex, interior, semigloss (Gloss Level 5), MPI #54.
n. Topcoat: Latex, interior, gloss (Gloss Level 6), MPI #114.
o. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

2. Alkyd System: MPI RIN 5.1E system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Metal, Surface Tolerant, MPI #23.
c. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd, Anti-Corrosive for Metal, MPI #79.

d. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Metal, Surface Tolerant, MPI #23.
e. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd, Anti-Corrosive for Metal, MPI #79.
f. Intermediate Coat: Alkyd, matching topcoat.
g. Topcoat: Alkyd, interior, flat (Gloss Level 1), MPI #49.
h. Topcoat: Alkyd, interior (Gloss Level 3), MPI #51.
i. Topcoat: Alkyd, interior, semigloss (Gloss Level 5), MPI #47.
j. Topcoat: Alkyd, interior, gloss (Gloss Level 6), MPI #48.
k. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

B. Wood Columns, Beams and Ceilings as directed:

1. Latex System over Latex Primer: MPI RIN 6.2D system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Latex, for Interior Wood, MPI #39.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Latex, for Interior Wood, MPI #39.
d. Intermediate Coat: Latex, interior, matching topcoat.
e. Topcoat: Latex, interior flat (Gloss Level 1), MPI #53.
f. Topcoat: Latex, interior (Gloss Level 2), MPI #44.
g. Topcoat: Latex, interior (Gloss Level 3), MPI #52.
h. Topcoat: Latex, interior (Gloss Level 4), MPI #43.
i. Topcoat: Latex, interior, semigloss (Gloss Level 5), MPI #54.
j. Topcoat: Latex, interior, gloss (Gloss Level 6), MPI #114.
k. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

2. Latex System over Alkyd Primer: MPI RIN 6.2A system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Undercoat, Enamel, Interior, MPI #46.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Undercoat, Enamel, Interior, MPI #46.
d. Intermediate Coat: Latex, interior, matching topcoat.
e. Topcoat: Latex, interior flat (Gloss Level 1), MPI #53.
f. Topcoat: Latex, interior (Gloss Level 2), MPI #44.
g. Topcoat: Latex, interior (Gloss Level 3), MPI #52.
h. Topcoat: Latex, interior (Gloss Level 4), MPI #43.
i. Topcoat: Latex, interior, semigloss (Gloss Level 5), MPI #54.
j. Topcoat: Latex, interior, gloss (Gloss Level 6), MPI #114.
k. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

C. Wood Doors, Windows, Frames and Moldings:

1. Latex System over Latex Primer: MPI RIN 6.3U system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Latex, for Interior Wood, MPI #39.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Latex, for Interior Wood, MPI #39.
d. Intermediate Coat: Latex, interior, matching topcoat.
e. Topcoat: Latex, interior, semigloss (Gloss Level 5), MPI #54.
f. Topcoat: Latex, interior, gloss (Gloss Level 6), MPI #114.
g. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

2. Low-Odor Latex System over Latex Primer: MPI RIN 6.3V system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Latex, for Interior Wood, MPI #39.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Latex, for Interior Wood, MPI #39.
d. Intermediate Coat: Latex, interior, matching topcoat.
e. Topcoat: Latex, interior, institutional low odor/VOC flat (Gloss Level 1), MPI #143.
f. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 2), MPI #144.
g. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 3), MPI #145.
h. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 4), MPI #146.
i. Topcoat: Latex, interior, institutional low odor/VOC, semigloss (Gloss Level 5), MPI #147.
j. Topcoat: Latex, interior, institutional low odor/VOC, gloss (Gloss Level 6), MPI #148.
k. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

3. Alkyd Varnish System (Clear): MPI RIN 6.3J.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Shellac, MPI #88.
c. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Alkyd, Sanding Sealer, Clear, MPI #102.
d. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Shellac, MPI #88.
e. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Alkyd, Sanding Sealer, Clear, MPI #102.
f. Intermediate Coat: Interior varnish matching topcoat.
g. Topcoat: Varnish, interior, flat (Gloss Level 1), MPI #73.
h. Topcoat: Varnish, interior, semigloss (Gloss Level 5), MPI #74.
i. Topcoat: Varnish, interior, gloss (Gloss Level 6), MPI #75.

D. Wood Paneling, Casework and Millwork as directed:

1. Latex System over Latex Primer: MPI RIN 6.4T system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Latex, for Interior Wood, MPI #39.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Latex, for Interior Wood, MPI #39.
d. Intermediate Coat: Latex, interior, matching topcoat.
e. Topcoat: Latex, interior, semigloss (Gloss Level 5), MPI #54.
f. Topcoat: Latex, interior, gloss (Gloss Level 6), MPI #114.
g. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

2. Low-Odor Latex System over Latex Primer: MPI RIN 6.4D system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Latex, for Interior Wood, MPI #39.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Latex, for Interior Wood, MPI #39.
d. Intermediate Coat: Latex, interior, matching topcoat.
e. Topcoat: Latex, interior, institutional low odor/VOC flat (Gloss Level 1), MPI #143.
f. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 2), MPI #144.
g. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 3), MPI #145.
h. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 4), MPI #146.
i. Topcoat: Latex, interior, institutional low odor/VOC, semigloss (Gloss Level 5), MPI #147.
j. Topcoat: Latex, interior, institutional low odor/VOC, gloss (Gloss Level 6), MPI #148.
k. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

3. Latex System over Alkyd Primer: MPI RIN 6.4A system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Undercoat, Enamel, Interior, MPI #46.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Undercoat, Enamel, Interior, MPI #46.
d. Intermediate Coat: Latex, interior, matching topcoat.
e. Topcoat: Latex, interior flat (Gloss Level 1), MPI #53.
f. Topcoat: Latex, interior (Gloss Level 2), MPI #44.
g. Topcoat: Latex, interior (Gloss Level 3), MPI #52.
h. Topcoat: Latex, interior (Gloss Level 4), MPI #43.
i. Topcoat: Latex, interior, semigloss (Gloss Level 5), MPI #54.
j. Topcoat: Latex, interior, gloss (Gloss Level 6), MPI #114.
k. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

E. Wood Floors and Stairs:

1. Alkyd Floor Enamel System: MPI RIN 6.5A system over a transition coat.

    a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
    b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with topcoat.
    c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with topcoat.
    d. Intermediate Coat: Floor enamel matching topcoat.
    e. Topcoat: Floor paint, alkyd, low gloss, MPI #59.
    f. Topcoat: Floor enamel, alkyd, gloss (Gloss Level 6), MPI #27.
    g. Topcoat Additive: Manufacturer's standard additive to increase skid resistance of painted surface.
    h. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

2. Polyurethane Varnish System (Clear): MPI RIN 6.5C.

    a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
    b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with topcoat.
    c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with topcoat.
    d. Intermediate Coat: Interior varnish matching topcoat.
    e. Topcoat: Varnish, interior, polyurethane, oil modified, gloss, MPI #56.

3. Moisture-Cured Polyurethane System (over Stain): MPI RIN 6.5L.

    a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
    b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Stain, Semi-Transparent, for Interior Wood, MPI #90.
    c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Stain, Semi-Transparent, for Interior Wood, MPI #90.
    d. Intermediate Coat: Moisture-cured polyurethane varnish matching topcoat.
    e. Topcoat: Varnish, polyurethane, moisture cured, gloss (Gloss Level 6), MPI #31.
    f. Stain Color: Match adjacent, cleaned wood of same type, existing color or color indicated on Drawings.

F. Plaster:

1. Low-Odor Latex System over Waterborne Primer: MPI RIN 9.2M system over a transition coat.

    a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
    b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer Sealer, Latex, Interior, MPI #50.
    c. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Stain Blocking, Water Based, MPI #137.
    d. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer Sealer, Latex, Interior, MPI #50.

e. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Stain Blocking, Water Based, MPI #137.
f. Topcoat: Latex, interior, institutional low odor/VOC flat (Gloss Level 1), MPI #143.
g. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 2), MPI #144.
h. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 3), MPI #145.
i. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 4), MPI #146.
j. Topcoat: Latex, interior, institutional low odor/VOC, semigloss (Gloss Level 5), MPI #147.
k. Topcoat: Latex, interior, institutional low odor/VOC, gloss (Gloss Level 6), MPI #148.
l. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

2. Latex System over Alkyd Primer: MPI RIN 9.2K system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer Sealer, Alkyd, Interior, MPI #45.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat Primer Sealer, Alkyd, Interior, MPI #45.
d. Intermediate Coat: Latex matching topcoat.
e. Topcoat: Latex, interior, flat (Gloss Level 1), MPI #53.
f. Topcoat: Latex, interior (Gloss Level 2), MPI #44.
g. Topcoat: Latex, interior (Gloss Level 3), MPI #52.
h. Topcoat: Latex, interior (Gloss Level 4), MPI #43.
i. Topcoat: Latex, interior, semigloss (Gloss Level 5), MPI #54.
j. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, existing colors or colors indicated on Drawings.

END OF SECTION 090190.52

SECTION 090320 - HISTORIC TREATMENT OF PLASTER

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Repair and replacement of historic interior and exterior lime plaster.
2. Repair and replacement of interior gypsum plaster.
3. Replication of cast plasterwork in gypsum plaster.

B. Related Requirements:

1. Section 013591 "Historic Treatment Procedures" for general historic treatment requirements.
2. Section 090391 "Historic Treatment of Plain Painting" for paint removal, surface preparation for refinishing, and refinishing of historic plaster surfaces.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review minutes of Preliminary Historic Treatment Conference that pertain to historic treatment of plaster.
2. Review methods and procedures related to historic treatment of plaster and fire protection.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples: For each exposed product and for each color and texture specified.

1.4 QUALITY ASSURANCE

A. Historic Treatment Specialist Qualifications: A qualified historic plastering specialist with expertise in matching and performing the types of historic plasterwork repairs required. Experience only in installing and repairing new plasterwork, veneer plaster, or gypsum board is insufficient experience for historic treatment work.

B. Cast-Plaster Manufacturer Qualifications: A firm regularly engaged in manufacturing custom-cast plasterwork for building restoration purposes, of same types and of similar size, complexity, and tolerances as those required for the Work.

C. Mockups: Prepare mockups of historic treatment processes for each type of plaster repair and reconstruction work to demonstrate aesthetic effects and to set quality standards for materials and execution and for fabrication and installation.

1. Number and Size: Two wall surfaces of at least 50 sq. ft. (4.5 sq. m) or approximately 48 inches (1200 mm) in least dimension to represent surfaces and conditions for application of each type of plaster repair and reconstruction under same conditions as the completed Work. Include at least the following:

a. Install 6 linear ft. (2 m) of wet-applied plaster molding.
b. Install 6 linear ft. (2 m) of cast-plaster molding, but not less than two cast units.
c. Repair 3 linear ft. (1 m) of plaster cracks.

PART 2 - PRODUCTS

2.1 LIME-PLASTER MATERIALS

A. Hydrated Lime: ASTM C206, Type S or Type N.

B. Lime Putty: Slaked hydrated lime or factory-prepared lime putty according to ASTM C1489.

C. Sand Aggregates: ASTM C897.

1. Finish-Coat Sand: Match size, texture, and gradation of existing sand as closely as possible. Blend several sands if necessary to achieve suitable match.

D. Pigments for Colored Plaster: ASTM C979/C979M and having a record of satisfactory performance in lime plaster.

E. Fiber: 1/2 to 1 inch (13 to 25 mm) in length; composed of cattle, goat, or hog hair or body hair from horses, natural linen, cotton, hemp, or jute fiber or alkali-resistant glass or polypropylene fiber as directed; free of grease, waxes, and oils; and beaten well to separate fibers before blending into unfibered plaster material.

1. Proportion of Fiber to Unfibered Plaster Material: 3.5 oz./cu. ft. (3.5 g/L) of unfibered plaster material, adjusted as required to produce a well-fibered, cohesive, spreadable, stiff mix with fibers uniformly distributed.

2.2 GYPSUM PLASTER MATERIALS

A. Gypsum Materials:

1. Lightweight Gypsum Ready-Mixed Plaster: ASTM C28/C28M, with mill-mixed perlite aggregate.
2. Gypsum Neat Plaster: ASTM C28/C28M for use with job-mixed aggregates.
3. Gypsum Wood-Fibered Plaster: ASTM C28/C28M.
4. High-Strength Gypsum Neat Plaster: ASTM C28/C28M; with a minimum, average, dry compressive strength of 2800 psi (19 MPa) per ASTM C472 for a mix of 100 lb (45 kg) of plaster and 2 cu. ft. (0.06 cu. m) of sand.

5. Gypsum Gaging Plaster. ASTM C28/C28M.
6. High-Strength Gypsum Gaging Plaster: ASTM C28/C28M; with a minimum, average, dry compressive strength of 5000 psi (34 MPa) per ASTM C472 for a neat mix.
7. Gypsum Ready-Mixed Finish Plaster: ASTM C28/C28M; manufacturer's standard, mill-mixed, gaged, interior finish.
8. Gypsum Keene's Cement: ASTM C61/C61M.

B. Hydrated Lime: ASTM C206, Type S or Type N.

C. Aggregates:

1. Aggregate for Base-Coat Plasters: ASTM C35, sand or perlite as directed.
2. Aggregate for Float Finishes: ASTM C35, sand or perlite; graded per ASTM C842 as directed.

D. Fiber: 1/2 to 1 inch (13 to 25 mm) in length; composed of cattle, goat, or hog hair or body hair from horses, natural linen, cotton, hemp, or jute fiber or glass or polypropylene fiber as directed; free of grease, waxes, and oils; and beaten well to separate fibers before blending into unfibered plaster material.

1. Proportion of Fiber to Unfibered Plaster Material: 3.5 oz./cu. ft. (3.5 g/L) of unfibered plaster material, adjusted as required to produce a well-fibered, cohesive, spreadable, stiff mix with fibers uniformly distributed.

E. Fabric Reinforcing: Coarse, open-weave, sackcloth made of natural linen, cotton, hemp, or jute; free of grease and oils or Coarse, open-weave, alkali-resistant fiberglass or polypropylene fabric as directed; free of grease, waxes, and oils.

F. Bonding Compound: ASTM C631.

2.3 LATH

A. Wood Lath: 1/4 inch by 1-1/4 inch (6 mm by 32 mm) sound, straight-grained, wood strips.

B. Metal Lath:

1. Expanded-Metal Lath: ASTM C847, cold-rolled carbon-steel sheet, ASTM A653/A653M, G60 (Z180), hot-dip galvanized zinc coated.

a. Paper Backing: Kraft paper factory bonded to back of lath.
b. Diamond-Mesh Lath: Flat or Self-furring, 2.5 lb/sq. yd. (1.4 kg/sq. m) or 3.4 lb/sq. yd. (1.8 kg/sq. m) as directed.
c. Flat Rib Lath: Rib depth of not more than 1/8 inch (3 mm), 2.75 lb/sq. yd. (1.5 kg/sq. m) or 3.4 lb/sq. yd. (1.8 kg/sq. m) as directed.
d. 3/8-Inch (9.5-mm) Rib Lath: 3.4 lb/sq. yd. (1.8 kg/sq. m) or 4 lb/sq. yd. (2.2 kg/sq. m) as directed.

2.4 TRIM ACCESSORIES

A. General: According to ASTM C1063 for lime plaster and ASTM C841 for gypsum plaster; coordinate depth of trim and accessories with thicknesses and number of plaster coats required.

B. Metal Accessories:

1. Cornerite: Fabricated from expanded-metal lath with ASTM A653/A653M, G60 (Z180), hot-dip galvanized zinc coating.
2. Striplath: Fabricated from expanded-metal lath with ASTM A653/A653M, G60 (Z180), hot-dip galvanized zinc coating.
3. Cornerbeads: Fabricated from zinc or zinc-coated (galvanized) steel.

    a. Small nose cornerbead with expanded flanges; use unless otherwise indicated.
    b. Small nose cornerbead with perforated flanges; use on curved corners.
    c. Small nose cornerbead with expanded flanges reinforced by perforated stiffening rib; use on columns and for finishing unit masonry corners.
    d. Bull nose cornerbead, radius of 3/4 inch (19 mm) minimum, with expanded flanges; use at locations indicated on Drawings.

4. Casing Beads: Fabricated from zinc or zinc-coated (galvanized) steel; square-edged style; with expanded flanges.
5. Control Joints: Fabricated from zinc or zinc-coated (galvanized) steel; one-piece-type, folded pair of unperforated screeds in M-shaped configuration; with perforated flanges and removable protective tape on plaster face of control joint.
6. Expansion Joints: Fabricated from zinc or zinc-coated (galvanized) steel; folded pair of unperforated screeds in M-shaped configuration; with expanded flanges.
7. Two-Piece Expansion Joints: Fabricated from zinc or zinc-coated (galvanized) steel; formed to produce slip-joint and square-edged reveal that is adjustable from 1/4 to 5/8 inch (6 to 16 mm) wide; with perforated flanges.

2.5 MISCELLANEOUS MATERIALS

A. Water for Mixing and Finishing Plaster: Potable and free of substances capable of affecting plaster set or of damaging plaster, lath, or accessories.

B. Fasteners for Attaching Lath to Substrates:

1. For Lime Plaster: ASTM C1063.
2. For Gypsum Plaster: ASTM C841.
3. For Wood Lath: ASTM C841 requirements for wood-floor-runner or wood-furring fasteners unless otherwise indicated on Drawings.

C. Wire Ties: ASTM A641/A641M, Class 1 zinc coating, soft temper, not less than 0.0475-inch (1.21-mm) diameter, unless otherwise indicated.

2.6 CAST-PLASTER FABRICATIONS

A. General: Fabricate cast-plaster units with uniformly finished surfaces and sharply defined details; repair hollows, voids, scratches, and other surface imperfections.

1. Fabricate units of sizes and shapes to match similar existing plasterwork unless otherwise indicated.
2. Configure joints between units so that they may be finished flush or otherwise concealed inconspicuously.
3. Maximum deviation from true line, size, or shape shall be 1/16 inch (2 mm), noncumulative.

B. Composition: Fabricate units from gypsum-plaster materials. Reinforce units with fiber or fabric reinforcing.

1. Plaster Face: Molding plaster with or without aggregate as is standard with manufacturer for required surface finish.
2. Plaster Backup: Molding plaster with or without aggregate, but with high-proportion of plaster-saturated fiber or fabric reinforcing as is standard with manufacturer.

C. Thickness: Not less than 3/16-inch (5-mm) thickness of plaster material at any point.

D. Finish: Smooth for paint finish.

E. Embedments: Incorporate manufacturer's standard embedments for attaching units to supporting elements unless otherwise indicated. Cover embedments with not less than 3/16-inch (5-mm) thickness of reinforced plaster material.

F. Joint-Treatment Materials: As recommended in writing by manufacturer.

PART 3 - EXECUTION

3.1 HISTORIC TREATMENT OF PLASTER, GENERAL

A. General: In treating historic plaster, disturb it as minimally as possible and as follows unless otherwise indicated:

1. Dismantle loose, damaged, or deteriorated plaster, lath, and support systems that cannot be repaired.
2. Verify that substrate surface conditions are suitable for repairs.
3. Provide lath, furring, and support systems for plaster included in the work of this Section.
4. Replace lost details in new, wet-applied and cast plaster that replicate existing or indicated plaster configurations.
5. Leave repaired plasterwork in proper condition for painting or applying other finishes as indicated.
6. Install temporary protective measures to protect historic surfaces that shall be treated later.

B. Illumination: Perform plastering work with adequate, uniform illumination that does not distort the flatness or curvature of surfaces.

3.2 PLASTER REMOVAL AND REPLACEMENT, GENERAL

A. Dismantle plaster that is damaged or deteriorated to the limits indicated. Carefully dismantle areas along straight edges that lie over supports, without damaging surrounding plasterwork.

B. Maintain lath and supporting members in an undamaged condition so far as practicable. Dismantle damaged lath and supports that cannot be repaired or resecured and replace with new work of same type.

C. Do not deviate more than plus or minus 1/8 inch in 10 feet (3 mm in 3 m) from a true plane in finished plaster surfaces, as measured by a 10-foot (3-m) straightedge placed on surface.

D. Clean substrate surfaces to remove grease, waxes, oils, waterborne staining, debris, and other foreign matter and deposits that could impair bond with repair material.

E. As directed Wet wood lath, masonry and concrete bases before plaster application. Keep substrate damp to the touch but without visible water droplets.

F. Wet remaining plaster abutting the replacement plaster before installing new plasterwork.

G. Finish plaster flush with metal frames and other built-in metal items or accessories that act as a plaster ground unless otherwise indicated. Where casing bead does not terminate plaster at metal frame, cut base coat free from metal frame before plaster sets and groove finish coat at junctures with metal.

H. Provide plaster surfaces that are ready to receive field-applied finishes indicated.

3.3 FLAT LIME-PLASTER REMOVAL AND REPLACEMENT

A. General: Dismantle deteriorated plaster to existing sound plaster at locations indicated on Drawings.

B. Lime-Plaster Base Coats:

1. Scratch Coat: As directed 1 part lime putty, 2-1/2 parts base-coat sand or 1 part lime putty, 2-1/2 parts base-coat sand, and fiber. Add hair fiber to mix and evenly distribute it without clumps just before spreading.
2. Brown Coat: 1 part lime putty, 3 parts base-coat sand.

C. Lime-Plaster Finish Coats:

1. Finish-Coat Mix for Smooth-Troweled Finish: As required to match finish of design reference sample or 3 parts lime putty, 1 part finish-coat sand as directed.
2. Finish-Coat Mix for Smooth-Float Finish: As required to match finish of design reference sample or 1 part lime putty, 1 part finish-coat sand as directed.
3. Finish-Coat Mix for Sandy Float Finish: As required to match finish of design reference sample or 1 part lime putty, 3 parts finish-coat sand as directed.

D. Lime-Plaster Finishes: Match finish(es) of design reference sample(s).

1. Provide smooth-troweled finish unless otherwise indicated or where indicated. As directed apply in one layer, two layers or three layers totaling 1/16 inch (2 mm), 1/8 inch (3 mm) or 3/16 inch (5 mm) thick.
2. Provide smooth-float finish unless otherwise indicated or where indicated. As directed apply in one layer, two layers or three layers totaling 1/16 inch (2 mm), 1/8 inch (3 mm) or 3/16 inch (5 mm) thick.
3. Provide sandy-float finish unless otherwise indicated or where indicated. As directed apply in one layer, two layers or three layers totaling 1/16 inch (2 mm), 1/8 inch (3 mm) or 3/16 inch (5 mm) thick.

E. Hairline cracking within the plaster or plaster separation at edge of a replacement is unacceptable. Completely dismantle such work and reinstall or repair as a crack repair.

3.4 FLAT GYPSUM-PLASTER REMOVAL AND REPLACEMENT

A. General: Dismantle deteriorated plaster to existing sound plaster at locations indicated on Drawings. Use replacement plaster mixes of gypsum, lime, and aggregate; and application according to ASTM C842 unless otherwise indicated.

B. Bonding Compound: Apply on unit masonry and concrete plaster bases.

C. Gypsum-Plaster Base Coats:

1. Base Coats over Wood Lath: Gypsum neat plaster with job-mixed sand and fiber, wood-fibered plaster with job-mixed sand or lightweight ready-mixed plaster with fiber as directed.
2. Base Coats over Expanded-Metal Lath: As directed High-strength gypsum, Gypsum neat plaster with job-mixed sand for scratch and brown coats. Add fiber to scratch coat.
3. Base Coats over Expanded-Metal Lath:

    a. Scratch Coat: Gypsum wood-fibered plaster; neat or with job-mixed sand.
    b. Brown Coat: As directed Gypsum wood-fibered plaster with job-mixed sand, neat plaster with job-mixed sand, lightweight ready-mixed plaster or neat plaster with job-mixed perlite.

4. Base Coats over Unit Masonry: As directed Gypsum wood-fibered plaster with job-mixed sand, neat plaster with job-mixed sand or lightweight ready-mixed plaster.
5. Base-Coat Mix over Monolithic Concrete: Gypsum neat plaster with job-mixed sand.

D. Gypsum-Plaster Finish Coats:

1. Finish-Coat Mix for Smooth-Troweled Finishes: As directed Gypsum gaging plaster, Gypsum ready-mixed finish plaster, High-strength gypsum gaging plaster or Gypsum Keene's cement.
2. Finish-Coat Mix for Float Finishes: As directed Gypsum gaging plaster or Gypsum Keene's cement.
3. Finish-Coat Mix for Textured Finishes: Gypsum ready-mixed finish plaster.

E. Gypsum-Plaster Finishes: Match finish(es) of design reference sample(s).

1. Provide troweled finish unless otherwise indicated or where indicated.
2. Provide float finish unless otherwise indicated or where indicated.
3. Provide textured finish where indicated.

3.5 CAST-PLASTER REMOVAL AND REPLACEMENT

A. General: Dismantle and replace cast-plaster that is damaged or deteriorated at locations indicated on Drawings. Carefully dismantle whole cast units from joint to joint, without damaging surrounding plasterwork.

B. Replacement Material: Replace cast fabrications with cast gypsum-plaster fabrications.

C. Adhering Cast Plaster: Wet the substrate in replacement area and affix cast plaster using finish-coat plaster for smooth-troweled finish as adhesive. Support units until adhesive can fully support weight of plaster. Remove excess adhesive.

D. Install cast-plaster fabrications level, plumb, true, and aligned with adjacent materials and ready to receive required finishes. Use concealed shims secured with wet plaster where required for alignment.

E. Hairline cracking within the plaster or plaster separation at edge of a replacement is unacceptable. Completely dismantle such work and reinstall or repair as a crack repair as directed by Architect.

3.6 REMOVING AND INSTALLING LATH AND ACCESSORIES

A. General: Dismantle existing plaster as necessary to expose deteriorated or rusted lath, wire ties, and support system, back to firm substrates and supports. Repair with new materials, well secured to existing lath in good condition and to building structure.

1. Cutting: Cut lath so it can be taken out completely from one support to the next. Cut to avoid cracking surrounding plaster.
2. Cut out existing base-coat plaster beyond the edges of the new lath to permit new plaster to extend onto the old lath. Then step subsequent plaster coats to permit new plaster to extend over the old material.
3. Fasten new lath to support system and to good existing lath. Wire tie at least every 6 inches (150 mm).
4. Install new lath according to ASTM C1063 for lime plaster and ASTM C841 for gypsum plaster.

B. Wood Lath: Install wood lath in same orientation and spacing as remaining wood lath and with lath ends supported by furring or framing. Stagger ends of adjacent laths over different supports, not aligned, and secure with fasteners at each end and spaced a maximum of 24 inches (610 mm) o.c. into supports.

C. Metal Lath: Install according to ASTM C1063 for lime plaster and ASTM C841 for gypsum plaster.

3.7 PATCH-TYPE REPAIR

A. General: Patch voids, fractured surfaces, and crushed areas in otherwise sound plaster that are larger than cracks at locations indicated on Drawings.

1. Inspect for deterioration of supporting plaster and lath, and repair or replace deteriorated material as required for a sound substrate.
2. Rake perimeter of hole to sound plaster, and slightly undercut existing plaster to enable replacement plaster to tuck behind existing plaster.
3. Replace missing lath in kind. Bridge gaps in wood lath with expanded-metal lath, overlapping wood by 6 inches (150 mm) and fastening them together.
4. Clean hole to remove loose materials and other foreign matter and deposits that could impair bond with repair material.
5. Wet substrate to damp condition, but without visible water droplets, then install patch material to original profiles.

B. Lime-Plaster Mix: As directed 3 parts lime putty, 1 part gypsum neat plaster or gypsum gaging plaster, 1 part lime putty, 3 parts sand, 1 part lime putty, 2-1/2 parts sand, applied in two coats with fiber in first coat or Repair mix demonstrated in mockup. Add hair fiber to mix and evenly distribute it without clumps just before spreading.

C. Gypsum-Plaster Mix: As directed Gypsum gaging plaster, Gypsum neat plaster with job-mixed sand, Gypsum neat plaster with job-mixed sand, applied in two coats with fiber in first coat or Repair mix demonstrated in mockup. Add hair fiber to mix and evenly distribute it without clumps just before spreading.

D. Finishing: Finish flat surfaces flush and with same texture as adjacent existing plaster. For molded plaster shapes, tool surface to restore the sharp edges and the shape of the molded shape to original contours.

E. Hairline cracking within the plaster or plaster separation at edge of a patch is unacceptable. Completely dismantle such work and reinstall or repair.

3.8 HAIRLINE CRACK REPAIR

A. General: Repair cracks 1/32 inch (1 mm) in width or narrower in otherwise sound plaster at locations indicated on Drawings.

B. Existing Topcoat: Open crack in existing topcoat to at least 1/8 inch (3 mm) in width and check for broken fiber reinforcement in base coats.

C. Existing Base Coats: Do not open crack wider in existing base coats unless inspection or other indication shows that the fiber reinforcement has broken. Where inspections indicate failure of fiber reinforcement, proceed as for a large crack repair, but only for length of crack with broken fiber reinforcement.

D. Clean out crack to remove loose materials and other foreign matter and deposits that could impair bond with repair material.

E. Wet substrate to damp condition, but without visible water droplets.

F. As directed Force finish-coat plaster without aggregate or repair material demonstrated in mockup into crack, filling crack to original plaster profile.

G. Finishing: Finish flat surfaces flush and with same texture as adjacent existing plaster. For molded plaster shapes, tool surface to restore the sharp edges and the shape of the molded shape to original contours.

3.9 LARGE CRACK REPAIR

A. General: Repair cracks over 1/32 inch (1 mm) in width in otherwise sound plaster at locations indicated on Drawings.

B. Open crack to at least 1/8 inch (3 mm) in width and full depth with V-groove tool and check for bond separation or lath deterioration.

C. Abrade side surfaces of crack and remove inner crack debris by gouging (keying) the inside area of the crack.

D. Clean out crack to remove loose materials and other foreign matter and deposits that could impair bond with repair material.

E. Wet substrate to damp condition, but without visible water droplets.

F. As directed Install finish-coat plaster or repair material demonstrated in mockup to fill crack to original plaster profile.

G. Finishing: Finish flat surfaces flush and with same texture as adjacent existing plaster. For molded plaster shapes, tool surface to restore the sharp edges and the shape of the molded shape to original contours.

END OF SECTION 090320

SECTION 090353 - HISTORIC TREATMENT OF METAL CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes historic treatment of stamped metal ceilings as follows:

1. Stabilizing and protecting metal.
2. Repairing metal and replacing damaged and missing components in place.
3. Dismantling metal for shop repair and replacement of components; reinstalling repaired metal.
4. Repairing and replacing wood materials that support the ceiling.

B. Related Requirements:

1. Section 013591 "Historic Treatment Procedures" for general historic treatment requirements.
2. Section 057500 "Decorative Formed Metal" for new decorative formed metal construction.

1.2 DEFINITIONS

A. Cornice Depth: Measurement of how far a cornice will extend down the wall from the ceiling.

B. Cornice Projection: Measurement of how far a cornice will extend out from the wall, across the ceiling.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review minutes of Preliminary Historic Treatment Conference that pertain to historic treatment of metal ceilings.
2. Review methods and procedures related to historic treatment of metal ceilings.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Include plans, elevations, and sections showing locations and extent of repair and replacement work, with enlarged details of replacement parts indicating materials, profiles, methods of attachment, accessory items, and finishes.

C. Samples: For each exposed product and for each color and texture specified.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans and other details, drawn to scale and coordinated with each other, using input from installers of the items involved.

1.6 QUALITY ASSURANCE

A. Historic Treatment Specialist Qualifications: A qualified historic metal ceiling repair specialist. Experience in installing and finishing new metal ceiling systems is insufficient experience for historic treatment work on metal ceilings.

B. Mockups: Prepare mockups of historic treatment repair processes to demonstrate aesthetic effects and to set quality standards for materials, execution, fabrication, and installation. Prepare mockups so they are inconspicuous.

1. Dent Removal: Repair a ceiling and cornice panel of each type by pushing out dents from the back side or filling dents with sculpted metal-patching compound, and flattening edges to align repaired panels flush with adjacent panels.
2. Replacing Panels: Replace a missing or excessively damaged ceiling and cornice panel of each type with new or repaired, salvaged panels, and align edges of replacement panels flush with adjacent panels.

PART 2 - PRODUCTS

2.1 METAL PANELS

A. Field Panel: Factory-stamped and prefinished metal ceiling panel(s) for the main area of the ceiling. Fabricate panels that match existing by using original, historic dies or custom-made patterns and dies.

1. Material: Aluminum, Aluminum-zinc alloy-coated steel, Copper, Tin-plated steel, Zinc or Zinc-coated (galvanized) steel as directed; of thickness needed for panel size and embossed design.
2. Size: Match existing, 24 by 24 inches (610 by 610 mm) or 24 by 48 inches (610 by 1219 mm) as directed.
3. Pattern Type: Match existing, Match Architect's samples or as selected by Architect from manufacturer's full range.

    a. Panel Assembly: Where indicated on Drawings or by manufacturer's product name or designation, form panels with matched seams that form a larger medallion or design.

4. Exposed Finish: As directed Match design reference sample, match existing, as indicated on Drawings, Bright mill finish, Antiqued, primed for on-site painting, Powder coated with clear organic coating.

a. Color: As indicated by manufacturer's designations, Match Architect's samples or as selected by Architect from full range of industry colors and color densities.

B. Filler Panel: Factory-stamped and -prefinished metal ceiling panel(s) for the ceiling perimeter between field panels and cornice. Fabricate panels that match existing by using original, historic dies or custom-made patterns and dies.

1. Material: As directed Aluminum, Aluminum-zinc alloy-coated steel, Copper, Tin-plated steel, Zinc or Zinc-coated (galvanized) steel; of thickness needed for panel size and embossed design.
2. Panel Width: As directed Match existing, 11.5 inches (292 mm), 20 inches (508 mm) or 24 inches (610 mm).
3. Pattern Type: As directed Match existing, Match Architect's samples or as selected by Architect from manufacturer's full range.
4. Exposed Finish: As directed Match design reference sample, match existing, As indicated on Drawings, Bright mill finish, Antiqued, primed for on-site painting, Powder coated with clear organic coating.

a. Color: As indicated by manufacturer's designations, Match Architect's samples or as selected by Architect from full range of industry colors and color densities.

C. Cornice Panel: Factory-stamped and prefinished metal ceiling panel(s) for the ceiling perimeter at top of walls Fabricate panels that match existing by using original, historic dies or custom-made patterns and dies.

1. Material: As directed Aluminum, Aluminum-zinc alloy-coated steel, Copper, Tin-plated steel, Zinc or Zinc-coated (galvanized) steel; of thickness needed for panel size and embossed design.
2. Projection and Depth: Match existing, 2.25 x 2.25 inches (57 x 57 mm), 3 x 3 inches (76 x 76 mm), 4 x 6 inches (102 x 152 mm), 6 x 8 inches (152 x 203 mm), 9 x 9 inches (229 x 229 mm) or 10 x 12 inches (254 x 305 mm).
3. Miters: Provide inside and outside preformed miters.
4. Pattern Type: Match existing, Match Architect's samples, As selected by Architect from manufacturer's full range or Combination of forms as selected by Architect from industry's full range.
5. Exposed Finish: As directed Match design reference sample, match existing, as indicated on Drawings or Bright mill finish, Antiqued, primed for on-site painting, Powder coated with clear organic coating.

a. Color: As indicated by manufacturer's designations, Match Architect's samples or as selected by Architect from full range of industry colors and color densities.

D. Molding: Factory-stamped metal molding panel(s) for the ceiling perimeter to cover continuous joint or space between edges of field and filler panels. Fabricate panels that match existing by using original, historic dies or custom-made patterns and dies.

1. Material: Aluminum, Aluminum-zinc alloy-coated steel, Copper, Tin-plated steel, Zinc or Zinc-coated (galvanized) steel; of thickness needed for panel size and embossed design.
2. Molding Width: As directed Match existing, 3.25 inches (83 mm), 4 inches (102 mm) or 7 inches (178 mm).

3. Pattern Type: Match existing, Match Architect's samples or as selected by Architect from manufacturer's full range.
4. Exposed Finish: As directed Match design reference sample, match existing, As indicated on Drawings, Bright mill finish, Antiqued, Primed for on-site painting, Powder coated with clear organic coating.

    a. Color: As indicated by manufacturer's designations, Match Architect's samples or as selected by Architect from full range of industry colors and color densities.

2.2 MATERIALS

A. Provide metal ceiling materials made of the alloys, forms, and types that match existing metals and have the ability to receive finishes matching existing finishes unless otherwise indicated.

2.3 ACCESSORIES

A. Metal-Patching Compound: Two-part, epoxy- or polyester-resin metal-patching compound; knife-grade formulation as recommended in writing by manufacturer for type of metal repair indicated, tooling time required for the detail of work, and site conditions. Compound shall be produced for filling metal that has deteriorated because of corrosion or deformation. Filler shall be capable of filling deep holes and spreading to feather edge.

B. Fasteners: Fasteners shall be of the same basic metal as fastened metal unless otherwise indicated. Use metals that are noncorrosive and compatible with each metal joined.

1. Match existing fasteners in material and in type of fastener unless otherwise indicated.
2. Use concealed fasteners for interconnecting metal ceiling components and for attaching them to other work unless exposed fasteners are unavoidable or the existing fastening method.
3. Finish exposed fasteners to match finish of metal fastened unless otherwise indicated.
4. Nails for Ceiling Panels: As directed 1-inch- (25-mm-) or 1.5-inch- (38-mm-) long, cone-head or finishing nails.
5. Fasteners for Nailable Substrates: As directed 1.5-inch- (38 mm-) or 2-inch- (51 mm-) long, flat-head nails or countersunk, flat-head wood screws.

C. Sealant: Acrylic latex or siliconized acrylic latex, ASTM C834, Type OP, colored to match painted ceiling panels being installed or Type C for bright metal finish.

D. Nailable Substrates:

1. Wood Furring: As directed 1-by-2-inch nominal (19-by-38-mm actual) or 1-by-3-inch nominal (19-by-63-mm actual) size and according to furring requirements as specified in Section 061000 "Rough Carpentry."
2. Plywood: 3/8-inch (9.5-mm) nominal thickness structural, fire-retardant-treated plywood sheathing panels as specified in Section 061600 "Sheathing."
3. Wood Blocking: Concealed, fire-retardant-treated wood supports as specified in Section 061000 "Rough Carpentry."

2.4 PREPARATORY CLEANING MATERIALS

A. Water: Potable.

B. Hot Water: Water heated to a temperature of 140 to 160 deg F (60 to 71 deg C).

C. Detergent Solution, Job Mixed: Solution prepared by mixing 2 cups (0.5 L) of tetrasodium pyrophosphate (TSPP), 1/2 cup (125 mL) of laundry detergent, and 20 quarts (20 L) of hot water for every 5 gal. (20 L) of solution required.

D. Abrasive Materials:

1. Abrasive Pads: Nonscratch, of the following type(s):

   a. Abrasive Pad with Sponge: Combination plastic abrasive pad, consisting of a sponge enclosed with a woven urethane, polypropylene, or other plastic mesh or fabric, without other abrasive components that can scratch metal.
   b. Abrasive Pad of Plant Fibers: Agave, loofa, or another tough plant fiber, without other abrasive components that can scratch metal.

2. Medium Abrasives for Ferrous Metals: Aluminum oxide paper, emery paper, fine steel wool, steel scrapers, and steel-wire brushes of various sizes.

E. Wash Cloths: Lint-free, absorbent, durable cloth without abrasives that can scratch metal.

F. Rust Remover: Manufacturer's standard phosphoric acid-based gel formulation, also called "naval jelly," for removing corrosion from iron and steel.

2.5 PANEL FABRICATION

A. Fabricate metal ceiling items and components in sizes and profiles to match existing metal ceiling unless otherwise indicated, with accurate curves, lines, and angles. Mill joints to a tight, hairline fit.

B. Stamped panels shall have embossed designs that are sharp and clear and shall be trimmed to exact size, so that installed edges will be concealed by proximity to the raised beads of the panel design.

2.6 ALUMINUM FINISHES

A. Mill finish.

B. Bright mill finish.

C. Baked-Enamel or Powder-Coat Finish: AAMA 2603. Comply with coating manufacturer's written instructions for cleaning, conversion coating, applying, and baking finish.

2.7 FERROUS METAL FINISHES

A. Repair Primer: Manufacturer's standard, rust-inhibiting, fast-curing, lead- and chromate-free universal primer, compatible with firmly adhered existing paint and applied finish. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.

B. Finish Primer: Primer complying with applicable requirements in Section 090391 "Historic Treatment of Plain Painting" for finish painting of primed historic metal.

C. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish, consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.

2.8 STAINLESS-STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines from new replacement stainless steel, or blend into finish.

B. Restored Finish: Grind and polish surfaces to produce uniform, directionally textured, polished finish to match existing finish or Architect's sample, free of cross scratches.

1. Run grain to match existing metal.
2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.1 HISTORIC METAL CEILING REPAIR, GENERAL

A. Execution of the Work: In repairing historic items, disturb remaining existing work as minimally as possible and as follows:

1. Stabilize metal ceilings to reestablish structural integrity while maintaining the existing form of each item.
2. Remove deteriorated coatings and corrosion.
3. Sequence work to minimize time before protective coatings are reapplied.
4. Repair items where stabilization is insufficient to stop progress of deterioration.
5. Repair items in place unless otherwise indicated and retain as much original material as possible.
6. Replace or reproduce historic items where indicated or scheduled.
7. Make historic treatment of materials reversible whenever possible.
8. Install temporary protective measures to stabilize metal ceilings that shall be repaired later.

B. Mechanical Coating Removal: Use gentlest mechanical methods, such as scraping and wire brushing, that do not abrade metal substrate. Do not use abrasive methods, such as sanding, or power tools except as approved by Architect.

C. Repairing Metal Ceiling Panels: Match existing materials and features, retaining as much original material as possible to complete the repair.

D. Replacing Metal Ceiling Panels: Where indicated, duplicate and replace panels with new metal, matching existing metal.

1. Replace heavily deteriorated or missing features of metal ceiling with compatible materials, using surviving prototypes to create patterns or dies for duplicate replacements.

3.2 PREPARATORY CLEANING

A. Perform preparatory cleaning before performing repair work. Use only those methods indicated for each type of metal ceiling and its location.

1. Brushes: If using wire brushes, use brushes of same base metal composition as metal being treated. Use brushes that are resistant to chemicals being used.
2. Uniformity: Perform each cleaning method in a manner that results in uniform coverage of all surfaces, including corners, contours, and interstices, and that produces an even effect without streaks or damaging surfaces.

B. Water Cleaning: Clean with cold or hot water applied with sponges or wash cloths. Supplement with natural-fiber or plastic bristle brush and abrasive pads. Use small brushes to remove soil and loose paint from joints and crevices. Leave uniform patina intact.

C. Detergent Cleaning:

1. As directed Wet surface with cold or hot water applied with sponges or wash cloths.
2. Scrub surface with detergent solution and natural-fiber or plastic bristle brush and abrasive pads until soil and loose paint is thoroughly dislodged and can be removed by rinsing. Use small brushes to remove soil and loose paint from joints and crevices. Dip brush in solution often to ensure that adequate fresh detergent is used and that surface remains wet. Leave uniform patina intact.
3. As directed Rinse with cold or hot water applied with sponges or wash cloths to remove detergent solution, soil, and loose paint.

D. Chemical Rust Removal:

1. Remove loose rust scale with approved, medium abrasives for ferrous metals.
2. Apply rust remover with brushes or as recommended in writing by manufacturer.
3. Allow rust remover to remain on surface for period recommended in writing by manufacturer or as determined by testing. Do not allow extended dwell time.
4. Wipe off residue with mineral spirits and either steel wool or soft rags, or clean with method recommended in writing by manufacturer to remove residue.
5. Dry immediately with clean wash cloths. Follow direction of grain in metal.
6. Prime immediately to prevent rust. Do not touch cleaned metal surface until primed.

E. Mechanical Rust Removal:

1. Remove rust with approved, medium abrasives for ferrous metals.
2. Wipe off residue with mineral spirits and either steel wool or soft rags.

3. Dry immediately with clean wash cloths. Follow direction of grain in metal.
4. Prime immediately to prevent rust. Do not touch cleaned metal surface until primed.

3.3 PANEL DISMANTLING AND REPAIR

A. Repair metal ceiling panels in place insofar as practicable, unless otherwise indicated. Where necessary, dismantle panels from their substrate and repair and reinstall them.

B. Perform dismantling work as required in Section 024296 "Historic Removal and Dismantling."

C. Deformed Panels: Flatten bent and deformed panels, so that embossed pattern along full length of panel edges will again nest tightly against adjacent panels insofar as practicable.

D. Defects in Painted Metal Surfaces: As directed Repair defects in existing metal surfaces, including dents and gouges more than 1/16 inch (1.6 mm) or 1/8 inch (3 mm) deep or 1/2 inch (13 mm) or 1 inch (25 mm) across and all holes and tears by filling with metal-patching compound. Remove burrs. Prime iron and steel surfaces immediately after repair to prevent flash rusting.

E. Defects in Bare Metal Surfaces: As directed Repair defects in existing metal surfaces, including dents and gouges more than 1/16 inch (1.6 mm) or 1/8 inch (3 mm) deep or 1/2 inch (13 mm) or 1 inch (25 mm) across and all holes and tears by filling with metal-patching compound, colored to match the metal finish. Do not extend patching compound beyond the local area of the repair. Remove burrs.

3.4 NAILABLE SUBSTRATES

A. Repair damaged nailable substrates that are exposed by removed or missing ceiling panels. Replace nailable substrate in kind where it is lost or irreparable and where repairs are extensive.

B. Furring: Install longitudinally and transversely across the ceiling area at 24 inches (610 mm) o.c. and flush with each other unless otherwise indicated. Fasten to structural members above ceiling. Where structural members are not level, insert shims between furring strips and the structural members before fully tightening the fasteners. Install fasteners with heads flush with or slightly recessed beneath surface of furring; sand smooth and flush any projections to prevent misalignment of the metal ceiling panels.

C. Plywood: Install as specified in Section 061600 "Sheathing" unless otherwise indicated. Fasten to structural members above ceiling. Install fasteners with heads flush with or slightly recessed beneath surface of plywood; sand smooth and flush any projections to prevent misalignment of the metal ceiling panels.

D. Blocking: Install blocking to support unsupported ends and edges of nailable substrates.

3.5 PANEL INSTALLATION

A. Installation: Install ceiling panels according to new-product manufacturer's written instructions. Lap panels matching existing method of lapping panels.

1. Panel Reinstallation: Use original nail holes to reinstall repaired panels.

B. Field Panels: Overlap and nest panels' beads with each other, and nail panels to substrate, locating nails on the nailing bead. Where needed, use flat-head nails on the concealed side of beads to temporarily hold panels in position until final nailing. Lap panels to minimize joint visibility from entrance to room unless otherwise indicated. Space nails 6 inches (152 mm) o.c. around panel perimeter and 12 inches (305 mm) o.c. in center area of panel where nails will penetrate nailable substrate.

C. Filler Panels: Slip filler panels beneath field panels. Overlap and nest panels with each other, and nail panels to substrate, locating nails to blend with the embossed design. Lap panels to minimize joint visibility from entrance to room unless otherwise indicated. Space nails 6 inches (152 mm) o.c.

D. Cornice: Overlap and nest panels with each other, overlap the field or filler panels, and nail panels to substrate, locating nails to blend with the embossed design. Lap panels to minimize joint visibility from entrance to room unless otherwise indicated. Space nails 6 inches (152 mm) o.c. along the top edge and 12 inches (305 mm) o.c. along the bottom edge.

E. Moldings: Overlap and nest panels with each other, overlap the field and filler panels, and nail panels to substrate, locating nails to blend with the embossed design. Lap panels to minimize joint visibility from entrance to room unless otherwise indicated. Space nails 6 inches (152 mm) o.c. along the edges.

F. Tamping: Tamp edge of open seams lightly with rubber mallet and wood block, so that they close flush and nest snugly along edges with adjacent panels. Install sealant where tamping is insufficient to close seams.

G. Sealant: After ceiling panel installation, apply sealant to repaired panel joints that cannot be closed tightly after flattening the panels before installation or by tamping. Keep joints to receive sealant dry and free of debris. Apply and cure sealant according to manufacturer's written instructions.

1. Seal joints that are more than 1/32 inch (0.8 mm) and as necessary to prevent joint shadows.
2. Do not allow sealant to overflow or spill onto adjoining surfaces, or to migrate into the voids of adjoining surfaces, particularly rough or sculptural textures. Promptly remove excess and spillage of sealant as the work progresses.
3. Before field painting, cure sealant.

H. Touch Up: At completion of installation, touch up and restore damaged or defaced finish surfaces and nail heads.

3.6 PRIMING AND PAINTING

A. Repair Primer: Apply immediately after completing a repair.

B. Finish Primer: Apply as soon after cleaning as possible.

C. Finish Painting: Apply as soon as possible after repair and installation according to applicable requirements in Section 090391 "Historic Treatment of Plain Painting".

3.7 HISTORIC METAL CEILING SCHEDULE

A. Treatment of Metal Ceiling MC-1:

1. Perform repair work in the shop or in the field.
2. Paint Removal: As specified in Section 050371 "Historic Decorative Metal Cleaning," except use no spray methods.
3. Rust Removal: As directed Chemical or Mechanical.
4. Repair: Flatten deformed panels and patch holes by filling with metal-patching compound.
5. Painted Finish: As specified in Section 090391 "Historic Treatment of Plain Painting.".

    a. Color: As directed.

6. Gilding: As specified in Section 090398 "Historic Treatment of Gilding.".

END OF SECTION 090353

SECTION 090391 - HISTORIC TREATMENT OF PLAIN PAINTING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes historic treatment of plain painting as follows:

1. Removing existing paint.
2. Repairing substrates.
3. Plain painting of historic surfaces, including staining and varnishing of historic wood.

B. Related Requirements:

1. Section 013591 "Historic Treatment Procedures" for general historic treatment requirements.
2. Section 090394 "Historic Treatment of Decorative Painting" for graining, marbleizing, stenciling, and striping on historic surfaces.
3. Section 090395 "Historic Treatment of Artistic Painting" for freehand painting and trompe l'oeil on historic surfaces.

1.2 DEFINITIONS

A. Gloss Level 1: Not more than 5 units at 60 degrees and 10 units at 85 degrees, according to ASTM D523.

B. Gloss Level 2: Not more than 10 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.

C. Gloss Level 3: 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.

D. Gloss Level 4: 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, according to ASTM D523.

E. Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D523.

F. Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D523.

G. Gloss Level 7: More than 85 units at 60 degrees, according to ASTM D523.

H. Modern Paint Materials: Paint materials not designed to match historic paint formulations but that may be required to match historic paint colors.

I. Plain Painting: For historic treatment, this means painting that requires attention to historic treatment requirements, but no special, decorative or artistic painting skill.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review minutes of Preliminary Historic Treatment Conference that pertain to historic treatment of painting.
2. Review methods and procedures related to historic treatment of painting and fire protection.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Samples: For each type of paint system and each color and gloss.

1. For each painted color being matched to a standardized color-coding system, include the color chips from the color-coding-system company with Samples.
2. Label each Sample for location and application.

D. Product List: Printout of current MPI's "MPI Approved Products List" for each MPI-product category specified in paint systems, with the proposed product highlighted.

1.5 INFORMATIONAL SUBMITTALS

A. Color Matching Certificate: For computer color matching of historic colors.

1.6 QUALITY ASSURANCE

A. Historic Treatment Specialist Qualifications: A qualified historic painting specialist with expertise in matching and touching up existing painting. Experience only in new painting work is insufficient experience for historic treatment work.

B. Color Matching: Custom computer-match paint colors to colors indicated in historic painting schedule(s) at the end of Part 3 in the Historic Structure Report or on Drawings. For colors indicated by a standardized coding system, obtain a color chip for each color indicated from the color-coding-system company; computer match paint colors to the color chips.

C. Mockups: Prepare mockups of historic treatment processes for each type of coating system and substrate indicated and each color and finish required to demonstrate aesthetic effects and to set quality standards for materials and execution. Duplicate appearance of approved Sample submittals.

1. Surface-preparation mockups using applicable specified methods of cleaning and other surface preparation.
2. Coating mockups to represent surfaces and conditions for application of each type of coating system.

PART 2 - PRODUCTS

2.1 PREPARATORY CLEANING MATERIALS

A. Water: Potable.

B. Hot Water: Water heated to a temperature of 140 to 160 deg F (60 to 71 deg C).

C. Detergent Solution: Solution prepared by mixing 2 cups (0.5 L) of tetrasodium pyrophosphate (TSPP), 1/2 cup (125 mL) of laundry detergent that contains no ammonia, 5 quarts (5 L) of 5 percent sodium hypochlorite bleach, and 15 quarts (15 L) of warm water for every 5 gal. (20 L) of solution required.

D. Mildewcide: Commercial proprietary mildewcide or a job-mixed solution prepared by mixing 1/3 cup (80 mL) of household detergent that contains no ammonia, 1 quart (1 L) of 5 percent sodium hypochlorite bleach, and 3 quarts (3 L) of warm water.

E. Abrasives for Ferrous Metal Cleaning: Aluminum oxide paper, emery paper, fine steel wool, steel scrapers, and steel-wire brushes of various sizes.

F. Rust Remover: Manufacturer's standard phosphoric acid-based gel formulation, also called "naval jelly," for removing corrosion from iron and steel.

2.2 PAINT REMOVERS

A. Alkaline Paste Paint Remover: Manufacturer's standard alkaline paste or gel formulation for removing paint from masonry, stone, wood, plaster, or metal as required to suit Project; and containing no methylene chloride.

B. Low-Odor, Solvent-Type Paste Paint Remover: Manufacturer's standard low-odor, water-rinseable, solvent-type paste, gel, or foamed emulsion formulation for removing paint from masonry, stone, wood, plaster, or metal as required to suit Project; and containing no methanol or methylene chloride.

2.3 PAINT, GENERAL

A. Material Compatibility:

1. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, provide products recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.

B. Colors: As indicated with each paint system in historic painting schedule(s) at the end of Part 3, Match Architect's samples or as selected by Architect from full range of industry colors.

2.4 MODERN PAINT MATERIALS, GENERAL

A. MPI Standards: Provide products that comply with MPI standards indicated and that are listed in its "MPI Approved Products List."

B. Transition Coat: Paint manufacturer's recommended coating for use where a residual existing coating is incompatible with the paint system.

2.5 MODERN PAINT MATERIAL MANUFACTURERS

2.6 MODERN PAINT MATERIALS

A. Primers and Sealers:

1. Primer Sealer, Latex, Interior: MPI #50.
    a. Basis-of-Design Product: As directed.
2. Primer, Latex, for Interior Wood: MPI #39.
    a. Basis-of-Design Product: As directed.
3. Primer Sealer, Alkyd, Interior: MPI #45.
    a. Basis-of-Design Product: As directed.
4. Undercoat, Enamel, Interior: MPI #46.
    a. Basis-of-Design Product: As directed.
5. Primer, Stain Blocking, Water Based: MPI #137.
    a. Basis-of-Design Product: As directed.
6. Alkyd, Sanding Sealer, Clear: MPI #102.
    a. Basis-of-Design Product: As directed.
7. Shellac: MPI #88.
    a. Basis-of-Design Product: As directed.
8. Stain, Semi-Transparent, for Interior Wood: MPI #90.
    a. Basis-of-Design Product: As directed.

B. Metal Primers:

1. Primer, Metal, Surface Tolerant: MPI #23.

a. Basis-of-Design Product: As directed.

2. Primer, Alkyd, Anti-Corrosive for Metal: MPI #79.

a. Basis-of-Design Product: As directed.

3. Primer, Rust-Inhibitive, Water Based: MPI #107.

a. Basis-of-Design Product: As directed.

C. Wood Primers:

1. Primer, Latex for Exterior Wood: MPI #6.

a. Basis-of-Design Product: As directed.

2. Primer, Alkyd for Exterior Wood: MPI #5.

a. Basis-of-Design Product: As directed.

D. Water-Based Paints:

1. Latex, Exterior Flat (Gloss Level 1): MPI #10.

a. Basis-of-Design Product: As directed.

2. Latex, Exterior Low Sheen (Gloss Levels 3-4): MPI #15.

a. Basis-of-Design Product: As directed.

3. Latex, Exterior Semigloss (Gloss Level 5): MPI #11.

a. Basis-of-Design Product: As directed.

4. Latex, Exterior, Gloss (Gloss Level 6): MPI #119.

a. Basis-of-Design Product: As directed.

5. Latex, Interior, Flat, (Gloss Level 1): MPI #53.

a. Basis-of-Design Product: As directed.

6. Latex, Interior, (Gloss Level 2): MPI #44.

a. Basis-of-Design Product: As directed.

7. Latex, Interior, (Gloss Level 3): MPI #52.

a. Basis-of-Design Product: As directed.

8. Latex, Interior, (Gloss Level 4): MPI #43.

a. Basis-of-Design Product: As directed.

9. Latex, Interior, Semigloss, (Gloss Level 5): MPI #54.

a. Basis-of-Design Product: As directed.

10. Latex, Interior, Gloss, (Gloss Level 6, except Minimum Gloss of 65 Units at 60 Degrees): MPI #114.

a. Basis-of-Design Product: As directed.

11. Latex, Interior, Institutional Low Odor/VOC, Flat (Gloss Level 1): MPI #143.

a. Basis-of-Design Product: As directed.

12. Latex, Interior, Institutional Low Odor/VOC (Gloss Level 2): MPI #144.

a. Basis-of-Design Product: As directed.

13. Latex, Interior, Institutional Low Odor/VOC (Gloss Level 3): MPI #145.

a. Basis-of-Design Product: As directed.

14. Latex, Interior, Institutional Low Odor/VOC (Gloss Level 4): MPI #146.

a. Basis-of-Design Product: As directed.

15. Latex, Interior, Institutional Low Odor/VOC, Semigloss (Gloss Level 5): MPI #147.

a. Basis-of-Design Product: As directed.

16. Latex, Interior, Institutional Low Odor/VOC, Gloss (Gloss Level 6): MPI #148.

a. Basis-of-Design Product: As directed.

E. Solvent-Based Paints:

1. Alkyd, Exterior Flat (Gloss Level 1): MPI #8.

a. Basis-of-Design Product: As directed.

2. Alkyd, Exterior, Semigloss (Gloss Level 5): MPI #94.

a. Basis-of-Design Product: As directed.

3. Alkyd, Exterior Gloss (Gloss Level 6): MPI #9.

a. Basis-of-Design Product: As directed.

4. Alkyd, Interior, Flat (Gloss Level 1): MPI #49.

a. Basis-of-Design Product: As directed.

5. Alkyd, Interior, (Gloss Level 3): MPI #51.
    a. Basis-of-Design Product: As directed.
6. Alkyd, Interior, Semigloss (Gloss Level 5): MPI #47.
    a. Basis-of-Design Product: As directed.
7. Alkyd, Interior, Gloss (Gloss Level 6): MPI #48.
    a. Basis-of-Design Product: As directed.

F. Floor Coatings:

1. Floor Paint, Latex, Low Gloss (Maximum Gloss Level 3): MPI #60.
    a. Basis-of-Design Product: As directed.
2. Floor Paint, Latex, Gloss MPI #68.
    a. Basis-of-Design Product: As directed.
3. Floor Paint, Alkyd, Low Gloss (Gloss Level 6): MPI #59.
    a. Basis-of-Design Product: As directed.
4. Floor Enamel, Alkyd, Gloss (Gloss Level 6): MPI #27.
    a. Basis-of-Design Product: As directed.

G. Solvent-Based Varnishes:

1. Varnish, with UV Inhibitor, Exterior, Semigloss (Gloss Level 5): MPI #30.
    a. Basis-of-Design Product: As directed.
2. Varnish, with UV Inhibitor, Exterior, Gloss (Gloss Level 6): MPI #29.
    a. Basis-of-Design Product: As directed.
3. Varnish, Marine Spar, Exterior, Gloss (Gloss Level 7): MPI #28.
    a. Basis-of-Design Product: As directed.
4. Varnish, Interior, Flat (Gloss Level 1): MPI #73.
    a. Basis-of-Design Product: As directed.
5. Varnish, Interior, Semigloss (Gloss Level 5): MPI #74.
    a. Basis-of-Design Product: As directed.

6. Varnish, Interior, Gloss (Gloss Level 6): MPI #75.

    a. Basis-of-Design Product: As directed.

H. Polyurethane Varnishes:

1. Varnish, Interior, Polyurethane, Oil-Modified, Gloss (Gloss Level 6): MPI #56.

    a. Basis-of-Design Product: As directed.

2. Varnish, Polyurethane, Moisture-Cured, Gloss (Gloss Level 6): MPI #31.

    a. Basis-of-Design Product: As directed.

2.7 PATCHING MATERIALS

A. Wood-Patching Compound: Two-part, epoxy-resin, wood-patching compound; knife-grade formulation as recommended in writing by manufacturer for type of wood repair indicated, tooling time required for the detail of work, and site conditions. Compound shall be designed for filling voids in damaged wood materials that have deteriorated due to weathering and decay. Compound shall be capable of filling deep holes and spreading to feather edge.

B. Metal Patching Compound: Two-part, polyester-resin, metal patching compound; knife-grade formulation as recommended in writing by manufacturer for type of metal repair indicated, tooling time required for the detail of work, and site conditions. Compound shall be produced for filling metal that has deteriorated due to corrosion. Filler shall be capable of filling deep holes and spreading to feather edge.

C. Cementitious Patching Compounds: Cementitious patching compounds and repair materials specifically manufactured for filling cementitious substrates and for sanding or tooling prior to repainting; formulation as recommended in writing by manufacturer for type of cementitious substrate indicated, exposure to weather and traffic, the detail of work, and site conditions.

D. Gypsum-Plaster Patching Compound: Finish coat plaster and bonding compound according to ASTM C842 and manufacturer's written instructions.

PART 3 - EXECUTION

3.1 HISTORIC TREATMENT OF PAINTING, GENERAL

A. Execution of the Work: In treating historic items, disturb them as minimally as possible and as follows:

1. Remove failed coatings and corrosion and repaint.
2. Verify that substrate surface conditions are suitable for painting.
3. Allow other trades to repair items in place and retain as much original material as possible before repainting.
4. Install temporary protective measures to protect historic painted surfaces that shall be treated later.

B. Mechanical Abrasion: Where mechanical abrasion is needed for the work, use only the gentlest mechanical methods, such as scraping and lightly hand sanding, that will not abrade softer substrates, reducing clarity of detail. Do not use abrasive methods such as rotary sanding, rotary wire brushing, or power tools except as indicated as part of the historic treatment program and as approved by Architect.

C. Heat Processes: Do not use torches, heat guns, or heat plates.

3.2 EXAMINATION

A. Examine substrates and conditions, with historic treatment specialist present, for compliance with requirements for maximum moisture content and other conditions affecting performance of painting work. Comply with paint manufacturer's written instructions for inspection.

B. Maximum Moisture Content of Substrates: Do not begin application of coatings unless moisture content of exposed surface is below the maximum value recommended in writing by paint manufacturer and not greater than the following maximum values when measured with an electronic moisture meter appropriate to the substrate material:

1. Concrete: 12 percent.
2. Gypsum Board: 12 percent.
3. Gypsum Plaster: 12 percent.
4. Masonry (Clay and CMU): 12 percent.
5. Portland Cement Plaster: 12 percent.
6. Wood: 15 percent.

C. Alkalinity: Do not begin application of coatings unless surface alkalinity is within range recommended in writing by paint manufacturer. Conduct alkali testing with litmus paper on exposed plaster, cementitious, and masonry surfaces.

3.3 PREPARATORY CLEANING

A. General: Use only the gentlest, appropriate method necessary to clean surfaces in preparation for painting. Clean all surfaces, corners, contours, and interstices.

B. Detergent Cleaning: Wash surfaces by hand using clean rags, sponges, and bristle brushes. Scrub surface with detergent solution and bristle brush until soil is thoroughly dislodged and can be removed by rinsing. Use small brushes to remove soil from joints and crevices. Dip brush in solution often to ensure that adequate fresh detergent is used and that surface remains wet. Rinse with water applied by clean rags or sponges.

C. Solvent Cleaning: Use solvent cleaning to remove oil, grease, smoke, tar, and asphalt from painted or unpainted surfaces before other preparation work. Wipe surfaces with solvent using clean rags and sponges. If necessary, spot-solvent cleaning may be employed just prior to commencement of paint application, provided enough time is allowed for complete evaporation. Use clean solvent and clean rags for the final wash to ensure that all foreign materials have been removed. Do not use solvents, including primer thinner and turpentine, that leave residue.

D. Mildew: Clean off existing mildew, algae, moss, plant material, loose paint, grease, dirt, and other debris by scrubbing with bristle brush or sponge and detergent solution. Scrub mildewed areas with mildewcide. Rinse with water applied by clean rags or sponges.

E. Chemical Rust Removal:

1. Remove loose rust scale with approved abrasives for ferrous-metal cleaning.
2. Apply rust remover with brushes or as recommended in writing by manufacturer.
3. Allow rust remover to remain on surface for period recommended in writing by manufacturer or as determined by preconstruction testing. Do not allow extended dwell time.
4. Wipe off residue with mineral spirits and either steel wool or soft rags, or clean with method recommended in writing by manufacturer to remove residue.
5. Dry immediately with clean, soft cloths. Follow direction of grain in metal.
6. Prime immediately to prevent rust. Do not touch cleaned metal surface until primed.

F. Mechanical Rust Removal:

1. Remove rust with approved abrasives for ferrous-metal cleaning. Clean to bright metal.
2. Wipe off residue with mineral spirits and either steel wool or soft rags.
3. Dry immediately with clean, soft cloths. Follow direction of grain in metal.
4. Prime immediately to prevent rust. Do not touch cleaned metal surface until primed.

3.4 PAINT REMOVAL

A. General: Remove paint where indicated. Where cleaning methods have been attempted and further removal of the paint is required because of incompatible or unsatisfactory surfaces for repainting, remove paint to extent required by conditions.

1. Brushes: Use brushes that are resistant to chemicals being used.

   a. Metal Substrates: If using wire brushes on metal , use brushes of same metal composition as metal being treated.
   b. Wood Substrates: Do not use wire brushes.

2. Spray Equipment: Use spray equipment that provides controlled application at volume and pressure indicated, measured at nozzle. Adjust pressure and volume to ensure that spray methods do not damage surfaces.

   a. Equip units with pressure gages.
   b. Unless otherwise indicated, hold spray nozzle at least 6 inches (150 mm) from surface and apply material in horizontal, back-and-forth sweeping motion, overlapping previous strokes to produce uniform coverage.
   c. For chemical spray application, use low-pressure tank or chemical pump suitable for chemical indicated, equipped with nozzle having a cone-shaped spray.
   d. For water-spray application, use fan-shaped spray tip that disperses water at an angle of 25 to 50 degrees.
   e. For heated water-spray application, use equipment capable of maintaining temperature between 140 and 160 deg F (60 and 71 deg C) at flow rates indicated.

B. Paint Removal with Hand Tools: Remove paint manually using hand-held scrapers, wire brushes, sandpaper, and metallic wool as appropriate for the substrate material. Do not use other methods except as indicated as part of the historic treatment program and as approved by Architect.

C. Paint Removal with Alkaline Paste Paint Remover:

1. Remove loose and peeling paint using water, scrapers, stiff brushes, or a combination of these. Let surface dry thoroughly.
2. Apply paint remover to dry, painted surface with brushes.
3. Allow paint remover to remain on surface for period recommended in writing by manufacturer or as determined by preconstruction testing.
4. As directed Rinse with cold or hot water applied by low or medium-pressure spray to remove chemicals and paint residue.
5. Use mechanical methods recommended in writing by manufacturer to remove chemicals and paint residue.
6. Repeat process if necessary to remove all paint.

D. Paint Removal with Low-Odor, Solvent-Type Paste Paint Remover:

1. Remove loose and peeling paint using water, scrapers, stiff brushes, or a combination of these. Let surface dry thoroughly.
2. Apply thick coating of paint remover to dry, painted surface with natural-fiber cleaning brush, deep-nap roller, or large paintbrush. Apply in one or two coats according to manufacturer's written instructions.
3. Allow paint remover to remain on surface for period recommended in writing by manufacturer or as determined by preconstruction testing.
4. As directed Rinse with cold or hot water applied by low or medium-pressure spray to remove chemicals and paint residue.
5. Use mechanical methods recommended in writing by manufacturer to remove chemicals and paint residue.
6. Repeat process if necessary to remove all paint.

3.5 SUBSTRATE REPAIR

A. General: Repair substrate surface defects that are inconsistent with the surface appearance of adjacent materials and finishes.

B. Wood Substrate:

1. Repair wood defects including dents and gouges more than 1/8 inch (3 mm) or 1/4 inch (6 mm) in size and all holes and cracks by filling with wood-patching compound and sanding smooth. Reset or remove protruding fasteners.
2. Where existing paint is allowed to remain, sand irregular buildup of paint, runs, and sags to achieve a uniformly smooth surface.

C. Cementitious Material Substrate:

1. General: Repair defects including dents and chips more than 1/4 inch (6 mm) or 1/2 inch (13 mm) in size as directed and all holes and cracks by filling with cementitious patching compound and sanding smooth. Remove protruding fasteners.
2. New and Bare Plaster: Neutralize surface of plaster with mild acid solution as recommended in writing by paint manufacturer. In lieu of acid neutralization, follow manufacturer's written instruction for primer or transition coat over alkaline plaster surfaces.
3. Concrete, Cement Plaster, and Other Cementitious Products: Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents. If surfaces are too alkaline to paint, correct this condition before painting.

D. Gypsum-Plaster and Gypsum-Board Substrates:

1. Repair defects including dents and chips more than 1/8 inch (3 mm) or 1/4 inch (6 mm) in size as directed and all holes and cracks by filling with gypsum-plaster patching compound and sanding smooth. Remove protruding fasteners.
2. Rout out surface cracks to remove loose, unsound material; fill with patching compound and sand smooth.

E. Metal Substrate:

1. Preparation: Treat repair locations by wire-brushing and solvent cleaning. Use chemical or mechanical rust removal method to clean off rust.
2. Defects in Metal Surfaces: Repair non-load-bearing defects in existing metal surfaces, including dents and gouges more than 1/16 inch (6 mm) or 1/8 inch (3 mm) deep or 1/2 inch (13 mm) or 1 inch (25 mm) across and all holes and cracks by filling with metal patching compound and sanding smooth. Remove burrs and protruding fasteners.
3. Priming: Prime iron and steel surfaces immediately after repair to prevent flash rusting. Stripe paint corners, crevices, bolts, welds, and sharp edges. Apply two coats to surfaces that are inaccessible after completion of the Work.

3.6 PAINT APPLICATION, GENERAL

A. Prepare surfaces to be painted according to the Surface-Preparation Schedule and with manufacturer's written instructions for each substrate condition.

B. Apply a transition coat over incompatible existing coatings.

C. Metal Substrate: Stripe paint corners, crevices, bolts, welds, and sharp edges before applying full coat. Apply two coats to surfaces that are inaccessible after completion of the Work. Tint stripe coat different than the main coating and apply with brush.

D. Blending Plain Painted Surfaces: When painting new substrates patched into existing surfaces or touching up missing or damaged finishes, apply coating system specified for the specific substrate. Apply final finish coat over entire surface from edge to edge and corner to corner.

3.7 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage paint-remover manufacturer's factory-authorized service representative for consultation and Project-site inspection and provide on-site assistance when requested by Architect.

3.8 CLEANING AND PROTECTION

A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.

B. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.

C. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.9 SURFACE-PREPARATION SCHEDULE

A. General: Before painting, prepare surfaces where indicated on Drawings for painting according to applicable requirements specified in this schedule.

1. Examine surfaces to evaluate each surface condition according to paragraphs below.
2. Where existing degree of soiling prevents examination, preclean surface and allow it to dry before making an evaluation.
3. Repair substrate defects according to "Substrate Repair" Article.

B. Surface Preparation for MPI DSD 0 Degree of Surface Degradation:

1. Surface Condition: Existing paint film in good condition and tightly adhered.
2. Paint Removal: Not required.
3. Preparation for Painting: Wash surface by detergent cleaning; use solvent cleaning where needed. Roughen or degloss cleaned surfaces to ensure paint adhesion according to paint manufacturer's written instructions.

C. Surface Preparation for MPI DSD 1 Degree of Surface Degradation:

1. Surface Condition: Paint film cracked or broken but adhered.
2. Paint Removal: Scrape by hand-tool cleaning methods to remove loose paint until only tightly adhered paint remains.
3. Preparation for Painting: Wash surface by detergent cleaning; use other cleaning methods for small areas of bare substrate if required. Roughen, degloss, and sand the cleaned surfaces to ensure paint adhesion and a smooth finish according to paint manufacturer's written instructions.

D. Surface Preparation for MPI DSD 2 Degree of Surface Degradation:

1. Surface Condition: Paint film loose, flaking, or peeling.

2. Paint Removal: Remove loose, flaking, or peeling paint film by hand-tool or chemical paint-removal methods.
3. Preparation for Painting: Wash surface by detergent cleaning; use solvent cleaning where needed. Use other cleaning methods for small areas of bare substrate if required. Sand surfaces to smooth remaining paint film edges. Prepare bare cleaned surface to be painted according to paint manufacturer's written instructions for substrate construction materials.

E. Surface Preparation for MPI DSD 3 Degree of Surface Degradation:

1. Surface Condition: As directed Paint film severely deteriorated, obscuring fine architectural detail work because of paint-layer buildup and surface indicated to have paint completely removed.
2. Paint Removal: Completely remove paint film by hand-tool or chemical paint-removal methods. Remove rust.
3. Preparation for Painting: Prepare bare cleaned surface according to paint manufacturer's written instructions for substrate construction materials.

F. Surface Preparation for MPI DSD 4 Degree of Surface Degradation:

1. Surface Condition: Missing material, small holes and openings, and deteriorated or corroded substrate.
2. Substrate Preparation: Repair, replace, and treat substrate according to "Substrate Repair" Article and requirements in other Specification Sections.
3. Preparation for Painting: Sand substrate surfaces to smooth remaining paint film edges and prepare according to paint manufacturer's written instructions for substrate construction materials. Remove rust.
4. Painting: Paint as required for MPI DSD 2 degree of surface degradation.

3.10 EXTERIOR HISTORIC PAINTING SCHEDULE

A. Ferrous Metal Substrates: As directed Cast-iron facade and storefront or Wrought-iron railing and gate:

1. Alkyd System: MPI REX 5.1D system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Metal, Surface Tolerant, MPI #23.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Metal, Surface Tolerant, MPI #23.
d. Intermediate Coat: Alkyd, exterior, matching topcoat.
e. Topcoat: Alkyd, exterior, semigloss (Gloss Level 5), MPI #94.
f. Topcoat: Alkyd, exterior, gloss (Gloss Level 6), MPI #9.
g. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

B. Wood Columns, Beams, Ceilings, Siding and Fencing:

1. Latex System: MPI REX 6.2A system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd for Exterior Wood, MPI #5.
c. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Latex for Exterior Wood, MPI #6.
d. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd for Exterior Wood, MPI #5.
e. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Latex for Exterior Wood, MPI #6.
f. Intermediate Coat: Latex, exterior, matching topcoat.
g. Topcoat: Latex, exterior flat (Gloss Levels 1-2), MPI #10.
h. Topcoat: Latex, exterior, low sheen (Gloss Levels 3-4), MPI #15.
i. Topcoat: Latex, exterior semigloss (Gloss Level 5), MPI #11.
j. Topcoat: Latex, exterior gloss (Gloss Level 6), MPI #119.
k. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

2. Alkyd System: MPI REX 6.2C system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd for Exterior Wood, MPI #5.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd for Exterior Wood, MPI #5.
d. Intermediate Coat: Latex, exterior, matching topcoat.
e. Topcoat: Alkyd, exterior flat (Gloss Level 1), MPI #8.
f. Topcoat: Alkyd, exterior semigloss (Gloss Level 5), MPI #94.
g. Topcoat: Alkyd, exterior gloss (Gloss Level 6), MPI #9.
h. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

C. Wood Doors, Windows, Frames, Casings and Smooth Fasciae as directed:

1. Latex System: MPI REX 6.3A system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd for Exterior Wood, MPI #5.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd for Exterior Wood, MPI #5.
d. Intermediate Coat: Latex, exterior, matching topcoat.
e. Topcoat: Latex, exterior flat (Gloss Levels 1-2), MPI #10.
f. Topcoat: Latex, exterior, low sheen (Gloss Levels 3-4), MPI #15.
g. Topcoat: Latex, exterior semigloss (Gloss Level 5), MPI #11.
h. Topcoat: Latex, exterior gloss (Gloss Level 6), MPI #119.
i. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

2. Alkyd System: MPI REX 6.3B system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd for Exterior Wood, MPI #5.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd for Exterior Wood, MPI #5.
d. Intermediate Coat: Alkyd, exterior, matching topcoat.
e. Topcoat: Alkyd, exterior flat (Gloss Level 1), MPI #8.
f. Topcoat: Alkyd, exterior semigloss (Gloss Level 5), MPI #94.
g. Topcoat: Alkyd, exterior gloss (Gloss Level 6), MPI #9.
h. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

3. Varnish System (Clear): MPI REX 6.3F.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with topcoat.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with topcoat.
d. Intermediate Coat: Exterior varnish matching topcoat.
e. Topcoat: Varnish, with UV inhibitor, exterior, semigloss (Gloss Level 5), MPI #30.
f. Topcoat: Varnish, with UV inhibitor, exterior, gloss (Gloss Level 6), MPI #29.
g. Topcoat: Varnish, marine spar, exterior, gloss (Gloss Level 6), MPI #28.

D. Wood Deck and Stairs:

1. Latex Porch and Floor System over Alkyd Primer: MPI REX 6.5A system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd/Oil for Exterior Wood, MPI #5.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd/Oil for Exterior Wood, MPI #5.
d. Intermediate Coat: Floor Paint, Latex, matching topcoat.
e. Topcoat: Floor paint, latex, low gloss, MPI #60.
f. Topcoat: Floor paint, latex, gloss, MPI #68.
g. Topcoat Additive: Manufacturer's standard additive to increase skid resistance of painted surface.
h. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

2. Alkyd Floor Enamel System: MPI REX 6.5B system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with topcoat.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with topcoat.

d. Intermediate Coat: Floor enamel matching topcoat.
e. Topcoat: Floor paint, alkyd, low gloss, MPI #59.
f. Topcoat: Floor enamel, alkyd, gloss (Gloss Level 6), MPI #27.
g. Topcoat Additive: Manufacturer's standard additive to increase skid resistance of painted surface.
h. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

E. Wood Shingle or Shake Siding:

1. Latex System: MPI REX 6.6A system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd for Exterior Wood, MPI #5.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd for Exterior Wood, MPI #5.
d. Intermediate Coat: Latex, exterior, matching topcoat.
e. Topcoat: Latex, exterior flat (Gloss Levels 1-2), MPI #10.
f. Topcoat: Latex, exterior, low sheen (Gloss Levels 3-4), MPI #15.
g. Topcoat: Latex, exterior semigloss (Gloss Level 5), MPI #11.
h. Topcoat: Latex, exterior gloss (Gloss Level 6), MPI #119.
i. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

2. Alkyd System: MPI REX 6.6B system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd for Exterior Wood, MPI #5.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd for Exterior Wood, MPI #5.
d. Intermediate Coat: Latex, exterior, matching topcoat.
e. Topcoat: Alkyd, exterior flat (Gloss Level 1), MPI #8.
f. Topcoat: Alkyd, exterior semigloss (Gloss Level 5), MPI #94.
g. Topcoat: Alkyd, exterior gloss (Gloss Level 6), MPI #9.
h. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

3.11 INTERIOR HISTORIC PAINTING SCHEDULE

A. Ferrous Metal Substrates: Cast-iron grilles or Wrought-iron railing:

1. Latex System: MPI RIN 5.1N system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Metal, Surface Tolerant, MPI #23.
c. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd, Anti-Corrosive for Metal, MPI #79.

d. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Rust-Inhibitive, Water Based, MPI #107.
e. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Metal, Surface Tolerant, MPI #23.
f. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd, Anti-Corrosive for Metal, MPI #79.
g. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Rust-Inhibitive, Water Based, MPI #107.
h. Intermediate Coat: Latex matching topcoat.
i. Topcoat: Latex, interior, flat (Gloss Level 1), MPI #53.
j. Topcoat: Latex, interior (Gloss Level 2), MPI #44.
k. Topcoat: Latex, interior (Gloss Level 3), MPI #52.
l. Topcoat: Latex, interior (Gloss Level 4), MPI #43.
m. Topcoat: Latex, interior, semigloss (Gloss Level 5), MPI #54.
n. Topcoat: Latex, interior, gloss (Gloss Level 6), MPI #114.
o. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

2. Alkyd System: MPI RIN 5.1E system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Metal, Surface Tolerant, MPI #23.
c. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Alkyd, Anti-Corrosive for Metal, MPI #79.
d. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Metal, Surface Tolerant, MPI #23.
e. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Alkyd, Anti-Corrosive for Metal, MPI #79.
f. Intermediate Coat: Alkyd, matching topcoat.
g. Topcoat: Alkyd, interior, flat (Gloss Level 1, MPI #49.
h. Topcoat: Alkyd, interior (Gloss Level 3), MPI #51.
i. Topcoat: Alkyd, interior, semigloss (Gloss Level 5), MPI #47.
j. Topcoat: Alkyd, interior, gloss (Gloss Level 6), MPI #48.
k. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

B. Wood Columns, Beams and Ceilings as directed:

1. Latex System over Latex Primer: MPI RIN 6.2D system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Latex, for Interior Wood, MPI #39.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Latex, for Interior Wood, MPI #39.
d. Intermediate Coat: Latex, interior, matching topcoat.
e. Topcoat: Latex, interior flat (Gloss Level 1), MPI #53.
f. Topcoat: Latex, interior (Gloss Level 2), MPI #44.
g. Topcoat: Latex, interior (Gloss Level 3), MPI #52.
h. Topcoat: Latex, interior (Gloss Level 4), MPI #43.

i. Topcoat: Latex, interior, semigloss (Gloss Level 5), MPI #54.
j. Topcoat: Latex, interior, gloss (Gloss Level 6), MPI #114.
k. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

2. Latex System over Alkyd Primer: MPI RIN 6.2A system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Undercoat, Enamel, Interior, MPI #46.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Undercoat, Enamel, Interior, MPI #46.
d. Intermediate Coat: Latex, interior, matching topcoat.
e. Topcoat: Latex, interior flat (Gloss Level 1), MPI #53.
f. Topcoat: Latex, interior (Gloss Level 2), MPI #44.
g. Topcoat: Latex, interior (Gloss Level 3), MPI #52.
h. Topcoat: Latex, interior (Gloss Level 4), MPI #43.
i. Topcoat: Latex, interior, semigloss (Gloss Level 5), MPI #54.
j. Topcoat: Latex, interior, gloss (Gloss Level 6), MPI #114.
k. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

C. Wood Doors, Windows, Frames and Moldings:

1. Latex System over Latex Primer: MPI RIN 6.3U system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Latex, for Interior Wood, MPI #39.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Latex, for Interior Wood, MPI #39.
d. Intermediate Coat: Latex, interior, matching topcoat.
e. Topcoat: Latex, interior, semigloss (Gloss Level 5), MPI #54.
f. Topcoat: Latex, interior, gloss (Gloss Level 6), MPI #114.
g. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

2. Low-Odor Latex System over Latex Primer: MPI RIN 6.3V system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Latex, for Interior Wood, MPI #39.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Latex, for Interior Wood, MPI #39.
d. Intermediate Coat: Latex, interior, matching topcoat.
e. Topcoat: Latex, interior, institutional low odor/VOC flat (Gloss Level 1), MPI #143.
f. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 2), MPI #144.
g. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 3), MPI #145.
h. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 4), MPI #146.

i. Topcoat: Latex, interior, institutional low odor/VOC, semigloss (Gloss Level 5), MPI #147.
j. Topcoat: Latex, interior, institutional low odor/VOC, gloss (Gloss Level 6), MPI #148.
k. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

3. Alkyd Varnish System (Clear): MPI RIN 6.3J.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Shellac, MPI #88.
c. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Alkyd, Sanding Sealer, Clear, MPI #102.
d. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Shellac, MPI #88.
e. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Alkyd, Sanding Sealer, Clear, MPI #102.
f. Intermediate Coat: Interior varnish matching topcoat.
g. Topcoat: Varnish, interior, flat (Gloss Level 1), MPI #73.
h. Topcoat: Varnish, interior, semigloss (Gloss Level 5), MPI #74.
i. Topcoat: Varnish, interior, gloss (Gloss Level 6), MPI #75.

D. Wood Paneling, Casework and Millwork as directed:

1. Latex System over Latex Primer: MPI RIN 6.4T system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Latex, for Interior Wood, MPI #39.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Latex, for Interior Wood, MPI #39.
d. Intermediate Coat: Latex, interior, matching topcoat.
e. Topcoat: Latex, interior, semigloss (Gloss Level 5), MPI #54.
f. Topcoat: Latex, interior, gloss (Gloss Level 6), MPI #114.
g. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

2. Low-Odor Latex System over Latex Primer: MPI RIN 6.4D system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Latex, for Interior Wood, MPI #39.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Latex, for Interior Wood, MPI #39.
d. Intermediate Coat: Latex, interior, matching topcoat.
e. Topcoat: Latex, interior, institutional low odor/VOC flat (Gloss Level 1), MPI #143.
f. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 2), MPI #144.
g. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 3), MPI #145.
h. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 4), MPI #146.

i. Topcoat: Latex, interior, institutional low odor/VOC, semigloss (Gloss Level 5), MPI #147.
j. Topcoat: Latex, interior, institutional low odor/VOC, gloss (Gloss Level 6), MPI #148.
k. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

3. Latex System over Alkyd Primer: MPI RIN 6.4A system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Undercoat, Enamel, Interior, MPI #46.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Undercoat, Enamel, Interior, MPI #46.
d. Intermediate Coat: Latex, interior, matching topcoat.
e. Topcoat: Latex, interior flat (Gloss Level 1), MPI #53.
f. Topcoat: Latex, interior (Gloss Level 2), MPI #44.
g. Topcoat: Latex, interior (Gloss Level 3), MPI #52.
h. Topcoat: Latex, interior (Gloss Level 4), MPI #43.
i. Topcoat: Latex, interior, semigloss (Gloss Level 5), MPI #54.
j. Topcoat: Latex, interior, gloss (Gloss Level 6), MPI #114.
k. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

E. Wood Floors and Stairs:

1. Alkyd Floor Enamel System: MPI RIN 6.5A system over a transition coat.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with topcoat.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with topcoat.
d. Intermediate Coat: Floor enamel matching topcoat.
e. Topcoat: Floor paint, alkyd, low gloss, MPI #59.
f. Topcoat: Floor enamel, alkyd, gloss (Gloss Level 6), MPI #27.
g. Topcoat Additive: Manufacturer's standard additive to increase skid resistance of painted surface.
h. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

2. Polyurethane Varnish System (Clear): MPI RIN 6.5C.

a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with topcoat.
c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with topcoat.
d. Intermediate Coat: Interior varnish matching topcoat.
e. Topcoat: Varnish, interior, polyurethane, oil modified, gloss, MPI #56.

3. Moisture-Cured Polyurethane System (over Stain): MPI RIN 6.5L.

    a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
    b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Stain, Semi-Transparent, for Interior Wood, MPI #90.
    c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Stain, Semi-Transparent, for Interior Wood, MPI #90.
    d. Intermediate Coat: Moisture-cured polyurethane varnish matching topcoat.
    e. Topcoat: Varnish, polyurethane, moisture cured, gloss (Gloss Level 6), MPI #31.
    f. Stain Color: Match adjacent, cleaned wood of same type, color indicated in the Historic Structure Report or color indicated on Drawings.

F. Plaster:

1. Low-Odor Latex System over Waterborne Primer: MPI RIN 9.2M system over a transition coat.

    a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
    b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer Sealer, Latex, Interior, MPI #50.
    c. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer, Stain Blocking, Water Based, MPI #137.
    d. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer Sealer, Latex, Interior, MPI #50.
    e. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat with Primer, Stain Blocking, Water Based, MPI #137.
    f. Topcoat: Latex, interior, institutional low odor/VOC flat (Gloss Level 1), MPI #143.
    g. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 2), MPI #144.
    h. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 3), MPI #145.
    i. Topcoat: Latex, interior, institutional low odor/VOC (Gloss Level 4), MPI #146.
    j. Topcoat: Latex, interior, institutional low odor/VOC, semigloss (Gloss Level 5), MPI #147.
    k. Topcoat: Latex, interior, institutional low odor/VOC, gloss (Gloss Level 6), MPI #148.
    l. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

2. Latex System over Alkyd Primer: MPI RIN 9.2K system over a transition coat.

    a. Prime Coat: For MPI DSD 1 degree of surface degradation, touch up with topcoat.
    b. Prime Coat: For MPI DSD 2 degree of surface degradation, spot prime with Primer Sealer, Alkyd, Interior, MPI #45.
    c. Prime Coat: For MPI DSD 3 degree of surface degradation, fully prime coat Primer Sealer, Alkyd, Interior, MPI #45.
    d. Intermediate Coat: Latex matching topcoat.
    e. Topcoat: Latex, interior, flat (Gloss Level 1), MPI #53.
    f. Topcoat: Latex, interior (Gloss Level 2), MPI #44.
    g. Topcoat: Latex, interior (Gloss Level 3), MPI #52.
    h. Topcoat: Latex, interior (Gloss Level 4), MPI #43.

i. Topcoat: Latex, interior, semigloss (Gloss Level 5), MPI #54.
j. Color: Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

END OF SECTION 090391

SECTION 090394 - HISTORIC TREATMENT OF DECORATIVE PAINTING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes historic treatment of decorative painting in the form of graining, marbleizing, stenciling and striping applied over substrates in good condition.

B. Related Requirements:

1. Section 013591 "Historic Treatment Procedures" for general historic treatment requirements.
2. Section 090391 "Historic Treatment of Plain Painting" for removing paint, substrate repair, and plain painting of historic surfaces.
3. Section 090395 "Historic Treatment of Artistic Painting" for freehand painting and trompe l'oeil on historic surfaces.

1.2 DEFINITIONS

A. Decorative Painting: Painting requiring a higher level of skill than plain painting. This classification includes graining, marbleizing, stenciling, and striping.

B. Glazing: Applying translucent paint material (glaze coat) to protect paint beneath it and impart a more uniform surface gloss.

C. Gloss Level 1: Not more than 5 units at 60 degrees and 10 units at 85 degrees, according to ASTM D523.

D. Gloss Level 2: Not more than 10 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.

E. Gloss Level 3: 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.

F. Gloss Level 4: 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, according to ASTM D523.

G. Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D523.

H. Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D523.

I. Graining: Decorative painting that simulates wood.

J. Marbleizing: Decorative painting that simulates marble or other stone.

K. Modern Paint Materials: Paint materials not designed to match historic paint formulations but that may be required to match historic paint colors.

L. Plain Painting: For historic treatment, this means painting that requires attention to historic treatment requirements, but no special, decorative or artistic painting skill.

M. Stenciling: Decorative paint designs applied using pattern cutouts.

N. Striping: Decorative painting in striped patterns.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review minutes of Preliminary Historic Treatment Conference that pertain to historic treatment of decorative painting.
2. Review methods and procedures related to historic treatment of decorative painting and fire protection.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples: For each exposed product and for each color and texture specified.

1. For each painted color being matched to a standardized color-coding system, include the color chips from the color-coding-system company with Samples.
2. Label each Sample for location and application.

C. Product List: Printout of current MPI's "MPI Approved Products List" for each MPI-product category specified, with the proposed product highlighted.

1.5 INFORMATIONAL SUBMITTALS

A. Color Matching Certificate: For computer color matching of historic colors.

1.6 QUALITY ASSURANCE

A. Historic Treatment Specialist Qualifications: A qualified historic painting specialist with expertise in matching and touching up existing, decorative painting. Experience only in new painting work is insufficient experience for historic treatment work.

B. Color Matching: Custom computer-match paint colors to colors indicated in decorative painting schedule(s) at the end of Part 3, in the Historic Structure Report or on Drawings as directed. For colors indicated by a standardized coding system, obtain a color chip for each color indicated from the color-coding-system company; computer match paint colors to the color chips.

C. Mockups: Prepare mockups of historic treatment processes for each type of decorative painting and substrate indicated and each color and finish required to demonstrate aesthetic effects and to set quality standards for materials and execution. Duplicate appearance of approved Sample submittals.

PART 2 - PRODUCTS

2.1 PAINT, GENERAL

A. Material Compatibility:

1. Provide paint materials that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat, provide products recommended in writing by manufacturer for use over substrate paint system or on substrate indicated.

B. Colors: As indicated in decorative painting schedule(s) at the end of Part 3, Match Architect's samples or As selected by Architect from full range of industry colors.

2.2 MODERN PAINT MATERIALS, GENERAL

A. MPI Standards: Provide products that comply with MPI standards indicated and that are listed in its "MPI Approved Products List."

B. VOC Content: Products shall comply with VOC limits of authorities having jurisdiction.

C. Transition Coat: Paint manufacturer's recommended coating for use where a residual existing coating is incompatible with the decorative paint material.

D. Glaze Coat: Manufacturer's standard translucent paint material for application as directed.

2.3 MODERN PAINT MATERIAL MANUFACTURERS

2.4 MODERN PAINT MATERIALS

A. Water-Based Paints:

1. Latex, Exterior, Low Sheen (Gloss Levels 3-4): MPI #15.

    a. Basis-of-Design Product: As directed.

2. Latex, Exterior, Semigloss (Gloss Level 5): MPI #11.

    a. Basis-of-Design Product: As directed.

3. Latex, Exterior, Gloss (Gloss Level 6): MPI #119.

a. Basis-of-Design Product: As directed.

4. Latex, Interior, Flat (Gloss Level 1): MPI #53.

a. Basis-of-Design Product: As directed.

5. Latex, Interior (Gloss Level 2): MPI #44.

a. Basis-of-Design Product: As directed.

6. Latex, Interior (Gloss Level 3): MPI #52.

a. Basis-of-Design Product.

7. Latex, Interior (Gloss Level 4): MPI #43.

a. Basis-of-Design Product.

8. Latex, Interior, Semigloss (Gloss Level 5): MPI #54.

a. Basis-of-Design Product: As directed.

9. Latex, Interior, Gloss (Gloss Level 6, except Minimum Gloss of 65 Units at 60 Degrees): MPI #114.

a. Basis-of-Design Product: As directed.

10. Latex, Interior, Institutional Low Odor/VOC, Flat (Gloss Level 1): MPI #143.

a. Basis-of-Design Product: As directed.

11. Latex, Interior, Institutional Low Odor/VOC (Gloss Level 2): MPI #144.

a. Basis-of-Design Product: As directed.

12. Latex, Interior, Institutional Low Odor/VOC (Gloss Level 3): MPI #145.

a. Basis-of-Design Product: As directed.

13. Latex, Interior, Institutional Low Odor/VOC (Gloss Level 4): MPI #146.

a. Basis-of-Design Product: As directed.

14. Latex, Interior, Institutional Low Odor/VOC, Semigloss (Gloss Level 5): MPI #147.

a. Basis-of-Design Product: As directed.

15. Latex, Interior, Institutional Low Odor/VOC, Gloss (Gloss Level 6): MPI #148.

a. Basis-of-Design Product: As directed.

B. Solvent-Based Paints:

1. Alkyd, Exterior, Semigloss (Gloss Level 5): MPI #94.
    a. Basis-of-Design Product: As directed.
2. Alkyd, Exterior, Gloss (Gloss Level 6): MPI #9.
    a. Basis-of-Design Product: As directed.
3. Alkyd, Interior, Flat (Gloss Level 1): MPI #49.
    a. Basis-of-Design Product: As directed.
4. Alkyd, Interior (Gloss Level 3): MPI #51.
    a. Basis-of-Design Product: As directed.
5. Alkyd, Interior, Semigloss (Gloss Level 5): MPI #47.
    a. Basis-of-Design Product: As directed.
6. Alkyd, Interior, Gloss (Gloss Level 6): MPI #48.
    a. Basis-of-Design Product: As directed.

C. Floor Coatings:

1. Floor Paint, Latex, Low Gloss (Maximum Gloss Level 3): MPI #60.
    a. Basis-of-Design Product: As directed.
2. Floor Paint, Latex, Gloss: MPI #68.
    a. Basis-of-Design Product: As directed.
3. Floor Paint, Alkyd, Low Gloss (Gloss Level 6): MPI #59.
    a. Basis-of-Design Product: As directed.
4. Floor Enamel, Alkyd, Gloss (Gloss Level 6): MPI #27.
    a. Basis-of-Design Product: As directed.

PART 3 - EXECUTION

3.1 HISTORIC TREATMENT OF DECORATIVE PAINTING, GENERAL

A. Execution of the Work: In treating historic items, disturb them as minimally as possible and as follows:

1. Remove failed coatings and corrosion before painting.

2. Verify that substrate surface conditions are suitable for painting.
3. Allow other trades to repair items in place and retain as much original material as possible before painting.
4. Install temporary protective measures to protect historic painted surfaces that shall be treated later.

3.2 PAINT APPLICATION, GENERAL

A. Substrate Surface Preparation: Before painting, prepare surfaces for painting according to manufacturer's written instructions for each substrate condition.

B. Apply a transition coat over incompatible existing coatings and substrate materials.

3.3 DECORATIVE PAINTING APPLICATIONS

A. General: Apply decorative painting with adequate illumination that does not distort the colors of surfaces or paint being applied.

B. Graining: Treat each grained substrate item or component as a separate decorative pattern, differentiating individually grained pieces. Do not overlay a single grain pattern over multiple grained pieces.

1. Graining Pattern: Match pattern indicated on Drawings, design reference sample, existing wood graining to be replicated, existing wood to be imitated or species and grain of wood to be imitated.

a. Location of Pattern to be Matched: As directed.

C. Marbleizing: Treat each marbleized item as a separate decorative pattern, differentiating individually marbleized pieces. Do not overlay a single marbleized pattern over multiple marbleized pieces.

1. Marbleizing Pattern Match pattern indicated on Drawings, design reference sample, existing marbleizing to be replicated or existing marble to be imitated as directed.

a. Location of Pattern to be Matched: As directed.

D. Stenciling Pattern: Match stenciled design indicated on Drawings, design reference sample or stenciled design to be replicated.

1. Location of Pattern to be Matched: As directed.

E. Striping Pattern: Match pattern indicated on Drawings, design reference sample or striping pattern to be replicated as directed.

1. Location of Pattern to be Matched: As directed.

3.4 CLEANING AND PROTECTION

A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.

B. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.

C. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.5 EXTERIOR DECORATIVE PAINTING SCHEDULE

A. Marbleizing, Graining, Stenciling on Painted Doors, Beams and Ceilings or Walls As Directed:

1. Latex paint over a transition coat.

    a. Type: Latex, exterior, low sheen (Gloss Levels 3-4), MPI #15.
    b. Type: Latex, exterior semigloss (Gloss Level 5), MPI #11.
    c. Type: Latex, exterior gloss (Gloss Level 6), MPI #119.
    d. Color(s): Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

2. Alkyd paint over a transition coat.

    a. Type: Alkyd, exterior semigloss (Gloss Level 5), MPI #94.
    b. Type: Alkyd, exterior gloss (Gloss Level 6), MPI #9.
    c. Color(s): Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

B. Stenciling, Striping on Painted Wood Floor or Concrete Floor As Directed:

1. Latex floor paint over a transition coat.

    a. Type: Floor paint, latex, low gloss, MPI #60.
    b. Type: Floor paint, latex, gloss, MPI #68.
    c. Nonslip Additive: Manufacturer's standard additive to increase skid resistance of painted surface.
    d. Color(s): Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

2. Alkyd floor paint over a transition coat.

    a. Type: Floor paint, alkyd, low gloss, MPI #59.
    b. Type: Floor enamel, alkyd, gloss (Gloss Level 6), MPI #27.
    c. Nonslip Additive: Manufacturer's standard additive to increase skid resistance of painted surface.
    d. Color(s): Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

3.6 INTERIOR DECORATIVE PAINTING SCHEDULE

A. Marbleizing, Graining, Stenciling on Painted Doors, Beams Ceilings and Walls As Directed:

1. Latex paint over a transition coat.

   a. Type: Latex, interior, flat (Gloss Level 1), MPI #53.
   b. Type: Latex, interior (Gloss Level 2), MPI #44.
   c. Type: Latex, interior (Gloss Level 3), MPI #52.
   d. Type: Latex, interior (Gloss Level 4), MPI #43.
   e. Type: Latex, interior, semigloss (Gloss Level 5), MPI #54.
   f. Type: Latex, interior, gloss (Gloss Level 6), MPI #114.
   g. Type: Latex, interior, institutional low odor/VOC, flat (Gloss Level 1), MPI #143.
   h. Type: Latex, interior, institutional low odor/VOC (Gloss Level 2), MPI #144.
   i. Type: Latex, interior, institutional low odor/VOC (Gloss Level 3), MPI #145.
   j. Type: Latex, interior, institutional low odor/VOC (Gloss Level 4), MPI #146.
   k. Type: Latex, interior, institutional low odor/VOC, semigloss (Gloss Level 5), MPI #147.
   l. Type: Latex, interior, institutional low odor/VOC, gloss (Gloss Level 6), MPI #148.
   m. Color(s): Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

2. Alkyd Paint over a transition coat.

   a. Type: Alkyd, interior, flat (Gloss Level 1), MPI #49.
   b. Type: Alkyd, interior (Gloss Level 3), MPI #51.
   c. Type: Alkyd, interior, semigloss (Gloss Level 5), MPI #47.
   d. Type: Alkyd, interior, gloss (Gloss Level 6), MPI #48.
   e. Color(s): Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

B. Stenciling, Striping on Painted Wood Floor or Concrete Floor As directed:

1. Latex floor paint over a transition coat.

   a. Type: Floor paint, latex, low gloss, MPI #60.
   b. Type: Floor paint, latex, gloss, MPI #68.
   c. Nonslip Additive: Manufacturer's standard additive to increase skid resistance of painted surface.
   d. Color(s): Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

2. Alkyd floor paint over a transition coat.

   a. Type: Floor paint, alkyd, low gloss, MPI #59.
   b. Type: Floor enamel, alkyd, gloss (Gloss Level 6), MPI #27.
   c. Nonslip Additive: Manufacturer's standard additive to increase skid resistance of painted surface.

d. Color(s): Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

END OF SECTION 090394

SECTION 090395 - HISTORIC TREATMENT OF ARTISTIC PAINTING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes historic treatment of artistic painting in the form of freehand painting and trompe l'oeil applied over substrates in good condition.

B. Related Requirements:

1. Section 013591 "Historic Treatment Procedures" for general historic treatment requirements.
2. Section 090391 "Historic Treatment of Plain Painting" for removing paint, substrate repair, and plain painting of historic surfaces.
3. Section 090394 "Historic Treatment of Decorative Painting" for graining, marbleizing, stenciling, and striping on historic surfaces.

1.2 DEFINITIONS

A. Artistic Painting: Painting requiring a higher level of skill than plain painting. This classification includes freehand painting and trompe l'oeil.

B. Freehand Painting: Artistic polychromatic painting applied using only a paintbrush.

C. Glazing: Applying translucent paint material (glaze coat) to protect paint beneath it and impart a more uniform surface gloss.

D. Gloss Level 1: Not more than 5 units at 60 degrees and 10 units at 85 degrees, according to ASTM D523.

E. Gloss Level 2: Not more than 10 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.

F. Gloss Level 3: 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.

G. Gloss Level 4: 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, according to ASTM D523.

H. Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D523.

I. Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D523.

J. Modern Paint Materials: Paint materials not designed to match historic paint formulations but that may be required to match historic paint colors.

K. Plain Painting: For historic treatment, this means painting that requires attention to historic treatment requirements, but no special, decorative or artistic painting skill.

L. Trompe L'oeil: Artistic painting that simulates three-dimensional architectural detailing.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review minutes of Preliminary Historic Treatment Conference that pertain to historic treatment of artistic painting.
2. Review methods and procedures related to historic treatment of artistic painting and fire protection.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include recommendations for product application and use. Include test data substantiating that products comply with requirements.

B. Samples: For each exposed product and for each color and texture specified.

1. For each painted color being matched to a standardized color-coding system, include the color chips from the color-coding-system company with Samples.
2. Label each Sample for location and application.

C. Product List: Printout of current MPI's "MPI Approved Products List" for each MPI-product category specified, with the proposed product highlighted.

1.5 INFORMATIONAL SUBMITTALS

A. Color Matching Certificate: For computer color matching of historic colors.

1.6 QUALITY ASSURANCE

A. Historic Treatment Specialist Qualifications: A qualified historic painting specialist with expertise in matching and touching up existing, artistic painting. Experience only in new painting work is insufficient experience for historic treatment work.

B. Color Matching: Custom computer-match paint colors to colors indicated in artistic painting schedule(s) at the end of Part 3, in the Historic Structure Report or on Drawings as directed. For colors indicated by a standardized coding system, obtain a color chip for each color indicated from the color-coding-system company; computer match paint colors to the color chips.

C. Mockups: Prepare mockups of historic treatment processes for each type of artistic painting and substrate indicated and each color and finish required to demonstrate aesthetic effects and to set

quality standards for materials and execution. Duplicate appearance of approved Sample submittals.

PART 2 - PRODUCTS

2.1 PAINT, GENERAL

A. Material Compatibility:

1. Provide paint materials that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat, provide products recommended in writing by manufacturer for use over substrate paint system or on substrate indicated.

B. Colors: As indicated in artistic painting schedule(s) at the end of Part 3, Match Architect's samples or As selected by Architect from full range of industry colors as directed.

2.2 MODERN PAINT MATERIALS, GENERAL

A. MPI Standards: Provide products that comply with MPI standards indicated and that are listed in its "MPI Approved Products List."

B. VOC Content: Products shall comply with VOC limits of authorities having jurisdiction.

C. Transition Coat: Paint manufacturer's recommended coating for use where a residual existing coating is incompatible with the artistic paint material.

D. Glaze Coat: Manufacturer's standard translucent paint material for application as directed.

2.3 MODERN PAINT MATERIAL MANUFACTURERS

2.4 MODERN PAINT MATERIALS

A. Water-Based Paints:

1. Latex, Exterior, Low Sheen (Gloss Levels 3-4): MPI #15.
    a. Basis-of-Design Product: As directed.
2. Latex, Exterior, Semigloss (Gloss Level 5): MPI #11.
    a. Basis-of-Design Product: As directed.
3. Latex, Exterior, Gloss (Gloss Level 6): MPI #119.
    a. Basis-of-Design Product: As directed.

4. Latex, Interior, Flat (Gloss Level 1): MPI #53.

    a. Basis-of-Design Product: As directed.

5. Latex, Interior (Gloss Level 2): MPI #44.

    a. Basis-of-Design Product: As directed.

6. Latex, Interior (Gloss Level 3): MPI #52.

    a. Basis-of-Design Product: As directed.

7. Latex, Interior (Gloss Level 4): MPI #43.

    a. Basis-of-Design Product: As directed.

8. Latex, Interior, Semigloss (Gloss Level 5): MPI #54.

    a. Basis-of-Design Product: As directed.

9. Latex, Interior, Gloss (Gloss Level 6, except Minimum Gloss of 65 Units at 60 Degrees): MPI #114.

    a. Basis-of-Design Product: As directed.

10. Latex, Interior, Institutional Low Odor/VOC, Flat (Gloss Level 1): MPI #143.

    a. Basis-of-Design Product: As directed.

11. Latex, Interior, Institutional Low Odor/VOC (Gloss Level 2): MPI #144.

    a. Basis-of-Design Product: As directed.

12. Latex, Interior, Institutional Low Odor/VOC (Gloss Level 3): MPI #145.

    a. Basis-of-Design Product: As directed.

13. Latex, Interior, Institutional Low Odor/VOC (Gloss Level 4): MPI #146.

    a. Basis-of-Design Product: As directed.

14. Latex, Interior, Institutional Low Odor/VOC, Semigloss (Gloss Level 5): MPI #147.

    a. Basis-of-Design Product: As directed.

15. Latex, Interior, Institutional Low Odor/VOC, Gloss (Gloss Level 6): MPI #148.

    a. Basis-of-Design Product: As directed.

B. Solvent-Based Paints:

1. Alkyd, Exterior, Semigloss (Gloss Level 5): MPI #94.

a. Basis-of-Design Product: As directed.

2. Alkyd, Exterior, Gloss (Gloss Level 6): MPI #9.

a. Basis-of-Design Product: As directed.

3. Alkyd, Interior, Flat (Gloss Level 1): MPI #49.

a. Basis-of-Design Product: As directed.

4. Alkyd, Interior (Gloss Level 3): MPI #51.

a. Basis-of-Design Product: As directed.

5. Alkyd, Interior, Semigloss (Gloss Level 5): MPI #47.

a. Basis-of-Design Product: As directed.

6. Alkyd, Interior, Gloss (Gloss Level 6): MPI #48.

a. Basis-of-Design Product: As directed.

PART 3 - EXECUTION

3.1 HISTORIC TREATMENT OF ARTISTIC PAINTING, GENERAL

A. Execution of the Work: In treating historic items, disturb them as minimally as possible and as follows:

1. Remove failed coatings and corrosion before painting.
2. Verify that substrate surface conditions are suitable for painting.
3. Allow other trades to repair items in place and retain as much original material as possible before painting.
4. Install temporary protective measures to protect historic painted surfaces that shall be treated later.

3.2 PAINT APPLICATION, GENERAL

A. Substrate Surface Preparation: Before painting, prepare surfaces for painting according to manufacturer's written instructions for each substrate condition.

B. Apply a transition coat over incompatible existing coatings and substrate materials.

3.3 ARTISTIC PAINTING APPLICATIONS

A. General: Apply artistic painting with adequate illumination that does not distort the colors of surfaces or paint being applied.

B. Freehand Painting Artwork Design: Match artwork indicated on Drawings, design reference sample or artwork to be replicated or touched up.

1. Location of Design to be Matched: As directed.

C. Trompe L'oeil Artwork Design: Match artwork indicated on Drawings, design reference sample or artwork to be replicated or touched up.

1. Location of Design to be Matched: As directed.

3.4 CLEANING AND PROTECTION

A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.

B. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.

C. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.5 EXTERIOR ARTISTIC PAINTING SCHEDULE

A. Freehand Painting, Trompe L'oeil on Painted, Wood Siding or Brick Wall As directed:

1. Latex paint over a transition coat.

a. Type: Latex, exterior, low sheen (Gloss Levels 3-4), MPI #15.
b. Type: Latex, exterior, semigloss (Gloss Level 5), MPI #11.
c. Type: Latex, exterior, gloss (Gloss Level 6), MPI #119.
d. Color(s): Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

2. Alkyd paint over a transition coat.

a. Type: Alkyd, exterior, semigloss (Gloss Level 5), MPI #94.
b. Type: Alkyd, exterior, gloss (Gloss Level 6), MPI #9.
c. Color(s): Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

3.6 INTERIOR ARTISTIC PAINTING SCHEDULE

A. Freehand Painting or Trompe L'oeil on Painted Ceilings and Walls:

1. Latex paint over a transition coat.

a. Type: Latex, interior, flat (Gloss Level 1), MPI #53.
b. Type: Latex, interior (Gloss Level 2), MPI #44.

c. Type: Latex, interior (Gloss Level 3), MPI #52.
d. Type: Latex, interior (Gloss Level 4), MPI #43.
e. Type: Latex, interior, semigloss (Gloss Level 5), MPI #54.
f. Type: Latex, interior, gloss (Gloss Level 6), MPI #114.
g. Type: Latex, interior, institutional low odor/VOC flat (Gloss Level 1), MPI #143.
h. Type: Latex, interior, institutional low odor/VOC (Gloss Level 2), MPI #144.
i. Type: Latex, interior, institutional low odor/VOC (Gloss Level 3), MPI #145.
j. Type: Latex, interior, institutional low odor/VOC (Gloss Level 4), MPI #146.
k. Type: Latex, interior, institutional low odor/VOC, semigloss (Gloss Level 5), MPI #147.
l. Type: Latex, interior, institutional low odor/VOC, gloss (Gloss Level 6), MPI #148.
m. Color(s): Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

2. Alkyd paint over a transition coat.

a. Type: Alkyd, interior, flat (Gloss Level 1), MPI #49.
b. Type: Alkyd, interior (Gloss Level 3), MPI #51.
c. Type: Alkyd, interior, semigloss (Gloss Level 5), MPI #47.
d. Type: Alkyd, interior, gloss (Gloss Level 6), MPI #48.
e. Color(s): Match Munsell Color 10 G 8/2, Plochere Color System #8da399, colors indicated in the Historic Structure Report or colors indicated on Drawings.

END OF SECTION 090395

SECTION 090398 - HISTORIC TREATMENT OF GILDING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes historic treatment of gilding on substrates in good condition.

B. Related Requirements:

1. Section 013591 "Historic Treatment Procedures" for general historic treatment requirements.
2. Section 090391 "Historic Treatment of Plain Painting" for substrate repair and for removing painting from and for plain painting on historic substrates if required before gilding.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review minutes of Preliminary Historic Treatment Conference that pertain to historic treatment of gilding.
2. Review methods and procedures related to historic treatment of gilding and fire protection.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples: For each exposed product and for each color and texture specified.

1.4 QUALITY ASSURANCE

A. Historic Treatment Specialist Qualifications: A qualified historic gilding specialist with expertise in matching and infilling existing gilding. Experience only in painting work is insufficient experience for historic treatment of gilding.

B. Mockups: Provide mockups for each type of gilding and substrate indicated and each metallic leaf required to demonstrate aesthetic effects and to set quality standards for materials and execution. Duplicate appearance of approved Sample submittals.

PART 2 - PRODUCTS

2.1 GILDING MATERIALS

A. Metallic Leaf: 12K gold (white gold), 18K gold, 22K gold, 23K gold, 23.5K gold, 23.5K red gold or Palladium.

B. Sizing: Oil type.

PART 3 - EXECUTION

3.1 GILDING APPLICATION

A. Comply with manufacturers' written instructions for application methods unless otherwise indicated in this Section.

B. Apply gilding with adequate illumination that does not distort the condition of surfaces or materials being applied.

C. Apply sizing and metallic leaf to surfaces after substrate and nearby painting is completed and dry. Gently press metallic leaf into sizing with a soft brush or a cotton or velvet cloth to fully adhere it to the surface. Gently remove overlapped edges with a soft brush after the sizing has fully dried.

END OF SECTION 090398

SECTION 090561.13 - MOISTURE VAPOR EMISSION CONTROL

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes fluid-applied, resin-based, membrane-forming systems that control the moisture-vapor-emission rate of high-moisture, interior concrete to prepare it for floor covering installation.

B. Work of this Section is affected by Moisture Vapor Emission Control.

1.2 DEFINITIONS

A. MVE: Moisture vapor emission.

B. MVER: Moisture vapor emission rate.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1.4 INFORMATIONAL SUBMITTALS

A. Product test reports.

B. Preinstallation testing reports.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Employs factory-trained personnel who are available for consultation and Project-site inspection.

B. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. MVE-Control System Capabilities: Capable of suppressing MVE without failure where installed on concrete that exhibits the following conditions:

1. MVER: As directed Maximum 15 lb of water/1000 sq. ft. (6.80 kg of water/92.9 sq. m), 25 lb of water/1000 sq. ft. (11.34 kg of water/92.9 sq. m) or 30 lb of water/1000 sq. ft. (13.61 kg of water/92.9 sq. m) when tested according to ASTM F1869.
2. Relative Humidity: As directed Maximum 100 or 90 percent when tested according to ASTM F2170 using in situ probes.

B. Water-Vapor Transmission: As directed Through MVE-control system, maximum 0.10 perm (5.75 ng/Pa x s x sq. m), 0.02 perm (1.15 ng/Pa x s x sq. m) or 0.06 perm (3.45 ng/Pa x s x sq. m) when tested according to ASTM E96/E96M.

C. Tensile Bond Strength: For MVE-control system, greater than 200 psi (1.38 MPa) with failure in the concrete according to ASTM D7234.

2.2 MVE-CONTROL SYSTEM

A. MVE-Control System: ASTM F3010-qualified, fluid-applied, two-component, epoxy-resin, membrane-forming system; formulated for application on concrete substrates to reduce MVER to level required for installation of floor coverings indicated and acceptable to manufacturers of floor covering products indicated, including adhesives.

1. Substrate Primer: Provide MVE-control system manufacturer's concrete-substrate primer if required for system indicated by substrate conditions.
2. Cementitious Underlayment Primer: If required for subsequent installation of cementitious underlayment products, provide MVE-control system manufacturer's primer to ensure adhesion of products to MVE-control system.

2.3 ACCESSORIES

A. Patching and Leveling Material: Moisture-, mildew-, and alkali-resistant product recommended in writing by MVE-control system manufacturer and with minimum of 3000-psi (20.68-MPa) compressive strength after 28 days when tested according to ASTM C109/C109M.

B. Crack-Filling Material: Resin-based material recommended in writing by MVE-control system manufacturer for sealing concrete substrate crack repair.

C. Cementitious Underlayment: If required to maintain manufacturer's warranty, provide MVE-control system manufacturer's gypsum or hydraulic cement-based underlayment as directed.

PART 3 - EXECUTION

3.1 PREPARATION

A. Preinstallation Testing:

1. Testing Agency: Owner will engage or Engage a qualified testing agency to perform tests as directed.
2. Alkalinity Testing: Perform pH testing according to ASTM F710. Install MVE-control system in areas where pH readings are less than 7.0 and in areas where pH readings are greater than 8.5.
3. Moisture Testing: As directed Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m) or 1000 sq. ft. (304.8 sq. m) and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

    a. Anhydrous Calcium Chloride Test: ASTM F1869. Install MVE-control system in locations where concrete substrate MVER exceeds 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
    b. Internal Relative Humidity Test: Using in situ probes, ASTM F2170. Install MVE-control system in locations where concrete substrates exhibit relative humidity level greater than 75 percent.

4. Tensile-Bond-Strength Testing: For typical locations indicated to receive installation of MVE-control system, install minimum 100-sq. ft. (9.29-sq. m) area of MVE-control system to prepared concrete substrate and test according to ASTM D7234.

    a. Proceed with installation only where tensile bond strength is greater than 200 psi (1.38 MPa) with failure in the concrete.

B. Concrete Substrates: Prepare and clean substrates according to MVE-control system manufacturer's written instructions to ensure adhesion of system to concrete.

3.2 INSTALLATION

A. General: Install MVE-control system according to ASTM F3010 and manufacturer's written instructions to produce a uniform, monolithic surface free of surface deficiencies such as pin holes, fish eyes, and voids.

1. Install primers as required to comply with manufacturer's written instructions.

B. Do not apply MVE-control system across substrate expansion, isolation, and other moving joints.

C. Apply system, including component coats if any, in thickness recommended in writing by MVE-control system manufacturer for MVER indicated by preinstallation testing.

D. After curing, examine MVE-control system for surface deficiencies. Repair surface deficiencies according to manufacturer's written instructions.

E. Install cementitious underlayment over cured membrane if required to maintain manufacturer's warranty and in thickness required to maintain the warranty.

F. Protect MVE-control system from damage, wear, dirt, dust, and other contaminants before floor covering installation. Use protective methods and materials, including temporary coverings, recommended in writing by MVE-control system manufacturer.

G. Do not allow subsequent preinstallation examination and testing for floor covering installation to damage, puncture, or otherwise compromise the MVE-control system membrane.

END OF SECTION 090561.13

SECTION 092116.23 - GYPSUM BOARD SHAFT WALL ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes gypsum board shaft wall assemblies.

1.2 ACTION SUBMITTALS

A. Product Data: For each component of gypsum board shaft wall assembly.

B. Sustainable Design Submittals: As directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E119 by an independent testing agency.

B. STC-Rated Assemblies: Provide materials and construction identical to those of assemblies tested according to ASTM E90 and classified according to ASTM E413 by a testing and inspecting agency.

2.2 GYPSUM BOARD SHAFT WALL ASSEMBLIES

A. Fire-Resistance Rating: As directed.

B. STC Rating: As indicated, 51, minimum

C. Gypsum Shaftliner Board:

1. Type X: ASTM C1396/C1396M; manufacturer's proprietary fire-resistive liner panels with paper faces, 1 inch (25.4 mm) thick, with double beveled long edges.

2. Moisture- and Mold-Resistant Type X: ASTM C1396/C1396M; manufacturer's proprietary fire-resistive liner panels with ASTM D3273 mold-resistance score of 10 as rated according to ASTM D3274, 1 inch (25.4 mm) thick, and with double beveled long edges.

3. Moisture- and Mold-Resistant, Fiberglass-Mat Faced: ASTM C1658/C1658M; manufacturer's proprietary fire-resistive liner panels with ASTM D3273 mold-resistance score of 10 as rated according to ASTM D3274, 1 inch (25.4 mm) thick, and with double beveled long edges.

D. Non-Load-Bearing Steel Framing, General: Complying with ASTM C645 requirements for metal unless otherwise indicated and complying with requirements for fire-resistance-rated assembly indicated.

E. Studs: Manufacturer's standard profile for repetitive, corner, and end members as follows:

1. Depth: As directed.
2. Minimum Base-Metal Thickness: As directed.

F. Runner Tracks: Manufacturer's standard J-profile track with manufacturer's standard long-leg length, but at least 2 inches (51 mm) long and matching studs in depth.

1. Minimum Base-Metal Thickness: As directed.

G. Firestop Tracks: Top runner manufactured to allow partition heads to expand and contract with movement of the structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.

H. Elevator-Hoistway-Entrance Struts: Manufacturer's standard J-profile jamb strut with long-leg length of 3 inches (76 mm), matching studs in depth, and not less than 0.033 inch (0.84 mm) thick.

I. Finish Panels: As indicated. Gypsum board as specified in Section 092900 "Gypsum Board.", Gypsum veneer plaster as specified in Section 092613, "Gypsum Veneer Plastering.", Cementitious backer units as specified in Section 092900 "Gypsum Board." Cementitious backer units as specified in Section 093013 "Ceramic Tiling" or as directed.

J. Sound Attenuation Blankets: As specified in Section 092900 "Gypsum Board or Section 092613 "Gypsum Veneer Plastering."

2.3 AUXILIARY MATERIALS

A. Trim Accessories: Cornerbead, edge trim, and control joints of material and shapes as specified in Section 092900 "Gypsum Board" and Section 092613 "Gypsum Veneer Plastering" that comply with gypsum board shaft wall assembly manufacturer's written instructions for application indicated.

B. Steel Drill Screws: ASTM C1002 unless otherwise indicated.

C. Track Fasteners: Power-driven fasteners of size and material required to withstand loading conditions imposed on shaft wall assemblies without exceeding allowable design stress of track, fasteners, or structural substrates in which anchors are embedded.

D. Reinforcing: Galvanized-steel reinforcing strips with 0.033-inch (0.84-mm) minimum thickness of base metal (uncoated).

E. Acoustical Sealant: Section 079219 "Acoustical Joint Sealants."

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install gypsum board shaft wall assemblies to comply with requirements of fire-resistance-rated assemblies indicated and manufacturer's written installation instructions.

B. Examine panels before installation. Reject panels that are wet, moisture damaged, or mold damaged.

C. Sprayed Fire-Resistive Materials: Coordinate with gypsum board shaft wall assemblies so both elements of Work remain complete and undamaged.

D. Do not bridge building expansion joints with shaft wall assemblies; frame both sides of expansion joints with furring and other support.

E. Install supplementary framing in gypsum board shaft wall assemblies around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, wall-mounted door stops, and similar items that cannot be supported directly by shaft wall assembly framing.

1. Elevator Hoistway: At elevator hoistway-entrance door frames, provide jamb struts on each side of door frame.
2. Reinforcing: Provide where items attach directly to shaft wall assembly as indicated on Drawings; accurately position and secure behind at least one layer of face panel.

F. Penetrations: Install supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices, elevator call buttons and floor indicators, and similar items.

G. Isolate perimeter of gypsum panels from building structure to prevent cracking of panels while maintaining continuity of fire-rated construction.

H. Firestop Tracks: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.

I. Control Joints: Install control joints as directed according to ASTM C840 and in specific locations approved by Architect while maintaining fire-resistance rating of gypsum board shaft wall assemblies.

J. Sound-Rated Shaft Wall Assemblies: Seal gypsum board shaft walls with acoustical sealant at perimeter of each assembly where it abuts other work and at joints and penetrations within each assembly.

K. Gypsum Board Cants: At projections into shaft exceeding 4 inches (102 mm) where indicated, install gypsum board cants covering tops of projections.

L. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch (3 mm) from the plane formed by faces of adjacent framing.

M. Remove and replace panels that are wet, moisture damaged, or mold damaged.

END OF SECTION 092116.23

SECTION 092216 - NON-STRUCTURAL METAL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Non-load-bearing steel framing systems for interior partitions.
2. Suspension systems for interior ceilings and soffits.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

1.3 INFORMATIONAL SUBMITTALS

A. Product Certificates: For each type of code-compliance certification for studs and tracks.

B. Evaluation reports for as directed.

1.4 QUALITY ASSURANCE

A. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program as directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing steel framing, provide materials and construction identical to those tested in assembly indicated, according to ASTM E119 by an independent testing agency.

B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated on Drawings, according to ASTM E90 and classified according to ASTM E413 by an independent testing agency.

2.2 FRAMING SYSTEMS

A. Framing Members, General: Comply with ASTM C754 for conditions indicated.

1. Steel Sheet Components: Comply with ASTM C645 requirements for steel unless otherwise indicated.
2. Protective Coating: ASTM A653/A653M, G40 (Z120), ASTM A653/A653M, G60 (Z180), Coating with equivalent corrosion resistance of ASTM A653/A653M, G40 (Z120), hot-dip galvanized unless otherwise indicated.

B. Studs and Tracks: ASTM C645. Use either conventional steel studs and tracks or embossed, high-strength steel studs and tracks or as directed.

1. Minimum Base-Steel Thickness: As required by performance requirements for horizontal deflection as directed.
2. Depth: As directed.

C. Slip-Type Head Joints: Where indicated, provide one of the following:

1. Clip System: Clips designed for use in head-of-wall deflection conditions that provide a positive attachment of studs to tracks while allowing as directed for minimum vertical movement.

2. Single Long-Leg Track System: ASTM C645 top track with 2-inch- (51-mm-) deep flanges in thickness not less than indicated for studs, installed with studs, friction fit into top track and with continuous bridging located within 12 inches (305 mm) of the top of studs to provide lateral bracing.
3. Double-Track System: ASTM C645 top outer tracks, inside track with 2-inch- (51-mm-) deep flanges in thickness not less than indicated for studs and fastened to studs, and outer track sized to friction-fit over inner track.
4. Deflection Track: Steel sheet top track manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.

D. Firestop Tracks: Top track manufactured to allow partition heads to expand and contract with movement of structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.

E. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated.

1. Minimum Base-Steel Thickness: As directed.

F. Cold-Rolled Channel Bridging: Steel, 0.0538-inch (1.367-mm) minimum base-steel thickness, with minimum 1/2-inch- (13-mm-) wide flanges.
1. Depth: As directed.
2. Clip Angle: Not less than 1-1/2 by 1-1/2 inches (38 by 38 mm), 0.068-inch- (1.72-mm-) thick, galvanized steel.

G. Hat-Shaped, Rigid Furring Channels: ASTM C645.
1. Minimum Base-Steel Thickness: As directed.
2. Depth: As directed.

H. Resilient Furring Channels: 1/2-inch- (13-mm-) deep, steel sheet members designed to reduce sound transmission.
   1. Configuration: Asymmetrical or hat shaped or as directed.

I. Cold-Rolled Furring Channels: 0.053-inch (1.34-mm) uncoated-steel thickness, with minimum 1/2-inch- (13-mm-) wide flanges.

   1. Depth: As directed.
   2. Furring Brackets: Adjustable, corrugated-edge-type steel sheet with minimum uncoated-steel thickness of 0.0329 inch (0.8 mm).
   3. Tie Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.062-inch- (1.59-mm-) diameter wire, or double strand of 0.048-inch- (1.21-mm-) diameter wire.

J. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches (32 mm), wall attachment flange of 7/8 inch (22 mm), minimum uncoated-steel thickness of 0.0179 inch (0.455 mm), and depth required to fit insulation thickness indicated.

2.3 SUSPENSION SYSTEMS

A. Tie Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.062-inch- (1.59-mm-) diameter wire, or double strand of 0.048-inch- (1.21-mm-) diameter wire.

B. Hanger Attachments to Concrete:

   1. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES as appropriate for the substrate.

      a. Uses: Securing hangers to structure.
      b. Type: As directed.
      c. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B633 or ASTM F1941 (ASTM F1941M), Class Fe/Zn 5, unless otherwise indicated.
      d. Material for Exterior or Interior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 (A1), Group 2 (A4) stainless-steel bolts, ASTM F593 (ASTM F738M), and nuts, ASTM F594 (ASTM F836M) or as directed.

C. Wire Hangers: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.16 inch (4.12 mm) in diameter.

D. Flat Hangers: Steel sheet, in size indicated on Drawings Carrying Channels (Main Runners): Cold-rolled, commercial-steel sheet with a base-steel thickness of 0.0538 inch (1.367 mm) and minimum 1/2-inch- (13-mm-) wide flanges.

   1. Depth: As directed.

E. Furring Channels (Furring Members):

   1. Cold-Rolled Channels: 0.0538-inch (1.367-mm) uncoated-steel thickness, with minimum 1/2-inch- (13-mm-) wide flanges, 3/4 inch (19 mm) deep.

2. Steel Studs and Tracks: ASTM C645. Use either conventional steel studs and tracks or embossed, high-strength steel studs and tracks or as directed.

    a. Minimum Base-Steel Thickness: As directed.
    b. Depth: As directed.

3. Hat-Shaped, Rigid Furring Channels: ASTM C645, 7/8 inch (22 mm) deep.

    a. Minimum Base-Steel Thickness: As directed.

4. Resilient Furring Channels: 1/2-inch- (13-mm-) deep members designed to reduce sound transmission.

    a. Configuration: Asymmetrical or hat shaped.

2.4 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards.

1. Fasteners for Steel Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.

B. Isolation Strip at Exterior Walls: Provide one of the following:

1. Asphalt-Saturated Organic Felt: ASTM D226/D226M, Type I (No. 15 asphalt felt), nonperforated.
2. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch (3.2 mm) thick, in width to suit steel stud size.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Installation Standard: ASTM C754.

1. Gypsum Plaster Assemblies: Also comply with requirements in ASTM C841 that apply to framing installation.
2. Portland Cement Plaster Assemblies: Also comply with requirements in ASTM C1063 that apply to framing installation.
3. Gypsum Veneer Plaster Assemblies: Also comply with requirements in ASTM C844 that apply to framing installation.
4. Gypsum Board Assemblies: Also comply with requirements in ASTM C840 that apply to framing installation.

B. Install framing and accessories plumb, square, and true to line, with connections securely fastened.

C. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.

D. Install bracing at terminations in assemblies.

E. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

3.2 INSTALLING FRAMED ASSEMBLIES

A. Install framing system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.

B. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.

C. Install studs so flanges within framing system point in same direction.

D. Install tracks at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts that penetrate partitions above ceiling.

1. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.
2. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install track section (for cripple studs) at head and secure to jamb studs.

    a. Install two studs at each jamb unless otherwise indicated.
    b. Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch (13-mm) clearance from jamb stud to allow for installation of control joint in finished assembly.
    c. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.

3. Other Framed Openings: Frame openings other than door openings the same as required for door openings unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
4. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.

    a. Firestop Track: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.

5. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.
6. Curved Partitions:

    a. Bend track to uniform curve and locate straight lengths so they are tangent to arcs.

b. Begin and end each arc with a stud, and space intermediate studs equally along arcs. On straight lengths of no fewer than two studs at ends of arcs, place studs 6 inches (150 mm) o.c.

E. Direct Furring:

1. Screw to wood framing.
2. Attach to concrete or masonry with stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches (610 mm) o.c.

F. Z-Shaped Furring Members:

1. Erect insulation, specified in Section 072100 "Thermal Insulation," vertically and hold in place with Z-shaped furring members spaced 24 inches (610 mm) o.c.
2. Except at exterior corners, securely attach narrow flanges of furring members to wall with concrete stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches (610 mm) o.c.
3. At exterior corners, attach wide flange of furring members to wall with short flange extending beyond corner; on adjacent wall surface, screw-attach short flange of furring channel to web of attached channel. At interior corners, space second member no more than 12 inches (305 mm) from corner and cut insulation to fit.

G. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch (3 mm) from the plane formed by faces of adjacent framing.

3.3 INSTALLING CEILING SUSPENSION SYSTEMS

A. Install suspension system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.

B. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.

C. Suspend hangers from building structure as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.

a. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.

2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.

a. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced installation standards

3. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.
4. Flat Hangers: Secure to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
5. Do not attach hangers to steel roof deck.
6. Do not attach hangers to permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.
7. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.
8. Do not connect or suspend steel framing from ducts, pipes, or conduit.

D. Fire-Resistance-Rated Assemblies: Wire tie furring channels to supports.

E. Seismic Bracing: Sway-brace suspension systems with hangers used for support as directed.

F. Installation Tolerances: Install suspension systems that are level to within 1/8 inch in 12 feet (3 mm in 3.6 m) measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

END OF SECTION 092216

SECTION 092300 - GYPSUM PLASTERING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Gypsum plastering on expanded-metal lath.
2. Gypsum plastering on unit masonry.
3. Gypsum plastering on monolithic concrete.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance Ratings: Where indicated, provide gypsum plaster assemblies identical to those of assemblies tested for fire resistance according to ASTM E119 by a qualified testing agency.

B. Sound-Transmission Characteristics: Where indicated, provide gypsum plaster assemblies identical to those of assemblies tested for STC ratings according to ASTM E90 and classified according to ASTM E413 by a qualified testing agency.

2.2 EXPANDED-METAL LATH

A. Expanded-Metal Lath: ASTM C847, cold-rolled carbon-steel sheet with ASTM A653/A653M, G60 (Z180), hot-dip galvanized-zinc coating.

1. Paper Backing: Kraft paper factory bonded to back of lath.
2. Diamond-Mesh Lath:

    a. Type: Flat or Self-furring.
    b. Weight: 2.5 lb/sq. yd. (1.4 kg/sq. m) or 3.4 lb/sq. yd. (1.8 kg/sq. m) and as directed.

3. Flat-Rib Lath: Rib depth of not more than 1/8 inch (3 mm), or as directed.
4. Rib Lath: As directed.

2.3 ACCESSORIES

A. General: Comply with ASTM C841, and coordinate depth of trim and accessories with thicknesses and number of plaster coats required.

B. Metal Accessories:
   1. Cornerite: Fabricated from expanded-metal lath with ASTM A653/A653M, G60 (Z180), hot-dip galvanized-zinc coating.
   2. Striplath: Fabricated from expanded-metal lath with ASTM A653/A653M, G60 (Z180), hot-dip galvanized-zinc coating.
   3. Cornerbeads: Fabricated from zinc or zinc-coated (galvanized) steel.
      a. Smallnose cornerbead with expanded flanges; use unless otherwise indicated.
      b. Smallnose cornerbead with perforated flanges; use on curved corners.
      c. Smallnose cornerbead with expanded flanges reinforced by perforated stiffening rib; use on columns and for finishing unit masonry corners.
      d. Bullnose cornerbead, radius 3/4-inch (19-mm) minimum, with expanded flanges; use at locations indicated on Drawings.
   4. Casing Beads: Fabricated from zinc or zinc-coated (galvanized) steel; square-edged style; with expanded flanges.
   5. Control Joints: Fabricated from zinc or zinc-coated (galvanized) steel; one-piece-type, folded pair of unperforated screeds in M-shaped configuration; with perforated flanges and removable protective tape on plaster face of control joint.
   6. Expansion Joints: Fabricated from zinc or zinc-coated (galvanized) steel; folded pair of unperforated screeds in M-shaped configuration; with expanded flanges.
   7. Two-Piece Expansion Joints: Fabricated from zinc or zinc-coated (galvanized) steel; formed to produce slip-joint and square-edged reveal that is adjustable from 1/4 to 5/8 inch (6 to 16 mm) wide; with perforated flanges.

C. Plastic Accessories: Manufactured from high-impact PVC.
   1. Cornerbeads: With perforated flanges.
      a. Smallnose cornerbead; use unless otherwise indicated.
      b. Bullnose cornerbead, radius 3/4-inch (19-mm) minimum; use at locations indicated on Drawings.
   2. Casing Beads: With perforated flanges in depth required to suit plaster bases indicated and flange length required to suit applications indicated.
      a. Square-edge style; use unless otherwise indicated.
      b. Bullnose style, radius 3/4-inch (19-mm) minimum; use at locations indicated on Drawings.
   3. Control Joints: One-piece-type, folded pair of unperforated screeds in M-shaped configuration; with perforated flanges and removable protective tape on plaster face of control joint.
   4. Expansion Joints: Two-piece type, formed to produce slip-joint and square-edged as directed wide reveal; with perforated concealed flanges.

2.4 MISCELLANEOUS MATERIALS

A. Water for Mixing and Finishing Plaster: Potable and free of substances capable of affecting plaster set or of damaging plaster, lath, or accessories.

B. Bonding Compound: ASTM C631.

C. Fasteners for Attaching Metal Lath to Substrates: ASTM C841.

D. Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, not less than 0.0475-inch (1.21-mm) diameter unless otherwise indicated.

E. Sound-Attenuation Blankets: ASTM C665, Type I (blankets without membrane facing), produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.

1. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of rated assembly.

F. Mix Additives: Use gypsum plaster accelerators and retarders from plaster manufacturer if required by Project conditions. Use only additives that manufacturer recommends in writing for use with plaster to which it is added.

2.5 BASE-COAT PLASTER MATERIALS

A. Lightweight-Gypsum Ready-Mixed Plaster: ASTM C28/C28M, with mill-mixed perlite aggregate.

B. Gypsum Neat Plaster: ASTM C28/C28M, for use with job-mixed aggregates.

C. Gypsum Wood-Fibered Plaster: ASTM C28/C28M, for use as is or with the addition of job-mixed sand in up to equal proportions by weight.

D. High-Strength Gypsum Neat Plaster: ASTM C28/C28M, with a minimum, average, dry compressive strength of 2800 psi (19 MPa) according to ASTM C472 for a mix of 100 lb (45 kg) of plaster and 2 cu. ft. (0.06 cu. m) of sand.

E. Aggregates for Base-Coat Plasters: ASTM C35, sand and perlite.

2.6 FINISH-COAT PLASTER MATERIALS

A. Gypsum Gaging Plaster: ASTM C28/C28M.

B. Gypsum Ready-Mixed Finish Plaster: Manufacturer's standard, mill-mixed, gaged, interior finish.

C. High-Strength Gypsum Gaging Plaster: ASTM C28/C28M, with a minimum, average, dry compressive strength of 5000 psi (34 MPa) according to ASTM C472 for a neat mix.

D. Lime: ASTM C206, Type S, special finishing hydrated lime.

E. Lime: ASTM C206, Type N, normal finishing hydrated lime.

F. Aggregates for Float Finishes: ASTM C35, sand or perlite or as directed; graded according to ASTM C842.

2.7 PLASTER MIXES

A. Mixing: Comply with ASTM C842 and manufacturer's written instructions for applications indicated.

B. Mix Additives: Use accelerators and retarders, if required by Project conditions, according to manufacturer's written instructions.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Fire-Resistance-Rated Assemblies: Install components according to requirements for design designations from listing organization and publication indicated on Drawings.

B. STC-Rated Assemblies: Install components according to requirements for design designations from listing organization and publication indicated on Drawings.

C. Sound-Attenuation Blankets: Where required, install blankets before installing lath unless blankets are readily installed after lath has been installed on one side.

D. Acoustical Sealant: Where required, seal joints between edges of plasterwork and abutting construction with acoustical sealant.

3.2 INSTALLING EXPANDED-METAL LATH

A. Expanded-Metal Lath: Install according to ASTM C841.

3.3 INSTALLING ACCESSORIES

A. General: Install according to ASTM C841.

B. Cornerbeads: Install at external corners.

C. Casing Beads: Install at terminations of plasterwork, except where plaster passes behind and is concealed by other work and where metal screeds, bases, or frames act as casing beads.

D. Control Joints: Locate as indicated on Drawings.

3.4 PLASTER APPLICATION

A. General: Comply with ASTM C842.

B. Bonding Compound: Apply on unit masonry and concrete substrates for direct application of plaster.

C. Base-Coat Plaster:

1. Over Expanded-Metal Lath:

   a. Scratch Coat: As directed.
   b. Brown Coat: As directed.

2. Over Unit Masonry: As directed.
3. Over Monolithic Concrete: Gypsum neat plaster with job-mixed sand or as directed.

D. Finish Coats:

1. Smooth-Troweled Finishes: As directed.
2. Float Finishes: Gypsum gaging plaster and lime putty or as directed.
3. Sprayed Finishes: Gypsum ready-mixed finish plaster applied to match Architect's sample or as directed.
4. Textured Finishes: Gypsum ready-mixed finish plaster applied to match Architect's sample or as directed.

E. Concealed Plaster:

1. Where plaster application is concealed behind built-in cabinets, similar furnishings, and equipment, apply finish coat.
2. Where plaster application is concealed above suspended ceilings and in similar locations, omit finish coat.
3. Where plaster application is used as a base for adhesive application of tile and similar finishes, omit finish coat.

3.5 PLASTER REPAIRS

A. Repair or replace work to eliminate cracks, dents, blisters, buckles, crazing and check cracking, dry outs, efflorescence, sweat outs, and similar defects and where bond to substrate has failed.

END OF SECTION 092300

SECTION 092400 - CEMENT PLASTERING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Exterior vertical plasterwork (stucco).
2. Exterior horizontal and nonvertical plasterwork (stucco).
3. Interior vertical plasterwork.
4. Interior horizontal and nonvertical plasterwork.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Samples: For each type of factory-prepared finish coat and for each color and texture specified.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance Ratings: Where indicated, provide cement plaster assemblies identical to those of assemblies tested for fire resistance according to ASTM E119 by a qualified testing agency.

2.2 METAL LATH

A. Expanded-Metal Lath: ASTM C847, cold-rolled carbon-steel sheet with ASTM A653/A653M, G60 (Z180), hot-dip galvanized-zinc coating.

1. Diamond-Mesh Lath: Flat or Self-furring or ad directed.
2. Flat-Rib Lath: Rib depth of not more than 1/8 inch (3 mm), or as directed.
3. 3/8-Inch (10-mm) Rib Lath: 3.4 lb/sq. yd. (1.8 kg/sq. m), 4 lb/sq. yd. (2.2 kg/sq. m) or as directed.

B. Wire-Fabric Lath:

1. Welded-Wire Lath: ASTM C933; self-furring, 1.4 lb/sq. yd. (0.8 kg/sq. m), 1.95 lb/sq. yd. (1.1 kg/sq. m) or as directed.

2. Woven-Wire Lath: ASTM C1032; self-furring, with stiffener wire backing, 1.4 lb/sq. yd. (0.8 kg/sq. m).

C. Paper Backing: FS UU-B-790a, Type I, Grade D, Style 2 vapor-permeable paper, Grade B, Style 1a vapor-retardant paper, or as directed.

1. Provide paper-backed lath unless otherwise indicated.

2.3 ACCESSORIES

A. General: Comply with ASTM C1063, and coordinate depth of trim and accessories with thicknesses and number of plaster coats required.

B. Metal Accessories:

1. Foundation Weep Screed: Fabricated from hot-dip galvanized-steel sheet, ASTM A653/A653M, G60 (Z180) zinc coating.
2. Cornerite: Fabricated from metal lath with ASTM A653/A653M, G60 (Z180), hot-dip galvanized-zinc coating.
3. External- (Outside-) Corner Reinforcement: Fabricated from metal lath with ASTM A653/A653M, G60 (Z180), hot-dip galvanized-zinc coating.
4. Cornerbeads: Fabricated from zinc or zinc-coated (galvanized) steel or as directed.
    a. Smallnose cornerbead with expanded flanges; use unless otherwise indicated.
    b. Smallnose cornerbead with perforated flanges; use on curved corners.
    c. Smallnose cornerbead with expanded flanges reinforced by perforated stiffening rib; use on columns and for finishing unit masonry corners.
    d. Bullnose cornerbead, radius 3/4 inch (19 mm) minimum, with expanded flanges; use at locations indicated on Drawings.
5. Casing Beads: Fabricated from zinc or zinc-coated (galvanized) steel or as directed; square-edged style; with expanded flanges.
6. Control Joints: Fabricated from zinc or zinc-coated (galvanized) steel or as directed; one-piece-type, folded pair of unperforated screeds in M-shaped configuration; with perforated flanges and removable protective tape on plaster face of control joint.
7. Expansion Joints: Fabricated from zinc or zinc-coated (galvanized) steel or as directed; folded pair of unperforated screeds in M-shaped configuration; with expanded flanges.
8. Two-Piece Expansion Joints: Fabricated from zinc or zinc-coated (galvanized) steel or as directed; formed to produce slip-joint and square-edged reveal that is adjustable from 1/4 to 5/8 inch (6 to 16 mm) wide; with perforated flanges.

C. Plastic Accessories: Manufactured from high-impact PVC.

1. Cornerbeads: With perforated flanges.
    a. Smallnose cornerbead; use unless otherwise indicated.
    b. Bullnose cornerbead, radius 3/4-inch (19-mm) minimum; use at locations indicated on Drawings.

2. Casing Beads: With perforated flanges in depth required to suit plaster bases indicated and flange length required to suit applications indicated.

   a. Square-edge style; use unless otherwise indicated.
   b. Bullnose style, radius 3/4-inch (19-mm) minimum; use at locations indicated on Drawings.

3. Control Joints: One-piece-type, folded pair of unperforated screeds in M-shaped configuration; with perforated flanges and removable protective tape on plaster face of control joint.
4. Expansion Joints: Two-piece type, formed to produce slip-joint and square-edged as directed, wide reveal; with perforated concealed flanges.

2.4 MISCELLANEOUS MATERIALS

A. Water for Mixing and Finishing Plaster: Potable and free of substances capable of affecting plaster set or of damaging plaster, lath, or accessories.

B. Fiber for Base Coat: Alkaline-resistant glass or polypropylene fibers, 1/2 inch (13 mm) long, free of contaminants, manufactured for use in cement plaster.

C. Bonding Compound: ASTM C932.

D. Fasteners for Attaching Metal Lath to Substrates: ASTM C1063.

E. Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, not less than 0.0475-inch (1.21-mm) diameter unless otherwise indicated.

F. Sound-Attenuation Blankets: ASTM C665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.

   1. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.

2.5 PLASTER MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I or Type II, or as directed.

   1. Color for Finish Coats: White or Gray or as directed.

B. Masonry Cement: ASTM C91, Type N.

   1. Color for Finish Coats: White or Gray or as directed.

C. Plastic Cement: ASTM C1328.

D. Colorants for Job-Mixed Finish Coats: Colorfast mineral pigments that produce finish plaster color as directed.

E. Lime: ASTM C206, Type S; or ASTM C207, Type S.

F. Sand Aggregate: ASTM C897.

1. Color for Job-Mixed Finish Coats: White or as directed.

G. Perlite Aggregate: ASTM C35.

H. Ready-Mixed Finish-Coat Plaster: Mill-mixed portland cement, aggregates, coloring agents, and proprietary ingredients.

1. Color: As directed.

I. Acrylic-Based Finish Coatings: Factory-mixed acrylic-emulsion coating systems formulated with colorfast mineral pigments and fine aggregates; for use over cement plaster base coats. Include manufacturer's recommended primers and sealing topcoats for acrylic-based finishes.

1. Color: As directed.

2.6 PLASTER MIXES

A. General: Comply with ASTM C926 for applications indicated.

1. Fiber Content: Add fiber to base-coat mixes after ingredients have mixed at least two minutes. Comply with fiber manufacturer's written instructions for fiber quantities in mixes, but do not exceed 1 lb of fiber/cu. yd. (0.6 kg of fiber/cu. m) of cementitious materials.

B. Base-Coat Mixes for Use over Metal Lath: Scratch and brown coats for three-coat plasterwork as follows:

1. Portland Cement Mixes:

a. Scratch Coat: For cementitious material, mix 1 part portland cement and 0 to ¾, 3/4 to 1-1/2, or as directed parts lime. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
b. Brown Coat: For cementitious material, mix 1 part portland cement and 0 to ¾, 3/4 to 1-1/2, or as directed parts lime. Use 3 to 5 parts aggregate per part of cementitious material, but not less than volume of aggregate used in scratch coat.

2. Masonry Cement Mixes:

a. Scratch Coat: Mix 1 part masonry cement and 2-1/2 to 4 parts aggregate.
b. Brown Coat: Mix 1 part masonry cement and 3 to 5 parts aggregate, but not less than volume of aggregate used in scratch coat.

3. Portland and Masonry Cement Mixes:

a. Scratch Coat: For cementitious material, mix 1 part portland cement and 1 part masonry cement. Use 2-1/2 to 4 parts aggregate per part of cementitious material.

b. Brown Coat: For cementitious material, mix 1 part portland cement and 1 part masonry cement. Use 3 to 5 parts aggregate per part of cementitious material, but not less than volume of aggregate used in scratch coat.

4. Plastic Cement Mixes:

a. Scratch Coat: Mix 1 part plastic cement and 2-1/2 to 4 parts aggregate.
b. Brown Coat: Mix 1 part plastic cement and 3 to 5 parts aggregate, but not less than volume of aggregate used in scratch coat.

5. Portland and Plastic Cement Mixes:

a. Scratch Coat: For cementitious material, mix 1 part plastic cement and 1 part portland cement. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
b. Brown Coat: For cementitious material, mix 1 part plastic cement and 1 part portland cement. Use 3 to 5 parts aggregate per part of cementitious material, but not less than volume of aggregate used in scratch coat.

C. Base-Coat Mixes for Use over Unit Masonry and Concrete: Single base (scratch) coat for two-coat plasterwork on low-absorption plaster bases as follows:

1. Portland Cement Mix: For cementitious material, mix 1 part portland cement and 0 to 3/4 part lime. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
2. Portland and Masonry Cement Mix: For cementitious material, mix 1 part portland cement and 1 part masonry cement. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
3. Plastic Cement Mix: Use 1 part plastic cement and 2-1/2 to 4 parts aggregate.

D. Base-Coat Mixes for Use over Unit Masonry and Concrete: Single base (scratch) coat for two-coat plasterwork on high-absorption plaster bases as follows:

1. Portland Cement Mix: For cementitious material, mix 1 part portland cement and 3/4 to 1-1/2 parts lime. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
2. Masonry Cement Mix: Use 1 part masonry cement and 2-1/2 to 4 parts aggregate.
3. Portland and Masonry Cement Mix: For cementitious material, mix 1 part portland cement and 1 part masonry cement. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
4. Plastic Cement Mix: Use 1 part plastic cement and 2-1/2 to 4 parts aggregate.

E. Job-Mixed Finish-Coat Mixes:

1. Portland Cement Mix: For cementitious materials, mix 1 part portland cement and 3/4 to 1-1/2 or 1-1/2 to 2 or as directed parts lime. Use 1-1/2 to 3 parts aggregate per part of cementitious material.
2. Masonry Cement Mix: Use 1 part masonry cement and 1-1/2 to 3 parts aggregate.
3. Portland and Masonry Cement Mix: For cementitious materials, mix 1 part portland cement and 1 part masonry cement. Use 1-1/2 to 3 parts aggregate per part of cementitious material.
4. Plastic Cement Mix: Use 1 part plastic cement and 1-1/2 to 3 parts aggregate.

F. Factory-Prepared Finish-Coat Mixes: For ready-mixed finish-coat plasters, acrylic-based finish coatings or as directed, comply with manufacturer's written instructions.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Prepare smooth, solid substrates for plaster according to ASTM C926.

B. Fire-Resistance-Rated Assemblies: Install components according to requirements for design designations from listing organization and publication indicated on Drawings.

C. Sound-Attenuation Blankets: Where required, install blankets before installing lath unless blankets are readily installed after lath has been installed on one side.

3.2 INSTALLING METAL LATH

A. Metal Lath: Install according to ASTM C1063.

3.3 INSTALLING ACCESSORIES

A. Install according to ASTM C1063 and at locations indicated on Drawings.

B. Reinforcement for External (Outside) Corners:

1. Install lath-type, external-corner reinforcement, cornerbead as directed at exterior locations.
2. Install cornerbead at interior locations.

C. Control Joints: Locate as indicated on Drawings.

3.4 PLASTER APPLICATION

A. General: Comply with ASTM C926.

B. Bonding Compound: Apply on unit masonry and concrete substrates for direct application of plaster.

C. Walls; Base-Coat Mixes for Use over Metal Lath: For scratch and brown coats, for three-coat plasterwork with 3/4-inch (19-mm) total thickness, as follows:

1. Portland cement mixes.
2. Masonry cement mixes.
3. Portland and masonry cement mixes.
4. Plastic cement mixes.
5. Portland and plastic cement mixes.

D. Ceilings; Base-Coat Mixes for Use over Metal Lath: For scratch and brown coats, for three-coat plasterwork and having 1/2-inch (13-mm) total thickness, 3/4-inch (19-mm) total thickness or as directed for metal lath on concrete, as follows:

1. Portland cement mixes.
2. Masonry cement mixes.
3. Portland and masonry cement mixes.
4. Plastic cement mixes.
5. Portland and plastic cement mixes.

E. Walls; Base-Coat Mix: For base (scratch) coat, for two-coat plasterwork and having 3/8-inch (10-mm) thickness on masonry, 1/4-inch (6-mm) thickness on concrete or as directed, as follows:

1. Portland cement mix.
2. Masonry cement mix.
3. Portland and masonry cement mix.
4. Plastic cement mix.
5. Portland and plastic cement mix.

F. Ceilings; Base-Coat Mix: For base (scratch) coat, for two-coat plasterwork and having 1/4-inch (6-mm) thickness on concrete, as follows:

1. Portland cement mix.
2. Masonry cement mix.
3. Portland and masonry cement mix.
4. Plastic cement mix.
5. Portland and plastic cement mix.

G. Plaster Finish Coats: Apply to provide as directed.

H. Acrylic-Based Finish Coatings: Apply coating system, including primers, finish coats, and sealing topcoats, according to manufacturer's written instructions.

I. Concealed Exterior Plasterwork: Where plaster application is used as a base for adhered finishes, omit finish coat.

J. Concealed Interior Plasterwork:

1. Where plaster application is concealed behind built-in cabinets, similar furnishings, and equipment, apply finish coat.
2. Where plaster application is concealed above suspended ceilings and in similar locations, omit finish coat.
3. Where plaster application is used as a base for adhesive application of tile and similar finishes, omit finish coat.

3.5 PLASTER REPAIRS

A. Repair or replace work to eliminate cracks, dents, blisters, buckles, crazing and check cracking, dry outs, efflorescence, sweat outs, and similar defects and where bond to substrate has failed.

END OF SECTION 092400

SECTION 092613 - GYPSUM VENEER PLASTERING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Gypsum veneer plaster and gypsum base for interior veneer plaster.
2. Gypsum veneer plaster over interior cementitious backer units.
3. Gypsum veneer plaster over interior masonry surfaces.
4. Gypsum veneer plaster over interior monolithic concrete surfaces.

B. Related Requirements:

1. Section 092216 "Non-Structural Metal Framing" for non-load-bearing steel framing.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Shop Drawings: Show locations, fabrication, and installation of control joints, reveals, and trim; include plans, elevations, sections, details of components, and attachments to other work.

D. Samples: For each trim accessory and textured finish on rigid backing.

1.3 QUALITY ASSURANCE

A. Mockups: Provide mockups of ceilings and partitions in sizes of at least 100 sq. ft. (9 sq. m).

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E119 by an independent testing agency.

B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E90 and classified according to ASTM E413 by an independent testing agency.

2.2 GYPSUM VENEER PLASTER

A. One-Component Gypsum Veneer Plaster: ASTM C587, ready-mixed, smooth, finish-coat veneer plaster formulated for application directly over substrate without use of separate base-coat material.

B. High-Strength, One-Component Gypsum Veneer Plaster: ASTM C587, ready-mixed, smooth, finish-coat veneer plaster containing mill-mixed, fine silica sand; with a compressive strength of 3000 psi (20 MPa) when tested according to ASTM C472; and formulated for application directly over substrate without use of separate base-coat material.

C. Two-Component Gypsum Veneer Plaster: ASTM C587, with separate formulations; one for base-coat application and one for finish-coat application over substrates.

1. Base Coat:

2. Smooth Finish Coat:

3. Textured Finish Coat:

D. High-Strength, Two-Component Gypsum Veneer Plaster: ASTM C587, ready-mixed, base-coat plaster and smooth finish-coat veneer plaster containing mill-mixed, fine silica sand; with a compressive strength of 3000 psi (20 MPa) when tested according to ASTM C472.

1. Base Coat:

2. Smooth Finish Coat:

2.3 PANEL PRODUCTS

A. Gypsum Base for Veneer Plaster: ASTM C1396/C1396M.
1. Thickness: 1/2 inch (12.7 mm) or as directed.

B. Gypsum Base for Veneer Plaster, Type X: ASTM C1396/C1396M.

1. Thickness: 5/8 inch (15.9 mm) or 3/4 inch (19.0 mm) or as directed.

C. Gypsum Base for Veneer Plaster, Type C: ASTM C1396/C1396M. Manufactured to have increased fire-resistive capability.

1. Thickness: 1/2 inch (12.7 mm) and as directed.

D. Foil-Backed Gypsum Base for Veneer Plaster: ASTM C1396/C1396M.

1. Thickness: 1/2 inch (12.7 mm) and as directed.

E. Abuse-Resistant Gypsum Base for Veneer Plaster: With specially reinforced core for greater resistance to surface abrasion, indentation, soft-body impact, and hard-body impact.

1. Core: As directed.
2. Long Edges: Tapered.
3. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.
4. Abuse Resistance: ASTM C1629/C1629M, level as directed.

F. Glass-Mat Interior Gypsum Board: ASTM C1658/C1658M. With moisture- and mold-resistant core; non-rated or fire-resistive rated, as directed; glass-mat facing on both sides of panel.

1. Core: As directed.
2. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

G. Cementitious Backer Units: ANSI A118.9 and ASTM C1288 and approved by backer unit manufacturer for use as veneer plaster substrate.

1. Thickness: 1/2 inch (12.7 mm), As directed.
2. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

H. Backing Panels for Multilayer Applications: ASTM C1396/C1396M gypsum base or gypsum board, as recommended by gypsum veneer plaster manufacturer, for application method and thicknesses indicated.

1. Core: Matching face layer unless otherwise indicated.
2. Thickness: Matching face layer unless otherwise indicated.

2.4 TRIM ACCESSORIES

A. Standard Trim: ASTM C1047, approved for use in gypsum veneer plaster applications indicated.

1. Material: As directed.

B. Aluminum Trim: Extruded accessories of profiles and dimensions indicated.

2.5 JOINT-REINFORCING MATERIALS

A. General: Comply with joint strength requirements in ASTM C587 and with gypsum veneer plaster manufacturer's written recommendations for each application indicated.

B. Joint Tape: As directed.

C. Embedding Material for Joint Tape: As recommended by gypsum veneer plaster manufacturer for use with joint-tape material and gypsum veneer plaster applications indicated.

2.6 AUXILIARY MATERIALS

A. Bonding Agent: ASTM C631 polyvinyl acetate.

B. Laminating Adhesive: Adhesive or joint compound recommended by manufacturer for directly adhering gypsum-base, face-layer panels to backing-layer panels in multilayer construction.

C. Steel Drill Screws: ASTM C1002 unless otherwise indicated.

1. Use screws complying with ASTM C954 for fastening panels to steel members from 0.033 to 0.112 inch (0.84 to 2.84 mm) thick.

D. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.

E. Sound Attenuation Blankets: ASTM C665, Type I; Comply with mineral-fiber requirements of assembly.

F. Acoustical Sealant: Manufacturer's standard nonsag, paintable, nonstaining latex sealant, complying with ASTM C834.

G. Patching Mortar: Dry-pack patching mortar, consisting of 1 part portland cement to 2-1/2 parts fine aggregate passing a No. 16 (1.18-mm) sieve, using only enough water for handling and placing.

PART 3 - EXECUTION

3.1 INSTALLING PANELS, GENERAL

A. Gypsum Base for Veneer Plaster: Apply according to ASTM C844 unless manufacturer's written recommendations are more stringent.

1. Erection Tolerance: No more than 1/16-inch (1.6-mm) offsets between planes of gypsum base panels, and 1/8 inch in 8 feet (3 mm in 2.4 m) noncumulative, for level, plumb, warp, and bow.

B. Examine panels before installation. Reject panels that are wet, moisture damaged, or mold damaged.

C. Install sound attenuation blankets before installing gypsum base for veneer plaster.

D. Cementitious Backer Units: Install according to ANSI A108.11.

1. Where cementitious backer units abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.

E. Trim: Install trim with back flanges intended for fasteners and attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.

F. Control Joints: Install as directed.

G. Gypsum Base: Reinforce interior angles and flat joints with joint tape and embedding material to comply with ASTM C843 and with gypsum veneer plaster manufacturer's written recommendations.

H. Abuse-Resistant Base: Reinforce joints between abuse-resistant panels with joint tape and embedding material according to panel manufacturer's written recommendations.

I. Glass-Mat Interior Gypsum Board: Reinforce joints between moisture- and mold-resistant panels with joint tape and embedding material according to panel manufacturer's written recommendations.

3.2 GYPSUM VENEER PLASTERING

A. Bonding Agent: Apply bonding agent on dry “as directed” according to gypsum veneer plaster manufacturer's written recommendations.

B. Gypsum Veneer Plaster Mixing: Mechanically mix gypsum veneer plaster materials to comply with ASTM C843 and with gypsum veneer plaster manufacturer's written recommendations.

C. Gypsum Veneer Plaster Application: Comply with ASTM C843 and with veneer plaster manufacturer's written recommendations.

1. One-Component Gypsum Veneer Plaster: Trowel apply plaster over substrate to uniform thickness. Fill all voids and imperfections. Immediately double back with same mixer batch of plaster to a uniform total thickness of 1/16 to 3/32 inch (1.6 to 2.4 mm).
2. Two-Component Gypsum Veneer Plaster:

    a. Base Coat: Hand trowel or machine apply base coat over substrate to a uniform thickness of 1/16 to 3/32 inch (1.6 to 2.4 mm). Fill voids and imperfections.
    b. Finish Coat: Trowel apply finish-coat plaster over base-coat plaster to a uniform thickness of 1/16 to 3/32 inch (1.6 to 2.4 mm).

3. Where gypsum veneer plaster abuts metal, including doorframes, windows and other units, groove finish coat to eliminate spalling.
4. Do not apply veneer plaster to gypsum base if paper facing has degraded from exposure to sunlight. Before applying veneer plaster, use remedial methods to restore bonding capability to degraded paper facing according to manufacturer's written recommendations and directed.

D. Concealed Surfaces: Do not omit gypsum veneer plaster behind cabinets, furniture, furnishings, and similar removable items. Omit veneer plaster in the following areas where it will be concealed from view in the completed Work unless otherwise indicated or required to maintain fire-resistance and STC ratings:

1. Above suspended ceilings.
2. Behind wood paneling.

E. Gypsum Veneer Plaster Finish: As directed.

END OF SECTION 092613

SECTION 092713 - GLASS-FIBER-REINFORCED GYPSUM FABRICATIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes factory-fabricated, glass-fiber-reinforced gypsum fabrications for interior applications.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings:

1. Include plans, elevations, sections, and attachment details.

D. Samples: For each exposed product and for each color and texture specified.

1.3 DELIVERY, STORAGE, AND HANDLING

A. Comply with ASTM C1467/C1467M.

PART 2 - PRODUCTS

2.1 GLASS-FIBER-REINFORCED GYPSUM FABRICATIONS

A. Fabrications: Molded, glass-fiber-reinforced gypsum units complying with ASTM C1381/C1381M.

B. Embedments: As directed.

C. Finish: Smooth for paint finish or smooth for gloss paint finish or as directed.

2.2 AUXILIARY MATERIALS

A. Adhesives: As recommended in glass-fiber-reinforced gypsum fabrication manufacturer's written instructions.

B. Steel Drill Screws: ASTM C1002, unless otherwise indicated.

1. Screws complying with ASTM C954 for fastening glass-fiber-reinforced gypsum fabrications to steel members from 0.033 to 0.112 inch (0.84 to 2.84 mm) thick.

C. Joint-Treatment Materials: ASTM C475/C475M.

2.3 FABRICATION

A. Fabricate glass-fiber-reinforced gypsum units in factory to comply with ASTM C1381/C1381M, with smooth-finished surfaces; repair hollows, voids, scratches, and other surface imperfections. Fabricate units in lengths and sizes that will minimize number of joints between abutting units.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Comply with ASTM C1467/C1467M.

B. Install glass-fiber-reinforced gypsum fabrications level, plumb, true, and aligned with adjacent materials. Use concealed shims where required for alignment.

C. Attach glass-fiber-reinforced gypsum fabrications to framing and substrates with steel drill screws unless otherwise indicated. Do not use pneumatic staple guns. Countersink screw heads below adjoining finished surface.

D. Use joint-treatment materials to finish glass-fiber-reinforced gypsum fabrications to produce surfaces ready to receive primers and paint finishes.

END OF SECTION 092713

SECTION 092900 - GYPSUM BOARD

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Interior gypsum board.
2. Exterior gypsum board for ceilings and soffits.
3. Tile backing panels.
4. Texture finishes.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Samples: For each texture finish indicated on same backing indicated for Work.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E119 by an independent testing agency.

B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E90 and classified according to ASTM E413 by an independent testing agency.

2.2 GYPSUM BOARD, GENERAL

A. Size: Provide maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

2.3 INTERIOR GYPSUM BOARD

A. Gypsum Wallboard: ASTM C1396/C1396M.

1. Thickness: 1/2 inch (12.7 mm).

2. Long Edges: Tapered or Tapered and featured (rounded or beveled) for prefilling as directed.

B. Gypsum Board, Type X: ASTM C1396/C1396M.

1. Thickness: 5/8 inch (15.9 mm).
2. Long Edges: Tapered or Tapered and featured (rounded or beveled) for prefilling as directed.

C. Flexible Gypsum Board: ASTM C1396/C1396M. Manufactured to bend to fit radii and to be more flexible than standard regular-type gypsum board of same thickness.

1. Thickness: 1/4 inch (6.4 mm).
2. Long Edges: Tapered.

D. Gypsum Ceiling Board: ASTM C1396/C1396M.

1. Thickness: 1/2 inch (12.7 mm).
2. Long Edges: Tapered.

E. Foil-Backed Gypsum Board: ASTM C1396/C1396M.

1. Core: As directed.
2. Long Edges: Tapered or Tapered and featured (rounded or beveled) for prefilling as directed.

F. Abuse-Resistant Gypsum Board: ASTM C1396/C1396M gypsum board, tested according to ASTM C1629/C1629M.

1. Core: As directed.
2. Surface Abrasion: ASTM C1629/C1629M, meets or exceeds requirements as directed.
3. Indentation: ASTM C1629/C1629M, meets or exceeds requirements as directed.
4. Soft-Body Impact: ASTM C1629/C1629M, meets or exceeds requirements as directed.
5. Long Edges: Tapered.
6. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

G. Impact-Resistant Gypsum Board: ASTM C1396/C1396M gypsum board, tested according to ASTM C1629/C1629M.

1. Core: As directed.
2. Surface Abrasion: ASTM C1629/C1629M, meets or exceeds requirements as directed.
3. Indentation: ASTM C1629/C1629M, meets or exceeds requirements as directed.
4. Soft-Body Impact: ASTM C1629/C1629M, meets or exceeds requirements as directed.
5. Hard-Body Impact: ASTM C1629/C1629M, meets or exceeds requirements as directed.
6. Long Edges: Tapered.

7. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

H. Mold-Resistant Gypsum Board: ASTM C1396/C1396M. With moisture- and mold-resistant core and paper surfaces.
1. Core: As directed.
2. Long Edges: Tapered.
3. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

2.4 SPECIALTY GYPSUM BOARD

A. Gypsum Board, Type C: ASTM C1396/C1396M. Manufactured to have increased fire-resistive capability.

1. Thickness: As required by fire-resistance-rated assembly indicated on Drawings.
2. Long Edges: Tapered.

2.5 EXTERIOR GYPSUM BOARD FOR CEILINGS AND SOFFITS

A. Exterior Gypsum Soffit Board: ASTM C1396/C1396M, with manufacturer's standard edges.

1. Core: As directed.

B. Glass-Mat Gypsum Sheathing Board: ASTM C1177/C1177M, with fiberglass mat laminated to both sides and with manufacturer's standard edges.

1. Core: As directed.

2.6 TILE BACKING PANELS

A. Glass-Mat, Water-Resistant Backing Board: ASTM C1178/C1178M, with manufacturer's standard edges.

1. Core: As directed.
2. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

B. Cementitious Backer Units: ANSI A118.9 and ASTM C1288 or ASTM C1325, with manufacturer's standard edges.
1. Thickness: As directed.
2. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

2.7 TRIM ACCESSORIES

A. Interior Trim: ASTM C1047.

1. Material: As directed.
2. Shapes:

    a. Cornerbead.
    b. Bullnose bead.
    c. LC-Bead: J-shaped; exposed long flange receives joint compound.
    d. L-Bead: L-shaped; exposed long flange receives joint compound.
    e. U-Bead: J-shaped; exposed short flange does not receive joint compound.
    f. Expansion (control) joint.
    g. Curved-Edge Cornerbead: With notched or flexible flanges.

B. Exterior Trim: ASTM C1047.

1. Material: Hot-dip galvanized-steel sheet, plastic, or rolled zinc.
2. Shapes:

    a. Cornerbead.
    b. LC-Bead: J-shaped; exposed long flange receives joint compound.
    c. Expansion (Control) Joint: One-piece, rolled zinc with V-shaped slot and removable strip covering slot opening.

2.8 JOINT TREATMENT MATERIALS

A. General: Comply with ASTM C475/C475M.

B. Joint Tape:

1. Interior Gypsum Board: Paper.
2. Exterior Gypsum Soffit Board: Paper.
3. Glass-Mat Gypsum Sheathing Board: 10-by-10 glass mesh.
4. Tile Backing Panels: As recommended by panel manufacturer.

C. Joint Compound for Interior Gypsum Board: For each coat, use formulation that is compatible with other compounds applied on previous or for successive coats.

1. Prefilling: At open joints, rounded or beveled panel edges, and damaged surface areas, use setting-type taping compound.
2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use setting-type taping or drying-type, all-purpose as directed compound.

    a. Use setting-type compound for installing paper-faced metal trim accessories.

3. Fill Coat: For second coat, use setting-type, sandable topping, drying-type, all-purpose compound as directed.
4. Finish Coat: For third coat, use setting-type, sandable topping or drying-type, all-purpose compound as directed.
5. Skim Coat: For final coat of Level 5 finish, use setting-type, sandable topping compound, drying-type, all-purpose compound, high-build interior coating product designed for application by airless sprayer and to be used instead of skim coat to produce Level 5 finish as directed.

D. Joint Compound for Exterior Applications:

1. Exterior Gypsum Soffit Board: Use setting-type taping compound and setting-type, sandable topping compound.
2. Glass-Mat Gypsum Sheathing Board: As recommended by sheathing board manufacturer.

E. Joint Compound for Tile Backing Panels:

1. Glass-Mat, Water-Resistant Backing Panel: As recommended by backing panel manufacturer.
2. Cementitious Backer Units: As recommended by backer unit manufacturer.

2.9 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards and manufacturer's written instructions.

B. Laminating Adhesive: Adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate.

C. Steel Drill Screws: ASTM C1002 unless otherwise indicated.

1. Use screws complying with ASTM C954 for fastening panels to steel members from 0.033 to 0.112 inch (0.84 to 2.84 mm) thick.
2. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.

D. Sound-Attenuation Blankets: ASTM C665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.

1. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.

E. Acoustical Sealant: Manufacturer's standard nonsag, paintable, nonstaining latex sealant complying with ASTM C834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E90.

F. Thermal Insulation: As specified in Section 072100 "Thermal Insulation."

G. Vapor Retarder: As specified in Section 072600 "Vapor Retarders."

2.10 TEXTURE FINISHES

A. Primer: As recommended by textured finish manufacturer.

B. Polystyrene Aggregate Ceiling Finish: Water-based, job-mixed, polystyrene aggregate finish with flame-spread and smoke-developed indexes of not more than 25 when tested according to ASTM E84.
1. Texture: As directed.

C. Aggregate Finish: Water-based, job-mixed, aggregated, drying-type texture finish for spray application.
   1. Texture: Light spatter or Spatter knock-down as directed.

D. Non-Aggregate Finish: Premixed, vinyl texture finish for spray application.

   1. Texture: As directed.

E. Acoustical Finish: Water-based, chemical-setting or drying-type, job-mixed texture finish for spray application.

   1. Application Thickness: 1/2 inch (12.7 mm) as directed.
   2. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

      a. Flame-Spread Index: 25 as directed or less.
      b. Smoke-Developed Index: 50, 450 as directed or less.

   3. NRC: 0.55 according to ASTM C423.

PART 3 - EXECUTION

3.1 APPLYING AND FINISHING PANELS

A. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.

B. Comply with ASTM C840.

C. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments. Provide 1/4- to 1/2-inch- (6.4- to 12.7-mm-) wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.

D. For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.

E. Prefill open joints, rounded or beveled edges, and damaged surface areas.

F. Apply joint tape over gypsum board joints, except for trim products specifically indicated as not intended to receive tape.

G. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C840:

   1. Level 1: Ceiling plenum areas, concealed areas, and where indicated.

2. Level 2: Panels that are substrate for tile, Panels that are substrate for acoustical tile, as directed.
3. Level 3: As directed.
4. Level 4: At panel surfaces that will be exposed to view unless otherwise indicated as directed.

    a. Primer and its application to surfaces are specified in Section 099123 "Interior Painting."

5. Level 5: As directed.

    a. Primer and its application to surfaces are specified in Section 099123 "Interior Painting."

H. Glass-Mat Gypsum Sheathing Board: Finish according to manufacturer's written instructions for use as exposed soffit board.

I. Glass-Mat Faced Panels: Finish according to manufacturer's written instructions.

J. Cementitious Backer Units: Finish according to manufacturer's written instructions.

3.2 APPLYING TEXTURE FINISHES

A. Surface Preparation and Primer: Prepare and apply primer to gypsum panels and other surfaces receiving texture finishes. Apply primer to surfaces that are clean, dry, and smooth.

B. Texture Finish Application: Mix and apply finish using powered spray equipment, to produce a uniform texture matching approved mockup and free of starved spots or other evidence of thin application or of application patterns.

3.3 PROTECTION

A. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.

B. Remove and replace panels that are wet, moisture damaged, and mold damaged.

END OF SECTION 092900

SECTION 093013 - CERAMIC TILING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Ceramic mosaic tile.
2. Quarry tile.
3. Pressed floor tile.
4. Porcelain tile.
5. Glazed wall tile.
6. Stone thresholds.
7. Tile backing panels.
8. Waterproof membrane for thinset applications.
9. Crack isolation membrane.
10. Metal edge strips.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Samples:

1. Each type and composition of tile and for each color and finish required. For ceramic mosaic tile in color blend patterns, provide samples of each color blend.
2. Assembled samples mounted on a rigid panel, with grouted joints, for each type and composition of tile and for each color and finish required.
3. Stone thresholds.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

1.4 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match and are from same production runs as products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Tile and Trim Units: Furnish quantity of full-size units equal to 3 percent of amount installed for each type, composition, color, pattern, and size indicated.

1.5 QUALITY ASSURANCE

A. Installer Qualifications:

1. Installer is a five-star member of the National Tile Contractors Association or a Trowel of Excellence member of the Tile Contractors' Association of America.
2. Installer's supervisor for Project holds the International Masonry Institute's Foreman Certification.
3. Installer employs Ceramic Tile Education Foundation Certified Installers or installers recognized by the U.S. Department of Labor as Journeyman Tile Layers.

B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockup of each type of floor tile installation.
2. Build mockup of each type of wall tile installation.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

PART 2 - PRODUCTS

2.1 PRODUCTS, GENERAL

A. ANSI Ceramic Tile Standard: Provide Standard-grade tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.

B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCNA installation methods specified in tile installation schedules, and other requirements specified.

2.2 TILE PRODUCTS

A. Ceramic Tile Type : Factory-mounted unglazed or glazed as directed ceramic mosaic tile.

1. Composition: As directed.
2. Certification: Porcelain tile certified by the Porcelain Tile Certification Agency.
3. Module Size: As directed
4. Thickness: 1/4 inch (6.4 mm).
5. Face: Plain or Pattern of design indicated, with cushion edges.
6. Surface: Smooth (without) or Slip resistant (with) abrasive admixture or as directed.
7. Dynamic Coefficient of Friction: Not less than 0.42.
8. Finish: As directed.
9. Tile Color and Pattern: As directed.
10. Grout Color: As directed.

11. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile. Provide shapes as follows, selected from manufacturer's standard shapes:

    a. Base Cove: Cove, module size as directed.
    b. Base Cap: Bead (bullnose) or Surface bullnose, module size as directed.
    c. Wainscot Cap: Bead (bullnose) or Surface bullnose, module size as directed.
    d. External Corners for Thinset Mortar Installations: Bead (bullnose) or Surface bullnose, module size as directed.
    e. Internal Corners: Cove, module size as directed.
    f. Tapered Transition Tile: Shape designed to effect transition between thickness of tile floor and adjoining floor finishes of different thickness, tapered to provide reduction in thickness from 1/2 to 1/4 inch (12.7 to 6.4 mm) across nominal 4-inch (100-mm) dimension.

B. Ceramic Tile Type : Unglazed or Glazed square-edged quarry tile.

1. Face Size: As directed.
2. Thickness: As directed
3. Wearing Surface: Nonabrasive, smooth or Abrasive aggregate embedded in surface, as directed.
4. Dynamic Coefficient of Friction: Not less than 0.42.
5. Finish: As directed.
6. Tile Color and Pattern: As directed.
7. Grout Color: As directed.
8. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile. Provide shapes as follows, selected from manufacturer's standard shapes:

    a. Base: Coved with surface bullnose top edge, face size as directed.
    b. Wainscot Cap: Surface bullnose, face size as directed.

C. Ceramic Tile Type: Unglazed or Glazed as directed pressed floor tile.

1. Composition: As directed.
2. Face Size: As directed.
3. Face Size Variation: As directed.
4. Thickness: As directed.
5. Face: As directed.
6. Dynamic Coefficient of Friction: Not less than 0.42.
7. Glaze: As directed.
8. Tile Color and Pattern: As directed.
9. Grout Color: As directed.
10. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile. Provide shapes as follows, selected from manufacturer's standard shapes:

    a. Base Cove: Cove, module size same as adjoining flat tile.

b. Base Cap: Bead (bullnose) or Surface bullnose, module size same as adjoining flat tile.
c. Wainscot Cap: Bead (bullnose) or Surface bullnose, module size same as adjoining flat tile.
d. External Corners: Bead (bullnose) or Surface bullnose, module size same as adjoining flat tile.
e. Internal Corners: Cove, module size same as adjoining flat tile.
f. Tapered Transition Tile: Shape designed to effect transition between thickness of tile floor and adjoining floor finishes of different thickness, tapered to provide reduction in thickness from 1/2 to 1/4 inch (12.7 to 6.4 mm) across nominal 4-inch (100-mm) dimension.

D. Ceramic Tile Type: Unglazed or Glazed porcelain tile as directed.

1. Certification: Tile certified by the Porcelain Tile Certification Agency.
2. Face Size: As directed.
3. Face Size Variation: Rectified.
4. Thickness: As directed.
5. Face: As directed.
6. Dynamic Coefficient of Friction: Not less than 0.42.
7. Tile Color, Glaze, and Pattern: As directed.
8. Grout Color: As directed.
9. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile. Provide shapes as follows, selected from manufacturer's standard shapes:

    a. Base Cap: Surface bullnose, module size same as adjoining flat tile.
    b. Wainscot Cap: Surface bullnose, module size same as adjoining flat tile.
    c. External Corners: Surface bullnose, module size same as adjoining flat tile.
    d. Tapered Transition Tile: Shape designed to effect transition between thickness of tile floor and adjoining floor finishes of different thickness, tapered to provide reduction in thickness from 1/2 to 1/4 inch (12.7 to 6.4 mm) across nominal 4-inch (100-mm) dimension.

E. Ceramic Tile Type: Glazed wall tile.

1. Module Size: As directed.
2. Face Size Variation: Rectified.
3. Thickness: 5/16 inch (8 mm).
4. Face: As directed.
5. Finish: As directed.
6. Tile Color and Pattern: As directed.
7. Grout Color: As directed.
8. Mounting: Factory, back mounted.
9. Mounting: Pregrouted sheets of tiles are factory assembled and grouted with manufacturer's standard white silicone rubber.
10. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile. Provide shapes as follows, selected from manufacturer's standard shapes:

a. Base: Coved or Straight, module size, as directed.
b. Wainscot Cap: Bullnose cap or Surface bullnose, module size as directed.
c. External Corners: Bullnose or Surface bullnose, same size as adjoining flat tile.
d. Internal Corners: Field-butted square corners. For coved base and cap use angle pieces designed to fit with stretcher shapes.

F. Accessories: Provide vitreous china accessories of type and size indicated, suitable for installing by same method as used for adjoining wall tile.

1. One soap holder with grab handle for each shower and tub indicated.
2. One paper holder at each water closet.
3. Color and Finish: Match adjoining glazed wall tile as directed.

2.3 THRESHOLDS

A. General: Fabricate to sizes and profiles indicated or required to provide transition between adjacent floor finishes.

1. Bevel edges at 1:2 slope, with lower edge of bevel aligned with or up to 1/16 inch (1.5 mm) above adjacent floor surface. Finish bevel to match top surface of threshold. Limit height of threshold to 1/2 inch (12.7 mm) or less above adjacent floor surface.

B. Marble Thresholds: ASTM C503/C503M, with a minimum abrasion resistance of 10 or 12 as directed according to ASTM C1353 or ASTM C241/C241M and with honed finish.

1. Description: Uniform, fine- to medium-grained white stone with gray veining.
2. Description: Match Architect's sample.

2.4 TILE BACKING PANELS

A. Cementitious Backer Units: ANSI A118.9 or ASTM C1325, Type A.
1. Thickness: As directed.

B. Fiber-Cement Backer Board: ASTM C1288.

1. Thickness: 1/4 inch (6.4 mm) or 1/2 inch (12.7 mm) or as directed..

2.5 WATERPROOF MEMBRANE

A. General: Manufacturer's standard product, selected from the following, that complies with ANSI A118.10 and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Chlorinated Polyethylene Sheet: Nonplasticized, chlorinated polyethylene faced on both sides with nonwoven polyester fabric.

1. Nominal Thickness: 0.030 inch (0.76 mm).
2. Nominal Thickness: 0.040 inch (1 mm).

C. PVC Sheet: PVC heat-fused on both sides to facings of nonwoven polyester.

1. Nominal Thickness: 0.025 inch (0.6 mm).
2. Nominal Thickness: 0.040 inch (1 mm).

D. Polyethylene Sheet: Polyethylene faced on both sides with fleece webbing; 0.008-inch (0.2-mm) nominal thickness.

E. Fabric-Reinforced, Modified-Bituminous Sheet: Self-adhering, SBS-modified-bituminous sheet with fabric reinforcement facing; 0.040-inch (1 -mm) nominal thickness.

F. Fabric-Reinforced, Fluid-Applied Membrane: System consisting of liquid-latex rubber or elastomeric polymer and continuous fabric reinforcement.

G. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.

H. Latex-Portland Cement Waterproof Mortar: Flexible, waterproof mortar consisting of cement-based mix and latex additive.

I. Waterproofing and Tile-Setting Adhesive: One-part, fluid-applied product intended for use as both waterproofing and tile-setting adhesive in a two-step process.

2.6 CRACK ISOLATION MEMBRANE

A. General: Manufacturer's standard product, selected from the following, that complies with ANSI A118.12 for standard performance or high performance as directed and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Chlorinated Polyethylene Sheet: Nonplasticized, chlorinated polyethylene faced on both sides with nonwoven polyester fabric; 0.030-inch (0.76-mm) nominal thickness.

C. PVC Sheet: PVC heat-fused on both sides to facings of nonwoven polyester; 0.040-inch (1-mm) nominal thickness.

D. Polyethylene Sheet: Polyethylene faced on both sides with fleece webbing; 0.008-inch (0.2-mm) nominal thickness.

E. Corrugated Polyethylene: Corrugated polyethylene with dovetail-shaped corrugations and with anchoring webbing on the underside; 3/16-inch (4-mm) nominal thickness.

F. Fabric-Reinforced, Modified-Bituminous Sheet: Self-adhering, modified-bituminous sheet with fabric reinforcement facing; 0.040-inch (1mm) nominal thickness.

G. Fabric-Reinforced, Fluid-Applied Membrane: System consisting of liquid-latex rubber or elastomeric polymer and fabric reinforcement.

H. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.

I. Latex-Portland Cement Crack-Resistant Mortar: Flexible mortar consisting of cement-based mix and latex additive.

J. Crack Isolation Membrane and Tile-Setting Adhesive: One-part, fluid-applied product intended for use as both a crack isolation membrane and tile-setting adhesive in a two-step process.

2.7 SETTING MATERIALS

A. Portland Cement Mortar (Thickset) Installation Materials: ANSI A108.02.

B. Standard Dry-Set Mortar (Thinset): ANSI A118.1.
1. For wall applications, provide nonsagging mortar.

C. Modified Dry-Set Mortar (Thinset): ANSI A118.4.

1. Provide prepackaged, dry-mortar mix to which only water must be added at Project site.
2. Provide prepackaged, dry-mortar mix combined with liquid-latex additive at Project site.
3. For wall applications, provide nonsagging mortar.

D. Improved Modified Dry-Set Mortar (Thinset): ANSI A118.15.

1. Provide prepackaged, dry-mortar mix to which only water must be added at Project site.
2. Provide prepackaged, dry-mortar mix combined with liquid-latex additive at Project site.
3. For wall applications, provide nonsagging mortar.

E. EGP (Exterior Glue Plywood) Latex-Portland Cement Mortar (Thinset): ANSI A118.11.

1. Provide prepackaged, dry-mortar mix to which only water must be added at Project site.
2. Provide prepackaged, dry-mortar mix combined with liquid-latex additive at Project site.

F. Water-Cleanable, Tile-Setting Epoxy: ANSI A118.3.

G. Organic Adhesive: ANSI A136.1, Type I.

2.8 GROUT MATERIALS

A. Sand-Portland Cement Grout: ANSI A108.10, consisting of white or gray cement and white or colored aggregate as required to produce color indicated.

B. Standard Cement Grout: ANSI A118.6.

C. High-Performance Tile Grout: ANSI A118.7.

1. Polymer Type: Dry, redispersible form, prepackaged with other dry ingredients.
2. Polymer Type: Liquid-latex form for addition to prepackaged dry-grout mix.

D. Water-Cleanable Epoxy Grout: ANSI A118.3, with a VOC content of 65 g/L or less.

E. Grout for Pregrouted Tile Sheets: Same product used in factory to pregrout tile sheets.

2.9 MISCELLANEOUS MATERIALS

A. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.

B. Metal Edge Strips: Angle or L-shape, height to match tile and setting-bed thickness, metallic or combination of metal and PVC or neoprene base, designed specifically for flooring applications; as directed, ASTM A666, 300 Series exposed-edge material.

C. Floor Sealer: Manufacturer's standard product for sealing grout joints and that does not change color or appearance of grout.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. Verify that substrates for setting tile are firm; dry; clean; free of coatings that are incompatible with tile-setting materials, including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
2. Verify that concrete substrates for tile floors installed with adhesives bonded mortar bed or thinset mortar comply with surface finish requirements in ANSI A108.01 for installations indicated.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Fill cracks, holes, and depressions in concrete substrates for tile floors installed with adhesives or thinset mortar with trowelable leveling and patching compound specifically recommended by tile-setting material manufacturer.

B. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1A and is sloped 1/4 inch per foot (1:50) toward drains.

C. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

3.3 CERAMIC TILE INSTALLATION

A. Comply with TCNA's "Handbook for Ceramic, Glass, and Stone Tile Installation" for TCNA installation methods specified in tile installation schedules. Comply with parts of the ANSI A108 series "Specifications for Installation of Ceramic Tile" that are referenced in TCNA installation methods, specified in tile installation schedules, and apply to types of setting and grouting materials used.

1. For the following installations, follow procedures in the ANSI A108 series of tile installation standards for providing 95 percent mortar coverage:

    a. Exterior tile floors.
    b. Tile floors in wet areas.
    c. Tile swimming pool decks.
    d. Tile floors in laundries.
    e. Tile floors consisting of tiles 8 by 8 inches (200 by 200 mm) or larger.
    f. Tile floors consisting of rib-backed tiles.

B. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.

C. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

D. Provide manufacturer's standard trim shapes where necessary to eliminate exposed tile edges.

E. Where accent tile differs in thickness from field tile, vary setting bed thickness so that tiles are flush.

F. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.

G. Joint Widths: Unless otherwise indicated, install tile with the following joint widths:

1. Ceramic Mosaic Tile: As directed.
2. Quarry Tile: As directed.

3. Pressed Floor Tile: As directed.
4. Glazed Wall Tile: As directed.
5. Porcelain Tile: As directed.

H. Lay out tile wainscots to dimensions indicated or to next full tile beyond dimensions indicated.

I. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated. Form joints during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.

1. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.

J. Stone Thresholds: Install stone thresholds in same type of setting bed as adjacent floor unless otherwise indicated.

1. At locations where mortar bed (thickset) would otherwise be exposed above adjacent floor finishes, set thresholds in modified dry-set or improved modified dry-set mortar (thinset) as directed.
2. Do not extend cleavage membrane waterproofing or crack isolation membrane under thresholds set in mortar as directed. Fill joints between such thresholds and adjoining tile set as directed with elastomeric sealant.

K. Metal Edge Strips: Install as directed.

L. Floor Sealer: Apply floor sealer to cementitious grout joints in tile floors according to floor-sealer manufacturer's written instructions. As soon as floor sealer has penetrated grout joints, remove excess sealer and sealer from tile faces by wiping with soft cloth.

M. Install tile backing panels and treat joints according to ANSI A108.11 and manufacturer's written instructions for type of application indicated.

N. Install waterproofing to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness that is bonded securely to substrate.

O. Install crack isolation membrane to comply with ANSI A108.17 and manufacturer's written instructions to produce membrane of uniform thickness that is bonded securely to substrate.

3.4 EXTERIOR CERAMIC TILE INSTALLATION SCHEDULE

A. Exterior Floor Installations:

1. Ceramic Tile Installation: TCNA F101 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; cement mortar bed (thickset) as directed.

a. Ceramic Tile Type: As directed.
b. Bond Coat for Cured-Bed Method: Modified dry-set or Improved modified dry-set mortar.
c. Grout: As directed.

2. Ceramic Tile Installation: TCNA F102; thinset mortar as directed.

a. Ceramic Tile Type: As directed.
b. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar.
c. Grout: As directed.

B. Exterior Roof/Deck Floor Installations:

1. Ceramic Tile Installation: TCNA F103 or TCNA F103B and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; cement mortar bed (thickset) over drainage material on roof membrane.

a. Ceramic Tile Type: As directed.
b. Bond Coat for Cured-Bed Method: Modified dry-set or Improved modified dry-set mortar.
c. Grout: As directed.

2. Ceramic Tile Installation : TCNA F104; thinset mortar As directed.

a. Ceramic Tile Type: As requested.
b. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar.
c. Grout: As directed.

C. Exterior Wall Installations, Masonry or Concrete:

1. Ceramic Tile Installation: TCNA W201 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; cement mortar bed (thickset) on metal lath over vapor-retarder membrane.

a. Ceramic Tile Type: As directed.
b. Bond Coat for Wet-Set Method: mortar, As directed.
c. Bond Coat for Cured-Bed Method: Modified dry-set or Improved modified dry-set mortar.
d. Grout: As directed.

2. Ceramic Tile Installation: TCNA W202; thinset mortar over waterproof membrane.

a. Ceramic Tile Type: As directed.
b. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar.
c. Grout: As directed.

D. Exterior Wall Installations, Wood or Metal Studs:

1. Ceramic Tile Installation: TCNA W244E; thinset mortar over waterproof membrane on cementitious backer units or on cementitious backer units over vapor-retarder membrane.

a. Ceramic Tile Type: As directed.
b. Thinset Mortar: As directed.

3.5 INTERIOR CERAMIC TILE INSTALLATION SCHEDULE

A. Interior Floor Installations, Concrete Subfloor:

1. Ceramic Tile Installation: TCNA F111 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; cement mortar bed (thickset) with cleavage membrane.

    a. Ceramic Tile Type: As directed.
    b. Bond Coat for Cured-Bed Method: As directed.
    c. Grout: As directed.

2. Ceramic Tile Installation: TCNA F112 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; cement mortar bed (thickset) bonded to concrete.

    a. Ceramic Tile Type: As directed.
    b. Bond Coat for Cured-Bed Method: As directed.
    c. Grout: As directed.

3. Ceramic Tile Installation: TCNA F113; thinset mortar.

    a. Ceramic Tile Type: As directed.
    b. Thinset Mortar: As directed.
    c. Grout: As directed.

4. Ceramic Tile Installation: TCNA F114 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; cement mortar bed (thickset) with cleavage membrane; epoxy grout.

    a. Ceramic Tile Type: As required
    b. Bond Coat for Cured-Bed Method: As directed.
    c. Grout: Water-cleanable epoxy grout.

5. Ceramic Tile Installation: TCNA F115; thinset mortar; epoxy grout.

    a. Ceramic Tile Type: As directed.
    b. Thinset Mortar: As directed.
    c. Grout: Water-cleanable epoxy grout.

6. Ceramic Tile Installation: TCNA F116; As directed.

    a. Ceramic Tile Type: As directed.
    b. Grout: As directed.

7. Ceramic Tile Installation: TCNA F121 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; cement mortar bed (thickset) on waterproof membrane.

    a. Ceramic Tile Type: .
    b. Bond Coat for Cured-Bed Method: As directed.
    c. Grout: As directed.

8. Ceramic Tile Installation: TCNA F122; thinset mortar on waterproof membrane.

    a. Ceramic Tile Type: As directed.
    b. Thinset Mortar: As directed.
    c. Grout: High-performance sanded or unsanded grout.

9. Ceramic Tile Installation: TCNA F125-Full or TCNA F125-Full, except where partial coverage is indicated TCNA F125-Partial; thinset mortar on crack isolation membrane.

    a. Ceramic Tile Type: As directed.
    b. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar.
    c. Grout: As directed.

10. Ceramic Tile Installation : TCNA F131; water-cleanable, tile-setting epoxy; epoxy grout.

    a. Ceramic Tile Type: As directed.
    b. Grout: Water-cleanable epoxy grout.

11. Ceramic Tile Installation As directed: TCNA F132; water-cleanable, tile-setting epoxy on cured cement mortar bed bonded to concrete subfloor or installed over cleavage membrane; epoxy grout.

    a. Ceramic Tile Type: As directed.
    b. Grout: Water-cleanable epoxy grout.

B. Interior Floor Installations, Wood Subfloor:

1. Ceramic Tile Installation: TCNA F121 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; cement mortar bed (thickset) on waterproof membrane.

    a. Ceramic Tile Type: As directed.
    b. Bond Coat for Cured-Bed Method: As directed.
    c. Grout: As directed.

2. Ceramic Tile Installation: TCNA F141 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; cement mortar bed (thickset) with cleavage membrane.

    a. Ceramic Tile Type: As directed.
    b. Bond Coat for Cured-Bed Method: As directed.
    c. Grout: As directed.

3. Ceramic Tile Installation: TCNA F142; organic adhesive.

    a. Ceramic Tile Type: As directed.
    b. Grout: As directed.

4. Ceramic Tile Installation: TCNA F143; water-cleanable, tile-setting epoxy; epoxy grout.

    a. Ceramic Tile Type: As directed.
    b. Grout: Water-cleanable epoxy grout.

5. Ceramic Tile Installation: TCNA F144; thinset mortar or water-cleanable epoxy adhesive on waterproof membrane over cementitious backer units or fiber-cement backer board.

    a. Ceramic Tile Type: As directed.
    b. Thinset Mortar: As directed.
    c. Grout: As directed.

6. Ceramic Tile Installation: TCNA F150 or TCNA F160; thinset mortar on exterior-glue plywood.

    a. Ceramic Tile Type: As directed.
    b. Thinset Mortar: EGP (exterior glue plywood) latex-portland cement mortar.
    c. Grout: As directed.

C. Interior Radiant Heat Floor Installations, Concrete Subfloor:

1. Ceramic Tile Installation: TCNA RH110; thinset mortar on crack isolation membrane; hydronic piping installed in concrete.

    a. Ceramic Tile Type: As directed.
    b. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar.
    c. Grout: As directed.

2. Ceramic Tile Installation: TCNA RH117 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; cement mortar bed (thickset) with hydronic piping installed in mortar bed.

    a. Ceramic Tile Type: As directed.
    b. Bond Coat for Cured-Bed Method: Modified dry-set or Improved modified dry-set.
    c. Grout: As directed.

3. Ceramic Tile Installation: TCNA RH112; thinset mortar on crack isolation membrane; hydronic piping encapsulated in cementitious self-leveling underlayment.

    a. Ceramic Tile Type: As directed.
    b. Cementitious Self-Leveling Underlayment: Specified in Section 035416 "Hydraulic Cement Underlayment."
    c. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar.
    d. Grout: As directed.

4. Ceramic Tile Installation: TCNA RH115; thinset mortar; electric radiant system encapsulated in thinset mortar.

    a. Ceramic Tile Type: As directed.
    b. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar.
    c. Grout: As directed.

5. Ceramic Tile Installation: TCNA RH116; thinset mortar on crack isolation membrane; electric radiant system encapsulated in cementitious self-leveling underlayment.

    a. Ceramic Tile Type: As directed.
    b. Cementitious Self-Leveling Underlayment: Specified in Section 035416 "Hydraulic Cement Underlayment."
    c. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar.
    d. Grout: As directed.

D. Interior Radiant Heat Floor Installations, Wood Subfloor:

1. Ceramic Tile Installation: TCNA RH123; thinset mortar on crack isolation membrane; hydronic piping encapsulated in cementitious self-leveling underlayment.

    a. Ceramic Tile Type: As directed.
    b. Cementitious Self-Leveling Underlayment: Specified in Section 035416 "Hydraulic Cement Underlayment."
    c. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar.
    d. Grout: As directed.

2. Ceramic Tile Installation: TCNA RH130; thinset mortar on exterior-glue plywood; electric radiant system encapsulated in thinset mortar.

    a. Ceramic Tile Type: As directed.
    b. Thinset Mortar: EGP (exterior glue plywood) latex-portland cement mortar.
    c. Grout: As directed.

3. Ceramic Tile Installation: TCNA RH135; thinset mortar on cementitious backer units or fiber-cement backer board; electric radiant system encapsulated in thinset mortar.

    a. Ceramic Tile Type: As directed.
    b. Thinset Mortar: As directed.
    c. Grout: As directed.

4. Ceramic Tile Installation: TCNA RH140; thinset mortar on crack isolation membrane; electric radiant system encapsulated in cementitious self-leveling underlayment.

    a. Ceramic Tile Type: As directed.
    b. Cementitious Self-Leveling Underlayment: Specified in Section 035416 "Hydraulic Cement Underlayment."
    c. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar.
    d. Grout: As directed.

5. Ceramic Tile Installation: TCNA RH141 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; cement mortar bed (thickset) with hydronic piping installed in mortar bed.

    a. Ceramic Tile Type: As directed.
    b. Bond Coat for Cured-Bed Method: Modified dry-set or Improved modified dry-set mortar.
    c. Grout: As directed.

E. Interior Wall Installations, Masonry or Concrete:

1. Ceramic Tile Installation: TCNA W202; thinset mortar.

    a. Ceramic Tile Type: As directed.
    b. Thinset Mortar: As directed.
    c. Grout: As directed.

2. Ceramic Tile Installation: TCNA W211 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; cement mortar bed (thickset) bonded to substrate.

    a. Ceramic Tile Type: As directed.
    b. Bond Coat for Wet-Set Method: As directed.
    c. Bond Coat for Cured-Bed Method: As directed.
    d. Grout: As directed.

3. Ceramic Tile Installation: TCNA W221 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C, cement mortar bed (thickset) on metal lath over cleavage membrane or over waterproof membrane.

    a. Ceramic Tile Type: As directed.
    b. Bond Coat for Wet-Set Method: As directed.
    c. Bond Coat for Cured-Bed Method: As directed.
    d. Grout: As directed.

4. Ceramic Tile Installation: TCNA W222 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; one-coat cement mortar bed (thickset) on metal lath over cleavage membrane over waterproof membrane.

    a. Ceramic Tile Type: As directed.
    b. Bond Coat for Wet-Set Method: As directed.
    c. Bond Coat for Cured-Bed Method: As directed.
    d. Grout: As directed.

5. Ceramic Tile Installation: TCNA W223; organic adhesive.

    a. Ceramic Tile Type: As directed.
    b. Grout: As directed.

F. Interior Wall Installations, Wood or Metal Studs or Furring:

1. Ceramic Tile Installation: TCNA W221 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; cement mortar bed (thickset) over cleavage membrane or over waterproof membrane on solid backing.

    a. Ceramic Tile Type: As directed.
    b. Bond Coat for Wet-Set Method: As directed.
    c. Bond Coat for Cured-Bed Method: As directed.
    d. Grout: As directed.

2. Ceramic Tile Installation: TCNA W222 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; one-coat cement mortar bed (thickset) over cleavage membrane or over waterproof membrane on solid backing.

    a. Ceramic Tile Type: As directed.
    b. Bond Coat for Wet-Set Method: As directed.
    c. Bond Coat for Cured-Bed Method: As directed.
    d. Grout: As directed.

3. Ceramic Tile Installation: TCNA W223; organic adhesive on solid backing.

    a. Ceramic Tile Type: As directed.
    b. Grout: As directed.

4. Ceramic Tile Installation: TCNA W231/W241 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; cement mortar bed (thickset).

    a. Ceramic Tile Type: As directed.
    b. Bond Coat for Wet-Set Method: As directed.
    c. Bond Coat for Cured-Bed Method: As directed.
    d. Grout: As directed.

5. Ceramic Tile Installation: TCNA W242; organic adhesive on gypsum board.

    a. Ceramic Tile Type: As directed.
    b. Grout: As directed.

6. Ceramic Tile Installation: TCNA W243; thinset mortar on gypsum board.

    a. Ceramic Tile Type: As directed.
    b. Thinset Mortar: As directed.
    c. Grout: As directed.

7. Ceramic Tile Installation: TCNA W244C or TCNA W244F; thinset mortar on cementitious backer units or fiber-cement backer board over vapor-retarder membrane.

    a. Ceramic Tile Type: As directed.
    b. Thinset Mortar: As directed.
    c. Grout: As directed.

8. Ceramic Tile Installation: TCNA W245 or TCNA W248; thinset mortar on glass-mat, water-resistant gypsum backer board.

    a. Ceramic Tile Type: As directed.
    b. Thinset Mortar: As directed.
    c. Grout: As directed.

G. Bathtub Wall Installations with No Shower Head, Wood or Metal Studs or Furring:

1. Ceramic Tile Installation: TCNA B413; thinset mortar or organic adhesive on water-resistant gypsum board.

    a. Ceramic Tile Type: As directed.
    b. Thinset Mortar: As directed.
    c. Grout: As directed.

H. Bathtub/Shower Wall Installations, Wood or Metal Studs or Furring:

1. Ceramic Tile Installation TCNA B411 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; cement mortar bed (thickset) over vapor-retarder membrane.

a. Ceramic Tile Type: As directed.
b. Bond Coat for Wet-Set Method: As directed.
c. Bond Coat for Cured-Bed Method: As directed.
d. Grout: As directed.

2. Ceramic Tile Installation: TCNA B412; on cementitious backer units or fiber-cement backer board as directed.

a. Ceramic Tile Type: As directed.
b. Thinset Mortar: As directed.
c. Grout: As directed.

3. Ceramic Tile Installation: TCNA B419; thinset mortar on coated glass-mat, water-resistant gypsum backer board.

a. Ceramic Tile Type: As directed.
b. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar.
c. Grout: As directed.

I. Shower Receptor and Wall Installations:

1. Ceramic Tile Installation: TCNA B414 and ANSI A108.1A, ANSI A108.1B, ANSI A108.1C; cement mortar bed (thickset) over vapor-retarder membrane.

a. Ceramic Tile Type: As directed.
b. Bond Coat for Wet-Set Method: As directed.
c. Bond Coat for Cured-Bed Method: As directed.
d. Grout: As directed.

2. Ceramic Tile Installation: TCNA B415; As directed.

a. Ceramic Tile Type: As directed.
b. Thinset Mortar: As directed.
c. Grout: As directed.

3. Ceramic Tile Installation: TCNA B420; thinset mortar as directed.

a. Ceramic Tile Type: As directed.
b. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar.
c. Grout: As directed.

4. Ceramic Tile Installation: TCNA B421; thinset mortar on waterproof membrane over solid backing.

a. Ceramic Tile Type: As directed.
b. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar.
c. Grout: As directed.

5. Ceramic Tile Installation: TCNA B422; thinset mortar on waterproof membrane with integrated bonding flange for bonded membranes.

a. Ceramic Tile Type: As directed.
b. Thinset Mortar: As directed.
c. Grout: As directed.

END OF SECTION 093013

SECTION 093023 - GLASS MOSAIC TILING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Glass tile.
2. Tile backing panels.
3. Waterproof membrane for thinset applications.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. LEED Submittals:

C. Sustainable Design Submittals:

D. Samples:

1. Each type and composition of tile and for each color and finish required. For glass mosaic tile in color blend patterns, provide samples of each color blend.
2. Assembled samples mounted on a rigid panel, with grouted joints, for each type and composition of tile and for each color and finish required.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

1.4 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match and are from same production runs as products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Tile Units: Furnish quantity of full-size units equal to 3 percent of amount installed for each type, composition, color, pattern, and size indicated.

1.5 QUALITY ASSURANCE

A. Installer Qualifications:

1. Installer is a five-star member of the National Tile Contractors Association or a Trowel of Excellence member of the Tile Contractors' Association of America.
2. Installer's supervisor for Project holds the International Masonry Institute's Foreman Certification.
3. Installer employs Ceramic Tile Education Foundation Certified Installers or installers recognized by the U.S. Department of Labor as Journeyman Tile Layers.

B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockup of each type of glass tile installation.
2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

PART 2 - PRODUCTS

2.1 PRODUCTS, GENERAL

A. ANSI Glass Tile Standard: Provide Standard grade glass tile that complies with ANSI A137.2 for types and other characteristics indicated.

B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCNA installation methods specified in tile installation schedules, and other requirements specified.

2.2 TILE PRODUCTS

A. Glass Tile Type: Large format glass tile, as directed.

1. Face Size: As directed.
2. Sizing Category: Standard or Natural.
3. Tile Color and Pattern: As directed.
4. Grout Color: As directed.

B. Glass Tile Type: Factory-mounted mosaic glass tile, as directed.

1. Module Size: As directed.
2. Sizing Category: Standard or Natural.
3. Tile Color and Pattern: As directed.
4. Grout Color: As directed.

C. Glass Tile Type: Factory-mounted miniature mosaic glass tile, as directed.

1. Module Size: As directed.

2. Sizing Category: Standard or Natural.
3. Tile Color and Pattern: As directed.
4. Grout Color: As directed.

2.3 TILE BACKING PANELS

A. Cementitious Backer Units: ANSI A118.9 or ASTM C1325, Type A.

1. Thickness: As directed.

B. Fiber-Cement Backer Board: ASTM C1288.
1. Thickness: 1/4 inch (6.4 mm) or 1/2 inch (12.7 mm) or as directed.

2.4 WATERPROOF MEMBRANE

A. General: Manufacturer's standard product, selected from the following, that complies with ANSI A118.10 and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Chlorinated Polyethylene Sheet: Nonplasticized, chlorinated polyethylene faced on both sides with nonwoven polyester fabric.

1. Nominal Thickness: 0.030 inch (0.76 mm).
2. Nominal Thickness: 0.040 inch (1 mm).

C. PVC Sheet: PVC heat-fused on both sides to facings of nonwoven polyester.

1. Nominal Thickness: 0.025 inch (0.6 mm).
2. Nominal Thickness: 0.040 inch (1 mm).

D. Polyethylene Sheet: Polyethylene faced on both sides with fleece webbing; 0.008-inch (0.203-mm) nominal thickness.

E. Fabric-Reinforced, Modified-Bituminous Sheet: Self-adhering, SBS-modified-bituminous sheet with fabric reinforcement facing; 0.040-inch (1-mm) nominal thickness.

F. Fabric-Reinforced, Fluid-Applied Membrane: System consisting of liquid-latex rubber or elastomeric polymer and continuous fabric reinforcement.

G. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.

H. Latex-Portland Cement Waterproof Mortar: Flexible, waterproof mortar consisting of cement-based mix and latex additive.

I. Waterproofing and Tile-Setting Adhesive: One-part, fluid-applied product intended for use as both waterproofing and tile-setting adhesive in a two-step process.

2.5 SETTING MATERIALS

A. Portland Cement Mortar (Thickset) Installation Materials: ANSI A108.02; use white cement unless otherwise indicated.

B. Standard Dry-Set Mortar (Thinset): ANSI A118; white, unless otherwise indicated.

1. For wall applications, provide nonsagging mortar.

C. Modified Dry-Set Mortar (Thinset): ANSI A118.4; white, unless otherwise indicated.

1. Provide prepackaged, dry-mortar mix to which only water must be added at Project site.
2. Provide prepackaged, dry-mortar mix combined with liquid-latex additive at Project site.
3. For wall applications, provide nonsagging mortar.

D. Improved Modified Dry-Set Mortar (Thinset): ANSI A118.15; white, unless otherwise indicated.

1. Provide prepackaged, dry-mortar mix to which only water must be added at Project site.
2. Provide prepackaged, dry-mortar mix combined with liquid-latex additive at Project site.
3. For wall applications, provide nonsagging mortar.

E. Water-Cleanable, Tile-Setting Epoxy: ANSI A118.3.

F. Organic Adhesive: ANSI A136.1, Type I.

2.6 GROUT MATERIALS

A. Sand-Portland Cement Grout: ANSI A108.10, consisting of white or gray cement and white or colored aggregate as required to produce color indicated.

B. Standard Cement Grout: ANSI A118.6.

C. High-Performance Tile Grout: ANSI A118.7.
1. Polymer Type: Dry, redispersible form, prepackaged with other dry ingredients.
2. Polymer Type: Liquid-latex form for addition to prepackaged dry-grout mix.

D. Water-Cleanable Epoxy Grout: ANSI A118.3, with a VOC content of 65 g/L.

2.7 MISCELLANEOUS MATERIALS

A. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.

B. Metal Edge Strips: Angle or L-shaped, height to match tile and setting-bed thickness; As directed.

C. Grout Sealer: Manufacturer's standard product for sealing grout joints and that does not change color or appearance of grout.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. Verify that substrates for setting tile are firm; dry; clean; free of coatings that are incompatible with tile-setting materials, including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
2. Verify that concrete substrates for tile floors installed with adhesives, bonded mortar bed or thinset mortar comply with surface finish requirements in ANSI A108.01 for installations indicated.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1A and is sloped 1/4 inch per foot (1:50) toward drains.

B. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

3.3 GLASS TILE INSTALLATION

A. Comply with TCNA's "Handbook for Ceramic, Glass, and Stone Tile Installation" for TCNA installation methods specified in tile installation schedules. Comply with parts of the ANSI A108 series "Specifications for Installation of Ceramic Tile" that are referenced in TCNA installation methods, specified in tile installation schedules, and apply to types of setting and grouting materials used.

B. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.

C. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for

straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

D. Where accent tile differs in thickness from field tile, vary setting bed thickness so that tiles are flush.

E. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.

F. Joint Widths: Unless otherwise indicated, install tile with the following joint widths:

1. Large Format Glass Tile: 1/16 inch (1.6 mm) or 1/8 inch (3.2 mm).
2. Mosaic Glass Tile: 1/16 inch (1.6 mm) or 1/8 inch (3.2 mm).
3. Miniature Mosaic Glass Tile: 1/16 inch (1.6 mm) or 1/8 inch (3.2 mm).

G. Lay out tile wainscots to dimensions indicated or to next full tile beyond dimensions indicated.

H. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated. Form joints during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.

1. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.

I. Metal Edge Strips: Install at locations indicated.

J. Grout Sealer: Apply grout sealer to grout joints according to grout-sealer manufacturer's written instructions. As soon as grout sealer has penetrated grout joints, remove excess sealer and sealer from tile faces by wiping with soft cloth.

K. Install tile backing panels and treat joints according to ANSI A108.11 and manufacturer's written instructions for type of application indicated (As directed). Install waterproofing to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness that is bonded securely to substrate.

3.4 EXTERIOR GLASS TILE INSTALLATION SCHEDULE

A. Exterior Wall Installations, Masonry or Concrete:

1. Glass Tile Installation: TCNA W201 and ANSI A108.14, ANSI A108.15, ANSI A108.16; cement mortar bed (thickset) on metal lath over vapor-retarder membrane.

a. Glass Tile Type: As directed.
b. Bond Coat: As directed.
c. Grout: As directed.

2. Glass Tile Installation: TCNA W202; thinset mortar over waterproof membrane.

a. Glass Tile Type: As directed.

b. Thinset Mortar: As directed.
c. Grout: As directed.

3.5 INTERIOR GLASS TILE INSTALLATION SCHEDULE

A. Interior Wall Installations, Masonry or Concrete:

1. Glass Tile Installation : TCNA W202; thinset mortar.

   a. Glass Tile Type: As directed.
   b. Thinset Mortar: As directed.
   c. Grout: As directed.

2. Glass Tile Installation: TCNA W211 and ANSI A108.14, ANSI A108.15, ANSI A108.16; cement mortar bed (thickset) bonded to substrate.

   a. Glass Tile Type: As directed.
   b. Bond Coat: As directed.
   c. Grout: As directed.

3. Glass Tile Installation: TCNA W221 and ANSI A108.14, ANSI A108.15, ANSI A108.16; cement mortar bed (thickset) on metal lath over cleavage membrane or over waterproof membrane.

   a. Glass Tile Type: As directed.
   b. Bond Coat: As directed.
   c. Grout: As directed.

4. Glass Tile Installation: TCNA W222 and ANSI A108.1, ANSI A108.15, ANSI A108.16; one-coat cement mortar bed (thickset) on metal lath over cleavage membrane or over waterproof membrane.

   a. Glass Tile Type: As directed.
   b. Bond Coat: As directed.
   c. Grout: As directed.

5. Glass Tile Installation: TCNA W223; organic adhesive.

   a. Glass Tile Type: As directed.
   b. Grout: As directed.

B. Interior Wall Installations, Wood or Metal Studs or Furring:

1. Glass Tile Installation: TCNA W221 and ANSI A108.14, ANSI A108.15, ANSI A108.16; cement mortar bed (thickset) over cleavage membrane or over waterproof membrane on solid backing.

   a. Glass Tile Type: As directed.
   b. Bond Coat: As directed.
   c. Grout: As directed.

2. Glass Tile Installation: TCNA W222 and ANSI A108.14, ANSI A108.15, ANSI A108.16; one-coat cement mortar bed (thickset) over cleavage membrane or over waterproof membrane on solid backing.

    a. Glass Tile Type: As directed.
    b. Bond Coat: As directed.
    c. Grout: As directed.

3. Glass Tile Installation: TCNA W223; organic adhesive on solid backing.

    a. Glass Tile Type: As directed.
    b. Grout: As directed.

4. Glass Tile Installation: TCNA W231/W241 and ANSI A108.14, ANSI A108.15, ANSI A108.16; cement mortar bed (thickset).

    a. Glass Tile Type: As directed.
    b. Bond Coat: As directed.
    c. Grout: As directed.

5. Glass Tile Installation: TCNA W242; organic adhesive on gypsum board.

    a. Glass Tile Type: As directed.
    b. Grout: As directed.

6. Glass Tile Installation: TCNA W243; thinset mortar on gypsum board.

    a. Glass Tile Type: As directed.
    b. Thinset Mortar: As directed.
    c. Grout: As directed.

7. Glass Tile Installation: TCNA W244C or TCNA W244F; thinset mortar on cementitious backer units or fiber-cement backer board over vapor-retarder membrane.

    a. Glass Tile Type: As directed.
    b. Thinset Mortar: As directed.
    c. Grout: As directed.

8. Glass Tile Installation: TCNA W245 or TCNA W248; thinset mortar on glass-mat, water-resistant gypsum backer board.

    a. Glass Tile Type: As directed.
    b. Thinset Mortar: As directed.
    c. Grout: As directed.

C. Bathtub Wall Installations with No Shower Head, Wood or Metal Studs or Furring:

1. Glass Tile Installation: TCNA B413; thinset mortar or organic adhesive on water-resistant gypsum board.

    a. Glass Tile Type: As directed.
    b. Thinset Mortar: As directed.

c. Grout: As directed.

D. Bathtub/Shower Wall Installations, Wood or Metal Studs or Furring:

1. Glass Tile Installation: TCNA B411 and ANSI A108.14, ANSI A108.15, ANSI A108.16; cement mortar bed (thickset) over vapor-retarder membrane.

a. Glass Tile Type: As directed.
b. Bond Coat: As directed.
c. Grout: As directed.

2. Glass Tile Installation: TCNA B412; On cementitious backer units or fiber-cement backer board, as directed.

a. Glass Tile Type: As directed.
b. Thinset Mortar: As directed.
c. Grout: As directed.

3. Glass Tile Installation: TCNA B419; thinset mortar or organic adhesive on coated glass-mat, water-resistant gypsum backer board.

a. Glass Tile Type: As directed.
b. Thinset Mortar: As directed.
c. Grout: As directed.

E. Shower Receptor and Wall Installations:

1. Glass Tile Installation: TCNA B414 and ANSI A108.14, ANSI A108.15, ANSI A108.16; cement mortar bed (thickset).

a. Glass Tile Type: As directed.
b. Bond Coat: As directed.
c. Grout: As directed.

2. Glass Tile Installation: TCNA B415; As directed.

a. Glass Tile Type: As directed.
b. Thinset Mortar: As directed.
c. Grout: As directed.

3. Glass Tile Installation: TCNA B420; thinset mortar as directed.

a. Glass Tile Type: As directed.
b. Thinset Mortar: As directed.
c. Grout: As directed.

4. Glass Tile Installation: TCNA B421; thinset mortar on waterproof membrane over solid backing.

a. Glass Tile Type: As directed.
b. Thinset Mortar: As directed.
c. Grout: As directed.

5. Glass Tile Installation: TCNA B422; thinset mortar on waterproof membrane with integrated bonding flange for bonded membranes.

    a. Glass Tile Type: As directed.
    b. Thinset Mortar: As directed.
    c. Grout: As directed.

END OF SECTION 093023

SECTION 093033 - STONE TILING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Dimension stone tile.
2. Tile backing panels.
3. Waterproof membrane for thinset applications.
4. Crack isolation membrane.
5. Metal edge strips.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Samples:

1. Full-size units of each type of stone tile in each finish required.
2. Assembled Samples with grouted joints for each type of stone tile and for each finish required.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For dimension stone tile to include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match and are from same production runs as products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Dimension Stone Tile: Furnish quantity of full-size units equal to 3 percent of amount installed, for each type, composition, color, pattern, and size indicated.

1.6 QUALITY ASSURANCE

A. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockup of each type of stone floor tile installation.
2. Build mockup of each type of stone wall tile installation.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

PART 2 - PRODUCTS

2.1 STONE PRODUCTS

A. Varieties and Sources: Subject to compliance with requirements, provide those indicated, provide one of those indicated or stone products that may be incorporated into the Work include, but are not limited to, those indicated.

B. Abrasion Resistance of Stone Tile for Floors: Provide stone with a value of not less than 8, 10, 12 or 25 according to ASTM C1353 or ASTM C241/C241M or as directed.

C. Stone Tile Type ST-#:

1. Stone Type: Granite, complying with ASTM C615/C615M.
2. Stone Type: Limestone, complying with ASTM C568/C568M, Classification II (Medium Density) or III (High Density) as directed.
3. Stone Type: Marble, complying with ASTM C503/C503M, Classification I, Calcite or II, Dolomite as directed.
4. Stone Type: Quartz-based stone, complying with ASTM C616/C616M, Classification II, Quartzitic Sandstone or III, Quartzite as directed.
5. Stone Type: Serpentine, complying with ASTM C1526, Classification I, Exterior or II, Interior as directed.
6. Stone Type: Slate, complying with ASTM C629/C629M, Classification I, Exterior or II, Interior as directed.
7. Stone Type: Travertine, complying with ASTM C1527/C1527M, Classification I, Exterior or II, Interior as directed.
8. Varieties and Sources:

9. Cut: Vein or Fleuri as directed.
10. Finish: Polished, Honed, Sand rubbed, Thermal, Natural cleft, As indicated or Match Architect's sample.
11. Edges: Square, Beveled or Eased as directed.
12. Module Size: 6 by 6 inches (152 by 152 mm), 6 by 12 inches (152 by 305 mm), 12 by 12 inches (305 by 305 mm), 300 by 300 mm, 18 by 18 inches (457 by 457 mm), 500 by 500 mm or As indicated.
13. Nominal Tile Thickness: 1/4 inch (6 mm), 3/8 inch (10 mm), 1/2 inch (13 mm) or 5/8 inch (16 mm) as directed.
14. Joint Width: Hand tight, 1/16 inch (1.5 mm), 1/8 inch (3 mm), 1/4 inch (6 mm), 3/8 inch (10 mm) or 1/2 inch (13 mm) as directed.

2.2 TILE BACKING PANELS

A. Cementitious Backer Units: ANSI A118.9 or ASTM C1325, Type A.
   1. Thickness: 1/4 inch (6.4 mm), 1/2 inch (12.7 mm), 5/8 inch (15.9 mm) or As indicated.

B. Fiber-Cement Backer Board: ASTM C1288.
   1. Thickness: 1/4 inch (6.4 mm), 1/2 inch (12.7 mm) or As indicated.

2.3 WATERPROOF MEMBRANE

A. General: Manufacturer's standard product, selected from the following, that complies with ANSI A118.10 and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Chlorinated Polyethylene Sheet: Nonplasticized, chlorinated polyethylene faced on both sides with nonwoven polyester fabric.
   1. Nominal Thickness: 0.030 inch (0.76 mm).
   2. Nominal Thickness: 0.040 inch (1 mm).

C. PVC Sheet: PVC heat-fused on both sides to facings of nonwoven polyester.
   1. Nominal Thickness: 0.025 inch (0.6 mm).
   2. Nominal Thickness: 0.040 inch (1 mm).

D. Polyethylene Sheet: Polyethylene faced on both sides with fleece webbing; 0.008-inch (0.203-mm) nominal thickness.

E. Fabric-Reinforced, Modified-Bituminous Sheet: Self-adhering, SBS-modified-bituminous sheet with woven reinforcement facing; 0.040-inch (1.01-mm) nominal thickness.

F. Fabric-Reinforced, Fluid-Applied Membrane: System consisting of liquid-latex rubber or elastomeric polymer and continuous fabric reinforcement.

G. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.

H. Latex-Portland Cement Waterproof Mortar: Flexible, waterproof mortar consisting of cement-based mix and latex additive.

I. Waterproofing and Tile-Setting Adhesive: One-part, fluid-applied product intended for use as both waterproofing and tile-setting adhesive in a two-step process.

2.4 CRACK ISOLATION MEMBRANES

A. General: Manufacturer's standard product, selected from the following, that complies with ANSI A118.12 for standard performance or high performance and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Chlorinated Polyethylene Sheet: Nonplasticized, chlorinated polyethylene faced on both sides with nonwoven polyester fabric; 0.030-inch (0.76-mm) nominal thickness.

C. PVC Sheet: PVC heat-fused on both sides to facings of nonwoven polyester; 0.040-inch (1-mm) nominal thickness.

D. Polyethylene Sheet: Polyethylene faced on both sides with fleece webbing; 0.008-inch (0.203-mm) nominal thickness.

E. Corrugated Polyethylene: Corrugated polyethylene with dovetail-shaped corrugations and with anchoring webbing on the underside; 1/8-inch (3-mm) nominal thickness.

F. Fabric-Reinforced, Modified-Bituminous Sheet: Self-adhering, modified-bituminous sheet with fabric reinforcement facing; 0.040-inch (1.01-mm) nominal thickness.

G. Fabric-Reinforced, Fluid-Applied Membrane: System consisting of liquid-latex rubber or elastomeric polymer and fabric reinforcement.

H. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.

I. Latex-Portland Cement Crack-Resistant Mortar: Flexible mortar consisting of cement-based mix and latex additive.

J. Crack Isolation Membrane and Tile-Setting Adhesive: One-part, fluid-applied product intended for use as both a crack isolation membrane and tile-setting adhesive in a two-step process.

2.5 SETTING MATERIALS

A. Portland Cement Mortar (Thickset) Installation Materials: ANSI A108.02.

B. Standard Dry-Set Mortar (Thinset): ANSI A118.1.
1. For wall applications, provide nonsagging mortar.

C. Modified Dry-Set Mortar (Thinset): ANSI A118.4.
1. Provide prepackaged, dry-mortar mix to which only water must be added at Project site.
2. Provide prepackaged, dry-mortar mix combined with liquid-latex additive at Project site.
3. For wall applications, provide nonsagging mortar.

D. Improved Modified Dry-Set Mortar (Thinset): ANSI A118.15.
1. Provide prepackaged, dry-mortar mix to which only water must be added at Project site.
2. Provide prepackaged, dry-mortar mix combined with liquid-latex additive at Project site.
3. For wall applications, provide nonsagging mortar.

E. Water-Cleanable, Tile-Setting Epoxy: ANSI A118.3.

F. Organic Adhesive: ANSI A136.1, Type I.

2.6 GROUT MATERIALS

A. Sand-Portland Cement Grout: ANSI A108.10, consisting of white or gray cement and white or colored aggregate as required to produce color indicated.

B. Standard Cement Grout: ANSI A118.6.

C. High-Performance Tile Grout: ANSI A118.7.
   1. Polymer Type: Dry, redispersible form, prepackaged with other dry ingredients.
   2. Polymer Type: Liquid-latex form for addition to prepackaged dry-grout mix.

D. Water-Cleanable Epoxy Grout: ANSI A118.3, with a VOC content of 65 g/L or less.

2.7 MISCELLANEOUS MATERIALS

A. Trowelable Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.

B. Metal Edge Strips: Angle or L-shaped, height to match stone tile and setting-bed thickness, metallic or combination of metal and PVC or neoprene base, designed specifically for flooring applications; half-hard brass, white zinc alloy, nickel silver or stainless-steel, ASTM A666, 300 Series exposed-edge material as directed.

C. Floor Sealer: Colorless, stain- and slip-resistant sealer, not affecting color or physical properties of stone surfaces as recommended by stone tile producers for application indicated.

2.8 FABRICATION

A. Facial Dimensions of Stone Tiles with Polished or Honed Faces: Do not vary facial dimensions from specified dimensions by more than plus or minus 1/64 inch (0.4 mm).

B. Facial Dimensions of Stone Tiles with Sand-Rubbed, Natural-Cleft, or Thermal-Finished Faces as directed: Do not vary facial dimensions from specified dimensions by more than plus or minus 1/32 inch (0.8 mm).

C. Thickness of Stone Tiles with Polished, Honed or Sand-Rubbed Finish as directed: Do not vary from specified thickness by more than plus or minus 1/32 inch (0.8 mm).

D. Thickness of Stone Tiles with Natural-Cleft or Thermal Finish: Do not vary average thickness of each stone tile from specified thickness by more than plus or minus 1/32 inch (0.8 mm) or 1/16 inch (1.5 mm) as directed.

E. Backs of Tiles: Gage units by dressing backs of tiles smooth and flat. When tested with a 24-inch (600-mm) straightedge, gap shall not exceed 1/32 inch (0.8 mm).

   1. Natural-cleft stone need not be gaged if gap does not exceed 1/16 inch (1.5 mm) when tested with a 24-inch (610-mm) straightedge on backs of units.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions where stone tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. Verify that substrates for setting stone tile are firm; dry; clean; free of coatings that are incompatible with tile-setting materials, including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
2. Verify that concrete substrates for stone tile floors installed with adhesives, bonded mortar bed or thinset mortar comply with surface finish requirements in ANSI A108.01 for installations indicated as directed.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Fill cracks, holes, and depressions in concrete substrates for stone tile floors installed with adhesives or thinset mortar with trowelable patching compound specifically recommended by tile-setting material manufacturer.

B. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1A and is sloped 1/4 inch per foot (1:50) toward drains.

3.3 STONE TILE INSTALLATION

A. Comply with TCNA's "Handbook for Ceramic, Glass, and Stone Tile Installation" for TCNA installation methods specified in stone tile installation schedules. Comply with parts of the ANSI A108 series "Specifications for Installation of Ceramic Tile" that are referenced in TCNA installation methods specified in stone tile installation schedules and apply to types of setting and grouting materials used.

1. For the following installations, follow procedures in the ANSI A108 series of tile installation standards for providing 95 percent mortar coverage:

    a. Exterior stone tile floors.
    b. Stone tile floors in wet areas.
    c. Stone tile floors consisting of stone tiles 8 by 8 inches (200 by 200 mm) or larger.

B. Extend stone tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.

C. Accurately form intersections and returns. Perform cutting and drilling of stone tile without marring visible surfaces. Carefully grind cut edges of stone tile abutting trim, finish, or built-in

items for straight aligned joints. Fit stone tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap stone tile.

D. Finish cut stone tile edges that will not be concealed by other construction by grinding and honing cut surfaces and beveling edges and easing edges to match factory-fabricated edges unless otherwise indicated.

E. Where accent tile differs in thickness from field tile, vary setting-bed thickness so that tiles are flush.

F. Jointing Pattern: Lay stone tile in grid pattern unless otherwise indicated. Lay out stone tile work and center stone tile fields in both directions in each space or on each wall area. Lay out stone tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.

G. Match stone tiles within each space by selecting tiles to achieve uniformity of color and pattern. Reject or relocate stone tiles that do not match color and pattern of adjacent tiles.

H. Mix stone tiles to achieve a uniformly random distribution of color shadings and patterns.

I. Pattern Orientation: For stone varieties with directional pattern, orient pattern as indicated or directed by Architect.

J. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated. Form joints during installation of setting materials, mortar beds, and stone tile. Do not saw-cut joints after installing stone tiles.

1. Where joints occur in concrete substrates, locate joints in stone tile surfaces directly above them.

K. Metal Edge Strips: Install at locations indicated, where exposed edge of stone tile flooring meets carpet, wood, or other flooring that finishes flush with top of stone tile or where exposed edge of stone tile flooring meets carpet, wood, or other flooring that finishes flush with or below top of stone tile and no threshold is indicated.

3.4 TILE BACKING PANEL INSTALLATION

A. Install panels and treat joints according to ANSI A108.11 and manufacturer's written instructions for type of application indicated. Use modified dry-set mortar for bonding material unless otherwise directed in manufacturer's written instructions.

3.5 WATERPROOFING INSTALLATION

A. Install waterproofing to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness and bonded securely to substrate.

3.6 CRACK ISOLATION MEMBRANE INSTALLATION

A. Install crack isolation membrane to comply with ANSI A108.17 and manufacturer's written instructions to produce membrane of uniform thickness and bonded securely to substrate.

3.7 INSTALLATION TOLERANCES

A. Variation from Plumb: For vertical joints, external corners, and other conspicuous lines, do not exceed 1/8 inch in 8 ft. (3 mm in 2.4 m).

B. Variation in Level: For horizontal joints and other conspicuous lines, do not exceed 1/8 inch in 10 ft. (3 mm in 3 m), or 1/2 inch (12 mm).

C. Variation in Surface Plane of Flooring: Do not exceed 1/8 inch in 10 ft. (3 mm in 3 m) from level or slope indicated when tested with a 10-ft. (3-m) straightedge.

D. Variation in Plane between Adjacent Units (Lipping): Do not exceed the following differences between faces of adjacent units as measured from a straightedge parallel to stone tiled surface:

1. Units with Polished Faces: 1/64 inch (0.4 mm).
2. Units with Honed Faces: 1/64 inch (0.4 mm) or 1/32 inch (0.8 mm) as directed.
3. Units with Sand-Rubbed Faces: 1/32 inch (0.8 mm).
4. Units with Thermal-Finished Faces: Depth of thermal finish or 3/16 inch (5 mm), whichever is less.
5. Units with Natural-Cleft Faces: Depth of natural-cleft finish or 3/16 inch (5 mm), whichever is less.

E. Variation in Joint Width: Do not vary joint thickness more than 1/16 inch (1.6 mm) or one-fourth of nominal joint width, whichever is less.

F. Hand-Tight Joints: Do not exceed 1/64 inch (0.4 mm) or 1/32 inch (0.8 mm) as directed.

3.8 CLEANING AND PROTECTION

A. Cleaning: On completion of placement and grouting, clean stone tile surfaces so they are free of foreign matter.

B. Apply sealer to cleaned stone tile flooring according to sealer manufacturer's written instructions.

3.9 EXTERIOR STONE TILE INSTALLATION SCHEDULE

A. Exterior Floor Installations:

1. Stone Tile Installation: TCNA F101 STONE and ANSI A108.1A, ANSI A108.1BANSI A108.1C; cement mortar bed (thickset) bonded to concrete, over waterproof membrane on concrete or over waterproof membrane on concrete where indicated and bonded to concrete where membrane is not indicated.

a. Stone Tile Type: As directed.
b. Bond Coat for Cured-Bed Method: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded or High-performance unsanded grout as directed.

2. Stone Tile Installation: TCNA F102 STONE; thinset mortar on concrete, over waterproof membrane on concrete or over waterproof membrane on concrete where indicated and on concrete where membrane is not indicated.

a. Stone Tile Type: As directed.
b. Thinset Mortar: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded or High-performance unsanded grout as directed.

B. Exterior Roof/Deck Floor Installations:

1. Stone Tile Installation: TCNA F103 STONE or TCNA F103B STONE and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C as directed; cement mortar bed (thickset) over drainage material on roof membrane.

a. Stone Tile Type: As directed.
b. Bond Coat for Cured-Bed Method: Modified dry-set or Improved modified dry-set mortar as directed.
c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded or High-performance unsanded grout as directed.

2. Stone Tile Installation: TCNA F104 STONE; thinset mortar on concrete, over waterproof membrane on concrete or over waterproof membrane on concrete where indicated and on concrete where membrane is not indicated.

a. Stone Tile Type: As directed.
b. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar as directed.
c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded or High-performance unsanded grout as directed.

C. Exterior Wall Installations, Masonry or Concrete:

1. Stone Tile Installation: TCNA W201 STONE and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C as directed; cement mortar bed (thickset) on metal lath over vapor-retarder membrane.

a. Stone Tile Type: As directed.
b. Bond Coat for Wet-Set Method: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
c. Bond Coat for Cured-Bed Method: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
d. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded or High-performance unsanded grout as directed.

2. Stone Tile Installation: TCNA W202 STONE; thinset mortar over waterproof membrane.

    a. Stone Tile Type: As directed.
    b. Thinset Mortar: Standard dry-set, modified dry-set or Improved modified dry-set mortar.
    c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded or High-performance unsanded grout as directed.

D. Exterior Wall Installations, Wood or Metal Studs:

1. Stone Tile Installation: TCNA W244E STONE; thinset mortar over waterproof membrane on cementitious backer units or on cementitious backer units over vapor-retarder membrane.

    a. Stone Tile Type: As directed.
    b. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar.
    c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded or High-performance unsanded grout as directed.

3.10 INTERIOR STONE TILE INSTALLATION SCHEDULE

A. Interior Floor Installations, Concrete Subfloor:

1. Stone Tile Installation: TCNA F111 STONE and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C as directed; cement mortar bed (thickset) with cleavage membrane.

    a. Stone Tile Type: As directed.
    b. Bond Coat for Cured-Bed Method: Modified dry-set mortar, improved modified dry-set mortar or Water-cleanable, tile-setting epoxy as directed.
    c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded or High-performance unsanded grout as directed.

2. Stone Tile Installation: TCNA F112 STONE and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C as directed; cement mortar bed (thickset) bonded to concrete.

    a. Stone Tile Type: As directed.
    b. Bond Coat for Cured-Bed Method: Modified dry-set mortar, improved modified dry-set mortar or Water-cleanable, tile-setting epoxy as directed.
    c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded or High-performance unsanded grout as directed.

3. Stone Tile Installation: TCNA F113 STONE; thinset mortar or water-cleanable, tile-setting epoxy as directed.

    a. Stone Tile Type: As directed.
    b. Thinset Mortar: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.

c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

4. Stone Tile Installation: TCNA F121 STONE and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C as directed; cement mortar bed (thickset) on waterproof membrane.

   a. Stone Tile Type: As directed.
   b. Bond Coat for Cured-Bed Method: Modified dry-set mortar, improved modified dry-set mortar or Water-cleanable, tile-setting epoxy as directed.
   c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded or High-performance unsanded grout as directed.

5. Stone Tile Installation: TCNA F122 STONE; thinset mortar or water-cleanable, tile-setting epoxy on waterproof membrane as directed.

   a. Stone Tile Type: As directed.
   b. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar as directed.
   c. Grout: High-performance sanded or unsanded grout as directed.

6. Stone Tile Installation: TCNA F125-Full STONE; thinset mortar on crack isolation membrane.

   a. Stone Tile Type: As directed.
   b. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar as directed.
   c. Grout: Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

B. Interior Floor Installations, Wood Subfloor:

1. Stone Tile Installation: TCNA F141 STONE and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C; cement mortar bed (thickset) over cleavage membrane or waterproof membrane as directed.

   a. Stone Tile Type: As directed.
   b. Bond Coat for Cured-Bed Method: Modified dry-set mortar, improved modified dry-set mortar or Water-cleanable, tile-setting epoxy as directed.
   c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

2. Stone Tile Installation: TCNA F250 STONE; thinset mortar, water-cleanable, tile-setting epoxy on waterproof membrane over cementitious backer units or fiber-cement backer board.

   a. Stone Tile Type: As directed.
   b. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar as directed.
   c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

C. Interior Radiant-Heat Floor Installations, Concrete Subfloor:

1. Stone Tile Installation: TCNA RH110 STONE; thinset mortar, water-cleanable, tile-setting epoxy on crack isolation membrane; hydronic piping installed in concrete.

   a. Stone Tile Type: As directed.
   b. Thinset Mortar: Modified dry-set or Improved modified dry-set mortar as directed.
   c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

2. Stone Tile Installation: TCNA RH117 STONE and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C as directed; cement mortar bed (thickset) with hydronic piping installed in mortar bed.

   a. Stone Tile Type: As directed.
   b. Bond Coat for Cured-Bed Method: Modified dry-set mortar, improved modified dry-set mortar or Water-cleanable, tile-setting epoxy as directed.
   c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

D. Interior Radiant-Heat Floor Installations, Wood Subfloor:

1. Stone Tile Installation: TCNA RH141 STONE and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C as directed; cement mortar bed (thickset) with hydronic piping installed in mortar bed with cleavage membrane or waterproof membrane.

   a. Stone Tile Type: As directed.
   b. Bond Coat for Cured-Bed Method: Modified dry-set mortar, improved modified dry-set mortar or Water-cleanable, tile-setting epoxy as directed.
   c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

E. Interior Wall Installations, Masonry or Concrete:

1. Stone Tile Installation: TCNA W211 STONE and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C; cement mortar bed (thickset) bonded to substrate.

   a. Stone Tile Type: As directed.
   b. Bond Coat for Wet-Set Method: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
   c. Bond Coat for Cured-Bed Method: Modified dry-set mortar, improved modified dry-set mortar or Water-cleanable, tile-setting epoxy as directed.
   d. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

2. Stone Tile Installation: TCNA W221 STONE and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C, cement mortar bed (thickset) on metal lath over cleavage membrane or over waterproof membrane as directed.

    a. Stone Tile Type: As directed.
    b. Bond Coat for Wet-Set Method: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
    c. Bond Coat for Cured-Bed Method: Modified dry-set mortar, improved modified dry-set mortar or Water-cleanable, tile-setting epoxy as directed.
    d. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

3. Stone Tile Installation: TCNA W222 STONE and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C; one-coat cement mortar bed (thickset) on metal lath over cleavage membrane or over waterproof membrane as directed.

    a. Stone Tile Type: As directed.
    b. Bond Coat for Wet-Set Method: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
    c. Bond Coat for Cured-Bed Method: Modified dry-set mortar, improved modified dry-set mortar or Water-cleanable, tile-setting epoxy as directed.
    d. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

F. Interior Wall Installations, Wood or Metal Studs or Furring:

1. Stone Tile Installation: TCNA W221 STONE and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C; cement mortar bed (thickset) over cleavage membrane or over waterproof membrane on solid backing as directed.

    a. Stone Tile Type: As directed.
    b. Bond Coat for Wet-Set Method: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
    c. Bond Coat for Cured-Bed Method: Modified dry-set mortar, improved modified dry-set mortar or Water-cleanable, tile-setting epoxy as directed.
    d. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

2. Stone Tile Installation: TCNA W222 STONE and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C; one-coat cement mortar bed (thickset) over cleavage membrane or over waterproof membrane on solid backing.

    a. Stone Tile Type: As directed.
    b. Bond Coat for Wet-Set Method: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
    c. Bond Coat for Cured-Bed Method: Modified dry-set mortar, improved modified dry-set mortar or Water-cleanable, tile-setting epoxy as directed.

d. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

3. Stone Tile Installation: TCNA W231/W241 STONE and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C; cement mortar bed (thickset) over cleavage membrane or waterproof membrane as directed.

   a. Stone Tile Type: As directed.
   b. Bond Coat for Wet-Set Method: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
   c. Bond Coat for Cured-Bed Method: Modified dry-set mortar, improved modified dry-set mortar or Water-cleanable, tile-setting epoxy as directed.
   d. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded or High-performance unsanded grout as directed.

4. Stone Tile Installation: TCNA W243 STONE; thinset mortar or water-cleanable, tile-setting epoxy on gypsum board as directed.

   a. Stone Tile Type: As directed.
   b. Thinset Mortar: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
   c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

5. Stone Tile Installation: TCNA W244 STONE; thinset mortar or water-cleanable, tile-setting epoxy on cementitious backer units or fiber-cement backer board over vapor-retarder membrane.

   a. Stone Tile Type: As directed.
   b. Thinset Mortar: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
   c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

6. Stone Tile Installation: TCNA W245 STONE; thinset mortar or water-cleanable, tile-setting epoxy on coated glass-mat, water-resistant gypsum backer board.

   a. Stone Tile Type: As directed.
   b. Thinset Mortar: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
   c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

G. Bathtub Wall Installations with no Shower Head, Wood or Metal Studs or Furring:

1. Stone Tile Installation: TCNA B413 STONE; thinset mortar or water-cleanable, tile-setting epoxy on water-resistant gypsum board as directed.

a. Stone Tile Type: As directed.
b. Thinset Mortar: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

H. Bathtub/Shower Wall Installations, Wood or Metal Studs or Furring:

1. Stone Tile Installation: TCNA B411 STONE and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C as directed; cement mortar bed (thickset) over vapor-retarder membrane.

a. Stone Tile Type: As directed.
b. Bond Coat for Wet-Set Method: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
c. Bond Coat for Cured-Bed Method: Standard dry-set mortar, modified dry-set mortar, Improved modified dry-set mortar or Water-cleanable, tile-setting epoxy as directed.
d. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout.

2. Stone Tile Installation: TCNA B412 STONE; thinset mortar or water-cleanable, tile-setting epoxy on cementitious backer units or fiber-cement backer board.

a. Stone Tile Type: As directed.
b. Thinset Mortar: Standard dry-set, Modified dry-set or Improved modified dry-set mortar as directed.
c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

3. Stone Tile Installation: TCNA B419 STONE; thinset mortar or water-cleanable, tile-setting epoxy on coated glass-mat, water-resistant gypsum backer board.

a. Stone Tile Type: As directed

I. Shower Receptor and Wall Installations:

1. Stone Tile Installation: TCNA B414 STONE and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C as directed; cement mortar bed (thickset) over vapor-retarder membrane.

a. Stone Tile Type: As directed.
b. Bond Coat for Wet-Set Method: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
c. Bond Coat for Cured-Bed Method: Modified dry-set mortar, improved modified dry-set mortar or Water-cleanable, tile-setting epoxy as directed.
d. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded or High-performance unsanded grout as directed.

2. Stone Tile Installation: TCNA B415 STONE; thinset mortar or water-cleanable, tile-setting epoxy on waterproof membrane over cementitious backer units or fiber-cement backer board or cementitious backer units or fiber-cement backer board over vapor-retarder membrane as directed

    a. Stone Tile Type: As directed.
    b. Thinset Mortar: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
    c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

3. Stone Tile Installation: TCNA B420 STONE; thinset mortar or water-cleanable, tile-setting epoxy on waterproof membrane over coated glass-mat, water-resistant gypsum backer board or coated glass-mat, water-resistant gypsum backer board over vapor-retarder membrane as directed.

    a. Stone Tile Type: As directed.
    b. Thinset Mortar: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
    c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

4. Stone Tile Installation: TCNA B421 STONE; thinset mortar or water-cleanable, tile-setting epoxy on waterproof membrane over solid backing as directed.

    a. Stone Tile Type: As directed.
    b. Thinset Mortar: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
    c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

5. Stone Tile Installation: TCNA B422 STONE; thinset mortar or water-cleanable, tile-setting epoxy on waterproof membrane with integrated bonding flange for bonded membranes as directed.

    a. Stone Tile Type: As directed.
    b. Thinset Mortar: Standard dry-set, modified dry-set or Improved modified dry-set mortar as directed.
    c. Grout: Sand-portland cement, Standard sanded cement, Standard unsanded cement, High-performance sanded, High-performance unsanded or Water-cleanable epoxy grout as directed.

END OF SECTION 093033

SECTION 093500 - CHEMICAL-RESISTANT TILING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Chemical-resistant tile.
2. Tile backing panels.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

1.4 QUALITY ASSURANCE

A. Installer Qualifications:

1. Installer is a five-star member of the National Tile Contractors Association or a Trowel of Excellence member of the Tile Contractors' Association of America.
2. Installer's supervisor for Project holds the International Masonry Institute's Foreman Certification.
3. Installer employs Ceramic Tile Education Foundation Certified Installers or installers recognized by the U.S. Department of Labor as Journeyman Tile Layers.

PART 2 - PRODUCTS

2.1 PRODUCTS, GENERAL

A. ANSI Ceramic Tile Standard: Provide standard grade tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.

B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCNA installation methods specified in tile installation schedules, and other requirements specified.

C. Factory-Applied Temporary Protective Coating: Where indicated under tile type, protect exposed surfaces of tile against adherence of mortar and grout by precoating with continuous film of petroleum paraffin wax, applied hot. Do not coat unexposed tile surfaces.

2.2 CHEMICAL-RESISTANT TILE PRODUCTS

A. Chemical-Resistant Tile Type CRT-#: Unglazed square-edged quarry tile.
1. Face Size: 3 by 3 inches (76 by 76 mm), 4 by 4 inches (102 by 102 mm), 6 by 3 inches (152 by 76 mm), 6 by 6 inches (152 by 152 mm), 8 by 3-7/8 inches (200 by 98 mm) or 8 by 8 inches (200 by 200 mm) as directed.
2. Thickness: 3/8 inch (9.5 mm), 1/2 inch (12.7 mm) or 3/4 inch (19 mm) as directed.
3. Wearing Surface: Nonabrasive, smooth or Abrasive aggregate embedded in surface as directed.
4. Dynamic Coefficient of Friction: Not less than 0.42.
5. Tile Color and Pattern: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from manufacturer's full range.
6. Grout Color: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from manufacturer's full range.
7. Precoat with temporary protective coating.
8. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile. Provide shapes as follows, selected from manufacturer's standard shapes:

    a. Base: Coved with surface bullnose top edge, face size 6 by 6 inches (152 by 152 mm) or 8 by 3-7/8 inches (200 by 98 mm) as directed.
    b. Wainscot Cap: Surface bullnose, face size 6 by 6 inches (152 by 152 mm) or 8 by 3-7/8 inches (200 by 98 mm) as directed.

2.3 TILE BACKING PANELS

A. Cementitious Backer Units: ANSI A118.9 or ASTM C1325, Type A.
1. Thickness: 1/4 inch (6.4 mm), 1/2 inch (12.7 mm), 5/8 inch (15.9 mm) or As indicated.

B. Fiber-Cement Backer Board: ASTM C1288.
1. Thickness: 1/4 inch (6.4 mm), 1/2 inch (12.7 mm) or As indicated.

2.4 SETTING MATERIALS

A. Portland Cement Mortar (Thickset) Installation Materials: ANSI A108.02.

B. Dry-Set Portland Cement Mortar (Thinset): ANSI A118.1.
1. For wall applications, provide nonsagging mortar.

C. Latex-Portland Cement Mortar (Thinset): ANSI A118.4.
1. Provide prepackaged, dry-mortar mix to which only water must be added at Project site.
2. Provide prepackaged, dry-mortar mix combined with liquid-latex additive at Project site.
3. For wall applications, provide nonsagging mortar.

D. Water-Cleanable, Tile-Setting Epoxy: ANSI A118.3.
   1. Provide product capable of withstanding continuous and intermittent exposure to temperatures of up to 140 and 212 deg F (60 and 100 deg C), respectively, and certified by manufacturer for intended use.

E. Chemical-Resistant Furan Mortar: ANSI A118.5, with carbon filler.

2.5 GROUT MATERIALS

A. Water-Cleanable Epoxy Grout: ANSI A118.3, with a VOC content of 65 g/L or less.
   1. Provide product capable of withstanding continuous and intermittent exposure to temperatures of up to 140 F and 212 deg F (60 and 100 deg C), respectively, and certified by manufacturer for intended use.

B. Chemical-Resistant Furan Grout: ANSI A118.5, with carbon filler.

C. Chemical-Resistant Vinyl-Ester Resin Grout: ASTM C658.

2.6 ELASTOMERIC SEALANTS

A. General: Provide sealants, primers, backer rods, and other sealant accessories that comply with the following requirements and with the applicable requirements in Section 079200 "Joint Sealants."
   1. Use primers, backer rods, and sealant accessories recommended by sealant manufacturer.

B. Chemical-Resistant Sealants: Provide chemical-resistant elastomeric sealant of type recommended and produced by chemical-resistant mortar and grout manufacturer for type of application indicated, with proven service record and compatibility with tile and other setting materials, and with chemical resistance equivalent to mortar/grout.

2.7 MISCELLANEOUS MATERIALS

A. Trowelable underlayments and patching compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.

B. Temporary Protective Coating: Petroleum paraffin wax, fully refined and odorless, containing at least 0.5 percent oil with a melting point of 120 to 140 deg F (49 to 60 deg C) according to ASTM D87 and formulated to protect exposed surfaces of tile against adherence of mortar and grout; compatible with tile, mortar, and grout products; and easily removable after grouting is completed without damaging grout or tile.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. Verify that substrates for setting tile are firm; dry; clean; free of coatings that are incompatible with tile-setting materials, including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
2. Verify that concrete substrates for tile floors comply with surface finish requirements in ANSI A108.01 for installations indicated.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Fill cracks, holes, and depressions in concrete substrates for tile floors with trowelable leveling and patching compound specifically recommended by tile-setting material manufacturer.

B. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

C. Field-Applied Temporary Protective Coating: If indicated under tile type or needed to prevent grout from staining or adhering to exposed tile surfaces, precoat them with continuous film of temporary protective coating, taking care not to coat unexposed tile surfaces.

3.3 CHEMICAL-RESISTANT TILE INSTALLATION

A. Comply with TCNA's "Handbook for Ceramic, Glass, and Stone Tile Installation" for TCNA installation methods specified in tile installation schedules. Comply with parts of the ANSI A108 series "Specifications for Installation of Ceramic Tile" that are referenced in TCNA installation methods, specified in tile installation schedules, and apply to types of setting and grouting materials used.

B. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.

C. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

D. Provide manufacturer's standard trim shapes where necessary to eliminate exposed tile edges.

E. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.

F. Joint Widths: Unless otherwise indicated, install tile with 1/4-inch (6.4-mm) or 3/8-inch (9.5-mm) joint width.

G. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated. Form joints during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.

1. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.
2. Prepare joints and apply sealants to comply with requirements in Section 079200 "Joint Sealants."

H. Install cementitious backer units and fiber-cement backer board and treat joints according to ANSI A108.11 and manufacturer's written instructions for type of application indicated. Use latex-portland cement mortar for bonding material unless otherwise directed in manufacturer's written instructions.

3.4 CLEANING AND PROTECTING

A. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.

1. Remove temporary protective coating by method recommended by coating manufacturer and that is acceptable to tile and grout manufacturer. Trap and remove coating to prevent drain clogging.

3.5 CHEMICAL-RESISTANT TILE INSTALLATION SCHEDULE

A. Interior Floor Installations, Concrete:

1. Chemical-Resistant Tile Installation: TCNA F114 and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C; cement mortar bed (thickset) with cleavage membrane.

a. Chemical-Resistant Tile Type: As directed.
b. Bond Coat for Cured-Bed Method: Dry-set or Latex-portland cement mortar.
c. Grout: Water-cleanable epoxy, Chemical-resistant furan or Chemical-resistant vinyl-ester as directed.

2. Chemical-Resistant Tile Installation: TCNA F115; thinset mortar.

a. Chemical-Resistant Tile Type: As directed.
b. Thinset Mortar: Dry-set or Latex-portland cement mortar.
c. Grout: Water-cleanable epoxy, Chemical-resistant furan or Chemical-resistant vinyl-ester a directed.

3. Chemical-Resistant Tile Installation: TCNA F131; water-cleanable, tile-setting epoxy.

    a. Chemical-Resistant Tile Type: As directed.
    b. Grout: Water-cleanable epoxy or Chemical-resistant vinyl-ester.

4. Chemical-Resistant Tile Installation: TCNA F132; Water-cleanable, tile-setting epoxy on cured cement mortar bed bonded to concrete subfloor or installed over cleavage membrane as directed.

    a. Chemical-Resistant Tile Type: As directed.
    b. Grout: Water-cleanable epoxy or Chemical-resistant vinyl-ester.

5. Chemical-Resistant Tile Installation: TCNA F133 except use water-cleanable, tile-setting epoxy instead of furan mortar; furan grout.

    a. Chemical-Resistant Tile Type: As directed.
    b. Bond Coat: Chemical-resistant furan mortar or Water-cleanable, tile-setting epoxy as directed.
    c. Grout: Chemical-resistant furan grout.

B. Interior Wall Installations, Masonry or Concrete:

1. Chemical-Resistant Tile Installation: TCNA W202; thinset mortar.

    a. Chemical-Resistant Tile Type: As directed.
    b. Thinset Mortar: Dry-set or Latex-portland cement mortar as directed.
    c. Grout: Water-cleanable epoxy or Chemical-resistant vinyl-ester.

2. Chemical-Resistant Tile Installation: TCNA W211 and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C; cement mortar bed (thickset) bonded to substrate as directed.

    a. Chemical-Resistant Tile Type: As directed.
    b. Bond Coat for Wet-Set Method: Dry-set or Latex-portland cement mortar as directed.
    c. Bond Coat for Cured-Bed Method: Dry-set or Latex-portland cement mortar as directed.
    d. Grout: Water-cleanable epoxy or Chemical-resistant vinyl-ester as directed.

3. Chemical-Resistant Tile Installation: TCNA W221 and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C; cement mortar bed (thickset) on metal lath over cleavage membrane or over waterproof membrane as directed.

    a. Chemical-Resistant Tile Type: As directed.
    b. Bond Coat for Wet-Set Method: Dry-set or Latex-portland cement mortar as directed.
    c. Bond Coat for Cured-Bed Method: Dry-set or Latex-portland cement mortar as directed.
    d. Grout: Water-cleanable epoxy or Chemical-resistant vinyl-ester as directed.

C. Interior Wall Installations, Wood or Metal Studs or Furring:

1. Chemical-Resistant Tile Installation: TCNA W221 and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C; cement mortar bed (thickset) over cleavage membrane or over waterproof membrane on solid backing.

    a. Chemical-Resistant Tile Type: As directed.
    b. Bond Coat for Wet-Set Method: Dry-set or Latex- portland cement mortar.
    c. Bond Coat for Cured-Bed Method: Dry-set or Latex-portland cement mortar.
    d. Grout: Water-cleanable epoxy or Chemical-resistant vinyl-ester.

2. Chemical-Resistant Tile Installation: TCNA W222 and ANSI A108.1A, ANSI A108.1B or ANSI A108.1C; one-coat cement mortar bed (thickset) over cleavage membrane or over waterproof membrane on solid backing as directed.

    a. Chemical-Resistant Tile Type: As directed.
    b. Bond Coat for Wet-Set Method: Dry-set or Latex-portland cement mortar as directed.
    c. Bond Coat for Cured-Bed Method: Dry-set or Latex-portland cement mortar as directed.
    d. Grout: Water-cleanable epoxy or Chemical-resistant vinyl-ester as directed.

3. Chemical-Resistant Tile Installation: TCNA W244C or TCNA W244F; thinset mortar on cementitious backer units or fiber-cement backer board over vapor-retarder membrane.

    a. Chemical-Resistant Tile Type: As directed.
    b. Thinset Mortar: Dry-set or Latex-portland cement mortar as directed.
    c. Grout: Water-cleanable epoxy or Chemical-resistant vinyl-ester as directed.

END OF SECTION 093500

SECTION 095113 - ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes acoustical panels and exposed suspension systems for interior ceilings.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference as directed.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Samples: For each exposed product and for each color and texture specified.

D. Delegated-Design Submittal: For seismic restraints for ceiling systems.

1. Include design calculations for seismic restraints including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, and coordinated with each other, using input from installers of the items involved.

B. Product test reports.

C. Research reports.

D. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design seismic restraints for ceiling systems.

B. Seismic Performance: Suspended ceilings shall withstand the effects of earthquake motions determined according to ASCE/SEI 7 as directed.

C. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: Class A, B or C according to ASTM E1264 and as directed.
2. Smoke-Developed Index: 50 or 450 as directed.

2.2 ACOUSTICAL PANELS

A. Acoustical Panel Standard: Manufacturer's standard panels according to ASTM E1264.

B. Classification: As directed.

C. Color: White or as directed.

D. Light Reflectance (LR): As directed.

E. Ceiling Attenuation Class (CAC): As directed

F. Noise Reduction Coefficient (NRC): As directed.

G. Articulation Class (AC): As directed.

H. Edge/Joint Detail: As directed.

I. Thickness: As directed.

J. Modular Size: As directed.

2.3 METAL SUSPENSION SYSTEM

A. Metal Suspension-System Standard: Manufacturer's standard, direct-hung, metal suspension system and accessories according to ASTM C635/C635M.

B. Wide-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; prepainted, electrolytically zinc coated, or hot-dip galvanized, G30 (Z90) coating designation; with prefinished 15/16-inch- (24-mm-) wide metal caps on flanges.

1. Structural Classification: Intermediate or Heavy-duty system.

2. End Condition of Cross Runners: Override (stepped) or butt-edge type.
3. Face Design: Flat, flush.
4. Cap Material: Cold-rolled steel or aluminum.
5. Cap Finish: Painted white or as directed.

C. Narrow-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; prepainted, electrolytically zinc coated, or hot-dip galvanized, G30 (Z90) coating designation; with prefinished 9/16-inch- (15-mm-) wide metal caps on flanges.

1. Structural Classification: Intermediate or Heavy-duty system.
2. End Condition of Cross Runners: Override (stepped) or butt-edge type.
3. Face Design: Flat, flush or Flanges formed with an integral center reveal.
4. Cap Material: Cold-rolled steel or aluminum.
5. Cap Finish: Painted white or as directed.

2.4 ACCESSORIES

A. Attachment Devices: Size for five times the design load indicated in ASTM C635/C635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.

B. Hold-Down Clips: Manufacturer's standard hold-down.

C. Impact Clips: Manufacturer's standard impact-clip system designed to absorb impact forces against acoustical panels.

D. Seismic Clips: Manufacturer's standard seismic clips designed to secure acoustical panels in place during a seismic event.

2.5 METAL EDGE MOLDINGS AND TRIM

A. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension-system runners.

PART 3 - EXECUTION

3.1 PREPARATION

A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders unless otherwise indicated.

B. Layout openings for penetrations centered on the penetrating items.

3.2 INSTALLATION

A. Install acoustical panel ceilings according to ASTM C636/C636M, seismic design requirements, and manufacturer's written instructions.

B. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.

1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
2. Do not use exposed fasteners, including pop rivets, on moldings and trim.
3. Arrange directionally patterned acoustical panels as follows:

    a. As indicated on reflected ceiling plans.
    b. Install panels with pattern running in one direction parallel to long or short axis of space.
    c. Install panels in a basket-weave pattern.

4. Install hold-down, impact and seismic clips (as directed) in areas indicated; space according to panel manufacturer's written instructions unless otherwise indicated.

3.3 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage or Engage a qualified special inspector to perform inspections.

1. Periodic inspection during the installation of suspended ceiling grids according to ASCE/SEI 7.

END OF SECTION 095113

SECTION 095123 - ACOUSTICAL TILE CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Acoustical tiles for interior ceilings.
2. Fully concealed, direct-hung, suspension systems.

B. Related Requirements:

1. Section 095113 "Acoustical Panel Ceilings" for ceilings consisting of mineral-base and glass-fiber-base acoustical panels and exposed suspension systems.
2. Section 095133 "Acoustical Metal Pan Ceilings" for ceilings consisting of metal-pan units with exposed and concealed suspension systems.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference as directed.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Samples: For each exposed product and for each color and texture specified.

D. Delegated-Design Submittal: For seismic restraints for ceiling systems.

1. Include design calculations for seismic restraints including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, and coordinated with each other, using input from installers of the items involved.

B. Product test reports.

C. Research reports.

D. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design seismic restraints for ceiling systems.

B. Seismic Performance: Suspended ceilings shall withstand the effects of earthquake motions determined according to ASCE/SEI 7 as directed.

C. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: Class A, B or C according to ASTM E1264 as directed.
2. Smoke-Developed Index: 50 or 450, as directed or less.

2.2 ACOUSTICAL TILES

A. Acoustical Tile Standard: Manufacturer's standard tiles of configuration indicated that comply with ASTM E1264.

B. Classification: As directed.

C. Color: White or as directed.

D. Light Reflectance (LR): As directed.

E. Ceiling Attenuation Class (CAC): As directed.

F. Noise Reduction Coefficient (NRC): As directed.

G. Articulation Class (AC): As directed.

H. Edge/Joint Detail: As directed.

I. Thickness: 5/8 inch (15 mm) or 3/4 inch (19 mm). as directed.

J. Modular Size: 12 by 12 inches (305 by 305 mm) or 300 by 300 mm as directed.

2.3 METAL SUSPENSION SYSTEM

A. Metal Suspension-System Standard: Manufacturer's standard, direct-hung, fully concealed, metal suspension system that complies with applicable requirements in ASTM C635/C635M.

B. Direct-Hung, Double-Web Suspension System: Main and cross runners roll formed from and capped with cold-rolled steel sheet, prepainted, electrolytically zinc coated, or hot-dip galvanized, G30 (Z90) coating designation.

1. Structural Classification: Intermediate or Heavy-duty system.
2. Access: Upward or Downward and end pivoted or side pivoted, with initial access openings of size indicated below and located throughout ceiling within each module formed by main and cross runners, with additional access available by progressively removing remaining acoustical tiles.

a. Initial Access Opening: In each module, **24 by 24 inches (610 by 610 mm)**, as directed.

2.4 ACCESSORIES

A. Attachment Devices: Size for five times the design load indicated in ASTM C635/C635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.

B. Seismic Clips: Manufacturer's standard seismic clips designed to secure acoustical tiles in-place during a seismic event.

2.5 METAL EDGE MOLDINGS AND TRIM

A. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations complying with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for of suspension-system runners.

PART 3 - EXECUTION

3.1 PREPARATION

A. Measure each ceiling area and establish layout of acoustical tiles to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width tiles at borders unless otherwise indicated.

B. Layout openings for penetrations centered on the penetrating items.

3.2 INSTALLATION OF SUSPENDED ACOUSTICAL TILE CEILINGS

A. Install suspended acoustical tile ceilings according to ASTM C636/C636M, seismic design requirements, and manufacturer's written instructions.

B. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical tiles.

1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
2. Do not use exposed fasteners, including pop rivets, on moldings and trim.

C. Arrange directionally patterned acoustical tiles as indicated on reflected ceiling plans.

3.3 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage or Engage a qualified special inspector to perform inspections:

1. Periodic inspection during the installation of suspended ceiling grids according to ASCE/SEI 7.

END OF SECTION 095123

SECTION 095133 - ACOUSTICAL METAL PAN CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes acoustical metal pans and associated suspension system for interior ceilings.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference as directed.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Samples: For each exposed product and for each color and texture specified.

D. Delegated-Design Submittal: For design of seismic restraints and attachment devices.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Product test reports.

C. Research reports.

D. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to NVLAP for testing indicated.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design seismic restraints and attachment devices.

B. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: Comply with ASTM E1264 for Class A, Class B, Class C materials.
2. Smoke-Developed Index: As directed 50 or 450 or less.

2.2 ACOUSTICAL METAL PANS, GENERAL

A. Acoustical Panel Standard: Comply with ASTM E1264.

B. Sheet Metal Characteristics: For metal components exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, roughness, stains, or discolorations.

1. Aluminum Sheet: Rolled aluminum sheet, complying with ASTM B209 (ASTM B209M); alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
2. Steel Sheet: Commercial-quality, cold-rolled, carbon-steel sheet; stretcher leveled; with protective coating complying with ASTM C635/C635M.

    a. Painted Finishes: Electrolytic zinc-coated steel complying with ASTM A879/A879M, 13Z (40G) coating, surface treatment as recommended by finish manufacturer for type of use and finish indicated.
    b. Chemical/Mechanical Finishes: Uncoated steel sheet complying with ASTM A1008/A1008M with luster or bright finish as required by finisher for applying electroplating or other metallic-finishing processes.

C. Sound-Absorbent Pads: Provide width and length to completely fill concealed surface of pan, with surface-burning characteristics for flame-spread index of 25 or less and smoke-developed index of 50 or less, as determined by testing according to ASTM E84, and to comply with the following requirements:

1. Plastic Sheet-Wrapped, Mineral-Fiber Insulation: Pads consisting of nonrigid, PVC plastic sheet encapsulating unfaced mineral-fiber insulation complying with ASTM C553, Type I, Type II, or Type III, and as follows:

    a. Mineral-Fiber Type and Thickness: Glass fiber; As directed.
    b. Mineral-Fiber Density: As directed.
    c. Plastic Sheet Thickness and Color: Not less than 0.003 inch (0.076 mm); As directed.

D. Adhesive: Manufacturer's standard nonflammable adhesive for sound-absorbent pads.

2.3 ALUMINUM PANS FOR ACOUSTICAL METAL PAN CEILING

A. Classification: Units complying with ASTM E1264 for Type VII, perforated aluminum facing (pan) with mineral- or glass-fiber-base backing or Type XX, other types described as unperforated aluminum facing (pan) units as directed.

1. Pattern: As directed.

B. Pan Fabrication: Manufacturer's standard units of size, profile, and edge treatment indicated, formed from metal indicated and finished to comply with requirements indicated.

1. Lay-in Pans: Formed to set in exposed suspension grid.
2. Clip-in Pans: Designed to clip in and be securely retained in exposed suspension grid by formed edges or accessory clips provided by manufacturer.
3. Snap-in Pans: Designed with dimples or continuous beads on flanges for snap-in, secure engagement with concealed suspension system.
4. Torsion-Spring-Hinged Pans: Designed to be securely retained in preslotted, exposed suspension grid by torsion springs provided by manufacturer.

C. Pan Thickness: As directed.

D. Pan Edge Detail: As directed.

E. Pan Size: As directed.

F. Pan Face Finish: As directed.

G. Light Reflectance Coefficient: As directed.

H. NRC: As directed.

I. Ceiling Attenuation Class: As directed.

2.4 STEEL PANS FOR ACOUSTICAL METAL PAN CEILING

A. Classification: Units complying with ASTM E1264 for Type V, perforated steel facing (pan) with mineral- or glass-fiber-base backing or Type XX, other types described as unperforated steel facing (pan) units.

1. Pattern: As directed.

B. Pan Fabrication: Manufacturer's standard units of size, profile, and edge treatment indicated, formed from metal indicated and finished to comply with requirements indicated.

1. Lay-in Pans: Formed to set in exposed suspension grid.
2. Clip-in Pans: Designed to clip in and be securely retained in exposed suspension grid by formed edges or accessory clips provided by manufacturer.
3. Snap-in Pans: Designed with dimples or continuous beads on flanges for snap-in, secure engagement with concealed suspension system.

4. Torsion-Spring-Hinged Pans: Designed to be securely retained in preslotted, exposed suspension grid by torsion springs provided by manufacturer.

C. Pan Thickness: Not less than (As directed).

D. Pan Edge Detail: As directed.

E. Pan Size: As directed.

F. Pan Face Finish: Painted white or as directed.

G. Light Reflectance Coefficient: Not less than 0.70 or 0.75, as directed.

H. NRC: Not less than (As directed).

I. Ceiling Attenuation Class: Not less than 35, 40 or 45 as directed.

2.5 METAL SUSPENSION SYSTEMS, GENERAL

A. Metal Suspension System Standard: Comply with ASTM C635/C635M.

B. Attachment Devices: Size for 5 times the design load indicated in ASTM C635/C635M, Table 1, Direct Hung, unless otherwise indicated. Comply with seismic design requirements.

2.6 DIRECT-HUNG, STANDARD-GRID, METAL SUSPENSION SYSTEM FOR ACOUSTICAL METAL PAN CEILING

A. Suspension System: For pans, as directed.

B. Wide-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, prepainted, electrolytic zinc-coated or hot-dip galvanized according to ASTM A653/A653M, G30 (Z90) coating designation, with prefinished, cold-rolled, 15/16-inch- (24-mm-) wide, sheet metal caps on flanges.

1. Structural Classification: Intermediate or Heavy-duty system.
2. End Condition of Cross Runners: Override (stepped) or butt-edge type.
3. Face Design: Flat, flush.
4. Cap Material: Steel or aluminum cold-rolled sheet.
5. Cap Finish: Painted white or as directed.

C. Narrow-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, prepainted, electrolytic zinc-coated or hot-dip galvanized according to ASTM A653/653M, G30 (Z90) coating designation, with prefinished, cold-rolled, 9/16-inch- (15-mm-) wide, sheet metal caps on flanges.

1. Structural Classification: Intermediate or Heavy-duty system.
2. End Condition of Cross Runners: Override (stepped) or butt-edge type.
3. Face Design: Flat, flush or Flanges formed with an integral center reveal.
4. Cap Material: Steel or aluminum cold-rolled sheet.

5. Cap Finish: Painted white or as directed.

D. Narrow-Face, Uncapped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, prepainted, electrolytic zinc-coated or hot-dip galvanized, to produce structural members with 9/16-inch- (15-mm-) wide faces.

1. Structural Classification: Intermediate or Heavy-duty system.
2. Face Design: With 1/8-inch- (3.2-mm-) or 1/4-inch- (6.35-mm-) wide, slotted, box-shaped flange.
3. Face Finish: Painted white or as directed.

E. Wide-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, hot-dip galvanized according to ASTM A653/A653M, G60 (Z180) coating designation, with prefinished, cold-rolled, 15/16-inch- (24-mm-) wide, aluminum caps on flanges.

1. Structural Classification: Intermediate or Heavy-duty system.
2. Face Design: Flat, flush.
3. Face Finish: Painted white or as directed.

F. Suspension System for Torsion-Spring-Hinged Metal Pans: Provide runners with factory-cut slots fabricated to accept torsion-spring-hinged attachment.

2.7 METAL SUSPENSION SYSTEM FOR ACOUSTICAL SNAP-IN METAL PAN CEILING

A. Manufacturers: Subject to compliance with requirements, provide products by snap-in metal pan ceiling manufacturer.

B. Indirect-Hung, Snap- Tee or Bar System: Designed to support metal pans that snap into main runners, consisting of main runners connected to carrying channels that are attached by hangers to building structure.

C. Access Panels: For access at locations indicated, provide acoustical snap-in metal pan ceiling units.

1. Access Key or Tool: Provide manufacturer's standard key or tool for opening access panels; one or two.

2.8 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.9 ALUMINUM FINISHES

A. Mill Finish: AA-M10C10 (Mechanical Finish: as fabricated, unspecified; Chemical Finish: chemically cleaned).

B. Lacquered Mill Finish: AA-M10C10R1x (Mechanical Finish: as fabricated, unspecified; Chemical Finish: chemically cleaned; Organic Coating: as specified below).

1. Organic Coating: Manufacturer's standard clear organic coating.

C. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

D. Clear Mirror Anodic Finish: AA-M21C12A212, 0.005 mm or thicker.

E. Color-Coated Finish: Manufacturer's standard powder-coat baked paint complying with coating manufacturer's written instructions for surface preparation, pretreatment, application, baking, and minimum dry film thickness.

F. Bright-Reflective Finish: Manufacturer's standard chemical/mechanical bright-reflective metallic finish complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, protective coating, and minimum thickness.

2.10 METALLIC-COATED STEEL SHEET FINISHES

A. Color-Coated Finish: Manufacturer's standard powder-coat baked paint complying with coating manufacturer's written instructions for surface preparation, pretreatment, application, baking, and minimum dry film thickness.

2.11 STEEL SHEET FINISHES

A. Electroplated Finish: Electroplating process complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, and minimum thickness.

B. Bright-Reflective Finish: Manufacturer's standard chemical/mechanical bright-reflective metallic finish complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, protective coating, and minimum thickness.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install acoustical metal pan ceiling assemblies to comply with ASTM C636/C636M, seismic design requirements, and manufacturer's written instructions.

B. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical metal pans.

C. Install acoustical metal pans in coordination with suspension system and exposed moldings and trim. Comply with manufacturer's installation tolerances.

1. Install directionally patterned or textured metal pans in directions indicated.

D. Install sound attenuation panels in areas indicated by reflected ceiling plans or room finish schedules.

END OF SECTION 095133

SECTION 095423 - LINEAR METAL CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes strip, linear metal pans and suspension systems for ceilings.

1.2 COORDINATION

A. Coordinate layout and installation of linear metal pans and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Samples: For each exposed finish.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Drawn to scale and coordinating and showing the following:

1. Linear pattern.
2. Joint pattern.
3. Ceiling suspension members.
4. Method of attaching hangers to building structure.
5. Ceiling-mounted items.
6. Ceiling perimeter and penetrations through ceiling; trim and moldings.

B. Product test reports.

C. Evaluation reports.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For finishes to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and to set quality standards for materials and execution.

1. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C) material surfaces.

B. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: Comply with ASTM E1264 for Class A, Class B, Class C materials.
2. Smoke-Developed Index: As directed 50 or 450 or less.

2.2 LINEAR METAL CEILING PANS

A. Acoustical Metal Pan Standard: Provide manufacturer's standard linear metal pans of configuration indicated that comply with ASTM E1264.

1. Mounting Method for Measuring NRC: Type E-400.

B. Sheet Metal Characteristics: For metal components exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, roughness, stains, or discolorations.

1. Aluminum Sheet: Roll-formed aluminum sheet, complying with ASTM B209 (ASTM B209M); alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
2. Steel Sheet: Commercial-quality, cold-rolled, carbon-steel sheet; stretcher leveled; with protective coating complying with ASTM C635/C635M.

a. Painted Finishes: Electrolytic zinc-coated steel complying with ASTM A879/A879M, 04Z (12G) coating; surface treatment as recommended by finish manufacturer for type of use and finish indicated.
b. Chemical/Mechanical Finishes: Uncoated steel sheet complying with ASTM A1008/A1008M with luster or bright finish as required by finisher for applying electroplating or other metallic-finishing processes.

C. Pan Fabrication: Manufacturer's standard units of size, profile, and edge treatment indicated, formed from metal indicated to snap on and be securely retained on carriers without separate fasteners, and finished to comply with requirements indicated.

D. Pan Splices: Construction same as pans, in lengths 8 to 12 inches (200 to 300 mm); with manufacturer's standard finish.

E. End Caps: Metal matching pans or Plastic (As directed); fabricated to fit and conceal exposed ends of pans.

F. Filler Strips: Metal matching pans or Plastic (As directed); fabricated to uninterruptedly close voids between pans.

G. Moldings and Trim: Provide manufacturer's standard moldings and trim for exposed members, and as indicated or required, for edges and penetrations of ceiling, around fixtures, at changes in ceiling height, and for other conditions; of same metal and finish as linear metal ceiling pans.

H. Sound-Absorbent Fabric Layer: Provide fabric layer, sized to fit concealed surface of pan, and consisting of black, nonwoven, nonflammable, sound-absorbent material with surface-burning characteristics for flame-spread index of 25 or less and smoke-developed index of 50 or less, as determined by testing per ASTM E84.

I. Sound-Absorbent Pads: Provide width and length to completely fill between carriers, joined at center of panel, with surface-burning characteristics for flame-spread index of 25 or less and smoke-developed index of 50 or less, as determined by testing per ASTM E84, and to comply with the following requirements:

2.3 METAL SUSPENSION SYSTEMS

A. Metal Suspension Systems Standard: Provide ceiling manufacturer's standard metal suspension systems of types and finishes indicated that comply with applicable ASTM C635/C635M requirements.

B. Attachment Devices: Size for five times the design load indicated in ASTM C635/C635M, Table 1, Direct Hung, unless otherwise indicated.

1. Cast-in-Place and Postinstalled Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to five times that imposed by ceiling construction, as determined by testing per ASTM E488/E488M or ASTM E1512 as applicable, conducted by a qualified testing and inspecting agency.

    a. Type: anchors, as directed.
    b. Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B633, Class Fe/Zn 5 (0.005 mm) for Class SC service condition (mild).

2. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without

failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing per ASTM E1190, conducted by a qualified testing and inspecting agency.

C. Wire Hangers, Braces, and Ties: Zinc-Coated Carbon-Steel Wire; ASTM A641/A641M, Class 1 zinc coating, soft temper

1. Size: Select wire diameter so its stress at 3 times the hanger design load indicated in ASTM C635/C635M, Table 1, Direct Hung is less than yield stress of wire, but provide not less than 0.106-inch- (2.69-mm-) diameter wire.

D. Carriers: Factory finished with matte-black baked finish.

1. Main Carriers: Aluminum, not less than 0.240-inch (6.0-mm) rolled sheet, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, complying with ASTM B209 (ASTM B209M).
2. Main Carriers: Steel, not less than 0.0209-inch (0.53-mm) nominal thickness, cold-rolled sheet, with factory-applied protective coating, complying with ASTM C635/C635M.
3. Flexible Radial Carriers: Manufacturer's standard radial carriers.
4. Expansion Carriers: Manufacturer's standard carriers allowing for irregularities or other unusual space conditions.

E. Carrier Splices: Same metal, profile, and finish as for carriers.

F. Stabilizer Channels, Tees, and Bars: Manufacturer's standard components for stabilizing main carriers at regular intervals and spaced as standard with manufacturer for use indicated; and factory finished with matte-black baked finish.

G. Seismic Struts: Manufacturer's standard.

H. Edge Moldings and Trim: Provide exposed members as indicated or required to comply with seismic requirements of authorities having jurisdiction, to conceal edges of penetrations through ceiling, to conceal ends of pans and carriers, for fixture trim and adapters, for fasciae at changes in ceiling height, and for other conditions; of metal and finish matching linear metal pans or extruded plastic unless otherwise indicated.

2.4 ALUMINUM PANS AND SUSPENSION SYSTEM FOR LINEAR METAL CEILING

A. Aluminum Pans and Suspension System:

B. Classification: Units complying with ASTM E1264 as directed.

1. Pattern: As directed.

C. Pan Thickness: As directed.

D. Pan Edge Detail: As directed.

E. Linear Module Width and Pan Face Width: As directed.

F. Pan Depth: As directed.

G. Pan Face Finish: As directed.

H. End Cap, Finish of Exposed Portions: Matte black to match pan, as directed.

I. Filler Strip Design: Recessed or Flush. An integral extension of pan profile, expansion, for use with expansion carriers or slotted, for air diffusion.

J. Filler Strip, Finish of Exposed Portions: Matte black to match pan.

K. LR: Not less than 0.70 or 0.75, as directed.

L. NRC: Not less than 0.65, 0.75, 0.95, as directed.

M. Suspension-System Main-Carrier Material: As directed.

2.5 STEEL PANS AND SUSPENSION SYSTEM FOR LINEAR METAL CEILING

2.6 See the tables at the end of the Evaluations for a list of manufacturers' products. Use these tables in combination with manufacturers' catalogs or product data to specify series, type, model, and designations of other characteristics.

A. Steel Pans and Suspension System:

B. Classification: Units complying with ASTM E1264 as directed.

1. Pattern: As directed.

C. Pan Thickness: As directed.

D. Pan Edge Detail: As directed.

E. Linear Module Width and Pan Face Width: As directed.

F. Pan Depth: As directed.

G. Pan Face Finish: Painted white or as directed.

H. End Cap, Finish of Exposed Portions: Matte black to match pan.

I. Filler Strip Design: Recessed or Flush, An integral extension of pan profile. Expansion, for use with expansion carriers or Slotted, for air diffusion.

J. Filler Strip, Finish of Exposed Portions: Matte black to match pan.

K. LR: Not less than 0.70 or 0.75 as directed.

L. NRC: Not less than 0.65, 0.75, 0.95 as directed.

M. Suspension-System Main-Carrier Material: As directed.

2.7 ALUMINUM FINISHES

A. Mill Finish: AA-M10C10.

B. Lacquered Mill Finish: AA-M10C10R1x with manufacturer's standard clear, organic coating.

C. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

D. Clear Mirror Anodic Finish: AA-M21C12A212, 0.005 mm or thicker.

E. Color-Coated Finish: Manufacturer's standard powder-coat baked paint.

F. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2604 or AAMA 2605 and containing not less than **50** or **70** percent, as directed. PVDF resin by weight.

G. Bright-Reflective Finish: Manufacturer's standard chemical/mechanical, bright-reflective metallic finish free of blisters, pits, roughness, nodules, burning, cracks, unfinished areas, and other visible defects.

2.8 GALVANIZED-STEEL SHEET FINISHES

A. Color-Coated Finish: Manufacturer's standard powder-coat baked paint finish.

2.9 STEEL SHEET FINISHES

A. Electroplated Finish: Uniform in appearance and free of blisters, pits, roughness, nodules, burning, cracks, unplated areas, and other visible defects.

B. Bright-Reflective Finish: Uniform in appearance and free of blisters, pits, roughness, nodules, burning, cracks, unfinished areas, and other visible defects.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Comply with ASTM C636/C636M and seismic requirement indicated, per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."

B. Suspend ceiling hangers from building's structural members and as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum.
2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required, install trapezes or equivalent devices.

4. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
5. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
6. Do not attach hangers to steel deck tabs or to steel roof deck.

C. Install edge moldings and trim of type indicated at perimeter of linear metal ceiling area and where necessary to conceal edges and ends of linear metal pans.

1. Screw attach moldings to substrate at intervals not more than 16 inches (400 mm) o.c. and not more than 3 inches (75 mm) from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3.2 mm in 3.6 m). Miter corners accurately and connect securely.

D. Install suspension system carriers so they are aligned and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

E. Cut linear metal pans for accurate fit at borders and at interruptions and penetrations by other work through ceilings. Stiffen edges of cut units as required to eliminate evidence of buckling or variations in flatness exceeding referenced standards for stretcher-leveled metal sheet.

F. Install linear metal pans in coordination with suspension system and exposed moldings and trim.

1. Align joints in adjacent courses to form uniform, straight joints parallel to room axis in both directions unless otherwise indicated.
2. Fit adjoining units to form flush, tight joints. Scribe and cut units for accurate fit at borders and around construction penetrating ceiling.
3. Install pans with butt joints using internal pan splices and in the following joint configuration:

    a. Aligned.
    b. Aligned, every other pan length.
    c. Staggered a minimum of 12 inches (300 mm).
    d. Random.
    e. As indicated.

4. Where metal pan ends are visible, install end caps unless trim is indicated.
5. Install filler strips where indicated.
6. Install sound-absorbent pads at right angle to perforated metal pans so pads do not hang unsupported.

END OF SECTION 095423

SECTION 095436 - SUSPENDED DECORATIVE GRIDS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes rigid, open-frame, suspended grids and suspension systems for ceilings.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Samples: For each exposed product and for each color and texture specified.

D. Delegated-Design Submittal: For design of seismic restraints and attachment devices.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, and coordinated with each other, using input from installers of the items involved.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design seismic restraints and attachment devices.

B. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 450 or less.

2.2 SUSPENDED DECORATIVE GRIDS, GENERAL

A. Sheet Metal: Selected for surface flatness, smoothness, and freedom from surface blemishes where exposed to view in finished unit. Do not use materials whose exposed surfaces exhibit pitting, seam marks, roller marks, variations in flatness exceeding those permitted by referenced standards for stretcher-leveled metal sheet, stains, discolorations, or other imperfections.

B. Grid Fabrication: Components are formed from metal indicated. Manufacturer's standard units of size, shape, and profile indicated; finished to comply with requirements indicated. Provide cells factory assembled into modular panel.

C. Cover Profiles and Trim: Provide manufacturer's standard cover profiles and trim for exposed members, and as indicated or required, for edges of grids, at changes in ceiling height, and for other conditions, of same metal and finish as suspended decorative grids.

D. Metal Suspension-System Standard: Provide ceiling manufacturer's standard metal suspension systems of types and finishes indicated that comply with applicable ASTM C635/C635M requirements. Provide systems complete with runners or beams, splice sections, connector clips, alignment clips, leveling clips, hangers, molding, trim, web covers, load-resisting struts, fixture filler pans, clips and adapters, and other suspension components required to support ceiling units and other ceiling-supported construction.

E. Attachment Devices: Size for 5 times the design load indicated in ASTM C635/C635M, Table 1, Direct Hung, unless otherwise indicated.

1. Expansion Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318, greater than or equal to the design load, as determined by testing per ASTM E488/E488M conducted by a qualified testing agency.
2. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with allowable load capacities calculated according to ICC-ES AC70, greater than or equal to the design load, as determined by testing per ASTM E1190 conducted by a qualified testing agency.

F. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:

1. Zinc-Coated, Carbon-Steel Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper.
2. Size: Select wire diameter so its stress at three times hanger design load indicated in ASTM C635/C635M, Table 1, Direct Hung, is less than yield stress of wire, but provide not less than 0.106-inch- (2.69-mm-) or 0.135-inch- (3.5-mm-) diameter wire.

G. Hanger Rods or Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.

H. Angle Hangers: Angles with legs not less than 7/8 inch (22 mm) wide; formed with 0.04-inch- (1.0-mm-) thick, galvanized-steel sheet complying with ASTM A653/A653M, G90 (Z275) coating designation; with bolted connections and 5/16-inch- (8-mm-) diameter bolts.

I. Seismic Struts: Manufacturer's standard compression struts designed to accommodate seismic forces.

J. Exposed Metal Edge Moldings, Covers, Trim, and Fixture Filler Panels: Provide exposed members as indicated or required to conceal edges of and penetrations through ceiling, to conceal edges of beams, to cover runner webs, for fixture trim and adapters, for fasciae at changes in ceiling height, and for other conditions; of metal and finish matching suspended decorative grids unless otherwise indicated.

1. For Circular Penetrations of Ceiling: Fabricate edge moldings to diameter required to fit penetration exactly.

2.3 ALUMINUM GRID UNITS FOR SUSPENDED DECORATIVE GRIDS If applicable, copy this article and re-edit for each product.

A. Aluminum Sheet: Roll-formed aluminum sheet, complying with ASTM B209 (ASTM B209M); alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

1. Sheet Metal Thickness: As directed.

B. Beam Grid Module: As directed.

C. Beam Width by Height: As directed.

D. Cell Panel Module: As directed.

E. Cell Module: As directed.

F. Cell Profile, Width by Height: As directed.

G. Finish: As directed.

2.4 STEEL GRID UNITS FOR SUSPENDED DECORATIVE GRIDS

A. Steel Sheet: Commercial-quality, cold-rolled, carbon-steel sheet; stretcher leveled; with protective coating complying with ASTM C635/C635M.

1. Painted Finishes: Electrolytic zinc-coated steel complying with ASTM A879/A879M, 04Z (12G) coating, surface treatment as recommended by finish manufacturer for type of use and finish indicated.
2. Chemical/Mechanical Finishes: Uncoated steel sheet complying with ASTM A1008/A1008M with luster or bright finish as required by finisher for applying electroplating or other metallic-finishing processes.
3. Sheet Metal Thickness: Not less than 0.020 inch (0.5 mm) or 0.024 inch (0.6 mm), as directed.

B. Beam Grid Module: As directed.

C. Beam Width by Height: As directed.

D. Cell Panel Module: As directed.

E. Cell Module: As directed. As directed.

F. Cell Profile, Width by Height: 3/8 by 2 inches (9.5 by 50 mm) or 9/16 by 2 inches (14 by 50 mm), as directed.

G. Finish: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Measure each installation area and establish layout of suspended decorative grids to balance border widths at opposite edges of each space. Comply with layout shown on reflected ceiling plans.

B. Install suspended decorative grids to comply with ASTM C636/C636M and seismic design requirements indicated, according to manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."

C. Install suspended decorative grids in coordination with suspension system and exposed moldings and trim. Comply with installation tolerances according to CISCA's "Metal Ceilings Technical Guidelines."

END OF SECTION 095436

SECTION 095443 - STRETCHED-FABRIC CEILING SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes site-upholstered ceiling systems.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For each stretched-fabric system.

D. Samples: For each exposed product and for each color and texture specified.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans and other details, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Product certificates.

C. Sample warranty.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

B. Mockups: Build mockup of typical ceiling area as shown on Drawings or as directed by Architect.

1.7 FIELD CONDITIONS

A. Lighting: As directed Do not install stretched-fabric systems until a permanent level of lighting or a lighting level of not less than 50 fc (538 lx) is provided on surfaces to receive stretched-fabric systems.

1.8 WARRANTY

A. Special Warranty: Manufacturer and Installer agree to repair or replace components of stretched-fabric systems that fail in performance, materials, or workmanship within specified warranty period.

1. Warranty Period: As directed Two or Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: Stretched-fabric ceiling systems shall comply with "Surface-Burning Characteristics" or "Fire Growth Contribution" Subparagraph below, or both, as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. Surface-Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency on systems prepared according to ASTM E2573. Identify products with appropriate markings of applicable testing agency.

a. Flame-Spread Index: 25 or less.
b. Smoke-Developed Index: 450 or less.

2. Fire Growth Contribution: Comply with acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 286.

2.2 STRETCHED-FABRIC CEILING SYSTEMS

A. Stretched-Fabric Ceiling System: Manufacturer's standard system consisting of facing material stretched tightly over a frame and core material and secured in the frame.
1. Core: As directed Manufacturer's standard, Glass-fiber board, Glass-fiber blanket, Mineral-fiber board or Cementitious-fiber board.
2. Frame Edge: Chamfered (beveled), Radiused (bullnosed) or Square as directed.

a. Fabric-Insertion Point: Bottom load.
b. Nominal Frame Thickness: Match core thickness, 1/2 inch (13 mm), 3/4 inch (19 mm), 1 inch (25 mm), 1-1/2 inches (38 mm), 2 inches (51 mm) or As indicated on Drawings.

3. Reveals between Panels: As directed Recessed, Flush or Projecting reveals as selected by Architect from manufacturer's full range or as indicated on Drawings.

4. Facing Material: Owner-furnished material or As indicated on Drawings.
5. Acoustical Performance: As directed Sound absorption NRC or SAA of 0.50 to 0.90, 0.60 to 0.70, 0.65 to 0.75, not less than 0.65 or not more than 0.35 according to ASTM C423 for Type A mounting according to ASTM E795.

2.3 MATERIALS

A. Sustainable Design Requirements:

B. Core Materials: Manufacturer's standard.

1. Glass-Fiber Board: ASTM C612, of type standard with manufacturer, unfaced, and dimensionally stable, molded rigid board; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
2. Glass-Fiber Blanket: ASTM C553, ASTM C612, or ASTM C665; of type standard with manufacturer and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
3. Mineral-Fiber Board: Maximum flame-spread and smoke-developed indexes of 25 and 10, respectively, and with perforated surface.

C. Frame Construction: Manufacturer's standard, continuous, extruded plastic frame (track).

D. Facing Material: Fabric from same dye lot; color and pattern as selected by Architect from manufacturer's full range or as indicated on Drawings.

1. Applied Treatments: Stain resistance.
2. Lining Material: Manufacturer's standard fabric for each use indicated.

2.4 INSTALLATION MATERIALS

A. Installation Products: Concealed on back of system, recommended by stretched-fabric system manufacturer to support weight of system, fabric tension, and as follows:
1. Fasteners: Manufacturer's standard.

PART 3 - EXECUTION

3.1 PREPARATION

A. Measure each area and establish layout of panels and joints of sizes indicated on Drawings within a given area.

B. Before installation, allow fabric to adjust and become stable in spaces where it will be installed according to stretched-fabric system manufacturer's written instructions. Acclimatize fabric for minimum of 24 hours at ambient temperature and humidity conditions indicated for spaces when occupied for their intended use.

3.2 INSTALLATION

A. Install stretched-fabric systems according to system manufacturer's written instructions.

1. Provide continuous perimeter frames of each profile indicated, designed to be inconspicuous when covered by fabric facing, with smooth edges, and with surface finish that will not telegraph through fabric facing.
2. Install framing around penetrations.
3. Tightly fit framing to adjacent construction and securely attach to substrate.
4. Install core material with full coverage, flush with face of stretched-fabric system frame.
5. Attach frame and core to substrate with adhesive or fasteners, or both, to support system and prevent deformation of components.
6. Install stretched-fabric systems true in plane and with fabric square to the grain.

B. Fabric Installation: Apply fabric monolithically in continuous run over area, without joints or reveals, except where panel joints or midspan frames are indicated.

1. Fabric Seams: Sewn seams are not permitted.
2. Fabric Seams: Manufacturer's standard sewn seams, straight and parallel seam dimensions and locations as indicated on Drawings.
3. Stretch and secure fabric to frame edges and so frame and frame attachment method are concealed by fabric unless otherwise indicated.
4. Stretch fabric tightly and square without puckers, ripples, or distortions. Acclimatize and restretch if recommended by stretched-fabric system manufacturer. Repair distortions, wrinkles, and sagging.

3.3 CLEANING

A. Clip loose threads; remove pills and extraneous materials.

B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

END OF SECTION 095443

SECTION 095446 - FABRIC-WRAPPED CEILING PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes shop-fabricated, fabric-wrapped ceiling panels.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For panel assembly and installation.

D. Samples: For each exposed product and for each color and texture specified.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans and other details, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Product certificates.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: Panels shall comply with "Surface-Burning Characteristics" or "Fire Growth Contribution" Subparagraph below, or both, as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. Surface-Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

    a. Flame-Spread Index: 25 or less.
    b. Smoke-Developed Index: 450 or less.

2. Fire Growth Contribution: Comply with acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 286.

2.2 FABRIC-WRAPPED CEILING PANELS

A. Fabric-Wrapped Ceiling Panel: Manufacturer's standard panel construction consisting of facing material laminated to front face, edges, and back edge border of core or stretched over front face of edge-framed core and bonded or attached to edges and back of frame as directed.

1. Mounting: Back mounted with manufacturer's standard metal clips, suspension system or suspension system with stiffening, back-support angles as directed.
2. Core: Manufacturer's standard, Glass-fiber board, Mineral-fiber board, Cementitious-fiber board, Medium-density fiberboard or Particleboard as directed.
3. Edge Construction: Manufacturer's standard chemically hardened core with no frame.
4. Edge Profile: Chamfered (beveled), Eased (small radius), Mitered (beveled to a point), Radiused (bullnosed), Square or Custom profile as indicated on Drawings.
5. Corner Detail in Elevation: As directed Square, Round, radius as indicated on Drawings or Custom as indicated on Drawings with continuous edge profile indicated.
6. Reveals between Panels: Recessed, Flush or Projecting reveals as selected by Architect from manufacturer's full range or as indicated on Drawings.
7. Facing Material: Owner-furnished material or As indicated on Drawings.
8. Nominal Core or Overall Panel Thickness as directed: 3/4 inch (19 mm), 1 inch (25 mm), 1-1/2 inches (38 mm), 2 inches (51 mm) or As indicated on Drawings.

2.3 MATERIALS

A. Core Materials: Manufacturer's standard.

1. Glass-Fiber Board: ASTM C612, of type standard with manufacturer, unfaced, and dimensionally stable, molded rigid board; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
2. Mineral-Fiber Board: Maximum flame-spread and smoke-developed indexes of 25 and 10, respectively.

B. Facing Material: Fabric from same dye lot; color and pattern as selected by Architect from manufacturer's full range or as indicated on Drawings.

1. Applied Treatments: Stain resistance.
2. Lining Material: Manufacturer's standard fabric for each use indicated.

C. Mounting Devices: Concealed on back of panel, recommended by manufacturer to support weight of panel.

2.4 FABRICATION

A. Standard Construction: Use manufacturer's standard construction except as otherwise indicated; with facing material applied to face, edges, and back border of dimensionally stable core; and with rigid edges to reinforce panel perimeter against warpage and damage.

B. Measure each area and establish layout of panels and joints of sizes indicated on Drawings within a given area.

C. Facing Material and Lining Material: Apply fabric fully covering visible surfaces of panel; with material stretched straight, on the grain, tight, square, and free from puckers, ripples, wrinkles, sags, blisters, seams, adhesive, or other visible distortions or foreign matter.

1. Fabrics with Directional or Repeating Patterns or Directional Weave: Mark fabric top and attach fabric in same direction so pattern or weave matches adjacent panels.

D. Dimensional Tolerances of Finished Panels: Plus or minus 1/16 inch (1.6 mm).

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install panels in locations indicated. Unless otherwise indicated, install units with edges in alignment with walls and other panels, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.

B. Comply with panel manufacturer's written instructions for installation of panels using type of mounting devices indicated. Mount panels securely to supporting substrate.

C. Align fabric pattern and grain with adjacent panels.

3.2 CLEANING

A. Clip loose threads; remove pills and extraneous materials.

B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

END OF SECTION 095446

SECTION 095753 - SECURITY CEILING ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Downward-locking-panel security ceiling assemblies.
2. Security-plank security ceiling assemblies.

1.2 COORDINATION

A. Detention Specialist: Coordinate with Section 013513.16 "Special Project Procedures for Detention Facilities" for requirements of this Section that are to be performed by Detention Specialist or other entity.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Samples: For security ceiling panel units and suspension systems.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Welding certificates.

C. Product test reports.

D. Attachment device test reports.

E. Research reports.

F. Field quality-control reports.

G. Anchor inspection reports.

H. Field quality-control certification signed by Contractor and Detention Specialist.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Acoustical Performance: Provide security ceiling assemblies with acoustical ratings indicated, as determined according to ASTM E1264 and the following:

1. Noise Reduction Coefficient (NRC): ASTM C423 and ASTM E795 in Type E-400 mounting.
2. Ceiling Attenuation Class (CAC): ASTM E1414/E1414M.

B. Seismic Standard: Provide ceilings designed and installed to withstand the effects of earthquake motions according to ASCE/SEI 7.

2.2 DOWNWARD-LOCKING-PANEL SECURITY CEILING ASSEMBLY

A. Provide a complete, integrated assembly, including security ceiling panels, exposed suspension system, perimeter supports, and accessories.

B. Panels: Fabricated from a single sheet of metal, with formed upturned edges on all four sides designed to continuously engage with and lock under rectangular bulb of suspension system.

1. Steel Panels: Metallic-coated steel with minimum uncoated sheet thickness of 0.043 inch (1.09 mm), 0.033 inch (0.84 mm) or 0.021 inch (0.53 mm) as directed.
2. Panel Size: 12 by 24 inches (305 by 610 mm), 12 by 48 inches (305 by 1220 mm), 24 by 24 inches (610 by 610 mm) or 24 by 48 inches (610 by 1220 mm) as directed.
3. Perforation Pattern: Manufacturer's standard or Unperforated as directed.
4. Noise Reduction Coefficient (NRC): 0.70, 0.80, 0.85, 0.90, 0.95 or 1.00 as directed.

C. Sound-Absorptive Pads: Provide sound-absorptive pads for placement over ceiling panels.

1. Spacer Grids: Metallic-coated-steel grid units.
2. Support Clips: Metal clips.

D. Backer Plates: Unperforated units formed from metallic-coated steel sheet that reduces travel of sound through panel and that makes panel assembly comply with the following performance:

1. Ceiling Attenuation Class (CAC): 40 or 45 as directed.
2. Sound-Absorptive Pads: Provide secondary sound-absorptive pads, same as specified for primary pads, for placement over backer plates to reduce plenum sound.

E. Access Panels: Material, perforation pattern, and finish same as security ceiling panels. Provide panels at locations indicated on Drawings.

1. Lock Preparation: Prepare door panel to accept cylinder specified in Section 087100 "Door Hardware", Section 087111 "Door Hardware (Descriptive Specification)" or Section 087163 "Detention Door Hardware" as directed

F. Suspension System: ASTM C635/C635M, heavy-duty exposed system consisting of snap-in main runners supported by hangers attached to building structure.

1. Provide system complete with main runners, splice plates, connector and alignment clips, hangers, trim, seismic- and wind-load clips and struts, and other suspension components required to support security ceiling units and other security ceiling-supported construction.
2. Main Runners and Cross Tees: Formed from metal sheet, 1-1/2 inches (38 mm) high, with 15/16-inch (23.8-mm) flange width and with oversized rectangular bulb for engaging panels.

    a. Material: Galvanized steel, G90 (Z275) zinc coating or Electrolytic zinc-coated steel, 40Z (12G) zinc coating as directed.

3. Wire Hangers, Braces, and Ties: Zinc-coated, carbon-steel wire, ASTM A641/A641M, Class 1 zinc coating, soft temper.

    a. Size: Select wire diameter so its stress at 3 times the hanger design load (ASTM C635/C635M, Table 1, Direct Hung) will be less than yield stress of wire, but provide not less than 0.106-inch- (2.69-mm-) diameter wire.

4. Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.
5. Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.
6. Angle Hangers: Angles with legs not less than 7/8 inch (22 mm) wide, formed with 0.04-inch- (1.0-mm-) thick, galvanized-steel sheet, G90 (Z275) zinc coating, with bolted connections and 5/16-inch- (8-mm-) diameter bolts.
7. Compression Struts: Fabricated from 3/4-inch- (19-mm-) diameter steel tubing, designed to fit over rectangular bulb of suspension system.
8. Security Clips: Steel wire, designed to slip over suspension system and through holes in flanges of panel to prevent panel removal.

G. Perimeter Supports: Wall-mounted channel moldings and wall angles; fabricated from 0.042-inch- (1.06-mm-) thick galvanized steel or 0.016-inch- (0.4-mm-) thick galvanized steel as directed; finished to match suspension system.

H. Exposed Edge Moldings and Trim: Provide exposed members as indicated or required for edges of security ceiling, fixture trim, beams, fasciae at changes in security ceiling height, and other conditions; of metal and finish matching security ceiling panels.

2.3 SECURITY-PLANK SECURITY CEILING ASSEMBLY

A. Single-Configuration Panels: Fabricated from a single sheet of metal, with a self-locking male/female lap joint for joining panels.
   1. Steel Panels: Electrolytic zinc or Metallic-coated steel with minimum uncoated sheet thickness of 0.097 inch (2.45 mm), 0.068 inch (1.72 mm), 0.053 inch (1.34 mm), 0.043 inch (1.09 mm) or 0.033 inch (0.84 mm) as directed.
   2. Panel Width: 12 inches (305 mm), 18 inches (457 mm) or 24 inches (610 mm) as directed.
   3. Panel Length: Minimum 8 feet (2.4 m), Minimum 10 feet (3.0 m), Minimum 12 feet (3.7 m) or Custom lengths to fit areas indicated as directed.
   4. Perforation Pattern: Manufacturer's standard or Unperforated as directed.
   5. Noise Reduction Coefficient (NRC): 0.70, 0.80, 0.85, 0.90, 0.95 or 1.00 as directed.

B. Sound-Absorptive Pads: Provide sound-absorptive pads for placement over ceiling planks.

   1. Spacer Grids: Metallic-coated-steel grid units.
   2. Support Clips: Metal clips.

C. Backer Plates: Unperforated units formed from metallic-coated steel sheet that reduces travel of sound through panel and that makes panel assembly comply with the following performance:

   1. Ceiling Attenuation Class (CAC): 40 or 45 as directed.
   2. Sound-Absorptive Pads: Provide secondary sound-absorptive pads, same as specified for primary pads, for placement over backer plates to reduce plenum sound.

D. Access Panels: Material, perforation pattern, and finish same as security ceiling panels. Provide at locations indicated on Drawings.

   1. Lock Preparation: Prepare door panel to accept cylinder specified in Section 087100 "Door Hardware", Section 087111 "Door Hardware (Descriptive Specification)" or Section 087163 "Detention Door Hardware" as directed

E. Closures: Fabricated from minimum 0.053-inch- (1.34-mm-) thick steel sheet, finished to match security ceiling panels. Fasten with security fasteners or by welding.

F. Suspension System: Heavy-duty exposed system consisting of intermediate carriers supported by secondary support system attached to building structure.

   1. Intermediate Carriers: Formed from tees with a nominal 4-inch- (102-mm-) wide exposed face or built up from back-to-back angles or channels each with a nominal 2-inch- (51-mm-) wide exposed face.

      a. Steel Intermediate Carriers: As directed Electrolytic zinc or Metallic-coated steel with minimum uncoated sheet thickness of 0.097 inch (2.45 mm), 0.068 inch (1.72 mm), 0.053 inch (1.34 mm) or 0.043 inch (1.09 mm), finished to match security ceiling panels.

   2. Secondary Support System:

      a. Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.

b. Angle Hangers: 1-1/2-by-1-1/2-inch (38-by-38-mm) galvanized-steel angles, G90 (Z275) zinc coating, bolted to intermediate carriers and building structure.

G. Perimeter Supports: Wall-mounted angles, tees, and bearing plates.

1. Steel Perimeter Supports: As directed Electrolytic zinc or Metallic-coated steel with minimum uncoated sheet thickness of 0.167 inch (4.20 mm), 0.097 inch (2.45 mm), 0.068 inch (1.72 mm), 0.053 inch (1.34 mm) or 0.043 inch (1.09 mm), finished to match security ceiling panels.

H. Exposed Edge Moldings and Trim: Provide exposed members as indicated or required for edges of security ceiling, fixture trim, beams, fasciae at changes in security ceiling height, and other conditions, of metal and finish matching security ceiling panels.

2.4 SOUND-ABSORPTIVE PADS

A. Plastic-Sheet-Wrapped, Mineral-Fiber Insulation: Pads consisting of nonrigid, vinyl chloride plastic sheet encapsulating unfaced mineral-fiber insulation.

1. Thickness: 1 inch (25 mm), 1-1/2 inches (38 mm), 2 inches (51 mm), 4 inches (102 mm) or As required to meet NRC rating as directed.
2. Surface-Burning Characteristics:

a. Flame-Spread Index: 25 or less.
b. Smoke-Developed Index: 50 or 450 or less as directed.

2.5 METALLIC-COATED STEEL SHEET FINISHES

A. Factory Prime Finish: After cleaning and pretreating, apply an air-dried primer compatible with the coating to be applied over it.

B. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of 2 mils (0.05 mm).

1. Color and Gloss: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

2.6 STEEL FINISHES

A. Factory Prime Finish: After surface preparation and pretreatment, apply manufacturer's standard, fast-curing, lead- and chromate-free, universal primer.

B. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils (0.05 mm).

1. Color and Gloss: Manufacturer's standard white.

2.7 SECURITY FASTENERS

A. Operable only by tools produced by fastener manufacturer or other licensed fabricator for use on specific type of fastener.
   1. Drive-System Type: Pinned Torx-Plus or Pinned Torx as directed.

2.8 SECURITY SEALANTS

A. Polyurethane Security Sealants: Manufacturer's standard, nonsag, tamper-resistant sealant for joints with low movement.

B. Epoxy Security Sealants: Manufacturer's standard, nonsag, tamper-resistant sealant for joints with no movement.

C. Acoustical Sealant: Manufacturer's standard, nonsag, paintable, nonstaining latex sealant complying with ASTM C834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E90.

2.9 ACCESSORIES

A. Concealed Bolts: ASTM A307, Grade A unless otherwise indicated.

B. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welding.

C. Attachment Devices: Size for five times the design load indicated in ASTM C635/C635M, Table 1, Direct Hung, unless otherwise indicated.

D. Expansion Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E488/E488M conducted by a qualified testing agency.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements.

B. Inspect built-in and cast-in anchor installations before installing security ceiling assemblies to verify that anchor installations comply with requirements.

3.2 GENERAL INSTALLATION

A. Comply with CISCA's "Ceiling Systems Handbook" for installation of security ceiling assemblies.

B. Install perimeter supports around perimeter of security ceiling area.

1. Sealant: As directed Apply polyurethane security, epoxy security or acoustical sealant in a continuous ribbon concealed on back of vertical legs of supports before they are installed.
2. Attach supports with anchor bolts or expansion anchors spaced not more than 12 inches (305 mm) o.c. and not more than 3 inches (76 mm) from ends. Miter corners accurately.

    a. Level perimeter supports with suspension system to a tolerance of 1/8 inch in 12 feet (3 mm in 3.7 m).

3. Do not use exposed fasteners, including pop rivets, on moldings and trim. If exposed fasteners are unavoidable, obtain prior written approval from Architect for their use and use security fasteners.

C. Install accessories where indicated and as required to comply with performance requirements.

1. Sound-Absorptive Pads: For security ceiling panels indicated, provide sound-absorptive pads of width and length to completely fill inside of each security ceiling panel.

    a. Install sound-absorptive pads over metal spacer grids with support clips.

2. Backer Plates: Install plates in areas indicated on reflected ceiling plans or in room finish schedules. Lay backer plates directly on security ceiling assembly in manner indicated and close major openings to form complete coverage in required areas. Lay second sound-absorptive pad on backer plate.

D. Seismic Installation: Comply with seismic standard indicated, manufacturer's written instructions, and CISCA's "Ceiling Systems Handbook."

3.3 DOWNWARD-LOCKING-PANEL SECURITY CEILING ASSEMBLY INSTALLATION

A. Ceiling Hangers: Suspend from building's structural members and as follows:

1. Install hangers plumb and free from contact with insulation or other objects within security ceiling plenum that are not part of supporting structure or of security ceiling suspension system.
2. Splay hangers only where required to avoid obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
4. Secure wire hangers to security ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts,

eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.

5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both structure to which hangers are attached and type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
6. Do not support security ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts or postinstalled mechanical or adhesive anchors.
7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
8. Do not attach hangers to steel deck tabs.
9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
10. Space hangers not more than 48 inches (1220 mm) o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches (200 mm) from ends of each member.
11. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
12. Install compression struts extending from main runners to structure above and spaced at 48 inches (1220 mm) o.c.

B. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

C. Panel Installation: Install panels to continuously engage with and lock under rectangular bulb of suspension system. Attach panels to perimeter supports with security fasteners not more than 3 inches (76 mm) from edges of panel. Fasten through exposed face of supports into panel.

1. Align joints in adjacent courses to form uniform, straight joints parallel to room axis in both directions unless otherwise indicated.
2. Fit adjoining units to form flush, tight joints. Scribe and cut units for accurate fit at borders and around construction penetrating security ceiling.
3. Install directionally patterned panels in directions indicated.
4. Scribe and cut security ceiling panels for accurate fit at borders and at interruptions and penetrations by other work through security ceilings. Stiffen edges of cut panels as required to eliminate evidence of buckling or variations in flatness.

D. Access Panels: Install each access panel only where indicated and within one security ceiling panel.

3.4 SECURITY-PLANK SECURITY CEILING ASSEMBLY INSTALLATION

A. Install security planks with long edges continuously interlocked. Adjust security planks to final position before permanently fastening. Provide minimum 1-1/2-inch (38-mm) end bearing.

1. Attach adjacent security planks to each other with security fasteners spaced not more than 12 inches (305 mm) o.c. and not more than 6 inches (152 mm) from ends.

2. Continuously weld ends of security planks to perimeter supports. Remove exposed projecting burrs, edges, and rough spots resulting from welding operations by grinding smooth.
3. Attach ends of security planks to perimeter supports with security fasteners not more than 3 inches (76 mm) from edges of security plank. Fasten through exposed face of supports into security planks.
4. Provide intermediate carriers for ends of security planks that are not supported by perimeter supports. To attach security planks to intermediate carriers, use same method as that used for attaching security planks to perimeter supports.

    a. Support intermediate carriers from structure above by secondary support system spaced at 48 inches (1220 mm) o.c. and bolted to carriers.

B. Access Panels: Install each access panel only where indicated and within one security plank.

C. Provide steel angle reinforcement on each side of openings that exceed 12 inches (305 mm) in any direction.

3.5 FIELD QUALITY CONTROL

A. Inspect installed products to verify compliance with requirements. Prepare inspection reports and indicate compliance with and deviations from the Contract Documents.

B. Prepare field quality-control certification endorsed by Detention Specialist that states installed products and their installation comply with requirements in the Contract Documents.

END OF SECTION 095753

SECTION 096229 - CORK FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cork floor tile.
2. Engineered cork floor tile.
3. Cork floating floor system.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Samples: For each exposed product and for each color and pattern specified.

1.3 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: For cork flooring, as determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.

1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

2.2 CORK FLOOR TILE

A. Composition: 100 percent natural cork bark and recycled cork granules and set in a natural or synthetic, flexible resin matrix; homogeneous and uniform in composition throughout the tile thickness.

B. Nominal Density: Manufacturer's standard, 30 lb/cu. ft. (480 kg/cu. m), minimum, 34 lb/cu. ft. (544 kg/cu. m), minimum or 37 lb/cu. ft. (592 kg/cu. m), minimum as directed.

C. Nominal Thickness: 0.156 inch (4.0 mm), 0.180 inch (4.8 mm) or 0.312 inch (8.0 mm) as directed.

D. Nominal Size: 12 by 12 inches (305 by 305 mm), 12 by 24 inches (305 by 610 mm) or 24 by 24 inches (610 by 610 mm) as directed.

E. Color: Light natural, Medium natural, Dark natural, As indicated by manufacturer's designations or Match Architect's sample.

F. Factory Finish: Sanded or unfinished, Waxed, Polyurethane, Polyurethane containing UV inhibitors, Acrylic, As indicated by manufacturer's designations or Match Architect's sample as directed.

2.3 ENGINEERED CORK FLOOR TILE

A. Composition: 100 percent natural cork bark and recycled cork granules with laminated, patterned cork veneers and set in a natural or synthetic, flexible resin matrix; homogeneous and uniform in composition throughout the tile thickness.

B. Nominal Density: Manufacturer's standard, 30 lb/cu. ft. (480 kg/cu. m), minimum, 34 lb/cu. ft. (544 kg/cu. m), minimum or 37 lb/cu. ft. (592 kg/cu. m), minimum as directed.

C. Nominal Thickness: 0.156 inch (4.0 mm), 0.180 inch (4.8 mm) or 0.312 inch (8.0 mm) as directed.

D. Nominal Size: 12 by 12 inches (305 by 305 mm), 12 by 24 inches (305 by 610 mm) or 24 by 24 inches (610 by 610 mm) as directed.

E. Color: Light natural, Medium natural, Dark natural, As indicated by manufacturer's designations or Match Architect's sample.

F. Pattern: As indicated by manufacturer's designations or Match Architect's sample.

G. Factory Finish: Sanded or unfinished, Waxed, Polyurethane, Polyurethane containing UV inhibitors, Acrylic, As indicated by manufacturer's designations or Match Architect's sample.

2.4 CORK FLOATING FLOOR SYSTEM

A. Construction: Laminated planks made of two cork layers, top and bottom, that sandwich a medium-density fiberboard core.

B. Plank Density:

1. Cork Top Layer: 28 lb/cu. ft. (448 kg/cu. m).
2. Interlocking Medium-Density Fiberboard Core: 45 lb/cu. ft. (720 kg/cu. m) or Manufacturer's standard density.
3. Cork Underlayment Layer: 13 lb/cu. ft. (208 kg/cu. m) or Manufacturer's standard density as directed.

C. Plank Thickness: As directed 0.450-inch (11.4-mm) or Manufacturer's standard overall nominal thickness made up as follows:

1. Cork Top Layer: As directed 0.125-inch (3.2-mm) or Manufacturer's standard nominal thickness.
2. Interlocking Medium-Density Fiberboard Core: As directed 0.250-inch (6.3-mm) or Manufacturer's standard nominal thickness.
3. Cork Underlayment Layer: As directed 0.078-inch (2.0-mm) or Manufacturer's standard nominal thickness.

D. Plank Size: 36 by 12 inches (900 by 305 mm).

E. Plank Edge: Tongue-and-groove type or Manufacturer's standard interlock as directed.

F. Color: Light natural, Medium natural, Dark natural, As indicated by manufacturer's designations or Match Architect's sample.

G. Pattern: As indicated by manufacturer's designations or Match Architect's sample.

H. Factory Finish: Sanded or unfinished, Waxed, Polyurethane, Polyurethane containing UV inhibitors, Acrylic, As indicated by manufacturer's designations or Match Architect's sample.

2.5 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by cork flooring manufacturer for applications indicated.

B. Vapor Retarder: ASTM D4397, polyethylene sheet not less than 6.0 mils (0.15 mm) or 8.0 mils (0.2 mm) thick as directed.

C. Adhesives: Water-resistant type recommended by flooring and adhesive manufacturers to suit cork flooring and substrate conditions indicated. Insert underlayment material requirements if cork flooring is installed on wood substrates. Consult cork flooring manufacturers for additional information.

2.6 FIELD-APPLIED FINISHES

A. Sealer: Product as recommended by cork flooring manufacturer.

B. Paste Wax: Products as recommended by cork flooring manufacturer.

C. Finish Coatings: Products containing UV inhibitors as recommended by cork flooring manufacturer.

PART 3 - EXECUTION

3.1 PREPARATION

A. Prepare substrates according to cork flooring manufacturer's written instructions to ensure adhesion of cork flooring.

B. Concrete Substrates: Prepare according to ASTM F710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by cork flooring manufacturer. Do not use solvents.
3. Alkalinity and Adhesion Testing: Perform tests recommended by cork flooring manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than 9 or 10 pH as directed.
4. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m) or 1000 sq. ft. (304.8 sq. m) as directed and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

    a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
    b. Relative Humidity Test: Using in-situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.

C. Access Flooring Panels: Remove protective film of oil or other coating using method recommended by access flooring manufacturer.

D. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.

E. Do not install cork flooring until materials are the same temperature as space where they are to be installed.

1. At least 72 hours in advance of installation, move cork flooring products and installation materials into spaces where they will be installed.

F. Immediately before installation, sweep and vacuum clean substrates to be covered by cork flooring.

3.2 FLOOR TILE INSTALLATION

A. Comply with manufacturer's written instructions for installing cork flooring.

B. Mix together floor tiles from each carton to ensure uniform distribution of shade.

C. Discard broken, cracked, chipped, or deformed floor tiles.

D. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.

E. Lay floor tiles square with room axis at a 45-degree angle with room axis in ashlar or staggered joint pattern or in pattern indicated.

F. Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.

G. Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings.

H. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent marking device.

I. Install floor tiles on covers for telephone and electrical ducts, building expansion-joint covers, and similar items in installation areas. Maintain overall continuity of appearance between pieces of tile installed on covers and adjoining tiles. Tightly adhere tile edges to substrates that abut covers and to cover perimeters.

J. Adhere floor tiles to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.3 CORK FLOATING FLOOR SYSTEM INSTALLATION

A. Comply with manufacturer's written instructions for installing cork floating floor system.

B. Install continuous vapor retarder over substrate, taping side and end laps.

C. Mix floor planks from several cartons to ensure uniform distribution of shade.

D. Discard broken, cracked, chipped, or deformed floor planks.

E. Do not attach floor planks to substrate.

F. Tightly interlock and adhere plank edges with adhesive. Remove excess adhesive from top surface of planks.

G. Lay floor planks in pattern indicated.

H. Use spacers to keep floor planks from shifting as subsequent rows are added. Remove spacers after installing cork floating floor system.

I. Maintain expansion space at walls and other obstructions and terminations of flooring as indicated on Drawings of not less than 3/8 inch (9.5 mm).

J. Extend floor planks into toe spaces, door reveals, closets, and similar openings. Extend floor planks to center of door openings.

K. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor planks as marked on substrates. Use chalk or other nonpermanent marking device.

3.4 FIELD-APPLIED FINISHES

A. Apply finishes according to cork flooring manufacturer's written instructions.

B. Cork Sealer: Apply one or two coat(s) as directed.

C. Paste Wax: Apply one, two or three coat(s) as directed.

D. Finish Coatings: Apply two or three coat(s) as directed.

END OF SECTION 096229

SECTION 096313 - BRICK FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Brick flooring set on thickset mortar bed.
2. Brick flooring set in thinset mortar directly on concrete.

1.2 ACTION SUBMITTALS

A. Product Data: For materials other than water and aggregates.

B. Sustainable Design Submittals: Retain option in "Samples" Paragraph below if flooring is grouted and grout color approval is required.

C. Samples: For each type of brick and for grout and accessories involving color selection.

1.3 FIELD CONDITIONS

A. Environmental Limitations: Do not set brick flooring when air temperature or material temperature is below 40 deg F (4.4 deg C). Maintain minimum ambient temperature of 40 deg F (4.4 deg C) during installation and for 48 hours after completion.

PART 2 - PRODUCTS

2.1 BRICK PAVERS

A. Brick Pavers: As directed Light-traffic paving brick complying with ASTM C902, Class SX, Class MX, Class NX, Type I, Type II, Type III, Application PS, Application PX or Application PA, without frogs or cores in surfaces exposed to view in the completed Work.

B. Size: Actual dimensions as follows:

1. Thickness: 1-1/4 inches (32 mm), 1-5/8 inches (41 mm) or 2-1/4 inches (57 mm) as directed.
2. Face Dimensions: 3-5/8 by 7-5/8 inches (92 by 194 mm), 4 by 8 inches (102 by 203 mm), 3-5/8 by 11-5/8 inches (92 by 295 mm) or 7-5/8 by 7-5/8 inches (194 by 194 mm) as directed.

C. Colors and Textures: As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range as directed.

D. Temporary Protective Coating: Precoat exposed surfaces of brick pavers at factory with a continuous film of a temporary protective coating that is compatible with brick, mortar, and grout products.

2.2 MORTAR SETTING-BED MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I or II.

B. Hydrated Lime: ASTM C207, Type S.

C. Aggregate: ASTM C144.

D. Latex Additive: As directed Manufacturer's standard, acrylic resin or styrene-butadiene-rubber water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed portland cement and aggregate mortar bed, and not containing a retarder.

E. Cleavage Membrane: Asphalt-saturated felt, ASTM D226/D226M, Type I (No. 15); or polyethylene sheeting, ASTM D4397, 4.0 mils (0.1 mm) thick.

F. Reinforcing Wire Fabric: Galvanized, welded-wire fabric, 2 by 2 inches (50.8 by 50.8 mm) by 0.062 inch (1.57 mm) in diameter; comply with ASTM A185/A185M and ASTM A82/A82M except for minimum wire size.

G. Thinset Mortar: Latex-portland-cement mortar complying with ANSI A118.4.

2.3 GROUT MATERIALS

A. Sand-Portland-Cement Grout: ANSI A108.10, composed of white or gray cement and white or colored aggregate as required to produce color indicated.

1. Colored Mortar Pigments for Grout: Natural and synthetic iron and chromium oxides, compounded for use in mortar and grout mixes and complying with ASTM C979/C979M. Use only pigments with a record of satisfactory performance in portland-cement grout.

B. Standard Cement Grout: ANSI A118.6, sanded.

C. High-Performance Tile Grout: ANSI A118.7, sanded.

D. Colors: As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.

E. Water: Potable.

2.4 MISCELLANEOUS MATERIALS

A. Expansion- and Control-Joint-Filler Strips: ASTM D1752, cork or self-expanding cork.

B. Sealer: Colorless, stain- and slip-resistant sealer, not affecting color or physical properties of brick and grout surfaces and specifically recommended by sealer manufacturer for use indicated.

C. Floor Polish: ASTM D4078, formulated for use over sealer indicated, acceptable to sealer manufacturer, and specifically recommended by floor-polish manufacturer for use indicated.

1. Slip Resistance: Floor polish shall have a static coefficient of friction of at least 0.5 when tested according to ASTM D2047.

2.5 MIXES

A. General: Comply with referenced standards and with manufacturers' written instructions. Discard mortars and grout when they have reached their initial set.

B. Portland-Cement-Lime Setting-Bed Mortar: ASTM C270, Type S or Type N, Proportion Specification as directed.

C. Latex-Modified Portland-Cement Setting-Bed Mortar: Proportion and mix according to written instructions of liquid-latex manufacturer and as necessary to produce stiff mixture with a moist surface when bed is ready to receive brick.

D. Mortar-Bed Bond Coat: Mix neat cement and latex additive or water to a creamy consistency as directed.

E. Thinset Mortar Bond Coat: Proportion and mix according to manufacturer's written instructions.

F. Portland-Cement Bond Coat: Mix neat cement and water to a creamy consistency.

G. Thinset Mortar: Proportion and mix according to manufacturer's written instructions.

H. Job-Mixed Grout: Proportion and mix portland cement and aggregate grout to match setting-bed mortar, except omit hydrated lime and use enough water to produce a pourable mixture.

I. Packaged Grout: Proportion and mix according to grout manufacturer's written instructions.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Remove substances from subfloor that could impair mortar bond, including curing and sealing compounds, form oil, and laitance.

B. Mix bricks from several pallets or cubes, as they are placed, to produce uniform blend of colors and textures.

C. Cut bricks with motor-driven masonry saw to provide clean, sharp, unchipped edges. Use full units without cutting where possible.

D. Joint Pattern: Running bond, Herringbone, Basket weave, As indicated or Match existing brick flooring joint pattern as directed.

E. Hand-Tight Joints: Set brick with hand-tight joints where indicated.

F. Spaced Joint Widths: Provide nominal 3/8-inch (10-mm) or 1/2-inch (13-mm) joint width with variations not exceeding plus or minus 1/16 inch (1.6 mm), 1/8 inch (3 mm) or unless otherwise indicated.

G. Finished-Surface Tolerances: Do not exceed 1/16-inch (1.5-mm) brick-to-brick offset from flush (lippage) nor 1/8 inch in 24 inches (3 mm in 600 mm) and 1/4 inch in 10 feet (6 mm in 3 m) from level, or indicated slope, for finished surface of brick flooring.

H. Expansion and Control Joints: Provide joint filler as backing for sealant-filled joints where indicated. Install joint filler before setting brick flooring.

3.2 THICKSET BRICK FLOORING

A. Apply mortar bed to concrete subfloors to comply with the following requirements:

1. Saturate concrete subfloor with clean water several hours before placing setting bed. Remove surface water about one hour before placing setting bed.
2. Apply mortar-bed bond coat over surface of concrete subfloor about 15 minutes before placing mortar bed. Do not exceed 1/16-inch (1.6-mm) thickness. Limit area of mortar-bed bond coat to avoid its drying out before placing setting bed.
3. Apply mortar bed immediately after applying mortar-bed bond coat. Spread and screed setting bed to uniform thickness at elevations required for accurate setting of brick to finished elevations indicated.
4. Brick Wet Set on Workable Mortar Bed: Mix and place only that amount of mortar bed that can be covered with brick before initial set. Cut back, bevel edge, and discard setting-bed material that has reached initial set before placing brick.
5. Brick Set on Cured Mortar Bed: Cure mortar bed for not less than 20 hours at 70 deg F (21 deg C).

B. Apply mortar bed over cleavage membrane or waterproofing to comply with the following requirements as directed:

1. Place cleavage membrane over subfloor surfaces indicated to receive brick flooring, lapped at least 4 inches (100 mm) at joints.
2. Place reinforcing wire fabric over membrane, lapped at joints by at least one full mesh and supported so mesh becomes embedded in the middle of setting bed. Hold edges back from vertical surfaces approximately 1/2 inch (13 mm).
3. Place mortar bed over cleavage membrane with reinforcing wire fabric fully embedded in middle of setting bed. Spread and screed setting bed to uniform thickness at elevations required for accurate setting of brick to finished elevations indicated.
4. Brick Wet Set on Workable Mortar Bed: Mix and place only that amount of mortar bed that can be covered with brick before initial set. Cut back, bevel edge, and discard setting-bed material that has reached initial set before placing brick.
5. Brick Set on Cured Mortar Bed: Cure mortar bed for not less than 20 hours at 70 deg F (21 deg C).

C. Install brick either in workable mortar bed or over cured mortar bed at Contractor's option.

D. Install brick in workable mortar bed to comply with the following requirements:

1. Wet brick before laying if the initial rate of absorption exceeds 30 g/30 sq. in. (30 g/194 sq. cm) per minute when tested according to ASTM C67. Allow brick to absorb the water so it is damp but not wet at the time of laying.
2. Place brick before initial set of mortar takes place. Immediately before placing brick on setting bed, apply uniform 1/16-inch- (1.6-mm-) thick bond coat to mortar bed or to back of each brick with a flat trowel.
3. Tamp or beat brick with a wooden block or rubber mallet to obtain full contact with setting bed and to bring finished surfaces within indicated tolerances. Set each brick in a single operation before initial set of mortar; do not return to areas already set and disturb bricks for purposes of realigning finished surfaces or adjusting joints.

E. Install brick over cured mortar bed to comply with the following requirements:

1. Wet brick before laying if the initial rate of absorption exceeds 30 g/30 sq. in. (30 g/194 sq. cm) per minute when tested according to ASTM C67. Allow brick to absorb the water so it is damp but not wet at the time of laying.
2. Apply thinset mortar to setting bed with notched trowel complying with manufacturer's specifications for notch depth and configuration and in heavy enough layer to provide a minimum mortar-bed thickness of 3/32 to 1/8 inch (2.5 to 3 mm) after bricks are fully embedded. Key the mortar into setting bed with flat side of trowel and comb with notched side of trowel in one direction. Apply only as much mortar as can be covered with brick before initial set (15 to 30 minutes).
3. Place brick while thinset mortar is still tacky and before initial set takes place. Immediately before placing brick on setting bed, apply skim coat of thinset mortar to back of brick. Place brick by sliding in direction perpendicular to combed ridges and tamp or beat brick with a small beating block to obtain full contact with setting bed and to bring finished surfaces within indicated tolerances; do not return to areas already set and disturb bricks for purposes of realigning finished surfaces or adjusting joints.

3.3 THINSET BRICK FLOORING

A. Install brick flooring on concrete subfloor with thinset mortar to comply with the following requirements:

1. Wet brick before laying if the initial rate of absorption exceeds 30 g/30 sq. in. (30 g/194 sq. cm) per minute when tested according to ASTM C67. Allow brick to absorb the water, so it is damp but not wet at the time of laying.
2. Apply thinset mortar to subfloor with notched trowel complying with manufacturer's specifications for notch depth and configuration and in heavy enough layer to provide a minimum mortar-bed thickness of 3/32 to 1/8 inch (2.5 to 3 mm) after bricks are fully embedded. Key the mortar into substrate with flat side of trowel and comb with notched side of trowel in one direction. Apply only as much mortar as can be covered with brick before initial set (15 to 30 minutes).
3. Place brick while mortar is still tacky and before initial set takes place. Immediately before placing brick, apply skim coat of thinset mortar to back of brick. Place brick by

sliding in direction perpendicular to combed ridges and tamp or beat brick with a small beating block to obtain full contact with mortar and to bring finished surfaces within indicated tolerances; do not return to areas already set and disturb bricks for purposes of realigning finished surfaces or adjusting joints.

3.4 JOINT TREATMENT

A. Hand-Tight Joints: Sweep dry mixture of portland cement and sand into joints, then fog surface with water to set mixture.

B. Grouted Joints: Grout brick joints complying with ANSI A108.10.

C. Grout joints as soon as possible after initial set of setting bed. Force grout into joints, taking care not to smear grout on adjoining brick and other surfaces. After initial set of grout, finish joints by tooling to produce a slightly concave polished joint, free from drying cracks.

D. Cure grout by maintaining it in a damp condition for seven days unless otherwise recommended by grout manufacturer.

3.5 CLEANING AND PROTECTION

A. Cleaning: Remove excess mortar and grout from exposed brick surfaces; wash and scrub clean.

1. Remove temporary protective coating as recommended by coating manufacturer and as acceptable to brick and grout manufacturers. Trap and remove coating to prevent it from clogging drains.

B. Sealing and Polishing: After floor has been cleaned and is thoroughly dry, seal and polish traffic surface of brick flooring in a manner that results in a clear, uniform appearance. Apply sealer and floor polish in the number of coats and by application methods that comply with written directions of manufacturer of each product. Do not apply floor polish until sealer has dried.

END OF SECTION 096313

SECTION 096313.35 - CHEMICAL-RESISTANT BRICK FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Chemical-resistant brick, used for flooring, base, and lining.
2. Industrial floor brick, used for flooring, base, and lining.
3. Portland-cement mortar and chemical-resistant resin grout.
4. Chemical-resistant resin mortar and chemical-resistant resin grout.
5. Chemical-resistant membrane.
6. Chemical-resistant joint sealants.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples for Verification: Full-size units of each type of brick indicated.

PART 2 - PRODUCTS

2.1 BRICK

A. Chemical-Resistant Brick: Solid (uncored), unfrogged brick complying with ASTM C279, Type I, Type II or Type III, shape, and size indicated as directed.

1. Colors of Exposed Brick Surfaces: As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range as directed.
2. Provide brick with smooth wearing surfaces, slip-resistant wearing surfaces with abrasive content, diagonal-scored wearing surfaces and scored bonding surfaces, wire-cut bonding surfaces or scored or wire-cut bonding surfaces, as standard with manufacturer as directed.

B. Industrial Floor Brick: As directed Solid (uncored), unfrogged brick complying with ASTM C410, Type T, Type H, Type M or Type L, shape, and size indicated.

1. Colors of Exposed Brick Surfaces: As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.
2. Provide brick with smooth wearing surfaces, slip-resistant wearing surfaces with abrasive content or diagonal-scored wearing surfaces and scored bonding surfaces, wire-cut bonding surfaces or scored or wire-cut bonding surfaces, as standard with manufacturer as directed.

C. Base: Provide matching base at walls and vertical elements. Include special shapes for internal and external corners, stops, and where indicated.

1. Type: As indicated, Square-top cove, Round-top cove or Turn-up base.

D. Temporary Protective Coating: Coat exposed faces of brick with a thick continuous film of a temporary protective coating. Use coating that is compatible with brick and with mortar and grout products and that can be removed without damaging grout or brick, as recommended by brick and mortar and grout manufacturers. Do not coat unexposed brick surfaces.

2.2 PORTLAND-CEMENT-MORTAR SETTING-BED MATERIALS

A. Cement: Portland cement, ASTM C150/C150M, Type I.

B. Aggregate: ASTM C144.

C. Cleavage Membrane: Asphalt felt, ASTM D226/D226M, Type I (No. 15); or polyethylene sheeting, ASTM D4397, 4 mils (0.1 mm) thick.

D. Reinforcing Wire Fabric: Galvanized, welded-wire fabric, 2 by 2 inches (50 by 50 mm) by 0.062-inch- (1.6-mm-) diameter wire complying with ASTM A185/A185M and ASTM A82/A82M, except for minimum wire size.

E. Water: Potable.

2.3 CHEMICAL-RESISTANT MORTAR AND JOINT MATERIALS

A. General: Provide products of formulation recommended by manufacturer for application indicated.

B. Resin Mortar for Setting Bed: ASTM C395, with furan, epoxy, phenolic, polyester, vinyl-ester resin and carbon or silica filler as directed.

C. Resin Mortar for Joints: ASTM C395, with same resin and filler as setting bed, furan resin and carbon filler, high-adhesion furan resin and carbon filler or vinyl-ester resin and silica filler as directed.

1. Colors of Exposed Joints: As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.

D. Resin Grout: ASTM C658, with furan, epoxy or vinyl-ester resin and carbon or silica filler.

1. Colors of Exposed Joints: As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.

E. Chemical-Resistant Membrane: Multiple-component asphaltic system consisting of asphalt primer and asphalt-impregnated, woven glass-fiber cloth embedded in hot-melt asphalt compound, as recommended and produced by mortar and grout manufacturer for type of application indicated.

F. Chemical-Resistant Joint Sealant: Chemical-resistant elastomeric sealant of type recommended and produced by chemical-resistant mortar and grout manufacturer for type of application indicated, with a proven service record and compatible with brick and other setting materials. Include primer and backer rod recommended by manufacturer.

1. Colors of Exposed Joints: As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Remove substances from subfloor that could impair bond of mortar, including curing and sealing compounds, form oil, and laitance.

B. Do not use bricks with chips, cracks, voids, discolorations, or other defects that might be visible or cause staining in the finished Work.

C. Cut bricks with motor-driven masonry saw to provide clean, sharp, unchipped edges. Hammer cutting is not acceptable. Cut units to provide pattern indicated and to fit adjoining work neatly. Use full units without cutting where possible.

D. Joint Pattern and Widths:

1. Lay brick in running bond, herringbone pattern, joint pattern shown or joint pattern matching existing brick flooring as directed.

E. Finished Surface Tolerances: Do not exceed 1/32-inch (1-mm) unit-to-unit offset from flush lippage or a tolerance of 1/8 inch in 10 feet (3 mm in 3 m) from level or slope as indicated for finished surface of flooring.

F. Finished Surface Tolerances: Do not exceed 1/16-inch (1.5-mm) unit-to-unit offset from flush lippage or a tolerance of 1/8 inch in 24 inches (3 mm in 600 mm) and 1/4 inch in 10 feet (6 mm in 3 m) from level or slope as indicated for finished surface of brick flooring.

3.2 CHEMICAL-RESISTANT RESIN-MORTAR APPLICATIONS

A. Chemical-Resistant Membrane: Provide chemical-resistant asphaltic membrane system over concrete substrates beneath chemical-resistant mortar applications where indicated. Comply with membrane manufacturer's written directions for installing membrane.

B. Flood Test Membrane: According to ASTM D5957, before installing brick flooring, remove water and dry membrane.

C. Bricklayer's Method: Comply with ASTM C399 and mortar manufacturer's written directions. Lay units in resin-mortar setting bed, and provide full joints of resin mortar by spreading or buttering mortar on sides of units before setting them in place.

D. Tile Setter's Method: Comply with ASTM C723 and mortar and grout manufacturer's written directions. Lay units in resin-mortar setting bed, and fill joints with resin grout.

E. Vertical Surfaces: Set units with resin mortar for joints, including back joint, to comply with ASTM C399.

3.3 PORTLAND-CEMENT-MORTAR AND RESIN-GROUT APPLICATIONS

A. Comply with ASTM C398 for application of units in portland-cement-mortar setting bed. Comply with ASTM C723 and grout manufacturer's written directions for grouting joints with resin grout of type indicated.

B. Cleavage Membrane: Install a continuous membrane with 2-inch- (50-mm-) minimum lapped joints over subfloor.

C. Setting-Bed Reinforcement: Install continuous welded-wire fabric with 4-inch- (100-mm-) minimum lapped joints in setting bed.

D. Vertical Surfaces: Install units to comply with ASTM C399 using resin mortar for joints.

3.4 INSTALLING JOINT SEALANTS

A. Do not fill joints that are to receive sealant. Prepare joints for sealant by raking joints clean for depth of unit thickness plus setting bed as indicated.

B. Install joint sealants, including chemical-resistant sealants specified in this Section, primer, and backer rod, to comply with sealant manufacturer's written directions and Section 079200 "Joint Sealants."

3.5 CLEANING

A. Cleaning: Remove excess mortar and grout from exposed brick surfaces, wash, and scrub clean.

1. Remove temporary protective coating as recommended by coating manufacturer and as acceptable to brick and grout manufacturers. Trap and remove coating to prevent it from clogging drains.

END OF SECTION 096313.35

SECTION 096340 - STONE FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Dimension stone exterior flooring.
2. Dimension stone interior flooring.
3. Dimension stone stair treads and risers.
4. Dimension stone thresholds.

B. Related Requirements:

1. Section 093033 "Stone Tiling."
2. Section 321400 "Unit Paving" for stone pavers.

1.2 ACTION SUBMITTALS

A. Product Data: For each variety of stone, stone accessory, and manufactured product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: Include plans, sections, details, and attachments to other work.

D. Samples:

1. For each stone type indicated. Include at least (as directed) or more Samples in each set and show the full range of color and other visual characteristics in completed Work.
2. For each color of grout or pointing mortar required.

1.3 CLOSEOUT SUBMITTALS

A. Maintenance Data: For stone flooring to include in maintenance manuals.

1.4 QUALITY ASSURANCE

A. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for fabrication and execution.

1. Build mockup of typical interior floor area about 96 inches (2400 mm) square.
2. Build mockup of typical exterior pavement area about 96 inches (2400 mm) square.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 FIELD CONDITIONS

A. Maintain air and material temperatures to comply with requirements of installation material manufacturers, but not less than 50 deg F (10 deg C) during installation and for seven days after completion.

B. Cold-Weather Requirements for Exterior Stone Flooring: Comply with cold-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.

C. Hot-Weather Requirements for Stone Flooring: Comply with hot-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602 and with the following:

1. Maintain temperature of materials below 100 deg F (38 deg C).
2. When the ambient temperature exceeds 90 deg F (32 deg C), fog spray installed stone flooring until damp at least three times a day until flooring is three days old.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Varieties and Sources: Subject to compliance with requirements, provide stone of varieties and from sources complying with Section 044200 "Exterior Stone Cladding."

2.2 GRANITE

A. Material Standard: Comply with ASTM C615/C615M.

B. Varieties and Sources: Subject to compliance with requirements, as directed.

C. Finish: As directed.

2.3 LIMESTONE

A. Material Standard: Comply with ASTM C568/C568M.

1. Stone Abrasion Resistance: Minimum value of 10, as directed based on testing according to ASTM C241/C241M or ASTM C1353.

B. Varieties and Sources: Subject to compliance with requirements as directed.

C. Finish: As directed.

2.4 MARBLE

A. Material Standard: Comply with ASTM C503/C503M.

1. Stone Abrasion Resistance: Minimum value of 10, as directed based on testing according to ASTM C241/C241M or ASTM C1353.

B. Varieties and Sources: Subject to compliance with requirements and as directed.

C. Finish: Polished or Honed, as directed.

2.5 QUARTZ-BASED STONE

A. Material Standard: Comply with ASTM C616/C616M, as directed.

1. Stone Abrasion Resistance: Minimum value of 10, as directed, based on testing according to ASTM C241/C241M or ASTM C1353.

B. Varieties and Sources: Subject to compliance with requirements and as directed.

C. Finish: As directed.

2.6 SERPENTINE

A. Material Standard: Comply with ASTM C1526, Classification I Exterior or Classification II Interior.

1. Stone Abrasion Resistance: Minimum value of 10, as directed, based on testing according to ASTM C241/C241M or ASTM C1353.

B. Varieties and Sources: Subject to compliance with requirements and as directed.

C. Finish: Polished or Honed, as directed.

2.7 SLATE

A. Material Standard: Comply with ASTM C629/C629M, Classification I Exterior or Classification II Interior.

1. Stone Abrasion Resistance: Minimum value of 8 or as directed, based on testing according to ASTM C241/C241M or ASTM C1353.

B. Description: As directed, slate with a fine, even grain and unfading color, from clear, sound stock.

C. Varieties and Sources: Subject to compliance with requirements and as directed.

D. Finish: As directed.

2.8 TRAVERTINE

A. Material Standard: Comply with ASTM C1527/C1527M, Classification I Exterior or Classification II Interior.

1. Stone Abrasion Resistance: Minimum value of 10 or as directed, based on testing according to ASTM C241/C241M or ASTM C1353.

B. Varieties and Sources: Subject to compliance with requirements and as directed.

C. Cut: Vein.

D. Filling: Fill pores on faces of stone with cementitious filler of color as directed.

E. Finish: As directed.

2.9 OTHER STONE

A. Material Standards:

1. Maximum Absorption according to ASTM C97/C97M: as directed.
2. Minimum Compressive Strength according to ASTM C170/C170M: as directed.
3. Stone Abrasion Resistance: Minimum value of 10 or 12 as directed, based on testing according to ASTM C241/C241M or ASTM C1353.

B. Varieties and Sources: Subject to compliance with requirements and as directed.

C. Finish: As directed.

2.10 MORTAR MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I or Type II. Provide natural color or white cement as required to produce mortar color indicated.

1. Low-Alkali Cement: Not more than 0.60 percent total alkali when tested according to ASTM C114.

B. Hydrated Lime: ASTM C207, Type S.

C. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C979/C979M. Use only pigments with a record of satisfactory performance in stone masonry mortar.

D. Aggregate: ASTM C144; except for joints narrower than 1/4 inch (6 mm) and pointing mortar, use aggregate graded with 100 percent passing No. 16 (1.18-mm) sieve.

1. White Aggregates: Natural white sand or ground white stone.

2. Colored Aggregates: Natural-colored sand or ground marble, granite, or other durable stone; of color necessary to produce required mortar color.

E. Latex Additive: acrylic-resin or styrene-butadiene-rubber water emulsion, serving as replacement for part of or all gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed portland cement mortar bed, and not containing a retarder.

F. Thinset Mortar:
1. Standard Dry-Set Mortar: ANSI A118.1.
2. Modified Dry-Set Mortar: ANSI A118.4.
3. Medium-Bed Modified Dry-Set Mortar: ANSI A118.4. Provide product that is approved by manufacturer for application thickness of 5/8 inch (16 mm), as directed.
4. Improved Modified Dry-Set Mortar: ANSI A118.15.

G. Water: Potable.

2.11 GROUT

A. Grout Colors: Match stone, as directed.

B. Sand-Portland Cement Grout: ANSI A108.10, composed of white or gray cement and white or colored aggregate to produce required color.

C. Standard Cement Grout: ANSI A118.6, packaged.

1. Unsanded grout mixture for joints 1/8 inch (3 mm) and narrower.
2. Sanded grout mixture for joints wider than 1/8 inch (3 mm).

D. High-Performance Cement Grout: ANSI A118.7, packaged.

1. Unsanded grout mix for joints 1/8 inch (3 mm) and narrower.
2. Sanded grout mix for joints wider than 1/8 inch (3 mm).

2.12 WATERPROOF MEMBRANES

A. General: Manufacturer's standard product, selected from the following, that complies with ANSI A118.10 and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Chlorinated Polyethylene Sheet: Nonplasticized, chlorinated polyethylene faced on both sides with nonwoven polyester fabric; 0.030-inch (0.76-mm) nominal thickness.

C. PVC Sheet: Two layers of PVC sheet heat-fused together and to facings of nonwoven polyester; 0.040-inch (1.01-mm) nominal thickness.

2.13 ACCESSORIES

A. Water-Cleanable Epoxy Adhesive: ANSI A118.3.

B. Cleavage Membrane: Polyethylene sheeting, ASTM D4397, 4.0 mils (0.1 mm) thick; or unperforated asphalt felt, ASTM D226/D226M, Type I (No. 15).

C. Reinforcing Wire: Galvanized, welded, 0.062-inch- (1.57-mm-) diameter wire; 2-by-2-inch (50-by-50-mm) mesh; comply with ASTM A1064/A1064M, except for minimum wire size.

D. Divider Strips and Edging: Metal or combination of metal and PVC or neoprene base, designed specifically for flooring applications, in longest lengths available, and as follows:

1. Exposed-Edge Material: As directed.
2. Cross-Section Profile: As directed.
3. Height: Match stone thickness or Equal to stone thickness plus depth of setting bed.
4. Exposed-Edge Width: As directed.
5. Control-Joint Filler: Neoprene.

E. Abrasive Inserts for Stair Treads: Abrasive strips consisting of aluminum oxide, silicon carbide, or a combination of both, in an epoxy-resin binder, fabricated for installing in routed grooves of stair treads to provide slip resistance. Provide epoxy-resin installation adhesive compatible with inserts.

1. Width: 1/4 inch (6.4 mm)
2. Depth: 1/2 inch (12.7 mm)
3. Length: 4 inches (100 mm)

Retain "Cork Joint Filler" Paragraph below if required for joints in exterior flooring or for locations where exterior stone flooring abuts curbs, vertical surfaces, or other paving types.

F. Cork Joint Filler: Preformed strips complying with ASTM D1752, Type II.

G. Cleaner: Stone cleaner specifically formulated for stone types, finishes, and applications indicated, as recommended by stone producer and by sealer manufacturer. Do not use cleaning compounds containing acids, caustics, harsh fillers, or abrasives.

H. Floor Sealer: Colorless, slip- and stain-resistant sealer that does not affect color or physical properties of stone surfaces, as recommended by stone producer for application indicated.

2.14 MORTAR AND GROUT MIXES

A. Mortar: Comply with referenced standards and with manufacturers' written instructions to produce mortar of uniform quality and with optimum performance characteristics.

1. Do not use admixtures unless otherwise indicated. Do not use calcium chloride.
2. Mixing Pointing Mortar: Thoroughly mix cementitious and aggregate materials together before adding any water. Add only enough water to produce a damp, unworkable mix that retains its form when pressed into a ball. Maintain mortar in this dampened condition for one to two hours. Add remaining water in small portions until mortar reaches desired

consistency. Use mortar within 30 minutes of final mixing; do not retemper or use partially hardened material.

B. Portland Cement-Lime Setting Mortar: ASTM C270, Proportion Specification, Type N or Type S, Type N for interior applications and Type S for exterior applications.

C. Latex-Modified Portland Cement Setting Mortar: Proportion and mix portland cement, aggregate, and latex additive to comply with latex-additive manufacturer's written instructions and to produce a stiff mixture with a moist surface when bed is ready to receive stone.

D. Mortar-Bed Bond Coat: Mix neat cement and water or latex additive to a creamy consistency.

E. Cement-Paste Bond Coat: Mix either neat cement or cement and sand with water to a consistency similar to that of thick cream.

F. Latex-Modified Portland Cement Bond Coat: Proportion and mix portland cement, aggregate, and latex additive to comply with latex-additive manufacturer's written instructions.

G. Pointing Mortar: Comply with requirements indicated above for setting mortar, including type and the following:

1. Pigmented Pointing Mortar: Select and proportion pigments with other ingredients to produce color required. Do not exceed pigment-to-cement ratio of 1:10, by weight.
2. Colored-Aggregate Pointing Mortar: Produce color required by combining colored aggregates with portland cement of selected color.

H. Joint Grout: Comply with mixing requirements in referenced ANSI standards and with manufacturer's written instructions.

2.15 STONE FABRICATION

A. Select stone for intended use to prevent fabricated units from containing cracks, seams, and starts that could impair structural integrity or function.

B. Cut stone to produce pieces of thickness, size, and shape indicated.

1. Stone Thickness: As directed.
2. Stone Edges: As directed.
3. Joint Width: As directed.

C. Pattern Arrangement: Fabricate and arrange stone units with veining and other natural markings to comply with the following requirements:

1. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
2. Arrange units with veining as directed or in blend pattern.

D. Fabricate stone thresholds in sizes and profiles as indicated or required to provide transition between adjacent floor finishes.

E. Fabricate stone stair treads in sizes and profiles indicated. Rout grooves into treads to receive abrasive strips and install strips to comply with manufacturer's written instructions. Cut grooves about 1/8 inch (3 mm) wide by 1/16 inch (1.5 mm) deep in stair treads as indicated.

PART 3 - EXECUTION

3.1 PREPARATION

A. Vacuum or Sweep concrete substrates to remove dirt, dust, debris, and loose particles.

B. Remove substances from concrete substrates that could impair mortar bond, including curing and sealing compounds, form oil, and laitance.

C. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1A and is sloped 1/4 inch per foot (1:50) toward drains.

D. Before setting stone, clean dirty or stained stone surfaces by removing soil, stains, and foreign materials.

3.2 INSTALLATION, GENERAL

A. Do necessary field cutting as stone is set. Cut lines straight and true, and finish field-cut edges to match shop-cut edges.

1. Use power saws with diamond blades to cut stone, except for stone that is specified to have rough-split edges.

B. Scribe and field cut stone as necessary to fit at obstructions. Produce neat joints of size specified or indicated.

C. Provide control and expansion joints of widths and at locations indicated. Keep control and expansion joints free of mortar, grout, and other rigid materials.

3.3 INSTALLATION TOLERANCES

A. Variation in Joint Width: Do not vary from average joint width more than plus or minus 1/16 inch (1.5 mm) or one-fourth of nominal joint width, whichever is less.

B. Variation in Surface Plane: Do not exceed 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 3/8 inch (10 mm) maximum from level or slope indicated.

C. Variation in Plane between Adjacent Units (Lipping): Do not exceed 1/32-inch (0.8-mm) difference between planes of adjacent units.

3.4 INSTALLATION OF STONE BONDED TO CONCRETE

A. Saturate concrete with clean water several hours before placing setting bed. Remove surface water about one hour before placing setting bed.

B. Apply mortar-bed bond coat to damp concrete and broom to provide an even coating that completely covers the concrete. Do not exceed 1/16-inch (1.5-mm) thickness. Limit area of mortar-bed bond coat to avoid its drying out before placing setting bed.

C. Apply mortar bed immediately after applying mortar-bed bond coat. Spread, tamp, and screed to uniform thickness at elevations required for setting stone to finished elevations indicated.

D. Mix and place only that amount of mortar bed that can be covered with stone before initial set. Cut back, bevel edge, and discard material that has reached initial set before stone can be placed.

E. Place stone before initial set of mortar occurs. Immediately before placing stone on setting bed, apply uniform 1/16-inch- (1.5-mm-) thick bond coat to mortar bed or to back of each stone unit.

F. Tamp and beat stone with a wooden block or rubber mallet to obtain full contact with mortar bed and to bring finished surfaces within indicated tolerances. Set each unit in a single operation before initial set of mortar; do not return to areas already set and disturb stone for purposes of realigning finished surfaces or adjusting joints.

G. Rake out joints to depth required to receive grout or pointing mortar as units are set.

H. Point joints after setting. Fill full with mortar type and color indicated. Tool joints flat, uniform, and smooth, without visible voids.

3.5 INSTALLATION OF STONE OVER CLEAVAGE MEMBRANE OR WATERPROOFING

A. Place cleavage membrane over substrates indicated to receive stone, lapped at least 4 inches (100 mm) at joints.

B. See waterproofing Section for installation of waterproofing and protection board.

1. Provide cork joint filler, where indicated, at waterproofing that is turned up on vertical surfaces.

C. Install waterproof membrane to comply with ANSI A108.13 and manufacturer's written instructions.

D. Place reinforcing wire fabric over as directed, lapped at least one full mesh at joints and supported so mesh becomes embedded in middle of mortar bed. Hold edges back from vertical surfaces and control and expansion joints about 1/2 inch (13 mm).

E. Place mortar bed over as directed, with reinforcing wire fabric fully embedded in middle of mortar bed. Spread, tamp, and screed to uniform thickness at elevations required for setting stone to finished elevations indicated.

F. Mix and place only that amount of mortar bed that can be covered with stone before initial set. Cut back, bevel edge, and discard material that has reached initial set before stone can be placed.

G. Place stone before initial set of mortar occurs. Immediately before placing stone on setting bed, apply uniform 1/16-inch- (1.5-mm-) thick bond coat to mortar bed or to back of each stone unit.

H. Tamp and beat stone with a wooden block or rubber mallet to obtain full contact with mortar bed and to bring finished surfaces within indicated tolerances. Set each unit in a single operation before initial set of mortar; do not return to areas already set and disturb stone for purposes of realigning finished surfaces or adjusting joints.

I. Rake out joints to depth required to receive grout or pointing mortar as units are set.

J. Point joints after setting. Fill full with mortar type and color indicated. Tool joints flat, uniform, and smooth, without visible voids.

3.6 STONE THRESHOLD INSTALLATION

A. At locations adjacent to stone flooring, install stone thresholds in same type of setting bed as abutting stone flooring unless otherwise indicated.

1. Set thresholds in thinset mortar to comply with ANSI A108.5 at locations where mortar bed would otherwise be exposed above other adjacent flooring.

B. At locations not adjacent to stone flooring, install stone thresholds in thinset mortar to comply with ANSI A108.5 or water-cleanable epoxy adhesive to comply with ANSI A108.4.

3.7 STONE STAIR TREAD AND RISER INSTALLATION

A. Install stone stair treads and risers to comply with "Installation of Stone Bonded to Concrete" Article.

B. Install stone stair treads and risers in thinset mortar to comply with ANSI A108.5 or water-cleanable epoxy adhesive to comply with ANSI A108.4.

3.8 GROUTING

A. Grout stone joints to comply with ANSI A108.10 and with manufacturer's written instructions.

1. Do not use sanded grout for polished stone.
2. Grout joints as soon as possible after initial set of setting bed. Force grout into joints, taking care not to smear grout on adjoining stone and other surfaces. After initial set of grout, finish joints by tooling to produce a slightly concave polished joint, free of drying cracks.

3.9 ADJUSTING AND CLEANING

A. In-Progress Cleaning: Clean stonework as work progresses. Remove mortar fins and smears or grout smears before tooling joints.

B. Clean stonework after setting and pointing or grouting are complete. Use procedures recommended by stone fabricator for application types.

C. Apply sealer to cleaned stonework according to sealer manufacturer's written instructions.

3.10 PROTECTION

A. Prohibit traffic from installed stone for a minimum of 72 hours.

B. Protect installed stonework during construction with nonstaining kraft paper. Where adjoining areas require construction work access, cover stonework with a minimum of 3/4-inch (20-mm) untreated plywood over nonstaining kraft paper.

END OF SECTION 096340

SECTION 096400 - WOOD FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Factory-finished wood flooring.
2. Field-finished wood flooring.
3. Sound control underlayment.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For each type of floor assembly and accessory. Include plans, sections, and attachment details. Include expansion provisions and trim details.

D. Samples: For each exposed product and for each color and texture specified.

1.3 QUALITY ASSURANCE – As directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Hardwood Flooring: Comply with NWFA A500 for species, grade, and cut.

1. Certification: Provide flooring that carries NWFA grade stamp on each bundle or piece.

B. Maple Flooring: Comply with applicable MFMA grading rules for species, grade, and cut.

1. Certification: Provide flooring that carries MFMA mark on each bundle or piece.

C. Softwood Flooring: Comply with WCLIB No. 17 grading rules for species, grade, and cut.

2.2 FIELD-FINISHED WOOD FLOORING

A. Solid-Wood Flooring: Kiln dried to 6 to 9 percent maximum moisture content; tongue and groove and end matched; with backs channeled.

1. Grade and Species: As directed.
2. Cut: As directed.
3. Thickness: 25/32 inch (20 mm) or 3/4 inch (19 mm) and as directed.
4. Face Width: As directed.
5. Lengths: As directed.
6. Simulated Wood Pegs: Contrasting wood pegs at ends of flooring pieces.

B. Engineered-Wood Flooring: HPVA EF, meeting requirements for composite wood products.

1. Species: As directed.
2. Grade: As directed.
3. Thickness: 1/2 inch (13 mm) or 3/8 inch (10 mm).
4. Construction: Five or Three ply as directed.
5. Face Width: 2-1/4 inches (57 mm) or 3 inches (76 mm).
6. Length: Manufacturer's standard.

C. Urethane Finish System: Complete solvent-based, oil-modified or water-based system of compatible components that is recommended by finish manufacturer for application indicated.

1. Stain: Penetrating and nonfading type.

    a. Color: As directed.

2. Floor Sealer: Pliable, penetrating type.
3. Finish Coats: Formulated for multicoat application on wood flooring.

D. Wood Filler: Compatible with finish system components and recommended by filler and finish manufacturers for use indicated. If required to match approved Samples, provide pigmented filler.

2.3 FACTORY-FINISHED WOOD FLOORING

A. Solid-Wood Flooring: Kiln dried to 6 to 9 percent maximum moisture content; tongue and groove and end matched; with backs channeled.

1. Species: As directed.
2. Grade: As directed.
3. Cut: As directed.
4. Thickness: 3/4 inch (19 mm) or 25/32 inch (20 mm), as directed.
5. Face Width: As directed.
6. Lengths: As directed.
7. Edge Style: Square or Beveled (eased), as directed.
8. Finish: UV urethane.

    a. Color: As directed.

B. Engineered-Wood Flooring: HPVA EF, meeting requirements for composite wood products.

1. Species: As directed.
2. Grade: As directed.
3. Thickness: 1/2 inch (13 mm) or 3/8 inch (10 mm), as directed.
4. Construction: Five or Three ply, as directed.
5. Face Width: 2-1/4 inches (57 mm) or 3 inches (76 mm).
6. Length: Manufacturer's standard.
7. Edge Style: Square or Beveled (eased).
8. Finish: UV urethane or Acrylic impregnated.

    a. Color: As directed.

2.4 SOUND CONTROL UNDERLAYMENT

A. Sound Control Underlayment: Sound reducing underlayment consisting of impact-absorbing materials. Minimum Impact Insulation Class (IIC) of 50 or 55 or as directed when tested according to ASTM E492.

1. Material: As directed.
2. Thickness: As directed.

2.5 ACCESSORY MATERIALS

A. Wood Sleepers and Subfloor: As specified in Section 061000 "Rough Carpentry" and Section 061600 "Sheathing."

B. Wood Underlayment: As specified in Section 061600 "Sheathing."

C. Vapor Retarder: ASTM D4397, polyethylene sheet not less than 6.0 mils (0.15 mm) or 8.0 mils (0.2 mm) thick.

D. Asphalt-Saturated Felt: ASTM D4869/D4869M, Type II.

E. Wood Flooring Adhesive: Mastic recommended by flooring and adhesive manufacturers for application indicated.

F. Trowelable Leveling and Patching Compound: Latex-modified, hydraulic-cement-based formulation approved by wood flooring manufacturer.

G. Fasteners: As recommended by manufacturer, but not less than that recommended in NWFA's "Installation Guidelines."

H. Thresholds and Saddles: To match wood flooring. Tapered on each side.

I. Reducer Strips: To match wood flooring. 2 inches (51 mm) wide, tapered, and in thickness required to match height of flooring.

J. Cork Expansion Strip: Composition cork strip.

K. Feature Strips: 2-inch- (51-mm-) wide, square-edged walnut strips furnished in lengths as long as practical and in thickness to match wood flooring.

L. Wood Air Vents and Grilles: To match wood flooring and in sizes and design indicated on Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Concrete Slabs:

1. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m) or 1000 sq. ft. (304.8 sq. m), and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

    a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) or 4.5 lb of water/1000 sq. ft. (2.04 kg of water/92.9 sq. m) in 24 hours.
    b. Relative Humidity Test: Using in situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 80 or 75, as directed percent relative humidity level measurement.
    c. Perform additional moisture tests recommended by manufacturer. Proceed with installation only after substrates pass testing.

3.2 PREPARATION

A. Concrete Slabs:

1. Grind high spots and fill low spots to produce a maximum 1/8-inch (3-mm) deviation in any direction when checked with a 10-foot (3-m) straight edge.
2. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, and depressions in substrates.
3. Remove coatings, including curing compounds, and other substances on substrates that are incompatible with installation adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.

B. Broom or vacuum clean substrates to be covered immediately before product installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Comply with flooring manufacturer's written installation instructions, but not less than applicable recommendations in NWFA's "Installation Guidelines", Retain "Wood Sleepers and Subfloor" and "Wood Underlayment" paragraphs below if required.

B. Wood Sleepers and Subfloor: Install according to requirements in Section 061000 "Rough Carpentry" and Section 061600 "Sheathing."

C. Wood Underlayment: Install according to requirements in Section 061600 "Sheathing."

D. Provide expansion space at walls and other obstructions and terminations of flooring as directed.

E. Vapor Retarder: Comply with the following for vapor retarder installation:

1. Wood Flooring Nailed to Wood Subfloor: Install flooring over a layer of asphalt-saturated felt.
2. Wood Flooring Nailed to Sleepers over Concrete: Install flooring over a layer of polyethylene sheet with edges overlapped over sleepers and turned up behind baseboards.
3. Wood Flooring Installed Directly on Concrete: Install a layer of polyethylene sheet according to flooring manufacturer's written instructions.

F. Sound Control Underlayment: Install over vapor retarder according to manufacturer's written instructions.

G. Solid-Wood Flooring: Blind nail or staple flooring to substrate.

1. Plank Flooring: For flooring of face width more than 3 inches (76 mm):

a. Hardwood: Install countersunk screws at each end of each piece in addition to blind nailing. Cover screw heads with wood plugs glued flush with flooring.
b. Softwood: Install no fewer than two countersunk nails at each end of each piece, spaced not more than 16 inches (406 mm) along length of each piece, in addition to blind nailing. Fill holes with matching wood filler.

H. Engineered-Wood Flooring: As directed.

3.4 FIELD FINISHING

A. Machine-sand flooring to remove offsets, ridges, cups, and sanding-machine marks that are noticeable after finishing. Vacuum and tack with a clean cloth immediately before applying finish.

1. Comply with applicable recommendations in NWFA's "Installation Guidelines."

B. Fill open-grained hardwood.

C. Fill and repair wood flooring defects.

D. Apply floor-finish materials in number of coats recommended by finish manufacturer for application indicated, but not less than one coat of floor sealer and three finish coats or a directed.

1. Apply stains to achieve an even color distribution matching approved Samples.
2. For water-based finishes, use finishing methods recommended by finish manufacturer to minimize grain raise.

E. Cover wood flooring before finishing.

F. Do not cover wood flooring after finishing until finish reaches full cure, and not before seven days after applying last finish coat.

3.5 PROTECTION

A. Protect installed wood flooring during remainder of construction period with covering of heavy kraft paper or other suitable material. Do not use plastic sheet or film that might cause condensation.

1. Do not move heavy and sharp objects directly over kraft-paper-covered wood flooring. Protect flooring with plywood or hardboard panels to prevent damage from storing or moving objects over flooring.

END OF SECTION 096400

SECTION 096466 - WOOD ATHLETIC FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes wood athletic flooring.

1.3 COORDINATION

A. Coordinate layout and installation of slab depressions to accommodate layout and height of wood athletic flooring assembly.

B. Coordinate layout and installation of flooring with floor inserts for gymnasium equipment.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For each type of floor assembly, include the following:

1. Plans, sections, and attachment details.
2. Details of concrete-slab depressions.
3. Locations of different grades of wood flooring.
4. Expansion provisions and trim details.
5. Layout, colors, widths, and dimensions of game lines and markers.
6. Locations of floor inserts for athletic equipment installed through flooring assembly.

D. Samples: For each exposed product and for each color and texture specified.

1.5 INFORMATIONAL SUBMITTALS

A. Product test reports.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: A firm or individual that has been approved by MFMA as an accredited Installer according to the MFMA Accreditation Program.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 SYSTEM DESCRIPTION

A. System Type: As directed.

B. Overall System Height: As directed.

2.3 PERFORMANCE REQUIREMENTS

2.4 FLOORING MATERIALS

A. Maple Flooring: Comply with MFMA grading rules for species, grade, and cut.

1. Certification: Provide flooring that carries MFMA mark on each bundle or piece.

B. Random-Length Strip Flooring: Northern hard maple (Acer saccharum), kiln dried, random length, tongue and groove, and end matched.

1. Grade: MFMA-RL – As directed.

a. Exception: For areas under stacked portion of telescoping bleachers that are normally concealed from view, provide Third and Better Grade.

2. Cut: Edge or Flat.
3. Thickness: 25/32 inch (20 mm) or 33/32 inch (26 mm), as directed.
4. Face Width: 2-1/4 inches (57 mm) or 1-1/2 inches (38 mm), as directed.

2.5 SUBFLOOR MATERIALS

A. Board Underlayment: Nominal 1-by-6-inch (25-by-150-mm) graded boards; of SPIB No. 2 Southern pine, WCLIB Construction grade (any species), or WWPA No. 3 (any species), dried to 15 percent moisture content.

B. Plywood Underlayment: APA rated, C-D plugged, exterior glue, tongue and groove, 15/32 inch (12 mm) or 23/32 inch (18 mm) thick.

C. Wood Sleepers: Standard grade; 48 inches (1200 mm) long; kiln-dried Eastern hemlock, fir, pine, or spruce.

1. Size: Nominal 2 by 3 inches (50 by 75 mm) or 2 by 4 inches (50 by 100 mm).
2. Sleeper Anchors: Manufacturer's standard drive pins recommended by anchor manufacturer to achieve minimum 900-lbf (4000-N) pullout strength in 3000-psi (20.7-MPa) concrete.
3. Sleeper Shims: In size and type recommended in writing by flooring manufacturer for application indicated.
4. Asphalt Primer: ASTM D41/D41M.
5. Asphalt Mastic: ASTM D312, Type I, cold-applied dead-level asphalt or Type III, hot-applied steep asphalt, as recommended in writing by manufacturer.

D. Channels: As directed.

1. Channel Anchors: Manufacturer's standard, but not less than modified steel drive pins recommended by anchor manufacturer to achieve minimum 900-lbf (4000-N) pullout strength.
2. Clips: As directed.

E. Resilient Pads: With air voids for resiliency and installed at manufacturer's standard spacing for product designation indicated above.

1. Type: As directed.
2. Material: As directed.
3. Thickness: As directed.

F. Resilient Underlayment: Flexible, multicellular, closed-cell, expanded polyethylene-foam sheet; nominal 2-lb/cu. ft. (32-kg/cu. m) density.

1. Thickness: As directed.

2.6 FINISHES

A. Floor-Finish System: System of compatible components recommended in writing by flooring manufacturer, and MFMA approved.

1. Floor-Sealer Formulation: Pliable, penetrating type. MFMA Group 1, Sealers.
2. Finish-Coat Formulation: Formulated for gloss finish indicated and multicoat application.

    a. Type: MFMA Group 3, Gymnasium-Type Surface Finishes or MFMA Group 5, Water-Based Finishes or as directed. .

3. Game-Line and Marker Paint: Industrial enamel compatible with finish coats and recommended in writing by manufacturers of finish coats, and paint for this use.

2.7 ACCESSORIES

A. Vapor Retarder: ASTM D4397, polyethylene sheet not less than 6 mils (0.15 mm) thick.

B. Resilient Wall Base: Molded, vented, rubber or vinyl cove base; 4 by 3 by 48 inches (100 by 75 by 1200 mm); with pre-molded outside corners.

1. Color: Black or Brown, as directed.

C. Wood Wall Base: Nominal 1-by-3-inch (25-by-75-mm) wood base or Built-up wood base matching species, grade, and cut of wood flooring as directed.

D. Thresholds: As specified in Section 087100 "Door Hardware".

E. Fasteners: Type and size recommended by manufacturer, but not less than those recommended by MFMA for application indicated.

F. Trowelable Leveling and Patching Compound: Latex-modified, hydraulic-cement-based formulation approved by wood athletic flooring manufacturer.

G. Adhesives: Manufacturer's standard for application as directed.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Concrete Slabs:

1. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m) or 1000 sq. ft. (304.8 sq. m) as directed and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) or 4.5 lb of water/1000 sq. ft. (2.04 kg of water/92.9 sq. m) in 24 hours.
b. Relative Humidity Test: Using in situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 80 or 75 percent relative humidity level measurement, as directed.
c. Perform additional moisture tests recommended by manufacturer. Proceed with installation only after substrates pass testing.

3.2 PREPARATION

A. Concrete Slabs:

1. Grind high spots and fill low spots on concrete substrates to produce a maximum 1/8-inch (3-mm) deviation in any direction when checked with a 10-foot (3-m) straight edge.

2. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, and depressions in substrates.
3. Remove coatings including curing compounds and other substances on substrates that are incompatible with installation adhesives and that contain soap, wax, oil, or silicone; use mechanical methods recommended by manufacturer. Do not use solvents.

B. Broom and vacuum clean substrates to be covered immediately before product installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Comply with wood athletic flooring manufacturer's written instructions, but not less than written recommendations of MFMA applicable to flooring type indicated.

B. Pattern: Lay flooring parallel with long dimension of space to be floored unless otherwise indicated.

C. Expansion Spaces: Provide as indicated, but not less than that required by manufacturer's written instructions and MFMA's written recommendations at walls and other obstructions, and at interruptions and terminations of flooring.

1. Cover expansion spaces with base molding, trim, and saddles, as indicated on Drawings.

D. Vapor Retarder: Cover entire slab area beneath wood flooring. Install with joints lapped a minimum of 6 inches (150 mm) and sealed.

E. Underlayment: Install perpendicular to direction of flooring, staggering end joints in adjacent rows.

F. Sleepers:

1. Prime entire slab beneath wood floor area with asphalt primer at coverage rate recommended by manufacturer.
2. Install sleepers perpendicular to direction of flooring, staggering end joints a minimum of 24 inches (610 mm) or as directed.
3. Space as directed.
4. Shim and level sleepers and install anchors at spacing recommended by manufacturer, but not less than 30 inches (760 mm) o.c.
5. Pour asphalt mastic to 1/8 inch (3 mm) above the level of shims.
6. Anchor predrilled sleepers through resilient pads.

G. Channels: Anchor channels to substrate according to manufacturer's written instructions.

1. Install wood strip flooring across channels.
2. Insert steel clip at each intersection of a flooring strip with a channel.

H. Strip Flooring: Mechanically fasten perpendicular to supports.

I. Installation Tolerances: 1/8 inch in 10 feet (3 mm in 3 m) of variance from level.

3.4 SANDING AND FINISHING

A. Allow installed flooring to acclimate to ambient conditions before sanding.

B. Follow applicable recommendations in MFMA's "Industry Recommendations for Sanding, Sealing, Court Lining, Finishing, and Resurfacing of Maple Gym Floors."

C. Machine sand with coarse, medium, and fine grades of sandpaper to achieve a level, smooth, uniform surface without ridges or cups. Remove sanding dust by tack or vacuum.

D. Finish: Apply seal and finish coats of finish system according to finish manufacturer's written instructions. Provide no fewer than four coats total and no fewer than two finish coats, as directed.

1. Water-Based Finishes: Use finishing methods recommended by finish manufacturer to reduce grain raise and sidebonding effect.
2. Game-Line and Marker Paint: Apply game-line and marker paint between final seal coat and first finish coat according to paint manufacturer's written instructions.

    a. Mask flooring at game line and markers, apply paint to produce lines and markers with sharp edges.
    b. Where game lines cross, break minor game line at intersection; do not overlap lines.
    c. Apply game lines and markers in widths and colors as directed.
    d. Apply finish coats after game-line and marker paint is fully cured.

E. Protect wood athletic flooring during remainder of construction period to allow finish to cure and to ensure that flooring and finish are without damage or deterioration at time of Substantial Completion.

1. Do not cover flooring after finishing until finish reaches full cure and not before seven days after applying last finish coat.
2. Do not move heavy and sharp objects directly over flooring. Protect fully cured floor finishes and surfaces with plywood or hardboard panels to prevent damage from storing or moving objects over flooring.

END OF SECTION 096466

SECTION 096513 - RESILIENT BASE AND ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Thermoset-rubber base.
2. Thermoplastic-rubber base.
3. Vinyl base.
4. Rubber stair accessories.
5. Vinyl stair accessories.
6. Rubber molding accessories.
7. Vinyl molding accessories.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Samples: For each exposed product and for each color and texture specified.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

2.2 THERMOSET-RUBBER BASE

A. Product Standard: ASTM F1861, Type TS (rubber, vulcanized thermoset), Group I (solid, homogeneous).

1. Style and Location:

a. Style A, Straight: As directed.
b. Style B, Cove: As directed.
c. Style C, Butt to: As directed.

B. Thickness: 0.125 inch (3.2 mm).

C. Height: As directed.

D. Lengths: As directed.

E. Outside Corners: As directed.

F. Inside Corners: As directed.

G. Colors: As directed.

2.3 THERMOPLASTIC-RUBBER BASE: As directed.

A. Product Standard: ASTM F1861, Type TP (rubber, thermoplastic).

1. Group: I (solid, homogeneous) or II (layered).
2. Style and Location:

a. Style A, Straight: As directed.
b. Style B, Cove: As directed.
c. Style C, Butt to: As directed.
d. Style D, Sculptured: As directed.

1) Profile: As directed. indicated

B. Thickness: 0.125 inch (3.2 mm).

C. Height: As directed.

D. Lengths: As directed.

E. Outside Corners: As directed.

F. Inside Corners: As directed.

G. Colors: As directed.

2.4 VINYL BASE

A. Product Standard: ASTM F1861, Type TV (vinyl, thermoplastic).

1. Group: I (solid, homogeneous) or II (layered).
2. Style and Location:

a. Style A, Straight: As directed.
b. Style B, Cove: As directed.

B. Minimum Thickness: 0.125 inch (3.2 mm) or 0.080 inch (2.0 mm).

C. Height: As directed. As directed.

D. Lengths: As directed.

E. Outside Corners: As directed.

F. Inside Corners: As directed.

G. Colors and Patterns: As directed.

2.5 RUBBER STAIR ACCESSORIES

A. Fire-Test-Response Characteristics: As determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.

1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

B. Stair Treads: ASTM F2169.

1. Type: TS (rubber, vulcanized thermoset) or TP (rubber, thermoplastic).
2. Class: 1 (smooth, flat) or 2 (pattern; embossed, grooved, or ribbed).
3. Group: 1 (embedded abrasive strips) or 2 (with contrasting color for the visually impaired).
4. Nosing Style: Square, adjustable to cover angles between 60 and 90 degrees. Square or Round as directed.
5. Nosing Height: As directed.
6. Thickness: 1/4 inch (6 mm) and tapered to back edge.
7. Size: Lengths and depths to fit each stair tread in one piece or one piece or, for treads exceeding maximum lengths manufactured, in equal-length units.
8. Integral Risers: Smooth, flat; in height that fully covers substrate.

C. Separate Risers: Smooth, flat; in height that fully covers substrate; produced by same manufacturer as treads and recommended by manufacturer for installation with treads.

1. Style: Coved toe, 7 inches (178 mm) high by length matching treads or Toeless, by length matching treads.
2. Thickness: 0.125 inch (3.2 mm), as directed.

D. Stringers: Height and length after cutting to fit risers and treads and to cover stair stringers, produced by same manufacturer as treads, and recommended by manufacturer for installation with treads.

1. Thickness: 0.125 inch (3.2 mm) or 0.080 inch (2.0 mm) or as directed.

E. Landing Tile: Matching treads; as directed.

F. Locations: Provide rubber stair accessories in areas indicated.

G. Colors and Patterns: As directed.

2.6 VINYL STAIR ACCESSORIES

A. Fire-Test-Response Characteristics: As determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.

1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

B. Stair Treads: ASTM F2169, Type TV (vinyl, thermoplastic).

1. Class: 1 (smooth, flat) or 2 (pattern; embossed, grooved, or ribbed).
2. Group: 1 (embedded abrasive strips) or 2 (with contrasting color for the visually impaired).
3. Nosing Style: Square, adjustable to cover angles between 60 and 90 degrees. Square or Round, as directed
4. Nosing Height: As directed.
5. Thickness: 1/4 inch (6 mm) and tapered to back edge.
6. Size: Lengths and depths to fit each stair tread in one piece or one piece for treads exceeding maximum lengths manufactured, in equal-length units.
7. Integral Risers: Smooth, flat; in height that fully covers substrate.

C. Separate Risers: Smooth, flat; in height that fully covers substrate; produced by same manufacturer as treads and recommended by manufacturer for installation with treads.

1. Style: Coved toe, 7 inches (178 mm) high by length matching treads or Toeless, by length matching treads.
2. Thickness: 0.125 inch (3.2 mm) or 0.080 inch (2.0 mm), as directed.

D. Stringers: Height and length after cutting to fit risers and treads and to cover stair stringers, produced by same manufacturer as treads, and recommended by manufacturer for installation with treads.

1. Thickness: 0.125 inch (3.2 mm) or 0.080 inch (2.0 mm), as directed.

E. Landing Tile: Matching treads; as directed.

F. Locations: Provide vinyl stair accessories in areas indicated.

G. Colors and Patterns: As directed.

2.7 RUBBER MOLDING ACCESSORY

A. Description: Rubber, as directed.

B. Profile and Dimensions: As directed.

C. Locations: Provide rubber molding accessories in areas indicated.

D. Colors and Patterns: As directed.

2.8 VINYL MOLDING ACCESSORY

A. Description: Vinyl, as directed.

B. Profile and Dimensions: As directed.

C. Locations: Provide vinyl molding accessories in areas indicated.

D. Colors and Patterns: As directed.

2.9 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by resilient-product manufacturer for applications indicated.

B. Adhesives: Water-resistant type recommended by resilient-product manufacturer for resilient products and substrate conditions indicated.

C. Stair-Tread Nose Filler: Two-part epoxy compound recommended by resilient stair-tread manufacturer to fill nosing substrates that do not conform to tread contours.

D. Floor Polish: Provide protective, liquid floor-polish products recommended by resilient stair-tread manufacturer.

PART 3 - EXECUTION

3.1 PREPARATION

A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.

B. Concrete Substrates for Resilient Stair Accessories: Prepare horizontal surfaces according to ASTM F710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
3. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than 9 or 10 pH, as directed.
4. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m) or 1000 sq. ft. (304.8 sq. m) (as directed), and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

    a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
    b. Relative Humidity Test: Using in-situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement, or as directed.

C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.

D. Do not install resilient products until materials are the same temperature as space where they are to be installed.

E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient products.

3.2 RESILIENT BASE INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient base.

B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.

C. Install resilient base in lengths as long as practical without gaps at seams and with tops of adjacent pieces aligned.

D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.

E. Do not stretch resilient base during installation.

F. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.

G. Preformed Corners: Install preformed corners before installing straight pieces.

H. Job-Formed Corners:

1. Outside Corners: Use straight pieces of maximum lengths possible and form with returns not less than 3 inches (76 mm) in length.

    a. Form without producing discoloration (whitening) at bends.

2. Inside Corners: Use straight pieces of maximum lengths possible and form with returns not less than 3 inches (76 mm) in length.

    a. Miter or cope corners to minimize open joints, as directed.

3.3 RESILIENT ACCESSORY INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient accessories.

B. Resilient Stair Accessories:

1. Use stair-tread-nose filler to fill nosing substrates that do not conform to tread contours.
2. Tightly adhere to substrates throughout length of each piece.

3. For treads installed as separate, equal-length units, install to produce a flush joint between units.

C. Resilient Molding Accessories: Butt to adjacent materials and tightly adhere to substrates throughout length of each piece. Install reducer strips at edges of floor covering that would otherwise be exposed.

3.4 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protecting resilient products.

B. Floor Polish: Remove soil, adhesive, and blemishes from resilient stair treads before applying liquid floor polish.

1. Apply coat(s) as directed.

C. Cover resilient products subject to wear and foot traffic until Substantial Completion.

END OF SECTION 096513

SECTION 096516 - RESILIENT SHEET FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Unbacked vinyl sheet flooring.
2. Vinyl sheet flooring with backing.
3. Unbacked rubber sheet flooring.
4. Rubber sheet flooring with backing.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Samples: For each exposed product and for each color, texture, and pattern specified.

1.3 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are competent in techniques required by manufacturer for resilient sheet flooring installation and seaming method indicated.

1. Engage an installer who employs workers for this Project who are trained or certified by resilient sheet flooring manufacturer for installation techniques required.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: For resilient sheet flooring, as determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.

1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

2.2 UNBACKED VINYL SHEET FLOORING

A. Product Standard: ASTM F1913.

B. Thickness: 0.080 inch (2.0 mm).

C. Wearing Surface: Smooth or Embossed.

D. Sheet Width: 6 feet (1.8 m) or 6.6 feet (2.0 m), as directed.

E. Seamless-Installation Method: Heat welded or Chemically bonded.

F. Colors and Patterns: As directed.

2.3 VINYL SHEET FLOORING WITH BACKING

A. Product Standard: ASTM F1303.

1. Type (Binder Content): Type I, minimum binder content of 90 percent or Type II, minimum binder content of 34 percent.
2. Wear-Layer Thickness: Grade 1.
3. Overall Thickness: As directed.
4. Interlayer Material: Foamed plastic or None.
5. Backing Class: As directed.

B. Wearing Surface: As directed.

C. Sheet Width: As directed.

D. Seamless-Installation Method: Heat welded as Chemically bonded.

E. Colors and Patterns: As directed.

2.4 UNBACKED RUBBER SHEET FLOORING

A. Product Standard: ASTM F1859.

1. Type: Type I, homogeneous rubber sheet floor covering or Type II, heterogeneous (layered) rubber sheet floor covering.
2. Thickness: As directed.
3. Hardness: Not less than required by ASTM F1859 or Manufacturer's standard hardness, measured using Shore, Type A durometer per ASTM D2240.

B. Wearing Surface: As directed.

1. Molded-Pattern Figure: Raised discs or Raised squares.

C. Sheet Width: As directed.

D. Seamless-Installation Method: Heat welded or Chemically bonded.

E. Colors and Patterns: As directed.

2.5 RUBBER SHEET FLOORING WITH BACKING

A. Product Standard: ASTM F1860.

1. Type: Type I, homogeneous rubber sheet floor covering with backing or Type II, layered rubber sheet floor covering with backing.
2. Wear-Layer Thickness: As directed.
3. Overall Thickness: As directed.
4. Interlayer Material: As directed.
5. Backing: Fibrous or Foamed rubber.
6. Hardness: Not less than required by ASTM F1860 or Manufacturer's standard hardness, measured using Shore, Type A durometer per ASTM D2240.

B. Wearing Surface: Smooth.

C. Sheet Width: As standard with manufacturer or 3.3 feet (1.0 m), as directed.

D. Seamless-Installation Method: Heat welded or Chemically bonded.

E. Colors and Patterns: As directed.

2.6 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by resilient sheet flooring manufacturer for applications indicated.

B. Adhesives: Water-resistant type recommended by flooring and adhesive manufacturers to suit resilient sheet flooring and substrate conditions indicated.

C. Seamless-Installation Accessories:

1. Heat-Welding Bead: Manufacturer's solid-strand product for heat welding seams.

    a. Colors: As directed.

2. Chemical-Bonding Compound: Manufacturer's product for chemically bonding seams.

D. Integral-Flash-Cove-Base Accessories:

1. Cove Strip: 1-inch (25-mm) radius provided or approved by resilient sheet flooring manufacturer.
2. Cap Strip: Square metal, vinyl, or rubber cap or Tapered vinyl cap, as directed, provided or approved by resilient sheet flooring manufacturer.
3. Corners: Metal inside and outside corners and end stops provided or approved by resilient sheet flooring manufacturer.

E. Floor Polish: Provide protective, liquid floor-polish products recommended by resilient sheet flooring manufacturer.

PART 3 - EXECUTION

3.1 PREPARATION

A. Prepare substrates according to resilient sheet flooring manufacturer's written instructions to ensure adhesion of resilient sheet flooring.

B. Concrete Substrates: Prepare according to ASTM F710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by resilient sheet flooring manufacturer. Do not use solvents.
3. Alkalinity and Adhesion Testing: Perform tests recommended by resilient sheet flooring manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than 9 or 10 pH or as directed.
4. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m) or 1000 sq. ft. (304.8 sq. m) and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

    a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
    b. Relative Humidity Test: Using in-situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement, as directed.

C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.

D. Do not install resilient sheet flooring until materials are the same temperature as space where they are to be installed.

1. At least 48 hours in advance of installation, move flooring and installation materials into spaces where they will be installed.

E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient sheet flooring.

3.2 RESILIENT SHEET FLOORING INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient sheet flooring.

B. Unroll resilient sheet flooring and allow it to stabilize before cutting and fitting.

C. Lay out resilient sheet flooring as follows:

1. Maintain uniformity of flooring direction.
2. Minimize number of seams; place seams in inconspicuous and low-traffic areas, at least 6 inches (152 mm) away from parallel joints in flooring substrates.
3. Match edges of flooring for color shading at seams.
4. Avoid cross seams.

D. Scribe and cut resilient sheet flooring to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.

E. Extend resilient sheet flooring into toe spaces, door reveals, closets, and similar openings.

F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on resilient sheet flooring as marked on substrates. Use chalk or other nonpermanent marking device.

G. Install resilient sheet flooring on covers for telephone and electrical ducts and similar items in installation areas. Maintain overall continuity of color and pattern between pieces of flooring installed on covers and adjoining flooring. Tightly adhere flooring edges to substrates that abut covers and to cover perimeters.

H. Adhere resilient sheet flooring to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

I. Seamless Installation:

1. Heat-Welded Seams: Comply with ASTM F1516. Rout joints and heat weld with welding bead to fuse sections permanently into a seamless flooring installation. Prepare, weld, and finish seams to produce surfaces flush with adjoining flooring surfaces.
2. Chemically Bonded Seams: Bond seams with chemical-bonding compound to fuse sections permanently into a seamless flooring installation. Prepare seams and apply compound to produce tightly fitted seams without gaps, overlays, or excess bonding compound on flooring surfaces.

J. Integral-Flash-Cove Base: Cove resilient sheet flooring 6 inches (152 mm) to dimension indicated up vertical surfaces. Support flooring at horizontal and vertical junction with cove strip. Butt at top against cap strip.

1. Install metal corners at inside and outside corners.

K. Floor Polish: Remove soil, adhesive, and blemishes from flooring surfaces before applying liquid floor polish.

1. Apply coat(s) as directed.

END OF SECTION 096516

SECTION 096519 - RESILIENT TILE FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Solid vinyl floor tile.
2. Rubber floor tile.
3. Vinyl composition floor tile.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Samples: For each exposed product and for each color and pattern specified.

1.3 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are competent in techniques required by manufacturer for floor tile installation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: For resilient floor tile, as determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.

1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

2.2 SOLID VINYL FLOOR TILE

A. Tile Standard: ASTM F1700.

1. Class: As directed.

B. Thickness: As directed.

C. Size: As directed.

D. Colors and Patterns: As directed.

2.3 RUBBER FLOOR TILE

A. Tile Standard: ASTM F1344, as directed.

B. Hardness: As directed.

C. Wearing Surface: As directed.

1. Molded-Pattern Figure: Raised discs or Raised squares.

D. Thickness: 0.125 inch (3.2 mm).

E. Size: 12 by 12 inches (305 by 305 mm) or 24 by 24 inches (610 by 610 mm).

F. Colors and Patterns: As directed.

2.4 VINYL COMPOSITION FLOOR TILE

A. Tile Standard: ASTM F1066, as directed.

B. Wearing Surface: Smooth or Embossed.

C. Thickness: 0.125 inch (3.2 mm).

D. Size: 12 by 12 inches (305 by 305 mm).

E. Colors and Patterns: As directed.

2.5 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by floor tile manufacturer for applications indicated.

B. Adhesives: Water-resistant type recommended by floor tile and adhesive manufacturers to suit floor tile and substrate conditions indicated.

C. Floor Polish: Provide protective, liquid floor-polish products recommended by floor tile manufacturer.

PART 3 - EXECUTION

3.1 PREPARATION

A. Prepare substrates according to floor tile manufacturer's written instructions to ensure adhesion of resilient products.

B. Concrete Substrates: Prepare according to ASTM F710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by floor tile manufacturer. Do not use solvents.
3. Alkalinity and Adhesion Testing: Perform tests recommended by floor tile manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than 9 or 10 pH, as directed.
4. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m) or 1000 sq. ft. (304.8 sq. m), and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

    a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
    b. Relative Humidity Test: Using in-situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement, as directed.

C. Access Flooring Panels: Remove protective film of oil or other coating using method recommended by access flooring manufacturer.

D. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.

E. Do not install floor tiles until materials are the same temperature as space where they are to be installed.

1. At least 48 hours in advance of installation, move resilient floor tile and installation materials into spaces where they will be installed.

F. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient floor tile.

3.2 FLOOR TILE INSTALLATION

A. Comply with manufacturer's written instructions for installing floor tile.

B. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.

1. Lay tiles as directed.

C. Match floor tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed tiles.

1. Lay tiles as directed.

D. Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.

E. Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings.

F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent marking device.

G. Install floor tiles on covers for telephone and electrical ducts, building expansion-joint covers, and similar items in installation areas. Maintain overall continuity of color and pattern between pieces of tile installed on covers and adjoining tiles. Tightly adhere tile edges to substrates that abut covers and to cover perimeters.

H. Adhere floor tiles to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

I. Floor Polish: Remove soil, adhesive, and blemishes from floor tile surfaces before applying liquid floor polish.

1. Apply coat(s) as directed.

END OF SECTION 096519

SECTION 096536 - STATIC-CONTROL RESILIENT FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Static-dissipative, solid vinyl floor tile, rubber floor tile, vinyl composition floor tile, vinyl sheet floor covering or rubber sheet floor covering as directed.
2. Conductive, solid vinyl floor tile or vinyl sheet floor covering as directed.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For each type of static-control resilient flooring.

1. Samples: For each type of static-control resilient flooring.

1.3 INFORMATIONAL SUBMITTALS

A. Product test reports.

B. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Store static-control resilient flooring and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer.

1.6 PROJECT CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer in spaces to receive static-control resilient flooring.

1. Until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer.

B. Close spaces to traffic during static-control resilient flooring installation.

C. Close spaces to traffic for 48 hours after static-control resilient flooring installation.

D. Install static-control resilient flooring after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Static-Dissipative Properties: Provide static-control resilient flooring with static-control properties indicated as determined by testing identical products per test method indicated by an independent testing and inspecting agency.

1. Electrical Resistance: Test per ASTM F150 with 100-V applied voltage or ESD-STM-7.1 as directed.

    a. Average greater than 1 megohm and less than or equal to 1000 megohms when test specimens are tested surface to ground.
    b. Average greater than 1 megohm and less than or equal to 1000 megohms when installed floor coverings are tested surface to ground.

2. Static Generation: Less than 300 V when tested per AATCC-134 at 20 percent relative humidity with conductive footwear.
3. Static Decay: 5000 to zero V in less than 0.25 seconds when tested per FED-STD-101C/4046.1.

B. Conductive Properties: Provide static-control resilient flooring with static-control properties indicated as determined by testing identical products per test method indicated by an independent testing and inspecting agency.

1. Electrical Resistance: Test per ASTM F150 with 500-V applied voltage, ESD-STM-7.1, NFPA 99, Annex E or UL 779 as directed.

    a. Average greater than 25,000 ohms and less than 1 megohm when test specimens and installed floor coverings are tested surface to surface (point to point).
    b. Average greater than 25,000 ohms with no single measurement less than 10,000 ohms when installed floor coverings are tested surface to ground.

2. Static Generation: Less than 100 V when tested per AATCC-134 at 20 percent relative humidity with conductive footwear.
3. Static Decay: 5000 to zero V in less than 0.03 or 0.01 seconds when tested per FED-STD-101C/4046.1 as directed.

C. Fire-Test-Response Characteristics: As determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.

1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

2.2 STATIC-DISSIPATIVE RESILIENT FLOOR COVERINGS

A. Static-Dissipative, Solid Vinyl Floor Tile: ASTM F1700, Class I (monolithic), Type A (smooth surface).
   1. Thickness: In manufacturer's standard thickness, but not less than 0.08 inch (2.0 mm).
   2. Size: 12 by 12 inches (305 by 305 mm), 24 by 24 inches (610 by 610 mm) or 36 by 36 inches (914 by 914 mm) as directed.
   3. Colors and Patterns: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from full range of industry colors as directed.

B. Static-Dissipative Rubber Floor Tile: ASTM F1344; except in manufacturer's standard hardness when tested per ASTM D2240 using Shore, Type A durometer.

   1. Hammered-Surface Textured Floor Tile: Class I-B (homogenous rubber, through-mottled pattern).
      a. Thickness: Not less than 0.09 inch (2.2 mm) or 0.14 inch (3.5 mm) as directed.
      b. Size: 19.7 by 19.7 inches (500 by 500 mm) or 39.4 by 39.4 inches (1000 by 1000 mm) as directed.
      c. Colors and Patterns: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from full range of industry colors.

   2. Smooth or Textured-Surface Floor Tile: Class I-B (homogenous rubber, through-mottled pattern).
      a. Thickness: Not less than 0.08 inch (2.0 mm) or 0.14 inch (3.5 mm) as directed.
      b. Size: 24 by 24 inches (610 by 610 mm) or 39.4 by 39.4 inches (1000 by 1000 mm) as directed.
      c. Colors and Patterns: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from full range of industry colors.

C. Static-Dissipative, Vinyl Composition Floor Tile: ASTM F1066 (vinyl composition floor tile, nonasbestos formulated), Class 2 (through-pattern tile).
   1. Thickness: Not less than 0.125 inch (3.2 mm).
   2. Size: 12 by 12 inches (305 by 305 mm).
   3. Colors and Patterns: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from full range of industry colors.

D. Static-Dissipative, Vinyl Sheet Floor Covering: ASTM F1913 (unbacked) or ASTM F1303, Type II, Grade I, Class B (nonfoamed plastic backing).
   1. Thickness: Not less than 0.08 inch (2.0 mm).
   2. Colors and Patterns: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from full range of industry colors.

E. Static-Dissipative, Rubber Sheet Floor Covering: ASTM F1859, Type I (homogenous).
   1. Wear Surface: Smooth or Slightly textured.
   2. Thickness: Not less than 0.08 inch (2.0 mm) or 0.14 inch (3.5 mm) as directed.
   3. Colors and Patterns: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from full range of industry colors.

2.3 CONDUCTIVE RESILIENT FLOOR COVERINGS

A. Conductive, Solid Vinyl Floor Tile: ASTM F1700, Class I (monolithic), Type A (smooth surface).
   1. Thickness: In manufacturer's standard thickness, but not less than 0.08 inch (2.0 mm).
   2. Size: 12 by 12 inches (305 by 305 mm), 24 by 24 inches (610 by 610 mm) or 36 by 36 inches (914 by 914 mm) as directed.
   3. Colors and Patterns: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from full range of industry colors.

B. Conductive, Vinyl Sheet Floor Covering: ASTM F1303, Type II, Grade I, Class B (nonfoamed plastic backing).
   1. Thickness: Manufacturer's standard thickness, but not less than 0.08 inch (2.0 mm).
   2. Colors and Patterns: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from full range of industry colors as directed.

2.4 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified portland cement or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.

B. Static-Control Adhesive: Provided or approved by manufacturer; type that maintains electrical continuity of floor-covering system to ground connection.

C. Grounding Strips: Provided or approved by manufacturer; type and size that maintains electrical continuity of floor-covering system to ground connection.

D. Integral-Flash-Cove Base Accessories:

   1. Cove Strip: 1-inch (25-mm) radius support strip provided or approved by manufacturer.
   2. Cap Strip: Square metal, vinyl, or rubber cap or Tapered vinyl cap provided or approved by manufacturer.
   3. Corners: Metal inside and outside corners and end stops provided or approved by floor-covering manufacturer.

E. Maintenance Floor Tiles: Special floor tiles inscribed "Conductive floor. Do not wax."

F. Floor Polish: Provide protective, static-control liquid floor polish products as recommended by floor-covering manufacturer.

PART 3 - EXECUTION

3.1 PREPARATION

A. Prepare substrates according to manufacturer's written instructions and with oversight by manufacturer's representative to ensure adhesion of static-control resilient flooring and electrical continuity of floor-covering systems.

B. Concrete Substrates: Prepare according to ASTM F710 and as recommended by manufacturer. Do not use solvents for cleaning substrates.

C. Access Flooring Panels: Remove protective film of oil or other coating using method recommended by access flooring manufacturer.

D. Do not install static-control resilient flooring until it is same temperature as space where it is to be installed.

1. Move static-control resilient flooring and installation materials into spaces where they will be installed at least 48 hours in advance of installation.

E. Sweep and vacuum substrates to be covered by static-control resilient flooring immediately before installation.

3.2 INSTALLATION, GENERAL

A. Install static-control resilient flooring according to manufacturer's written instructions and with oversight by manufacturer's representative.

B. Embed grounding strips in static-control adhesive. Extend grounding strips beyond perimeter of static-control resilient floor-covering surfaces to ground connections.

C. Scribe, cut, and fit static-control resilient flooring to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.

D. Extend static-control resilient flooring into toe spaces, door reveals, closets, and similar openings. Extend static-control resilient flooring to center of door openings.

E. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on static-control resilient flooring as marked on substrates. Use chalk or other nonpermanent, nonstaining marking device.

F. Adhere static-control resilient flooring to substrates using a full spread of static-control adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

G. Integral-Flash-Cove Base: As directed Cove static-control flooring 6 inches (152 mm) or to dimension indicated up vertical surfaces. Support static-control resilient flooring at horizontal and vertical junction with cove strip. Butt at top against cap strip.

1. Install metal corners at inside and outside corners.

3.3 FLOOR-TILE INSTALLATION

A. Comply with manufacturer's written instructions for installing floor tile.

B. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so floor tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half floor tile at perimeter.

1. Lay floor tiles square with room axis, at a 45-degree angle with room axis or in pattern indicated as directed.

C. Match floor tiles for color and pattern by selecting floor tiles from cartons in same sequence as manufactured and packaged if so numbered. Discard broken, cracked, chipped, or deformed floor tiles.

1. Lay static-dissipative, vinyl composition floor tiles with grain running in one direction, with grain direction alternating in adjacent floor tiles (basket-weave pattern) or in pattern of colors and sizes indicated.

D. In each space where conductive, solid vinyl floor tile is installed, install maintenance floor tile identifying conductive floor tile in locations approved by Architect.

3.4 SHEET FLOOR-COVERING INSTALLATION

A. Comply with manufacturer's written instructions for installing sheet floor coverings.

B. Unroll sheet floor coverings and allow them to stabilize before cutting and fitting.

C. Lay out sheet floor coverings as follows:

1. Maintain uniformity of sheet floor-covering direction.
2. Minimize number of seams and place them in inconspicuous and low-traffic areas, at least 6 inches (152 mm) away from parallel joints in floor-covering substrates.
3. Match edges of floor coverings for color shading at seams.
4. Avoid cross seams.

3.5 FIELD QUALITY CONTROL

A. Testing: As directed Owner will engage or Engage a qualified testing agency to test electrical resistance of static-control resilient flooring for compliance with requirements.

1. Arrange for testing after static-control adhesives have fully cured and static-control resilient flooring has stabilized to ambient conditions and after ground connections are completed.
2. Arrange for testing of static-control resilient flooring before and after performing floor polish procedures.

B. Static-control resilient flooring will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protection of static-control resilient flooring.

B. Protect static-control resilient flooring from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

C. Cover static-control resilient flooring until Substantial Completion.

END OF SECTION 096536

SECTION 096543 - LINOLEUM FLOORING.

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Linoleum floor tile.
2. Linoleum sheet flooring.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Samples: For each exposed product and for each color and pattern specified.

1.3 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are competent in techniques required by manufacturer for flooring installation and seaming methods indicated.

1. Engage an installer who employs workers for this Project who are trained or certified by flooring manufacturer for installation techniques required.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: For linoleum flooring, as determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.

1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

2.2 LINOLEUM FLOOR TILE

A. Linoleum Floor Tile: ASTM F2195, as directed.

1. Nominal Floor Tile Size: As directed.

B. Thickness: 0.08 inch (2.0 mm) or 0.10 inch (2.5 mm).

C. Colors and Patterns: As directed.

2.3 LINOLEUM SHEET FLOORING

A. Linoleum Sheet Flooring: ASTM F2034, Type I, linoleum sheet with backing or Type III, linoleum sheet with special backing.

1. Roll Size: In manufacturer's standard length, but not less than 78 inches (1980 mm) wide.

B. Thickness: As directed.

C. Heat-Welding Bead: For seamless installation, solid-strand product of linoleum flooring manufacturer.

1. Colors: As directed.

D. Integral-Flash-Cove-Base Accessories:

1. Cove Strip: 1-inch (25.4-mm) radius, provided or approved by manufacturer.
2. Cove-Base Cap Strip: As directed or approved by manufacturer.

E. Colors and Patterns: As directed.

2.4 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by linoleum flooring manufacturer for applications indicated.

B. Adhesives: Water-resistant type recommended by flooring and adhesive manufacturers to suit products and substrate conditions indicated.

C. Floor Polish: Provide protective, liquid floor-polish products recommended by linoleum flooring manufacturer.

PART 3 - EXECUTION

3.1 PREPARATION

A. Prepare substrates according to linoleum flooring manufacturer's written instructions to ensure adhesion of flooring.

B. Concrete Substrates: Prepare according to ASTM F710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
2. Remove substrate coatings and other substances that are incompatible with flooring adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by linoleum flooring manufacturer. Do not use solvents.
3. Alkalinity and Adhesion Testing: Perform tests recommended by linoleum flooring manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than 9 or 10 pH, as directed.
4. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m) or 1000 sq. ft. (304.8 sq. m), and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

    a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
    b. Relative Humidity Test: Using in-situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement or as directed.

C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.

D. Do not install flooring until materials are the same temperature as space where they are to be installed.

1. At least 72 hours in advance of installation, move flooring and installation materials into spaces where they will be installed.

E. Immediately before installation, sweep and vacuum clean substrates to be covered by flooring.

3.2 INSTALLATION, GENERAL

A. Comply with manufacturer's written instructions for installing flooring.

B. Scribe and cut flooring to butt neatly and tightly to vertical surfaces and permanent fixtures, including built-in furniture, cabinets, pipes, outlets, edgings, thresholds, door frames, and nosings.

C. Extend flooring into toe spaces, door reveals, closets, and similar openings.

D. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on flooring as marked on substrates. Use chalk or other nonpermanent marking device.

E. Install flooring on covers for telephone and electrical ducts and similar items in installation areas. Maintain overall continuity of color and pattern between pieces of flooring installed on

covers and adjoining flooring. Tightly adhere flooring edges to substrates that abut covers and to cover perimeters.

F. Adhere flooring to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

G. Heat-Welded Seams: For seamless installation, comply with ASTM F1516. Rout joints and heat weld with welding bead to fuse sections permanently into a seamless flooring installation. Prepare, weld, and finish seams to produce surfaces flush with adjoining flooring surfaces.

3.3 LINOLEUM FLOOR TILE INSTALLATION

A. Lay out linoleum floor tiles from center marks established with principal walls, discounting minor offsets, so floor tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.

1. Lay floor tiles as directed.

B. Match linoleum floor tiles for color and pattern by selecting tiles from cartons in same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed floor tiles.

1. Lay floor tiles as directed.

3.4 LINOLEUM SHEET FLOORING INSTALLATION

A. Unroll linoleum sheet flooring and allow it to stabilize before cutting and fitting.

B. Lay out linoleum sheet flooring as follows:

1. Maintain uniformity of flooring direction.
2. Minimize number of seams; place seams in inconspicuous and low-traffic areas, at least 6 inches (152 mm) away from parallel joints in flooring substrates.
3. Match edges of flooring for color shading at seams.
4. Avoid cross seams.
5. Eliminate deformations that result from hanging method used during drying process (stove bar marks).

C. Integral-Flash-Cove Base: Cove flooring 6 inches (152 mm) to dimension indicated up vertical surfaces. Support flooring at horizontal and vertical junction with cove strip. Butt at top against cap strip.

3.5 CLEANING AND PROTECTION

A. Floor Polish: Remove soil, adhesive, and blemishes from linoleum flooring surfaces before applying liquid floor polish.

1. Apply two or three coat(s) as directed.

B. After allowing drying room film (yellow film caused by linseed oil oxidation) to disappear, cover linoleum flooring until Substantial Completion.

END OF SECTION 096543

SECTION 096566 - RESILIENT ATHLETIC FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Interlocking, rubber floor tile.
2. Rubber floor tile.
3. Rubber sheet flooring.
4. Sheet vinyl flooring.

1.2 COORDINATION

A. Coordinate layout and installation of flooring with floor inserts for gymnasium equipment.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: Show installation details and locations of the following:

1. Border tiles.
2. Floor patterns.
3. Layout, colors, widths, and dimensions of game lines and markers.
4. Locations of floor inserts for athletic equipment installed through flooring.
5. Seam locations for sheet flooring.

D. Samples: For each exposed product and for each type, color, and pattern specified.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 QUALITY ASSURANCE

A. Sheet Vinyl Flooring Installer Qualifications: An experienced installer who has completed sheet vinyl flooring installations using seaming methods indicated for this Project and similar in material, design, and extent to that indicated for this Project; who is acceptable to manufacturer; and whose work has resulted in installations with a record of successful in-service performance.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

2.2 INTERLOCKING, RUBBER FLOOR TILE

A. Description: Athletic flooring consisting of modular rubber tiles with precision cut, interlocking edges, for free-lay installation.

B. Material: Rubber or Recycled-rubber compound as directed.

C. Tile Interlock: Visible or Hidden as directed.

D. Traffic-Surface Texture: Smooth, Nondirectional, stipple texture or Textured as directed.

1. Provide reversible tiles (with traffic-surface texture on both sides).

E. Size: Manufacturer's standard-size square tile or 24 inches (610 mm) square as directed.

F. Thickness: 3/8 inch (9.5 mm), 7/16 inch (11.1 mm), 1/2 inch (13 mm), 9/16 inch (14.3 mm) or 3/4 inch (19 mm) as directed.

G. Weight: Not less than a certain weight per tile as directed.

H. Color and Pattern: As selected by Architect from manufacturer's full range or As indicated by manufacturer's designations as directed.

I. Border: Interlocking, beveled-edge tiles, of same material as floor tile; with bevels that transition from thickness of floor tile to surface below it; with straight outside edges; for use where flooring corners and edges do not abut vertical surfaces.

1. Border Color and Pattern: Matching floor tile, As selected by Architect from manufacturer's full range to contrast with floor tile or As indicated by manufacturer's designations.

2.3 RUBBER FLOOR TILE

A. Description: Athletic flooring consisting of modular rubber tiles with smooth edges for adhered application.

B. Material: Rubber, Recycled-rubber compound or Rubber wear layer and rubber shock-absorbent layer, vulcanized together as directed.

C. Traffic-Surface Texture: Smooth, Nondirectional, stipple texture or Textured as directed.

D. Size: Manufacturer's standard-size square tile, 18 inches (457 mm) square, 24 inches (610 mm) square or 36 inches (914 mm) square as directed.

E. Thickness: 5/32 inch (4 mm), 1/4 inch (6.4 mm), 3/8 inch (9.5 mm) or 1/2 inch (13 mm) as directed.

F. Weight: Not less than a certain weight per tile as directed.

G. Color and Pattern: As selected by Architect from manufacturer's full range or As indicated by manufacturer's designations.

H. Border: Interlocking, beveled-edge tiles, of same material as floor tile; with bevels that transition from thickness of floor tile to surface below it; with straight outside edges; for use where flooring corners and edges do not abut vertical surfaces.

1. Border Color and Pattern: Matching floor tile, As selected by Architect from manufacturer's full range to contrast with floor tile or As indicated by manufacturer's designations.

2.4 RUBBER SHEET FLOORING

A. Description: Rubber athletic flooring provided as rolled goods for adhered installation.

B. Material: Recycled-rubber compound or Rubber wear layer and rubber shock-absorbent layer, vulcanized together as directed.

C. Traffic-Surface Texture: Smooth.

D. Roll Size: Not less than 48 inches (1219 mm) wide by longest length that is practical to minimize splicing during installation.

E. Thickness: 1/4 inch (6.4 mm) or 3/8 inch (9.5 mm) as directed.

F. Color and Pattern: As selected by Architect from manufacturer's full range or As indicated by manufacturer's designations.

G. Border: Interlocking, beveled-edge tiles, of same material as sheet flooring; with bevels that transition from thickness of sheet flooring to surface below it; with straight outside edges; for use where flooring corners and edges do not abut vertical surfaces.

1. Border Color and Pattern: Matching sheet flooring, As selected by Architect from manufacturer's full range to contrast with floor tile or As indicated by manufacturer's designations.

2.5 SHEET VINYL FLOORING

A. Description: Sheet vinyl flooring specifically designed for adhered athletic flooring applications.

B. Unbacked Sheet Vinyl Flooring: ASTM F1913, 0.08 inch (2 mm) thick.

1. Separate underlayment pad of bonded recycled rubber and polyurethane particles.

C. Sheet Vinyl Flooring with Backing: ASTM F1303.

1. Type (Binder Content): Type I, minimum binder content of 90 percent or Type II, minimum binder content of 34 percent as directed.
2. Wear-Layer Thickness: Grade 1.
3. Overall Thickness: As directed.
4. Interlayer Material: Foamed plastic or None as directed.
5. Backing Class: Class B (nonfoamed plastic) or Class C (foamed plastic) as directed.

D. Seaming Method: Heat welded or Chemically bonded as directed.

E. Traffic-Surface Texture: Smooth or Embossed as directed.

F. Applied Finish: Factory-applied UV urethane.

G. Roll Size: Not less than 48 inches (1219 mm) wide by longest length that is practical to minimize splicing during installation.

H. Color and Pattern: As selected by Architect from manufacturer's full range or As indicated by manufacturer's designations.

2.6 ACCESSORIES

A. Trowelable Leveling and Patching Compound: Latex-modified, hydraulic-cement-based formulation approved by flooring manufacturer.

B. Adhesives: Water-resistant type recommended in writing by manufacturer for substrate and conditions indicated.

C. Game-Line and Marker Paint: Complete system including primer, if any, compatible with flooring and recommended in writing by flooring and paint manufacturers for use indicated.

PART 3 - EXECUTION

3.1 PREPARATION

A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of flooring.

B. Concrete Substrates: Prepare according to ASTM F710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
2. Alkalinity Testing: Perform pH testing according to ASTM F710. Proceed with installation only if pH readings are not less than 7.0 and not greater than 8.5.
3. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m) or 1000 sq. ft. (304.8 sq. m) as directed and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
b. Relative Humidity Test: Using in-situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.

C. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended in writing by manufacturer. Do not use solvents.

D. Use trowelable leveling and patching compound to fill cracks, holes, and depressions in substrates.

E. Sweep and vacuum clean substrates to be covered by flooring immediately before installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, and dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 FLOORING INSTALLATION, GENERAL

A. Comply with manufacturer's written installation instructions.

B. Scribe, cut, and fit flooring to butt neatly and tightly to vertical surfaces, equipment anchors, floor outlets, and other interruptions of floor surface.

C. Extend flooring into toe spaces, door reveals, closets, and similar openings unless otherwise indicated.

D. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating subfloor markings on flooring. Use nonpermanent, nonstaining marking device.

3.3 FLOOR TILE INSTALLATION

A. Lay out tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.

1. Lay tiles square with room axis, at a 45-degree angle or with room axis in pattern indicated as directed.

B. Discard broken, cracked, chipped, or deformed tiles.

C. Tile Matching: Match tiles for color and pattern by selecting tiles from cartons in same sequence as manufactured and packaged if so numbered.

1. Lay tiles with grain running in one direction, with grain direction alternating in adjacent tiles (basket-weave pattern) or in pattern of colors and sizes indicated as directed.

D. Adhered Floor Tile: Adhere products to substrates using a full spread of adhesive applied to substrate to comply with adhesive and flooring manufacturers' written instructions, including those for trowel notching, adhesive mixing, and adhesive open and working times.

1. Provide completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

E. Free-Lay Tile: Place flooring at locations indicated with units securely interconnected and fully seated on substrate to form a smooth, level surface.

3.4 SHEET FLOORING INSTALLATION

A. Unroll sheet flooring and allow it to stabilize before cutting and fitting.

B. Lay out sheet flooring as follows:

1. Maintain uniformity of flooring direction.
2. Minimize number of seams; place seams in inconspicuous and low-traffic areas, at least 6 inches (150 mm) away from parallel joints in flooring substrates.
3. Match edges of flooring for color shading at seams.
4. Locate seams according to approved Shop Drawings.

C. Adhere products to substrates using a full spread of adhesive applied to substrate to comply with adhesive and flooring manufacturers' written instructions, including those for trowel notching, adhesive mixing, and adhesive open and working times.

1. Provide completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

D. Vinyl Sheet Flooring Seams: Prepare and finish seams to produce surfaces flush with adjoining flooring surfaces.

1. Heat-Welded Seams: Comply with ASTM F1516. Rout joints and use welding bead to permanently fuse sections into a seamless flooring.
2. Chemically Bonded Seams: Comply with ASTM F693. Seal seams to prevent openings from forming between cut edges and to prevent penetration of dirt, liquids, and other substances into seams.

3.5 GAME LINES AND MARKERS

A. Mask flooring at game lines and markers, apply paint to produce sharp edges. Where crossing, break minor game line at intersection; do not overlap lines.

B. Apply game lines and markers in widths and colors according to requirements indicated on Drawings.

3.6 CLEANING AND PROTECTION

A. Perform the following operations immediately after completing flooring installation:

1. Remove adhesive and other blemishes from flooring surfaces.
2. Sweep and vacuum flooring thoroughly.
3. Damp-mop flooring to remove marks and soil after time period recommended in writing by manufacturer.

B. Protect flooring from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period. Use protection methods recommended in writing by manufacturer.

1. Do not move heavy and sharp objects directly over flooring. Protect flooring with plywood or hardboard panels to prevent damage from storing or moving objects over flooring.

END OF SECTION 096566

SECTION 096613 - PORTLAND CEMENT TERRAZZO FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Poured-in-place portland cement terrazzo flooring.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference as directed.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: Include terrazzo installation requirements. Include plans, sections, component details, and relationship to other work.

D. Samples: For each exposed product and for each color and texture specified.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Material certificates.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An installer who is a contractor member of NTMA.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. NTMA Standards: Comply with NTMA's written recommendations for terrazzo type indicated unless more stringent requirements are specified.

2.2 PORTLAND CEMENT TERRAZZO

A. Portland Cement Terrazzo System: As directed.

1. Underbed Thickness: As directed.
2. Terrazzo Topping Thickness: As directed.

B. Materials:

1. Portland Cement: ASTM C150/C150M, Type 1.

    a. Color for Terrazzo Matrix: As directed.

2. Water: Potable.
3. Sand: ASTM C33/C33M.
4. Aggregates: Comply with NTMA gradation standards for mix indicated and contain no deleterious or foreign matter.

    a. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C131/C131M and ASTM C535 for large-size coarse aggregates.
    b. 24-Hour Absorption Rate: Less than 0.75 percent.
    c. Dust Content: Less than 1.0 percent by weight.
5. Matrix Pigments: Pure mineral or synthetic pigments, alkali resistant, durable under exposure to sunlight, and compatible with terrazzo matrix.
6. Underbed Bonding Agent: Neat portland cement paste.
7. Topping Bonding Agent: Neat portland cement paste, or epoxy or acrylic bonding agents formulated for use with monolithic terrazzo.
8. Underbed Reinforcement: Galvanized welded-wire reinforcement, wire 2 by 2 inches (51 by 51 mm) by 0.062 inch (1.57 mm) in diameter, complying with ASTM A1064/A1064M, except for minimum wire size.
9. Isolation Membrane: Polyethylene sheeting, ASTM D2103, Type 13300, 4 mils (0.1 mm) thick; or unperforated asphalt felt, ASTM D226/D226M, Type I (No. 15).

C. Mixes:

1. Underbed Mix: One part portland cement to four parts sand and sufficient water to provide workability at as low a slump as possible.
2. Terrazzo Topping Mix: One 94-lb (42.6-kg) bag of portland cement per 200 lb (90.7 kg) of aggregate, matrix pigment if required by mix color, and sufficient water to produce a workable mix.

    a. Mix Color and Pattern: As directed.

2.3 STRIP MATERIALS

A. Standard Divider Strips: One-piece, flat-type strips for grouting into sawed joints prepared in substrate.

1. Material: White-zinc alloy or Brass.
2. Depth: As directed.
3. Width: As directed.

B. Heavy-Top Divider Strips: One-piece, flat-type strips for grouting into sawed joints prepared in substrate.

1. Base-Section Material: White-zinc alloy or Galvanized steel.
2. Top-Section Material: As directed.
3. Depth: As directed.
4. Top-Section Width: As directed.

C. Heavy-Top Angle Divider Strips: One-piece, L-type angle strips with anchoring device and in depth required for topping thickness indicated.

1. Material: As directed.
2. Top-Section Width: As directed.

D. Control-Joint Strips: Separate, double L-type angles, positioned back to back, that match material and color of divider strips and in depth required for topping thickness indicated.

E. Accessory Strips: Match divider-strip width, material, and color unless otherwise indicated. Use the following types of accessory strips as required to provide a complete installation:

1. Base-bead strips for exposed top edge of terrazzo base.
2. Edge-bead strips for exposed edges of terrazzo.
3. Nosings for terrazzo stair treads and landings.

F. Abrasive Strips: As directed, abrasive inserts at nosings. Silicon carbide or aluminum oxide, or combination of both, in epoxy-resin binder and set in channel.

1. Width: 1/2 inch (12.7 mm).
2. Depth: As required by terrazzo thickness.
3. Length: 4 inches (100 mm) less than stair width, as indicated.
4. Color: As directed.

2.4 MISCELLANEOUS ACCESSORIES

A. Strip Adhesive: Recommended by manufacturer for this use.
1.

B. Anchoring Devices: Provide mechanical anchoring devices or adhesives for strip materials as recommended by manufacturer and as required for secure attachment to substrate.

C. Moisture-Retaining Cover: ASTM C171, polyethylene film or white burlap-polyethylene sheet.

D. Isolation and Expansion-Joint Material: Closed-cell polyethylene foam, nonabsorbent to liquid water and gas, and non-outgassing in unruptured state; butyl rubber; rubber; or cork; in width indicated or minimum 1/2 inch (12.7 mm) wide.

E. Portland Cement Terrazzo Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by cleaner manufacturer for use on terrazzo type indicated.

F. Sealer: Slip- and stain-resistant, penetrating-type sealer that is chemically neutral; does not affect terrazzo color or physical properties; is recommended by sealer manufacturer; and complies with NTMA's written recommendations for terrazzo type indicated.

1. Surface Friction: Not less than 0.6 according to ASTM D2047.
2. Acid-Base Properties: With pH factor between 7 and 10.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application.

1. Roughen concrete substrates before installing terrazzo system according to NTMA's written recommendations.

B. Comply with NTMA's written recommendations for terrazzo and accessory installation.

C. Installation Tolerance: Limit variation in terrazzo surface from level to 1/4 inch in 10 feet (6.4 mm in 3 m); noncumulative.

D. Underbed:

1. Comply with NTMA's written recommendations for underbed installation.
2. Sand-Cushion Portland Cement Terrazzo:

a. Cover entire surface to receive terrazzo with dusting of sand.
b. Install isolation membrane over sand, overlapping ends and edges a minimum of 3 inches (75 mm).
c. Install welded-wire reinforcement, overlapping at edges and ends at least two squares. Stop mesh a minimum of 1 inch (25 mm) short of expansion joints.

3. Bonded Portland Cement Terrazzo:

a. Saturate structural concrete substrate with water, and slush and broom with underbed bonding agent.

4. Place underbed and screed to elevation indicated below finished floor elevation.

E. Strip Materials:

1. Divider and Control-Joint Strips:

    a. Locate divider strips directly over breaks and control joints in concrete slabs, in locations indicated.
    b. Install control-joint strips back to back and directly above concrete-slab control joints or in locations indicated.

        1) Install control-joint strips with 1/4-inch (6.4-mm) gap between strips, and install sealant in gap.

    c. Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.

2. Accessory Strips: Install as required to provide a complete installation.
3. Abrasive Strips: Install with surface of abrasive strip positioned 1/16 inch (1.6 mm) higher than terrazzo surface.

3.2 POURED-IN-PLACE TERRAZZO INSTALLATION

A. Underbed Preparation:

1. Sand-Cushion Portland Cement Terrazzo: Saturate underbed with water to produce a cement slurry.
2. Bonded Portland Cement Terrazzo: Dampen underbed with water.

B. Monolithic Portland Cement Terrazzo: Apply topping bonding agent on concrete substrate.

C. Place terrazzo mixture in panels formed by divider strips and trowel mixture to top of strips. Seed additional aggregates in matrix to uniformly distribute granular material and produce a surface with a minimum of 70 percent aggregate exposure. Roll and compact surface until excess cement and water have been extracted.

1. Portland Cement Terrazzo: Trowel to a dense, uniform, flat surface disclosing lines of divider strips.

D. Portland Cement Terrazzo Stairs: Install and finish stairs at the same time that adjacent flooring is installed.

E. Portland Cement Terrazzo Base: Install and finish base at the same time that adjacent flooring is installed.

F. Portland Cement Terrazzo Finishing: Cover terrazzo topping with moisture-retaining cover and cure until topping develops sufficient strength to prevent lifting or pulling of aggregate during grinding.

1. Rough Grinding: Grind with 24-grit or finer stones or with comparable diamond plates.
2. Grouting: After rough grinding, clean terrazzo topping with water and rinse away residue. Remove excess rinse water, apply matrix mix to grout surface, and fill voids. After

grouting, cover surface with moisture-retaining cover to cure grout until ready for fine grinding.

3. Fine Grinding and Polishing: Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted. Grind with 80 or 120 -grit stones or with comparable diamond abrasives until grout is removed from surface.

G. Cut out and replace terrazzo areas that evidence lack of bond with substrate or underbed, including areas that emit a "hollow" sound if tapped. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by Architect.

3.3 CLEANING AND PROTECTION

A. Terrazzo Cleaning:

1. Remove grinding dust from installation and adjacent areas.
2. Wash surfaces with cleaner immediately after final cleaning of terrazzo flooring according to both NTMA's and manufacturer's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow them to dry thoroughly.

B. Sealing:

1. Seal surfaces according to NTMA's written recommendations.
2. Apply sealer according to sealer manufacturer's written instructions.

END OF SECTION 096613

SECTION 096623 - RESINOUS MATRIX TERRAZZO FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes thin-set, epoxy-resin terrazzo flooring.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: Include terrazzo installation requirements. Include plans, sections, component details, and relationship to other work.

D. Samples: For each exposed product and for each color and texture specified.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Material certificates.

C. Preinstallation moisture-testing reports.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 QUALITY ASSURANCE

A. Installer Qualifications:

1. Engage an installer who is a contractor member of NTMA.
2. Engage an installer who is certified in writing by terrazzo manufacturer as qualified to install manufacturer's products.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. NTMA Standards: Comply with NTMA's written recommendations for terrazzo type indicated unless more stringent requirements are specified.

2.2 EPOXY-RESIN TERRAZZO

A. Epoxy-Resin Terrazzo: Comply with manufacturer's written instructions for matrix and aggregate proportions and mixing.

B. Mix Color and Pattern: As selected by Architect from manufacturer's full range, As selected by Architect from NTMA's "Terrazzo Color Palette" EI Series, As selected by Architect from NTMA's "Terrazzo Color Palette" EII Series, As selected by Architect from NTMA's "Terrazzo Color Palette" EIII Series, As selected by Architect from NTMA's "Terrazzo Color Palette" EIV Series, Match Architect's sample or Match existing.

C. Materials:

1. Moisture-Vapor-Emission-Control Membrane: Two-component, high-solids, high-density, low-odor, epoxy-based membrane-forming product produced by epoxy terrazzo manufacturer that reduces moisture emission from concrete substrate to not more than 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
2. Substrate-Crack-Suppression Membrane: Product of terrazzo-resin manufacturer, having minimum 120 percent elongation potential according to ASTM D412.
    a. Reinforcement: Fiberglass scrim.
3. Primer: Manufacturer's product recommended for substrate and use indicated.
4. Epoxy-Resin Matrix: Manufacturer's standard recommended for use indicated and in color required for mix indicated.
5. Finishing Grout: Resin based.

2.3 STRIP MATERIALS

A. Thin-Set Divider Strips: L-type angle in depth required for topping thickness indicated.

1. Material: As indicated, White-zinc alloy, Brass, Aluminum or Plastic, in color selected from full range of industry colors.
2. Top Width: As indicated, 1/8 inch (3.2 mm) or 1/4 inch (6.4 mm) as directed.

B. Heavy-Top Divider Strips: L-type angle in depth required for topping thickness indicated.

1. Bottom-Section Material: As indicated, Galvanized steel or Matching top-section material as directed.
2. Top-Section Material: As indicated, White-zinc alloy, Brass, Aluminum or Plastic, in color selected from full range of industry colors.

3. Top-Section Width: As indicated, 1/8 inch (3.2 mm), 1/4 inch (6.4 mm), 3/8 inch (9.5 mm) or 1/2 inch (12.7 mm).

C. Control-Joint Strips: Separate, double L-type angles, positioned back to back, that match material and color of divider strips and in depth required for topping thickness indicated.

D. Accessory Strips: Match divider-strip width, material, and color unless otherwise indicated. Use the following types of accessory strips as required to provide a complete installation:

1. Base-bead strips for exposed top edge of terrazzo base.
2. Edge-bead strips for exposed edges of terrazzo.
3. Nosings for terrazzo stair treads and landings.

E. Abrasive Strips: As directed Three-line, Two-line, One-line or Abrasive nosing strip and two-line abrasive inserts at nosings. Silicon carbide or aluminum oxide, or combination of both, in epoxy-resin binder and set in channel.

1. Width: 1/2 inch (12.7 mm).
2. Depth: As required by terrazzo thickness.
3. Length: 4 inches (100 mm) less than stair width or As indicated.
4. Color: As selected by Architect from full range of industry colors.

2.4 MISCELLANEOUS ACCESSORIES

A. Strip Adhesive: Epoxy-resin adhesive recommended by adhesive manufacturer for this use.

B. Anchoring Devices: Provide mechanical anchoring devices or adhesives for strip materials as recommended by manufacturer and as required for secure attachment to substrate.

C. Patching and Fill Material: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.

D. Joint Compound: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.

E. Resinous Matrix Terrazzo Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by sealer manufacturer for use on terrazzo type indicated.

F. Sealer: Slip- and stain-resistant, penetrating-type sealer that is chemically neutral; does not affect terrazzo color or physical properties; and is recommended by sealer manufacturer, Acrylic, Urethane, Chemical-resistant epoxy or Water based as directed.

1. Surface Friction: Not less than 0.6 according to ASTM D2047.
2. Acid-Base Properties: With pH factor between 7 and 10.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application.

B. Concrete Slabs:

1. Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with terrazzo.

    a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
    b. Repair damaged and deteriorated concrete according to terrazzo manufacturer's written instructions.
    c. Use patching and fill material to fill holes and depressions in substrates according to terrazzo manufacturer's written instructions.

C. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.

D. Preinstallation Moisture Testing:

1. Testing Agency: Owner will engage or Engage a qualified testing agency to perform tests.
2. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m), perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

    a. Moisture-Vapor-Emission Test: Maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours when tested according to ASTM F1869 using anhydrous calcium chloride.
    b. Relative Humidity Test: Maximum 75 percent relative humidity measurement when tested according to ASTM F2170 using in-situ probes.

3. Proceed with terrazzo installation only after concrete substrates pass moisture testing or after installation of moisture-vapor-emission-control membrane on substrate areas that fail testing.

E. Moisture-Vapor-Emission-Control Membrane: Install according to manufacturer's written instructions.

1. Install on concrete substrates that incorporate lightweight aggregates.
2. Install concrete substrates that fail preinstallation moisture testing.

F. Substrate-Crack-Suppression Membrane: Install to isolate and suppress substrate cracks according to manufacturer's written instructions.

1. Prepare and prefill substrate cracks with membrane material.
2. Install membrane at substrate cracks to produce full substrate coverage in areas to receive terrazzo.
3. Reinforce membrane with fiberglass scrim.

G. Protect other work from water and dust generated by grinding operations. Control water and dust to comply with environmental protection regulations.

1. Erect and maintain temporary enclosures and other suitable methods to limit water damage and dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.

3.2 EPOXY-RESIN TERRAZZO INSTALLATION

A. Comply with NTMA's written recommendations for terrazzo and accessory installation.

B. Strip Materials:

1. Divider and Control-Joint Strips:

a. Locate divider strips in locations indicated.
b. Install control-joint strips back to back and directly above concrete-slab control joints or in locations indicated.
c. Install control-joint strips with 1/4-inch (6.4-mm) gap between strips, and install sealant in gap.
d. Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.

2. Accessory Strips: Install as required to provide a complete installation or in locations indicated.
3. Abrasive Strips: Install with surface of abrasive strip positioned 1/16 inch (1.6 mm) higher than terrazzo surface.

C. Apply primer to terrazzo substrates according to manufacturer's written instructions.

D. Place, rough grind, grout, cure grout, fine grind, and finish terrazzo according to manufacturer's written instructions.

1. Installed Thickness: 1/4 inch (6.4 mm) or 3/8 inch (9.5 mm) or As indicated on Drawings nominal.
2. Terrazzo Finishing: Ensure that matrix components and fluids from grinding operations do not stain terrazzo by reacting with divider and control-joint strips.

a. Rough Grinding: Grind with 24-grit or finer stones or with comparable diamond abrasives. Follow initial grind with 60/80-grit stones or with comparable diamond abrasives.
b. Grouting: Before grouting, clean terrazzo with water, rinse, and allow to dry. Apply and cure epoxy grout.

c. Fine Grinding/Polishing: Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted. As directed Grind with 80 or 120-grit stones or with comparable diamond abrasives until grout is removed from surface.

3. Installation Tolerance: Limit variation in terrazzo surface from level to 1/4 inch in 10 feet (6.4 mm in 3 m); noncumulative.

E. Install and finish poured-in-place terrazzo stairs at the same time the adjacent terrazzo flooring is installed.

F. Install and finish poured-in-place terrazzo base at the same time the adjacent terrazzo flooring is installed.

G. Cut out and replace terrazzo areas that evidence lack of bond with substrate. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by Architect.

H. Cleaning:

1. Remove grinding dust from installation and adjacent areas.
2. Wash surfaces with cleaner according to NTMA's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow them to dry thoroughly.

I. Sealing:

1. Seal surfaces according to NTMA's written recommendations.
2. Apply sealer according to sealer manufacturer's written instructions.

END OF SECTION 096623

SECTION 096723 - RESINOUS FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes resinous flooring systems.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference as directed.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Samples: For each type of exposed finish required.

1.4 INFORMATIONAL SUBMITTALS

A. Material certificates.

B. Material test reports.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Comply with resinous flooring manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting resinous flooring application.

B. Lighting: Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during resinous flooring application.

C. Close spaces to traffic during resinous flooring application and for 24 hours after application unless manufacturer recommends a longer period.

PART 2 - PRODUCTS

2.1 PERORMANCE REQUIREMENTS

A. Flammability: Self-extinguishing according to ASTM D635.

2.2 RESINOUS FLOORING

A. Resinous Flooring System: Abrasion-, impact-, and chemical-resistant, aggregate-filled, and resin-based monolithic floor surfacing designed to produce a seamless floor and integral cove base.

B. System Characteristics:

1. Color and Pattern: As directed.
2. Wearing Surface: As directed.
3. Overall System Thickness: As directed.
4. Federal Agency Approvals: USDA or FDA approved for food-processing environments.

C. Primer: Type recommended by resinous flooring manufacturer for substrate and resinous flooring system indicated.

D. Reinforcing Membrane: Flexible resin formulation that is recommended by resinous flooring manufacturer.

a. Provide fiberglass scrim embedded in reinforcing membrane.

E. Patching and Fill Material: Resinous product of or approved by resinous flooring manufacturer and recommended by manufacturer for application indicated.

F. Body Coats:
1. Resin: Epoxy.
2. Formulation Description: As directed.
3. Type: Clear or Pigmented.
4. Application Method: As directed.
5. Number of Coats: One or Two.
6. Thickness of Coats: As directed.
7. Aggregates: As directed.

G. Topcoats: Sealing or finish coats.
1. Resin: Epoxy.
2. Formulation Description: As directed.
3. Type: Clear or Pigmented.
4. Number of Coats: One or Two.
5. Thickness of Coats: As directed.
6. Finish: Matte or Gloss.

H. System Physical Properties: Provide resinous flooring system with the following minimum physical property requirements when tested according to test methods indicated:

1. Compressive Strength: Minimum according to ASTM C579, as directed.
2. Tensile Strength: Minimum according to ASTM C307, as directed.
3. Flexural Modulus of Elasticity: Minimum according to ASTM C580, as directed.
4. Water Absorption: percent (as directed) maximum according to ASTM C413.

I. System Chemical Resistance: Test specimens of cured resinous flooring system are unaffected when tested according to ASTM D1308 for 50 percent immersion or ASTM D543, Procedure A, for immersion or ASTM C267 for immersion in the following reagents for no fewer than seven days:

1. As directed.

PART 3 - EXECUTION

3.1 PREPARATION

A. Prepare and clean substrates according to resinous flooring manufacturer's written instructions for substrate indicated. Provide clean, dry substrate for resinous flooring application.

B. Concrete Substrates: Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with resinous flooring.

1. Roughen concrete substrates as follows:

   a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
   b. Comply with ASTM C811 requirements unless manufacturer's written instructions are more stringent.

2. Repair damaged and deteriorated concrete according to resinous flooring manufacturer's written instructions.
3. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.

   a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with application of resinous flooring only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) or 4.5 lb of water/1000 sq. ft. (2.04 kg of water/92.9 sq. m) of slab area in 24 hours.
   b. Plastic Sheet Test: ASTM D4263. Proceed with application only after testing indicates absence of moisture in substrates.
   c. Relative Humidity Test: Use in situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement, as directed.

4. Alkalinity and Adhesion Testing: Verify that concrete substrates have pH within acceptable range. Perform tests recommended by manufacturer. Proceed with application only after substrates pass testing.

C. Patching and Filling: Use patching and fill material to fill holes and depressions in substrates according to manufacturer's written instructions.

D. Resinous Materials: Mix components and prepare materials according to resinous flooring manufacturer's written instructions.

3.2 APPLICATION

A. Apply components of resinous flooring system according to manufacturer's written instructions to produce a uniform, monolithic wearing surface of thickness indicated.

1. Expansion and Isolation Joint Treatment: At substrate expansion and isolation joints, comply with resinous flooring manufacturer's written instructions.

B. Primer: Apply primer over prepared substrate at manufacturer's recommended spreading rate.

C. Reinforcing Membrane: Apply reinforcing membrane to substrate cracks or entire substrate surface.

D. Integral Cove Base: Apply cove base mix to wall surfaces before applying flooring. Apply according to manufacturer's written instructions. Round internal and external corners.

1. Integral Cove Base: 4 inches (100 mm) high.

E. Self-Leveling Body Coats: Apply self-leveling slurry body coats in thickness indicated for flooring system.

1. Aggregates: Broadcast aggregates at rate recommended by manufacturer and, after resin is cured, remove excess aggregates to provide surface texture indicated.

F. Troweled or Screeded Body Coats: Apply troweled or screeded body coats in thickness indicated for flooring system. Hand or power trowel and grout to fill voids. When body coats are cured, remove trowel marks and roughness using method recommended by manufacturer.

G. Grout Coat: Apply grout coat, of type recommended by resinous flooring manufacturer, to fill voids in surface of final body coat.

H. Topcoats: Apply topcoats in number indicated for flooring system and at spreading rates recommended in writing by manufacturer and to produce wearing surface indicated.

I. Protect resinous flooring from damage and wear during the remainder of construction period.

END OF SECTION 096723

SECTION 096766 - FLUID-APPLIED ATHLETIC FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Polyurethane flooring, fluid applied directly on substrates.
2. Polyurethane flooring, fluid applied over base mats.

1.2 COORDINATION

A. Coordinate layout and installation of flooring with floor inserts for gymnasium equipment.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Shop Drawings: For flooring. Show installation details including layout, colors, widths, and dimensions of game lines and markers and locations of athletic equipment floor inserts.

D. Samples: For each exposed product and for each color, gloss, and texture of floor specified.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An installer who is approved, trained, or certified by fluid-applied athletic flooring manufacturer.

PART 2 - PRODUCTS

2.1 DIRECT-APPLIED FLOORING

A. Description: Fluid-applied athletic flooring system consisting of primer and polyurethane body and topcoats applied directly to substrate.

B. Materials:

1. Primer: Manufacturer's primer recommended for substrate indicated.
2. Body Coat(s): Two-component, self-leveling, pigmented, polyurethane containing no rubber fillers and no mercury.
3. Topcoat (Finish Coat): Manufacturer's standard pigmented polyurethane.

C. Finishes:

1. Color: As selected by Architect from manufacturer's full range or As indicated by manufacturer's designations.
2. Surface Texture: Manufacturer's standard.

2.2 FLOORING APPLIED OVER BASE MATS

A. Description: Fluid-applied athletic flooring system consisting of resilient base mat adhered to substrate, base mat sealer, and fluid-applied polyurethane body and topcoats.

B. Base Mat: Manufacturer's standard base mats of granulated recycled rubber in polyurethane binder.

1. Thickness: 5/32 inch (4 mm), 1/4 inch (6 mm), 9/32 inch (7 mm), 11/32 inch (9 mm) or 15/32 inch (12 mm) as directed.

C. Base-Mat Adhesive: Manufacturer's standard two-component polyurethane.

D. Base-Mat Sealer: Manufacturer's standard two-component polyurethane compound formulated for sealing base mat.

E. Body Coat(s): Two-component, self-leveling, pigmented, polyurethane containing no rubber fillers and no mercury.

1. Topcoat (Finish Coat): Manufacturer's standard pigmented polyurethane.

F. Finishes:

1. Color: As selected by Architect from manufacturer's full range or As indicated by manufacturer's designations.
2. Surface Texture: Manufacturer's standard.

2.3 ACCESSORIES

A. Trowelable Leveling and Patching Compound: Latex-modified, hydraulic-cement-based formulation approved by flooring manufacturer.

B. Game-Line and Marker Paint: Complete system including primer, if any, compatible with flooring and recommended in writing by flooring and paint manufacturers for use indicated.

PART 3 - EXECUTION

3.1 PREPARATION

A. Concrete Substrates: Prepare substrates according to manufacturer's written instructions to ensure adhesion of flooring.

1. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m) or 1000 sq. ft. (304.8 sq. m) as directed, and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
b. Relative Humidity Test: Using in situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.

B. Remove substrate coatings and other substances that are incompatible with flooring system components and that contain soap, wax, oil, or silicone, using mechanical methods recommended in writing by manufacturer. Do not use solvents.

C. Use trowelable leveling and patching compound to fill cracks, holes, and depressions in substrates.

D. Treat nonmoving substrate cracks and control joints to prevent cracks from telegraphing (reflecting) through flooring, according to manufacturer's written instructions.

E. Protect substrate voids and joints to prevent flooring resins from flowing into or leaking through them.

F. Sweep and vacuum clean substrates to be covered by flooring immediately before installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, and dust. Proceed with installation only after unsatisfactory conditions have been corrected.

G. Protect walls, floor openings, athletic equipment inserts, electrical openings, door frames, and other obstructions during installation. Cover floor and wall areas at mixing stations.

3.2 FLOORING INSTALLATION, GENERAL

A. Mix and apply flooring components according to manufacturer's written instructions.

1. At substrate expansion, isolation, and other moving joints, install continuous joint of same width through flooring.

3.3 INSTALLATION OF DIRECT-APPLIED FLOORING

A. Apply primer over prepared substrate at manufacturer's recommended spreading rate.

B. Apply body coat(s) and topcoat to produce a uniform, level surface and finish.

3.4 INSTALLATION OF FLOORING APPLIED OVER BASE MATS

A. Adhesively apply resilient base mats to substrate according to manufacturer's written instructions.

1. Do not compress mats when fitting into place. Leave gap of width recommended in writing by manufacturer at butted base-mat sheets, walls, floor openings, athletic equipment inserts, electrical openings, door frames, and other obstructions.
2. Roll base mats to set them into adhesive and eliminate air pockets.
3. Repair ridges at seams, loose areas, and air pockets according to manufacturer's written instructions.

B. Apply seal coat to base mats before applying body coat(s).

C. Smooth ridges and high spots in seal coat before applying body coat(s).

D. Apply body coat(s) and topcoat to produce a uniform surface and finish.

3.5 GAME LINES AND MARKERS

A. Mask flooring at game lines and markers, and apply paint to produce sharp edges. Where crossing, break minor game line at intersection; do not overlap lines.

B. Apply game lines and markers in widths and colors according to requirements indicated on Drawings.

3.6 PROTECTION

A. Close spaces to traffic for 48 hours, 96 hours or seven days after flooring installation unless manufacturer recommends longer period in writing.

B. Protect flooring from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period. Use protection methods recommended in writing by manufacturer.

END OF SECTION 096766

SECTION 096813 - TILE CARPETING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes modular carpet tile.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference as directed.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For carpet tile installation, plans showing the following:

1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet tiles.
2. Carpet tile type, color, and dye lot.
3. Type of subfloor.
4. Type of installation.
5. Pattern of installation.
6. Pattern type, location, and direction.
7. Pile direction.
8. Type, color, and location of insets and borders.
9. Type, color, and location of edge, transition, and other accessory strips.
10. Transition details to other flooring materials.

D. Samples: For each exposed product and for each color and texture required.

1.4 INFORMATIONAL SUBMITTALS

A. Product test reports.

B. Sample warranty.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Certified by the International Certified Floorcovering Installers Association at the Commercial II or Master II certification level.

1.7 WARRANTY

A. Special Warranty for Carpet Tiles: Manufacturer agrees to repair or replace components of carpet tile installation that fail in materials or workmanship within specified warranty period.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 CARPET TILE

A. Color: As directed.

B. Pattern: As directed.

C. Fiber Content: As directed.

D. Fiber Type: As directed.

E. Pile Characteristic: As directed.

F. Yarn Twist: TPI (TPCM), as directed.

G. Yarn Count: As directed.

H. Density: oz./cu. yd. (g/cu. cm), as directed.

I. Pile Thickness: inches (mm) for finished carpet tile according to ASTM D6859, as directed.

J. Stitches: inch (mm), as directed.

K. Gage: inch (mm), as directed.

L. Surface Pile Weight: oz./sq. yd. (g/sq. m), as directed.

M. Total Weight: oz./sq. yd. (g/sq. m) for finished carpet tile, as directed.

N. Primary Backing/Backcoating: As directed.

O. Secondary Backing: As directed.

P. Backing System: As directed.

Q. Size: As directed.

R. Applied Treatments:

1. Soil-Resistance Treatment: As directed.
2. Antimicrobial Treatment: As directed to protect carpet tiles as follows:

a. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria, not less than 1-mm halo of inhibition for gram-negative bacteria, and no fungal growth, according to AATCC 174.

S. Sustainable Design Requirements:

1. Sustainable Product Certification: Level certification according to ANSI/NSF 140, as directed.

T. Performance Characteristics:

1. Appearance Retention Rating: As directed, minimum according to ASTM D7330.
2. Critical Radiant Flux Classification: Not less than 0.45 W/sq. cm or 0.22 W/sq. cm according to NFPA 253.
3. Dry Breaking Strength: Not less than 100 lbf (445 N) according to ASTM D2646.
4. Tuft Bind: Not less than "as directed" according to ASTM D1335.
5. Delamination: Not less than 3.5 lbf/in. (0.6 N/mm) or 4 lbf/in. (0.7 N/mm) according to ASTM D3936.
6. Dimensional Tolerance: Within 1/32 inch (0.8 mm) of specified size dimensions, as determined by physical measurement.
7. Dimensional Stability: 0.2 percent or less according to ISO 2551 (Aachen Test).
8. Noise Reduction Coefficient (NRC): As directed, according to ASTM C423.
9. Colorfastness to Crocking: Not less than 4, wet and dry, according to AATCC 165.
10. Colorfastness to Light: Not less than 4 after 40 or 60 AFU (AATCC fading units) according to AATCC 16, Option E.
11. Electrostatic Propensity: Less than 3.5 or 2 kV according to AATCC 134.

2.2 INSTALLATION ACCESSORIES

A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet tile manufacturer.

B. Adhesives: Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that comply with flammability requirements for installed carpet tile, and are recommended by carpet tile manufacturer for releasable installation.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Concrete Slabs:

1. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m) or 1000 sq. ft. (304.8 sq. m), and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

    a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
    b. Relative Humidity Test: Using in situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement, as directed.
    c. Perform additional moisture tests recommended in writing by adhesive and carpet tile manufacturers. Proceed with installation only after substrates pass testing.

B. Wood Subfloors: Verify that underlayment surface is free of irregularities and substances that may interfere with adhesive bond or show through surface.

C. Metal Subfloors: Verify that underlayment surface is free of irregularities and substances that may interfere with adhesive bond or show through surface.

D. Painted Subfloors: Perform bond test recommended in writing by adhesive manufacturer.

1. Access Flooring Systems: Verify access floor substrate is compatible with carpet tile and adhesive, if any, and underlayment surface is gaps greater than 1/8 inch (3 mm) and protrusions more than 1/32 inch (0.8 mm).

3.2 PREPARATION

A. General: Comply with CRI's "CRI Carpet Installation Standards" and with carpet tile manufacturer's written installation instructions for preparing substrates indicated to receive carpet tile.

B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch (3 mm) wide or wider, and protrusions more than 1/32 inch (0.8 mm) unless more stringent requirements are required by manufacturer's written instructions.

C. Concrete Substrates: Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by adhesive and carpet tile manufacturers.

D. Metal Substrates: Clean grease, oil, soil and rust, and prime if recommended in writing by adhesive manufacturer. Rough sand painted metal surfaces and remove loose paint. Sand aluminum surfaces, to remove metal oxides, immediately before applying adhesive.

E. Broom and vacuum clean substrates to be covered immediately before installing carpet tile.

3.3 INSTALLATION

A. General: Comply with CRI's "CRI Carpet Installation Standard," Section 18, "Modular Carpet" and with carpet tile manufacturer's written installation instructions.

B. Installation Method: As directed.

C. Maintain dye-lot integrity. Do not mix dye lots in same area.

D. Maintain pile-direction patterns, as directed.

E. Cut and fit carpet tile to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer.

F. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.

G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on carpet tile as marked on subfloor. Use nonpermanent, nonstaining marking device.

H. Install pattern parallel to walls and borders.

I. Access Flooring: Stagger joints of carpet tiles so carpet tile grid is offset from access flooring panel grid. Do not fill seams of access flooring panels with carpet adhesive; keep seams free of adhesive.

J. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

END OF SECTION 096813

SECTION 096816 - SHEET CARPETING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Tufted carpet.
2. Woven carpet.
3. Carpet cushion.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference as directed.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For carpet installation, showing the following:

1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet.
2. Carpet type, color, and dye lot.
3. Locations where dye lot changes occur.
4. Seam locations, types, and methods.
5. Type of subfloor.
6. Type of installation.
7. Pattern type, repeat size, location, direction, and starting point.
8. Pile direction.
9. Types, colors, and locations of insets and borders.
10. Types, colors, and locations of edge, transition, and other accessory strips.
11. Transition details to other flooring materials.
12. Type of carpet cushion.

D. Samples: For each exposed product and for each color and texture required.

1.4 INFORMATIONAL SUBMITTALS

A. Product test reports.

B. Sample warranties.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Certified by the International Certified Floorcovering Installers Association at the Commercial II or Master II certification level.

1.7 WARRANTY

A. Special Warranty for Carpet: Manufacturer agrees to repair or replace components of carpet installation that fail in materials or workmanship within specified warranty period.

1. Warranty Period: 10 years from date of Substantial Completion.

B. Special Warranty for Carpet Cushion: Manufacturer agrees to repair or replace components of carpet cushion installation that fail in materials or workmanship within specified warranty period.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 TUFTED CARPET

A. Color: As directed.

B. Pattern: As directed.

C. Fiber Content: As directed.

D. Fiber Type: As directed.

E. Pile Characteristic: As directed.

F. Yarn Twist: TPI (TPCM), as directed.

G. Yarn Count: As directed.

H. Density: oz./cu. yd. (g/cu. cm), as directed.

I. Pile Thickness: As directed, inches (mm) for finished carpet according to ASTM D6859.

J. Stitches: inch (mm), as directed.

K. Gage: inch (mm), as directed.

L. Face Weight: oz./sq. yd. (g/sq. m), as directed.

M. Total Weight: oz./sq. yd. (g/sq. m) for finished carpet, as directed.

N. Primary Backing: As directed.

O. Secondary Backing: As directed.

P. Backcoating: As directed.

Q. Backing System: As directed.

R. Roll Width: As directed.

S. Applied Treatments:

1. Applied Soil-Resistance Treatment: As directed.
2. Antimicrobial Treatment: As directed.

a. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria, not less than 1-mm halo of inhibition for gram-negative bacteria, and no fungal growth, according to AATCC 174.

T. Sustainable Design Requirements:

1. Sustainable Product Certification: Level certification according to ANSI/NSF 140, as directed.

U. Performance Characteristics:

1. Appearance Retention Rating: As directed. Minimum according to ASTM D7330.
2. Critical Radiant Flux Classification: Not less than 0.45 W/sq. cm or 0.22 W/sq. cm according to NFPA 253.
3. Dry Breaking Strength: Not less than 100 lbf (445 N) according to ASTM D2646.
4. Tuft Bind: Not less than (As directed) according to ASTM D1335.
5. Delamination: Not less than (As directed) according to ASTM D3936.
6. Noise Reduction Coefficient (NRC): According to ASTM C423, as directed.
7. Colorfastness to Crocking: Not less than 4, wet and dry, according to AATCC 165.
8. Colorfastness to Light: Not less than 4 after 40 or 60 AFU (AATCC fading units) according to AATCC 16, Option E.
9. Electrostatic Propensity: Less than 3.5 or 2 kV according to AATCC 134.

2.2 WOVEN CARPET

A. Color: As directed.

B. Pattern: As directed.

C. Fiber Content: As directed.

D. Face Construction: As directed.

E. Pile Characteristic: As directed.

F. Yarn Twist: TPI (TPCM), as directed.

G. Yarn Count: As directed.

H. Density: oz./cu. yd. (g/cu. cm), as directed.

I. Pile Thickness: inches (mm) for finished carpet according to ASTM D6859, as directed.

J. Rows: inch (mm), as directed.

K. Pitch: Number of rows in 27 inches (686 mm), as directed.

L. Face Weight: oz./sq. yd. (g/sq. m), as directed.

M. Total Weight: oz./sq. yd. (g/sq. m) for finished carpet, as directed.

N. Backing: As directed:

1. Chain Warp: As directed.
2. Stuffer Warp: As directed.
3. Shot or Fill Weft: As directed.
4. Backcoating: As directed.

O. Applied Treatments:

1. Applied Soil-Resistance Treatment: As directed.
2. Antimicrobial Treatment: As directed.

    a. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria, not less than 1-mm halo of inhibition for gram-negative bacteria, and no fungal growth, according to AATCC 174.

P. Sustainable Design Requirements:

1. Sustainable Product Certification: Level certification according to ANSI/NSF 140, as directed

Q. Performance Characteristics:

1. Appearance Retention Rating: As directed. Minimum according to ASTM D7330.
2. Critical Radiant Flux Classification: Not less than 0.45 W/sq. cm or 0.22 W/sq. cm according to NFPA 253.
3. Dry Breaking Strength: Not less than 100 lbf (445 N) according to ASTM D2646.
4. Noise Reduction Coefficient (NRC): According to ASTM C423, as directed.
5. Colorfastness to Crocking: Not less than 4, wet and dry, according to AATCC 165.
6. Colorfastness to Light: Not less than 4 after 40 or 60 AFU (AATCC fading units) according to AATCC 16, Option E.
7. Electrostatic Propensity: Less than 3.5 or 2 kV according to AATCC 134.

2.3 CARPET CUSHION

A. Traffic Classification: CCC, as directed.

B. Fiber Cushion: As directed.

1. Weight: oz./sq. yd. (g/sq. m), as directed.
2. Thickness: inches (mm), as directed plus 5 percent maximum.
3. Density: lb/cu. ft. (kg/cu. m), as directed.

C. Rubber Cushion: As directed.

1. Weight: oz./sq. yd. (g/sq. m), as directed.
2. Thickness: inches (mm), as directed plus 5 percent maximum.
3. Compression Resistance: lb/sq. in. (kg/sq. mm) at 25 or 65 percent according to ASTM D3676, as directed.
4. Density: lb/cu. ft. (kg/cu. m), as directed.

D. Polyurethane-Foam Cushion: As directed.

1. Compression Force Deflection at 65 Percent: lb/sq. in. (kg/sq. mm) of polymer density according to ASTM D3574, as directed.
2. Thickness: inches (mm), as directed.
3. Density: lb/cu. ft. (kg/cu. m) as directed.

E. Performance Characteristics:

1. Critical Radiant Flux Classification: Not less than 0.45 W/sq. cm or 0.22 W/sq. cm according to NFPA 253, as directed.
2. Noise Reduction Coefficient (NRC): According to ASTM C423, as directed

2.4 INSTALLATION ACCESSORIES

A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet or carpet cushion manufacturer.

B. Adhesives: Water-resistant, mildew-resistant, nonstaining type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet and is recommended or provided by as directed.

C. Tackless Carpet Stripping: Water-resistant plywood, in strips as required to match cushion thickness and that comply with CRI's "Carpet Installation Standard."

D. Seam Adhesive: Hot-melt adhesive tape or similar product recommended by carpet manufacturer for sealing and taping seams and butting cut edges at backing to form secure seams and to prevent pile loss at seams.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Concrete Slabs:

1. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. (18.6 sq. m) or 1000 sq. ft. (304.8 sq. m), and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

    a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
    b. Relative Humidity Test: Using in situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement, as directed
    c. Perform additional moisture tests recommended in writing by adhesive and carpet or adhesive, carpet cushion, and carpet manufacturers. Proceed with installation only after substrates pass testing.

B. Wood Subfloors: Verify that underlayment surface is free of irregularities and substances that may interfere with adhesive bond or show through surface.

3.2 PREPARATION

A. General: Comply with CRI's "CRI Carpet Installation Standard" and with carpet manufacturer's written installation instructions for preparing substrates.

B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch (3 mm) wide or wider, and protrusions more than 1/32 inch (0.8 mm), unless more stringent requirements are required by manufacturer's written instructions.

C. Concrete Substrates: Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by adhesive and carpet or adhesive, carpet, and carpet cushion manufacturers.

D. Broom and vacuum clean substrates to be covered immediately before installing carpet.

3.3 CARPET INSTALLATION

A. Comply with CRI's "CRI Carpet Installation Standard" and carpet manufacturer's or carpet and carpet cushion manufacturers' written installation instructions for the following:

1. Direct-glue-down installation.
2. Double-glue-down installation.
3. Carpet with attached-cushion installation.
4. Preapplied adhesive installation.

5. Hook-and-loop installation.
6. Stretch-in installation.
7. Stair installation.

B. Comply with carpet manufacturer's written instructions and Shop Drawings for seam locations and direction of carpet; maintain uniformity of carpet direction and lay of pile. At doorways, center seams under the door in closed position.

1. Stretch-in Carpet Installation: Install carpet cushion seams at 90-degree angle with carpet seams.

C. Install pattern parallel to walls and borders, as directed.

D. Install borders with mitered corner seams.

E. Do not bridge building expansion joints with carpet.

F. Cut and fit carpet to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet manufacturer.

G. Extend carpet into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.

H. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on carpet as marked on subfloor. Use nonpermanent, nonstaining marking device.

I. Protect carpet against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods recommended in writing by carpet manufacturer, as directed.

END OF SECTION 096816

SECTION 096900 - ACCESS FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cementitious-core steel panel access flooring.
2. Wood-core steel panel access flooring.
3. Unfilled steel panel access flooring.

1.2 COORDINATION

A. Coordinate location of mechanical and electrical work in underfloor cavity to prevent interference with access flooring.

B. Mark pedestal locations on subfloor to enable mechanical and electrical work to proceed without interfering with access-flooring pedestals installed after mechanical and electrical work.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference as directed.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For access flooring:

1. Include layout of access flooring and relationship to adjoining Work based on field-verified dimensions.
2. Details and sections with descriptive notes indicating materials, finishes, fasteners, typical and special edge conditions, accessories, and understructures.

D. Samples: For each type of exposed finish.

E. Delegated-Design Submittal: For seismic design of access flooring.

1.5 INFORMATIONAL SUBMITTALS

A. Product certificates.

B. Product test reports.

C. Seismic Design Calculations: For seismic design of access flooring, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design access flooring for seismic performance, including loads imposed on the access flooring by items and equipment installed on the access flooring.

B. Seismic Performance: Access flooring shall withstand the effects of earthquake motions determined according to ASCE/SEI 7, including loads imposed on the access flooring by items and equipment installed on the access flooring.

C. Structural Performance: Provide access flooring capable of complying with the following performance requirements according to testing procedures in CISCA's "Recommended Test Procedures for Access Floors":

1. Concentrated Loads: As directed with the following deflection and permanent set:

   a. Top-Surface Deflection: 0.10 inch (2.54 mm).
   b. Permanent Set: 0.010 inch (0.25 mm).

2. Ultimate Loads:As directed.
3. Rolling Loads: With local or overall deformation not to exceed 0.040 inch (1.02 mm).

   a. CISCA Wheel 1: 10 passes as directed.
   b. CISCA Wheel 2: 10,000 passes as directed.

4. Stringer Load Test: As directed. As directed, at center of span with a permanent set not to exceed 0.010 inch (0.254 mm).
5. Pedestal Axial Load Test: 5000 lbf (22 240 N) or 6000 lbf (26 690 N).
6. Pedestal-Overturning-Moment Test: 1000 lbf x inches (113 N x meters).
7. Uniform Load Test: As directed, with a maximum top-surface deflection not to exceed 0.040 inch (1.02 mm) and a permanent set not to exceed 0.010 inch (0.254 mm).
8. Drop Impact Load Test: As directed.

D. Fire Performance:

1. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

    a. Flame-Spread Index: 25 or less.
    b. Smoke-Developed Index: 50 or 450 or less.

2.2 CEMENTITIOUS-CORE STEEL PANEL ACCESS FLOORING

A. Fabricate panels from cold-rolled steel sheet, with die-cut flat top sheet and die-formed and stiffened bottom pan welded together. Protect metal surfaces against corrosion using manufacturer's standard factory-applied finish. Fully grout internal spaces of completed units with manufacturer's standard cementitious fill.

1. Configuration: Provide modular panels with nominal size of 24 by 24 inches (610 by 610 mm), interchangeable with other field panels without disturbing adjacent panels or understructure.
2. Attachment to Understructure: Bolted or by gravity.

B. Perforated Panels: Perforated top surface with holes or slots of number, spacing, and size standard with manufacturer to produce a nominal open area of (As directed) percent. Provide mechanical dampers with each panel unit.

1. Quantity: As directed.
2. Finish: As directed.

C. Grates: Grating ribs arranged in manufacturer's standard pattern to produce a nominal open area of (As directed) percent. Provide mechanical dampers with each panel unit.

1. Quantity: As directed.
2. Finish: Manufacturer's standard or To match solid panels.

D. Pedestal System Understructure: System consisting of base, column with provisions for height adjustment, and head (cap); made of steel.

E. Stringer System Understructure: Modular steel stringer systems designed to bolt to pedestal heads and form a grid pattern. Protect steel components with manufacturer's standard galvanized or corrosion-resistant paint finish.

1. Continuous Gaskets: At contact surfaces between panel and stringers to deaden sound, seal off the underfloor cavity from above, and maintain panel alignment and position.

F. Floor Finish: Provide factory-applied floor finish fabricated in one piece to cover entire panel face; with integral trim or applied perimeter plastic edging.

1. High-Pressure Plastic Laminate: NEMA LD 3, High-Wear type, Grade HDH or Grade HDM.

a. Electrical Resistance: Average no less than 1 megohm and no more than 20,000 megohms when installed floor coverings are surface-to-ground tested according to NFPA 99.
b. Colors, Textures, and Patterns: As directed.

2. Conductive High-Pressure Plastic Laminate: NEMA LD 3, High-Wear type, Grade HDH or Grade HDM.

a. Electrical Resistance: Average no less than 25,000 ohms and no more than 1 megohm when installed floor coverings are surface-to-ground tested according to ASTM F150 with 100-V applied voltage.
b. Colors, Textures, and Patterns: As directed.

3. Static-Dissipative Vinyl Tile: ASTM F1700, Class I (Monolithic Vinyl Tile), Type A (Smooth Surface).

4.

a. Electrical Resistance: Average no less than 1 megohm and no more than 1000 megohms when installed floor coverings are surface-to-ground tested according to ASTM F150 with 100-V applied voltage.
b. Colors, Textures, and Patterns: As directed.

5. Conductive Vinyl Tile: ASTM F1700, Class I (Monolithic Vinyl Tile), Type A (Smooth Surface).

a. Electrical Resistance: Average no less than 25,000 ohms and no more than 1 megohm when installed floor coverings are surface-to-ground tested according to ASTM F150 with 100-V applied voltage.
b. Colors, Textures, and Patterns: As directed.

2.3 WOOD-CORE STEEL PANEL ACCESS FLOORING

A. Fabricate panels with 1-inch- (25-mm-) thick particleboard core laminated to top and bottom steel face sheets, and with a flame-spread index of 25 or less according to ASTM E84. Provide core edges enclosed with upturned, die-formed, bottom-sheet edge or with perimeter steel channel welded to top sheet and welded or bonded to bottom sheet. Protect metal surfaces against corrosion by manufacturer's standard factory-applied finish.
1. Configuration: Provide modular panels with nominal size of 24 by 24 inches (610 by 610 mm), interchangeable with other field panels without disturbing adjacent panels or understructure.
2. Attachment to Understructure: Bolted or by gravity.

B. Perforated Panels: Perforated top surface with holes or slots of number, spacing, and size standard with manufacturer to produce a nominal open area of (as directed) percent. Provide mechanical dampers with each panel unit.

1. Quantity: As directed.
2. Finish: Manufacturer's standard or to match solid panels.

C. Grates: Grating ribs arranged in manufacturer's standard pattern to produce a nominal open area of (as directed) percent. Provide mechanical dampers with each panel unit.

1. Quantity: As directed.
2. Finish: Manufacturer's standard or to match solid panels.

D. Pedestal System Understructure: System consisting of base, column with provisions for height adjustment, and head (cap); made of steel.

E. Stringer System Understructure: Modular steel stringer systems designed to bolt to pedestal heads and form a grid pattern. Protect steel components with manufacturer's standard galvanized or corrosion-resistant paint finish.

1. Continuous Gaskets: At contact surfaces between panel and stringers to deaden sound, seal off the underfloor cavity from above, and maintain panel alignment and position.

F. Floor Finish: Provide factory-applied floor finish fabricated in one piece to cover entire panel face; with integral trim or applied perimeter plastic edging.

1. High-Pressure Plastic Laminate: NEMA LD 3, High-Wear type, Grade HDH or Grade HDM.
   a. Electrical Resistance: Average no less than 1 megohm and no more than 20,000 megohms when installed floor coverings are surface-to-ground tested according to NFPA 99.
   b. Colors, Textures, and Patterns: As directed.

2. Conductive High-Pressure Plastic Laminate: NEMA LD 3, High-Wear type, Grade HDH or Grade HDM.

   a. Electrical Resistance: Average no less than 25,000 ohms and no more than 1 megohm when installed floor coverings are surface-to-ground tested according to ASTM F150 with 100-V applied voltage.
   b. Colors, Textures, and Patterns: As directed.

3. Static-Dissipative Vinyl Tile: ASTM F1700, Class I (Monolithic Vinyl Tile), Type A (Smooth Surface).
   a. Electrical Resistance: Average no less than 1 megohm and no more than 1000 megohms when installed floor coverings are surface-to-ground tested according to ASTM F150 with 100-V applied voltage.
   b. Colors, Textures, and Patterns: As directed.

4. Conductive Vinyl Tile: ASTM F1700, Class I (Monolithic Vinyl Tile), Type A (Smooth Surface).

   a. Electrical Resistance: Average no less than 25,000 ohms and no more than 1 megohm when installed floor coverings are surface-to-ground tested according to ASTM F150 with 100-V applied voltage.
   b. Colors, Textures, and Patterns: As directed.

2.4 UNFILLED STEEL PANEL ACCESS FLOORING

A. Fabricate panels from cold-rolled steel sheet, with die-cut flat top sheet and die-formed and stiffened bottom pan welded together. Protect metal surfaces against corrosion by manufacturer's standard factory-applied finish.

1. Configuration: Provide modular panels with nominal size of 24 by 24 inches (610 by 610 mm), interchangeable with other field panels without disturbing adjacent panels or understructure.
2. Attachment to Understructure: Bolted or by gravity.

B. Perforated Panels: Perforated top surface with holes or slots of number, spacing, and size standard with manufacturer to produce a nominal open area of (as directed) percent. Provide mechanical dampers with each panel unit.

1. Quantity: As directed.
2. Finish: Manufacturer's standard or to match solid panels.

C. Grates: Grating ribs arranged in manufacturer's standard pattern to produce a nominal open area of (as directed) percent. Provide mechanical dampers with each panel unit.

1. Quantity: As directed.
2. Finish: Manufacturer's standard or to match solid panels.

D. Pedestal System Understructure: System consisting of base, column with provisions for height adjustment, and head (cap); made of steel.

E. Stringer System Understructure: Modular steel stringer systems designed to bolt to pedestal heads and form a grid pattern. Protect steel components with manufacturer's standard galvanized or corrosion-resistant paint finish.

1. Continuous Gaskets: At contact surfaces between panel and stringers to deaden sound, seal off the underfloor cavity from above, and maintain panel alignment and position.

F. Floor Finish: Provide factory-applied floor finish fabricated in one piece to cover entire panel face; with integral trim or applied perimeter plastic edging.

1. High-Pressure Plastic Laminate: NEMA LD 3, High-Wear type, Grade HDH or Grade HDM.

    a. Electrical Resistance: Average no less than 1 megohm and no more than 20,000 megohms when installed floor coverings are surface-to-ground tested according to NFPA 99.
    b. Colors, Textures, and Patterns: As directed.

2. Conductive High-Pressure Plastic Laminate: NEMA LD 3, High-Wear type, Grade HDH or Grade HDM.

a. Electrical Resistance: Average no less than 25,000 ohms and no more than 1 megohm when installed floor coverings are surface-to-ground tested according to ASTM F150 with 100-V applied voltage.
b. Colors, Textures, and Patterns: As directed.

3. Static-Dissipative Vinyl Tile: ASTM F1700, Class I (Monolithic Vinyl Tile), Type A (Smooth Surface).

a. Electrical Resistance: Average no less than 1 megohm and no more than 1000 megohms when installed floor coverings are surface-to-ground tested according to ASTM F150 with 100-V applied voltage.
b. Colors, Textures, and Patterns: As directed.

4. Conductive Vinyl Tile: ASTM F1700, Class I (Monolithic Vinyl Tile), Type A (Smooth Surface).

a. Electrical Resistance: Average no less than 25,000 ohms and no more than 1 megohm when installed floor coverings are surface-to-ground tested according to ASTM F150 with 100-V applied voltage.
b. Colors, Textures, and Patterns: As directed.

2.5 FABRICATION

A. Fabrication Tolerances:

1. Size: Plus or minus 0.020 inch (0.50 mm) of required size.
2. Squareness: Plus or minus 0.015 inch (0.38 mm) between diagonal measurements across top of panel.
3. Flatness: Plus or minus 0.035 inch (0.89 mm), measured on a diagonal on top of panel.

B. Panel Markings: Clearly and permanently mark floor panels on their underside with panel type and concentrated-load rating.

C. Bolted Panels: Provide panels with holes drilled in corners to align precisely with threaded holes in pedestal heads and to accept countersunk screws with heads flush with top of panel.

1. Captive Fasteners: Provide fasteners held captive to panels.

D. Cutouts: Fabricate cutouts in floor panels for cable penetrations and service outlets. Provide reinforcement or additional support, if needed, to make panels with cutouts comply with structural performance requirements.

1. Number, Size, Shape, and Location: As directed.
2. Grommets: Where indicated, fit cutouts with manufacturer's standard grommets; or, if size of cutouts exceeds maximum grommet size available, trim edge of cutouts with manufacturer's standard plastic molding with tapered top flange. Furnish removable covers for grommets.
3. Provide foam-rubber pads for sealing annular space formed in cutouts by cables.

2.6 ACCESSORIES

A. Adhesives: Manufacturer's standard adhesive for bonding pedestal bases to subfloor.

B. Post-Installed Anchors: For anchoring pedestal bases to subfloor, provide two or four post-installed expansion anchors or threaded concrete screws made from carbon-steel components, zinc plated to comply with ASTM B633, Class Fe/Zn 5 (5 microns) for Class SC 1 (Mild), with the capability to sustain, without failure, a load equal to 1.5 times the loads imposed by pedestal-overturning moment on fasteners, as determined by testing according to ASTM E488/E488M, conducted by a qualified independent testing agency.

C. Service Outlets: Standard UL-listed and -labeled assemblies, for recessed mounting flush with top of floor panels; for power, communication, and signal services; and complying with the following requirements:

1. Structural Performance: Cover capable of supporting a concentrated load, as directed.
2. Cover and Box Type: Hinged polycarbonate cover with opening for passage of cables when cover is closed and including frame and steel box or formed-steel plate for mounting electrical receptacles or Grommet with twist-close cover and including steel junction box for electrical receptacle with provision for telephone connectors and signal cables.
3. Location: In center of panel quadrant unless otherwise indicated.
4. Receptacles and Wiring: Electrical receptacles and wiring for service outlets are specified elsewhere.
5. Receptacles and Wiring: Equip each service outlet with power receptacles to comply with the following requirements:

    a. Type of Receptacle: Heavy-duty duplex, two-pole, three-wire grounding, 20 A, 125 V, NEMA WD 6, Configuration 5-20R unless otherwise indicated.
    b. Number of Receptacles for Outlet: As directed.
    c. Wiring Method: Factory wired for field hardwiring with armored cable, containing three insulated No. 12 AWG solid-copper conductors, terminated with a 6-inch-(152-mm-) long pigtail.
    d. Wiring Method: Power-in connectors, built into outlet housing, of type to fit power-in and power-out connectors of branch-circuit cables supplied with building electrical system.

D. Occupant Adjustable Diffusers: Manufacturer's standard round diffusers, 4 inches (102 mm) or 8 inches (203 mm) in diameter, formed from aluminum or polycarbonate plastic to produce a removable one-piece unit complete with diffuser, manually adjustable flow regulator, dirt and dust receptacle, trim ring, and underfloor compression mounting ring; precisely fitted in factory-prepared openings of standard field panels and complying with the following requirements:

1. Air-Distribution Characteristics: 100 cfm (47 L/s) at 0.096-inch (24-Pa) static pressure and a maximum noise criterion rating of 15.
2. Structural Performance: Capable of supporting a 600-lbf (2669-N) concentrated load.
3. Fire-Test-Response Characteristics: Classified 94V-0 according to UL 94.

E. Floor Grilles: Standard load-bearing grilles formed from aluminum or polycarbonate plastic to produce removable one-piece unit precisely fitted in factory-prepared openings of standard field

panels, with adjustable/removable or without dampers and complying with the following requirements:

1. Air-Distribution Characteristics: 468 cfm at 0.10-inch wg (221 L/s at 25-Pa) static pressure.
2. Structural Performance: Capable of supporting a 1000-lbf (4448-N) concentrated load.
3. Fire-Test-Response Characteristics: Classified 94V-0 according to UL 94.

F. Plenum-Wall Brush Grommets: Self-sealing cable brush grommet as directed at usable area for passage of power and signal cables through plenum walls. Provide ABS plastic or Aluminum frame with passageway of interwoven nylon filaments and intermediate layer of EPDM. Provide units with plastic cable tray for support of cables and protection of wallboard.

G. Cavity Dividers: Provide manufacturer's standard metal dividers located where indicated to divide underfloor cavities.

H. Fascia Closures: Where underfloor cavity is not enclosed by abutting walls or other construction, provide metal closure plates with manufacturer's standard finish, as directed.

I. Ramps: Manufacturer's standard ramp construction of width and slope indicated, but not steeper than 1:12, with raised-disc or textured rubber or vinyl-tile floor coverings, and of same materials, performance, and construction requirements as access flooring.

J. Steps: Provide steps of size and arrangement indicated with floor coverings to match access flooring. Apply nonslip aluminum nosings to treads unless otherwise indicated.

K. Railings: Standard extruded-aluminum railings at ramps and open-sided perimeter of access flooring where indicated. Include handrail, intermediate rails, posts, brackets, end caps, wall returns, wall and floor flanges, plates, and anchorages where required.

1. Provide railings that comply with structural performance requirements specified in Section 055213 "Pipe and Tube Railings" or Section 057300 "Decorative Metal Railings."

L. Panel Lifting Device: Panel manufacturer's standard portable lifting device for each type of panel required for each computer room.

M. Perimeter Support: Where indicated, provide manufacturer's standard method for supporting panel edge and forming transition between access flooring and adjoining floor coverings at same level as access flooring.

PART 3 - EXECUTION

3.1 PREPARATION

A. Examine substrates, with Installer and manufacturer's authorized representative present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Lay out floor panel installation to keep the number of cut panels at floor perimeter to a minimum. Avoid using panels cut to less than 6 inches (152 mm).

C. Locate each pedestal, complete any necessary subfloor preparation, and vacuum subfloor to remove dust, dirt, and construction debris before beginning installation.

3.2 INSTALLATION

A. Install access flooring and accessories under supervision of access-flooring manufacturer's authorized representative to produce a rigid, firm installation that complies with performance requirements and is free of instability, rocking, rattles, and squeaks.

B. Adhesive Attachment of Pedestals: Set pedestals in adhesive, according to access-flooring manufacturer's written instructions, to provide full bearing of pedestal base on subfloor; and as required to meet seismic design requirements.

C. Mechanical Attachment of Pedestals: Attach pedestals to subfloor with post-installed mechanical anchors as required to meet seismic design requirements.

D. Adjust pedestals so installed panels are flat, level, and at the proper height.

E. Stringer Systems: Secure stringers to pedestal heads according to access-flooring manufacturer's written instructions.

F. Install flooring panels securely in place, leaving them properly seated with panel edges flush. Do not force panels into place.

G. Scribe perimeter panels to provide a close fit, with adjoining construction having no voids greater than 1/8 inch (3 mm) where panels abut vertical surfaces.

1. To prevent dusting, seal cut edges of steel-encapsulated, wood-core panels with sealer recommended in writing by panel manufacturer.

H. Cut and trim access flooring and perform other dirt-or-debris-producing activities at a remote location or as required to prevent contamination of subfloor under installed access flooring.

I. Grounded Access Flooring: Ground access flooring as recommended by manufacturer and as needed to comply with performance requirements for electrical resistance of floor coverings.

1. Panel-to-Understructure Resistance: Not more than 10 ohms as measured without floor coverings.

J. Underfloor Dividers: Scribe and install underfloor-cavity dividers to closely fit against subfloor surfaces, and seal with mastic.

K. Closures: Scribe closures to closely fit against subfloor and adjacent finished-floor surfaces. Set in mastic and seal to maintain plenum effect within underfloor cavity.

L. Clean dust, dirt, and construction debris caused by floor installation, and vacuum subfloor area as installation of floor panels proceeds.

M. Seal underfloor air cavities at construction seams, penetrations, and perimeter to control air leakage, according to manufacturer's written instructions.

N. Install access flooring without change in elevation between adjacent panels and within the following tolerances:

1. Plus or minus 1/16 inch (1.5 mm) or 1/8 inch (3 mm) in any 10-foot (3-m) distance.
2. Plus or minus 1/8 inch (3 mm) or 1/4 inch (6.5 mm) from a level plane over entire access flooring area.

END OF SECTION 096900

SECTION 096933 - LOW-PROFILE FIXED HEIGHT ACCESS FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes low-profile, fixed-height access flooring.

1.2 COORDINATION

A. Coordinate location of electrical work in underfloor cavity and wire management channels.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review connections between low-profile, fixed-height access flooring and electrical systems.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For low-profile, fixed-height access flooring:

D. Samples: For each exposed product and for each color and texture specified.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Low-profile, fixed-height access flooring shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

B. Structural Performance:

1. Loading Capacity: As directed 100-lbf/sq. ft. (4.8-kN/sq. m) or 250-lbf/sq. ft. (12.0-kN/sq. m) live load with the following deflection and permanent set:

    a. Top-Surface Deflection: Maximum 0.15 inch (0.38 mm).
    b. Permanent Set: Maximum 0.06 inch (0.15 mm).

C. Fire Performance:

1. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

    a. Flame-Spread Index: 25 or less.
    b. Smoke-Developed Index: 50 or 450 or less as directed.

2.2 LOW-PROFILE, FIXED-HEIGHT ACCESS FLOORING

A. Low-Profile, Fixed-Height Access Flooring: As directed Manufacturer's standard or reinforced, modular, steel or polymer components, designed to interconnect and provide channels for installation of wiring; with manufacturer's standard factory-applied finish.
1. Module: Low-profile access flooring with nominal module size of 24 by 24 inches (610 by 610 mm) or 23.6 by 23.6 inches (600 by 600 mm) as directed.
2. Height: Low-profile access flooring with nominal height of 1-1/2 inches (38 mm), 2 inches (50 mm) or 3 inches (75 mm) as directed.

B. Service Outlets and Wiring: Standard UL-listed and -labeled assemblies, for recessed mounting flush with top of floor panels; for power, communication, and signal services; and complying with the following requirements:

1. Structural Performance: As directed Cover capable of supporting a 300-lbf (1334-N), 800-lbf (3559-N) or 1000-lbf (4448-N) concentrated load.
2. Cover and Box Type: Hinged polycarbonate cover with opening for passage of cables when cover is closed and including frame and steel box or formed-steel plate for mounting electrical receptacles or Grommet with twist-close cover and including steel junction box for electrical receptacle with provision for telephone connectors and signal cables as directed.
3. Receptacles and Wiring: Equip each service outlet with power receptacles to comply with the following requirements:

    a. Type of Receptacle: Heavy-duty duplex, two-pole, three-wire grounding, 20 A, 125 V, NEMA WD 6, Configuration 5-20R unless otherwise indicated.
    b. Number of Receptacles for Outlet: One, Two or Four as directed.
    c. Wiring Method: Factory wired for field hardwiring with armored cable, containing three insulated No. 12 AWG solid-copper conductors, terminated with a 6-inch-(152-mm-) long pigtail.
    d. Wiring Method: Power-in connectors, built into outlet housing, of type to fit power-in and power-out connectors of branch-circuit cables supplied with building electrical system.

C. Fascia Closures: Where underfloor cavity is not enclosed by abutting walls or other construction, provide metal closure plates with manufacturer's standard finish.

D. Ramps: Manufacturer's standard ramp construction of width and slope indicated, but not steeper than 1:12, of same materials, performance, and construction requirements as low-profile, fixed-height access flooring.

E. Perimeter Support: Manufacturer's standard method for supporting panel edge and forming transition between low-profile, fixed-height access flooring and adjoining floor coverings at same level as low-profile, fixed-height access flooring.

2.3 LOW-PROFILE, FIXED-HEIGHT ACCESS FLOORING WITH MODULAR WIRING

A. Low-Profile, Fixed-Height Access Flooring with Modular Wiring: Manufacturer's standard or reinforced, modular, steel or polymer components, designed to interconnect and provide channels for installation of wiring. Include factory-assembled modular wiring harnesses and service outlets; with manufacturer's standard factory-applied finish.
   1. Height: Provide low-profile access flooring with nominal height of 1-1/2 inches (38 mm), 2 inches (50 mm) or 3 inches (75 mm) as directed.

B. Service Outlets and Wiring: Standard UL-listed and -labeled assemblies, for recessed mounting flush with top of floor panels; for power, communication, and signal services; and complying with the following requirements:

   1. Structural Performance: Cover capable of supporting a 300-lbf (1334-N), 800-lbf (3559-N) or 1000-lbf (4448-N) concentrated load as directed.
   2. Cover and Box Type: Hinged polycarbonate cover with opening for passage of cables when cover is closed and including frame and steel box or formed-steel plate for mounting electrical receptacles or Grommet with twist-close cover and including steel junction box for electrical receptacle with provision for telephone connectors and signal cables as directed.
   3. Receptacles and Wiring: Electrical receptacles and wiring for service outlets are specified elsewhere.
   4. Receptacles and Wiring: Equip each service outlet with power receptacles to comply with the following requirements:

      a. Type of Receptacle: Heavy-duty duplex, two-pole, three-wire grounding, 20 A, 125 V, NEMA WD 6, Configuration 5-20R unless otherwise indicated.
      b. Number of Receptacles for Outlet: One, Two or Four as directed.
      c. Wiring Method: Factory wired for field hardwiring with armored cable, containing three insulated No. 12 AWG solid-copper conductors, terminated with a 6-inch-(152-mm-) long pigtail.

C. Fascia Closures: Where underfloor cavity is not enclosed by abutting walls or other construction, provide metal closure plates with manufacturer's standard finish.

D. Ramps: Manufacturer's standard ramp construction of width and slope indicated, but not steeper than 1:12, of same materials, performance, and construction requirements as low-profile, fixed-height access flooring.

E. Perimeter Support: Provide manufacturer's standard method for supporting panel edge and forming transition between low-profile, fixed-height access flooring and adjoining floor coverings at same level as low-profile, fixed-height access flooring.

2.4 FABRICATION

A. Fabrication Tolerances:

1. Size: Plus or minus 0.020 inch (0.50 mm) of required size.
2. Flatness: Plus or minus 0.035 inch (0.89 mm), measured on a diagonal on top of panel.

PART 3 - EXECUTION

3.1 PREPARATION

A. Examine substrates, with Installer and manufacturer's authorized representative present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.

C. Lay out low-profile access flooring installation to keep the number of cut panels at floor perimeter to a minimum. Avoid using panels cut to less than 6 inches (152 mm).

D. Complete any necessary subfloor preparation, and vacuum subfloor to remove dust, dirt, and construction debris before beginning installation.

3.2 INSTALLATION

A. Install low-profile, fixed-height access flooring and accessories under supervision of low-profile, fixed-height access-flooring manufacturer's authorized representative to produce a rigid, firm installation that complies with performance requirements and is free of instability, rocking, rattles, and squeaks.

B. Install flooring securely in place and properly seated, with panel edges flush. Do not force panels into place.

C. Scribe perimeter panels to provide a close fit with adjoining construction, having no voids greater than 1/8 inch (3 mm) where panels abut vertical surfaces.

END OF SECTION 096933

SECTION 097200 - WALL COVERINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Vinyl wall covering.
2. Textile wall covering.
3. Wallpaper.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Samples: For each type of wall covering and for each color, pattern, texture, and finish specified, full width by 36-inch- (914-mm-) long in size.

1.3 INFORMATIONAL SUBMITTALS

A. Product test reports.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: As determined by testing identical wall coverings applied with identical adhesives to substrates according to test method indicated below by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

a. Flame-Spread Index: 25 or less.
b. Smoke-Developed Index: 50 or 450 or less.

2. Fire-Growth Contribution: No flashover and heat and smoke release according to NFPA 265 or NFPA 286.

2.2 VINYL WALL COVERING

A. Description: Provide mildew-resistant products in rolls from same production run and complying with the following:

1. FS CCC-W-408D and CFFA-W-101-D, as directed.
2. ASTM F793 for peelable or strippable wall coverings.

a. Category: As directed.

b. Coordinate "Total Weight" Paragraph below with CFFA-W-101-D Type.

B. Total Weight: As directed, excluding coatings.

C. Width: 27 inches (686 mm) or 54 inches (1372 mm).

D. Backing: Fabric, as directed.

1. Fiber Content: As directed.

E. Repeat: Random.

F. Stain-Resistant Coating, as directed.

G. Retain "Colors, Textures, and Patterns" Paragraph below unless manufacturer's product name or designation indicates color, texture, and pattern.

H. Colors, Textures, and Patterns: As directed.

2.3 TEXTILE WALL COVERING

A. Description: Provide wall coverings, as directed, in rolls from same production run and that comply with ASTM F793.

1. Category: As directed.

B. Test Responses:

1. Colorfastness to Wet and Dry Crocking: Passes AATCC 8, Grade 3, minimum.
2. Colorfastness to Light: Passes AATCC 16, Test Option 1 or 3, Grade 4, minimum, at 40 hours.

C. Total Weight: As directed, excluding coatings.

D. Width: As directed.

E. Repeat: Random.

F. Applied Backing Material: Acrylic or Paper.

G. Stain-Resistant Coating: As directed.

H. Retain "Colors, "Textures, and Patterns" Paragraph below unless manufacturer's product name or designation indicates color, texture, and pattern.

I. Colors, Textures, and Patterns: As directed.

2.4 WALLPAPER

A. Description: Provide wallpaper, as directed, in rolls from same production run and that complies with ASTM F793.

1. Category: As directed.

B. Total Weight: As directed.

C. Width: 20-1/2 inches (520.7 mm) or 28 inches (711.2 mm).

D. Repeat: Random.

E. Colors, Textures, and Patterns: As directed.

2.5 ACCESSORIES

A. Adhesive: Mildew-resistant, nonstaining, strippable adhesive, for use with specific wall covering and substrate application indicated and as recommended in writing by wall-covering manufacturer.

B. Primer/Sealer: Mildew resistant, complying with requirements in Section 099123 "Interior Painting" and recommended in writing by primer/sealer and wall-covering manufacturers for intended substrate.

C. Metal Primer: Interior ferrous metal primer complying with Section 099123 "Interior Painting" and recommended in writing by primer and wall-covering manufacturers for intended substrate.

PART 3 - EXECUTION

3.1 PREPARATION

A. Comply with manufacturer's written instructions for surface preparation.

B. Clean substrates of substances that could impair bond of wall covering, including dirt, oil, grease, mold, mildew, and incompatible primers.

C. Prepare substrates to achieve a smooth, dry, clean, structurally sound surface free of flaking, unsound coatings, cracks, and defects.

1. Moisture Content: Maximum of 5 percent on new plaster, concrete, and concrete masonry units when tested with an electronic moisture meter.
2. Plaster: Allow new plaster to cure. Neutralize areas of high alkalinity. Prime with primer recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
3. Metals: If not factory primed, clean and apply primer recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
4. Gypsum Board: Prime with primer as recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
5. Painted Surfaces: Treat areas susceptible to pigment bleeding.

D. Check painted surfaces for pigment bleeding. Sand gloss, semigloss, and eggshell finish with fine sandpaper.

E. Remove hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.

F. Acclimatize wall-covering materials by removing them from packaging in the installation areas not less than 24 hours before installation.

3.2 WALL-COVERING INSTALLATION

A. Comply with wall-covering manufacturers' written installation instructions applicable to products and applications indicated.

B. Cut wall-covering strips in roll number sequence. Change the roll numbers at partition breaks and corners.

C. Install strips in same order as cut from roll.

D. Install wall covering without lifted or curling edges and without visible shrinkage.

E. Match pattern 72 inches (1830 mm) above the finish floor.

F. Install seams vertical and plumb at least 6 inches (150 mm) from outside corners and 3 inches (75 mm) or 6 inches (150 mm) from inside corners unless a change of pattern or color exists at corner. Horizontal seams are not permitted.

G. Trim edges and seams for color uniformity, pattern match, and tight closure. Butt seams without overlaps or gaps between strips.

H. Fully bond wall covering to substrate. Remove air bubbles, wrinkles, blisters, and other defects.

I. Remove excess adhesive at seams, perimeter edges, and adjacent surfaces.

J. Reinstall hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.

END OF SECTION 097200

SECTION 097513 - STONE WALL FACING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes dimension stone paneling on interior walls and columns.

1.2 ACTION SUBMITTALS

A. Product Data: For each variety of stone, stone accessory, and manufactured product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: Show fabrication and installation details for stone paneling system, including dimensions and profiles of stone units.

D. Samples:

1. For each stone type indicated. Include two, three, four or five or more Samples in each set and show the full range of variations in appearance characteristics in completed Work.
2. For each color of grout, pointing mortar and sealant required as directed.

E. Delegated-Design Submittal: For stone paneling assembly.

1.3 QUALITY ASSURANCE

A. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for fabrication and installation.

1. Build mockup of typical wall area as shown on Drawings.
2. Build mockups for the following kinds of stone paneling:

    a. Typical stone wall paneling, not less than 72 inches (1800 mm) long by 96 inches (2400 mm) high.
    b. Typical stone wainscot paneling, not less than 72 inches (1800 mm) long by full wainscot height.
    c. Typical column facing, one complete column.

3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Stone: Obtain each variety of stone, regardless of finish, from a single quarry, whether specified in this Section or in another Section of the Specifications.

B. Varieties and Sources: Subject to compliance with requirements, provide stone of varieties and from sources complying with Section 044200 "Exterior Stone Cladding."

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design stone paneling system.

B. General: Design stone anchors and anchoring systems according to ASTM C1242.

C. Seismic Performance: Stone paneling system shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. Component Importance Factor: 1.5 or 1.0 as directed.

2.3 GRANITE

A. Material Standard: Comply with ASTM C615/C615M.

B. Varieties and Sources: Subject to compliance with requirements, provide the following, provide one of the following or available stone varieties that may be incorporated into the Work include, but are not limited to, the following:

C. Finish: Polished, Honed, Thermal, As indicated, Match Architect's sample.

D. Match Architect's samples.

2.4 LIMESTONE

A. Material Standard: Comply with ASTM C568/C568M.

1. Classification: I Low, II Medium or III High Density as directed.

B. Varieties and Sources: Subject to compliance with requirements, provide the following, provide one of the following or available stone varieties that may be incorporated into the Work include, but are not limited to, the following:

C. Finish: Smooth, Sand rubbed, Machine tooled, four bats per 1 inch (25 mm), Machine tooled, six bats per 1 inch (25 mm), Machine tooled, eight bats per 1 inch (25 mm), As indicated, Match Architect's sample, matching standard ILI finish as directed.

D. Match Architect's samples.

2.5 MARBLE

A. Material Standard: Comply with ASTM C503/C503M, Classification I Calcite, Classification II Dolomite, Group A, Group B, Group C, Group D as directed.

B. Varieties and Sources: Subject to compliance with requirements, provide the following, provide one of the following or available stone varieties that may be incorporated into the Work include, but are not limited to, the following:

C. Finish: Polished, Honed, As indicated or Match Architect's sample.

D. Match Architect's samples.

2.6 SERPENTINE

A. Material Standard: Comply with ASTM C1526, Classification I Exterior or Classification II Interior as directed.

B. Varieties and Sources: Subject to compliance with requirements, provide the following, provide one of the following or available stone varieties that may be incorporated into the Work include, but are not limited to, the following:

C. Finish: Polished, Honed, As indicated or Match Architect's sample.

D. Match Architect's samples.

2.7 SLATE

A. Material Standard: Comply with ASTM C629/C629M, Classification I Exterior or Classification II Interior as directed.

B. Varieties and Sources: Subject to compliance with requirements, provide the following,, provide one of the following or available stone varieties that may be incorporated into the Work include, but are not limited to, the following:

C. Finish: Honed, Sand rubbed, Natural cleft, As indicated or Match Architect's sample.

D. Match Architect's samples

2.8 TRAVERTINE

A. Material Standard: Comply with ASTM C1527/C1527M, Classification I Exterior or Classification II Interior.

B. Varieties and Sources: Subject to compliance with requirements, provide the following, provide one of the following or available stone varieties that may be incorporated into the Work include, but are not limited to, the following:

C. Cut: Vein or Fleuri as directed.

1. Orientation of Veining: Horizontal, Vertical or As indicated.

D. Filling: Fill pores on faces of stone with cementitious filler of color selected by Architect or matching Architect's sample as directed.

E. Finish: Polished, Honed, As indicated or Match Architect's sample as directed.

F. Match Architect's samples.

2.9 SETTING MATERIALS

A. Molding Plaster: ASTM C59/C59M.

B. Portland Cement: ASTM C150/C150M, Type I or Type II.

1. Low-Alkali Cement: Not more than 0.60 percent total alkali when tested according to ASTM C114.

C. Hydrated Lime: ASTM C207, Type S.

D. Aggregate: ASTM C144.

E. Water: Potable.

2.10 GROUT

A. Grout Colors: Match stone, As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.

B. Sand-Portland Cement Grout: ANSI A108.10, composed of white or gray cement and white or colored aggregate to produce required color.

C. Standard Cement Grout: ANSI A118.6, packaged.

D. High-Performance Tile Grout: ANSI A118.7, packaged.

E. Water-Cleanable Epoxy Grout: ANSI A118.3, packaged, chemical-resistant, water-cleanable, tile-setting and -grouting epoxy.

2.11 POINTING MORTAR MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I or Type II. Provide natural color or white cement as required to produce mortar color indicated.

1. Low-Alkali Cement: Not more than 0.60 percent total alkali when tested according to ASTM C114.

B. Hydrated Lime: ASTM C207, Type S.

C. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C979/C979M. Pigments shall have a record of satisfactory performance in mortar.

D. Aggregate: ASTM C144, except with 100 percent passing No. 16 (1.18-mm) sieve.

1. White Aggregates: Natural white sand or ground white stone.
2. Colored Aggregates: Natural-colored sand or ground marble, granite, or other durable stone; of color necessary to produce required mortar color.

E. Water: Potable.

2.12 SEALANTS

A. Joint Sealants: Manufacturer's standard sealants that comply with applicable requirements in Section 079200 "Joint Sealants" and will not stain the stone they are applied to.

2.13 STONE ANCHORS AND ATTACHMENTS

A. Fabricate anchors from stainless steel, ASTM A240/A240M or ASTM A666, Type 304.

1. Fasteners for Stainless-Steel Anchors: Annealed stainless-steel bolts, nuts, and washers; ASTM F593 (ASTM F738M) for bolts and ASTM F594 (ASTM F836M) for nuts, Alloy Group 1 (A1).

B. Fabricate dowels from stainless steel, ASTM A276, Type 304.

C. Wire Tiebacks: No. 9 AWG copper or copper-alloy or 0.120-inch- (3.0-mm-) diameter, stainless-steel wire.

2.14 STONE ACCESSORIES

A. Temporary Setting Shims: Rigid plastic shims, nonstaining to stone, sized to suit joint thickness.

B. Cleaner: Stone cleaner specifically formulated for stone types, finishes, and applications indicated, as recommended by stone producer. Do not use cleaning compounds containing acids, caustics, harsh fillers, or abrasives.

C. Stone Sealer: Colorless, stain-resistant sealer that does not affect color or physical properties of stone surfaces, as recommended by stone producer for application indicated.

2.15 STONE FABRICATION

A. Select stone for intended use to prevent fabricated units from containing cracks, seams, and starts that could impair structural integrity or function.

B. Cut stone to produce pieces of thickness, size, and shape indicated and to comply with fabrication and construction tolerances recommended by applicable stone association.

1. Where items are installed with adhesive or where stone edges are visible in the finished work, make items uniform in thickness and of identical thickness for each type of item; gage back of stone if necessary.
2. Dress joints straight and at right angle to face unless otherwise indicated.

C. Nominal Thickness: 3/4 inch (20 mm), 7/8 inch (22 mm), 1 inch (25 mm), 1-1/4 inches (32 mm) or 2 inches (50 mm) unless otherwise indicated.

D. Cut stone to produce uniform joints 1/16 inch (1.5 mm), 1/8 inch (3 mm), 1/4 inch (6 mm) or 3/8 inch (10 mm) wide and in locations indicated.

E. Quirk-miter corners unless otherwise indicated. Fabricate for anchorage in top and bottom bed joints of corner units.

F. Pattern Arrangement: Fabricate and arrange panels with veining and other natural markings to comply with the following requirements:

1. Arrange panels with veining horizontal.
2. Arrange panels with veining vertical.
3. Arrange panels with veining as indicated on Drawings.
4. Arrange panels in blend pattern.

2.16 MIXES

A. Spotting Plaster: Stiff mix of molding plaster and water.

B. Mortar, General: Comply with referenced standards and with manufacturers' written instructions for mix proportions, mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures needed to produce mortar of uniform quality and with optimum performance characteristics.

1. Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated. Do not use calcium chloride.
2. Combine and thoroughly mix cementitious materials, water, and aggregates in a mechanical batch mixer unless otherwise indicated. Discard mortar when it has reached initial set.

C. Setting Mortar: Comply with ASTM C270, Proportion Specification, Type N or Type O as directed.

D. Pointing Mortar: Comply with ASTM C270, Proportion Specification, Type N or Type O as directed. Provide pointing mortar mixed to match Architect's sample and complying with the following:

1. Pigmented Pointing Mortar: Select and proportion pigments with other ingredients to produce color required. Do not exceed pigment-to-cement ratio of 1:10, by weight.
2. Colored-Aggregate Pointing Mortar: Produce color required by combining colored aggregates with portland cement of selected color.

E. Grout: Comply with mixing requirements of referenced ANSI standards and with manufacturer's written instructions.

PART 3 - EXECUTION

3.1 SETTING STONE, GENERAL

A. Do necessary field cutting as stone is set. Use power saws with diamond blades to cut stone. Cut lines straight and true, with edges eased slightly to prevent snipping.

B. Contiguous Work: Provide reveals and openings as required to accommodate contiguous work.

C. Set stone to comply with requirements indicated. Install anchors, supports, fasteners, and other attachments indicated or necessary to secure stone in place. Shim and adjust anchors, supports, and accessories to set stone accurately in locations indicated, with edges and faces aligned according to established relationships and indicated tolerances.

D. Provide expansion, control, and pressure-relieving joints of widths and at locations indicated.

1. Sealing of expansion and other joints is specified in Section 079200 "Joint Sealants."
2. Keep expansion joints free of plaster, mortar, grout, and other rigid materials.

3.2 CONSTRUCTION TOLERANCES

A. Variation from Plumb: For vertical lines and surfaces, do not exceed 1/8 inch in 96 inches (3 mm in 2400 mm), 1/4 inch (6 mm) maximum.

B. Variation from Level: For lintels, sills, chair rails, horizontal bands, horizontal grooves, and other conspicuous lines, do not exceed 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), 3/8 inch (10 mm) maximum.

C. Variation in Joint Width: Do not vary from average joint width more than plus or minus 1/16 inch (1.5 mm) or one-fourth of nominal joint width, whichever is less.

D. Variation in Plane between Adjacent Stone Units (Lipping): Do not exceed 1/32-inch (0.8-mm) difference between planes of adjacent units.

3.3 INSTALLATION OF STONE FACING

A. Set units firmly against setting spots. Locate setting spots at anchors and spaced not more than 18 inches (450 mm) apart across back of unit, but provide no fewer than one setting spot per 2 sq. ft. (0.18 sq. m) unless otherwise indicated.

1. Moisture Exposure: Use portland cement mortar for setting spots where stone is applied to inside face of exterior walls and where indicated.

B. Set units with anchors securely attached to stone and to backup surfaces. Comply with anchoring recommendations in ASTM C1242.

C. Minimum Anchors: Provide anchors at a maximum of 24 inches (600 mm) o.c. around perimeter of stone panels with a minimum of four anchors per panel.

D. Minimum Anchors: Provide a minimum of four anchors per panel up to 12 sq. ft. (1.1 sq. m) in face area, plus a minimum of two additional anchors for each additional 8 sq. ft. (0.7 sq. m).

E. As directed Grout or Point joints after setting stone.

3.4 GROUTING JOINTS

A. Grout stone to comply with ANSI A108.10.

1. Use sanded grout mixture for joints wider than 1/8 inch (3 mm).
2. Use unsanded grout mixture for joints 1/8 inch (3 mm) and narrower.

B. Remove temporary shims before grouting.

C. Tool joints uniformly and smoothly with plastic tool.

3.5 POINTING JOINTS WITH MORTAR

A. Prepare stone-joint surfaces for pointing with mortar by removing temporary shims, dust, and mortar particles. Where setting spots occur at joints, rake out excess setting mortar or plaster to a depth of not less than 1/2 inch (13 mm).

B. Point stone joints by placing pointing mortar in layers of not more than 3/8 inch (10 mm). Compact each layer thoroughly and allow it to become thumbprint hard before applying next layer. Apply mortar first to areas where depths are greater than surrounding areas until a uniform depth is formed.

C. Tool joints when pointing mortar is thumbprint hard. Use a round jointer having a diameter 1/8 inch (3 mm) larger than width of joint.

3.6 JOINT-SEALANT INSTALLATION

A. Prepare joints and apply sealants to comply with applicable requirements in Section 079200 "Joint Sealants." Remove temporary shims before applying sealants.

3.7 ADJUSTING AND CLEANING

A. In-Progress Cleaning: Clean stone paneling as work progresses. Remove adhesive, grout, mortar, and sealant smears immediately.

B. Clean stone paneling no fewer than six days after completion of grouting and pointing, using clean water and soft rags or stiff-bristle fiber brushes. Do not use wire brushes, acid-type cleaning agents, cleaning compounds with caustic or harsh fillers, or other materials or methods that could damage stone.

C. Sealer Application: Apply stone sealer to comply with stone producer's and sealer manufacturer's written instructions and recommendations.

END OF SECTION 097513

SECTION 097519 - STONE TRIM

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes interior stone trim, including, stone base and stone window stools as directed.

1.2 ACTION SUBMITTALS

A. Product Data: For each variety of stone, stone accessory, and manufactured product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: Show fabrication and installation details for stone trim, including dimensions and profiles of stone units.

D. Samples:

1. As directed For each stone type indicated. Include two, three, four or five or more Samples in each set, and show the full range of variations in appearance characteristics in completed Work.
2. For each color of grout or pointing mortar required as directed.

1.3 QUALITY ASSURANCE

A. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for fabrication and installation.

1. Build mockup of typical wall area as shown on Drawings.
2. Build mockups for typical interior stone trim as shown on Drawings.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Stone: Obtain each variety of stone, regardless of finish, from a single quarry, whether specified in this Section or in another Section of the Specifications, with resources to provide materials of consistent quality in appearance and physical properties.

B. Varieties and Sources: Subject to compliance with requirements, provide stone of varieties and from sources complying with Section 044200 "Exterior Stone Cladding."

2.2 GRANITE

A. Material Standard: Comply with ASTM C615/C615M.

B. Varieties and Sources: Subject to compliance with requirements, provide the following, provide one of the following or available stone varieties that may be incorporated into the Work include, but are not limited to, the following:

C. Finish: Polished, Honed, Thermal, As indicated or Match Architect's sample.

D. Match Architect's samples.

2.3 LIMESTONE

A. Material Standard: Comply with ASTM C568/C568M.

1. Classification: I Low, II Medium or III High Density as directed.

B. Varieties and Sources: As directed Subject to compliance with requirements, provide the following, provide one of the following or available stone varieties that may be incorporated into the Work include, but are not limited to, the following:

C. Finish: Smooth, Sand rubbed, Machine tooled, four bats per 1 inch (25 mm), Machine tooled, six bats per 1 inch (25 mm), Machine tooled, eight bats per 1 inch (25 mm), As indicated or Match Architect's sample, matching standard ILI finish.

D. Match Architect's samples.

2.4 MARBLE

A. Material Standard: Comply with ASTM C503/C503M, Classification I Calcite, Classification II Dolomite, Group A, Group B, Group C, Group D as directed.

B. Varieties and Sources: Subject to compliance with requirements, provide the following, provide one of the following or available stone varieties that may be incorporated into the Work include, but are not limited to, the following:

C. Finish: Polished, Honed, As indicated or Match Architect's sample.

D. Match Architect's samples.

2.5 SERPENTINE

A. Material Standard: Comply with ASTM C1526, Classification I Exterior or Classification II Interior as directed.

B. Varieties and Sources: As directed Subject to compliance with requirements, provide the following, provide one of the following or available stone varieties that may be incorporated into the Work include, but are not limited to, the following:

C. Finish: Polished, Honed, As indicated or Match Architect's sample.

D. Match Architect's samples.

2.6 SLATE

A. Material Standard: Comply with ASTM C629/C629M, Classification I Exterior or Classification II Interior.

B. Varieties and Sources: As directed producers, distributors, or importers.

C. Finish: Honed, Sand rubbed, Natural cleft, As indicated or Match Architect's sample.

D. Match Architect's samples.

2.7 TRAVERTINE

A. Material Standard: Comply with ASTM C1527/C1527M, Classification I Exterior or Classification II Interior as directed.

B. Varieties and Sources: As directed Subject to compliance with requirements, provide the following, provide one of the following or available stone varieties that may be incorporated into the Work include, but are not limited to, the following:

C. Cut: Vein or Fleur as directed.

1. Orientation of Veining: Horizontal, Vertical or As indicated.

D. Filling: Fill pores on faces of stone with cementitious filler of color selected by Architect or matching Architect's sample.

E. Finish: Polished, Honed, As indicated or Match Architect's sample.

F. Match Architect's samples.

2.8 SETTING MATERIALS

A. Molding Plaster: ASTM C59/C59M.

B. Portland Cement: ASTM C150/C150M, Type I or Type II.

1. Low-Alkali Cement: Not more than 0.60 percent total alkali when tested according to ASTM C114.

C. Hydrated Lime: ASTM C207, Type S.

D. Aggregate: ASTM C144.

E. Water: Potable.

F. Adhesives, General: Use only adhesives formulated for stone and ceramic tile and recommended by their manufacturer for the application indicated.

G. Water-Cleanable Epoxy Adhesive: ANSI A118.3.

2.9 GROUT

A. Grout Colors: Match stone, As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.

B. Sand-Portland Cement Grout: ANSI A108.10, composed of white or gray cement and white or colored aggregate to produce required color.

C. Standard Cement Grout: ANSI A118.6, packaged.

1. Grout Type: Sanded or Unsanded.

D. High-Performance Cement Grout: ANSI A118.7, packaged.
1. Grout Type: Sanded or Unsanded as directed.

E. Water-Cleanable Epoxy Grout: ANSI A118.3, packaged, chemical-resistant, water-cleanable, tile-setting and -grouting epoxy.

2.10 POINTING MORTAR MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I or Type II. Provide natural color or white cement as required to produce mortar color indicated.

1. Low-Alkali Cement: Not more than 0.60 percent total alkali when tested according to ASTM C114.

B. Hydrated Lime: ASTM C207, Type S.

C. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C979/C979M. Pigments shall have a record of satisfactory performance in mortar.

D. Aggregate: ASTM C144, except with 100 percent passing No. 16 (1.18-mm) sieve.

1. White Aggregates: Natural white sand or ground white stone.
2. Colored Aggregates: Natural-colored sand or ground marble, granite, or other durable stone; of color necessary to produce required mortar color.

E. Water: Potable.

2.11 SEALANTS

A. Joint Sealants: Manufacturer's standard sealants that comply with applicable requirements in Section 079200 "Joint Sealants" and will not stain the stone they are applied to.

2.12 STONE ANCHORS AND ATTACHMENTS

A. Fabricate anchors from stainless steel, ASTM A240/A240M or ASTM A666, Type 304.

1. Fasteners for Stainless-Steel Anchors: Annealed stainless-steel bolts, nuts, and washers; ASTM F593 (ASTM F738M) for bolts and ASTM F594 (ASTM F836M) for nuts, Alloy Group 1 (A1).

B. Fabricate dowels from stainless steel, ASTM A276, Type 304.

C. Wire Tiebacks: No. 9 AWG copper or copper-alloy or 0.120-inch- (3.0-mm-) diameter, stainless-steel wire.

2.13 STONE ACCESSORIES

A. Temporary Setting Shims: Rigid plastic shims, nonstaining to stone, sized to suit joint thickness.

B. Cleaner: Stone cleaner specifically formulated for stone types, finishes, and applications indicated, as recommended by stone producer. Do not use cleaning compounds containing acids, caustics, harsh fillers, or abrasives.

C. Stone Sealer: Colorless, stain-resistant sealer that does not affect color or physical properties of stone surfaces, as recommended by stone producer for application indicated.

2.14 STONE FABRICATION

A. Select stone for intended use to prevent fabricated units from containing cracks, seams, and starts that could impair structural integrity or function.

B. Cut stone to produce pieces of thickness, size, and shape indicated and to comply with fabrication and construction tolerances recommended by applicable stone association.

1. Where items are installed with adhesive or where stone edges are visible in the finished work, make items uniform in thickness and of identical thickness for each type of item; gage back of stone if necessary.
2. Dress joints straight and at right angle to face unless otherwise indicated.

C. Fabricate molded work to produce stone shapes with a uniform profile throughout entire unit length and with precisely formed arris slightly eased to prevent snipping, matched at joints between units.

1. Produce moldings with machines having abrasive shaping wheels made to reverse contour of molding shape; do not sculpt moldings.

2. Miter moldings at corners, unless otherwise indicated, with edges of miters slightly eased at outside corners.

D. Flat Stone Trim:

1. Nominal Thickness: 3/4 inch (20 mm), 7/8 inch (22 mm), 1-1/4 inches (32 mm) or 1-1/2 inches (40 mm) unless otherwise indicated.
2. Edge Detail: Straight, slightly eased at corners, 3/8-inch (10-mm) bevels, 3/4-inch (20-mm) radii, 3/8-inch (10-mm) radii or as indicated.
3. Joints: 1/16-inch- (1.5-mm-) wide grouted joints, 1/8-inch- (3-mm-) wide grouted joints, 1/8-inch- (3-mm-) wide, sealant-filled joints or Bonded joints, 1/32 inch (0.8 mm) or less in width as directed.

E. Molded Stone Trim:

1. Profile: Match profiles indicated on Drawings or existing as directed.
2. Joints: 1/16-inch- (1.5-mm-) wide grouted joints, 1/8-inch- (3-mm-) wide grouted joints, 1/8-inch- (3-mm-) wide, sealant-filled joints or Bonded joints, 1/32 inch (0.8 mm) or less in width as directed.

F. Stone Base:

1. Nominal Thickness: 3/4 inch (20 mm), 7/8 inch (22 mm) or 1-1/4 inches (32 mm) or unless otherwise indicated.
2. Top-Edge Detail: Straight, slightly eased at corner, 3/8-inch (10-mm) bevel, 3/4-inch (20-mm) radius, 3/8-inch (10-mm) radius or as indicated.
3. Ends: Butt ends into casings, Butt ends into opening frames or Return ends to depth of adjacent finish with edge detail same as top edge unless otherwise indicated.
4. Joints: 1/16-inch- (1.5-mm-) wide grouted joints, 1/8-inch- (3-mm-) wide grouted joints, 1/8-inch- (3-mm-) wide, sealant-filled joints or Bonded joints, 1/32 inch (0.8 mm) or less in width as directed.

G. Stone Window Stools:

1. Nominal Thickness: 3/4 inch (20 mm), 7/8 inch (22 mm) or 1-1/4 inches (32 mm) or unless otherwise indicated.
2. Edge Detail: Straight, slightly eased at corners, 3/8-inch (10-mm) bevel at top edge, bottom corner slightly eased, 3/8-inch (10-mm) radius at top edge, bottom corner slightly eased, 3/4-inch (20-mm) bullnose, 1-1/2-inch (40-mm) laminated bullnose or as indicated.
3. Ends: Extend stools beyond opening as indicated and finish ends to match exposed edge.
4. Joints: 1/16-inch- (1.5-mm-) wide grouted joints, 1/8-inch- (3-mm-) wide grouted joints, 1/8-inch- (3-mm-) wide, sealant-filled joints, Bonded joints, 1/32 inch (0.8 mm) or less in width or Fabricate in one piece without joints as directed.
5. Fabricate window stools in one piece unless otherwise indicated.

2.15 MIXES

A. Spotting Plaster: Stiff mix of molding plaster and water.

B. Mortar, General: Comply with referenced standards and with manufacturers' written instructions for mix proportions, mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures needed to produce mortar of uniform quality and with optimum performance characteristics.

1. Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated. Do not use calcium chloride.
2. Combine and thoroughly mix cementitious materials, water, and aggregates in a mechanical batch mixer unless otherwise indicated. Discard mortar when it has reached initial set.

C. Setting Mortar: Comply with ASTM C270, Proportion Specification, Type N or Type O.

D. Pointing Mortar: Comply with ASTM C270, Proportion Specification, Type N or Type O. Provide pointing mortar mixed to match Architect's sample and complying with the following:

1. Pigmented Pointing Mortar: Select and proportion pigments with other ingredients to produce color required. Do not exceed pigment-to-cement ratio of 1:10, by weight.
2. Colored-Aggregate Pointing Mortar: Produce color required by combining colored aggregates with portland cement of selected color.

E. Grout: Comply with mixing requirements of referenced ANSI standards and with manufacturer's written instructions.

PART 3 - EXECUTION

3.1 SETTING STONE, GENERAL

A. Do necessary field cutting as stone is set. Use power saws with diamond blades to cut stone. Cut lines straight and true, with edges eased slightly to prevent snipping.

B. Contiguous Work: Provide reveals and openings as required to accommodate contiguous work.

C. Set stone to comply with requirements indicated. Install anchors, supports, fasteners, and other attachments indicated or necessary to secure stone in place. Shim and adjust anchors, supports, and accessories to set stone accurately in locations indicated, with edges and faces aligned according to established relationships and indicated tolerances.

D. Provide expansion, control, and pressure-relieving joints of widths and at locations indicated.

1. Sealing of expansion and other joints is specified in Section 079200 "Joint Sealants."
2. Keep expansion joints free of plaster, mortar, grout, and other rigid materials.

3.2 CONSTRUCTION TOLERANCES

A. Variation from Plumb: For vertical lines and surfaces, do not exceed 1/8 inch in 96 inches (3 mm in 2400 mm), 1/4 inch (6 mm) maximum.

B. Variation from Level: For lintels, sills, window stools, chair rails, horizontal bands, horizontal grooves, and other conspicuous lines, do not exceed 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 3/8 inch (10 mm) maximum.

C. Variation in Joint Width: Do not vary from average joint width more than plus or minus 1/16 inch (1.5 mm) or one-fourth of nominal joint width, whichever is less.

D. Variation in Plane between Adjacent Stone Units (Lipping): Do not exceed 1/32-inch (0.8-mm) difference between planes of adjacent units.

3.3 INSTALLATION

A. Stone Trim at Stone Paneling: Set units by adhering to stone paneling with water-cleanable epoxy adhesive. Hold adhesive back from exposed edges of joints to allow for grouting.

B. Stone Trim at Stone Paneling: Set units firmly against setting spots. Locate setting spots at anchors and spaced not more than 18 inches (450 mm) apart unless otherwise indicated. Provide no fewer than two anchors per piece for stone trim up to 48 inches (1200 mm) in length, plus one additional anchor for each additional 24 inches (600 mm) of length.

C. Stone Trim at Gypsum Board: Adhere units to plywood backing with full spread of water-cleanable epoxy adhesive. Hold adhesive back from exposed edges of joints to allow for grouting.

D. Stone Trim at Gypsum Board: Adhere units to gypsum board with full spread of water-cleanable epoxy adhesive. Hold adhesive back from exposed edges of joints to allow for grouting.

E. Stone Base at Stone Paneling: Set units by adhering to stone paneling with water-cleanable epoxy adhesive. Hold adhesive back from exposed edges of joints to allow for grouting.

F. Stone Base at Stone Paneling: Set units firmly against setting spots. Locate setting spots at anchors and spaced not more than 18 inches (450 mm) apart unless otherwise indicated. Provide no fewer than two anchors per piece for stone base up to 48 inches (1200 mm) in length, plus one additional anchor for each additional 24 inches (600 mm) of length.

G. Stone Base at Gypsum Board: Adhere units to plywood backing with full spread of water-cleanable epoxy adhesive. Hold adhesive back from exposed edges of joints to allow for grouting.

H. Stone Base at Gypsum Board: Adhere units to gypsum board with full spread of water-cleanable epoxy adhesive. Hold adhesive back from exposed edges of joints to allow for grouting.

I. Stone Window Stools: Set stone window stools on masonry in a full bed of mortar.

J. Stone Window Stools: Set stone window stools on wood or metal framing or wood blocking in a full bed of water-cleanable epoxy adhesive. Hold adhesive back from exposed edges of joints to allow for grouting.

K. Grout or Point joints after setting stone as directed.

L. Fill indicated joints with sealant after setting and grouting and pointing stone.

3.4 GROUTING JOINTS

A. Grout stone to comply with ANSI A108.10.

1. Use sanded grout mixture for joints wider than 1/8 inch (3 mm).
2. Use unsanded grout mixture for joints 1/8 inch (3 mm) and narrower.

B. Remove temporary shims before grouting.

C. Tool joints uniformly and smoothly with plastic tool.

3.5 POINTING JOINTS WITH MORTAR

A. Prepare stone-joint surfaces for pointing with mortar by removing temporary shims, dust, and mortar particles. Where setting spots occur at joints, rake out excess setting mortar or plaster to a depth of not less than 1/2 inch (13 mm).

B. Point stone joints by placing pointing mortar in layers of not more than 3/8 inch (10 mm). Compact each layer thoroughly and allow it to become thumbprint hard before applying next layer. Apply mortar first to areas where depths are greater than surrounding areas until a uniform depth is formed.

C. Tool joints when pointing mortar is thumbprint hard. Use a round jointer having a diameter 1/8 inch (3 mm) larger than width of joint.

3.6 JOINT-SEALANT INSTALLATION

A. Prepare joints and apply sealants to comply with applicable requirements in Section 079200 "Joint Sealants." Remove temporary shims before applying sealants.

3.7 ADJUSTING AND CLEANING

A. In-Progress Cleaning: Clean interior stone trim as work progresses. Remove adhesive, grout, mortar, and sealant smears immediately.

B. Clean interior stone trim no fewer than six days after completion of grouting and pointing, using clean water and soft rags or stiff-bristle fiber brushes. Do not use wire brushes, acid-type cleaning agents, cleaning compounds with caustic or harsh fillers, or other materials or methods that could damage stone.

C. Sealer Application: Apply stone sealer to comply with stone producer's and sealer manufacturer's written instructions and recommendations.

END OF SECTION 097519

SECTION 097713 - STRETCHED-FABRIC WALL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes site-upholstered wall systems.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For each stretched-fabric system.

D. Samples: For each exposed product and for each color and texture specified.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Elevations and other details, drawn to scale, and coordinated with each other, using input from installers of the items involved:

B. Product certificates.

C. Sample warranty.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

1.7 WARRANTY

A. Special Warranty: Manufacturer and Installer agree to repair or replace components of stretched-fabric systems that fail in performance, materials, or workmanship within specified warranty period.

1. Warranty Period: Two or Five years from date of Substantial Completion as directed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: Stretched-fabric wall systems shall comply with "Surface-Burning Characteristics" or "Fire Growth Contribution" Subparagraph below, or both, as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. Surface-Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency on systems prepared according to ASTM E2573. Identify products with appropriate markings of applicable testing agency.

a. Flame-Spread Index: 25 or less.
b. Smoke-Developed Index: 450 or less.

2. Fire Growth Contribution: Comply with acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 286.

2.2 STRETCHED-FABRIC WALL SYSTEMS

A. Stretched-Fabric Wall System: Manufacturer's standard system consisting of facing material stretched tightly over a frame and core material and secured in the frame.

1. Core: Manufacturer's standard, Glass-fiber board, Glass-fiber blanket, Mineral-fiber board or Cementitious-fiber board as directed.

a. Core-Face Layer: Manufacturer's standard tackable, impact-resistant, high-density board or impact-resistant, acoustically transparent, copolymer sheet as directed.

2. Frame Edge: Chamfered (beveled), Radiused (bullnosed) or Square profile as directed.

a. Fabric-Insertion Point: Bottom load.
b. Nominal Frame Thickness: Match core thickness, 1/2 inch (13 mm), 3/4 inch (19 mm), 1 inch (25 mm), 1-1/2 inches (38 mm), 2 inches (51 mm) or as indicated on Drawings.

3. Reveals between Panels: Recessed, Flush or Projecting reveals as selected by Architect from manufacturer's full range or as indicated on Drawings.
4. Facing Material: Owner-furnished material or as indicated on Drawings as directed.

5. Acoustical Performance: Sound absorption NRC or SAA of 0.50 to 0.90, 0.60 to 0.70, 0.65 to 0.75, not less than 0.65 or not more than 0.35 as directed according to ASTM C423 for Type A mounting according to ASTM E795.

2.3 MATERIALS

A. Core Materials: Manufacturer's standard.

1. Glass-Fiber Board: ASTM C612; of type standard with manufacturer; nominal density of 6 to 7 lb/cu. ft. (96 to 112 kg/cu. m), unfaced, and dimensionally stable, molded rigid board; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
2. Glass-Fiber Blanket: ASTM C553, ASTM C612, or ASTM C665; of type standard with manufacturer; nominal density of 3 to 4 lb/cu. ft. (48 to 64 kg/cu. m); flexible; with tackable, thermally bonded white glass-fiber mat facing; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
3. Mineral-Fiber Board: Maximum flame-spread and smoke-developed indexes of 25 and 10, respectively; minimum density of 13 lb/cu. ft. (208 kg/cu. m), and with perforated surface.
4. Cementitious-Fiber Board: Density of not less than 20 lb/cu. ft. (320 kg/cu. m).
5. Tackable, Impact-Resistant, High-Density Board for Face Layer: 1/8-inch- (3.2-mm-) thick layer of compressed molded glass-fiber board with a nominal density of 16 to 18 lb/cu. ft. (256 to 288 kg/cu. m) laminated to face of core.
6. Impact-Resistant, Acoustically Transparent, Copolymer Sheet for Face Layer: 1/16- to 1/8-inch- (1.6- to 3.2-mm-) thick layer of perforated, noncombustible, copolymer sheet laminated to face of core.

B. Frame Construction: Manufacturer's standard, continuous, extruded plastic frame (track).

C. Facing Material: Fabric from same dye lot; color and pattern as selected by Architect from manufacturer's full range or as indicated on Drawings.

1. Applied Treatments: Stain resistance.
2. Lining Material: Manufacturer's standard fabric for each use indicated.

D. Lining Material: Fabric as selected by Architect from manufacturer's full range or as indicated on Drawings.

2.4 INSTALLATION MATERIALS

A. Installation Products: Concealed on back of system, recommended by stretched-fabric system manufacturer to support weight of system, fabric tension, and as follows:
1. Fasteners: Manufacturer's standard.

PART 3 - EXECUTION

3.1 PREPARATION

A. Measure each area and establish layout of panels and joints of sizes indicated on Drawings within a given area.

B. Before installation, allow fabric to adjust and become stable in spaces where it will be installed according to stretched-fabric system manufacturer's written instructions. Acclimatize fabric for minimum of 24 hours at ambient temperature and humidity conditions indicated for spaces when occupied for their intended use.

3.2 INSTALLATION

A. Install stretched-fabric systems according to system manufacturer's written instructions.

1. Provide continuous perimeter frames of each profile indicated, designed to be inconspicuous when covered by fabric facing, with smooth edges, and with surface finish that will not telegraph through fabric facing.
2. Install framing around penetrations.
3. Tightly fit framing to adjacent construction and securely attach to substrate.
4. Install core material with full coverage, flush with face of stretched-fabric system frame.
5. Attach frame and core to substrate with adhesive or fasteners or both to support system and prevent deformation of components.
6. Install stretched-fabric systems level and plumb unless otherwise indicated, true in plane, and with fabric square to the grain.

B. Fabric Installation: Apply fabric monolithically in continuous run over area, without joints or reveals, except where panel joints or midspan frames are indicated.

1. Fabric Seams: Sewn seams are not permitted.
2. Fabric Seams: Manufacturer's standard sewn seams, straight and parallel; seam dimensions and locations as indicated on Drawings.
3. Stretch and secure fabric to frame edges and so frame and frame attachment method are concealed by fabric unless otherwise indicated.
4. Stretch fabric tightly and square without puckers, ripples, or distortions. Acclimatize and restretch if recommended by stretched-fabric system manufacturer. Repair distortions, wrinkles, and sagging.

3.3 CLEANING

A. Clip loose threads; remove pills and extraneous materials.

B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

END OF SECTION 097713

SECTION 097723 - FABRIC-WRAPPED PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes shop-fabricated, fabric-wrapped wall panels.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference as directed.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For panel assembly and installation.

D. Samples: For each exposed product and for each color and texture specified.

1.4 INFORMATIONAL SUBMITTALS

A. Product certificates.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 QUALITY ASSURANCE

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: Panels shall comply with "Surface-Burning Characteristics" or "Fire Growth Contribution" Subparagraph below, or both, as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. Surface-Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

    a. Flame-Spread Index: 25 or less.
    b. Smoke-Developed Index: 450 or less.

2. Fire Growth Contribution: Comply with acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 265 Method B Protocol or NFPA 286.

2.2 FABRIC-WRAPPED WALL PANELS

A. Fabric-Wrapped Wall Panel: Manufacturer's standard panel construction consisting of facing material laminated to front face, edges, and back edge border of core or stretched over front face of edge-framed core and bonded or attached to edges and back of frame.

1. Mounting: Edge mounted with splines secured to substrate.
2. Mounting: Back mounted with manufacturer's standard secured to substrate, as directed.
3. Core: As directed.

    a. Core-Face Layer: Manufacturer's standard tackable, impact-resistant, high-density board or impact-resistant, copolymer sheet.

4. Edge Construction: Manufacturer's standard, as directed.
5. Edge Profile: As directed.
6. Corner Detail in Elevation: As directed.
7. Reveals between Panels: Reveals, as directed
8. Facing Material: As directed.
9. Nominal Core or Overall Panel Thickness: As directed.

2.3 MATERIALS

A. Sustainable Design Requirements: As directed.

B. Core Materials: As directed.

1. Glass-Fiber Board: ASTM C612; of type standard with manufacturer, unfaced, and dimensionally stable, molded rigid board; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
2. Glass-Fiber Blanket: ASTM C612, ASTM C553, or ASTM C665; of type standard with manufacturer; with tackable, thermally bonded, white glass-fiber mat facing; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
3. Mineral-Fiber Board: Maximum flame-spread and smoke-developed indexes of 25 and 10, respectively.
4. Medium-Density Fiberboard: Panels complying with ANSI A208.2.

a. Fire-retardant panels made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less per ASTM E84 or UL 723.

5. Particleboard: Panels complying with ANSI A208.1, grade to suit performance requirements.

   a. Fire-retardant panels made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less per ASTM E84 or UL 723.

6. Tackable, Impact-Resistant, High-Density Board for Face Layer: 1/8-inch- (3.2-mm-) thick layer of compressed, molded glass-fiber board with a nominal density of 16 to 18 lb/cu. ft. (256 to 288 kg/cu. m) laminated to face of core.
7. Impact-Resistant, Copolymer Sheet for Face Layer: 1/16- to 1/8-inch- (1.6- to 3.2-mm-) thick layer of perforated, noncombustible, copolymer sheet laminated to face of core.
8. Wood and Plywood: Manufacturer's standard plywood or clear, vertical grain, straight, kiln-dried hardwood.

   a. Fire-retardant treated by pressure process with a flame-spread index of 25 or less when tested according to ASTM E84 or UL 723, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet (3.2 m) beyond the centerline of the burners at any time during the test.

      1) Treated material shall have a moisture content of 28 percent or less when tested according to ASTM D3201/D3201M at 92 percent relative humidity.
      2) Kiln-dry material after treatment to 19 percent for lumber and 15 percent or less for plywood.

C. Facing Material: Fabric from same dye lot; color and pattern as directed.

1. Applied Treatments: Stain resistance.
2. Lining Material: As directed.

D. Mounting Devices: Concealed on back of panel, recommended by manufacturer to support weight of panel, and as follows:

2.4 FABRICATION

A. Standard Construction: Use manufacturer's standard construction unless otherwise indicated; with facing material applied to face, edges, and back border of dimensionally stable core; and with rigid edges to reinforce panel perimeter against warpage and damage.

B. Core-Face Layer: Evenly stretched over core face and edges and securely attached to core; free from puckers, ripples, wrinkles, or sags.

C. Facing Material and Lining Material: Apply fabric fully covering visible surfaces of panel; with material stretched straight, on the grain, tight, square, and free from puckers, ripples, wrinkles, sags, blisters, seams, adhesive, or other visible distortions or foreign matter.

1. Fabrics with Directional or Repeating Patterns or Directional Weave: Mark fabric top and attach fabric in same direction so pattern or weave matches in adjacent panels.

D. Dimensional Tolerances of Finished Panels: Plus or minus 1/16 inch (1.6 mm).

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install panels in locations indicated. Unless otherwise indicated, install panels with vertical surfaces and edges plumb, top edges level and in alignment with other panels, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.

B. Comply with manufacturer's written instructions for installation of panels using type of mounting devices indicated. Mount panels securely to supporting substrate.

C. Align fabric pattern and grain with adjacent panels.

3.2 CLEANING

A. Clip loose threads; remove pills and extraneous materials.

B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

END OF SECTION 097723

SECTION 098433 - SOUND-ABSORBING WALL UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes shop-fabricated, sound-absorbing acoustical panel units tested for acoustical performance.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference as directed.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For unit assembly and installation.

D. Samples: For each exposed product and for each color and texture specified.

1.4 INFORMATIONAL SUBMITTALS

A. Product certificates.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 QUALITY ASSURANCE

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: Units shall comply with "Surface-Burning Characteristics" or "Fire Growth Contribution" Subparagraph below, or both, as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. Surface-Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

    a. Flame-Spread Index: 25 or less.
    b. Smoke-Developed Index: 450 or less.

2. Fire Growth Contribution: Comply with acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 265 Method B Protocol or NFPA 286.

2.2 SOUND-ABSORBING WALL UNITS

A. Sound-Absorbing Wall Panel: Manufacturer's standard panel construction consisting of facing material laminated to front face, edges, and back edge border of core or stretched over front face of edge-framed core and bonded or attached to edges and back of frame.

1. Mounting: Edge mounted with splines secured to substrate.
2. Mounting: Back mounted with manufacturer's standard secured to substrate, as directed.
3. Core: As directed. Provide wood or plywood nailing strips in core where indicated.

    a. Core-Face Layer: Manufacturer's standard tackable, impact-resistant, high-density board or impact-resistant, acoustically transparent, copolymer sheet .

4. Edge Construction: Manufacturer's standard, as directed.
5. Edge Profile: As directed.
6. Corner Detail in Elevation: Square or Round, radius as directed with continuous edge profile indicated.
7. Reveals between Panels: Reveals, as directed.
8. Facing Material: As directed.
9. Acoustical Performance: Sound absorption NRC or SAA as directed, according to ASTM C423 for Type A mounting according to ASTM E795.
10. Nominal Core or Overall Panel Thickness: As directed.

2.3 MATERIALS

A. Core Materials: Manufacturer's standard.

1. Glass-Fiber Board: ASTM C612; of type standard with manufacturer, unfaced, and dimensionally stable, molded rigid board; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
2. Mineral-Fiber Board: Maximum flame-spread and smoke-developed indexes of 25 and 10, respectively, and with perforated surface.
3. Tackable, Impact-Resistant, High-Density Board for Face Layer: 1/8-inch- (3.2-mm-) thick layer of compressed molded glass-fiber board with a nominal density of 16 to 18 lb/cu. ft. (256 to 288 kg/cu. m) laminated to face of core.
4. Impact-Resistant, Acoustically Transparent, Copolymer Sheet for Face Layer: 1/16- to 1/8-inch- (1.6- to 3.2-mm-) thick layer of perforated, noncombustible, copolymer sheet laminated to face of core.

5. Wood and Plywood: Manufacturer's standard plywood or clear, vertical grain, straight, kiln-dried hardwood.

    a. Fire-retardant treated by pressure process with a flame-spread index of 25 or less when tested according to ASTM E84 or UL 723, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet (3.2 m) beyond the centerline of the burners at any time during the test.

        1) Treated material shall have a moisture content of 28 percent or less when tested according to ASTM D3201/D3201M at 92 percent relative humidity.
        2) Kiln-dry material after treatment to 19 percent or less for lumber and 15 percent or less for plywood.

B. Facing Material: Fabric from same dye lot; color and pattern as directed.

1. Applied Treatments: Stain resistance.

C. Mounting Devices: Concealed on back of unit, recommended by manufacturer to support weight of unit, and as follows:

2.4 FABRICATION

A. Standard Construction: Use manufacturer's standard construction unless otherwise indicated; with facing material applied to face, edges, and back border of dimensionally stable core; and with rigid edges to reinforce panel perimeter against warpage and damage.

B. Core-Face Layer: Evenly stretched over core face and edges and securely attached to core; free from puckers, ripples, wrinkles, or sags.

C. Facing Material: Apply fabric facing fully covering visible surfaces of unit; with material stretched straight, on the grain, tight, square, and free from puckers, ripples, wrinkles, sags, blisters, seams, adhesive, or other visible distortions or foreign matter.

1. Fabrics with Directional or Repeating Patterns or Directional Weave: Mark fabric top and attach fabric in same direction so pattern or weave matches in adjacent units.

D. Dimensional Tolerances of Finished Units: Plus or minus 1/16 inch (1.6 mm).

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install units in locations indicated. Unless otherwise indicated, install units with vertical surfaces and edges plumb, top edges level and in alignment with other units, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.

B. Comply with manufacturer's written instructions for installation of units using type of mounting devices indicated. Mount units securely to supporting substrate.

C. Align fabric pattern and grain with adjacent units.

3.2 CLEANING

A. Clip loose threads; remove pills and extraneous materials.

B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

END OF SECTION 098433

SECTION 098436 - SOUND-ABSORBING CEILING UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes shop-fabricated, sound-absorbing acoustical panel units tested for acoustical performance.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference as directed.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For unit assembly and installation.

D. Samples: For each exposed product and for each color and texture specified.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans and other details, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Product certificates.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: Units shall comply with "Surface-Burning Characteristics" or "Fire Growth Contribution" Subparagraph below, or both, as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. Surface-Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

    a. Flame-Spread Index: 25 or less.
    b. Smoke-Developed Index: 450 or less.

2. Fire Growth Contribution: Comply with acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 286.

2.2 SOUND-ABSORBING CEILING UNITS

A. Sound-Absorbing Ceiling Panel: Manufacturer's standard panel construction consisting of facing material laminated to front face, edges, and back edge border of core or stretched over front face of edge-framed core and bonded or attached to edges and back of frame.

1. Mounting: Back mounted with manufacturer's standard secured to substrate, as directed.
2. Core: As directed.
3. Edge Construction: Manufacturer's standard chemically hardened core with no frame.
4. Edge Profile: As directed.
5. Corner Detail in Elevation: As directed with continuous edge profile indicated.
6. Reveals between Panels: Reveals, as directed.
7. Facing Material: As directed.
8. Acoustical Performance: Sound absorption NRC or SAA as directed according to ASTM C423 for Type A or Type J mounting according to ASTM E795.
9. Nominal Core or Overall Panel Thickness: As directed.

2.3 MATERIALS

A. Sustainable Design Requirements: As directed.

B. Core Materials: Manufacturer's standard.

1. Glass-Fiber Board: ASTM C612; of type standard with manufacturer, unfaced, and dimensionally stable, molded rigid board; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
2. Mineral-Fiber Board: Maximum flame-spread and smoke-developed indexes of 25 and 10, respectively, and with perforated surface.

C. Facing Material: Fabric from same dye lot; color and pattern as directed.

1. Applied Treatments: Stain resistance.

D. Mounting Devices: Concealed on back or top edge of unit, recommended by manufacturer to support weight of unit.

2.4 FABRICATION

A. Standard Construction: Use manufacturer's standard construction unless otherwise indicated, with facing material applied to face, edges, and back border of dimensionally stable core and with rigid edges to reinforce panel perimeter against warpage and damage.

B. Measure each area and establish layout of panels and joints of sizes indicated on Drawings within a given area.

C. Facing Material: Apply fabric facing fully covering visible surfaces of unit; with material stretched straight, on the grain, tight, square, and free from puckers, ripples, wrinkles, sags, blisters, seams, adhesive, or other visible distortions or foreign matter.

1. Fabrics with Directional or Repeating Patterns or Directional Weave: Mark fabric top and attach fabric in same direction so pattern or weave matches adjacent units.

D. Dimensional Tolerances of Finished Units: Plus or minus 1/16 inch (1.6 mm).

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install units in locations indicated. Unless otherwise indicated, install units with edges in alignment with walls and other units, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.

B. Comply with manufacturer's written instructions for installation of units using type of mounting devices indicated. Mount units securely to supporting substrate.

C. Align fabric pattern and grain with adjacent units.

3.2 CLEANING

A. Clip loose threads; remove pills and extraneous materials.

B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

END OF SECTION 098436

SECTION 099113 - EXTERIOR PAINTING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes surface preparation and the application of paint systems on exterior substrates or the following exterior substrates:

1. Concrete.
2. Fiber-cement board.
3. Clay masonry.
4. Concrete masonry units (CMUs).
5. Steel and iron.
6. Galvanized metal.
7. Aluminum (not anodized or otherwise coated).
8. Copper.
9. Stainless steel.
10. Wood.
11. Plastic.
12. Portland cement plaster (stucco).
13. Gypsum board.
14. Cotton or canvas insulation covering.
15. ASJ insulation covering.

1.2 DEFINITIONS

A. MPI Gloss Level 1: Not more than five units at 60 degrees and 10 units at 85 degrees, according to ASTM D523.

B. MPI Gloss Level 3: 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.

C. MPI Gloss Level 4: 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, according to ASTM D523.

D. MPI Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D523.

E. MPI Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D523.

F. MPI Gloss Level 7: More than 85 units at 60 degrees, according to ASTM D523.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product. Include preparation requirements and application instructions.

1. Include printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.

B. Sustainable Design Submittals: As required.

C. Samples: For each type of paint system and each color and gloss of topcoat.

1.4 QUALITY ASSURANCE

A. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Architect will select one surface to represent surfaces and conditions for application of each paint system.

a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft. (9 sq. m).
b. Other Items: Architect will designate items or areas required.

2. Final approval of color selections will be based on mockups.

a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Products: Subject to compliance with requirements, as directed, listed in the Exterior Painting Schedule for the paint category indicated.

2.2 PAINT, GENERAL

A. MPI Standards: Products shall comply with MPI standards indicated and shall be listed in its "MPI Approved Products Lists."

B. Material Compatibility:

1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.

Colors: As directed.

3. Percent of surface area will be painted with deep tones, as directed.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:

1. Concrete: 12 percent.
2. Fiber-Cement Board: 12 percent.
3. Masonry (Clay and CMUs): 12 percent.
4. Wood: 15 percent.
5. Portland Cement Plaster: 12 percent.
6. Gypsum Board: 12 percent.

C. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers.

D. Proceed with coating application only after unsatisfactory conditions have been corrected.

1. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates and paint systems indicated.

B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.

1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection.

3.3 APPLICATION

A. Apply paints according to manufacturer's written instructions and recommendations in "MPI Manual."

B. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

3.4 CLEANING AND PROTECTION

A. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.

B. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.5 EXTERIOR PAINTING SCHEDULE

A. Concrete Substrates, Nontraffic Surfaces:

1. Latex System MPI EXT 3.1A or MPI EXT 3.1K:

a. Prime Coat: Primer, alkali resistant, water based, MPI #3.

1) As directed.

b. Prime Coat: Latex, exterior, matching topcoat.
c. Intermediate Coat: Latex, exterior, matching topcoat.
d. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

e. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

f. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

g. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

2. Latex over Latex Aggregate System MPI EXT 3.1B:

a. Prime Coat: Textured coating, latex, flat, MPI #42.

1) As directed.

b. Intermediate Coat: Latex, exterior, matching topcoat.
c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

3. Latex Aggregate System MPI EXT 3.1N:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Textured coating, latex, nonflat, MPI #41.

1) As directed.

d. Topcoat: Textured coating, latex, flat, MPI #42.

1) As directed.

4. High-Build Latex System MPI EXT 3.1L: Dry film thickness of not less than 10 mils (0.25 mm).

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Latex, exterior, high build, MPI #40.

1) As directed.

B. Concrete Substrates, Traffic Surfaces:

1. Latex Floor Paint System MPI EXT 3.2A:

a. Prime Coat: Floor paint, latex, matching topcoat.
b. Intermediate Coat: Floor paint, latex, matching topcoat.
c. Topcoat: Floor paint, latex, low gloss (maximum MPI Gloss Level 3), MPI #60.

1) As directed.

2. Alkyd Floor Enamel System MPI EXT 3.2D:

a. Prime Coat: Floor enamel, matching topcoat.
b. Intermediate Coat: Floor enamel, matching topcoat.
c. Topcoat: Floor enamel, alkyd, gloss (MPI Gloss Level 6), MPI #27.

1) As directed.

d. Additive: Manufacturer's standard additive to increase skid resistance of painted surface.

3. Clear Water-Based Sealer System MPI EXT 3.2H:

a. Prime Coat: Sealer, water based, matching topcoat.
b. Intermediate Coat: Sealer, water based, matching topcoat.
c. Topcoat: Sealer, water based, for concrete floors, MPI #99.

1) As directed.

4. Clear Sealer System MPI EXT 3.2G:

a. Prime Coat: Sealer, solvent based, matching topcoat.
b. Intermediate Coat: Sealer, solvent based, matching topcoat.
c. Topcoat: Sealer, solvent based, for concrete floors, MPI #104.

1) As directed.

C. Cement Board Substrates:

1. Latex System MPI EXT 3.3A or MPI EXT 3.3J:

a. Prime Coat: Latex, exterior, matching topcoat.
b. Prime Coat: Primer, alkali resistant, water based, MPI #3.

1) As directed.

c. Intermediate Coat: Latex, exterior, matching topcoat.
d. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

e. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

f. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

g. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

2. Latex Aggregate System MPI EXT 3.3G:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Textured coating, latex, nonflat, MPI #41.

1) As directed.

d. Topcoat: Textured coating, latex, flat, MPI #42.

1) As directed.

3. High-Build Latex System MPI EXT 3.3H: Dry film thickness of not less than 10 mils (0.25 mm).

    a. Prime Coat: As recommended in writing by topcoat manufacturer.
    b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
    c. Topcoat: Latex, exterior, high build, MPI #40.

        1) As directed.

4. Alkyd System MPI EXT 3.3B:

    a. Prime Coat: Primer, latex for exterior wood, MPI #6.

        1) As directed.

    b. Intermediate Coat: Exterior, alkyd enamel, matching topcoat.
    c. Topcoat: Alkyd, exterior, flat (MPI Gloss Level 1), MPI #8.

        1) As directed.

    d. Topcoat: Alkyd, exterior, semi-gloss (MPI Gloss Level 5), MPI #94.

        1) As directed.

    e. Topcoat: Alkyd, exterior, gloss (MPI Gloss Level 6), MPI #9.

        1) As directed.

D. Clay Masonry Substrates:

1. Latex System MPI EXT 4.1A:

    a. Prime Coat: Latex, exterior, matching topcoat.
    b. Intermediate Coat: Latex, exterior, matching topcoat.
    c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

        1) As directed.

    d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

        1) As directed.

    e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

        1) As directed.

    f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

        1) As directed.

2. Latex Aggregate System MPI EXT 4.1B:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Textured coating, latex, nonflat, MPI #41.

1) As directed.

d. Topcoat: Textured coating, latex, flat, MPI #42.

1) As directed.

3. High-Build Latex System MPI EXT 4.1H: Dry film thickness of not less than 10 mils (0.25 mm).

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Latex, exterior, high build, MPI #40.

1) As directed.

E. CMU Substrates:

1. Latex System MPI EXT 4.2A:

a. Prime Coat: Block filler, latex, interior/exterior, MPI #4.

1) As directed.

b. Intermediate Coat: Latex, exterior, matching topcoat.
c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

2. Latex over Alkali-Resistant Primer System MPI EXT 4.2L:

a. Prime Coat: Primer, alkali resistant, water based, MPI #3.

1) As directed.

b. Intermediate Coat: Latex, exterior, matching topcoat.

c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

3. Latex Aggregate System MPI EXT 4.2B:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Textured coating, latex, nonflat, MPI #41.

1) As directed.

d. Topcoat: Textured coating, latex, flat, MPI #42.

1) As directed.

4. High-Build Latex System MPI EXT 4.2K: Dry film thickness of not less than 10 mils (0.25 mm).

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Latex, exterior, high build, MPI #40.

1) As directed.

F. Steel and Iron Substrates:

1. Water-Based Light Industrial Coating System MPI EXT 5.1C or MPI EXT 5.1M:

a. Prime Coat: Primer, alkyd, anti-corrosive for metal, MPI #79.

1) As directed.

b. Prime Coat: Primer, rust inhibitive, water based MPI #107.

1) As directed.

c. Prime Coat: Primer, epoxy, anti-corrosive MPI #101.

1) As directed.

d. Prime Coat: Shop primer specified in Section where substrate is specified.
e. Intermediate Coat: Light industrial coating, exterior, water based, matching topcoat.
f. Topcoat: Light industrial coating, exterior, water based (MPI Gloss Level 3), MPI #161.

1) As directed.

g. Topcoat: Light industrial coating, exterior, water based, semi-gloss (MPI Gloss Level 5), MPI #163.

1) As directed.

h. Topcoat: Light industrial coating, exterior, water based, gloss (MPI Gloss Level 6), MPI #164.

1) As directed.

2. Alkyd System MPI EXT 5.1D or MPI EXT 5.1Q:

a. Prime Coat: Primer, alkyd, anticorrosive, for metal, MPI #79.

1) As directed.

b. Prime Coat: Shop primer specified in Section where substrate is specified.
c. Prime Coat: Primer, metal, surface tolerant, MPI #23.

1) As directed.

d. Intermediate Coat: Exterior, alkyd enamel, matching topcoat.
e. Topcoat: Alkyd, exterior, flat (MPI Gloss Level 1), MPI #8.

1) As directed.

f. Topcoat: Alkyd, exterior, semi-gloss (MPI Gloss Level 5), MPI #94.

1) As directed.

g. Topcoat: Alkyd, exterior, gloss (MPI Gloss Level 6), MPI #9.

1) As directed.

3. Quick-Dry Enamel System MPI EXT 5.1A:

a. Prime Coat: Primer, alkyd, quick dry, for metal, MPI #76.

1) As directed.

b. Intermediate Coat: Alkyd, quick dry, matching topcoat.
c. Topcoat: Alkyd, quick dry, semi-gloss (MPI Gloss Level 5), MPI #81.

1) As directed.

d. Topcoat: Alkyd, quick dry, gloss (MPI Gloss Level 7), MPI #96.

1) As directed.

4. Aluminum Paint System MPI EXT 5.1K:

a. Prime Coat: Primer, alkyd, anti-corrosive, for metal, MPI #79.

1) As directed.

b. Prime Coat: Shop primer specified in Section where substrate is specified.
c. Intermediate Coat: Aluminum paint, matching topcoat.
d. Topcoat: Aluminum paint, MPI #1.

1) As directed.

G. Galvanized-Metal Substrates:

1. Latex System MPI EXT 5.3H:

a. Prime Coat: Primer, galvanized, water based, MPI #134.

1) As directed.

b. Intermediate Coat: Latex, exterior, matching topcoat.
c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

2. Water-Based Light Industrial Coating System MPI EXT 5.3J:

a. Prime Coat: Primer, galvanized, water based, MPI #134.

1) As directed.

b. Intermediate Coat: Light industrial coating, exterior, water based, matching topcoat.

c. Topcoat: Light industrial coating, exterior, water based (MPI Gloss Level 3), MPI #161.

1) As directed.

d. Topcoat: Light industrial coating, exterior, water based, semi-gloss (MPI Gloss Level 5), MPI #163.

1) As directed.

e. Topcoat: Light industrial coating, exterior, water based, gloss (MPI Gloss Level 6), MPI #164.

1) As directed.

3. Alkyd System MPI EXT 5.3B:

a. Prime Coat: Primer, galvanized, cementitious, MPI #26.

1) As directed.

b. Intermediate Coat: Exterior, alkyd enamel, matching topcoat.
c. Topcoat: Alkyd, exterior, flat (MPI Gloss Level 1), MPI #8.

1) As directed.

d. Topcoat: Alkyd, exterior, semi-gloss (MPI Gloss Level 5), MPI #94.

1) As directed.

e. Topcoat: Alkyd, exterior, gloss (MPI Gloss Level 6), MPI #9.

1) As directed.

H. Aluminum Substrates:

1. Latex System MPI EXT 5.4H:

a. Prime Coat: Primer, quick dry, for aluminum, MPI #95.

1) As directed.

b. Intermediate Coat: Latex, exterior, matching topcoat.
c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

2. Water-Based Light Industrial Coating System MPI EXT 5.4G:

a. Prime Coat: Primer, quick dry, for aluminum, MPI #95.

1) As directed.

b. Intermediate Coat: Light industrial coating, exterior, water based, matching topcoat.

c. Topcoat: Light industrial coating, exterior, water based (MPI Gloss Level 3), MPI #161.

1) As directed.

d. Topcoat: Light industrial coating, exterior, water based, semi-gloss (MPI Gloss Level 5), MPI #163.

1) As directed.

e. Topcoat: Light industrial coating, exterior, water based, gloss (MPI Gloss Level 6, MPI #164.

1) As directed.

3. Alkyd System MPI EXT 5.4F:

a. Prime Coat: Primer, quick dry, for aluminum, MPI #95.

1) As directed.

b. Intermediate Coat: Exterior, alkyd enamel, matching topcoat.

c. Topcoat: Alkyd, exterior, flat (MPI Gloss Level 1), MPI #8.

1) As directed.

d. Topcoat: Alkyd, exterior, semi-gloss (MPI Gloss Level 5), MPI #94.

1) As directed.

e. Topcoat: Alkyd, exterior, gloss (MPI Gloss Level 6), MPI #9.

1) As directed.

I. Copper Substrates:

1. Latex System MPI EXT 5.5H:

a. Prime Coat: Primer, quick dry, for aluminum, MPI #95.

1) As directed.

b. Intermediate Coat: Latex, exterior, matching topcoat.
c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6, MPI #119.

1) As directed.

2. Water-Based Light Industrial Coating System MPI EXT 5.5G:

a. Prime Coat: Primer, quick dry, for aluminum, MPI #95.

1) As directed.

b. Intermediate Coat: Light industrial coating, exterior, water based, matching topcoat.
c. Topcoat: Light industrial coating, exterior, water based (MPI Gloss Level 3), MPI #161.

1) As directed.

d. Topcoat: Light industrial coating, exterior, water based, semi-gloss (MPI Gloss Level 5), MPI #163.

1) As directed.

e. Topcoat: Light industrial coating, exterior, water based, gloss (MPI Gloss Level 6), MPI #164.

1) As directed.

3. Alkyd System MPI EXT 5.5F:

a. Prime Coat: Primer, quick dry, for aluminum, MPI #95.

1) As directed.

b. Intermediate Coat: Exterior, alkyd enamel, matching topcoat.
c. Topcoat: Alkyd, exterior, flat (MPI Gloss Level 1), MPI #8.

1) As directed.

d. Topcoat: Alkyd, exterior, semi-gloss (MPI Gloss Level 5), MPI #94.

1) As directed.

e. Topcoat: Alkyd, exterior, gloss (MPI Gloss Level 6), MPI #9.

1) As directed.

J. Stainless-Steel Substrates:

1. Latex System MPI EXT 5.6F:

a. Prime Coat: Primer, bonding, solvent based, MPI #69.

1) As directed.

b. Intermediate Coat: Latex, exterior, matching topcoat.
c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

2. Water-Based Light Industrial Coating System MPI EXT 5.6G:

a. Prime Coat: Primer, quick dry, for aluminum, MPI #95.

1) As directed.

b. Intermediate Coat: Light industrial coating, exterior, water based, matching topcoat.
c. Topcoat: Light industrial coating, exterior, water based (MPI Gloss Level 3), MPI #161.

1) As directed.

d. Topcoat: Light industrial coating, exterior, water based, semi-gloss (MPI Gloss Level 5), MPI #163.

1) As directed.

e. Topcoat: Light industrial coating, exterior, water based, gloss (MPI Gloss Level 6), MPI #164.

1) As directed.

K. Wood Substrates: Glued-laminated construction.

1. Latex over Latex Primer System MPI EXT 6.1L:

a. Prime Coat: Primer, latex for exterior wood, MPI #6.

1) As directed.

b. Intermediate Coat: Latex, exterior, matching topcoat.
c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

2. Latex over Alkyd Primer System MPI EXT 6.1A:

a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

1) As directed.

b. Intermediate Coat: Latex, exterior, matching topcoat.
c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

3. Alkyd System MPI EXT 6.1B:

   a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

      1) As directed.

   b. Intermediate Coat: Exterior, alkyd enamel, matching topcoat.
   c. Topcoat: Alkyd, exterior, flat (MPI Gloss Level 1), MPI #8.

      1) As directed.

   d. Topcoat: Alkyd, exterior, semi-gloss (MPI Gloss Level 5), MPI #94.

      1) As directed.

   e. Topcoat: Alkyd, exterior, gloss (MPI Gloss Level 6), MPI #9.

      1) As directed.

L. Wood Substrates: Exposed framing.

1. Latex over Latex Primer System MPI EXT 6.2M:

   a. Prime Coat: Primer, latex for exterior wood, MPI #6.

      1) As directed.

   b. Intermediate Coat: Latex, exterior, matching topcoat.
   c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

      1) As directed.

   d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

      1) As directed.

   e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

      1) As directed.

   f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

      1) As directed.

2. Latex over Alkyd Primer System MPI EXT 6.2A:

   a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

      1) As directed.

   b. Intermediate Coat: Latex, exterior, matching topcoat.
   c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

3. Alkyd System MPI EXT 6.2C:

a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

1) As directed.

b. Intermediate Coat: Exterior, alkyd enamel, matching topcoat.
c. Topcoat: Alkyd, exterior, flat (MPI Gloss Level 1), MPI #8.

1) As directed.

d. Topcoat: Alkyd, exterior, semi-gloss (MPI Gloss Level 5), MPI #94.

1) As directed.

e. Topcoat: Alkyd, exterior, gloss (MPI Gloss Level 6), MPI #9.

1) As directed.

M. Wood Substrates: As directed.

1. Latex over Latex Primer System MPI EXT 6.3L:

a. Prime Coat: Primer, latex for exterior wood, MPI #6.

1) As directed.

b. Intermediate Coat: Latex, exterior, matching topcoat.
c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

2. Latex System MPI EXT 6.3A:

a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

1) As directed.

b. Intermediate Coat: Latex, exterior, matching topcoat.
c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

3. Alkyd System MPI EXT 6.3B:

a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

1) As directed.

b. Intermediate Coat: Exterior, alkyd enamel, matching topcoat.
c. Topcoat: Alkyd, exterior, flat (MPI Gloss Level 1), MPI #8.

1) As directed.

d. Topcoat: Alkyd, exterior, semi-gloss (MPI Gloss Level 5), MPI #94.

1) As directed.

e. Topcoat: Alkyd, exterior, gloss (MPI Gloss Level 6), MPI #9.

1) As directed.

N. Wood Substrates: Wood-based panel products.

1. Latex over Latex Primer System MPI EXT 6.4K:

a. Prime Coat: Primer, latex for exterior wood, MPI #6.

1) As directed.

b. Intermediate Coat: Latex, exterior, matching topcoat.
c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

2. Latex over Alkyd Primer System MPI EXT 6.4G:

a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

1) As directed.

b. Intermediate Coat: Latex, exterior, matching topcoat.
c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

3. Alkyd System MPI EXT 6.4B:

a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

1) As directed.

b. Intermediate Coat: Exterior, alkyd enamel, matching topcoat.
c. Topcoat: Alkyd, exterior, flat (MPI Gloss Level 1), MPI #8.

1) As directed.

d. Topcoat: Alkyd, exterior, semi-gloss (MPI Gloss Level 5), MPI #94.

1) As directed.

e. Topcoat: Alkyd, exterior, gloss (MPI Gloss Level 6), MPI #9.

1) As directed.

O. Wood Substrates: Traffic surfaces, including lumber decking and stairs.

1. Latex Porch and Floor Paint over Latex Primer System MPI EXT 6.5E:

a. Prime Coat: Primer, latex for exterior wood, MPI #6.

1) As directed.

b. Intermediate Coat: Latex floor paint, matching topcoat.
c. Topcoat: Latex floor paint, low gloss, MPI #60.

1) As directed.

d. Additive: Manufacturer's standard additive to increase skid resistance of painted surface.

2. Latex Porch and Floor Paint over Alkyd Primer System MPI EXT 6.5A:

a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.
b. Intermediate Coat: Latex floor paint, matching topcoat.
c. Topcoat: Latex floor paint, low gloss, MPI #60.

1) As directed.

d. Additive: Manufacturer's standard additive to increase skid resistance of painted surface.

3. Alkyd Floor Enamel System MPI EXT 6.5B:

a. Prime Coat: Floor enamel, alkyd, gloss, matching topcoat.
b. Intermediate Coat: Floor enamel, alkyd, gloss, matching topcoat.
c. Topcoat: Floor enamel, alkyd, gloss (MPI Gloss Level 6), MPI #27.

1) As directed.

d. Additive: Manufacturer's standard additive to increase skid resistance of painted surface.

P. Plastic Trim Fabrication Substrates:

1. Latex System MPI EXT 6.8A:

a. Prime Coat: Primer, bonding, water based, MPI #17.

1) As directed.

b. Prime Coat: Primer, bonding, solvent based, MPI #69.

1) As directed.

c. Intermediate Coat: Latex, exterior, matching topcoat.
d. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

e. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

f. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

g. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

2. Alkyd System MPI EXT 6.8B:

a. Prime Coat: Primer, bonding, water based, MPI #17.

1) As directed.

b. Prime Coat: Primer, bonding, solvent based, MPI #69.

1) As directed.

c. Intermediate Coat: Exterior, alkyd enamel, matching topcoat.
d. Topcoat: Alkyd, exterior, flat (MPI Gloss Level 1), MPI #8.

1) As directed.

e. Topcoat: Alkyd, exterior, semi-gloss (MPI Gloss Level 5), MPI #94.

1) As directed.

f. Topcoat: Alkyd, exterior, gloss (MPI Gloss Level 6), MPI #9.

1) As directed.

Q. Portland Cement Plaster Substrates:

1. Latex System MPI EXT 9.1A or MPI EXT 9.1J:

a. Prime Coat: Latex, exterior, matching topcoat.
b. Prime Coat: Primer, alkali resistant, water based, MPI #3.

1) As directed.

c. Intermediate Coat: Latex, exterior, matching topcoat.
d. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

e. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

f. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

g. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

2. High-Build Latex System MPI EXT 9.1H: Dry film thickness of not less than 10 mils (0.25 mm).

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Latex, exterior, high build, MPI #40.

1) As directed.

R. Exterior Gypsum Board Substrates:

1. Latex System MPI EXT 9.2A:

a. Prime Coat: Primer, latex for exterior wood (reduced), MPI #6.

1) As directed.

b. Intermediate Coat: Latex, exterior, matching topcoat.
c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

2. Latex Aggregate System MPI EXT 9.2C:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Textured coating, latex, nonflat, MPI #41.

1) As directed.

d. Topcoat: Textured coating, latex, flat, MPI #42.

1) As directed.

3. Alkyd System MPI EXT 9.2B:

a. Prime Coat: Primer, latex for exterior wood (reduced), MPI #6.

1) As directed.

b. Intermediate Coat: Exterior, alkyd enamel, matching topcoat.
c. Topcoat: Alkyd, exterior, flat (MPI Gloss Level 1), MPI #8.

1) As directed.

d. Topcoat: Alkyd, exterior, semi-gloss (MPI Gloss Level 5), MPI #94.

1) As directed.

e. Topcoat: Alkyd, exterior, gloss (MPI Gloss Level 6), MPI #9.

1) As directed.

S. Exterior Canvas Substrates:

1. Latex System MPI EXT 10.1A:

a. Prime Coat: Latex, exterior, matching topcoat.
b. Intermediate Coat: Latex, exterior, matching topcoat.
c. Topcoat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

d. Topcoat: Latex, exterior, low sheen (MPI Gloss Level 3-4), MPI #15.

1) As directed.

e. Topcoat: Latex, exterior, semi-gloss (MPI Gloss Level 5), MPI #11.

1) As directed.

f. Topcoat: Latex, exterior, gloss (MPI Gloss Level 6), MPI #119.

1) As directed.

2. Alkyd System MPI EXT 10.1C:

a. Prime Coat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

b. Intermediate Coat: Exterior, alkyd enamel, matching topcoat.
c. Topcoat: Alkyd, exterior, flat (MPI Gloss Level 1), MPI #8.

1) As directed.

d. Topcoat: Alkyd, exterior, semi-gloss (MPI Gloss Level 5, MPI #94.

1) As directed.

e. Topcoat: Alkyd, exterior, gloss (MPI Gloss Level 6), MPI #9.

1) As directed.

3. Aluminum Paint System MPI EXT 10.1D:

a. Prime Coat: Latex, exterior, flat (MPI Gloss Level 1), MPI #10.

1) As directed.

b. Intermediate Coat: Aluminum paint, matching topcoat.
c. Topcoat: Aluminum paint, MPI #1.

1) As directed.

END OF SECTION 099113

SECTION 099123 - INTERIOR PAINTING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes surface preparation and the application of paint systems on the following interior substrates:

1. Concrete.
2. Cement board.
3. Clay masonry.
4. Concrete masonry units (CMUs).
5. Steel and iron.
6. Galvanized metal.
7. Aluminum (not anodized or otherwise coated).
8. Wood.
9. Plastic.
10. Gypsum board.
11. Plaster.
12. Spray-textured ceilings.
13. Cotton or canvas insulation covering.
14. ASJ insulation covering.

1.2 DEFINITIONS

A. MPI Gloss Level 1: Not more than five units at 60 degrees and 10 units at 85 degrees, according to ASTM D523.

B. MPI Gloss Level 2: Not more than 10 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.

C. MPI Gloss Level 3: 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.

D. MPI Gloss Level 4: 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, according to ASTM D523.

E. MPI Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D523.

F. MPI Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D523.

G. MPI Gloss Level 7: More than 85 units at 60 degrees, according to ASTM D523.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product. Include preparation requirements and application instructions.

1. Include Printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.

B. Sustainable Design Submittals: As directed.

C. Samples: For each type of paint system and in each color and gloss of topcoat.

1.4 QUALITY ASSURANCE

A. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Architect will select one surface to represent surfaces and conditions for application of each paint system.

a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft. (9 sq. m).
b. Other Items: Architect will designate items or areas required.

2. Final approval of color selections will be based on mockups.

a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Products: Subject to compliance with requirements listed in the Interior Painting Schedule for the paint category indicated, as directed.

2.2 PAINT, GENERAL

A. MPI Standards: Products shall comply with MPI standards indicated and shall be listed in its "MPI Approved Products Lists."

B. Material Compatibility:

1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.

C. Colors: As directed.

1. Percent of surface area will be painted with deep tones, as directed.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:

1. Concrete: 12 percent.
2. Fiber-Cement Board: 12 percent.
3. Masonry (Clay and CMUs): 12 percent.
4. Wood: 15 percent.
5. Gypsum Board: 12 percent.
6. Plaster: 12 percent.

C. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers.

D. Proceed with coating application only after unsatisfactory conditions have been corrected.

1. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates and paint systems indicated.

B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.

1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.

3.3 APPLICATION

A. Apply paints according to manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual."

B. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

3.4 INTERIOR PAINTING SCHEDULE

A. Concrete Substrates, Nontraffic Surfaces:

1. Latex System MPI INT 3.1A or MPI INT 3.1E:

a. Prime Coat: Primer, alkali resistant, water based, MPI #3.

1) As directed.

b. Prime Coat: Latex, interior, matching topcoat.
c. Intermediate Coat: Latex, interior, matching topcoat.
d. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

g. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

h. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

i. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

2. Latex over Latex Aggregate System MPI INT 3.1B:

a. Prime Coat: Textured coating, latex, flat, MPI #42.

1) As directed.

b. Intermediate Coat: Latex, interior, matching topcoat.
c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

3. Latex Aggregate System MPI INT 3.1N:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Textured coating, latex, nonflat, MPI #41.

1) As directed.

d. Topcoat: Textured coating, latex, flat, MPI #42.

1) As directed.

4. Institutional Low-Odor/VOC Latex System MPI INT 3.1M:

a. Prime Coat: Primer sealer, interior, institutional low odor/VOC, MPI #149.

1) As directed.

b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
c. Topcoat: Latex, interior, institutional low odor/VOC, flat (MPI Gloss Level 1), MPI #143.

1) As directed.

d. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 2), MPI #144.

1) As directed.

e. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 3), MPI #145.

1) As directed.

f. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 4), MPI #146.

1) As directed.

g. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147.

1) As directed.

h. Topcoat: Latex, interior, institutional low odor/VOC, gloss (MPI Gloss Level 6), MPI #148.

1) As directed.

5. High-Performance Architectural Latex System MPI INT 3.1C:

a. Prime Coat: Primer, alkali resistant, water based, MPI #3.

1) As directed.

b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.

c. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 2), MPI #138.

1) As directed.

d. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 3), MPI #139.

1) As directed.

e. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 4), MPI #140.

1) As directed.

f. Topcoat: Latex, interior, high performance architectural, semi-gloss (MPI Gloss Level 5), MPI #141.

1) As directed.

6. Water-Based Light Industrial Coating System MPI INT 3.1L:

a. Prime Coat: Primer, alkali resistant, water based, MPI #3.

1) As directed.

b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.

c. Topcoat: Light industrial coating, interior, water based (MPI Gloss Level 3), MPI #151.

1) As directed.

d. Topcoat: Light industrial coating, interior, water based, semi-gloss (MPI Gloss Level 5), MPI #153.

1) As directed.

e. Topcoat: Light industrial coating, interior, water based, gloss (MPI Gloss Level 6), MPI #154.

1) As directed.

7. Alkyd System MPI INT 3.1D:

a. Prime Coat: Primer, alkali resistant, water based, MPI #3.

1) As directed.

b. Intermediate Coat: Alkyd, interior, matching topcoat.
c. Topcoat: Alkyd, interior, flat (MPI Gloss Level 1), MPI #49.

1) As directed.

d. Topcoat: Alkyd, interior (MPI Gloss Level 3), MPI #51.

1) As directed.

e. Topcoat: Alkyd, interior, semi-gloss (MPI Gloss Level 5), MPI #47.

1) As directed.

f. Topcoat: Alkyd, interior, gloss (MPI Gloss Level 6), MPI #48.

1) As directed.

B. Concrete Substrates, Traffic Surfaces:

1. Latex Floor Enamel System MPI INT 3.2A:

a. Prime Coat: Floor paint, latex, matching topcoat.
b. Intermediate Coat: Floor paint, latex, matching topcoat.
c. Topcoat: Floor paint, latex, low gloss (maximum MPI Gloss Level 3), MPI #60.

1) As directed.

2. Alkyd Floor Enamel System MPI INT 3.2B:

a. Prime Coat: Floor enamel, alkyd, matching topcoat.
b. Intermediate Coat: Floor enamel, alkyd, matching topcoat.

c. Topcoat: Floor enamel, alkyd, gloss (MPI Gloss Level 6), MPI #27.

1) As directed.

3. Concrete Stain System MPI INT 3.2E:

a. First Coat: Stain, interior, for concrete floors, matching topcoat.
b. Topcoat: Stain, interior, for concrete floors, MPI #58.

1) As directed.

4. Water-Based Concrete Floor Sealer System MPI INT 3.2G:

a. First Coat: Sealer, water based, for concrete floors, matching topcoat.
b. Topcoat: Sealer, water based, for concrete floors, MPI #99.

5. Solvent-Based Concrete Floor Sealer System MPI INT 3.2F:

a. First Coat: Sealer, solvent based, for concrete floors, matching topcoat.
b. Topcoat: Sealer, solvent based, for concrete floors, MPI #104.

1) As directed.

C. Cement Board Substrates:

1. Latex System MPI INT 3.3A:

a. Prime Coat: Primer, alkali resistant, water based, MPI #3.

1) As directed.

b. Intermediate Coat: Latex, interior, matching topcoat.
c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

2. Institutional Low-Odor/VOC Latex System MPI INT 3.3G:

a. Prime Coat: Primer sealer, interior, institutional low odor/VOC, MPI #149.

1) As directed.

b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.

c. Topcoat: Latex, interior, institutional low odor/VOC, flat (MPI Gloss Level 1), MPI #143.

1) As directed.

d. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 2), MPI #144.

1) As directed.

e. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 3), MPI #145.

1) As directed.

f. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 4), MPI #146.

1) As directed.

g. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147.

1) As directed.

h. Topcoat: Latex, interior, institutional low odor/VOC, gloss (MPI Gloss Level 6), MPI #148.

1) As directed.

3. High-Performance Architectural Latex System MPI INT 3.3B:

a. Prime Coat: Primer, alkali resistant, water based, MPI #3.

1) As directed.

b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.

c. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 2), MPI #138.

1) As directed.

d. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 3), MPI #139.

1) As directed.

e. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 4), MPI #140.

1) As directed.

f. Topcoat: Latex, interior, high performance architectural, semi-gloss (MPI Gloss Level 5), MPI #141.

1) As directed.

4. Water-Based Light Industrial Coating System MPI INT 3.3H:

a. Prime Coat: Primer, alkali resistant, water based, MPI #3.

1) As directed.

b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.

c. Topcoat: Light industrial coating, interior, water based (MPI Gloss Level 3), MPI #151.

1) As directed.

d. Topcoat: Light industrial coating, interior, water based, semi-gloss (MPI Gloss Level 5), MPI #153.

1) As directed.

e. Topcoat: Light industrial coating, interior, water based, gloss (MPI Gloss Level 6), MPI #154.

1) As directed.

5. Alkyd System MPI INT 3.3C:

a. Prime Coat: Primer, alkali resistant, water based, MPI #3.

1) As directed.

b. Intermediate Coat: Alkyd, interior, matching topcoat.

c. Topcoat: Alkyd, interior, flat (MPI Gloss Level 1), MPI #49.

1) As directed.

d. Topcoat: Alkyd, interior (MPI Gloss Level 3), MPI #51.

1) As directed.

e. Topcoat: Alkyd, interior, semi-gloss (MPI Gloss Level 5), MPI #47.

1) As directed.

f. Topcoat: Alkyd, interior, gloss (MPI Gloss Level 6), MPI #48.

1) As directed.

D. Clay Masonry Substrates:

1. Latex System MPI INT 4.1A:

a. Prime Coat: Primer, alkali resistant, water based, MPI #3.

1) As directed.

b. Intermediate Coat: Latex, interior, matching topcoat.
c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

2. Latex Aggregate System MPI INT 4.1B:

a. Prime Coat: Primer for textured coating, latex, flat, as recommended in writing by topcoat manufacturer.
b. Intermediate Coat: Intermediate coat for textured coating, latex, flat, as recommended in writing by topcoat manufacturer.
c. Topcoat: Textured coating, latex, nonflat, MPI #41.

1) As directed.

d. Topcoat: Textured coating, latex, flat, MPI #42.

1) As directed.

3. Institutional Low-Odor/VOC Latex System MPI INT 4.1M:

a. Prime Coat: Primer sealer, interior, institutional low odor/VOC, MPI #149.

1) As directed.

b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.

c. Topcoat: Latex, interior, institutional low odor/VOC, flat (MPI Gloss Level 1), MPI #143.

1) As directed.

d. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 2), MPI #144.

1) As directed.

e. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 3), MPI #145.

1) As directed.

f. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 4), MPI #146.

1) As directed.

g. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147.

1) As directed.

h. Topcoat: Latex, interior, institutional low odor/VOC, gloss (MPI Gloss Level 6), MPI #148.

1) As directed.

4. High-Performance Architectural Latex System MPI INT 4.1L:

a. Prime Coat: Primer, alkali resistant, water based, MPI #3.

1) As directed.

b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.

c. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 2), MPI #138.

1) As directed.

d. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 3), MPI #139.

1) As directed.

e. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 4), MPI #140.

1) As directed.

f. Topcoat: Latex, interior, high performance architectural, semi-gloss (MPI Gloss Level 5), MPI #141.

1) As directed.

5. Water-Based Light Industrial Coating System MPI INT 4.1C:

a. Prime Coat: Primer, alkali resistant, water based, MPI #3.

1) As directed.

b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.
c. Topcoat: Light industrial coating, interior, water based (MPI Gloss Level 3), MPI #151.

1) As directed.

d. Topcoat: Light industrial coating, interior, water based, semi-gloss (MPI Gloss Level 5), MPI #153.

1) As directed.

e. Topcoat: Light industrial coating, interior, water based, gloss (MPI Gloss Level 6), MPI #154.

1) As directed.

6. Alkyd System MPI INT 4.1D:

a. Prime Coat: Primer, alkali resistant, water based, MPI #3.

1) As directed.

b. Intermediate Coat: Alkyd, interior, matching topcoat.
c. Topcoat: Alkyd, interior, flat (MPI Gloss Level 1), MPI #49.

1) As directed.

d. Topcoat: Alkyd, interior (MPI Gloss Level 3), MPI #51.

1) As directed.

e. Topcoat: Alkyd, interior, semi-gloss (MPI Gloss Level 5), MPI #47.

1) As directed.

f. Topcoat: Alkyd, interior, gloss (MPI Gloss Level 6), MPI #48.

1) As directed.

E. CMU Substrates:

1. Latex System MPI INT 4.2A:

a. Block Filler: Block filler, latex, interior/exterior, MPI #4.

1) As directed.

b. Intermediate Coat: Latex, interior, matching topcoat.
c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

2. Latex Aggregate System MPI INT 4.2B:

a. Prime Coat: Primer for textured coating, latex, flat, as recommended in writing by topcoat manufacturer.

b. Intermediate Coat: Intermediate coat for textured coating, latex, flat, as recommended in writing by topcoat manufacturer.
c. Topcoat: Textured coating, latex, nonflat, MPI #41.

1) As directed.

d. Topcoat: Textured coating, latex, flat, MPI #42.

1) As directed.

3. Institutional Low-Odor/VOC Latex System MPI INT 4.2E:

a. Block Filler: Block filler, latex, interior/exterior, MPI #4.

1) As directed.

b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
c. Topcoat: Latex, interior, institutional low odor/VOC, flat (MPI Gloss Level 1), MPI #143.

1) As directed.

d. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 2), MPI #144.

1) As directed.

e. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 3), MPI #145.

1) As directed.

f. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 4), MPI #146.

1) As directed.

g. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147.

1) As directed.

h. Topcoat: Latex, interior, institutional low odor/VOC, gloss (MPI Gloss Level 6), MPI #148.

1) As directed.

4. High-Performance Architectural Latex System MPI INT 4.2D or MPI INT 4.2P:

a. Block Filler: Block filler, latex, interior/exterior, MPI #4.

1) As directed.

b. Prime Coat: Primer, alkali resistant, water based, MPI #3.

1) As directed.

c. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.

d. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 2), MPI #138.

1) As directed.

e. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 3), MPI #139.

1) As directed.

f. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 4), MPI #140.

1) As directed.

g. Topcoat: Latex, interior, high performance architectural, semi-gloss (MPI Gloss Level 5), MPI #141.

1) As directed.

5. Water-Based Light Industrial Coating System MPI INT 4.2K:

a. Block Filler: Block filler, latex, interior/exterior, MPI #4.

1) As directed.

b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.

c. Topcoat: Light industrial coating, interior, water based (MPI Gloss Level 3), MPI #151.

1) As directed.

d. Topcoat: Light industrial coating, interior, water based, semi-gloss (MPI Gloss Level 5), MPI #153.

1) As directed.

e. Topcoat: Light industrial coating, interior, water based, gloss (MPI Gloss Level 6), MPI #154.

1) As directed.

6. Alkyd System MPI INT 4.2C or MPI INT 4.2N:

a. Block Filler: Block filler, latex, interior/exterior, MPI #4.

1) As directed.

b. Sealer Coat: Primer sealer, latex, interior, MPI #50.

1) As directed.

c. Intermediate Coat: Alkyd, interior, matching topcoat.
d. Topcoat: Alkyd, interior, flat (MPI Gloss Level 1), MPI #49.

1) As directed.

e. Topcoat: Alkyd, interior (MPI Gloss Level 3), MPI #51.

1) As directed.

f. Topcoat: Alkyd, interior, semi-gloss (MPI Gloss Level 5), MPI #47.

1) As directed.

g. Topcoat: Alkyd, interior, gloss (MPI Gloss Level 6), MPI #48.

1) As directed.

F. Steel Substrates:

1. Latex System, Alkyd Primer MPI INT 5.1Q or MPI INT 5.1QQ:

a. Prime Coat: Primer, alkyd, quick dry, for metal, MPI #76.

1) As directed.

b. Prime Coat: Primer, alkyd, anti-corrosive, for metal, MPI #79.

1) As directed.

c. Prime Coat: Shop primer specified in Section where substrate is specified.
d. Intermediate Coat: Latex, interior, matching topcoat.
e. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

g. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

h. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

i. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

j. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

2. Latex over Shop-Applied Quick-Drying Shop Primer System MPI INT 5.1X:

a. Prime Coat: Primer, quick dry, for shop application, MPI #275.

1) As directed.

b. Intermediate Coat: Latex, interior, matching topcoat.
c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

3. Institutional Low-Odor/VOC Latex System MPI INT 5.1S:

a. Prime Coat: Primer, rust inhibitive, water based MPI #107.

1) As directed.

b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
c. Topcoat: Latex, interior, institutional low odor/VOC, flat (MPI Gloss Level 1), MPI #143.

1) As directed.

d. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 2), MPI #144.

1) As directed.

e. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 3), MPI #145.

1) As directed.

f. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 4), MPI #146.

1) As directed.

g. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147.

1) As directed.

h. Topcoat: Latex, interior, institutional low odor/VOC, gloss (MPI Gloss Level 6), MPI #148.

1) As directed.

4. High-Performance Architectural Latex System MPI INT 5.1R or MPI INT 5.1R:

a. Prime Coat: Primer, alkyd, quick dry, for metal, MPI #76.

1) As directed.

b. Prime Coat: Primer, alkyd, anti-corrosive, for metal, MPI #79.

1) As directed.

c. Prime Coat: Shop primer specified in Section where substrate is specified.
d. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.
e. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 2), MPI #138.

1) As directed.

f. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 3), MPI #139.

1) As directed.

g. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 4), MPI #140.

1) As directed.

h. Topcoat: Latex, interior, high performance architectural, semi-gloss (MPI Gloss Level 5), MPI #141.

1) As directed.

5. Water-Based Light Industrial Coating System MPI INT 5.1B:

a. Prime Coat: Primer, rust-inhibitive, water based MPI #107.

1) As directed.

b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.

c. Topcoat: Light industrial coating, interior, water based (MPI Gloss Level 3), MPI #151.

1) As directed.

d. Topcoat: Light industrial coating, interior, water based, semi-gloss (MPI Gloss Level 5), MPI #153.

1) As directed.

e. Topcoat: Light industrial coating, interior, water based, gloss (MPI Gloss Level 6), MPI #154.

1) As directed.

6. Water-Based Dry-Fall System MPI INT 5.1C or MPI INT 5.1CC:

a. Prime Coat: Primer, alkyd, quick dry, for metal, MPI #76.

1) As directed.

b. Prime Coat: Primer, alkyd, anti-corrosive, for metal, MPI #79.

1) As directed.

c. Prime Coat: Shop primer specified in Section where substrate is specified.

d. Topcoat: Dry fall, latex, flat, MPI #118.

1) As directed.

e. Topcoat: Dry fall, water based, for galvanized steel, flat (MPI Gloss Level 1), MPI #133.

1) As directed.

f. Topcoat: Dry fall, latex (MPI Gloss Level 3), MPI #155.

1) As directed.

g. Topcoat: Dry fall, latex (MPI Gloss Level 5), MPI #226.

1) As directed.

7. Alkyd System MPI INT 5.1E or MPI INT 5.1EE:

a. Prime Coat: Primer, alkyd, quick dry, for metal, MPI #76.

1) As directed.

b. Prime Coat: Primer, alkyd, anti-corrosive, for metal, MPI #79.

1) As directed.

c. Prime Coat: Shop primer specified in Section where substrate is specified.
d. Intermediate Coat: Alkyd, interior, matching topcoat.
e. Topcoat: Alkyd, interior, flat (MPI Gloss Level 1), MPI #49.

1) As directed.

f. Topcoat: Alkyd, interior (MPI Gloss Level 3), MPI #51.

1) As directed.

g. Topcoat: Alkyd, interior, semi-gloss (MPI Gloss Level 5), MPI #47.

1) As directed.

h. Topcoat: Alkyd, interior, gloss (MPI Gloss Level 6), MPI #48.

1) As directed.

8. Alkyd over Surface-Tolerant Primer System MPI INT 5.1T:

a. Prime Coat: Primer, metal, surface tolerant MPI #23.

1) As directed.

b. Intermediate Coat: Alkyd, interior, matching topcoat.
c. Topcoat: Alkyd, interior, flat (MPI Gloss Level 1), MPI #49.

1) As directed.

d. Topcoat: Alkyd, interior (MPI Gloss Level 3), MPI #51.

1) As directed.

e. Topcoat: Alkyd, interior, semi-gloss (MPI Gloss Level 5), MPI #47.

1) As directed.

f. Topcoat: Alkyd, interior, gloss (MPI Gloss Level 6), MPI #48.

9. Quick-Dry Enamel System MPI INT 5.1A:

a. Prime Coat: Primer, alkyd, quick dry, for metal, MPI #76.

1) As directed.

b. Intermediate Coat: Alkyd, quick dry, matching topcoat.
c. Topcoat: Alkyd, quick dry, semi-gloss (MPI Gloss Level 5), MPI #81.

1) As directed.

d. Topcoat: Alkyd, quick dry, gloss (MPI Gloss Level 7), MPI #96.

1) As directed.

10. Alkyd Dry-Fall System MPI INT 5.1D or MPI INT 5.1DD:

a. Prime Coat: Primer, alkyd, quick dry, for metal, MPI #76.

1) As directed.

b. Prime Coat: Primer, alkyd, anti-corrosive, for metal, MPI #79.

1) As directed.

c. Prime Coat: Shop primer specified in Section where substrate is specified.
d. Topcoat: Dry fall, alkyd, flat, MPI #55.

1) As directed.

e. Topcoat: Dry fall, alkyd (MPI Gloss Level 3), MPI #89.

1) As directed.

f. Topcoat: Dry fall, alkyd, semi-gloss (MPI Gloss Level 5), MPI #225.

1) As directed.

11. Aluminum Paint System MPI INT 5.1M or MPI INT 5.1MM:

a. Prime Coat: Primer, alkyd, quick dry, for metal, MPI #76.

1) As directed.

b. Prime Coat: Primer, alkyd, anti-corrosive, for metal, MPI #79.

1) As directed.

c. Prime Coat: Shop primer specified in Section where substrate is specified.
d. Intermediate Coat: Aluminum paint, matching topcoat.

e. Topcoat: Aluminum paint, MPI #1.

1) As directed.

G. Galvanized-Metal Substrates:

1. Latex System MPI INT 5.3A:

a. Prime Coat: Primer, galvanized, water based, MPI #134.

1) As directed.

b. Intermediate Coat: Latex, interior, matching topcoat.
c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

2. Institutional Low-Odor/VOC Latex System MPI INT 5.3N:

a. Prime Coat: Primer, galvanized, water based, MPI #134.

1) As directed.

b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
c. Topcoat: Latex, interior, institutional low odor/VOC, flat (MPI Gloss Level 1), MPI #143.

1) As directed.

d. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 2), MPI #144.

1) As directed.

e. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 3), MPI #145.

1) As directed.

f. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 4), MPI #146.

1) As directed.

g. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147.

1) As directed.

h. Topcoat: Latex, interior, institutional low odor/VOC, gloss (MPI Gloss Level 6), MPI #148.

1) As directed.

3. High-Performance Architectural Latex System MPI INT 5.3M:

a. Prime Coat: Primer, galvanized, water based, MPI #134.

1) As directed.

b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.

c. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 2), MPI #138.

1) As directed.

d. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 3), MPI #139.

1) As directed.

e. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 4), MPI #140.

1) As directed.

f. Topcoat: Latex, interior, high performance architectural, semi-gloss (MPI Gloss Level 5), MPI #141.

1) As directed.

4. Water-Based Light Industrial Coating System MPI INT 5.3B:

a. Prime Coat: Primer, galvanized, water based, MPI #134.

1) As directed.

b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.
c. Topcoat: Light industrial coating, interior, water based (MPI Gloss Level 3), MPI #151.

1) As directed.

d. Topcoat: Light industrial coating, interior, water based, semi-gloss (MPI Gloss Level 5), MPI #153.

1) As directed.

e. Topcoat: Light industrial coating, interior, water based, gloss (MPI Gloss Level 6), MPI #154.

1) As directed.

5. Water-Based Dry-Fall System MPI INT 5.3H:

a. Prime Coat: Dry fall, water based, for galvanized steel, matching topcoat.
b. Topcoat: Dry fall, water based, for galvanized steel, flat (MPI Gloss Level 1), MPI #133.

1) As directed.

6. Alkyd over Cementitious Primer System MPI INT 5.3C:

a. Prime Coat: Primer, galvanized, cementitious, MPI #26.

1) As directed.

b. Intermediate Coat: Alkyd, interior, matching topcoat.
c. Topcoat: Alkyd, interior, flat (MPI Gloss Level 1), MPI #49.

1) As directed.

d. Topcoat: Alkyd, interior (MPI Gloss Level 3), MPI #51.

1) As directed.

e. Topcoat: Alkyd, interior, semi-gloss (MPI Gloss Level 5), MPI #47.

1) As directed.

f. Topcoat: Alkyd, interior, gloss (MPI Gloss Level 6), MPI #48.

1) As directed.

7. Alkyd Dry-Fall System (Cementitious Primer) MPI INT 5.3F:

   a. Prime Coat: Primer, galvanized, cementitious, MPI #26.

      1) As directed.

   b. Topcoat: Dry fall, alkyd, flat, MPI #55.

      1) As directed.

   c. Topcoat: Dry fall, alkyd (MPI Gloss Level 3), MPI #89.

      1) As directed.

   d. Topcoat: Dry fall, alkyd, semi-gloss (MPI Gloss Level 5), MPI #225.

      1) As directed.

8. Aluminum Paint System (Cementitious Primer) MPI INT 5.3G:

   a. Prime Coat: Primer, galvanized, cementitious, MPI #26.

      1) As directed.

   b. Intermediate Coat: Aluminum paint, matching topcoat.
   c. Topcoat: Aluminum paint, MPI #1.

      1) As directed.

H. Aluminum (Not Anodized or Otherwise Coated) Substrates:

1. Latex System MPI INT 5.4H:

   a. Prime Coat: Primer, quick dry, for aluminum, MPI #95.

      1) As directed.

   b. Intermediate Coat: Latex, interior, matching topcoat.
   c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

      1) As directed.

   d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

      1) As directed.

   e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

      1) As directed.

   f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

2. Institutional Low-Odor/VOC Latex System MPI INT 5.4G:

a. Prime Coat: Primer, quick dry, for aluminum, MPI #95.

1) As directed.

b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.

c. Topcoat: Latex, interior, institutional low odor/VOC, flat (MPI Gloss Level 1), MPI #143.

1) As directed.

d. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 2), MPI #144.

1) As directed.

e. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 3), MPI #145.

1) As directed.

f. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 4), MPI #146.

1) As directed.

g. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147.

1) As directed.

h. Topcoat: Latex, interior, institutional low odor/VOC, gloss (MPI Gloss Level 6), MPI #148.

1) As directed.

3. High-Performance Architectural Latex System MPI INT 5.4F:

a. Prime Coat: Primer, quick dry, for aluminum, MPI #95:

1) As directed.

b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.

c. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 2), MPI #138.

1) As directed.

d. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 3), MPI #139.

1) As directed.

e. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 4), MPI #140.

1) As directed.

f. Topcoat: Latex, interior, high performance architectural, semi-gloss (MPI Gloss Level 5), MPI #141.

1) As directed.

4. Water-Based Light Industrial Coating System MPI INT 5.4E:

a. Prime Coat: Primer, quick dry, for aluminum, MPI #95.

1) As directed.

b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.

c. Topcoat: Light industrial coating, interior, water based (MPI Gloss Level 3), MPI #151.

1) As directed.

d. Topcoat: Light industrial coating, interior, water based, semi-gloss (MPI Gloss Level 5), MPI #153.

1) As directed.

e. Topcoat: Light industrial coating, interior, water based, gloss (MPI Gloss Level 6), MPI #154.

1) As directed.

5. Alkyd System MPI INT 5.4A or MPI INT 5.4:

a. Prime Coat: Primer, vinyl wash, MPI #80.

1) As directed.

b. Prime Coat: Primer, quick dry, for aluminum, MPI #95.

1) As directed.

c. Intermediate Coat: Alkyd, interior, matching topcoat.
d. Topcoat: Alkyd, interior, flat (MPI Gloss Level 1), MPI #49.

1) As directed.

e. Topcoat: Alkyd, interior (MPI Gloss Level 3), MPI #51.

1) As directed.

f. Topcoat: Alkyd, interior, semi-gloss (MPI Gloss Level 5), MPI #47.

1) As directed.

g. Topcoat: Alkyd, interior, gloss (MPI Gloss Level 6), MPI #48.

1) As directed.

I. Wood Substrates: Glued-laminated construction.

1. Latex over Latex Primer System MPI INT 6.1M:

a. Prime Coat: Primer, latex, for interior wood, MPI #39.

1) As directed.

b. Intermediate Coat: Latex, interior, matching topcoat.
c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

2. Latex over Alkyd Primer System MPI INT 6.1A:

a. Prime Coat: Primer sealer, alkyd, interior, MPI #45.

1) As directed.

b. Intermediate Coat: Latex, interior, matching topcoat.
c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

3. Institutional Low-Odor/VOC Latex System MPI INT 6.1Q:

a. Prime Coat: Primer, latex, for interior wood, MPI #39.

1) As directed.

b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
c. Topcoat: Latex, interior, institutional low odor/VOC, flat (MPI Gloss Level 1), MPI #143.

1) As directed.

d. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 2), MPI #144.

1) As directed.

e. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 3), MPI #145.

1) As directed.

f. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 4), MPI #146.

1) As directed.

g. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147.

1) As directed.

h. Topcoat: Latex, interior, institutional low odor/VOC, gloss (MPI Gloss Level 6), MPI #148.

1) As directed.

4. High-Performance Architectural Latex System MPI INT 6.1N:

a. Prime Coat: Primer, latex, for interior wood, MPI #39:

1) As directed.

b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.

c. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 2), MPI #138.

1) As directed.

d. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 3), MPI #139.

1) As directed.

e. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 4), MPI #140.

1) As directed.

f. Topcoat: Latex, interior, high performance architectural, semi-gloss (MPI Gloss Level 5), MPI #141.

1) As directed.

5. Alkyd System MPI INT 6.1B:

a. Prime Coat: Primer sealer, alkyd, interior, MPI #45.

1) As directed.

b. Intermediate Coat: Alkyd, interior, matching topcoat.
c. Topcoat: Alkyd, interior, flat (MPI Gloss Level 1), MPI #49.

1) As directed.

d. Topcoat: Alkyd, interior (MPI Gloss Level 3), MPI #51.

1) As directed.

e. Topcoat: Alkyd, interior, semi-gloss (MPI Gloss Level 5), MPI #47.

1) As directed.

f. Topcoat: Alkyd, interior, gloss (MPI Gloss Level 6), MPI #48.

1) As directed.

J. Wood Substrates: Exposed framing.

1. Latex over Latex Primer System MPI INT 6.2D:

a. Prime Coat: Primer, latex, for interior wood, MPI #39.

1) As directed.

b. Intermediate Coat: Latex, interior, matching topcoat.
c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

2. Latex over Alkyd Primer System MPI INT 6.2A:

   a. Prime Coat: Primer sealer, alkyd, interior, MPI #45.

      1) As directed.

   b. Intermediate Coat: Latex, interior, matching topcoat.
   c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

      1) As directed.

   d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

      1) As directed.

   e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

      1) As directed.

   f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

      1) As directed.

   g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

      1) As directed.

   h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

      1) As directed.

3. Institutional Low-Odor/VOC Latex System MPI INT 6.2L:

   a. Prime Coat: Primer, latex, for interior wood, MPI #39.

      1) As directed.

   b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
   c. Topcoat: Latex, interior, institutional low odor/VOC, flat (MPI Gloss Level 1), MPI #143.

      1) As directed.

   d. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 2), MPI #144.

      1) As directed.

   e. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 3), MPI #145.

1) As directed.

f. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 4), MPI #146.

1) As directed.

g. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147.

1) As directed.

h. Topcoat: Latex, interior, institutional low odor/VOC, gloss (MPI Gloss Level 6), MPI #148.

1) As directed.

4. High-Performance Architectural Latex System MPI INT 6.2B:

a. Prime Coat: Primer, latex, for interior wood, MPI #39.

1) As directed.

b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.

c. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 2), MPI #138.

1) As directed.

d. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 3), MPI #139.

1) As directed.

e. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 4), MPI #140.

1) As directed.

f. Topcoat: Latex, interior, high performance architectural, semi-gloss (MPI Gloss Level 5), MPI #141.

1) As directed.

5. Alkyd System MPI INT 6.2C:

a. Prime Coat: Primer sealer, alkyd, interior, MPI #45.

1) As directed.

b. Intermediate Coat: Alkyd, interior, matching topcoat.

c. Topcoat: Alkyd, interior, flat (MPI Gloss Level 1), MPI #49.

1) As directed.

d. Topcoat: Alkyd, interior (MPI Gloss Level 3), MPI #51.

1) As directed.

e. Topcoat: Alkyd, interior, semi-gloss (MPI Gloss Level 5), MPI #47.

1) As directed.

f. Topcoat: Alkyd, interior, gloss (MPI Gloss Level 6), MPI #48.

1) As directed.

K. Wood Substrates: As directed.

1. Latex over Latex Primer System MPI INT 6.3T:

a. Prime Coat: Primer, latex, for interior wood, MPI #39.

1) As directed.

b. Intermediate Coat: Latex, interior, matching topcoat.
c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

2. Latex over Alkyd Primer System MPI INT 6.3U:

a. Prime Coat: Primer sealer, alkyd, interior, MPI #45.

1) As directed.

b. Intermediate Coat: Latex, interior, matching topcoat.
c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

3. Institutional Low-Odor/VOC Latex System MPI INT 6.3V:

a. Prime Coat: Primer, latex, for interior wood, MPI #39.

1) As directed.

b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
c. Topcoat: Latex, interior, institutional low odor/VOC, flat (MPI Gloss Level 1), MPI #143.

1) As directed.

d. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 2), MPI #144.

1) As directed.

e. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 3), MPI #145.

1) As directed.

f. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 4), MPI #146.

1) As directed.

g. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147.

1) As directed.

h. Topcoat: Latex, interior, institutional low odor/VOC, gloss (MPI Gloss Level 6), MPI #148.

1) As directed.

4. High-Performance Architectural Latex System MPI INT 6.3A:

a. Prime Coat: Primer, latex, for interior wood, MPI #39.

1) As directed.

b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.

c. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 2), MPI #138.

1) As directed.

d. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 3), MPI #139.

1) As directed.

e. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 4), MPI #140.

1) As directed.

f. Topcoat: Latex, interior, high performance architectural, semi-gloss (MPI Gloss Level 5), MPI #141.

1) As directed.

5. Water-Based Alkyd System MPI INT 6.3BB:

a. Prime Coat: Primer, latex, for interior wood, MPI #39.

1) As directed.

b. Intermediate Coat: Alkyd, water based, matching topcoat.

c. Topcoat: Alkyd, water based, gloss (MPI Gloss Level 6-7), MPI #157.

1) As directed.

6. Alkyd System MPI INT 6.3B:

a. Prime Coat: Primer sealer, alkyd, interior, MPI #45.

1) As directed.

b. Intermediate Coat: Alkyd, interior, matching topcoat.
c. Topcoat: Alkyd, interior, flat (MPI Gloss Level 1), MPI #49.

1) As directed.

d. Topcoat: Alkyd, interior (MPI Gloss Level 3), MPI #51.

1) As directed.

e. Topcoat: Alkyd, interior, semi-gloss (MPI Gloss Level 5), MPI #47.

1) As directed.

f. Topcoat: Alkyd, interior, gloss (MPI Gloss Level 6), MPI #48.

1) As directed.

L. Wood Substrates: Wood paneling and casework.

1. Latex over Latex Primer System MPI INT 6.4R:

a. Prime Coat: Primer, latex, for interior wood, MPI #39.

1) As directed.

b. Intermediate Coat: Latex, interior, matching topcoat.
c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

2. Latex over Alkyd Sealer System MPI INT 6.4A:

a. Prime Coat: Primer sealer, alkyd, interior, MPI #45.

1) As directed.

b. Intermediate Coat: Latex, interior, matching topcoat.
c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

3. Institutional Low-Odor/VOC Latex System MPI INT 6.4T:

a. Prime Coat: Primer, latex, for interior wood, MPI #39.

1) As directed.

b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
c. Topcoat: Latex, interior, institutional low odor/VOC, flat (MPI Gloss Level 1), MPI #143.

1) As directed.

d. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 2), MPI #144.

1) As directed.

e. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 3), MPI #145.

1) As directed.

f. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 4), MPI #146.

1) As directed.

g. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147.

1) As directed.

h. Topcoat: Latex, interior, institutional low odor/VOC, gloss (MPI Gloss Level 6), MPI #148.

1) As directed.

4. High-Performance Architectural Latex System MPI INT 6.4S:

a. Prime Coat: Primer, latex, for interior wood, MPI #39.

1) As directed.

b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.

c. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 2), MPI #138.

1) As directed.

d. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 3), MPI #139.

1) As directed.

e. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 4), MPI #140.

1) As directed.

f. Topcoat: Latex, interior, high performance architectural, semi-gloss (MPI Gloss Level 5), MPI #141.

1) As directed.

5. Alkyd over Alkyd Sealer System MPI INT 6.4B:

a. Prime Coat: Primer sealer, alkyd, interior, MPI #45.

1) As directed.

b. Intermediate Coat: Alkyd, interior, matching topcoat.
c. Topcoat: Alkyd, interior, flat (MPI Gloss Level 1), MPI #49.

1) As directed.

d. Topcoat: Alkyd, interior (MPI Gloss Level 3), MPI #51.

1) As directed.

e. Topcoat: Alkyd, interior, semi-gloss (MPI Gloss Level 5), MPI #47.

1) As directed.

f. Topcoat: Alkyd, interior, gloss (MPI Gloss Level 6), MPI #48.

1) As directed.

M. Wood Substrates: Traffic surfaces, including floors and stairs.

1. Latex Porch & Floor Enamel System MPI INT 6.5G:

a. Prime Coat: Primer sealer, alkyd, interior, MPI #45.

1) As directed.

b. Intermediate Coat: Floor paint, latex, matching topcoat.
c. Topcoat: Floor paint, latex, low gloss (maximum MPI Gloss Level 3), MPI #60.

1) As directed.

2. Alkyd Floor Enamel System MPI INT 6.5A:

a. Prime Coat: Floor enamel, alkyd, matching topcoat.
b. Intermediate Coat: Floor enamel, alkyd, matching topcoat.
c. Topcoat: Floor enamel, alkyd, gloss (MPI Gloss Level 6), MPI #27.

1) As directed.

N. Plastic Substrates:

1. Latex System MPI INT 6.8E:

a. Prime Coat: Primer, bonding, solvent based, MPI #69.

1) As directed.

b. Intermediate Coat: Latex, interior, matching topcoat.
c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

2. Institutional Low-Odor/VOC Latex System MPI INT 6.8F:

a. Prime Coat: Primer, bonding, solvent based, MPI #69.

1) As directed.

b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
c. Topcoat: Latex, interior, institutional low odor/VOC, flat (MPI Gloss Level 1), MPI #143.

1) As directed.

d. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 2), MPI #144.

1) As directed.

e. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 3), MPI #145.

1) As directed.

f. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 4), MPI #146.

1) As directed.

g. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147.

1) As directed.

h. Topcoat: Latex, interior, institutional low odor/VOC, gloss (MPI Gloss Level 6), MPI #148.

1) As directed.

3. High-Performance Architectural Latex System MPI INT 6.8A:

a. Prime Coat: Primer, bonding, solvent based, MPI #69.

1) As directed.

b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.

c. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 2), MPI #138.

1) As directed.

d. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 3), MPI #139.

1) As directed.

e. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 4), MPI #140.

1) As directed.

f. Topcoat: Latex, interior, high performance architectural, semi-gloss (MPI Gloss Level 5), MPI #141.

1) As directed.

4. Alkyd System MPI INT 6.8B:

a. Prime Coat: Primer, bonding, solvent based, MPI #69.

1) As directed.

b. Intermediate Coat: Alkyd, interior, matching topcoat.

c. Topcoat: Alkyd, interior, flat (MPI Gloss Level 1), MPI #49.

1) As directed.

d. Topcoat: Alkyd, interior (MPI Gloss Level 3), MPI #51.

1) As directed.

e. Topcoat: Alkyd, interior, semi-gloss (MPI Gloss Level 5), MPI #47.

1) As directed.

f. Topcoat: Alkyd, interior, gloss (MPI Gloss Level 6), MPI #48.

1) As directed.

O. Spray-Textured Ceiling Substrates:

1. Latex, Flat System MPI INT 9.1A Spray applied.

a. Prime Coat: Latex, interior, flat, matching topcoat.
b. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

2. Latex System MPI INT 9.1E: Spray applied.

a. Prime Coat: Latex, interior, matching topcoat.
b. Intermediate Coat: Latex, interior, matching topcoat.
c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

3. Alkyd, Flat System MPI INT 9.1C:

a. Prime Coat: Alkyd, interior, flat matching topcoat.
b. Topcoat: Alkyd, interior, flat (MPI Gloss Level 1), MPI #49.

1) As directed.

4. Alkyd over Alkyd Sealer System MPI INT 9.1D:

a. Prime Coat: Primer sealer, alkyd, interior, MPI #45.

1) As directed.

b. Intermediate Coat: Alkyd, interior, matching topcoat.
c. Topcoat: Alkyd, interior, flat (MPI Gloss Level 1), MPI #49.

1) As directed.

d. Topcoat: Alkyd, interior (MPI Gloss Level 3), MPI #51.

1) As directed.

e. Topcoat: Alkyd, interior, semi-gloss (MPI Gloss Level 5), MPI #47.

1) As directed.

f. Topcoat: Alkyd, interior, gloss (MPI Gloss Level 6), MPI #48.

1) As directed.

P. Gypsum Board and Plaster Substrates:

1. Latex over Latex Sealer System MPI INT 9.2A:

a. Prime Coat: Primer sealer, latex, interior, MPI #50.

1) As directed.

b. Prime Coat: Latex, interior, matching topcoat.
c. Intermediate Coat: Latex, interior, matching topcoat.
d. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

g. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

h. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

i. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

2. Latex over Alkyd Primer System (for Plaster Only) MPI INT 9.2K:

a. Prime Coat: Primer sealer, alkyd, interior, MPI #45.

1) As directed.

b. Intermediate Coat: Latex, interior, matching topcoat.
c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

1) As directed.

d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

1) As directed.

e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

1) As directed.

f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

1) As directed.

g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed.

3. Institutional Low-Odor/VOC Latex System MPI INT 9.2M:

a. Prime Coat: Primer sealer, interior, institutional low odor/VOC, MPI #149.

1) As directed.

b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
c. Topcoat: Latex, interior, institutional low odor/VOC, flat (MPI Gloss Level 1), MPI #143.

1) As directed.

d. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 2), MPI #144.

1) As directed.

e. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 3), MPI #145.

1) As directed.

f. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 4), MPI #146.

1) As directed.

g. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147.

1) As directed.

h. Topcoat: Latex, interior, institutional low odor/VOC, gloss (MPI Gloss Level 6), MPI #148.

1) As directed.

4. High-Performance Architectural Latex System MPI INT 9.2B:

a. Prime Coat: Primer sealer, latex, interior, MPI #50.

1) As directed.

b. Intermediate Coat: Latex, interior, high performance architectural, matching topcoat.

c. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 2), MPI #138.

1) As directed.

d. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 3), MPI #139.

1) As directed.

e. Topcoat: Latex, interior, high performance architectural (MPI Gloss Level 4), MPI #140.

1) As directed.

f. Topcoat: Latex, interior, high performance architectural, semi-gloss (MPI Gloss Level 5), MPI #141.

1) As directed.

5. Alkyd over Latex Sealer System MPI INT 9.2C:

   a. Prime Coat: Primer sealer, latex, interior, MPI #50.

      1) As directed.

   b. Intermediate Coat: Alkyd, interior, matching topcoat.
   c. Topcoat: Alkyd, interior, flat (MPI Gloss Level 1), MPI #49.

      1) As directed.

   d. Topcoat: Alkyd, interior (MPI Gloss Level 3), MPI #51.

      1) As directed.

   e. Topcoat: Alkyd, interior, semi-gloss (MPI Gloss Level 5), MPI #47.

      1) As directed.

   f. Topcoat: Alkyd, interior, gloss (MPI Gloss Level 6), MPI #48.

      1) As directed.

Q. Cotton or Canvas and ASJ Insulation-Covering Substrates: Including pipe and duct coverings, as directed.

1. Latex System MPI INT 10.1A:

   a. Prime Coat: Primer sealer, latex, interior, MPI #50.

      1) As directed.

   b. Intermediate Coat: Latex, interior, matching topcoat.
   c. Topcoat: Latex, interior, flat (MPI Gloss Level 1), MPI #53.

      1) As directed.

   d. Topcoat: Latex, interior (MPI Gloss Level 2), MPI #44.

      1) As directed.

   e. Topcoat: Latex, interior (MPI Gloss Level 3), MPI #52.

      1) As directed.

   f. Topcoat: Latex, interior (MPI Gloss Level 4), MPI #43.

      1) As directed.

   g. Topcoat: Latex, interior, semi-gloss (MPI Gloss Level 5), MPI #54.

      1) As directed.

h. Topcoat: Latex, interior, gloss (MPI Gloss Level 6, except minimum gloss of 65 units at 60 degrees), MPI #114.

1) As directed..

2. Institutional Low-Odor/VOC Latex System MPI INT 10.1D:

a. Prime Coat: Primer sealer, latex, interior, MPI #50.

1) As directed.

b. Intermediate Coat: Latex, interior, institutional low odor/VOC, matching topcoat.
c. Topcoat: Latex, interior, institutional low odor/VOC, flat (MPI Gloss Level 1), MPI #143.

1) As directed.

d. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 2), MPI #144.

1) As directed.

e. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 3), MPI #145.

1) As directed.

f. Topcoat: Latex, interior, institutional low odor/VOC (MPI Gloss Level 4), MPI #146.

1) As directed.

g. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147.

1) As directed.

h. Topcoat: Latex, interior, institutional low odor/VOC, gloss (MPI Gloss Level 6), MPI #148.

1) As directed.

3. Alkyd System MPI INT 10.1B:

a. Prime Coat: Primer sealer, latex, interior, MPI #50.

1) As directed.

b. Intermediate Coat: Alkyd, interior, matching topcoat.
c. Topcoat: Alkyd, interior, flat (MPI Gloss Level 1), MPI #49.

1) As directed.

d. Topcoat: Alkyd, interior, (MPI Gloss Level 3), MPI #51.

1) As directed.

e. Topcoat: Alkyd, interior, semi-gloss (MPI Gloss Level 5), MPI #47.

1) As directed.

f. Topcoat: Alkyd, interior, gloss (MPI Gloss Level 6), MPI #48.

1) As directed.

4. Aluminum Paint System MPI INT 10.1C:

a. Prime Coat: Primer sealer, latex, interior, MPI #50.

1) As directed.

b. Intermediate Coat: Aluminum paint matching topcoat.
c. Topcoat: Aluminum paint, MPI #1.

1) As directed.

END OF SECTION 099123

SECTION 099300 - STAINING AND TRANSPARENT FINISHING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes surface preparation and application of wood stains and transparent finishes on the following substrates:

1. Exterior Substrates:

a. Exposed glued-laminated beams and columns.
b. Exposed framing.
c. Dressed lumber (finish carpentry or woodwork).
d. Wood-based panel products.
e. Wood decks and stairs.
f. Wood shingles and shakes (excluding roofs).

2. Interior Substrates:

a. Exposed glued-laminated beams and columns.
b. Exposed framing.
c. Dressed lumber (finish carpentry or woodwork).
d. Wood-based panel products.

1.2 DEFINITIONS

A. MPI Gloss Level 1: Not more than 5 units at 60 degrees and 10 units at 85 degrees, according to ASTM D523.

B. MPI Gloss Level 4: 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, according to ASTM D523.

C. MPI Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D523.

D. MPI Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D523.

E. MPI Gloss Level 7: More than 85 units at 60 degrees, according to ASTM D523.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product. Include preparation requirements and application instructions.

1. Include printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.

B. Sustainable Design Submittals: As directed.

C. Samples: For each type of finish system and in each color and gloss of finish required.

1.4 QUALITY ASSURANCE

A. Mockups: Apply mockups of each finish system indicated and each color selected to verify preliminary selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Architect will select one surface to represent surfaces and conditions for application of each type of finish system and substrate.

a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft. (9 sq. m).
b. Other Items: Architect will designate items or areas required.

2. Final approval of stain color selections will be based on mockups.

a. If preliminary stain color selections are not approved, apply additional mockups of additional stain colors selected by Architect at no added cost to Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide products indicated in wood finish systems schedules or comparable products by one of the following:

1. As directed.

B. Products: Subject to compliance with requirements, listed in wood finish systems schedules for the product category indicated, as directed.

2.2 MATERIALS, GENERAL

A. MPI Standards: Products shall comply with MPI standards indicated and shall be listed in its "MPI Approved Products List."

B. Material Compatibility:

1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, products shall be recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.

C. Stain Colors: As directed.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. Maximum Moisture Content of Exterior Wood Substrates: 15 percent, when measured with an electronic moisture meter.

C. Maximum Moisture Content of Interior Wood Substrates: percentage, when measured with an electronic moisture meter, as directed.

D. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers.

E. Proceed with finish application only after unsatisfactory conditions have been corrected.

1. Beginning finish application constitutes Contractor's acceptance of substrates and conditions.

3.2 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates indicated.

B. Remove hardware, covers, plates, and similar items already in place that are removable. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and finishing.

1. After completing finishing operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.

C. Clean and prepare surfaces to be finished according to manufacturer's written instructions for each substrate condition and as specified.

1. Remove dust, dirt, oil, and grease by washing with a detergent solution; rinse thoroughly with clean water and allow to dry. Remove grade stamps and pencil marks by sanding lightly. Remove loose wood fibers by brushing.
2. Remove mildew by scrubbing with a commercial wash formulated for mildew removal and as recommended by stain manufacturer.

3.3 APPLICATION

A. Apply finishes according to manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual."

B. Apply finishes to produce surface films without cloudiness, holidays, lap marks, brush marks, runs, ropiness, or other surface imperfections.

3.4 CLEANING AND PROTECTION

A. Protect work of other trades against damage from finish application. Correct damage by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.

B. At completion of construction activities of other trades, touch up and restore damaged or defaced finished wood surfaces.

3.5 EXTERIOR WOOD-FINISH-SYSTEM SCHEDULE

A. Wood Substrates: Glued-laminated construction.

1. Solid-Color, Solvent-Based Stain System MPI EXT 6.1C:

a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

1) As directed.

b. Intermediate Coat: Stain, exterior, solvent based, solid hide, matching topcoat.
c. Topcoat: Stain, exterior, solvent based, solid hide, MPI #14.

1) As directed.

2. Varnish over Semitransparent Stain System MPI EXT 6.1D:

a. Stain Coat: Stain, exterior, solvent based, semitransparent, MPI #13.

1) As directed.

b. First Intermediate Coat: Varnish matching topcoat.
c. Second Intermediate Coat: Varnish matching topcoat.
d. Topcoat: Varnish, with UV inhibitor, exterior, semi-gloss (MPI Gloss Level 5), MPI #30.

1) As directed.

e. Topcoat: Varnish, with UV inhibitor, exterior, gloss (MPI Gloss Level 6), MPI #29.

1) As directed.

f. Topcoat: Varnish, marine spar, exterior, gloss (MPI Gloss Level 7), MPI #28.

1) As directed.

3. Water-Based Varnish System MPI EXT 6.1M:

a. Prime Coat: Water-based varnish matching topcoat.
b. Intermediate Coat: Water-based varnish matching topcoat.
c. Topcoat: Water-based varnish (MPI Gloss Level 1), MPI #191.

1) As directed.

d. Topcoat: Water-based varnish (MPI Gloss Level 2), MPI #192.

1) As directed.

e. Topcoat: Water-based varnish (MPI Gloss Level 3), MPI #193.

1) As directed.

f. Topcoat: Water-based varnish (MPI Gloss Level 4), MPI #194.

1) As directed.

g. Topcoat: Water-based varnish (MPI Gloss Level 5), MPI #195.

1) As directed.

h. Topcoat: Water-based varnish (MPI Gloss Level 6), MPI #196.

1) As directed.

i. Topcoat: Water-based varnish (MPI Gloss Level 7), MPI #197.

1) As directed.

4. Varnish System MPI EXT 6.1K:

a. Prime Coat: Varnish matching topcoat.
b. First Intermediate Coat: Varnish matching topcoat.
c. Second Intermediate Coat: Varnish matching topcoat.
d. Topcoat: Varnish, with UV inhibitor, exterior, semi-gloss (MPI Gloss Level 5), MPI #30.

1) As directed.

e. Topcoat: Varnish, with UV inhibitor, exterior, gloss (MPI Gloss Level 6), MPI #29.

1) As directed.

f. Topcoat: Varnish, marine spar, exterior, gloss (MPI Gloss Level 7), MPI #28.

1) As directed.

5. Clear, Two-Component Polyurethane Varnish over Stain System MPI EXT 6.1E:

a. Stain Coat: Stain, exterior, solvent based, semitransparent, MPI #13.

1) As directed.

b. First Intermediate Coat: Varnish, aliphatic polyurethane, two component, matching topcoat.
c. Second Intermediate Coat: Varnish, aliphatic polyurethane, two component, matching topcoat.
d. Topcoat: Varnish, aliphatic polyurethane, two component (MPI Gloss Level 6 or 7), MPI #78.

1) As directed.

6. Clear, Two-Component Polyurethane Varnish System MPI EXT 6.1H:

a. Prime Coat: Varnish, aliphatic polyurethane, two component, matching topcoat.
b. Topcoat: Varnish, aliphatic polyurethane, two component (MPI Gloss Level 6 or 7), MPI #78.

1) As directed.

B. Wood Substrates: Exposed framing.

1. Solid-Color, Water-Based Stain System MPI EXT 6.2B:

a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

1) As directed.

b. Intermediate Coat: Stain, exterior, water based, solid hide, matching topcoat.
c. Topcoat: Stain, exterior, water based, solid hide, MPI #16.

1) As directed.

2. Solid-Color, Solvent-Based Stain System MPI EXT 6.2D:

a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

1) As directed.

b. Intermediate Coat: Stain, exterior, solvent based, solid hide, matching topcoat.
c. Topcoat: Stain, exterior, solvent based, solid hide, MPI #14.

1) As directed.

3. Water-Based Semitransparent Stain System MPI EXT 6.2P:

a. Prime Coat: Stain, exterior, water based, semitransparent, matching topcoat.
b. Intermediate Coat: Stain, exterior, water based, semitransparent, matching topcoat.
c. Topcoat: Stain, exterior, water based, semitransparent, MPI #156.

1) As directed.

4. Semitransparent Stain System MPI EXT 6.2L:

a. Prime Coat: Stain, exterior, solvent based, semitransparent, matching topcoat.

b. Topcoat: Stain, exterior, solvent based, semitransparent, MPI #13.

1) As directed.

5. Varnish over Stain System MPI EXT 6.2E:

a. Stain Coat: Stain, exterior, solvent based, semitransparent, MPI #13.

1) As directed.

b. First Intermediate Coat: Varnish matching topcoat.
c. Second Intermediate Coat: Varnish matching topcoat.
d. Topcoat: Varnish, with UV inhibitor, exterior, semi-gloss (MPI Gloss Level 5), MPI #30.

1) As directed.

e. Topcoat: Varnish, with UV inhibitor, exterior, gloss (MPI Gloss Level 6), MPI #29.

1) As directed.

f. Topcoat: Varnish, marine spar, exterior, gloss (MPI Gloss Level 7), MPI #28.

1) As directed.

6. Water-Based Varnish System MPI EXT 6.2N:

a. Prime Coat: Water-based varnish matching topcoat.
b. Intermediate Coat: Water-based varnish matching topcoat.
c. Topcoat: Water-based varnish (MPI Gloss Level 1), MPI #191.

1) As directed.

d. Topcoat: Water-based varnish (MPI Gloss Level 2), MPI #192.

1) As directed.

e. Topcoat: Water-based varnish (MPI Gloss Level 3), MPI #193.

1) As directed.

f. Topcoat: Water-based varnish (MPI Gloss Level 4), MPI #194.

1) As directed.

g. Topcoat: Water-based varnish (MPI Gloss Level 5), MPI #195.

1) As directed.

h. Topcoat: Water-based varnish (MPI Gloss Level 6), MPI #196.

1) As directed.

i. Topcoat: Water-based varnish (MPI Gloss Level 7), MPI #197.

1) As directed.

7. Varnish System MPI EXT 6.2K:

a. Prime Coat: Varnish matching topcoat.
b. First Intermediate Coat: Varnish matching topcoat.
c. Second Intermediate Coat: Varnish matching topcoat.
d. Topcoat: Varnish, with UV inhibitor, exterior, semi-gloss (MPI Gloss Level 5), MPI #30.

1) As directed.

e. Topcoat: Varnish, with UV inhibitor, exterior, gloss (MPI Gloss Level 6), MPI #29.

1) As directed.

f. Topcoat: Varnish, marine spar, exterior, gloss (MPI Gloss Level 7), MPI #28.

1) As directed.

8. Clear, Two-Component Polyurethane Varnish System MPI EXT 6.2Q:

a. Prime Coat: Varnish, aliphatic polyurethane, two component, matching topcoat.
b. Intermediate Coat: Varnish, aliphatic polyurethane, two component, matching topcoat.
c. Topcoat: Varnish, aliphatic polyurethane, two component (MPI Gloss Level 6 or 7), MPI #78.

1) As directed.

C. Wood Substrates: As directed.

1. Solid-Color, Water-Based Stain System MPI EXT 6.3K:

a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

1) As directed.

b. Intermediate Coat: Stain, exterior, water based, solid hide, matching topcoat.
c. Topcoat: Stain, exterior, water based, solid hide, MPI #16.

1) As directed.

2. Solid-Color, Solvent-Based Stain System MPI EXT 6.3C:

a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

1) As directed.

b. Intermediate Coat: Stain, exterior, solvent based, solid hide, matching topcoat.
c. Topcoat: Stain, exterior, solvent based, solid hide, MPI #14.

1) As directed.

3. Water-Based Semitransparent Stain System MPI EXT 6.3N:

a. Prime Coat: Stain, exterior, water based, semitransparent, matching topcoat.
b. Intermediate Coat: Stain, exterior, water based, semitransparent, matching topcoat.
c. Topcoat: Stain, exterior, water based, semitransparent, MPI #156.

1) As directed.

4. Semitransparent Stain System MPI EXT 6.3D:

a. Prime Coat: Stain, exterior, solvent based, semitransparent, matching topcoat.
b. Topcoat: Stain, exterior, solvent based, semitransparent, MPI #13.

1) As directed.

5. Varnish over Stain System MPI EXT 6.3E:

a. Stain Coat: Stain, exterior, solvent-based, semitransparent, MPI #13.

1) As directed.

b. First Intermediate Coat: Varnish matching topcoat.
c. Second Intermediate Coat: Varnish matching topcoat.
d. Topcoat: Varnish, with UV inhibitor, exterior, semi-gloss (MPI Gloss Level 5), MPI #30.

1) As directed.

e. Topcoat: Varnish, with UV inhibitor, exterior, gloss (MPI Gloss Level 6), MPI #29.

1) As directed.

f. Topcoat: Varnish, marine spar, exterior, gloss (MPI Gloss Level 7), MPI #28.

1) As directed.

6. Water-Based Varnish System MPI EXT 6.3M:

a. Prime Coat: Water-based varnish matching topcoat.
b. Intermediate Coat: Water-based varnish matching topcoat.
c. Topcoat: Water-based varnish (MPI Gloss Level 1), MPI #191.

1) As directed.

d. Topcoat: Water-based varnish (MPI Gloss Level 2), MPI #192.

1) As directed.

e. Topcoat: Water-based varnish (MPI Gloss Level 3), MPI #193.

1) As directed.

f. Topcoat: Water-based varnish (MPI Gloss Level 4), MPI #194.

1) As directed.

g. Topcoat: Water-based varnish (MPI Gloss Level 5), MPI #195.

1) As directed.

h. Topcoat: Water-based varnish (MPI Gloss Level 6), MPI #196.

1) As directed.

i. Topcoat: Water-based varnish (MPI Gloss Level 7), MPI #197.

1) As directed.

7. Varnish System MPI EXT 6.3F:

a. Prime Coat: Varnish matching topcoat.
b. First Intermediate Coat: Varnish matching topcoat.
c. Second Intermediate Coat: Varnish matching topcoat.
d. Topcoat: Varnish, with UV inhibitor, exterior, semi-gloss (MPI Gloss Level 5), MPI #30.

1) As directed.

e. Topcoat: Varnish, with UV inhibitor, exterior, gloss (MPI Gloss Level 6), MPI #29.

1) As directed.

f. Topcoat: Varnish, marine spar, exterior, gloss (MPI Gloss Level 7), MPI #28.

1) As directed.

8. Clear, Two-Component Polyurethane Varnish System MPI EXT 6.3G:

a. Prime Coat: Varnish, aliphatic polyurethane, two component, matching topcoat.
b. Topcoat: Varnish, aliphatic polyurethane, two component (MPI Gloss Level 6 or 7), MPI #78.

1) As directed.

D. Wood Substrates: Wood-based panel products.

1. Solid-Color, Water-Based Stain System MPI EXT 6.4A:

a. Prime Coat: Primer, latex for exterior wood, MPI #6.

1) As directed.

b. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

1) As directed.

c. Intermediate Coat: Stain, exterior, water based, solid hide, matching topcoat.
d. Topcoat: Stain, exterior, water based, solid hide, MPI #16.

1) As directed.

2. Solid-Color, Solvent-Based Stain System MPI EXT 6.4C:

a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

1) As directed.

b. Intermediate Coat: Stain, exterior, solvent based, solid hide, matching topcoat.
c. Topcoat: Stain, exterior, solvent based, solid hide, MPI #14.

1) As directed.

3. Water-Based Semitransparent Stain System MPI EXT 6.4L:

a. Prime Coat: Stain, exterior, water based, semitransparent, matching topcoat.
b. Intermediate Coat: Stain, exterior, water based, semitransparent, matching topcoat.
c. Topcoat: Stain, exterior, water based, semitransparent, MPI #156.

1) As directed.

4. Semitransparent Stain System MPI EXT 6.4D:

a. Prime Coat: Stain, exterior, solvent based, semitransparent, matching topcoat.
b. Topcoat: Stain, exterior, solvent based, semitransparent, MPI #13.

1) As directed.

5. Varnish over Stain System MPI EXT 6.4J:

a. Stain Coat: Stain, exterior, solvent based, semitransparent, MPI #13.

1) As directed.

b. First Intermediate Coat: Varnish matching topcoat.

c. Second Intermediate Coat: Varnish matching topcoat.
d. Topcoat: Varnish, with UV inhibitor, exterior, semi-gloss (MPI Gloss Level 5), MPI #30.

1) As directed.

e. Topcoat: Varnish, with UV inhibitor, exterior, gloss (MPI Gloss Level 6), MPI #29.

1) As directed.

f. Topcoat: Varnish, marine spar, exterior, gloss (MPI Gloss Level 7), MPI #28.

1) As directed.

6. Varnish System MPI EXT 6.4H:

a. Prime Coat: Varnish matching topcoat.
b. First Intermediate Coat: Varnish matching topcoat.
c. Second Intermediate Coat: Varnish matching topcoat.
d. Topcoat: Varnish, with UV inhibitor, exterior, semi-gloss (MPI Gloss Level 5), MPI #30.

1) As directed.

e. Topcoat: Varnish, with UV inhibitor, exterior, gloss (MPI Gloss Level 6), MPI #29.

1) As directed.

f. Topcoat: Varnish, marine spar, exterior, gloss (MPI Gloss Level 7), MPI #28.

1) As directed.

E. Wood Substrates: Traffic surfaces including lumber decking and stairs.

1. Deck Stain over Wood Preservative System MPI EXT 6.5D:

a. Preservative Coat: Preservative, for exterior wood, MPI #37.

1) As directed.

b. Intermediate Coat: Stain, for exterior wood decks, matching topcoat.
c. Top coat: Stain, for exterior wood decks, MPI #33.

1) As directed.

2. Deck Stain System MPI EXT 6.5F:

a. Prime Coat: Stain, for exterior wood decks, matching topcoat.

b. Top coat: Stain, for exterior wood decks, MPI #33.

1) As directed.

F. Wood Substrates: Wood shingles and shakes (excluding roofs).

1. Solid-Color, Water-Based Stain System MPI EXT 6.6D:

a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

1) As directed.

b. Intermediate Coat: Stain, exterior, water based, solid hide, matching topcoat.
c. Topcoat: Stain, exterior, water based, solid hide, MPI #16.

1) As directed.

2. Solid-Color, Solvent-Based Stain System MPI EXT 6.6C:

a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

1) As directed.

b. Intermediate Coat: Stain, exterior, solvent based, solid hide, matching topcoat.
c. Topcoat: Stain, exterior, solvent based, solid hide, MPI #14.

1) As directed.

3. Semitransparent Stain System MPI EXT 6.6F:

a. Prime Coat: Stain, exterior, solvent based, semitransparent, matching topcoat.
b. Topcoat: Stain, exterior, solvent based, semitransparent, MPI #13.

1) As directed.

3.6 INTERIOR WOOD -FINISH-SYSTEM SCHEDULE

A. Wood Substrates: Glued-laminated construction.

1. Solid-Color Latex Stain System MPI INT 6.1T:

a. Prime Coat: Primer, alkyd for exterior wood, MPI #5.

1) As directed.

b. Intermediate Coat: Stain, exterior, water based, solid hide, matching topcoat.
c. Topcoat: Stain, exterior, water based, solid hide, MPI #16.

1) As directed.

2. Solid-Color, Solvent-Based Stain System MPI INT 6.1H:

a. Prime Coat: Stain, exterior, solvent based, solid hide, matching topcoat.
b. Topcoat: Stain, exterior, solvent based, solid hide, MPI #14.

1) As directed.

3. Semitransparent Stain System MPI INT 6.1G:

a. Prime Coat: Stain, semitransparent, matching topcoat.
b. Topcoat: Stain, semitransparent, for interior wood, MPI #90.

1) As directed.

4. Water-Based Varnish over Stain System MPI INT 6.1R:

a. Stain Coat: Stain, semitransparent, for interior wood, MPI #90.

1) As directed.

b. First Intermediate Coat: Water-based varnish matching topcoat.
c. Second Intermediate Coat: Water-based varnish matching topcoat.
d. Topcoat: Varnish, water based, clear, satin (MPI Gloss Level 4), MPI #128.

1) As directed.

e. Topcoat: Varnish, water based, clear, semi-gloss (MPI Gloss Level 5), MPI #129.

1) As directed.

f. Topcoat: Varnish, water based, clear, gloss (MPI Gloss Level 6), MPI #130.

1) As directed.

5. Water-Based Varnish System MPI INT 6.1F:

a. Prime Coat: Water-based varnish matching topcoat.
b. Intermediate Coat: Water-based varnish matching topcoat.
c. Topcoat: Varnish, water based, clear, satin (MPI Gloss Level 4), MPI #128.

1) As directed.

d. Topcoat: Varnish, water based, clear, semi-gloss (MPI Gloss Level 5), MPI #129.

1) As directed.

e. Topcoat: Varnish, water based, clear, gloss (MPI Gloss Level 6), MPI #130.

1) As directed.

6. Alkyd Varnish over Stain System MPI INT 6.1K or MPI INT 6.1P:

a. Stain Coat: Stain, semitransparent, for interior wood, MPI #90.

1) As directed.

b. First Intermediate Coat: Varnish matching topcoat.
c. First Intermediate Coat: Alkyd, sanding sealer, clear, MPI #102.

1) As directed.

d. Second Intermediate Coat: Varnish matching topcoat.
e. Topcoat: Varnish, interior, flat (MPI Gloss Level 1), MPI #73.

1) As directed.

f. Topcoat: Varnish, interior, semi-gloss (MPI Gloss Level 5), MPI #74.

1) As directed.

g. Topcoat: Varnish, interior, gloss (MPI Gloss Level 6), MPI #75.

1) As directed.

7. Alkyd Varnish System MPI INT 6.1C:

a. Prime Coat: Alkyd, sanding sealer, clear, MPI #102.

1) As directed.

b. Intermediate Coat: Varnish matching topcoat.
c. Topcoat: Varnish, interior, flat (MPI Gloss Level 1), MPI #73.

1) As directed.

d. Topcoat: Varnish, interior, semi-gloss (MPI Gloss Level 5), MPI #74.

1) As directed.

e. Topcoat: Varnish, interior, gloss (MPI Gloss Level 6), MPI #75.

1) As directed.

8. Polyurethane Varnish over Stain System MPI INT 6.1J:

a. Stain Coat: Stain, semitransparent, for interior wood, MPI #90.

1) As directed.

b. First Intermediate Coat: Polyurethane varnish matching topcoat.
c. Second Intermediate Coat: Polyurethane varnish matching topcoat.
d. Topcoat: Varnish, interior, polyurethane, oil modified, satin (MPI Gloss Level 4), MPI #57.

1) As directed.

e. Topcoat: Varnish, interior, polyurethane, oil modified, gloss (MPI Gloss Level 6), MPI #56.

1) As directed.

9. Polyurethane Varnish System MPI INT 6.1D:

a. Prime Coat: Polyurethane varnish matching topcoat.
b. Intermediate Coat: Polyurethane varnish matching topcoat.
c. Topcoat: Varnish, interior, polyurethane, oil modified, satin (MPI Gloss Level 4), MPI #57.

1) As directed.

d. Topcoat: Varnish, interior, polyurethane, oil modified, gloss (MPI Gloss Level 6), MPI #56.

1) As directed.

10. Moisture-Cured Clear Polyurethane over Stain System MPI INT 6.1S:

a. Stain Coat: Stain, semitransparent, for interior wood, MPI #90.

1) As directed.

b. First Intermediate Coat: Moisture-cured polyurethane matching topcoat.
c. Second Intermediate Coat: Moisture-cured polyurethane matching topcoat.
d. Topcoat: Varnish, polyurethane, moisture cured, gloss (MPI Gloss Level 6), MPI #31.

1) As directed.

11. Clear, Two-Component Polyurethane System MPI INT 6.1W:

a. Prime Coat: Two-component polyurethane matching topcoat.
b. Intermediate Coat: Two-component polyurethane matching topcoat.
c. Topcoat: Varnish, aliphatic polyurethane, two component (MPI Gloss Level 6 or MPI Gloss Level 7), MPI #78.

1) As directed.

B. Wood Substrates: Exposed framing.

1. Water-Based Varnish over Stain System MPI INT 6.2M:

a. Stain Coat: Stain, semitransparent, for interior wood, MPI #90.

1) As directed.

b. First Intermediate Coat: Water-based varnish matching topcoat.

c. Second Intermediate Coat: Water-based varnish matching topcoat.
d. Topcoat: Varnish, water based, clear, satin (MPI Gloss Level 4), MPI #128.

1) As directed.

e. Topcoat: Varnish, water based, clear, semi-gloss (MPI Gloss Level 5), MPI #129.

1) As directed.

f. Topcoat: Varnish, water based, clear, gloss (MPI Gloss Level 6), MPI #130.

1) As directed.

2. Alkyd Varnish over Stain System MPI INT 6.2K:

a. Stain Coat: Stain, semitransparent, for interior wood, MPI #90.

1) As directed.

b. First Intermediate Coat: Alkyd, sanding sealer, clear, MPI #102.

1) As directed.

c. Second Intermediate Coat: Varnish matching topcoat.
d. Topcoat: Varnish, interior, flat (MPI Gloss Level 1), MPI #73.

1) As directed.

e. Topcoat: Varnish, interior, semi-gloss (MPI Gloss Level 5), MPI #74.

1) As directed.

f. Topcoat: Varnish, interior, gloss (MPI Gloss Level 6), MPI #75.

1) As directed.

3. Alkyd Varnish System MPI INT 6.2P:

a. Prime Coat: Alkyd, sanding sealer, clear, MPI #102.

1) As directed.

b. Intermediate Coat: Varnish matching topcoat.
c. Topcoat: Varnish, interior, flat (MPI Gloss Level 1), MPI #73.

1) As directed.

d. Topcoat: Varnish, interior, semi-gloss (MPI Gloss Level 5), MPI #74.

1) As directed.

e. Topcoat: Varnish, interior, gloss (MPI Gloss Level 6), MPI #75.

1) As directed.

4. Polyurethane Varnish over Stain System MPI INT 6.2J:

a. Stain Coat: Stain, semitransparent, for interior wood, MPI #90.

1) As directed.

b. First Intermediate Coat: Polyurethane varnish matching topcoat.
c. Second Intermediate Coat: Polyurethane varnish matching topcoat.
d. Topcoat: Varnish, interior, polyurethane, oil modified, satin (MPI Gloss Level 4), MPI #57.

1) As directed.

e. Topcoat: Varnish, interior, polyurethane, oil modified, gloss (MPI Gloss Level 6), MPI #56.

1) As directed.

5. Polyurethane Varnish System MPI INT 6.2H:

a. Prime Coat: Polyurethane varnish matching topcoat.
b. Intermediate Coat: Polyurethane varnish matching topcoat.
c. Topcoat: Varnish, interior, polyurethane, oil modified, satin (MPI Gloss Level 4), MPI #57.

1) As directed.

d. Topcoat: Varnish, interior, polyurethane, oil modified, gloss (MPI Gloss Level 6), MPI #56.

1) As directed.

6. Moisture-Cured Clear Polyurethane over Stain System MPI INT 6.2N:

a. Stain Coat: Stain, semitransparent, for interior woo, MPI #90.

1) As directed.

b. First Intermediate Coat: Moisture-cured polyurethane matching topcoat.
c. Second Intermediate Coat: Moisture-cured polyurethane matching topcoat.
d. Topcoat: Varnish, polyurethane, moisture cured, gloss (MPI Gloss Level 6), MPI #31.

1) As directed.

7. Clear, Two-Component Polyurethane System MPI INT 6.2Q:

a. Prime Coat: Two-component polyurethane matching topcoat.
b. Intermediate Coat: Two-component polyurethane matching topcoat.
c. Topcoat: Varnish, aliphatic polyurethane, two component (MPI Gloss Level 6 or MPI Gloss Level 7), MPI #78.

1) As directed.

C. Wood Substrates: As directed.

1. Semitransparent Stain System MPI INT 6.3C:

a. Prime Coat: Stain, exterior, solvent based, semitransparent, matching topcoat.
b. Topcoat: Stain, exterior, solvent based, semitransparent, MPI #13.

1) As directed.

2. Water-Based Varnish over Stain System MPI INT 6.3W:

a. Stain Coat: Stain, semitransparent, for interior wood, MPI #90.

1) As directed.

b. First Intermediate Coat: Water-based varnish matching topcoat.
c. Second Intermediate Coat: Water-based varnish matching topcoat.
d. Topcoat: Varnish, water based, clear, satin (MPI Gloss Level 4), MPI #128.

1) As directed.

e. Topcoat: Varnish, water based, clear, semi-gloss (MPI Gloss Level 5), MPI #129.

1) As directed.

f. Topcoat: Varnish, water based, clear, gloss (MPI Gloss Level 6), MPI #130.

1) As directed.

3. Water-Based Varnish System MPI INT 6.3Q:

a. Prime Coat: Water-based varnish matching topcoat.
b. Intermediate Coat: Water-based varnish matching topcoat.
c. Topcoat: Varnish, water based, clear, satin (MPI Gloss Level 4), MPI #128.

1) As directed.

d. Topcoat: Varnish, water based, clear, semi-gloss (MPI Gloss Level 5), MPI #129.

1) As directed.

e. Topcoat: Varnish, water based, clear, gloss (MPI Gloss Level 6), MPI #130.

1) As directed.

4. Alkyd Varnish over Stain System MPI INT 6.3D:

    a. Stain Coat: Stain, semitransparent, for interior wood, MPI #90.

        1) As directed.

    b. First Intermediate Coat: Alkyd, sanding sealer, clear, MPI #102.

        1) As directed.

    c. First Intermediate Coat: Shellac, clear, MPI #88.

        1) As directed.

    d. Second Intermediate Coat: Varnish matching topcoat.
    e. Topcoat: Varnish, interior, flat (MPI Gloss Level 1), MPI #73.

        1) As directed.

    f. Topcoat: Varnish, interior, semi-gloss (MPI Gloss Level 5), MPI #74.

        1) As directed.

    g. Topcoat: Varnish, interior, gloss (MPI Gloss Level 6), MPI #75.

        1) As directed.

5. Alkyd Varnish System MPI INT 6.3J:

    a. Prime Coat: Alkyd, sanding sealer, clear, MPI #102.

        1) As directed.

    b. Prime Coat: Shellac, clear, MPI #88.

        1) As directed.

    c. Intermediate Coat: Varnish matching topcoat.
    d. Topcoat: Varnish, interior, flat (MPI Gloss Level 1), MPI #73.

        1) As directed.

    e. Topcoat: Varnish, interior, semi-gloss (MPI Gloss Level 5), MPI #74.

        1) As directed.

    f. Topcoat: Varnish, interior, gloss (MPI Gloss Level 6), MPI #75.

        1) As directed.

6. Polyurethane Varnish over Stain System MPI INT 6.3E:

a. Stain Coat: Stain, semitransparent, for interior wood, MPI #90.

1) As directed.

b. First Intermediate Coat: Polyurethane varnish matching topcoat.
c. Second Intermediate Coat: Polyurethane varnish matching topcoat.
d. Topcoat: Varnish, interior, polyurethane, oil modified, satin (MPI Gloss Level 4), MPI #57.

1) As directed.

e. Topcoat: Varnish, interior, polyurethane, oil modified, gloss (MPI Gloss Level 6), MPI #56.

1) As directed.

7. Polyurethane Varnish System MPI INT 6.3K:

a. Prime Coat: Polyurethane varnish matching topcoat.
b. Intermediate Coat: Polyurethane varnish matching topcoat.
c. Topcoat: Varnish, interior, polyurethane, oil modified, satin (MPI Gloss Level 4), MPI #57.

1) As directed.

d. Topcoat: Varnish, interior, polyurethane, oil modified, gloss (MPI Gloss Level 6), MPI #56.

1) As directed.

8. Moisture-Cured Clear Polyurethane over Stain System MPI INT 6.3Y:

a. Stain Coat: Stain, semitransparent, for interior wood, MPI #90.

1) As directed.

b. First Intermediate Coat: Moisture-cured polyurethane matching topcoat.
c. Second Intermediate Coat: Moisture-cured polyurethane matching topcoat.
d. Topcoat: Varnish, polyurethane, moisture cured, gloss (MPI Gloss Level 6), MPI #31.

1) As directed.

9. Moisture-Cured Clear Polyurethane System MPI INT 6.3X:

a. Prime Coat: Moisture-cured polyurethane matching topcoat.
b. Intermediate Coat: Moisture-cured polyurethane matching topcoat.
c. Topcoat: Varnish, polyurethane, moisture cured, gloss (MPI Gloss Level 6), MPI #31.

1) As directed.

10. Clear, Two-Component Polyurethane System MPI INT 6.3Z:

    a. Prime Coat: Two-component polyurethane matching topcoat.
    b. Intermediate Coat: Two-component polyurethane matching topcoat.
    c. Topcoat: Varnish, aliphatic polyurethane, two component (MPI Gloss Level 6 or MPI Gloss Level 7), MPI #78.

        1) As directed.

11. Danish Oil System MPI INT 6.3M:

    a. Prime Coat: Danish oil matching topcoat.
    b. Topcoat: Danish oil, MPI #92.

        1) As directed.

D. Wood Substrates: Wood paneling and casework.

1. Semitransparent Stain System MPI INT 6.4C:

    a. Prime Coat: Stain, exterior, solvent based, semitransparent, matching topcoat.
    b. Topcoat: Stain, exterior, solvent based, semitransparent, MPI #13.

        1) As directed.

2. Water-Based Varnish over Stain System MPI INT 6.4U:

    a. Stain Coat: Stain, semitransparent, for interior wood, MPI #90.

        1) As directed.

    b. First Intermediate Coat: Water-based varnish matching topcoat.
    c. Second Intermediate Coat: Water-based varnish matching topcoat.
    d. Topcoat: Varnish, water based, clear, satin (MPI Gloss Level 4), MPI #128.

        1) As directed.

    e. Topcoat: Varnish, water based, clear, semi-gloss (MPI Gloss Level 5), MPI #129.

        1) As directed.

    f. Topcoat: Varnish, water based, clear, gloss (MPI Gloss Level 6), MPI #130.

        1) As directed.

3. Water-Based Varnish System MPI INT 6.4M:

    a. Prime Coat: Water-based varnish matching topcoat.
    b. Intermediate Coat: Water-based varnish matching topcoat.
    c. Topcoat: Varnish, water based, clear, satin (MPI Gloss Level 4), MPI #128.

        1) As directed.

d. Topcoat: Varnish, water based, clear, semi-gloss (MPI Gloss Level 5), MPI #129.

1) As directed.

e. Topcoat: Varnish, water based, clear, gloss (MPI Gloss Level 6), MPI #130.

1) As directed.

4. Alkyd Varnish over Stain System MPI INT 6.4D:

a. Stain Coat: Stain, semitransparent, for interior wood, MPI #90.

1) As directed.

b. First Intermediate Coat: Alkyd, sanding sealer, clear, MPI #102.

1) As directed.

c. First Intermediate Coat: Shellac, clear, MPI #88.

1) As directed.

d. Second Intermediate Coat: Varnish matching topcoat.
e. Topcoat: Varnish, interior, flat (MPI Gloss Level 1), MPI #73.

1) As directed.

f. Topcoat: Varnish, interior, semi-gloss (MPI Gloss Level 5), MPI #74.

1) As directed.

g. Topcoat: Varnish, interior, gloss (MPI Gloss Level 6), MPI #75.

1) As directed.

5. Alkyd Varnish System MPI INT 6.4G:

a. Prime Coat: Alkyd, sanding sealer, clear, MPI #102.

1) As directed.

b. Prime Coat: Shellac, clear, MPI #88.

1) As directed.

c. Intermediate Coat: Varnish matching topcoat.
d. Topcoat: Varnish, interior, flat (MPI Gloss Level 1), MPI #73.

1) As directed.

e. Topcoat: Varnish, interior, semi-gloss (MPI Gloss Level 5), MPI #74.

1) As directed.

f. Topcoat: Varnish, interior, gloss (MPI Gloss Level 6), MPI #75.

1) As directed.

6. Polyurethane Varnish over Stain System MPI INT 6.4E:

a. Stain Coat: Stain, semitransparent, for interior wood, MPI #90.

1) As directed.

b. First Intermediate Coat: Polyurethane varnish matching topcoat.
c. Second Intermediate Coat: Polyurethane varnish matching topcoat.
d. Topcoat: Varnish, interior, polyurethane, oil modified, satin (MPI Gloss Level 4), MPI #57.

1) As directed.

e. Topcoat: Varnish, interior, polyurethane, oil modified, gloss (MPI Gloss Level 6), MPI #56.

1) As directed.

7. Polyurethane Varnish System MPI INT 6.4J:

a. Prime Coat: Polyurethane varnish matching topcoat.
b. Intermediate Coat: Polyurethane varnish matching topcoat.
c. Topcoat: Varnish, interior, polyurethane, oil modified, satin (MPI Gloss Level 4), MPI #57.

1) As directed.

d. Topcoat: Varnish, interior, polyurethane, oil modified, gloss (MPI Gloss Level 6), MPI #56.

1) As directed.

8. Moisture-Cured Clear Polyurethane over Stain System MPI INT 6.4V:

a. Stain Coat: Stain, semitransparent, for interior wood, MPI #90.

1) As directed.

b. First Intermediate Coat: Moisture-cured polyurethane matching topcoat.
c. Second Intermediate Coat: Moisture-cured polyurethane matching topcoat.
d. Topcoat: Varnish, polyurethane, moisture cured, gloss (MPI Gloss Level 6), MPI #31.

1) As directed.

9. Danish Oil System MPI INT 6.4K:

a. Prime Coat: Danish oil matching topcoat.
b. Topcoat: Danish oil, MPI #92.

1) As directed.

END OF SECTION 099300

SECTION 099419 - MULTICOLOR INTERIOR FINISHING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes surface preparation and field application of multicolor interior finishing systems. applied on the following substrates:

1. Vertical concrete.
2. Clay masonry units.
3. Concrete masonry units (CMU).
4. Wood.
5. Plaster.
6. Gypsum veneer plaster.
7. Gypsum board.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Samples: For each exposed product and for each color and texture specified.

PART 2 - PRODUCTS

2.1 MULTICOLOR FINISHING SYSTEMS

A. Master Painters Institute (MPI) Standards: Comply with recommendations in "MPI Architectural Painting Specification Manual" applicable to products and coating systems indicated.

B. Material Compatibility: Provide materials for use within each coating system that are compatible with one another and substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

C. Colors and Patterns: Match Architect's samples, As selected by Architect from manufacturer's full range or as indicated in finish schedule.

2.2 MULTICOLOR COATINGS

A. Multicolor Coating: Water- or solvent-based coat that provides a decorative polychromatic finish.

2.3 FILLERS AND PRIMERS

A. Fillers, sealers, and primers recommended in writing for use in coating systems by manufacturer of multicolor interior coating on substrates and under conditions indicated.

B. Latex Block Filler: Waterborne, high-solids, emulsion-type, pigmented coating product recommended in writing for use in coating system indicated by manufacturer of multicolor interior coating, with bridging and filling properties, and formulated for filling surfaces of CMU for subsequent applications of finish coatings.

C. Wood Filler Paste: Solvent-based, high-solids, clear paste product recommended in writing for use in coating system indicated by manufacturer of multicolor interior coating, for use on open-grained or damaged woods. The paste fills hardwood pores with minimal surface residues and without showing cracking or shrinkage. Sanding dried filler produces a smooth surface without clogging or gumming sandpaper.

D. Wood-Knot Sealer: White shellac or other sealer recommended in writing for this purpose by manufacturer of multicolor interior coating.

E. Primer/Sealer for Multicolor Systems: Acrylic or acrylic/polyvinyl acetate (PVA) co-polymer emulsion-type, pigmented primer/sealer product recommended in writing for use in coating system indicated by manufacturer of multicolor interior coating.

F. Interior Alkyd Primer/Sealer: Solvent-based, pigmented primer/sealer.

PART 3 - EXECUTION

3.1 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates indicated.

B. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions.

C. Masonry Substrates: Remove efflorescence and chalk. Do not coat surfaces if moisture content of surfaces or if alkalinity of surfaces or mortar joints exceeds that permitted in manufacturer's written instructions.

D. Wood Substrates:

1. Scrape and clean small, dry, seasoned knots, and apply a thin coat of knot sealer before applying primer.
2. Sand surfaces that will be exposed to view; remove sanding dust from surfaces to be coated.
3. Prime edges, ends, faces, undersides, and backsides of wood.
4. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried and remove sanding dust.

3.2 APPLICATION

A. Apply coatings according to manufacturer's written instructions using applicators and techniques suited for coating and substrate indicated.

B. Apply coating systems to produce uniformly textured, colored, and patterned finished-surface films without substrates, undercoats, marks, or stains showing through. Produce sharp, even glass lines and color breaks.

C. At completion of construction activities of other trades, touch up and restore damaged or defaced coated surfaces.

3.3 MULTICOLOR INTERIOR FINISHING SCHEDULE

A. Vertical Concrete Substrates:

1. Prime Coat: Primer/sealer for multicolor systems.
2. Multicolor Base Coat: Multicolor coating.
3. Multicolor Pattern Coat: Multicolor coating.

B. Clay Masonry Unit Substrates:

1. Prime Coat: Primer/sealer for multicolor systems tinted to match multicolor basecoat.
2. Multicolor Base Coat: Multicolor coating.
3. Multicolor Pattern Coat: Multicolor coating.

C. CMU Substrates:

1. Block Filler: Latex block filler.
2. Prime Coat: Primer/sealer for multicolor systems.
3. Multicolor Base Coat: Multicolor coating.
4. Multicolor Pattern Coat: Multicolor coating.

D. Wood Substrates:

1. Fill Coat: Wood filler paste.
2. Prime Coat: Interior alkyd primer/sealer tinted to match multicolor base coat.
3. Multicolor Base Coat: Multicolor coating.
4. Multicolor Pattern Coat: Multicolor coating.

E. Gypsum Board Substrates:

1. Prime Coat: Primer/sealer for multicolor systems.
2. Multicolor Base Coat: Multicolor coating.
3. Multicolor Pattern Coat: Multicolor coating.

F. Plaster Substrates:

1. Prime Coat: Primer/sealer for multicolor systems.
2. Multicolor Base Coat: Multicolor coating.
3. Multicolor Pattern Coat: Multicolor coating.

G. Gypsum Veneer Plaster Substrates:

1. Prime Coat: Primer/sealer for multicolor systems.
2. Multicolor Base Coat: Multicolor coating.
3. Multicolor Pattern Coat: Multicolor coating.

END OF SECTION 099419

SECTION 099423 - GILDING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes gilding.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples: For each exposed product and for each color and texture specified.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: A qualified gilding specialist. Experience applying metallic paint is insufficient experience for gilding.

B. Mockups: Provide mockups for each type of gilding and substrate indicated and each metallic leaf required to demonstrate aesthetic effects and set quality standards for materials and execution. Duplicate appearance of approved Sample submittals.

PART 2 - PRODUCTS

2.1 GILDING MATERIALS

A. Metallic Leaf: 12K gold (white gold), 18K gold, 22K gold, 23K gold, 23.5K gold, 23.5K red gold or Palladium as directed.

B. Sizing: Oil type.

PART 3 - EXECUTION

3.1 GILDING APPLICATION

A. Comply with manufacturer's written instructions for application methods unless otherwise indicated.

B. Apply gilding with adequate illumination that will not distort the condition of surfaces or materials being applied.

C. Apply sizing and metallic leaf to surfaces after substrate and nearby painting is completed and dry. Gently press metallic leaf into sizing with a soft brush or a cotton or velvet cloth to fully adhere it to the surface. Gently remove overlapped edges with a soft brush after the sizing has fully dried.

END OF SECTION 099423

SECTION 099600 - HIGH-PERFORMANCE COATINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes surface preparation and the application of high-performance coating systems on the following substrates: Revise lists below to suit Project.

1. Exterior Substrates:

a. Concrete, vertical and horizontal surfaces.
b. Clay masonry.
c. Concrete masonry units (CMUs).
d. Steel.
e. Galvanized metal.
f. Aluminum (not anodized or otherwise coated).
g. Wood.

2. Interior Substrates:

a. Concrete, vertical and horizontal surfaces.
b. Cement board.
c. Clay masonry.
d. Concrete masonry units (CMUs).
e. Steel.
f. Galvanized metal.
g. Aluminum (not anodized or otherwise coated).
h. Wood.
i. Gypsum board.
j. Plaster.

1.2 DEFINITIONS

A. MPI Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D523.

B. MPI Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D523.

C. MPI Gloss Level 7: More than 85 units at 60 degrees, according to ASTM D523.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product. Include preparation requirements and application instructions.

1. Include printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.

B. Sustainable Design Submittals:

C. Samples: For each type of coating system and in each color and gloss of topcoat indicated.

1.4 QUALITY ASSURANCE

A. Mockups: Apply mockups of each coating system indicated to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Architect will select one surface to represent surfaces and conditions for application of each coating system.

a. Wall and Ceiling Surfaces: Provide samples of at least 100 sq. ft. (9 sq. m).
b. Other Items: Architect will designate items or areas required.

2. Final approval of color selections will be based on mockups.

a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Products: As directed Subject to compliance with requirements, provide product, provide one of the products or available products that may be incorporated into the Work include, but are not limited to products listed in the Exterior High-Performance Coating Schedule or Interior High-Performance Coating Schedule for the coating category indicated.

2.2 HIGH-PERFORMANCE COATINGS, GENERAL

A. MPI Standards: Products shall comply with MPI standards indicated and shall be listed in its "MPI Approved Products Lists."

B. Material Compatibility:

1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.
3. Products shall be of same manufacturer for each coat in a coating system.

C. Colors: As selected by Architect from manufacturer's full range, Match Architect's samples or as indicated in color schedule.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:

1. Concrete: 12 percent.
2. Fiber-Cement Board: 12 percent.
3. Masonry (Clay and CMUs): 12 percent.
4. Wood: 15 percent.
5. Gypsum Board: 12 percent.
6. Plaster: 12 percent.

C. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers.

D. Proceed with coating application only after unsatisfactory conditions have been corrected.

1. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates and coating systems indicated.

B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.

1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.

C. Clean substrates of substances that could impair bond of coatings, including dust, dirt, oil, grease, and incompatible paints and encapsulants.

1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce coating systems indicated.

3.3 APPLICATION

A. Apply high-performance coatings according to manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual."

B. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Produce sharp glass lines and color breaks.

3.4 EXTERIOR HIGH-PERFORMANCE COATING SCHEDULE

A. Concrete Substrates, Vertical Surfaces:

1. Epoxy System MPI EXT 3.1D:

   a. Prime Coat: Epoxy, matching topcoat.
   b. Intermediate Coat: Epoxy, matching topcoat.
   c. Topcoat: Epoxy, gloss, MPI #77.

2. Epoxy-Modified Latex System MPI EXT 3.1E:

   a. Prime Coat: Epoxy-modified latex, matching topcoat.
   b. Intermediate Coat: Epoxy-modified latex, matching topcoat.
   c. Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5), MPI #215.

   d. Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6), MPI #115.

3. Pigmented Polyurethane over Epoxy System MPI EXT 3.1M:

   a. Prime Coat: Epoxy, matching intermediate coat.
   b. Intermediate Coat: Epoxy, gloss, MPI #77.

   c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

B. Concrete Substrates, Horizontal Surfaces:

1. Epoxy Non-Slip Deck Coating System MPI EXT 3.2C:

   a. Prime Coat: As recommended in writing by topcoat manufacturer.
   b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
   c. Topcoat: Epoxy deck coating (slip resistant), MPI #82.

C. Clay Masonry Substrates:

1. Epoxy System MPI EXT 4.1D:

   a. Prime Coat: Epoxy, matching topcoat.
   b. Intermediate Coat: Epoxy, matching topcoat.
   c. Topcoat: Epoxy, gloss, MPI #77.

2. Pigmented Polyurethane over Epoxy System MPI EXT 4.1J:

   a. Prime Coat: Epoxy, matching intermediate coat.
   b. Intermediate Coat: Epoxy, gloss, MPI #77.

c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

D. CMU Substrates:

1. Epoxy System MPI EXT 4.2E:

a. Block Filler: Block filler, epoxy, MPI #116.

b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss, MPI #77.

2. Pigmented Polyurethane over High-Build Epoxy System MPI EXT 4.2G:

a. Block Filler: Block filler, epoxy, MPI #116.

b. Intermediate Coat: Epoxy, high build, low gloss, MPI #108.

c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

E. Steel Substrates:

1. Epoxy System MPI EXT 5.1F:

a. Prime Coat: Primer, epoxy, anti-corrosive, for metal, MPI #101.

b. Intermediate Coat: Epoxy, high build, low gloss, MPI #108.

c. Topcoat: Epoxy, gloss, MPI #77.

2. Epoxy Deck Coating over Epoxy Primer and High-Build Epoxy System MPI EXT 5.1V:

a. Prime Coat: Primer, epoxy, anti-corrosive, for metal, MPI #101.

b. Intermediate Coat: Epoxy, high build, low gloss, MPI #108.

c. Topcoat: Epoxy deck coating, MPI #82.

3. Pigmented Polyurethane over Epoxy System MPI EXT 5.1H:

a. Prime Coat: Primer, epoxy, anti-corrosive, for metal, MPI #101.

b. Intermediate Coat: Epoxy, gloss, MPI #77.

c. First and Second Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

4. Pigmented Polyurethane over High-Build Epoxy System MPI EXT 5.1J:

a. Prime Coat: Primer, epoxy, anti-corrosive, for metal, MPI #101.

b. Intermediate Coat: Epoxy, high build, low gloss, MPI #108.

c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

5. Pigmented Polyurethane over Epoxy Zinc-Rich Primer System MPI EXT 5.1P:

a. Prime Coat: Primer, zinc rich, epoxy, MPI #20.

b. Intermediate Coat: Epoxy, gloss, MPI #77.

c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

6. Pigmented Polyurethane over Epoxy Zinc-Rich Primer and High-Build Epoxy System MPI EXT 5.1G:

a. Prime Coat: Primer, zinc rich, epoxy, MPI #20.

b. Intermediate Coat: Epoxy, high build, low gloss, MPI #108.

c. First and Second Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

F. Galvanized-Metal Substrates:

1. Epoxy System MPI EXT 5.3C:

a. Prime Coat: Primer, epoxy, anti-corrosive, for metal, MPI #101.

b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss, MPI #77.

2. Pigmented Polyurethane over Epoxy Primer System MPI EXT 5.3L:

a. Prime Coat: Primer, epoxy, anti-corrosive, for metal, MPI #101.

b. Intermediate Coat: Polyurethane, two component, pigmented, gloss matching topcoat.
c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

3. Pigmented Polyurethane over Vinyl Wash Primer and Epoxy Primer System MPI EXT 5.3D:

a. Prime Coat: Primer, vinyl wash, MPI #80.

b. Intermediate Coat: Primer, epoxy, anti-corrosive, for metal, MPI #101.

c. First and Second Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

G. Aluminum (Not Anodized or Otherwise Coated) Substrates:

1. Epoxy System MPI EXT 5.4E:

a. Prime Coat: Primer, vinyl wash, MPI #80.

b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss, MPI #77.

2. Pigmented Polyurethane over Epoxy System MPI EXT 5.4B:

a. Prime Coat: Primer, vinyl wash, MPI #80.

b. Intermediate Coat: Primer, epoxy, anti-corrosive, for metal, MPI #101.
c. First and Second Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

H. Wood Substrates: Glued-laminated construction.

1. Pigmented Polyurethane System MPI EXT 6.1J:

a. Prime Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
b. Intermediate Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

I. Wood Substrates: Exposed framing.

1. Pigmented Polyurethane System MPI EXT 6.2J:

a. Prime Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
b. Intermediate Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

J. Wood Substrates: Wood trim, Architectural woodwork, Doors, Windows, Wood board siding and wood fences as directed

1. Pigmented Polyurethane System MPI EXT 6.3H:

a. Prime Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
b. Intermediate Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

3.5 INTERIOR HIGH-PERFORMANCE COATING SCHEDULE

A. Concrete Substrates, Vertical Surfaces:

1. Epoxy System MPI INT 3.1F:

    a. Prime Coat: Epoxy, matching topcoat.
    b. Intermediate Coat: Epoxy, matching topcoat.
    c. Topcoat: Epoxy, gloss, MPI #77.

2. Epoxy, High-Build System MPI INT 3.1P:

    a. Prime Coat: High-build epoxy, matching topcoat (reduced).
    b. Intermediate Coat: High-build epoxy, matching topcoat.
    c. Topcoat: High-build epoxy, low gloss, MPI #108.

    d. Topcoat: High-build epoxy, gloss, MPI #98.

3. Epoxy-Modified Latex System MPI INT 3.1G:

    a. Prime Coat: Epoxy-modified latex, matching topcoat.
    b. Intermediate Coat: Epoxy-modified latex, matching topcoat.
    c. Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5), MPI #215.

    d. Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6), MPI #115.

B. Concrete Substrates, Horizontal Surfaces.

1. Epoxy System MPI INT 3.2C:

    a. Prime Coat: Epoxy, matching topcoat.
    b. Intermediate Coat: Epoxy, matching topcoat.
    c. Topcoat: Epoxy, gloss, MPI #77

2. Epoxy, High-Build System MPI INT 3.2L:

    a. Prime Coat: High-build epoxy, matching topcoat (reduced).
    b. Intermediate Coat: High-build epoxy, matching topcoat.
    c. Topcoat: High-build epoxy, low gloss, MPI #108.

    d. Topcoat: High-build epoxy, gloss, MPI #98.

3. Pigmented Polyurethane System MPI INT 3.2D:

    a. Prime Coat: Epoxy, gloss, MPI #77.

    b. Intermediate Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
    c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

4. Clear (Two-Component) Polyurethane System MPI INT 3.2K:

    a. Prime Coat: Two-component polyurethane matching topcoat.
    b. Intermediate Coat: Two-component polyurethane, matching topcoat.

c. Topcoat: Varnish, aliphatic polyurethane, two component (MPI Gloss Level 6 or MPI Gloss Level 7), MPI #78.

C. Cement Board Substrates:

1. Epoxy System MPI INT 3.3E:

a. Prime Coat: Epoxy, matching topcoat.
b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss, MPI #77.

2. Epoxy-Modified Latex System MPI INT 3.3D:

a. Prime Coat: Epoxy-modified latex, matching topcoat.
b. Intermediate Coat: Epoxy-modified latex, matching topcoat.
c. Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5), MPI #215.

d. Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6), MPI #115.

D. Clay Masonry Substrates:

1. Epoxy System MPI INT 4.1F:

a. Prime Coat: Epoxy, matching topcoat.
b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss, MPI #77.

2. Epoxy-Modified Latex System MPI INT 4.1G:

a. Prime Coat: Epoxy-modified latex, matching topcoat.
b. Intermediate Coat: Epoxy-modified latex, matching topcoat.
c. Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5), MPI #215.

d. Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6), MPI #115.

3. Clear (Two-Component) Polyurethane System MPI INT 4.1K:

a. Prime Coat: Two-component polyurethane, matching topcoat.
b. Intermediate Coat: Two-component polyurethane, matching topcoat.
c. Topcoat: Varnish, aliphatic polyurethane, two component (MPI Gloss Level 6 or MPI Gloss Level 7), MPI #78.

E. CMU Substrates:

1. Epoxy System MPI INT 4.2F or MPI INT 4.2G:

a. Block Filler: Block filler, latex, interior/exterior, MPI #4.

b. Block Filler: Block filler, epoxy, MPI #116.

c. Intermediate Coat: Epoxy, matching topcoat.
d. Topcoat: Epoxy, gloss, MPI #77.

2. Epoxy, High-Build System MPI INT 4.2R:

   a. Prime Coat: Epoxy block filler, MPI #116.
   b. Intermediate Coat: High-build epoxy, matching topcoat.
   c. Topcoat: High-build epoxy, low gloss, MPI #108.

   d. Topcoat: High-build epoxy, gloss, MPI #98.

3. Epoxy-Modified Latex System MPI INT 4.2J:

   a. Block Filler: Block filler, latex, interior/exterior, MPI #4.

   b. Intermediate Coat: Epoxy-modified latex, interior, matching topcoat.
   c. Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5), MPI #215.

   d. Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6), MPI #115.

F. Steel Substrates:

1. Epoxy System MPI INT 5.1L:

   a. Prime Coat: Primer, epoxy, anti-corrosive, for metal, MPI #101.

   b. Intermediate Coat: Epoxy, matching topcoat.
   c. Topcoat: Epoxy, gloss, MPI #77.

2. High-Build Epoxy over Epoxy Zinc-Rich Primer System MPI INT 5.1P:

   a. Prime Coat: Primer, zinc-rich, epoxy, MPI #20.

   b. Intermediate Coat: Epoxy, high build, low gloss, MPI #108.

   c. Topcoat: Epoxy, gloss, MPI #77.

   d. Topcoat: Epoxy, high-build, low gloss, MPI #108.

3. Epoxy, High-Build System MPI INT 5.1Y:

   a. Prime Coat: Primer, epoxy, anti-corrosive, for metal, MPI #101.

   b. Intermediate Coat: High-build epoxy, matching topcoat.
   c. Topcoat: High-build epoxy, low gloss, MPI #108.

   d. Topcoat: High-build epoxy, gloss, MPI #98.

4. Epoxy Deck Coating System MPI INT 5.1LL:

   a. Prime Coat: Primer, epoxy, anti-corrosive, for metal, MPI #101.

   b. Intermediate Coat: Epoxy, gloss, MPI #77.

   c. Topcoat: Epoxy deck coating (slip resistant), MPI #82.

5. Epoxy-Modified Latex System MPI INT 5.1K:

   a. Prime Coat: Primer, rust inhibitive, water based, MPI #107.

   b. Intermediate Coat: Epoxy-modified latex, interior, matching topcoat.
   c. Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5), MPI #215.

   d. Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6), MPI #115.

6. Pigmented Polyurethane over Epoxy Primer System MPI INT 5.1F:

   a. Prime Coat: Primer, epoxy, anti-corrosive, for metal, MPI #101.

   b. Intermediate Coat: Polyurethane, two component, pigmented, matching topcoat.
   c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

7. Pigmented Polyurethane over High-Build Epoxy System MPI INT 5.1G:

   a. Prime Coat: Primer, epoxy, anti-corrosive, for metal, MPI #101.

   b. Intermediate Coat: Epoxy, high build, MPI #108.

   c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

8. Pigmented Polyurethane over Epoxy Zinc-Rich and Epoxy System MPI INT 5.1J:

   a. Prime Coat: Primer, zinc rich, epoxy, MPI #20.

   b. Intermediate Coat: Epoxy, gloss, MPI #77.

   c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

G. Galvanized-Metal Substrates:

1. Epoxy over Epoxy Primer System MPI INT 5.3D:

   a. Prime Coat: Primer, epoxy, anti-corrosive, for metal, MPI #101.

   b. Intermediate Coat: Epoxy, matching topcoat.
   c. Topcoat: Epoxy, gloss, MPI #77.

2. Epoxy over Vinyl Wash Primer and Epoxy Primer System MPI INT 5.3E:

   a. Prime Coat: Primer, vinyl wash, MPI #80.

   b. Intermediate Coat: Primer, epoxy, anti-corrosive, for metal, MPI #101.

   c. Topcoat: Epoxy, gloss, MPI #77.

H. Aluminum (Not Anodized or Otherwise Coated) Substrates:

1. Epoxy System MPI INT 5.4B:

a. Prime Coat: Primer, vinyl wash, MPI #80.

b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss, MPI #77.

2. Pigmented Polyurethane System MPI INT 5.4C:

a. Prime Coat: Primer, vinyl wash, MPI #80.

b. Intermediate Coat: Epoxy, gloss, MPI #77.

c. Topcoat: Polyurethane, two-component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

I. Wood Substrates: Glued-laminated construction.

1. Epoxy System MPI INT 6.1L:

a. Prime Coat: Epoxy, matching topcoat.
b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss, MPI #77.

2. Pigmented Polyurethane System MPI INT 6.1E:

a. Prime Coat: Polyurethane, two component, pigmented, matching topcoat.
b. Intermediate Coat: Polyurethane, two component, pigmented, matching topcoat.
c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.

J. Wood Substrates: Wood trim, Architectural woodwork, Doors, Windows and wood board paneling as directed.

1. Epoxy System MPI INT 6.3L:

a. Prime Coat: Epoxy, matching topcoat.
b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss, MPI #77.

K. Gypsum Board or Plaster Substrates as directed:

1. Epoxy System MPI INT 9.2E:

a. Prime Coat: Primer sealer, latex, interior, MPI #50.

b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss, MPI #77.

2. Epoxy, High-Build System MPI INT 9.2N:

a. Prime Coat: Primer sealer, latex, interior, MPI #50.

b. Intermediate Coat: High-build epoxy, matching topcoat.
c. Topcoat: High-build epoxy, low gloss, MPI #108.

d. Topcoat: High-build epoxy, gloss, MPI #98.

3. Epoxy-Modified Latex System MPI INT 9.2F:

a. Prime Coat: Primer sealer, latex, interior, MPI #50.

b. Intermediate Coat: Epoxy-modified latex, matching topcoat.
c. Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5), MPI #215.

d. Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6), MPI #115.

END OF SECTION 099600

SECTION 099633 - HIGH-TEMPERATURE-RESISTANT COATINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes surface preparation and application of high-temperature-resistant coating systems on steel substrates.

1.2 DEFINITIONS

A. MPI Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D523.

B. MPI Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D523.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product. Include preparation requirements and application instructions.

B. Sustainable Design Submittals: As directed.

C. Samples: For each type of coating system and in each color and gloss of topcoat indicated.

1.4 QUALITY ASSURANCE

A. Mockups: Apply mockups of each coating system indicated to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Architect will select one surface to represent surfaces and conditions for application of each coating system.
2. Final approval of color selections will be based on mockups.

    a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Products: Subject to compliance with requirements, provide product, provide one of the products or available products that may be incorporated into the Work include, but are not

limited to products listed in High-Temperature-Resistant Coating Schedule for the category indicated.

2.2 HIGH-TEMPERATURE-RESISTANT COATINGS, GENERAL

A. MPI Standards: Products shall comply with MPI standards indicated and shall be listed in its "MPI Approved Products Lists."

B. Material Compatibility:

1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.
3. Products shall be of same manufacturer for each coat in a coating system.

C. Colors: As selected by Architect from manufacturer's full range, Match Architect's samples or as indicated in color schedule.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements and other conditions affecting performance of the Work.

B. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers.

C. Proceed with coating application only after unsatisfactory conditions have been corrected.

1. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates and coating systems indicated.

B. Clean substrates of substances that could impair bond of coatings, including dust, dirt, oil, grease, and incompatible paints and encapsulants.

1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce coating systems indicated.

3.3 APPLICATION

A. Apply high-temperature-resistant coating systems according to manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual."

B. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections.

3.4 HIGH-TEMPERATURE-RESISTANT COATING SCHEDULE

A. Heat-Resistant Enamel System MPI EXT 5.2A and MPI INT 5.2A:

1. Prime Coat: Primer recommended in writing for use in coating system and under conditions indicated by manufacturer of topcoat.
2. Top Coat(s): Enamel, heat resistant (MPI Gloss Level 5 or 6), MPI #21.
    a. Provide number of topcoats recommended in writing for use in coating system and under conditions indicated by manufacturer but not less than two.

B. Inorganic Zinc-Rich Coating System MPI EXT 5.2C and MPI INT 5.2C:

1. Prime Coat: Primer, zinc rich, inorganic, matching topcoat.
2. Top Coat(s): Primer, zinc rich, inorganic, MPI #19.
    a. Provide number of topcoats recommended in writing for use in coating system and under conditions indicated by manufacturer but not less than two.

C. Heat-Resistant Aluminum Enamel System MPI EXT 5.2B and MPI INT 5.2B:

1. Prime Coat: Primer recommended in writing for use in coating system and under conditions indicated by manufacturer of topcoat.
2. Top Coat(s): Aluminum paint, enamel, heat resistant, MPI #2.
    a. Provide number of topcoats recommended in writing for use in coating system and under conditions indicated by manufacturer but not less than two.

D. High-Heat-Resistant Coating System MPI EXT 5.2D and MPI INT 5.2D:

1. Prime Coat: Primer recommended in writing for use in coating system and under conditions indicated by manufacturer of topcoat.
2. Top Coat(s): Aluminum paint, high heat, MPI #22.
    a. Provide number of topcoats recommended in writing for use in coating system and under conditions indicated by manufacturer but not less than two.

END OF SECTION 099633

SECTION 099646 - INTUMESCENT PAINTING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes surface preparation and application of fire-retardant intumescent paint to interior and exterior items and surfaces.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.

B. Sustainable Design Submittals:

C. Samples: For each type of coating system and each color and gloss of intumescent paint finish indicated.

1.3 QUALITY ASSURANCE

A. Mockups: Apply mockups of each paint system indicated to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Architect will select one surface to represent surfaces and conditions for application of each coating system.

a. Wall and Ceiling Surfaces: Provide samples of at least 100 sq. ft. (9 sq. m).
b. Other Items: Architect will designate items or areas required.

2. Final approval of color selections will be based on mockups.

a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Products: Subject to compliance with requirements, provide products indicated in the Exterior Intumescent Painting Schedule and Interior Intumescent Painting Schedule or comparable product by one of the following:

B. Products: Subject to compliance with requirements, provide product, provide one of the products or available products that may be incorporated into the Work include, but are not limited to products listed in the Exterior Intumescent Painting Schedule and Interior Intumescent Painting Schedule for the paint category indicated.

2.2 INTUMESCENT PAINT MATERIALS, GENERAL

A. MPI Standards: Products shall comply with MPI standards indicated and shall be listed in its "MPI Approved Products Lists."

B. Surface-Burning Characteristics of Fire-Retardant Systems: As tested according to ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or 75 or less.
2. Smoke-Developed Index: 450 or less.

C. Material Compatibility:

1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each material or coat, products and spreading rates shall be as recommended in writing by intumescent paint manufacturer for use on substrate indicated. Comply with requirements for fire-retardant coating classification and surface-burning characteristics indicated.

D. Colors and Gloss: As selected by Architect from manufacturer's full range, Match Architect's samples or as indicated in a color schedule.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with manufacturer's requirements for surface treatments, shop-primed surfaces, maximum moisture content, and other conditions affecting performance of the Work.

B. Begin coating only when moisture content of wood substrate is 15 percent or less when measured with an electronic moisture meter.

C. Verify suitability of substrates, including surface conditions, and compatibility with existing finishes and primers.

D. Proceed with coating application only after unsatisfactory conditions have been corrected and surfaces are dry.

3.2 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in the "MPI Architectural Painting Specification Manual" applicable to substrates and coating systems indicated.

B. Remove hardware and hardware accessories, plates, machined surfaces, light fixtures, and similar items already installed that are not to be coated. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and coating.

1. After completing coating operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.

3.3 APPLICATION

A. General: Apply intumescent paints according to manufacturer's written instructions and to comply with requirements for listing and labeling for surface-burning characteristics specified.

1. Finish doors on faces with intumescent finish. Paint tops, bottoms, and side edges with fire-inert finish.

3.4 EXTERIOR INTUMESCENT PAINTING SCHEDULE

A. Wood Substrates: Glued-laminated construction.

1. Pigmented, Fire-Retardant System MPI EXT 6.1F:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant topcoat, exterior, low sheen, MPI #126.

2. Clear, Fire-Retardant, Penetrating Wood Preservative System MPI EXT 6.1G:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-resistant sealer, for exterior wood, MPI #109.

B. Wood Substrates: Exposed framing.

1. Pigmented, Fire-Retardant System MPI EXT 6.2F:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant topcoat, exterior, low sheen, MPI #126.

2. Clear, Fire-Retardant, Penetrating Wood Preservative System MPI EXT 6.2G:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.

c. Topcoat: Fire-resistant sealer, for exterior wood, MPI #109.

C. Wood Substrates: Wood trim, architectural woodwork and wood board siding as directed.

1. Pigmented, Fire-Retardant System MPI EXT 6.3P:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant topcoat, exterior, low sheen, MPI #126.

2. Clear, Fire-Retardant, Penetrating Wood Preservative System MPI EXT 6.3Q:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-resistant sealer, for exterior wood, MPI #109.

D. Wood Substrates: Wood-based panel products.

1. Pigmented, Fire-Retardant System EXT 6.4E:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant topcoat, exterior, low sheen, MPI #126.

2. Clear, Fire-Retardant, Penetrating Wood Preservative System MPI EXT 6.4F:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-resistant sealer, for exterior wood, MPI #109.

3.5 INTERIOR INTUMESCENT PAINTING SCHEDULE

A. Wood Substrates: Glued-laminated construction.

1. Pigmented, Fire-Retardant, Water-Based System MPI INT 6.1U:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant coating, latex, interior, flat MPI #64.

d. Topcoat: Fire-retardant topcoat, latex, interior MPI #67.

2. Pigmented, Fire-Retardant, Solvent-Based System MPI INT 6.1UU:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant coating, alkyd, interior, flat MPI #63.

3. Clear, Fire-Retardant, Water-Based System MPI INT 6.1V:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant coating, interior, clear MPI #62.

4. Clear, Fire-Retardant, Solvent-Based System MPI INT 6.1VV:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant topcoat, clear, alkyd, interior MPI #66.

B. Wood Substrates: Exposed framing.

1. Pigmented, Fire-Retardant, Water-Based System MPI INT 6.2F:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant coating, latex, interior, flat MPI #64.

d. Topcoat: Fire-retardant topcoat, latex, interior MPI #67.

2. Pigmented, Fire-Retardant, Solvent-Based System MPI INT 6.2FF:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant coating, alkyd, interior, flat MPI #63.

3. Clear, Fire-Retardant, Water-Based System MPI INT 6.2G:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant coating, interior, clear MPI #62.

4. Clear, Fire-Retardant, Solvent-Based System MPI INT 6.2GG:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant topcoat, clear, alkyd, interior MPI #66.

C. Wood Substrates: Wood trim, architectural woodwork and wood board paneling.

1. Pigmented, Fire-Retardant, Water-Based System MPI INT 6.3R:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant coating, latex, interior, flat MPI #64.

d. Topcoat: Fire-retardant topcoat, latex, interior MPI #67.

2. Pigmented, Fire-Retardant, Solvent-Based System MPI INT 6.3RR:

a. Prime Coat: As recommended in writing by topcoat manufacturer.

b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant coating, alkyd, interior, flat MPI #63.

3. Clear, Fire-Retardant, Water-Based System MPI INT 6.3S:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant coating, interior, clear MPI #62.

4. Clear, Fire-Retardant, Solvent-Based System MPI INT 6.3SS:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant topcoat, clear, alkyd, interior MPI #66.

D. Wood Substrates: Wood-based panel products.

1. Pigmented, Fire-Retardant, Water-Based System MPI INT 6.4P:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant coating, latex, interior, flat MPI #64.

d. Topcoat: Fire-retardant topcoat, latex, interior MPI #67.

2. Pigmented, Fire-Retardant, Solvent-Based System MPI INT 6.4PP:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant coating, alkyd, interior, flat MPI #63.

3. Clear, Fire-Retardant, Water-Based System MPI INT 6.4Q:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant coating, interior, clear MPI #62.

4. Clear, Fire-Retardant, Solvent-Based System MPI INT 6.4QQ:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant topcoat, clear, alkyd, interior MPI #66.

E. Wood Substrates: Wood shingles and shakes.

1. Pigmented, Fire-Retardant, Water-Based System MPI INT 6.6G:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant coating, latex, interior, flat MPI #64.

d. Topcoat: Fire-retardant topcoat, latex, interior MPI #67.

2. Pigmented, Fire-Retardant, Solvent-Based System MPI INT 6.6GG:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant coating, alkyd, interior, flat MPI #63.

3. Clear, Fire-Retardant, Water-Based System MPI INT 6.6H:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant coating, interior, clear MPI #62.

4. Clear, Fire-Retardant, Solvent-Based System MPI INT 6.6HH:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Fire-retardant topcoat, clear, alkyd, interior MPI #66.

END OF SECTION 099646

SECTION 099653 - ELASTOMERIC COATINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes surface preparation and application of elastomeric coatings to the following exterior substrates:

1. Concrete.
2. Concrete unit masonry.
3. Stucco.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.

B. Samples: For each type of elastomeric coating indicated and in each color and gloss.

1.3 QUALITY ASSURANCE

A. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Architect will select one surface to represent surfaces and conditions for application of each paint system.

a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft (9 sq. m).
b. Other Items: Architect will designate items or areas required.

2. Final approval of color selections will be based on mockups.

a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Products: Subject to compliance with requirements listed in the Elastomeric Coating Schedule for the paint category, as directed.

2.2 MATERIALS

A. MPI Standards: Products shall comply with MPI standards indicated and shall be listed in its "MPI Approved Products List."

B. Moisture-Vapor Transmission: Minimum (As directed), based on testing according to ASTM D1653.

C. Material Compatibility:

1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, products shall be recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.

D. Colors: As directed.

E. Crack Fillers: Elastomeric coating manufacturer's recommended, factory-formulated crack fillers or sealants, including crack filler primers, compatible with substrate and other materials indicated.

F. Primer: Elastomeric coating manufacturer's recommended, factory-formulated, alkali-resistant primer compatible with substrate and other materials indicated.

G. Concrete Unit Masonry Block Filler: Elastomeric coating manufacturer's recommended, factory-formulated, high-performance latex block filler compatible with substrate and other materials indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with manufacturer's requirements for maximum moisture content, alkalinity, and other conditions affecting performance of work.

B. Begin coating only when moisture content of substrate is 12 percent or less when measured with an electronic moisture meter.

C. Begin coating no sooner than 28 days after substrate is constructed and is visually dry on both sides.

3.2 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in the "MPI Architectural Painting Specification Manual" applicable to substrates and coating systems indicated.

B. Remove hardware and hardware accessories, plates, machined surfaces, light fixtures, and similar items already installed that are not to be coated. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and coating.

1. After completing coating operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.

C. Crack Repair: Fill cracks according to manufacturer's written instructions before coating surfaces.

3.3 APPLICATION

A. Apply elastomeric coatings according to manufacturer's written instructions.

B. Primers: Apply at a rate to ensure complete coverage.

C. Block Fillers: Apply at a rate to ensure complete coverage with pores filled.

D. Elastomeric Finish Coat(s): As directed.

3.4 ELASTOMERIC COATING SCHEDULE

A. Concrete Substrates:

1. Elastomeric Coating System MPI EXT 3.1F:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Elastomeric, pigmented, exterior, water-based, flat coating; MPI #113.

1) As directed.

d. Topcoat: Elastomeric, pigmented, exterior, water-based, nonflat coating; MPI #38.

1) As directed.

B. Concrete Unit Masonry Substrates:

1. Elastomeric Coating System MPI EXT 4.2D:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Block Filler: As recommended in writing by topcoat manufacturer.
c. Intermediate Coat: As recommended in writing by topcoat manufacturer.
d. Topcoat: Elastomeric, pigmented, exterior, water-based, flat coating; MPI #113.

1) As directed.

C. Stucco Substrates:

1. Elastomeric Coating System MPI EXT 9.1C:

    a. Prime Coat: As recommended in writing by topcoat manufacturer.
    b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
    c. Topcoat: Elastomeric, pigmented, exterior, water-based, flat coating; MPI #113.

        1) As directed.

    d. Topcoat: Elastomeric, pigmented, exterior, water-based, nonflat coating; MPI #38.

        1) As directed.

END OF SECTION 099653

SECTION 099726 - CEMENTITIOUS COATINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes surface preparation and application of cementitious coating systems on concrete and masonry.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Samples: In each color and gloss of topcoat.

1. Submit Samples on rigid backing, not less than 8 inches (200 mm) square.
2. Step coats on Samples to show each coat required for system.
3. Label each coat of each Sample.

1.3 INFORMATIONAL SUBMITTALS

A. Material certificates.

B. Product test reports.

1.4 QUALITY ASSURANCE

A. Mockups: Apply mockups of at least 100 sq. ft. (9.3 sq. m) of coating system indicated and each color and finish selected.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Products: Subject to compliance with requirements listed in the Cementitious Coating Schedule for the paint category indicated, as directed.

2.2 CEMENTITIOUS COATINGS

A. Polymer-Modified Cementitious Coating: Containing portland cement, polymer, and hydrated lime or aggregates.

1. Compressive Strength: Not less than 3500 psi (24.1 MPa) at 28 days according to ASTM C109/C109M.
2. Tensile Strength: Not less than 350 psi (2.41 MPa) at 28 days according to ASTM C109/C109M.
3. Flexural Strength: As directed.
4. Adhesion: As directed.
5. Permeance: As directed.
6. Accelerated Weathering: As directed.
7. UV Resistance: As directed.
8. Salt-Spray Resistance: As directed.

B. Colors: As directed.

C. Other Materials: Provide crack fillers, block fillers, and related materials that are compatible with cementitious finish-coat materials and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements and other conditions affecting performance of the Work.

B. Begin coating application only after unsatisfactory conditions have been corrected and surfaces are dry.

1. Beginning coating application constitutes Contractor's acceptance of substrates and conditions.

3.2 PREPARATION

A. Comply with manufacturer's written instructions for mixing and preparing materials and as applicable to substrates indicated.

B. Remove plates, machined surfaces, and similar items already in place that are not to be coated. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and coating.

1. After completing coating operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.

C. Clean substrates of substances that could impair bond of coatings, including dirt, oil, grease, incompatible coatings, and loose substrate materials.

D. Cementitious and Masonry Surfaces: Remove release agents, curing compounds, efflorescence, and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.

E. Crack Repair: Fill cracks according to manufacturer's written instructions before coating surfaces.

3.3 APPLICATION

A. Apply coatings according to manufacturer's written instructions. Use applicators and techniques suited for coating and substrate indicated.

B. Apply coating to achieve material thickness as recommended in writing by manufacturer, but not less than the following:

1. First Coat: Apply polymer-modified cementitious coating material at the rate of 2 lb/sq. yd. (1 kg/sq. m) to achieve a total cured thickness of 25 mils (0.6 mm).
2. Second Coat: Apply polymer-modified cementitious coating material at the rate of 1 lb/sq. yd. (0.5 kg/sq. m) to achieve a total cured thickness of 15 mils (0.4 mm).

C. On previously coated surfaces, apply coating to achieve material thickness as recommended in writing by manufacturer, but not less than the following:

1. Apply polymer-modified cementitious coating material at the rate of 1 lb/sq. yd. (0.5 kg/sq. m) to achieve a total cured thickness of 15 mils (0.4 mm).

3.4 CEMENTITIOUS COATING SCHEDULE

A. Above-Grade Concrete and Masonry:

1. Polymer-Modified Cementitious Coating:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Polymer-modified cementitious coating.

1) As directed.

END OF SECTION 099726

SECTION 101100 - VISUAL DISPLAY UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Visual display board assemblies.
2. Sliding visual display units.
3. Visual display conference units.
4. Glass markerboards.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For visual display units.

1. Include plans, elevations, sections, details, and attachment to other work.
2. Show locations of panel joints

D. Samples: For each type of visual display unit indicated.

E. Product Schedule: For visual display units.

1.3 INFORMATIONAL SUBMITTALS

A. Sample warranties.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 WARRANTY

A. Special Warranty for Porcelain-Enamel Face Sheets: Manufacturer agrees to repair or replace porcelain-enamel face sheets that fail in materials or workmanship within specified warranty period.

1. Warranty Period: 50 years from date of Substantial Completion.
2. Warranty Period: Life of the building.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 50 or 450 as directed or less.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 VISUAL DISPLAY BOARD ASSEMBLY

A. Visual Display Board Assembly: Field or factory fabricated.

1. Assembly: As directed.
2. Corners: Square or Rounded.
3. Width: As directed.
4. Height: As directed.

B. Chalkboard Panel: As directed -faced chalkboard panel on core indicated.

1. Color: As directed.

C. Markerboard Panel: As directed. Markerboard panel on core indicated.

1. Color: As directed.

D. Tackboard Panel: As directed. Tackboard panel on core indicated.

1. Fabric Wrapped Edge: Wrap edge of tackboard panel with fabric facing.
2. Color and Pattern: As directed.

E. Aluminum Frames and Trim: Fabricated from not less than 0.062-inch- (1.57-mm-) thick, extruded aluminum; as directed.

1. Field-Applied Trim: Manufacturer's standard, as directed.
2. Aluminum Finish: Finish as directed.

    a. Color: As directed

F. Factory-Applied Wood Trim: As directed, not less than 1/2 inch (13 mm) thick; as directed with opaque or transparent finish.

G. Vinyl Trim: Dark brown or Black. If locations of joints are critical, indicate them on Drawings and delete "Joints" Paragraph below.

H. Joints: Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, as directed.

I. Combination Assemblies: Provide as directed between abutting sections of visual display panels.

J. Chalktray: Manufacturer's standard; continuous.

1. Box Type: Extruded aluminum with slanted front, grooved tray, and cast-aluminum end closures.
2. Solid Type: Extruded aluminum with ribbed section and smoothly curved exposed ends.

K. Display Rail: Manufacturer's standard, extruded-aluminum display rail with plastic-impregnated-cork insert, end stops, and continuous paper holder, designed to hold accessories.

1. Size: As directed.
2. Map Hooks: Two map hooks for every 48 (1200) inches (mm) of display rail or fraction thereof.
3. Map Hooks and Clips: Two map hooks with flexible metal clips for every 48 (1200) inches (mm) of display rail or fraction thereof.
4. Flag Holder: One for each room.
5. Tackboard Insert Color: As directed.
6. Aluminum Color: Match finish of visual display assembly trim.

L. Paper Holder Display Rail: Extruded aluminum; designed to hold paper by clamping action.

2.3 SLIDING VISUAL DISPLAY UNITS

A. Horizontal-Sliding Visual Display Units: Factory-fabricated units consisting of extruded-aluminum tubular frame, fixed rear visual display panel, aluminum-framed horizontal-sliding visual display panels, and extruded-aluminum fascia that conceals overhead sliding track; designed for recessed mounting. Provide panels that operate smoothly without vibration or chatter.

1. Two-Track Units: Fabricate unit with fixed rear panel covering entire rear surface. Provide two sliding panels, each equal to not less than one-half of overall length of unit.
2. Three-Track Units: Fabricate unit with fixed rear panel covering entire rear surface. Provide three sliding panels, each equal to not less than one-third or one-half of overall length of unit.
3. Four-Track Units: Fabricate unit with fixed rear panel centered in and covering not less than one-half of rear surface, and fixed front panel on each side of unit equal to not less than one-quarter of overall length of unit. Provide four sliding panels, each equal to not less than one-quarter of overall length of unit.

    a. Swinging Doors: Fabricated from same construction as sliding panels and supported on full-height continuous hinges. Provide visual display panel on both faces of each door.

4. Hardware: Manufacturer's standard, extruded-aluminum overhead track and channel-shaped bottom guides; with two nylon ball-bearing carriers and two nylon rollers for each sliding panel.

5. Overall Width: As directed.
6. Overall Height: As directed.

B. Vertical-Sliding Visual Display Units: Factory-fabricated units consisting of extruded-aluminum tubular frame, fixed rear visual display panel, and aluminum-framed vertical-sliding panels; motor operated; designed for recessed mounting. Provide panels that operate smoothly without vibration or chatter.
   1. Type: Tubular frame on four sides or top and two sides, with sides extending to floor; with kick panel to conceal sliding panels. Design unit to support panels independently of wall.
   2. Two-Track Units: Fabricate unit with fixed rear panel covering entire rear surface. Provide two sliding panels, each equal to not less than one-half of overall height of unit.
   3. Three-Track Units: Fabricate unit with fixed rear panel covering entire rear surface. Provide three sliding panels, each equal to not less than one-half of overall height of unit.
   4. Four-Track Units: Fabricate unit with fixed rear panel centered in and covering not less than one-half of rear surface. Provide four sliding panels, each equal to not less than one-half of overall height of unit.
   5. Hardware: Manufacturer's standard, neoprene ball-bearing end rollers, four on each side of each sliding panel. Counterbalance each sliding panel with counterweights supported by steel aircraft cable over ball-bearing sheaves; with removable cover plate for access to counterweights. Provide rubber bumpers at top and bottom for each sliding panel.
   6. Motorized Operation: Provide not less than one motor with gearhead reducers for each sliding panel, mounted above visual display unit and connected to sliding panels with steel aircraft cable. Provide removable cover plate for access to motor. Equip motors with limit switches to automatically stop motor at each end of travel.

      a. Electric Motors: UL approved or recognized, totally enclosed, complying with NEMA MG 1, with thermal-overload protection; 1/15 hp, single phase, 110 or 220 V, 60 Hz.
      b. Control Station: Three-position, maintained or momentary contact, switch-operated control station with open, close, and off functions; with NEMA ICS 6, Type 1 enclosure. Provide one control station for each sliding panel unit.
      c. Key Switch: Provide supplementary key switch for each control station. Furnish two keys for each control station, keyed alike.

   7. Overall Width: As directed.
   8. Overall Height: As directed.

C. Panels and Accessories:

   1. Sliding Chalkboard Panel: Porcelain-enamel or High-pressure chalkboard laminate-faced chalkboard panel on kraft-paper honeycomb core designed to be rigid and to resist warpage, not less than 3/8 (9.5) inch (mm) thick.

      a. Color: As directed.

   2. Sliding Markerboard Panel: Porcelain-enamel or High-pressure markerboard laminate-faced markerboard panel on kraft-paper honeycomb core designed to be rigid and to resist warpage, not less than 3/8 (9.5) inch (mm) thick.

      a. Color: As directed.

3. Sliding Tackboard Panel: As directed tackboard panel on kraft-paper honeycomb core designed to be rigid and to resist warpage, not less than 3/8 (9.5) inch (mm) thick.

    a. Color and Pattern: As directed.

4. Fixed Rear Chalkboard Panel: Porcelain-enamel or High-pressure chalkboard laminate-faced chalkboard panel on core indicated.

    a. Color: As directed.

5. Fixed Rear Markerboard Panel: Porcelain-enamel or High-pressure markerboard laminate-faced markerboard panel on core indicated.

    a. Color: As directed.

6. Fixed Rear Tackboard Panel: Tackboard panel on core indicated as directed.

    a. Color and Pattern: As directed.

7. Kick Panel: Manufacturer's standard fabric-covered cork or low-pressure laminate.

    a. Color and Pattern: As directed.

8. Accessories: As directed.
9. Display Rail: Manufacturer's standard, extruded-aluminum display rail with plastic-impregnated-cork insert, end stops, and continuous paper holder, designed to hold accessories.

    a. Size: High by full length of visual display unit as directed
    b. Map Hooks: Two map hooks for every 48 (1200) inches (mm) of display rail or fraction thereof.
    c. Flag Holder: One for each sliding visual display unit.
    d. Tackboard Insert Color: As directed.

10. Aluminum Trim: Factory applied or Field applied; in manufacturer's standard size and profile; with clear anodic finish.

2.4 VISUAL DISPLAY CONFERENCE UNITS

A. Visual Display Conference Units: Factory-fabricated units consisting of hinged-door wood cabinet with perimeter face frame, sides, and back; not less than 3-inch (75-mm) interior depth and designed for surface wall mounting. Fabricate inside of cabinet and cabinet doors with fixed visual display units.

1. Wood Cabinets: Fabricated from solid wood with integral, solid-wood marker tray. Fabricate hinged door panels with solid-wood frame and wood-veneer exterior surface.

    a. Species and Finish: As directed.

2. Plastic-Laminate Cabinets: Cabinet and hinged door panels fabricated from manufacturer's standard wood panels finished with high-pressure decorative laminate; with integral marker tray.

    a. Color: As directed

3. Cabinet Corners: Square or Rounded.
4. Hardware: Manufacturer's standard, full-height continuous hinges, wire door pulls, and door bumpers.
5. Fixed Rear Panel: Manufacturer's standard markerboard panel.

    a. Color: As directed.

6. Inside Surface of Doors: Same as fixed rear panel.
7. Inside Surface of Doors: Tackboard panel consisting of facing on manufacturer's standard core.

    a. Color: As directed.

8. Width: 48 inches (1219 mm).
9. Height: As directed.
10. Accessories: Cylinder lock and flip-chart pad clamp.

2.5 GLASS MARKERBOARDS

A. Glass Markerboards: Fabricated of as directed glass with steel backing for use with magnets.

1. Edge Treatment: Smooth polished edge with rounded or eased corners.
2. Frame: Aluminum trim in profile indicated.
3. Surface: Glossy or Matte.
4. Color: As directed.

B. Mounting: Round, stainless steel standoffs, holding glass approximately 1 (25) inch (mm) from wall surface; mounted through holes in or in notches in standoffs at top and bottom edges of markerboard.

C. Mounting: Concealed, Z-shaped brackets.

D. Mounting: Manufacturer's standard adhesive or adhesive-foam tape mounting.

E. Graphics: Provide screen-printed graphics as indicated.

F. Marker Tray: Glass or Aluminum, attached with stainless steel clips or magnet.

G. Size: As directed.

2.6 CHALKBOARD PANELS

A. Porcelain-Enamel Chalkboard Panels: High-pressure factory-laminated chalkboard panels of balanced three-ply construction, consisting of moisture-barrier backing, core material, and

porcelain-enamel face sheet with matte finish. Laminate panels under heat and pressure with manufacturer's standard, flexible waterproof adhesive.

1. Face Sheet Thickness: 0.021 inch (0.53 mm) or 0.013 inch (0.33 mm) uncoated base metal thickness.
2. Manufacturer's Standard Core: Minimum 1/4 inch (6 mm) thick, with manufacturer's standard moisture-barrier backing.
3. Hardboard Core: 1/4 inch (6 mm) thick; with backing as directed.
4. Particleboard Core: 3/8 inch (9.5 mm) thick; with backing as directed.
5. Fiberboard Core: 3/8 inch (9.5 mm) or 1/2 inch (13 mm) thick; with backing as directed.
6. MDF Core: 7/16 inch (11 mm) thick; with manufacturer's standard moisture-barrier backing.
7. Laminating Adhesive: Manufacturer's standard moisture-resistant thermoplastic type.

B. High-Pressure Chalkboard Laminate Panels: Factory-laminated chalkboard panels of balanced three-ply construction, consisting of backing, fiberboard core material, and high-pressure chalkboard laminate writing surface.

C. Melamine Chalkboard Panels: Fabricated from 1/4-inch- (6-mm-) thick, sealed and primed hardboard core permanently bonded with thermally fused, melamine-impregnated decorative paper writing surface complying.

2.7 MARKERBOARD PANELS

A. Porcelain-Enamel Markerboard Panels: Balanced, high-pressure, factory-laminated markerboard assembly of three-ply construction, consisting of moisture-barrier backing, core material, and porcelain-enamel face sheet with high or low-gloss finish. Laminate panels under heat and pressure with manufacturer's standard, flexible waterproof adhesive.

1. Face Sheet Thickness: 0.021 inch (0.53 mm) or 0.013 inch (0.33 mm) uncoated base metal thickness.
2. Manufacturer's Standard Core: Minimum 1/4 inch (6 mm) thick, with manufacturer's standard moisture-barrier backing.
3. Hardboard Core: 1/4 inch (6 mm) thick; with backing as directed.
4. Particleboard Core: 3/8 inch (9.5 mm) or 1/2 inch (13 mm) thick; backing as directed.
5. Fiberboard Core: 3/8 inch (9.5 mm) or 1/2 inch (13 mm) thick; backing as directed.
6. MDF Core: 7/16 inch (11 mm) thick; with manufacturer's standard moisture-barrier backing.
7. Laminating Adhesive: Manufacturer's standard moisture-resistant thermoplastic type.

B. High-Pressure Markerboard Laminate Panels: Factory-laminated markerboard panel of three-ply construction, consisting of backing, fiberboard core material, and high-pressure markerboard laminate writing surface.

C. Melamine Markerboard Panels: Fabricated from 1/4-inch- (6-mm-) thick, sealed and primed hardboard panels permanently bonded with thermally fused, melamine-impregnated decorative paper writing surface.

2.8 TACKBOARD PANELS

A. Tackboard Panels:

1. Facing: Natural cork or plastic-impregnated cork as directed.
2. Facing: Vinyl or Polyester fabric.
3. Facing: Vinyl or Polyester fabric factory laminated thick, cork sheet as directed.
4. Facing: Recycled rubber, 0.44 inch (11 mm) thick; with color flecks as directed.
5. Core: Manufacturer's standard.
6. Core: 3/8-inch- (9.5-mm-) or 7/16-inch- (11-mm-) thick fiberboard.
7. Core: 1/4-inch- (6-mm-) thick hardboard or particleboard.

2.9 MATERIALS

A. Porcelain-Enamel Face Sheet: PEI-1002, with face sheet manufacturer's standard two- or three-coat process.

B. High-Pressure Decorative Laminate: NEMA LD 3.

C. High-Pressure Markerboard Laminate: Complying with physical testing requirements of NEMA LD 3.

D. High-Pressure Chalkboard Laminate: Complying with physical testing requirements of NEMA LD 3.

E. Natural-Cork Sheet: Seamless, single-layer, compressed fine-grain cork sheet; bulletin board quality; face sanded for natural finish; with surface-burning characteristics indicated.

F. Plastic-Impregnated-Cork Sheet: Seamless, homogeneous, self-sealing sheet consisting of granulated cork, linseed oil, resin binders, and dry pigments that are mixed and calendared onto fabric backing; with washable vinyl finish and integral color throughout; with surface-burning characteristics indicated.

G. Vinyl Fabric: Mildew resistant, washable, complying with ASTM F793/F793M, Type II, burlap weave; weighing not less than 13 oz./sq. yd. (440 g/sq. m); with surface-burning characteristics indicated.

H. Polyester Fabric: Nondirectional weave, 100 percent polyester; weighing not less than 15 oz./sq. yd. (508 g/sq. m); with surface-burning characteristics indicated.

I. Hardboard: ANSI A135.4, tempered.

J. Particleboard: ANSI A208.1, Grade M-1.

K. MDF: ANSI A208.2, Grade 130.

L. Fiberboard: ASTM C208 cellulosic fiber insulating board.

M. Clear Tempered Glass: ASTM C1048, Kind FT, Condition A, Type I, Class 1, Quality Q3, with exposed edges seamed before tempering.

N. Extruded Aluminum: ASTM B221 or ASTM B221M, Alloy 6063.

O. Adhesives for Field Application: Mildew-resistant, nonstaining adhesive for use with specific type of panels, sheets, or assemblies; and for substrate application; as recommended in writing by visual display unit manufacturer.

2.10 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

B. Color Anodic Finish: AAMA 611, AA-M12C22A32/A34, Class II, 0.010 mm or thicker.

C. Baked-Enamel or Powder-Coat Finish: AAMA 2603, except with a minimum dry film thickness of 1.5 mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install visual display surfaces in locations and at mounting heights indicated on Drawings, or if not indicated, at heights indicated below. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.

B. Field-Assembled Visual Display Board Assemblies: Coordinate field-assembled units with grounds, trim, and accessories indicated. Join parts with a neat, precision fit.

1. Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, balanced around center of board, as acceptable to Architect or as indicated on approved Shop Drawings.
2. Where size of visual display board assemblies or other conditions require support in addition to normal trim, provide structural supports or modify trim as indicated or as selected by Architect from manufacturer's standard structural support accessories to suit conditions indicated.

C. Factory-Fabricated Visual Display Board Assemblies: Adhere to wall surfaces with egg-size adhesive gobs at 16 inches (400 mm) o.c., horizontally and vertically.

D. Factory-Fabricated Visual Display Board Assemblies: Attach concealed clips, hangers, and grounds to wall surfaces and to visual display board assemblies with fasteners at not more than 16 inches (400 mm) o.c. Secure tops and bottoms of boards to walls.

E. Sliding Visual Display Units: Install units at mounting heights indicated. Attach to wall framing with fasteners at not more than 16 inches (400 mm) o.c.

F. Visual Display Conference Units: Install units at mounting heights indicated on Drawings, or if not indicated, at height indicated below. Attach to wall surface as directed.

END OF SECTION 101100

SECTION 101146 - VISUAL DISPLAY FABRICS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes dry-erase wall coverings.

1.2 ACTION SUBMITTALS

A. Product Data.

B. Sustainable Design Submittals.

C. Shop drawings.

D. Samples.

E. Product schedule.

1.3 INFORMATIONAL SUBMITTALS

A. Product test reports.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: As directed 50 or 450 or less.

2.2 DRY-ERASE WALL COVERINGS

A. Dry-Erase Wall Covering: As directed Intended for use with dry-erase markers and as a projection surface and consisting of low-gloss, moderate-gloss or high-gloss plastic film bonded to fabric backing.

1. Color: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from manufacturer's full range.

B. Magnetic Dry-Erase Wall Covering: Intended for use with dry-erase markers and magnetic aids and consisting of moderate-gloss plastic film bonded to ferrous-powdered fabric backing.
   1. Color: As indicated by manufacturer's designations, Match Architect's sample, as selected by Architect from manufacturer's full range.

C. Adhesives for Field Application: Strippable, mildew-resistant, nonstaining adhesive for use with dry-erase wall coverings; and for substrate application; as recommended in writing by dry-erase wall covering manufacturer.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Dry-Erase Wall Covering: Comply with dry-erase wall-covering manufacturers' written installation instructions.

END OF SECTION 101146

SECTION 101200 - DISPLAY CASES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Bulletin boards.
2. Display cases.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For display cases and bulletin boards.

1. Include plans, elevations, sections, and attachment details.

D. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Product Test Reports: For fabrics and tackboard panels, for tests performed by a qualified testing agency.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 50 or 450 or less.

B. Electrical Components: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 BULLETIN BOARDS

A. General: Factory-fabricated unit consisting of manufacturer's standard wall-mounted cabinet with tackboard panel on back inside surface and operable glazed doors at front.

1. Frame and Cabinet Profile: Square or Rounded frame section with square or rounded cabinet corners.
2. Mounting: Surface mounted or Recessed.
3. Size: As indicated on Drawings.
4. Size: 48 (1200) inches (mm) wide by 36 (910) inches (mm) high by 4 (100) inches (mm) deep.

B. Aluminum-Framed Cabinet: Extruded aluminum; with finish as directed.

1. Color: As directed.

C. Wood-Framed Cabinet: As directed.

D. Glazed Sliding Doors: Tempered glass or Clear acrylic sheet; unframed; with extruded-aluminum top and bottom track; supported on nylon or ball-bearing rollers; with plastic top guide and rubber bumpers. Equip each door with ground finger pull and adjustable cylinder lock with two keys.

1. Number of Doors: As directed

E. Glazed Hinged Doors: Tempered glass or Clear acrylic sheet; set in frame matching cabinet material and finish. Equip each door with full-height continuous hinge and cylinder lock with two keys.

1. Number of Doors: As directed.

F. Back Panel: Manufacturer's standard Tackboard panel as directed.

1. Color: As directed

2.3 DISPLAY CASES

A. Unit in "Recessed Display Case" Paragraph below is also available from some manufacturers as front, face-frame component only, without cabinet, for installation with field-constructed recessed box. Revise text if retaining face-frame only. Several manufacturers offer semi-recessed display cases; revise Section Text if specifying semi-recessed display cases.

B. Recessed Display Case: Factory-fabricated display case; with finished interior, operable glazed doors at front, and trim on face to cover edge of recessed opening.

1. Display Case Cabinet: Extruded aluminum or Hardwood veneer plywood.

    a. Veneer Species: As directed.

2. Face Frame: Aluminum.
3. Face Frame: As directed.

4. Aluminum Finish: As directed.

    a. Color: As directed.

C. Surface-Mounted Display Case: Factory-fabricated display case; with finished interior, and glazed doors at front.

1. Construction: Hardwood-veneer-plywood bottom panel; glazed side panels; hardwood-veneer-plywood or glazed as directed top panel; aluminum or hardwood face frame as directed.

    a. Wood and Veneer Species: As directed

2. Construction: Extruded-aluminum top, bottom, and side panels.
3. Construction: Aluminum frame with glazed top, bottom, and side panels.
4. Construction: Hardwood frame; As directed.
5. Aluminum Finish: As directed.

    a. Color: As directed

6. Display Case Base: As directed.

D. Glazed Sliding Doors: Tempered glass; unframed; with extruded-aluminum top and bottom track; supported on nylon or ball-bearing rollers; with plastic top guide and rubber bumpers. Equip each door with ground finger pull and adjustable cylinder lock with two keys.

1. Number of Doors: As directed.

E. Glazed Hinged Doors: Tempered glass; set in frame matching cabinet material and finish. Equip each door with full-height continuous hinge and cylinder lock with two keys.

1. Number of Doors: As directed

F. Shelves: 6-mm-thick tempered glass; supported on adjustable shelf standards and supports.

1. Shelf Depth: As directed.
2. Number of Shelves: Three.

G. Adjustable Shelf Standards and Supports: BHMA A156.9, B04102; with shelf brackets, B04112; recess mounted in rear surface or BHMA A156.9, B04071; with shelf rests, B04081; mounted on sides as directed. Provide standards extending full height of display case.

H. Natural-Cork Back Panel: Natural-cork tackboard panel.

I. Plastic-Impregnated Back Panel: Plastic-impregnated-cork tackboard panel.

J. Vinyl Back Panel: Vinyl-fabric-faced tackboard panel.

K. Polyester Back Panel: Polyester-fabric-faced tackboard panel.

L. Hardwood Back Panel: Hardwood veneer to match display case construction.

M. Back Panel: As directed.

1. Color: As directed.

N. Illumination System: Concealed top-lighting system consisting of fluorescent-strip fixtures. Include lamps and internal wiring with single concealed electrical connection to building system. Coordinate electrical characteristics with power supply provided.

1. Ballasts: Low-temperature, high-power-factor, low-energy, fluorescent lamp ballasts that comply with Certified Ballast Manufacturers Association standards and carry its label.

a. Electrical Characteristics: Single phase, 120 or 277 V.

2.4 MATERIALS

A. Hardboard: ANSI A135.4, tempered.

B. Fiberboard: ASTM C208.

C. Particleboard: ANSI A208.1, Grade M-1.

D. Hardwood Plywood: HPVA HP-1.

E. Natural-Cork Sheet: Seamless, single-layer, compressed fine-grain cork sheet; bulletin board quality; face sanded for natural finish.

F. Plastic-Impregnated-Cork Sheet: Seamless, homogeneous, self-sealing sheet consisting of granulated cork, linseed oil, resin binders, and dry pigments that are mixed and calendared onto burlap backing; with washable vinyl finish and integral color throughout.

G. Polyester Fabric: Nondirectional weave, 100 percent polyester; weighing not less than 15 oz./sq. yd. (508 g/sq. m); with flame-spread index of 25 or less when tested in accordance with ASTM E84.

H. Vinyl Fabric: ASTM F793/F793M, Type II, burlap weave; weighing not less than 13 oz./sq. yd. (440 g/sq. m); with flame-spread index of 25 or less when tested in accordance with ASTM E84.

I. Extruded-Aluminum Bars and Shapes: ASTM B221 (ASTM B221M), Alloy 6063.

J. Aluminum Tubing: ASTM B429/B429M, Alloy 6063.

K. Clear Tempered Glass: ASTM C1048, Kind FT, Condition A, Type I, Class 1, Quality Q3, with exposed edges seamed before tempering.

L. Transparent Acrylic Sheet: ASTM D4802, Category A-1 (cell-cast sheet), with Finish 1 (smooth or polished), colorless sheet with visible light transmittance of 92 percent measured in accordance with ASTM D1003.

M. Opaque Acrylic Sheet: ASTM D4802, Category A-1 (cell-cast sheet).

N. Translucent Acrylic Sheet: ASTM D4802, Category A-1 (cell-cast sheet), with Finish 1 (smooth or polished). Provide white-colored sheet unless otherwise indicated, of density required to produce uniform brightness and minimum halation effects.

O. High-Pressure Plastic Laminate: NEMA LD 3.

2.5 FABRICATION

A. Fabricate bulletin boards and display cases to requirements indicated for dimensions, design, and thickness and finish of materials.

B. Use metals and shapes of thickness and reinforcing required to produce flat surfaces, and to impart strength for size, design, and application indicated.

C. Fabricate cabinets and door frames with reinforced corners, mitered to a hairline fit, with no exposed fasteners.

D. Fabricate shelf standards plumb and at heights to align shelf brackets for level shelves.

2.6 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

B. Color Anodic Finish: AAMA 611, AA-M12C22A32/A34, Class II, 0.010 mm or thicker.

C. Baked-Enamel or Powder-Coat Finish: AAMA 2603, except with a minimum dry film thickness of 1.5 mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install units in locations and at mounting heights indicated on Drawings, or if not indicated, at heights indicated below. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.

B. Bulletin Boards: Attach units to wall surfaces with concealed clips, hangers, or grounds.

C. Recessed Display Cases: Attach units to wall framing with fasteners at not more than 16 inches (400 mm) o.c. Attach aluminum trim over edges of recessed display cases and conceal grounds and clips. Attach trim with fasteners at not more than 24 inches (600 mm) o.c.

D. Surface-Mounted Display Cases: Attach units to wall surfaces with concealed clips, hangers, or grounds fastened at not more than 16 inches (400 mm) o.c. Secure tops and bottoms of display cases to walls.

E. Floor-Mounted Display Cases: Attach display cases with bases or legs to floor with concealed anchors.

END OF SECTION 101200

SECTION 101300 - DIRECTORIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Nonilluminated message-strip directories.
2. Rear-illuminated message-strip directories.
3. Changeable-letter directories.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For directories.

1. Include plans, elevations, sections, and attachment details.
2. Indicate layout directory, including header and message strips.
3. Include diagrams for power wiring.

C. Samples: For each exposed product and for each color and texture specified.

D. Message-Strip Schedule: For each message strip, indicating letter size, font, spacing, indents, text copy, and graphics.

1.3 INFORMATIONAL SUBMITTALS

A. Product Test Reports: For each directory, for tests performed by manufacturer and witnessed by a qualified testing agency or a qualified testing agency as directed, for surface-burning characteristics of letterboards.

1.4 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Message Strips: Full-size blank strips equal to 10 percent of number installed for each size indicated, but no fewer than 20 strips.
2. Paper Message-Strip Stock: Colored, perforated paper stock for printing paper message-strip inserts using manufacturer-supplied software, equal to 2 times message-strip capacity of directory.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 50 or 450 or less as directed.

B. Electrical Components: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 NONILLUMINATED AND FRONT-ILLUMINATED MESSAGE-STRIP DIRECTORIES

A. Profiled Frame: Profiled frame at top and bottom, with sheet metal rear cover, housing changeable message strips in configuration indicated as directed.

1. Frame:

a. Top and Bottom Profile: A directed.
b. Side Trim: As directed.
c. Depth: Manufacturer's standard 1-1/2- to 2-1/2- (38- to 64-) inch (mm) frame depth.
d. Profile Face Dimension: 4 (100) or 6 (152) inches (mm) high as directed.
e. Aluminum Finish: As directed.
f. Color: As directed.

2. Cover: Removable, clear acrylic sheet held in place by perimeter frame. Provide suction cup tool for cover removal.
3. Number of Columns: Columns of message strips as directed.
4. Mounting: Surface.
5. Header: Copy applied to top section of profiled frame.
6. Divider Color: As directed.

B. Metal Frame: Directory with full perimeter metal frame and sheet metal rear cover, housing changeable message strips in configuration indicated.

1. Perimeter Frame:

a. Material: Extruded aluminum.
b. Profile: As directed.
c. Corners: Square or Radius as directed.
d. Depth: Manufacturer's standard 1-3/4- to 2-3/4- (44- to 70-) inch (mm) frame depth as directed.

2. Cover: Non-sectional single-piece cover with full-length concealed hinge, full width of directory or cover for each section of message strips with full-length concealed hinge as directed. Equip with cylinder lock(s).

a. Frame: Same material and finish as perimeter frame.
b. Hinge Location: As directed.
c. Glazing: As directed.

3. Number of Columns: Columns of message strips as directed.
4. Mounting: As directed.
5. Header Panel: Full width of directory, as directed.
6. Divider Strips: Provide divider strips between columns of message strips, and between header and message strips.

a. Color: As directed.

7. Aluminum Finish: As directed.

a. Color: As directed.

C. Message Strips: Provide message strips compatible with directory system selected, with message copy indicated in message-strip schedule.

1. Type:

a. Opaque flat plastic strips, which slide into retainer channels on sides of directory, with screen-printed or vinyl-film copy.
b. Acrylic or high-pressure plastic-laminate strips with machine- or laser-engraved copy, which exposes contrasting core.
c. Flexible magnetic tape with screen-printed or vinyl-film copy.
d. Film-Insert Changeable Message Strips: Removable message strips fabricated from plastic film with vinyl or screen-printed as directed lettering, held in interchangeable, interlocking plastic carriers.

2. Width: As directed.
3. Height: 1/2 (13) or 1 (25) inch (mm) as directed.
4. Color:

a. Message-Strip Background: As directed.
b. Lettering: As directed.

5. Lettering:

a. Letter Height: As directed.
b. Font Style: As directed.
c. Case: As directed.

6. Header Graphics: Provide copy that complies with requirements indicated on Drawings or artwork supplied on electronic media by Architect as directed for size, style, spacing, content, height, location, material, and colors of graphics.
7. Width: 24 inches (610 mm).
8. Height: 36 inches (914 mm).

D. Illumination System: Concealed top-lighting system consisting of fluorescent or LED fixtures. Include lamps and internal wiring with single, concealed electrical connection to building

system. Coordinate electrical characteristics with power supply provided. Provide angled message-strip section for more even illumination.

1. Ballasts: Low-temperature, high-power-factor, low-energy, fluorescent lamp ballasts that comply with Certified Ballast Manufacturers Association standards and carry its label.
2. Electrical Characteristics: Single phase, 120 or 277 V as directed.

2.3 REAR-ILLUMINATED MESSAGE-STRIP DIRECTORIES

A. Rear-Illuminated Message-Strip Directory: Factory-fabricated unit consisting of changeable message strips held in place by retainer frame enclosed in manufacturer's standard 4-to-6-inch- (100-to-150-mm-) deep perimeter frame; with glazed cover, aluminum-sheet rear cover panel, and concealed rear-illumination system.

1. Frame:

    a. Material: Extruded aluminum.
    b. Profile: As directed.
    c. Corners: Square or Radius as directed.

2. Cover: Non-section, one-piece cover with concealed lock.

    a. Cover Frame Material: Same material and finish as perimeter frame.
    b. Cover Frame Profile: As directed
    c. Hinge Location: As directed.
    d. Glazing: As directed.

3. Header Panel: Same material and color as changeable message strips. Provide copy that complies with requirements indicated on Drawings or artwork supplied on electronic media by Architect as directed for size, style, spacing, content, height, location, material, and colors of graphics.
4. Divider Color: Same as message strips.
5. Film-Insert Message Strips: Removable, black, film-negative message strips in 7-inch- (175-mm-) or 14-inch- (350-mm-) long, interchangeable, interlocking plastic carriers as directed.
6. Engraved Changeable Message Strips: Machine- or laser-engraved copy in 7-inch- (175-mm-) or 14-inch- (350-mm-) long, interchangeable, interlocking, black, acrylic strips with transparent core as directed.

    a. Message-Strip Height: As directed.
    b. Letter Height: As directed.
    c. Letter Style: As directed.
    d. Letter Case: As directed.

7. Rear-Illumination System: Provide removable and accessible fluorescent-strip or LED fixture system with reflective interior surfaces for uniform illumination of message strips and header panel with minimum halation and without light leaks. Include lamps and internal wiring with single concealed electrical connection to building system. Coordinate electrical characteristics with power supply provided.

a. Ballasts: Low-temperature, high-power-factor, low-energy, fluorescent lamp ballasts that comply with Certified Ballast Manufacturers Association standards and carry its label.
b. Electrical Characteristics: Single phase, 120 or 277 V as directed.

8. Aluminum Finish: As directed.

a. Color: As directed.
b. Plating: As directed.

9. Width: As directed.
10. Height: As directed.
11. Mounting: As directed

2.4 CHANGEABLE-LETTER DIRECTORIES

A. Enclosed-Face, Changeable-Letter Directory: Factory-fabricated unit consisting of manufacturer's standard, 2-inch- (50-mm-) deep, perimeter frame with fixed or removable letterboard as directed on back inside surface and with glazed doors or lift-off, glazed cover as directed.

1. Aluminum Perimeter Frame: Extruded aluminum.

a. Perimeter Frame Profile: As directed
b. Perimeter Frame Corners: Square or Radius as directed.
c. Finish: As directed.

1) Color: As directed.

2. Wood Perimeter Frame: Red oak or Walnut with finish as directed.

a. Perimeter Frame Profile: As directed.
b. Perimeter Frame Corners: Square or Radius as directed.

3. Glazed Sliding Doors: Unframed, clear-tempered-glass doors supported on nylon or ball-bearing rollers in extruded-aluminum top and bottom track, with plastic top guide and rubber bumpers. Equip each door with ground finger pull and adjustable cylinder lock with two keys.

a. Door Track: Same finish on exposed surfaces as perimeter frame.
b. Number of Doors: Two or Three as directed.

4. Glazed Hinged Doors: Clear acrylic sheet or tempered glass set in door frame equipped with full-height continuous hinge and cylinder lock with two keys.

a. Door Frame: Same material and finish as perimeter frame.
b. Number of Doors: As directed

5. Lift-off Cover: Clear acrylic sheet or tempered glass as directed set in frame that snaps into place. Fabricate frame from same material and finish as perimeter frame.

6. Letterboard: Manufacturer's standard covered panel material, with grooves spaced at 1/4 inch (6 mm) o.c. to receive changeable letters as directed.

    a. Color: Black or Red as directed.

7. Letters: Molded plastic with tabs for engaging grooves in letterboard. Provide manufacturer's standard assortment of not less than 300 characters for each size, style, color, and case required; include letters, numbers, and characters. Package letters in compartmentalized carrying box.

    a. Height: To top of capitals as directed.
    b. Style: As directed.
    c. Color: White or Black as directed.
    d. Case: All capitals or Capitals and lowercase as directed.

8. Width: 24 inches (610 mm).
9. Height: 36 inches (914 mm).
10. Mounting: As directed.
11. Illumination System: Concealed top-lighting system consisting of fluorescent or LED fixtures. Include lamps and internal wiring with single, concealed electrical connection to building system. Coordinate electrical characteristics with power supply provided.

    a. Ballasts: Low-temperature, high-power-factor, low-energy, fluorescent lamp ballasts that comply with Certified Ballast Manufacturers Association standards and carry its label.
    b. Electrical Characteristics: Single phase, 120 or 277 V as directed.

2.5 MATERIALS

A. Aluminum: Alloy and temper recommended by aluminum producer and manufacturer for type of use and finish indicated, and as follows:

    1. Sheet: ASTM B209 (ASTM B209M).
    2. Extruded Shapes: ASTM B221 (ASTM B221M), Alloy 6063.

B. Clear Float Glass: ASTM C1036, Type I, Class 1, Quality q3.

C. Gray-Tinted Float Glass: ASTM C1036; Type I (transparent glass, flat); Class 2 (tinted, heat absorbing, and light reducing), Quality q3 (glazing select); gray-tinted monolithic glass with a maximum luminous transmittance of 14 percent.

D. Bronze-Tinted Float Glass: ASTM C1036; Type I (transparent glass, flat); Class 2 (tinted, heat absorbing, and light reducing), Quality q3 (glazing select); bronze-tinted monolithic glass with a maximum luminous transmittance of 44 percent.

E. Clear Tempered Glass: ASTM C1048, Kind FT, Condition A, Type I, Class 1 (clear), Quality q3, with exposed edges seamed before tempering.

F. Tinted Tempered Glass: ASTM C1048, Kind FT, Condition A, Type I, Class 2 (tinted), tint as indicated, Quality q3, with exposed edges seamed before tempering.

G. Clear Acrylic Sheet: ASTM D4802, Category A-1 (cell-cast sheet), with Finish 1 (smooth or polished), colorless sheet with visible light transmittance of 92 percent measured in accordance with ASTM D1003.

H. Bronze-Tinted Acrylic Sheet: ASTM D4802, Category A-1 (cell-cast sheet), with Finish 1 (smooth or polished).

I. Translucent Acrylic Sheet: ASTM D4802, Category A-1 (cell-cast sheet), with Finish 1 (smooth or polished), white-colored sheet of density required to produce uniform brightness and minimum halation effects.

J. Opaque Acrylic Sheet: ASTM D4802, Category A-1 (cell-cast sheet), with Finish 1 (smooth or polished), colors as indicated.

2.6 FABRICATION

A. Fabricate directories to requirements indicated for dimensions, design, and thickness and finish of materials. Use metals and shapes of thickness and reinforcement to produce flat surfaces, free of oil canning, and to impart strength for size, design, and application indicated.

B. Fabricate directory cabinets and door frames with reinforced corners, mitered and welded to a hairline fit, with no exposed fasteners. Provide structural reinforcement to prevent racking and misalignment.

C. Message-Strip Directories: Provide blank message strips for each carrier in entire directory.

D. Message-Strip Directories: Provide message strips with wording and other designations for locations where wording is indicated. Include blank message strips as needed to fill out remainder of directory.

E. Provide hold-open arms for doors of top-hinged directories.

2.7 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611 or thicker as directed.

B. Color Anodic Finish: AAMA 611 or thicker as directed.

C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install directories with perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.

B. Mounting Height: Install directories at mounting heights indicated on Drawings, or if not indicated, at 72 (1829) inches (mm) above finished floor to top of directory.

C. Recessed Directories: Attach directories to wall framing with fasteners at not more than 16 inches (400 mm) o.c. Attach aluminum trim over edges of recessed directories, and conceal grounds and clips.

D. Surface-Mounted Directories: Attach directories to wall framing with concealed clips, hangers, or grounds fastened at not more than 16 inches (400 mm) o.c. Secure both top and bottom of directories to walls.

E. Comply with requirements specified elsewhere for connecting illuminated directories.

3.2 ADJUSTING AND CLEANING

A. Adjust directory doors to operate smoothly without warp or bind and so that contact points meet accurately. Lubricate operating hardware as recommended by manufacturer.

B. Touch up factory-applied finishes to restore damaged or soiled areas.

END OF SECTION 101300

SECTION 101416 - PLAQUES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes metal plaques.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For plaques.

1. Include fabrication and installation details and attachments to other work.
2. Show plaque mounting heights, locations of supplementary supports to be provided by other installers, and accessories.
3. Show message list, typestyles, graphic elements, including raised characters and Braille, and layout for each plaque at least half size.

D. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of plaques that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Accessibility Standard: Comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design", the ABA standards of the Federal agency having jurisdiction and ICC A117.1 As directed.

2.2 PLAQUES

A. Cast Plaque: Cast-metal plaque with background texture, border, and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:
   1. Plaque Material: As directed Cast aluminum, brass, bronze or zinc.
   2. Plaque Thickness: As directed 0.153 inch (3.89 mm), 0.25 inch (6.35 mm) or 0.50 inch (12.7 mm).
   3. Finishes:
      a. Integral Metal Finish: Mill, Antique oxidized, Mill finish raised surface with dark oxidized background, as indicated by manufacturer's designation, Match Architect's sample or As selected by Architect from full range of industry finishes.
      b. Integral Aluminum Finish: Clear anodized, Light bronze anodized, Medium bronze anodized, Match Architect's sample or Anodized color as selected by Architect from full range of industry colors and color densities.
      c. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard, in color as indicated by manufacturer's designation, matching Architect's sample or as selected by Architect from manufacturer's full range.
      d. Overcoat: Manufacturer's standard baked-on clear coating.
   4. Background Texture: Smooth, Pebble, Leatherette, Matte, Stipple, Match Architect's sample or As selected by Architect from manufacturer's full range.
   5. Integrally Cast Border Style: As indicated on Drawings, Square cut without border, Square single line, polished, Square double line, polished, Plain bevel, brushed, Plain bevel, polished, Projected bevel, Raised flat band or Double-raised line border.
   6. Mounting: As indicated on Drawings, Concealed studs, Rosette-head through fasteners, Countersunk flathead through fasteners or Adhesive.

B. Etched Plaque: Chemically etched or photochemically engraved metal sheet or plate with texture, border, and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:
   1. Plaque Material: Sheet or plate aluminum, brass, bronze, copper or stainless steel or zinc.
   2. Plaque Thickness: As directed 0.064 inch (1.63 mm), 0.125 inch (3.18 mm), 0.153 inch (3.89 mm) or 0.250 inch (6.35 mm).
   3. Finishes:
      a. Integral Metal Finish: As directed Mill, Antique oxidized, Mill finish raised surface with dark oxidized background, as indicated by manufacturer's designation, Match Architect's sample or as selected by Architect from full range of industry finishes.

b. Integral Aluminum Finish: As directed Clear anodized, Light bronze anodized, Medium bronze anodized, Match Architect's sample or Anodized color as selected by Architect from full range of industry colors and color densities.
c. Integral Stainless-Steel Finish: No. 4, No. 8, Match Architect's sample or as selected by Architect from full range of industry finishes.
d. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard, in color as indicated by manufacturer's designation, matching Architect's sample or as selected by Architect from manufacturer's full range.
e. Overcoat: Manufacturer's standard baked-on clear coating.

4. Integral Edge Style: As indicated on Drawings, Square cut, polished or Plain bevel, brushed.
5. Mounting: As indicated on Drawings, Concealed studs, Rosette-head through fasteners, Countersunk flathead through fasteners or Adhesive.

2.3 MATERIALS

A. Brass Castings: ASTM B584, alloy recommended by manufacturer and finisher for finish indicated, lead-free alloy recommended by manufacturer and finisher for finish indicated or Alloy UNS No. C85200 (high-copper yellow brass).

B. Brass Sheet (Yellow Brass): ASTM B36/B36M, alloy recommended by manufacturer and finisher for finish indicated, lead-free alloy recommended by manufacturer and finisher for finish indicated or Alloy UNS No. C26000 (yellow brass).

C. Bronze Castings: ASTM B584, alloy recommended by manufacturer and finisher for finish indicated, lead-free alloy recommended by manufacturer and finisher for finish indicated or Alloy UNS No. C86500 (No. 1 manganese bronze).

D. Bronze Plate: ASTM B36/B36M, alloy recommended by manufacturer and finisher for finish indicated, lead-free alloy recommended by manufacturer and finisher for finish indicated or Alloy UNS No. C22000 (commercial bronze).

E. Stainless-Steel Sheet: ASTM A240/A240M or ASTM A666, Type 304, Type 316, stretcher-leveled standard of flatness.

2.4 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of plaques, noncorrosive and compatible with each material joined, and complying with the following:

1. Use concealed fasteners and anchors unless indicated to be exposed.
2. For exterior exposure, furnish nonferrous-metal, stainless-steel or hot-dip galvanized devices unless otherwise indicated.
3. Exposed Metal-Fastener Components, General:

a. Fabricated from same basic metal and finish of fastened metal unless otherwise indicated.

4. Plaque Mounting Fasteners:

    a. Concealed Studs: Concealed (blind), threaded studs welded or brazed to back of plaque, screwed into back of plaque, or screwed into tapped lugs cast integrally into back of plaque unless otherwise indicated.
    b. Through Fasteners: Exposed metal fasteners matching plaque finish, with type of head indicated, installed in predrilled holes.

B. Adhesive: As recommended by plaque manufacturer.
    1. As directed.

C. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.5 FABRICATION

A. General: Provide manufacturer's standard plaques according to requirements indicated.

    1. Mill joints to a tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
    2. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed connections of flux, and dress exposed and contact surfaces.
    3. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
    4. Provide rabbets, lugs, and tabs necessary to assemble components and to attach to existing work. Drill and tap for required fasteners. Use concealed fasteners where possible; use exposed fasteners that match plaque finish.
    5. Castings: Fabricate castings free of warp, cracks, blowholes, pits, scale, sand holes, and other defects that impair appearance or strength. Grind, wire brush, sandblast, and buff castings to remove seams, gate marks, casting flash, and other casting marks before finishing.

B. Surface-Engraved Graphics: Machine-engrave characters and other graphic devices into indicated plaque surface to produce precisely formed copy, incised to uniform depth.

    1. Engraved Metal: Fill engraved graphics with manufacturer's standard baked enamel.

C. Brackets: Fabricate brackets, fittings, and hardware for bracket-mounted plaques to suit plaque construction and mounting conditions indicated. Modify manufacturer's standard brackets as required.

    1. Aluminum Brackets: Factory finish brackets with baked-enamel or powder-coat finish to match plaque-background color or to match Architect's sample color unless otherwise indicated.
    2. Stainless-Steel Brackets: Factory finish brackets to match plaque background, to match Architect's sample or with No. 4 finish unless otherwise indicated.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install plaques using mounting methods indicated and according to manufacturer's written instructions.

1. Install plaques level, plumb, true to line, and at locations and heights indicated, with plaque surfaces free of distortion and other defects in appearance.
2. Install plaques so they do not protrude or obstruct according to the accessibility standard.
3. Before installation, verify that plaque surfaces are clean and free of materials or debris that would impair installation.
4. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

B. Mounting Methods:

1. Concealed Studs: Using a template, drill holes in substrate aligning with studs on back of plaque. Remove loose debris from hole and substrate surface.

    a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place plaque in position and push until flush to surface, embedding studs in holes. Temporarily support plaque in position until adhesive fully sets.
    b. Thin or Hollow Surfaces: Place plaque in position and flush to surface, install washers and nuts on studs projecting through opposite side of surface, and tighten.

2. Through Fasteners: Drill holes in substrate using predrilled holes in plaque as template. Countersink holes in plaque if required. Place plaque in position and flush to surface. Install through fasteners and tighten.
3. Brackets: Remove loose debris from substrate surface and install bracket supports in position, so that plaque is correctly located and aligned.
4. Adhesive: Clean bond-breaking materials from substrate surface and remove loose debris. Apply linear beads or spots of adhesive symmetrically to back of plaque and of suitable quantity to support weight of plaque after cure without slippage. Keep adhesive away from edges to prevent adhesive extrusion as plaque is applied and to prevent visibility of cured adhesive at plaque edges. Place plaque in position, push to engage adhesive. Temporarily support plaque in position until adhesive fully sets.

C. Remove temporary protective coverings and strippable films as plaques are installed.

END OF SECTION 101416

SECTION 101419 - DIMENSIONAL LETTER SIGNAGE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cast dimensional characters.
2. Cutout dimensional characters.
3. Fabricated channel dimensional characters.
4. Illuminated, fabricated channel dimensional characters.
5. Molded-plastic dimensional characters.
6. Illuminated, molded-plastic dimensional characters.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For signs.

1. Include fabrication and installation details and attachments to other work.
2. Show sign mounting heights, locations of supplementary supports to be provided by other installers, and accessories.
3. Show message list, typestyles, graphic elements, and layout for each sign at least half size.
4. Show locations of electrical service connections.
5. Include diagrams for power, signal, and control wiring.

D. Samples: For each exposed product and for each color and texture specified.

E. Delegated-Design Submittal: For signs indicated in "Performance Requirements" Article.

1. Include structural analysis calculations for signs indicated to comply with design loads; signed and sealed by the qualified professional engineer responsible for their preparation.

1.3 INFORMATIONAL SUBMITTALS

A. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design sign structure and anchorage of rooftop sign type(s) according to structural performance requirements.

B. Structural Performance: Signs and supporting elements shall withstand the effects of gravity and other loads within limits and under conditions indicated.

C. Thermal Movements: For exterior fabricated channel dimensional characters, allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces or as directed.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 DIMENSIONAL CHARACTERS

A. Cast Characters: Characters with uniform faces, sharp corners, and precisely formed lines and profiles, and as follows:
1. Character Material: Cast as directed.
2. Character Height: As directed.
3. Finishes:

a. Integral Metal Finish: Mill or Antique oxidized or as directed.
b. Integral Aluminum Finish: As directed.
c. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard, in color as directed.
d. Overcoat: Manufacturer's standard baked-on clear coating.

4. Mounting: As directed.

B. Cutout Characters: Characters with uniform faces; square-cut, smooth, eased edges; precisely formed lines and profiles; and as follows:
1. Character Material: Sheet or plate or as directed.
2. Character Height: As directed.
3. Thickness: 0.125 inch (3.18 mm) or 0.25 inch (6.35 mm) as directed.
4. Finishes:

a. Integral Metal Finish: Mill or Antique oxidized or as directed.
b. Integral Aluminum Finish: As directed.
c. Integral Stainless-Steel Finish: No. 4 or No. 8 as directed
d. Integral Acrylic Color: As directed.
e. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard, in color as directed.
f. Overcoat: As directed

5. Mounting: As directed.

C. Fabricated Channel Characters formed free from warp and distortion; with uniform faces, sharp corners, and precisely formed lines and profiles; internally braced for stability, to meet structural performance loading without oil-canning or other surface deformation, and for securing fasteners; and as follows as directed.
1. Illuminated Characters: Backlighted or Frontlighted as directed character construction with as directed lighting, including transformers, insulators, and other accessories for operability, with provision for servicing and concealing connections to building electrical system. Use tight or sealed joint construction to prevent unintentional light leakage. Space lamps apart from each other and away from character surfaces as needed to illuminate evenly.

a. Power: As directed

2. Character Material: Sheet or plate aluminum.
3. Translucent Face Sheet: Acrylic sheet with integral color as directed.
4. Character Height: As directed.
5. Character Depth: As directed.
6. Finishes:

a. Integral Metal Finish: Mill or Antique oxidized as directed.
b. Integral Aluminum Finish: As directed
c. Integral Stainless-Steel Finish: No. 4 or No. 8 as directed.
d. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard, in color as directed.
e. Overcoat: As directed.

7. Mounting: As directed.

a. Hold characters at as directed from wall surface.

D. Molded-Plastic Characters: Characters having uniform faces and profiles, and as follows:
1. Illuminated Characters: Characters with concealed lighting, including transformers, insulators, and other accessories; with provision for servicing and concealing connections to building electrical system as directed. Space lamps apart from each other and away from character surfaces as needed to illuminate evenly.

a. Power: 120 V, 60 Hz, 1 phase, 15 A or as directed.

2. Color: Manufacturer's standard integral color or painted finish process, in color as directed.

2.3 DIMENSIONAL CHARACTER MATERIALS

A. Brass Castings: ASTM B584 or as directed.

B. Brass Sheet (Yellow Brass): ASTM B36/B36M or as directed.

C. Bronze Castings: ASTM B584 or as directed.

D. Bronze Plate: ASTM B36/B36M or as directed.

E. Copper Sheet: ASTM B152/B152M.

F. Stainless-Steel Sheet: ASTM A240/A240M or ASTM A666, Type 304 or Type 316 or as directed stretcher-leveled standard of flatness.

G. Acrylic Sheet: ASTM D4802, category as standard with manufacturer for each sign, Type UVF (UV filtering).

2.4 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signs, noncorrosive and compatible with each material joined, and complying with the following:

1. Use concealed fasteners and anchors unless indicated to be exposed.
2. For exterior exposure, furnish as directed devices unless otherwise indicated.
3. Exposed Metal-Fastener Components, General:

    a. Fabricated from same basic metal and finish of fastened metal unless otherwise indicated.

4. Sign Mounting Fasteners:

    a. Concealed Studs: Concealed (blind), threaded studs welded or brazed to back of sign material, screwed into back of sign assembly, or screwed into tapped lugs cast integrally into back of cast sign material, unless otherwise indicated.
    b. Projecting Studs: Threaded studs with sleeve spacer, welded or brazed to back of sign material, screwed into back of sign assembly, or screwed into tapped lugs cast integrally into back of cast sign material, unless otherwise indicated.
    c. Through Fasteners: Exposed metal fasteners matching sign finish, with type of head indicated, installed in predrilled holes.

B. Adhesive: As recommended by sign manufacturer.

C. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.5 FABRICATION

A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.

1. Mill joints to a tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
2. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed connections of flux, and dress exposed and contact surfaces.
3. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
4. Internally brace dimensional characters for stability, to meet structural performance loading without oil-canning or other surface deformation, and for securing fasteners.
5. Provide rabbets, lugs, and tabs necessary to assemble components and to attach to existing work. Drill and tap for required fasteners. Use concealed fasteners where possible; use exposed fasteners that match sign finish.
6. Castings: Fabricate castings free of warp, cracks, blowholes, pits, scale, sand holes, and other defects that impair appearance or strength. Grind, wire brush, sandblast, and buff castings to remove seams, gate marks, casting flash, and other casting marks before finishing.

B. Brackets: Fabricate brackets, fittings, and hardware for bracket-mounted signs to suit sign construction and mounting conditions indicated. Modify manufacturer's standard brackets as required.

1. Aluminum Brackets: Factory finish brackets with baked-enamel or powder-coat finish to match sign-background color unless otherwise indicated.
2. Stainless-Steel Brackets: Factory finish brackets unless otherwise indicated.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.

1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
2. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.
3. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

B. Mounting Methods:

1. Concealed Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.

a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place sign in position and push until flush to surface, embedding studs in holes. Temporarily support sign in position until adhesive fully sets.

b. Thin or Hollow Surfaces: Place sign in position and flush to surface, install washers and nuts on studs projecting through opposite side of surface, and tighten.

2. Projecting Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.

   a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place spacers on studs, place sign in position, and push until spacers are pinched between sign and substrate, embedding the stud ends in holes. Temporarily support sign in position until adhesive fully sets.
   b. Thin or Hollow Surfaces: Place spacers on studs, place sign in position with spacers pinched between sign and substrate, and install washers and nuts on stud ends projecting through opposite side of surface, and tighten.

3. Through Fasteners: Drill holes in substrate using predrilled holes in sign as template. Countersink holes in sign if required. Place sign in position and flush to surface. Install through fasteners and tighten.
4. Back Bar and Brackets: Remove loose debris from substrate surface and install backbar or bracket supports in position, so that signage is correctly located and aligned.
5. Adhesive: Clean bond-breaking materials from substrate surface and remove loose debris. Apply linear beads or spots of adhesive symmetrically to back of sign and of suitable quantity to support weight of sign after cure without slippage. Keep adhesive away from edges to prevent adhesive extrusion as sign is applied and to prevent visibility of cured adhesive at sign edges. Place sign in position and push to engage adhesive. Temporarily support sign in position until adhesive fully sets.

C. Remove temporary protective coverings and strippable films as signs are installed.

END OF SECTION 101419

SECTION 101423 - PANEL SIGNAGE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Panel signs.
2. Illuminated panel signs.

B. Related Requirements:

1. Section 101423.16 "Room-Identification Panel Signage" for room-identification signs that are directly attached to the building.
2. Section 101426 "Post and Panel/Pylon Signage" for freestanding signs.
3. Section 265213 "Emergency and Exit Lighting" for illuminated, self-luminous, and photoluminescent exit sign units.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For panel signs.

1. Include fabrication and installation details and attachments to other work.
2. Show sign mounting heights, locations of supplementary supports to be provided by other installers, and accessories.
3. Show message list, typestyles, graphic elements, including raised characters and Braille, and layout for each sign at least half size.
4. Show locations of electrical service connections.
5. Include diagrams for power, signal, and control wiring.

D. Samples: For each exposed product and for each color and texture specified.

E. Delegated-Design Submittal: For signs indicated in "Performance Requirements" Article.

1. Include structural analysis calculations for signs indicated to comply with design loads; signed and sealed by the qualified professional engineer responsible for their preparation.

1.3 INFORMATIONAL SUBMITTALS

A. Evaluation Reports: For post-installed anchors and power-actuated fasteners, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

B. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design sign structure and anchorage of rooftop or illuminated panel sign type(s) according to structural performance requirements.

B. Structural Performance: Signs and supporting elements shall withstand the effects of gravity and other loads within limits and under conditions indicated.

C. Thermal Movements: For exterior signs, allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

D. Accessibility Standard: Comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design" or the ABA standards of the Federal agency having jurisdiction and ICC A117.1.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 PANEL SIGNS

A. Panel Sign: Sign with smooth, uniform surfaces; with message and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:

1. Illuminated Panel Sign: As directed Backlighted or Edgelighted construction with fluorescent tube, fiber-optic, LED or neon tube lighting including transformers, insulators, and other accessories for operability, with provision for servicing and concealing connections to building electrical system. Use tight or sealed joint construction to prevent unintentional light leakage. Space lamps apart from each other and away from sign surfaces as needed to illuminate evenly.

a. Power: As indicated on electrical Drawings or 120 V, 60 Hz, 1 phase, 15 A.

2. Solid-Sheet Sign and Returns, Returns, and Back: As directed Aluminum, Stainless-steel, Acrylic, Fiberglass or PVC sheet with finish specified in "Surface Finish and Applied Graphics" Subparagraph and as follows:

   a. Surface-Applied, Flat Graphics: As directed Applied vinyl film, baked enamel or powder coat, paint or photo image.
   b. Surface-Applied, Raised Graphics: Applied polymer characters and Braille.
   c. Etched and Filled Graphics: Sign face etched or routed to receive enamel-paint infill.
   d. Inset, Cutout Characters: As directed Sign face routed to receive push-through acrylic graphics flush with or slightly projecting from the sign panel.

3. Laminated Aluminum-Sheet Sign: Aluminum sheet laminated to both sides of acrylic or phenolic core sheet with painted edges.

   a. Surface-Applied, Flat Graphics: As directed Applied vinyl film, paint or photo image.
   b. Surface-Applied, Raised Graphics: Applied polymer characters and Braille.

4. Laminated-Sheet Sign: As directed Photopolymer or Sandblasted polymer face sheet with raised graphics laminated over subsurface graphics to acrylic or phenolic backing sheet to produce composite sheet.

   a. Surface-Applied, Flat Graphics: As directed Applied vinyl film, paint or photo image.
   b. Surface-Applied, Raised Graphics: Applied polymer characters and Braille.
   c. Subsurface Graphics: As directed Reverse halftone or dot-screen image, Reverse etch image, Snap-in changeable insert beneath removable face sheet or Slide-in changeable insert.

5. Laminated Polycarbonate-Sheet Sign: Polycarbonate face sheet laminated to each side of phenolic base sheet to produce composite sheet.

   a. Surface-Applied, Flat Graphics: As directed Applied vinyl film, paint or photo image.
   b. Surface-Applied, Raised Graphics: Applied polymer characters and Braille.
   c. Subsurface Graphics: Reverse halftone or dot-screen image or Reverse etch image.

6. Engraved Plastic-Laminate Sign: Plastic-laminate face laminated to contrasting phenolic core to produce composite sheet.

   a. Engraved Graphics: Characters engraved through plastic-laminate face sheet to expose contrasting phenolic core.
   b. Plastic-Laminate Color and Pattern: As indicated by manufacturer's designation or as selected by Architect from manufacturer's full range.

7. Sign-Panel Perimeter: Finish edges smooth.

a. Edge Condition at Vertical Edges at Horizontal Edges: As indicated on Drawings, Square cut, Beveled or Bullnosed.
b. Corner Condition in Elevation: As indicated on Drawings, Square or Rounded to radius indicated.

8. Frame: As directed Entire perimeter, Horizontal retainers, Vertical retainers or to hold changeable sign panel.

a. Material: As directed Aluminum, Brass, Bronze, Steel, Stainless steel or PVC.
b. Profile: As directed Square, Beveled or Rounded.
c. Corner Condition in Elevation: As directed Square, Mitered or Rounded to radius indicated.
d. Finish and Color: Mill, Painted, matte black color, Match Architect's sample or As selected by Architect from manufacturer's full range.

9. Mounting: As indicated on Drawings, Manufacturer's standard method for substrates indicated, Surface mounted to wall, Projecting from wall, Suspended, Aluminum bracket or Stainless-steel bracket with concealed anchors, countersunk flathead through fasteners, adhesive, two-face tape, hook-and-loop tape or magnetic tape.
10. Surface Finish and Applied Graphics:

a. Integral Metal Finish: As directed Mill, Antique oxidized, As indicated by manufacturer's designation, Match Architect's sample or as selected by Architect from full range of industry finishes.
b. Integral Aluminum Finish: As directed Clear anodized, Light bronze anodized, Medium bronze anodized, Match Architect's sample or Anodized color as selected by Architect from full range of industry colors and color densities.
c. Integral Stainless-Steel Finish: As directed No. 4, No. 8, Match Architect's sample or as selected by Architect from full range of industry finishes.
d. As directed Integral Acrylic, Fiberglass or PVC Sheet Color: As indicated by manufacturer's designation, Match Architect's sample or as selected by Architect from full range of industry colors.
e. Baked-Enamel or Powder-Coat Finish and Graphics: Manufacturer's standard, in color as indicated by manufacturer's designation, matching Architect's sample or as selected by Architect from manufacturer's full range.
f. Painted Finish and Graphics: Manufacturer's standard, factory-applied exterior-grade sign paint or acrylic polyurethane, in color as indicated by manufacturer's designation or matching Architect's sample as selected by Architect from manufacturer's full range.
g. Photo-Image Graphics: Manufacturer's standard black-and-white, multicolor, 600-dpi halftone or dot-screen image.
h. Overcoat: Manufacturer's standard baked-on clear coating.

2.3 PANEL-SIGN MATERIALS

A. Stainless-Steel Sheet: ASTM A240/A240M or ASTM A666, Type 304, Type 316, stretcher-leveled standard of flatness.

B. Acrylic Sheet: ASTM D4802, Type UVF (UV filtering).

C. Polycarbonate Sheet: Coated, mar-resistant, UV-stabilized polycarbonate, with coating on both sides.

D. Vinyl Film: UV-resistant vinyl film of nominal thickness indicated, with pressure-sensitive, permanent adhesive on back; die cut to form characters or images as indicated on Drawings and suitable for exterior applications.

2.4 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signs, noncorrosive and compatible with each material joined, and complying with the following unless otherwise indicated:

1. Use concealed fasteners and anchors unless indicated to be exposed.
2. For exterior exposure, furnish nonferrous-metal, stainless-steel or hot-dip galvanized devices unless otherwise indicated.
3. Exposed Metal-Fastener Components, General:

    a. Fabricated from same basic metal and finish of fastened metal unless otherwise indicated.

4. Sign Mounting Fasteners:

    a. Concealed Studs: Concealed (blind), threaded studs welded or brazed to back of sign material or screwed into back of sign assembly unless otherwise indicated.
    b. Projecting Studs: Threaded studs with sleeve spacer, welded or brazed to back of sign material or screwed into back of sign assembly, unless otherwise indicated.
    c. Through Fasteners: Exposed metal fasteners matching sign finish, with type of head indicated, and installed in predrilled holes.

B. Post-Installed Anchors: Fastener systems with bolts of same basic metal as fastened metal, if visible, unless otherwise indicated; with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC01, ICC-ES AC193, ICC-ES AC58 or ICC-ES AC308 as appropriate for the substrate.

1. Uses: Securing signs with imposed loads to structure.
2. Type: Torque-controlled, expansion anchor, torque-controlled, adhesive anchor or adhesive anchor.
3. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B633 or ASTM F1941 (ASTM F1941M), Class Fe/Zn 5, unless otherwise indicated.
4. Material for Exterior or Interior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 (A1) or Group 2 (A4) stainless-steel bolts, ASTM F593 (ASTM F738M), and nuts, ASTM F594 (ASTM F836M).

C. Power-Actuated Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

D. Adhesive: As recommended by sign manufacturer.

E. Two-Face Tape: Manufacturer's standard high-bond, foam-core tape, 0.045 inch (1.14 mm) thick, with adhesive on both sides.

F. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.5 FABRICATION

A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.

1. Mill joints to a tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
2. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed connections of flux, and dress exposed and contact surfaces.
3. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
4. Internally brace signs for stability, to meet structural performance loading without oil-canning or other surface deformation, and for securing fasteners.
5. Provide rabbets, lugs, and tabs necessary to assemble components and to attach to existing work. Drill and tap for required fasteners. Use concealed fasteners where possible; use exposed fasteners that match sign finish.

B. Surface-Engraved Graphics: Machine engrave characters and other graphic devices into indicated sign surface to produce precisely formed copy, incised to uniform depth.

1. Engraved Metal: Fill engraved graphics with manufacturer's standard baked enamel.
2. Engraved Opaque Acrylic Sheet: Fill engraved graphics with manufacturer's standard enamel.
3. Face-Engraved Clear Acrylic Sheet: Fill engraved copy with manufacturer's standard enamel. Apply manufacturer's standard opaque background color coating to back face of acrylic sheet.
4. Engraved Plastic Laminate: Engrave through exposed face ply of plastic-laminate sheet to expose contrasting core ply.

C. Subsurface-Applied Graphics: Apply graphics to back face of clear face-sheet material to produce precisely formed image. Image shall be free of rough edges.

D. Subsurface-Engraved Graphics: Reverse engrave back face of clear face-sheet material. Fill resulting copy with manufacturer's standard enamel. Apply opaque manufacturer's standard background color coating over enamel-filled copy.

E. Shop- and Subsurface-Applied Vinyl: Align vinyl film in final position and apply to surface. Firmly press film from the middle outward to obtain good bond without blisters or fishmouths.

F. Brackets: Fabricate brackets, fittings, and hardware for bracket-mounted signs to suit sign construction and mounting conditions indicated. Modify manufacturer's standard brackets as required.

1. Aluminum Brackets: Factory finish brackets with baked-enamel or powder-coat finish to match sign-background color or to match Architect's sample color unless otherwise indicated.
2. Stainless-Steel Brackets: As directed Factory finish brackets to match sign background, to match Architect's sample or with No. 4 finish unless otherwise indicated.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.

1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
2. Install signs so they do not protrude or obstruct according to the accessibility standard.
3. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.
4. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

B. Mounting Methods:

1. Concealed Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.

    a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place sign in position and push until flush to surface, embedding studs in holes. Temporarily support sign in position until adhesive fully sets.
    b. Thin or Hollow Surfaces: Place sign in position and flush to surface, install washers and nuts on studs projecting through opposite side of surface, and tighten.

2. Projecting Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.

    a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place spacers on studs, place sign in position, and push until spacers are pinched between sign and substrate, embedding the stud ends in holes. Temporarily support sign in position until adhesive fully sets.
    b. Thin or Hollow Surfaces: Place spacers on studs, place sign in position with spacers pinched between sign and substrate and install washers and nuts on stud ends projecting through opposite side of surface and tighten.

3. Through Fasteners: Drill holes in substrate using predrilled holes in sign as template. Countersink holes in sign if required. Place sign in position and flush to surface. Install through fasteners and tighten.

4. Brackets: Remove loose debris from substrate surface and install backbar or bracket supports in position so that signage is correctly located and aligned.
5. Adhesive: Clean bond-breaking materials from substrate surface and remove loose debris. Apply linear beads or spots of adhesive symmetrically to back of sign and of suitable quantity to support weight of sign after cure without slippage. Keep adhesive away from edges to prevent adhesive extrusion as sign is applied and to prevent visibility of cured adhesive at sign edges. Place sign in position and push to engage adhesive. Temporarily support sign in position until adhesive fully sets.
6. Two-Face Tape: Clean bond-breaking materials from substrate surface and remove loose debris. Apply tape strips symmetrically to back of sign and of suitable quantity to support weight of sign without slippage. Keep strips away from edges to prevent visibility at sign edges. Place sign in position and push to engage tape adhesive.

C. Remove temporary protective coverings and strippable films as signs are installed.

END OF SECTION 101423

SECTION 101423.16 - ROOM-IDENTIFICATION PANEL SIGNAGE

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes room-identification signs that are directly attached to the building.

B. Related Requirements:

1. Section 101416 "Plaques" for one-piece, solid metal signs, with or without frames, that are used for high-end room-identification.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For room-identification signs.

1. Include fabrication and installation details and attachments to other work.
2. Show sign mounting heights, locations of supplementary supports to be provided by other installers, and accessories.
3. Show message list, typestyles, graphic elements, including raised characters and Braille, and layout for each sign at least half size.

D. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Accessibility Standard: Comply with applicable provisions as directed.

2.2 ROOM-IDENTIFICATION SIGNS

A. Room-Identification Sign: Sign or Sign system or as directed with smooth, uniform surfaces; with message and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:

1. Laminated-Sheet Sign: Photopolymer or Sandblasted polymer face sheet with raised graphics laminated over subsurface graphics to acrylic or phenolic backing sheet to produce composite sheet as directed.

    a. Composite-Sheet Thickness: 0.125 inch (3.18 mm) or 0.25 inch (6.35 mm) as directed.
    b. Surface-Applied Graphics: Applied as directed.
    c. Subsurface Graphics: As directed.
    d. Color(s): As directed.

2. Sign-Panel Perimeter: Finish edges smooth.

    a. Edge Condition at Vertical Edges or at Horizontal Edges: As directed.
    b. Corner Condition in Elevation: Square or Rounded to radius indicated as directed.

3. Frame: As directed.

    a. Material: Aluminum.
    b. Profile: As directed.
    c. Corner Condition in Elevation: As directed.
    d. Finish and Color: As directed.

4. Mounting: Manufacturer's standard method for substrates indicated or Surface mounted to wall with concealed anchors or as directed.

2.3 SIGN MATERIALS

A. Acrylic Sheet: ASTM D4802, category as standard with manufacturer for each sign, Type UVF (UV filtering).

B. Vinyl Film: UV-resistant vinyl film with pressure-sensitive, permanent adhesive; die cut to form characters or images as indicated on Drawings and suitable for exterior applications.

2.4 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signs, noncorrosive and compatible with each material joined, and complying with the following:

1. Use concealed fasteners and anchors unless indicated to be exposed.
2. For exterior exposure, furnish devices unless otherwise indicated as directed.
3. Exposed Metal-Fastener Components, General:

    a. Fabricated from same basic metal and finish of fastened sign unless otherwise indicated.

4. Sign Mounting Fasteners:

    a. Concealed Studs: Concealed (blind), threaded studs welded or brazed to back of sign material or screwed into back of sign assembly unless otherwise indicated.
    b. Through Fasteners: Exposed metal fasteners matching sign finish, with type of head indicated, and installed in predrilled holes.

B. Adhesive: As recommended by sign manufacturer.

C. Two-Face Tape: Manufacturer's standard high-bond, foam-core tape, 0.045 inch (1.14 mm) thick, with adhesive on both sides.

2.5 FABRICATION

A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.

1. Mill joints to a tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
2. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
3. Provide rabbets, lugs, and tabs necessary to assemble components and to attach to existing work. Drill and tap for required fasteners. Use concealed fasteners where possible; use exposed fasteners that match sign finish.

B. Subsurface-Applied Graphics: Apply graphics to back face of clear face-sheet material to produce precisely formed image. Image shall be free of rough edges.

C. Subsurface-Etched Graphics: Reverse etch back face of clear face-sheet material. Fill resulting copy with manufacturer's standard enamel. Apply opaque manufacturer's standard background color coating over enamel-filled copy.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.

1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
2. Install signs so they do not protrude or obstruct according to the accessibility standard.

3. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.

B. Mounting Methods:

1. Concealed Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.

    a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place sign in position and push until flush to surface, embedding studs in holes. Temporarily support sign in position until adhesive fully sets.
    b. Thin or Hollow Surfaces: Place sign in position and flush to surface, install washers and nuts on studs projecting through opposite side of surface, and tighten.

2. Through Fasteners: Drill holes in substrate using predrilled holes in sign as template. Countersink holes in sign if required. Place sign in position and flush to surface. Install through fasteners and tighten.
3. Adhesive: Clean bond-breaking materials from substrate surface and remove loose debris. Apply linear beads or spots of adhesive symmetrically to back of sign and of suitable quantity to support weight of sign after cure without slippage. Keep adhesive away from edges to prevent adhesive extrusion as sign is applied and to prevent visibility of cured adhesive at sign edges. Place sign in position and push to engage adhesive. Temporarily support sign in position until adhesive fully sets.
4. Two-Face Tape: Clean bond-breaking materials from substrate surface and remove loose debris. Apply tape strips symmetrically to back of sign and of suitable quantity to support weight of sign without slippage. Keep strips away from edges to prevent visibility at sign edges. Place sign in position and push to engage tape adhesive.

END OF SECTION 101423.16

SECTION 101426 - POST AND PANEL/PYLON SIGNAGE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Nonilluminated post-and-panel signs.
2. Internally illuminated post-and-panel signs.
3. Nonilluminated pylon signs.
4. Internally illuminated pylon signs.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For signage.

1. Include fabrication and installation details and attachments to other work.
2. Show sign mounting heights, locations of supplementary supports to be provided by other installers, and accessories.
3. Show message list, typestyles, graphic elements, and layout for each sign at least half size.
4. Show locations of electrical service connections.
5. Include diagrams for power, signal, and control wiring.

C. Samples: For each exposed product and for each color and texture specified.

D. Delegated-Design Submittal: For signs indicated in "Performance Requirements" Article.

1. Include structural analysis calculations for signs indicated to comply with design loads; signed and sealed by the qualified professional engineer responsible for their preparation.

1.3 INFORMATIONAL SUBMITTALS

A. Evaluation Reports: For post-installed anchors and power-actuated fasteners, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

B. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design sign structure and anchorage of post-and-panel or pylon sign type(s) according to structural performance requirements.

B. Structural Performance: Signs and supporting elements shall withstand the effects of gravity and other loads within limits and under conditions indicated.

C. Thermal Movements: For exterior signs, allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

D. Accessibility Standard: Comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design" the ABA standards of the Federal agency having jurisdiction and ICC A117.1.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 POST-AND-PANEL SIGNS

A. Post-and-Panel Sign: As directed Sign of single-panel or hollow-box configuration; with smooth, uniform surfaces and support assembly; with message and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:

1. Illuminated Sign: As directed Backlighted or Edgelighted construction with fluorescent tube, fiber-optic, LED or neon tube lighting including transformers, insulators, and other accessories for operability, with provision for servicing and concealing connections to building electrical system. Use tight or sealed joint construction to prevent unintentional light leakage. Space lamps apart from each other and away from sign surfaces as needed to illuminate evenly.

a. Power: As indicated on electrical Drawings or 120 V, 60 Hz, 1 phase, 15 A.

2. Solid-Sheet Sign Panels and Returns, Returns, and Back: As directed Aluminum, Stainless-steel, Acrylic, Fiberglass or Polycarbonate sheet with finish specified in "Sign-Panel-Face Finish and Applied Graphics" Subparagraph and as follows:

a. Surface-Applied Graphics: As directed Applied vinyl film, baked enamel or powder coat, paint or photo image.
b. Etched and Filled Graphics: Sign face etched or routed to receive enamel-paint infill.
c. Inset, Cutout Characters: As directed Sign face routed to receive push-through acrylic graphics flush with or slightly projecting from the sign panel.

3. Laminated, Aluminum-Sheet Sign Panels: As directed Aluminum sheet laminated to both sides of acrylic or phenolic core sheet with painted edges.

   a. Surface-Applied Graphics: As directed Applied vinyl film, paint or photo image.

4. Single-Panel Sign Frame: As directed Entire perimeter, Horizontal retainers or Vertical retainers.

   a. Material: As directed Aluminum or Stainless steel.
   b. Profile: As directed Square, Beveled or Rounded.
   c. Corner Condition in Elevation: As directed Square, Mitered or Rounded to radius indicated.
   d. Finish and Color: As directed Mill, Black baked enamel or powder coat, Match sign-panel face, Match Architect's sample or As selected by Architect from manufacturer's full range.

5. Hollow-Box Sign Frame: Entire perimeter framed with formed-aluminum sheet or extruded-aluminum, hollow-box-type frame with vertical edges attached to supports with aluminum fittings. Close top and bottom edges of panels with manufacturer's standard welded seams or extrusions.

   a. Hollow-Box Depth: As directed 2 inches (50 mm), 6 inches (150 mm) or Same depth as posts.
   b. Profile: As directed Square, Beveled or Rounded.
   c. Corner Condition in Elevation: As directed Square, Mitered or Rounded to radius indicated.
   d. Finish and Color: Mill, Black baked enamel or powder coat, Match sign-panel face, Match Architect's sample or as selected by Architect from manufacturer's full range.

6. Multiple-Message Bars and Inserts: Fixed message bars capable of receiving changeable messages in the form of slide-in, aluminum or acrylic-sheet changeable inserts.Provide initial messages as indicated on Drawings.
7. Posts: As directed Aluminum or Steel.

   a. Shape: As directed Round, Square, Rectangular or Semicircular.
   b. Size: As directed 2-inch (50-mm) diameter, 3-inch (75-mm) diameter, 4-inch (100-mm) diameter, 2 by 2 inches (50 by 50 mm), 3 by 3 inches (75 by 75 mm), 4 by 4 inches (100 by 100 mm), 2 by 4 inches (50 by 100 mm) or 1-3/4 by 3 inches (44 by 75 mm).
   c. Installation Method: As directed Direct burial, Baseplate, Sleeve or Reverse sleeve.

d. Finish and Color: As directed Mill, Black baked enamel or powder coat, Match sign-panel face, Match sign-panel frame, Match Architect's sample or as selected by Architect from manufacturer's full range.

8. Sign-Panel-Face Finish and Applied Graphics:

a. Integral Metal Finish: As directed Mill, Antique oxidized, Mill finish raised surface with dark oxidized background, as indicated by manufacturer's designation, Match Architect's sample or as selected by Architect from full range of industry finishes.
b. Integral Aluminum Finish: Clear anodized, Light bronze anodized, Medium bronze anodized, Match Architect's sample, Anodized color as selected by Architect from full range of industry colors and color densities.
c. Integral Stainless-Steel Finish: No. 4, No. 8, Match Architect's sample or as selected by Architect from full range of industry finishes.
d. Integral Acrylic, Fiberglass or Polycarbonate Sheet Color: As indicated by manufacturer's designation, Match Architect's sample or as selected by Architect from full range of industry colors.
e. Baked-Enamel or Powder-Coat Finish and Graphics: Manufacturer's standard, in color as indicated by manufacturer's designation, match Architect's sample or as selected by Architect from manufacturer's full range.
f. Painted Finish and Graphics: Manufacturer's standard, factory-applied exterior-grade sign paint or acrylic polyurethane, in color as indicated by manufacturer's designation, matching Architect's sample or as selected by Architect from manufacturer's full range.
g. Photo-Image Graphics: Manufacturer's standard black-and-white, multicolor, 600-dpi halftone or dot-screen image.
h. Overcoat: Manufacturer's standard baked-on clear coating.

2.3 PYLON SIGNS

A. Pylon Sign: Sign with smooth, uniform surfaces and support assembly; with message and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:
1. Illuminated Sign: Backlighted or Edgelighted construction with fluorescent tube, fiber-optic, LED or neon tube lighting including transformers, insulators, and other accessories for operability, with provision for servicing and concealing connections to building electrical system. Use tight or sealed joint construction to prevent unintentional light leakage. Space lamps apart from each other and away from sign surfaces as needed to illuminate evenly.

a. Power: As indicated on electrical Drawings or 120 V, 60 Hz, 1 phase, 15 A.

2. Solid-Sheet Sign Panels and Returns, Returns, and Back: Aluminum, Stainless-steel, Acrylic, Fiberglass or Polycarbonate sheet with finish specified in "Sign-Panel-Face Finish and Applied Graphics" Subparagraph and as follows:

a. Surface-Applied Graphics: As directed Applied vinyl film, baked enamel or powder coat, paint or photo image.

b. Etched and Filled Graphics: Sign face etched or routed to receive enamel-paint infill.
c. Inset, Cutout Characters: As directed Sign face routed to receive push-through acrylic graphics flush with or slightly projecting from the sign panel.

3. Laminated, Aluminum-Sheet Sign Panels: Aluminum sheet laminated to both sides of acrylic or phenolic core sheet with painted edges.

   a. Surface-Applied Graphics: Applied vinyl film, paint or photo image.

4. Single-Panel Sign Frame: As directed Entire perimeter, Horizontal retainers or Vertical retainers.

   a. Material: As directed Aluminum or Stainless steel.
   b. Profile: As directed Square, Beveled or Rounded.
   c. Corner Condition in Elevation: As directed Square, Mitered or Rounded to radius indicated.
   d. Finish and Color: As directed Mill, Black baked enamel or powder coat, Match sign-panel face, Match Architect's sample or as selected by Architect from manufacturer's full range.

5. Hollow-Box Sign Frame: Entire perimeter framed with formed-aluminum sheet or extruded-aluminum, hollow-box-type frame with vertical edges attached to supports with aluminum fittings. Close top and bottom edges of panels with manufacturer's standard welded seams or extrusions.

   a. Hollow-Box Depth: As directed 2 inches (50 mm), 6 inches (150 mm) or Same depth as external pylon frame.
   b. Profile: As directed Square, Beveled or Rounded.
   c. Corner Condition in Elevation: As directed Square, Mitered or Rounded to radius indicated.
   d. Finish and Color: As directed Mill, Black baked enamel or powder coat, Match sign-panel face, Match Architect's sample or as selected by Architect from manufacturer's full range.

6. Multiple-Message Bars and Inserts: Fixed message bars capable of receiving changeable messages in the form of slide-in, aluminum or acrylic-sheet changeable inserts. Provide initial messages as indicated on Drawings.
7. Pylon Structure: As directed Internal or External frame.

   a. Pylon Shape: As directed Rectangular, Square, Triangular or Circular.
   b. External-Frame Finish and Color: As directed Mill, Black baked enamel or powder coat, Match sign-panel face, Match sign-panel frame, Match Architect's sample or as selected by Architect from manufacturer's full range.

8. Sign-Panel-Face Finish and Applied Graphics:

   a. Integral Metal Finish: As directed Mill, Antique oxidized, Mill finish raised surface with dark oxidized background, as indicated by manufacturer's designation, Match Architect's sample or as selected by Architect from full range of industry finishes.

b. Integral Aluminum Finish: Clear anodized, Light bronze anodized, Medium bronze anodized, Match Architect's sample or Anodized color as selected by Architect from full range of industry colors and color densities.
c. Integral Stainless-Steel Finish: As directed No. 4, No. 8, Match Architect's sample or as selected by Architect from full range of industry finishes.
d. Integral As directed Acrylic, Fiberglass or Polycarbonate Sheet Color: As indicated by manufacturer's designation, Match Architect's sample or as selected by Architect from full range of industry colors.
e. Baked-Enamel or Powder-Coat Finish and Graphics: Manufacturer's standard, in color as indicated by manufacturer's designation, match Architect's sample or as selected by Architect from manufacturer's full range.
f. Painted Finish and Graphics: Manufacturer's standard, factory-applied exterior-grade sign paint or acrylic polyurethane, in color as indicated by manufacturer's designation, matching Architect's sample or as selected by Architect from manufacturer's full range.
g. Photo-Image Graphics: Manufacturer's standard black-and-white, multicolor, 600-dpi halftone or dot-screen image.
h. Overcoat: Manufacturer's standard baked-on clear coating.

2.4 MATERIALS

A. Stainless-Steel Sheet: ASTM A240/A240M or ASTM A666, Type 304, Type 316, stretcher-leveled standard of flatness.

B. Acrylic Sheet: ASTM D4802, Type UVF (UV filtering).

C. Polycarbonate Sheet: Coated, mar-resistant, UV-stabilized polycarbonate, with coating on both sides.

D. Vinyl Film: UV-resistant vinyl film of nominal thickness indicated, with pressure-sensitive, permanent adhesive on back; die cut to form characters or images as indicated on Drawings and suitable for exterior applications.

2.5 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signs, noncorrosive and compatible with each material joined, and complying with the following unless otherwise indicated:

1. Use concealed fasteners and anchors unless indicated to be exposed.
2. For exterior exposure, furnish nonferrous-metal, stainless-steel or hot-dip galvanized devices unless otherwise indicated.
3. Exposed Metal-Fastener Components, General:

a. Fabricated from same basic metal and finish of fastened metal unless otherwise indicated.

B. Post-Installed Anchors: Fastener systems with bolts of same basic metal as fastened metal, if visible, unless otherwise indicated; with working capacity greater than or equal to the design

load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC01, ICC-ES AC193, ICC-ES AC58 or ICC-ES AC308 as appropriate for the substrate.

1. Uses: Securing signs with imposed loads to structure.
2. Type: As directed Torque-controlled, expansion anchor, torque-controlled, adhesive anchor or adhesive anchor.
3. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B633 or ASTM F1941 (ASTM F1941M), Class Fe/Zn 5, unless otherwise indicated.
4. Material for Exterior or Interior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 (A1) or Group 2 (A4) stainless-steel bolts, ASTM F593 (ASTM F738M), and nuts, ASTM F594 (ASTM F836M).

C. Power-Actuated Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

E. Anchoring Materials:

1. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.
2. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.

    a. Water-Resistant Product: At exterior locations, provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.6 FABRICATION

A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.

1. Mill joints to tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
2. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed joints of flux, and dress exposed and contact surfaces.
3. Conceal fasteners and anchors unless indicated to be exposed; locate exposed fasteners where they will be inconspicuous.
4. Internally brace signs for stability, to meet structural performance loading without oil-canning or other surface deformation, and for securing fasteners.

B. Post Fabrication: Fabricate posts designed for structural performance indicated and of lengths required for installation method indicated for each sign.

1. Aluminum Posts: Manufacturer's standard 0.125-inch- (3.18-mm-) thick, extruded-aluminum tubing unless otherwise indicated, with brackets or slots to engage sign panels.
2. Steel Posts: Fabricate from minimum 0.120-inch- (3.05-mm-) thick, steel tubing unless otherwise indicated.

    a. Hot-dip galvanize post assemblies after fabrication according to ASTM A123/A123M.

3. Direct Burial: Fabricate posts 36 inches (910 mm) longer than height of sign to permit direct burial or embedment in concrete foundations or concrete-filled postholes.
4. Baseplates: Fabricate posts with baseplates welded to bottom of posts. Drill holes in baseplate for anchor-bolt connection.

    a. As directed Provide preset or drilled-in-place anchor bolts of size required for connecting posts to concrete foundations.

5. Sleeves: Fabricate posts 12 inches (300 mm) longer than height of sign to permit embedment in sleeves cast in concrete foundations or concrete-filled postholes. Provide sleeves by manufacturer, sized to receive outside diameter of posts. As directed Size sleeves for direct embedment in concrete foundations or concrete-filled postholes and to prevent sign movement, but not less than 24 inches (610 mm) or 36 inches (910 mm) for embedment.
6. Reverse Sleeves: Provide inserts by sign manufacturer, sized for close fit inside posts. Size inserts for direct embedment in concrete foundations and to attach sign posts securely and prevent sign movement, but of a height not less than one-third of post height plus 36 inches (910 mm) for embedment.

    a. Provide through bolts to fasten posts to inserts.

C. Pylon Fabrication: Fabricate pylon signs with integral base consisting of channels, angles, plates, or other fittings. Design and fabricate pylon and anchorage for structural performance indicated. Detail anchorage so that water can drain out of assembly without obstruction. Drill holes in members for anchor-bolt connection. Provide anchor bolts of size required for connecting base to concrete foundations.

1. Internal Frames: Manufacturer's standard internal steel framing system and anchorage, modified as required for Project requirements. Provide welded construction. Cut, drill, and tap units to receive hardware, bolts, and similar items.

    a. Hot-dip galvanize steel framing system after fabrication according to ASTM A123/A123M.

2. External Frames: As directed Manufacturer's standard external aluminum or steel framing system and anchorage for direct attachment of sign message panels, modified as required for Project requirements. Provide welded construction using mitered joints. Cut, drill, and tap units to receive hardware, bolts, and similar items.

    a. Hot-dip galvanize steel framing system after fabrication according to ASTM A123/A123M.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install signs using installation methods indicated and according to manufacturer's written instructions.

1. Install signs level, plumb, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
2. Install signs so they do not protrude or obstruct according to the accessibility standard.
3. Before installation, verify that sign components are clean and free of materials or debris that would impair installation.
4. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

3.2 INSTALLING POSTS

A. Direct-Burial Method:

1. Excavation: Excavate posthole to dimensions indicated. Reconstruct subgrade that is not firm, undisturbed, or compacted soil, or that is damaged by freezing temperatures, frost, rain, accumulated water, or construction activities by excavating an additional 12 inches (300 mm), backfilling with satisfactory soil or well-graded aggregate, and compacting to original subgrade elevation.
2. Setting in Earth: Set post in position, support to prevent movement, and backfill with satisfactory soil or well-graded aggregate as recommended in writing by manufacturer. Place and compact backfill in 6-inch (150-mm) lifts, compacting each lift.
3. Setting in Cast-in-Place Concrete: Set post in position, support to prevent movement, and place concrete in posthole or for concrete foundation as indicated on Drawings.
4. Setting in Preformed Hole in Concrete Foundation: Form or core drill holes in concrete foundation not less than 3/4 inch (20 mm) larger than outside dimension of post for installing posts in concrete. Set post in position, shim to prevent movement, and fill annular space between post and hole with nonshrink, nonmetallic grout or anchoring cement, mixed and placed to comply with manufacturer's written instructions.

    a. As directed Cover anchorage joint in concrete foundations with flange of same metal and finish as post, welded to post after placing anchoring material or attached to post with set screws.
    b. As directed Leave anchorage joint exposed with 1/8-inch (3-mm) anchoring material sloped away from post or anchoring material flush with adjacent surface.

B. Baseplate Method:

1. Preset Anchor Bolts: Set post baseplate in position over anchor bolts projecting from concrete foundation, shim and support post to prevent movement, place washers and nuts, and tighten. Fill shim space with nonshrink, nonmetallic grout, mixed and placed to comply with manufacturer's written instructions.

2. Drilled-in-Place Anchor Bolts: Set post baseplate in position over concrete foundation, locate and drill anchor holes, shim and support post to prevent movement, place washers and anchor bolts, and tighten. Fill shim space with nonshrink, nonmetallic grout, mixed and placed to comply with manufacturer's written instructions.

C. Sleeve Method: Set post in position in sleeve and support post to prevent movement, fill annular space between post and sleeve with nonshrink, nonmetallic grout or anchoring cement, mixed and placed to comply with manufacturer's written instructions.

1. As directed Cover anchorage joint with flange of same metal and finish as post, welded to post after placing anchoring material or attached to post with set screws.
2. As directed Leave anchorage joint exposed with 1/8-inch (3-mm) anchoring material sloped away from post or anchoring material flush with adjacent surface.

D. Reverse-Sleeve Method: Set post in position over the projecting insert and support post to prevent movement, drill posts and inserts for through bolts, and install and tighten through bolts.

3.3 INSTALLING PYLONS

A. Attachment with Preset Anchor Bolts: Set pylon base in position over anchor bolts projecting from concrete foundation, shim and support pylon to prevent movement, place washers and nuts, and tighten. Fill shim space with nonshrink, nonmetallic grout, mixed and placed to comply with manufacturer's written instructions.

B. Attachment with Drilled-in-Place Anchor Bolts: Set pylon base in position over concrete foundation, locate and drill anchor holes, shim and support pylon to prevent movement, place washers and anchor bolts, and tighten. Fill shim space with nonshrink, nonmetallic grout, mixed and placed to comply with manufacturer's written instructions.

END OF SECTION 101426

SECTION 101429 - MODULAR SIGNAGE

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes modular signage.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For modular signs.

1. Include plans, elevations, sections, and mounting details.
2. Show message list, typestyles, graphic elements, including raised characters and Braille, and layout for each sign at least half size.

D. Samples: For each type of modular sign, exposed component, and exposed finish.

E. Product Schedule: For modular signs. Use same designations indicated on Drawings or specified.

1.3 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Accessibility Standard: Comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design" or the ABA standards of the Federal agency having jurisdiction and ICC A117.1.

2.2 MODULAR SIGNS

A. Modular Signs: Sign system with removable inserts for graphics and copy attached to a receiver frame system using clips, splines, or comparable method. Provide system with modular increments of height and width, permitting assembly of units with multiple inserts of varying size.

1. Sign Size: As indicated.

B. Inserts:

1. Module Height: System of inserts fabricated in multiples of manufacturer's standard dimension, 9/16 inch (15 mm), 1 inch (25 mm) or 1.25 inches (32 mm).
2. Type: As directed Extruded aluminum for applied graphics or Rigid plastic for applied graphics.
3. Finish: As directed Anodized, Painted or Plastic laminate.
4. Color and Pattern: As directed One or Two color(s), indicated by manufacturer's designation or selected by Architect from manufacturer's full range.

C. Graphics and Copy:

1. Surface Applied: As directed Die-cut vinyl film, Silk-screen, Direct print or Paint or Photo image.
2. Raised, ADA Compliant: Manufacturer's standard, Applied, Photopolymer or Subsurface raised characters and Braille.
3. Etched and Filled: Sign face etched or routed to receive enamel-paint infill.
4. Engraved: Characters engraved through plastic-laminate face sheet to expose contrasting phenolic core.
5. Text and Typeface: As directed Times Roman, Helvetica, Typeface as indicated by manufacturer's designation, Typeface matching Architect's sample or Typeface as selected by Architect from manufacturer's full range. Finish raised characters to contrast with background color, and finish Braille to match background color.

D. End Caps and Trim:

1. Side Trim: Continuous extruded-aluminum trim attached to message-strip receiver frame.
2. End Caps: As directed Individual snap-on caps for each message strip or Snap-on caps covering ends of multiple message strips.
3. Profile: As directed Narrow, Square, Bevel, Radius corner, Quarter round, Stepped or Contoured.
4. Top and Bottom Trim: As directed Message strips with integral trim profile to provide finished appearance or Extruded-aluminum trim section, attached to message-strip receiver frame. As directed Provide narrow face, square, bevel or contoured profile.

E. Mounting: Mount modular signs to wall surfaces using manufacturer's standard method, adhesive, two-faced tape or screws.

F. Accessories: Provide sliding insert to indicate room occupancy, user-changeable paper insert feature, note gripper or pen holder where indicated.

2.3 MATERIALS

A. Aluminum Extrusions: ASTM B221 (ASTM B221M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

B. Plastic-Laminate Sheet: NEMA LD 3, general-purpose HGS grade, 0.048-inch (1.2-mm) nominal thickness.

C. Vinyl Film: UV-resistant vinyl film of nominal thickness indicated, with pressure-sensitive, permanent adhesive on back; die cut to form copy indicated on Drawings.

2.4 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signs, noncorrosive and compatible with each material joined. Use concealed fasteners and anchors unless indicated to be exposed.

B. Adhesive: As recommended by sign manufacturer.
   1. As directed.

C. Two-Face Tape: Manufacturer's standard high-bond, foam-core tape, 0.045 inch (1.14 mm) thick, with adhesive on both sides.

2.5 FABRICATION

A. Surface-Engraved Graphics: Machine engrave characters and other graphic devices into indicated sign surface to produce precisely formed copy, incised to uniform depth.

B. Subsurface-Applied Graphics: Apply graphics to back of clear face-sheet material to produce precisely formed image. Image shall be free of rough edges.

C. Subsurface-Engraved Graphics: Reverse engrave back of clear face-sheet material. Fill resulting copy with manufacturer's standard enamel. Apply opaque manufacturer's standard background color coating over enamel-filled copy.

D. Shop- and Subsurface-Applied Vinyl: Align vinyl film in final position and apply to surface. Firmly press film from the middle outward to obtain good bond without blisters or fishmouths.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install signs using mounting methods indicated and in accordance with manufacturer's written instructions.

B. Accessible Signage: Install in locations on walls as indicated on Drawings and in accordance with the accessibility standards.

C. Adhesives and Tapes: Clean substrate to remove materials that would adversely affect bond. Use materials and quantities sufficient to support weight of sign after cure without slippage. Keep adhesives and tapes away from edges to prevent visibility at sign edges.

END OF SECTION 101429

SECTION 101473 - PAINTED SIGNAGE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Field-lettered signs painted directly on substrates in good condition.
2. Wall-identification signs for fire and smoke assemblies.

B. Related Requirements:

1. Section 321723 "Pavement Markings" for signage painted on pavements.

1.2 DEFINITIONS

A. Gloss Level 1: Not more than 5 units at 60 degrees and 10 units at 85 degrees, according to ASTM D523.

B. Gloss Level 2: Not more than 10 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.

C. Gloss Level 3: 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523.

D. Gloss Level 4: 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, according to ASTM D523.

E. Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D523.

F. Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D523.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For painted signs.

1. Show sign locations and mounting heights.

2. Show message list, typestyles, graphic elements, and layout for each sign at least half size.

D. Samples: For each exposed product and for each color and texture specified.

1.5 INFORMATIONAL SUBMITTALS

A. Color Matching Certificate: For computer color matching of colors.

1.6 QUALITY ASSURANCE

A. Color Matching: Custom computer-match paint colors to colors indicated as directed. For colors indicated by a standardized coding system, obtain a color chip for each color indicated from the color-coding-system company; computer-match paint colors to the color chips.

PART 2 - PRODUCTS

2.1 SIGN-PAINT MANUFACTURERS

2.2 PERFORMANCE REQUIREMENTS

A. Accessibility Standard: Comply with applicable provisions as directed.

2.3 PAINTED SIGNS

A. Painted Sign: Sign painted directly on indicated substrate, including primers, sealers, undercoats, and transition coats as required.

1. Paint Type: As directed.

    a. Gloss: As directed.

2. Substrate: As directed.
3. Text and Typeface: As directed.

    a. Size: 2 in. (51 mm) based on height of uppercase "I" letter.
    b. Color: As directed.

4. Background: Characters outlined or Overall rectangular background or as directed.

    a. Thickness or Extent: As directed.
    b. Color: As directed.

B. Wall-Identification Sign: Sign applied directly on indicated substrate to identify fire and smoke assemblies, including preparatory treatment as required.

1. Sign Material: Stenciled-on as directed on paint or preprinted, self-adhesive decals.
2. Font: Minimum 3 inches (76 mm) high characters in a contrasting color, with minimum 0.375-inch (9.5-mm) wide strokes.
3. Text: As directed.

2.4 PAINT MATERIALS

A. Sign Paints and Coatings: Inks, dyes, and paints that are recommended in writing by manufacturer for optimum adherence to substrate and are UV and water resistant for colors and exposure indicated.

1. Compatibility: Provide paint materials that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. Transition Coat: Paint manufacturer's recommended coating for use where a residual existing coating is incompatible with the paint system.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Proceed with installation only after unsatisfactory conditions have been corrected and surface is dry.

1. Beginning coating application constitutes Contractor's acceptance of substrates and conditions.

B. Apply a transition coat over incompatible existing coatings and substrate materials.

C. Apply primers, sealers, undercoats, and transition coats so that they do not extend beyond the limits of the painted signage. Remove excess without damaging the substrate.

D. Install signs level, plumb, true to line, with uniform delineation and borders, and at locations and heights indicated.

E. Signs Painted on Glass: Provide opaque, black paint matching painted sign material and finish onto opposite side of glass to conceal back of sign.

3.2 MARKING FIRE AND SMOKE ASSEMBLIES

A. Wall-Identification Signs: Permanently identify both sides of each fire and smoke assembly indicated on Drawings. Place signs in accessible, concealed floor, floor-ceiling, or attic space at maximum 15 feet (4.57 m) from end of wall and at maximum intervals of 30 feet (9.14 m), measured horizontally along the assembly. Locate signs for greatest visibility in the space.

END OF SECTION 101473

SECTION 101700 - TELEPHONE SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Wall-mounted telephone enclosures.
2. Pedestal-mounted telephone enclosures.
3. Wall-mounted telephone housings.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For each telephone specialty.

1. Include plans, elevations, sections, and mounting details.
2. Include diagrams for power, signal, and control wiring.

C. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Product certificates.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Accessibility Standard: As directed Comply with applicable provisions in the USDJ's "2010 ADA Standards for Accessible Design" or the ABA standards of the Federal agency having jurisdiction and ICC A117.1 for telephone specialties.

2.2 WALL-MOUNTED TELEPHONE ENCLOSURES

A. Wall-Mounted Telephone Enclosure: Individual enclosure or In-line group of multiple enclosures as indicated on Drawings, constructed for indoor exposure.

1. Construction: Surface-mounted, one-piece, shell-configuration enclosure, curved in plan to form rear and side walls; with acoustical-panel interior surface, concealed internal reinforcement, and writing shelf.

    a. Material: As directed Stainless steel or Aluminum.
    b. Stainless-Steel Finish: No. 4.
    c. Aluminum Finish: As directed Clear anodic finish or Color anodic finish, dark bronze.

2. Construction: Recessed enclosure consisting of acoustical-panel rear and side walls, soffit, and writing shelf.

    a. Material: As directed Stainless steel or Aluminum.
    b. Stainless-Steel Finish: No. 4.
    c. Aluminum Finish: As directed Clear anodic finish or Color anodic finish, dark bronze.

3. Construction: Surface-mounted enclosure consisting of flat rear wall, straight side walls, and writing shelf.

    a. Rear Wall: As directed Stainless-steel acoustical panel, Aluminum acoustical panel, Stainless steel, Aluminum or 3/16-inch (4.76-mm) polyethylene.
    b. Side Walls: As directed Double-wall, stainless-steel acoustical panels, Double-wall, aluminum acoustical panels, Plastic-laminate panels, 3/16-inch (4.76-mm) polyethylene, Frameless, 12-mm-thick tempered glass, Frameless, 0.47-inch- (12-mm-) thick acrylic sheet or Extruded-aluminum frame, glazed with 6-mm-thick tempered glass.
    c. Stainless-Steel Finish: No. 4.
    d. Aluminum Finish: Clear anodic finish or Color anodic finish, dark bronze.
    e. Plastic-Laminate Finish: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.
    f. Tempered Glass: As directed Clear or Tinted.
    g. Acrylic Sheet: As directed Clear or Tinted.

4. Telephone Mounting: As directed Provide steel or stainless-steel mounting plate with threaded inserts located to receive surface-mounted telephone; plate is concealed when telephone is installed.
5. Telephone Mounting: Provide for flush-mounted telephone, recessed into built-in mounting adapter, with hinged door and locking provisions to simulate panel-style telephone.
6. Telephone Adaptor: Provide adaptor if required for installation of telephone.
7. Shelf: As directed Full-width stainless-steel, aluminum or 12-mm-thick, clear tempered-glass writing shelf.

a. Directory Storage: As directed Undershelf directory shelf with directory binder and chain, Shelf-mounted, swing-out directory holder with directory binder or Wall-mounted, swing-out directory holder with directory binder.

8. Header Panel: As directed Integral header panel with telephone sign, telephone sign and concealed fluorescent lighting with acrylic diffuser or illuminated telephone sign and concealed fluorescent lighting with acrylic diffuser, and matching metal material and finish of rear wall or side walls.
9. Accessories: As directed Provide electrical outlet and shelf sized for TTY or electrical outlet and undershelf bracket for TTY for each telephone indicated on Drawings.

2.3 PEDESTAL-MOUNTED TELEPHONE ENCLOSURES

A. Pedestal-Mounted Telephone Enclosure: As directed Individual enclosure, Two-position, back-to-back pair of enclosures, Two-position, angled, side-by-side pair of enclosures, Four-position carousel group of enclosures, Six-position carousel group of enclosures or Six-position in-line group of enclosures, constructed for outdoor or indoor exposure.

1. Construction: One-piece, shell-configuration enclosure, curved in plan to form rear and side walls; with acoustical-panel interior surface, concealed internal reinforcement, and writing shelf.

    a. Material: As directed Stainless steel or Aluminum.
    b. Stainless-Steel Finish: No. 4.
    c. Aluminum Finish: As directed Clear anodic finish or Color anodic finish, dark bronze.

2. Construction: Enclosure consisting of flat rear wall, straight side walls, and writing shelf.

    a. Rear Wall: As directed Stainless-steel acoustical panel, Aluminum acoustical panel, Stainless steel, Aluminum or 3/16-inch (4.76-mm) polyethylene.
    b. Side Walls: As directed Double-wall, stainless-steel acoustical panels, Double-wall, aluminum acoustical panels, Frameless, 12-mm-thick tempered glass, Frameless, 0.47-inch- (12-mm-) thick acrylic sheet, Extruded-aluminum frame, glazed with 6-mm-thick tempered glass or 3/16-inch (4.76-mm) polyethylene.
    c. Stainless-Steel Finish: No. 4.
    d. Aluminum Finish: Clear anodic finish or Color anodic finish, dark bronze.
    e. Tempered Glass: As directed Clear or Tinted.
    f. Acrylic Sheet: As directed Clear or Tinted.

3. Pedestal: As directed Steel or Aluminum pedestal for floor mounting with concealed mounting bolts. Include matching metal covers with tamper-resistant fasteners for access to service components.

    a. Service Entry: Through pedestal base.
    b. As directed Steel or Aluminum Finish: Baked enamel or powder coat.
    c. Color: As directed Black, Match Architect's sample or as selected by Architect from manufacturer's full range.

4. Telephone Mounting: Provide steel or stainless-steel mounting plate with threaded inserts located to receive surface-mounted telephone; plate is concealed when telephone is installed.
5. Telephone Mounting: Provide for flush-mounted telephone, recessed into built-in mounting adapter, with hinged door and locking provisions to simulate panel-style telephone.
6. Telephone Adaptor: Provide adaptor if required for installation of telephone.
7. Shelf: Full-width stainless-steel, aluminum or 12-mm-thick, clear tempered-glass writing shelf.

    a. Directory Storage: As directed Undershelf directory shelf with directory binder and chain or Shelf-mounted, swing-out directory holder with directory binder.

8. Header Panel: As directed Integral header panel with telephone sign, telephone sign and concealed fluorescent lighting with acrylic diffuser or illuminated telephone sign and concealed fluorescent lighting with acrylic diffuser, and matching metal material and finish of rear wall or side walls.
9. Roof and Ceiling Assembly: Combination roof and ceiling assembly consisting of one-piece flat roof and hinged, translucent-plastic ceiling panel.

    a. Lighting: Circular, 40-W fluorescent lamp above ceiling activated by photoelectric device.
    b. Signs: One illuminated sign face for each exposed direction of each telephone enclosure. Mount signs in fascia.
    c. Sign Text: As directed.

10. Accessories: As directed Provide electrical outlet and shelf sized for TTY or electrical outlet and undershelf bracket for TTY for each telephone indicated on Drawings.

2.4 WALL-MOUNTED TELEPHONE HOUSINGS

A. Wall-Mounted Telephone Housing: As directed Fully recessed, Semirecessed or Surface-mounted telephone-set housing, as indicated on Drawings, constructed for indoor exposure.
    1. Construction: Flush, stainless steel with steel mounting frame.

        a. Stainless-Steel Finish: No. 4.

    2. Telephone Mounting: Provide for flush-mounted telephone, recessed into built-in mounting adapter, with hinged door and locking provisions to simulate panel-style telephone.
    3. Shelf: Full-width writing shelf in metal and finish matching general construction.
    4. Directory Storage: As directed Fully recessed or Semirecessed directory shelf with directory binder and chain.
    5. Accessories: Provide electrical outlet and shelf sized for TTY for each telephone indicated on Drawings.

2.5 MATERIALS

A. Acoustical Panel: Perforated metal panel with not less than 1000 perforations/sq. ft. (10 000 perforations/sq. m) and with enclosed, nonflaking or wrapped, glass-fiber sound-absorption blanket or board. Where double-wall panel is indicated, provide perforated metal sheet at interior of enclosure and unperforated metal sheet at exterior.

B. Plastic-Laminate Panels: NEMA LD 3, laminated to 1/2-inch- (13-mm-) thick particleboard.

C. Particleboard: Panels complying with ANSI A208.1, Grade M-2.

1. Made with binder containing no urea formaldehyde.
2. Fire-retardant panels made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less according to ASTM E84 or UL 723.

D. Tempered Glass: ASTM C1048, Kind FT (fully tempered), Condition A (uncoated), Type I (transparent glass, flat), clear or tinted as indicated.

E. Acrylic Sheet: ASTM D4802, Category A-1 (cell-cast) or Category A-2 (continuous cast), Finish 1 (smooth or polished), clear or tinted as indicated.

F. Fasteners: Screws, bolts, inserts, anchorages, and other fastening devices of same material as items being fastened, and of same finish where exposed, except provide stainless-steel fasteners for exterior exposures. Use tamperproof fasteners where exposed to view.

2.6 STAINLESS-STEEL FINISHES

A. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Directional Satin Finish: No. 4.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install telephone specialties according to manufacturer's written instructions. Install units level and plumb, with tight joints and uniform appearance, and free of deformation and surface and finish irregularities.

B. Install telephone specialties after other finishing operations, including painting, have been completed.

END OF SECTION 101700

SECTION 102113.13 - METAL TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes painted steel toilet compartments configured as toilet enclosures, entrance screens and urinal screens.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For toilet compartments. Include plans, elevations, sections, and attachment details.

D. Samples for each type of toilet compartment material indicated.

1.3 INFORMATIONAL SUBMITTALS

A. Product certificates.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1 for toilet compartments designated as accessible.

2.2 PAINTED STEEL TOILET COMPARTMENTS

A. Toilet-Enclosure Style: As directed Overhead braced, Floor anchored, Ceiling hung or Floor and ceiling anchored.

B. Entrance-Screen Style: As directed Overhead braced, Floor anchored, Ceiling hung or Floor and ceiling anchored.

C. Urinal-Screen Style: As directed Wall hung, flat panel, Wall hung with integral flanges, Wall hung, wedge shaped, Floor anchored, Overhead braced or Post to ceiling.

D. Door, Panel, and Pilaster Construction: Seamless, metal facing sheets pressure laminated to core material; with continuous, interlocking molding strip or lapped-and-formed edge closures; corners secured by welding or clips and exposed welds ground smooth. Provide with no-sightline system. Exposed surfaces shall be free of pitting, seam marks, roller marks, stains, discolorations, telegraphing of core material, or other imperfections.

1. Core Material: Manufacturer's standard sound-deadening honeycomb of resin-impregnated kraft paper in thickness required to provide finished thickness of 1 inch (25 mm) for doors and panels and 1-1/4 inches (32 mm) for pilasters.
2. Grab-Bar Reinforcement: Provide concealed internal reinforcement for grab bars mounted on units of size and material adequate for panel to withstand applied downward load on grab bar of at least 250 lbf (1112 N), when tested according to ASTM F446, without deformation of panel.
3. Tapping Reinforcement: Provide concealed reinforcement for tapping (threading) at locations where machine screws are used for attaching items to units.

E. Urinal-Screen Construction:

1. Flat-Panel Urinal Screen: Matching panel construction.
2. Integral-Flange, Wall-Hung Urinal Screen: Similar to panel construction, with integral full-height flanges for wall attachment, and maximum 1-1/4 inches (32 mm) thick.
3. Wedge-Shaped, Wall-Hung Urinal Screen: Similar to panels, V-shaped, fabricated for concealed wall attachment, and maximum 6 inches (152 mm) wide at wall and minimum 1 inch (25 mm) wide at protruding end.

F. Facing Sheets and Closures: Electrolytically coated steel or hot-dip galvanized-steel sheet with nominal base-metal (uncoated) thicknesses as follows:

1. Pilasters, Braced at Both Ends: Manufacturer's standard thickness, but not less than 0.036 inch (0.91 mm).
2. Pilasters, Unbraced at One End: Manufacturer's standard thickness, but not less than 0.048 inch (1.21 mm).
3. Panels: As directed Manufacturer's standard thickness, but not less than 0.030 inch (0.76 mm) or 0.036 inch (0.91 mm).
4. Doors: Manufacturer's standard thickness, but not less than 0.030 inch (0.76 mm).
5. Flat-Panel Urinal Screens: Thickness matching the panels.
6. Integral-Flange, Wall-Hung Urinal Screens: Manufacturer's standard thickness, but not less than 0.030 inch (0.76 mm).
7. Wedge-Shaped, Wall-Hung Urinal Screens: Manufacturer's standard thickness, but not less than 0.036 inch (0.91 mm).

G. Pilaster Shoes and Sleeves (Caps): Stainless-steel sheet, not less than 0.031-inch (0.79-mm) nominal thickness and 3 inches (76 mm) high, finished to match hardware.

H. Urinal-Screen Post: As directed Manufacturer's standard post design of material matching the thickness and construction of pilasters or 1-3/4-inch- (44-mm-) square, aluminum tube with satin finish; with shoe and sleeve (cap) matching that on the pilaster.

I. Brackets (Fittings):

1. Stirrup Type: As directed Ear or U-brackets; chrome-plated zamac, clear-anodized aluminum, stainless steel or chrome-plated brass.
2. Full-Height (Continuous) Type: Manufacturer's standard design; stainless steel or aluminum.

J. Steel Sheet Finish: Manufacturer's standard baked-on finish.

1. Color: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from manufacturer's full range.

a. As directed Allow for application of one color or two colors in each room.

2.3 HARDWARE AND ACCESSORIES

A. Hardware and Accessories: Manufacturer's standard operating hardware and accessories.

1. Material: As directed Chrome-plated zamac, Clear-anodized aluminum or Chrome-plated brass.
2. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible.

B. Hardware and Accessories: Manufacturer's heavy-duty stainless-steel operating hardware and accessories.

1. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible.

C. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with antigrip profile and in manufacturer's standard finish.

D. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel, finished to match the items they are securing, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless steel, hot-dip galvanized steel, or other rust-resistant, protective-coated steel compatible with related materials.

2.4 FABRICATION

A. Fabrication, General: Fabricate toilet compartment components to sizes indicated. Coordinate requirements and provide cutouts for through-partition toilet accessories, and solid blocking within panel where required for attachment of toilet accessories.

B. Overhead-Braced Units: Provide manufacturer's standard corrosion-resistant supports, leveling mechanism, and anchors at pilasters to suit floor conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.

C. Floor-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at pilasters for structural connection to floor. Provide shoes at pilasters to conceal anchorage.

D. Ceiling-Hung Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at pilasters for connection to structural support above finished ceiling. Provide assemblies that support pilasters from structure without transmitting load to finished ceiling. Provide sleeves (caps) at tops of pilasters to conceal anchorage.

E. Floor-and-Ceiling-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment at tops and bottoms of pilasters. Provide shoes and sleeves (caps) at pilasters to conceal anchorage.

F. Urinal-Screen Posts: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment at tops and bottoms of posts. Provide shoes and sleeves (caps) at posts to conceal anchorage.

G. Door Size and Swings: Unless otherwise indicated, provide 24-inch- (610-mm-) wide, in-swinging doors for standard toilet compartments and 36-inch- (914-mm-) wide, out-swinging doors with a minimum 32-inch- (813-mm-) wide, clear opening for compartments designated as accessible.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position indicated with manufacturer's recommended anchoring devices.

1. Maximum Clearances:

   a. Pilasters and Panels: 1/2 inch (13 mm).
   b. Panels and Walls: 1 inch (25 mm).

2. Stirrup Brackets: As directed Secure panels to walls and to pilasters with no fewer than two brackets attached or three brackets attached at midpoint and near top and bottom of panel.

   a. Locate wall brackets so holes for wall anchors occur in masonry or tile joints.
   b. Align brackets at pilasters with brackets at walls.

3. Full-Height (Continuous) Brackets: Secure panels to walls and to pilasters with full-height brackets.

   a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
   b. Align brackets at pilasters with brackets at walls.

3.2 ADJUSTING

A. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open

approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors and doors in entrance screens to return doors to fully closed position.

END OF SECTION 102113.13

SECTION 102113.14 - STAINLESS-STEEL TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes stainless-steel toilet compartments configured as toilet enclosures, entrance screens and urinal screens.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For toilet compartments. Include plans, elevations, sections, details, and attachment details.

D. Samples for each type of toilet compartment material indicated.

1.3 INFORMATIONAL SUBMITTALS

A. Product certificates.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1 for toilet compartments designated as accessible.

2.2 STAINLESS-STEEL TOILET COMPARTMENTS

A. Toilet-Enclosure Style: As directed Overhead braced, Floor anchored, Ceiling hung or Floor and ceiling anchored.

B. Entrance-Screen Style: As directed Overhead braced, Floor anchored, Ceiling hung or Floor and ceiling anchored.

C. Urinal-Screen Style: As directed Wall hung flat panel, Wall hung with integral flanges, Wall hung, wedge shaped, Floor anchored, Overhead braced or Post to ceiling.

D. Door, Panel, and Pilaster Construction: Seamless, metal facing sheets pressure laminated to core material; with continuous, interlocking molding strip or lapped-and-formed edge closures; corners secured by welding or clips and exposed welds ground smooth. Provide with no-sightline system. Exposed surfaces shall be free of pitting, seam marks, roller marks, stains, discolorations, telegraphing of core material, or other imperfections.

1. Core Material: Manufacturer's standard sound-deadening honeycomb of resin-impregnated kraft paper in thickness required to provide finished thickness of 1 inch (25 mm) for doors and panels and 1-1/4 inches (32 mm) for pilasters.
2. Grab-Bar Reinforcement: Provide concealed internal reinforcement for grab bars mounted on units of size and material adequate for panel to withstand applied downward load on grab bar of at least 250 lbf (1112 N), when tested according to ASTM F446, without deformation of panel.
3. Tapping Reinforcement: Provide concealed reinforcement for tapping (threading) at locations where machine screws are used for attaching items to units.

E. Urinal-Screen Construction:

1. Flat-Panel Urinal Screen: Matching panel construction.
2. Integral-Flange, Wall-Hung Urinal Screen: Similar to panel construction, with integral full-height flanges for wall attachment, and maximum 1-1/4 inches (32 mm) thick.
3. Wedge-Shaped, Wall-Hung Urinal Screen: Similar to panels, V-shaped, fabricated for concealed wall attachment, and maximum 6 inches (152 mm) wide at wall and minimum 1 inch (25 mm) wide at protruding end.

F. Facing Sheets and Closures: Stainless-steel sheet of nominal thicknesses as follows:

1. Pilasters, Braced at Both Ends: Manufacturer's standard thickness, but not less than 0.038 inch (0.95 mm).
2. Pilasters, Unbraced at One End: Manufacturer's standard thickness, but not less than 0.050 inch (1.27 mm).
3. Panels: As directed Manufacturer's standard thickness, but not less than 0.031 inch (0.79 mm) or 0.038 inch (0.95 mm).
4. Doors: Manufacturer's standard thickness, but not less than 0.031 inch (0.79 mm).
5. Flat-Panel Urinal Screens: Thickness matching the panels.
6. Integral-Flange, Wall-Hung Urinal Screens: Manufacturer's standard thickness, but not less than 0.031 inch (0.79 mm).
7. Wedge-Shaped, Wall-Hung Urinal Screens: Manufacturer's standard thickness, but not less than 0.038 inch (0.95 mm).

G. Pilaster Shoes and Sleeves (Caps): Stainless-steel sheet, not less than 0.031-inch (0.79-mm) nominal thickness and 3 inches (76 mm) high, finished to match hardware.

H. Urinal-Screen Post: Manufacturer's standard post design of material matching the thickness and construction of pilasters or 1-3/4-inch- (44-mm-) square, aluminum tube with satin finish; with shoe and sleeve (cap) matching that on the pilaster.

I. Brackets (Fittings):

1. Stirrup Type: As directed Ear or U-brackets; chrome-plated zamac, clear-anodized aluminum, stainless steel or chrome-plated brass.
2. Full-Height (Continuous) Type: Manufacturer's standard design; stainless steel or aluminum.

J. Stainless-Steel Finish: As directed No. 4 bright, directional polish or Manufacturer's standard textured finish on exposed faces. Protect exposed surfaces from damage by application of strippable, temporary protective covering before shipment.

2.3 HARDWARE AND ACCESSORIES

A. Hardware and Accessories: Manufacturer's standard stainless-steel operating hardware and accessories.

1. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible.

B. Hardware and Accessories: Manufacturer's heavy-duty stainless-steel operating hardware and accessories.

1. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible.

C. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with antigrip profile and in manufacturer's standard finish.

D. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel, finished to match the items they are securing, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless-steel, hot-dip galvanized-steel, or other rust-resistant, protective-coated steel anchors compatible with related materials.

2.4 FABRICATION

A. Fabrication, General: Fabricate toilet compartment components to sizes indicated. Coordinate requirements and provide cutouts for through-partition toilet accessories and solid blocking within panel where required for attachment of toilet accessories.

B. Overhead-Braced Units: Provide manufacturer's standard corrosion-resistant supports, leveling mechanism, and anchors at pilasters to suit floor conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.

C. Floor-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at pilasters for structural connection to floor. Provide shoes at pilasters to conceal anchorage.

D. Ceiling-Hung Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at pilasters for connection to structural support above finished

ceiling. Provide assemblies that support pilasters from structure without transmitting load to finished ceiling. Provide sleeves (caps) at tops of pilasters to conceal anchorage.

E. Floor-and-Ceiling-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at tops and bottoms of pilasters. Provide shoes and sleeves (caps) at pilasters to conceal anchorage.

F. Urinal-Screen Posts: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at tops and bottoms of posts. Provide shoes and sleeves (caps) at posts to conceal anchorage.

G. Door Size and Swings: Unless otherwise indicated, provide 24-inch- (610-mm-) wide in-swinging doors for standard toilet compartments and 36-inch- (914-mm-) wide out-swinging doors with a minimum 32-inch- (813-mm-) wide clear opening for compartments designated as accessible.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.

1. Maximum Clearances:

   a. Pilasters and Panels: 1/2 inch (13 mm).
   b. Panels and Walls: 1 inch (25 mm).

2. Stirrup Brackets: As directed Secure panels to walls and to pilasters with no fewer than two brackets attached or three brackets attached at midpoint and near top and bottom of panel.

   a. Locate wall brackets so holes for wall anchors occur in masonry or tile joints.
   b. Align brackets at pilasters with brackets at walls.

3. Full-Height (Continuous) Brackets: Secure panels to walls and to pilasters with full-height brackets.

   a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
   b. Align brackets at pilasters with brackets at walls.

3.2 ADJUSTING

A. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors and doors in entrance screens to return doors to fully closed position.

END OF SECTION 102113.14

SECTION 102113.16 - PLASTIC-LAMINATE-CLAD TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes plastic-laminate-clad toilet compartments configured as directed.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For toilet compartments. Include plans, elevations, sections, details, and attachment details.

D. Samples for each type of toilet compartment material indicated.

1.3 INFORMATIONAL SUBMITTALS

A. Product certificates.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: As directed.
2. Smoke-Developed Index: 450 or less.

B. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1 as directed for toilet compartments designated as accessible.

2.2 PLASTIC-LAMINATE-CLAD TOILET COMPARTMENTS

A. Toilet-Enclosure Style: As directed.

B. Entrance-Screen Style: As directed.

C. Urinal-Screen Style: As directed.

D. Door, Panel, Screen, and Pilaster Construction: One-piece, plastic-laminate facing sheets pressure laminated to core material without splices or joints in facings or cores; with laminate applied to edges before faces to seal edges and prevent laminate from being pried loose. Seal exposed core material at cutouts to protect core from moisture. Provide with no-sightline system.

1. Core Material: Particleboard.
2. Doors and Panels: Finished to not less than 7/8 inch (22 mm) or 1 inch (25 mm) thick as directed.
3. Pilasters: Provide construction to comply with one of the following:

    a. Finished to not less than 1-1/4 inches (32 mm) thick and with internal, nominal 0.134-inch- (3.42-mm-) thick, steel-sheet reinforcement.
    b. Finished to 1-1/4 inches (32 mm) thick and with manufacturer's standard steel-sheet core laminated to both sides of honeycomb of resin-impregnated kraft paper in lieu of particleboard core.
    c. Finished to not less than 1 inch (25 mm) thick and with internal, nominal 0.120-inch- (3.04-mm-) thick, steel-sheet reinforcement.

E. Pilaster Shoes and Sleeves (Caps) as directed: Formed from stainless-steel sheet, not less than 0.031-inch (0.79-mm) nominal thickness and 3 inches (76 mm) high, finished to match hardware.

F. Urinal-Screen Post: As directed.

G. Brackets (Fittings):

1. Stirrup Type: Ear or U-brackets, as directed.
2. Full-Height (Continuous) Type: Manufacturer's standard design; stainless steel or aluminum as directed.

H. Plastic-Laminate Finish: One color and pattern or Two colors and patterns as directed in each room.

1. Color and Pattern: As directed.

2.3 HARDWARE AND ACCESSORIES

A. Hardware and Accessories: Manufacturer's standard operating hardware and accessories.

1. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible.

B. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with antigrip profile and in manufacturer's standard finish.

C. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel, finished to match the items they are securing, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless-steel, hot-dip galvanized-steel, or other rust-resistant, protective-coated steel anchors compatible with related materials.

2.4 MATERIALS

A. Particleboard: ANSI A208.1, Grade M-2.

B. Plastic Laminate: NEMA LD 3, general-purpose HGS grade, 0.048-inch (1.2-mm) nominal thickness.

2.5 FABRICATION

A. Fabrication, General: Fabricate toilet compartment components to sizes indicated. Coordinate requirements and provide cutouts for through-partition toilet accessories where required for attachment of toilet accessories.

B. Overhead-Braced Units: Provide manufacturer's standard corrosion-resistant supports, leveling mechanism, and anchors at pilasters to suit floor conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.

C. Floor-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at pilasters for structural connection to floor. Provide shoes at pilasters to conceal anchorage.

D. Ceiling-Hung Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at pilasters for connection to structural support above finished ceiling. Provide assemblies that support pilasters from structure without transmitting load to finished ceiling. Provide sleeves (caps) at tops of pilasters to conceal anchorage.

E. Floor-and-Ceiling-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at tops and bottoms of pilasters. Provide shoes and sleeves (caps) at pilasters to conceal anchorage.

F. Urinal-Screen Posts: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at tops and bottoms of posts. Provide shoes and sleeves (caps) at posts to conceal anchorage.

G. Door Size and Swings: Unless otherwise indicated, provide 24-inch- (610-mm-) wide in-swinging doors for standard toilet compartments and 36-inch- (914-mm-) wide out-swinging doors with a minimum 32-inch- (813-mm-) wide clear opening for compartments designated as accessible.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.

1. Maximum Clearances:

   a. Pilasters and Panels: 1/2 inch (13 mm).
   b. Panels and Walls: 1 inch (25 mm).

2. Stirrup Brackets: Secure panels to walls and to pilasters with no fewer than two brackets attached or three brackets attached at midpoint and as directed near top and bottom of panel.

   a. Locate wall brackets so holes for wall anchors occur in masonry or tile joints.
   b. Align brackets at pilasters with brackets at walls.

3. Full-Height (Continuous) Brackets: Secure panels to walls and to pilasters with full-height brackets.

   a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
   b. Align brackets at pilasters with brackets at walls.

3.2 ADJUSTING

A. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors and doors in entrance screens to return doors to fully closed position.

END OF SECTION 102113.16

SECTION 102113.17 - PHENOLIC-CORE TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Phenolic-core toilet compartments configured as toilet enclosures, entrance screens and urinal screens.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For toilet compartments. Include plans, elevations, sections, details, and attachment details.

D. Samples for each type of toilet compartment material indicated.

1.3 INFORMATIONAL SUBMITTALS

A. Product certificates.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: As directed 25, 75 or 200 or less.
2. Smoke-Developed Index: 450 or less.

B. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1 for toilet compartments designated as accessible.

2.2 PHENOLIC-CORE TOILET COMPARMENTS

A. Toilet-Enclosure Style: As directed Overhead braced, Floor anchored, Ceiling hung or Floor and ceiling anchored.

B. Entrance-Screen Style: As directed Overhead braced, Floor anchored, Ceiling hung or Floor and ceiling anchored.

C. Urinal-Screen Style: As directed Wall hung, Floor anchored, Overhead braced or Post to ceiling.

D. Door, Panel, Screen, and Pilaster Construction: Solid phenolic-core panel material with melamine facing on both sides fused to substrate during panel manufacture (not separately laminated), and with eased and polished edges and no-sightline system. Provide minimum 3/4-inch- (19-mm-) thick doors and pilasters and minimum 1/2-inch- (13-mm-) thick panels.

E. Pilaster Shoes and Sleeves (Caps): Formed from stainless-steel sheet, not less than 0.031-inch (0.79-mm) nominal thickness and 3 inches (76 mm) high, finished to match hardware.

F. Urinal-Screen Post: As directed Manufacturer's standard post design of monolithic phenolic urinal screen cut out at bottom to form a post, material matching the thickness and construction of pilasters or 1-3/4-inch- (44-mm-) square, aluminum tube with satin finish; with shoe and sleeve (cap) matching that on the pilaster.

G. Brackets (Fittings):

1. Stirrup Type: As directed Ear or U-brackets, chrome-plated zamac, clear-anodized aluminum, stainless steel or chrome-plated brass.
2. Full-Height (Continuous) Type: As directed Manufacturer's standard design; stainless steel or aluminum.

H. Phenolic-Panel Finish:

1. Facing Sheet Finish: As directed One color and pattern or Two colors and patterns in each room.
2. Color and Pattern: As indicated by manufacturer's designations or As selected by Architect from manufacturer's full range, with manufacturer's standard dark color core or through-color core matching face sheet.
3. Edge Color: As directed Manufacturer's standard or Through-color matching facing sheet color.

2.3 HARDWARE AND ACCESSORIES

A. Hardware and Accessories: Manufacturer's standard operating hardware and accessories.

1. Material: As directed Chrome-plated zamac, Clear-anodized aluminum, Stainless steel or Chrome-plated brass.
2. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible.

B. Hardware and Accessories: Manufacturer's heavy-duty stainless steel operating hardware and accessories.

1. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible.

C. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with antigrip profile and in manufacturer's standard finish.

D. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel, finished to match the items they are securing, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless-steel, hot-dip galvanized-steel, or other rust-resistant, protective-coated steel compatible with related materials.

2.4 FABRICATION

A. Fabrication, General: Fabricate toilet compartment components to sizes indicated. Coordinate requirements and provide cutouts for through-partition toilet accessories where required for attachment of toilet accessories.

B. Overhead-Braced Units: Provide manufacturer's standard corrosion-resistant supports, leveling mechanism, and anchors at pilasters to suit floor conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.

C. Floor-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at pilasters for structural connection to floor. Provide shoes at pilasters to conceal anchorage.

D. Ceiling-Hung Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at pilasters for connection to structural support above finished ceiling. Provide assemblies that support pilasters from structure without transmitting load to finished ceiling. Provide sleeves (caps) at tops of pilasters to conceal anchorage.

E. Floor-and-Ceiling-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at tops and bottoms of pilasters. Provide shoes and sleeves (caps) at pilasters to conceal anchorage.

F. Urinal-Screen Posts: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at tops and bottoms of posts. Provide shoes and sleeves (caps) at posts to conceal anchorage.

G. Door Size and Swings: Unless otherwise indicated, provide 24-inch- (610-mm-) wide in-swinging doors for standard toilet compartments and 36-inch- (914-mm-) wide out-swinging doors with a minimum 32-inch- (813-mm-) wide clear opening for compartments designated as accessible.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.

1. Maximum Clearances:

   a. Pilasters and Panels: 1/2 inch (13 mm).
   b. Panels and Walls: 1 inch (25 mm).

2. Stirrup Brackets: Secure panels to walls and to pilasters with no fewer than two brackets attached or three brackets attached at midpoint and near top and bottom of panel.

   a. Locate wall brackets so holes for wall anchors occur in masonry or tile joints.
   b. Align brackets at pilasters with brackets at walls.

3. Full-Height (Continuous) Brackets: Secure panels to walls and to pilasters with full-height brackets.

   a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
   b. Align brackets at pilasters with brackets at walls.

3.2 ADJUSTING

A. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors and doors in entrance screens to return doors to fully closed position.

END OF SECTION 102113.17

SECTION 102113.19 - PLASTIC TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes solid-plastic toilet compartments configured as directed.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For toilet compartments. Include plans, elevations, sections, details, and attachment details.

D. Samples for each type of toilet compartment material indicated.

1.3 INFORMATIONAL SUBMITTALS

A. Product certificates.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: As directed.
2. Smoke-Developed Index: 450 or less.

B. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1 as directed for toilet compartments designated as accessible.

2.2 SOLID-PLASTIC TOILET COMPARTMENTS

A. Toilet-Enclosure Style: As directed.

B. Entrance-Screen Style: As directed.

C. Urinal-Screen Style: As directed.

D. Door, Panel, Screen, and Pilaster Construction: Solid, high-density polyethylene (HDPE) panel material, not less than 1 inch (25 mm) thick, seamless, with eased edges, no-sightline system, and with homogenous color and pattern throughout thickness of material.

1. Integral Hinges: Configure doors and pilasters to receive integral hinges.
2. Heat-Sink Strip: Manufacturer's standard continuous, extruded-aluminum or stainless-steel as directed strip fastened to exposed bottom edges of solid-plastic components to hinder malicious combustion.
3. Color and Pattern: One color and pattern or Two colors and patterns as directed in each room as indicated by manufacturer's designations or as selected by Architect from manufacturer's full range as directed.

E. Pilaster Shoes and Sleeves (Caps): Manufacturer's standard design; polymer or stainless steel.

1. Polymer Color and Pattern: As directed.

F. Urinal-Screen Post: Manufacturer's standard post design of material matching the thickness and construction of pilasters or 1-3/4-inch- (44-mm-) square, aluminum tube with satin finish; with shoe and sleeve (cap) matching that on the pilaster as directed.

G. Brackets (Fittings):

1. Stirrup Type: Ear or U-brackets or as directed.
2. Full-Height (Continuous) Type: Manufacturer's standard design; as directed.

    a. Polymer Color and Pattern: As directed.

H. Overhead Cross Bracing for Ceiling-Hung Units: As recommended by manufacturer and fabricated from solid polymer.

2.3 HARDWARE AND ACCESSORIES

A. Hardware and Accessories: Manufacturer's standard operating hardware and accessories.

1. Material: As directed.
2. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible.

B. Hardware and Accessories: Manufacturer's heavy-duty stainless-steel operating hardware and accessories.

1. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible.

C. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with antigrip profile and in manufacturer's standard finish.

D. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel, finished to match the items they are securing, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless-steel, hot-dip galvanized-steel, or other rust-resistant, protective-coated steel compatible with related materials.

2.4 FABRICATION

A. Fabrication, General: Fabricate toilet compartment components to sizes indicated. Coordinate requirements and provide cutouts for through-partition toilet accessories where required for attachment of toilet accessories.

B. Overhead-Braced Units: Provide manufacturer's standard corrosion-resistant supports, leveling mechanism, and anchors at pilasters to suit floor conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.

C. Floor-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at pilasters for structural connection to floor. Provide shoes at pilasters to conceal anchorage.

D. Ceiling-Hung Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at pilasters for connection to structural support above finished ceiling. Provide assemblies that support pilasters from structure without transmitting load to finished ceiling. Provide sleeves (caps) at tops of pilasters to conceal anchorage.

E. Floor-and-Ceiling-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at tops and bottoms of pilasters. Provide shoes and sleeves (caps) at pilasters to conceal anchorage.

F. Urinal-Screen Posts: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at tops and bottoms of posts. Provide shoes and sleeves (caps) at posts to conceal anchorage.

G. Door Size and Swings: Unless otherwise indicated, provide 24-inch- (610-mm-) wide, in-swinging doors for standard toilet compartments and 36-inch- (914-mm-) wide, out-swinging doors with a minimum 32-inch- (813-mm-) wide, clear opening for compartments designated as accessible.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.

1. Maximum Clearances:

a. Pilasters and Panels: 1/2 inch (13 mm).
b. Panels and Walls: 1 inch (25 mm).

2. Stirrup Brackets: Secure panels to walls and to pilasters with no fewer than two brackets attached or three brackets attached at midpoint and near top and bottom of panel as directed.

a. Locate wall brackets so holes for wall anchors occur in masonry or tile joints.
b. Align brackets at pilasters with brackets at walls.

3. Full-Height (Continuous) Brackets: Secure panels to walls and to pilasters with full-height brackets.

a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
b. Align brackets at pilasters with brackets at walls.

3.2 ADJUSTING

A. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors and doors in entrance screens to return doors to fully closed position.

END OF SECTION 102113.19

SECTION 102113.40 - STONE TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes stone toilet compartments configured as toilet enclosures, entrance screens and urinal screens.

1.2 ACTION SUBMITTALS

A. Product Data: For each variety of stone and each type of stone accessory, door, hardware, bracket (fitting), and other manufactured product.

B. Sustainable Design Submittals:
   1. As directed.

C. Shop Drawings: For stone toilet compartments. Include plans, elevations, sections, details, and attachments to other work in one coordinated submittal together with product data.

D. Samples for each exposed product and for each color and texture specified.

   1. Stone: Sets for each color, grade, finish, and variety of stone required.
   2. Doors: Door faces and edges finished with materials proposed for the Work.

1.3 INFORMATIONAL SUBMITTALS

A. Product certificates.

B. Qualification Data: As directed For qualified Installer or fabricator.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 QUALITY ASSURANCE

A. Fabricator Qualifications: Shop accredited by MIA that employs skilled workers who custom-fabricate stone toilet compartments similar to those indicated for this Project and whose products have a record of successful in-service performance.

B. Installer Qualifications: As directed Fabricator of products, an experienced installer, accredited by MIA or who has completed stone toilet compartment installations similar in material, design, and extent to those indicated for this Project and whose installations have a record of successful in-service performance.

C. Source Limitations for Stone: Obtain each variety of stone from single quarry with resources to provide materials of consistent quality in appearance and physical properties.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities" and ICC A117.1 for toilet compartments designated as accessible.

2.2 STONE TYPES

A. Marble: ASTM C503/C503M, Soundness Group A; selected for uniform visual quality.

1. Varieties and Sources: Subject to compliance with requirements, provide the following, provide one of the following or available stone varieties that may be incorporated into the Work include, but are not limited to, the following:

2. Cut: As directed Vein or Fleuri.
3. Finish: As directed Polished, Honed or Match Architect's sample.

B. Granite: ASTM C615 and complying with NBGQA's "Specifications for Architectural Granite"; free of cracks, defects, and geological flaws; and selected for uniform visual quality.

1. Varieties and Sources: Subject to compliance with requirements, provide the following, provide one of the following or available stone varieties that may be incorporated into the Work include, but are not limited to, the following:

2. Cut: As directed Vein or Fleuri.
3. Finish: Polished, Honed or Match Architect's sample.

C. Quartz Agglomerate: Solid sheets consisting of quartz aggregates bound together with a matrix of filled plastic resin and complying with the "Physical Characteristics of Materials" Article of ICPA SS-1.
1. Colors and Patterns: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from manufacturer's full range.

D. Match Architect's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.3 OTHER MATERIALS

A. Brass Castings: ASTM B584.

B. Stainless-Steel Sheet: ASTM A666, Type 304, stretcher-leveled standard of flatness.

C. Stainless-Steel Castings: ASTM A743/A743M.

D. Particleboard: ANSI A208.1, Grade M-2.

E. Plastic Laminate: NEMA LD 3, general-purpose HGS grade, 0.048-inch (1.2-mm) nominal thickness.

2.4 STONE TOILET COMPARTMENTS

A. Toilet-Enclosure Style: As directed Floor anchored, Ceiling hung or Floor and ceiling anchored.

B. Entrance-Screen Style: As directed Floor anchored, Ceiling hung or Floor and ceiling anchored.

C. Urinal-Screen Style: As directed Floor anchored, Ceiling hung or Floor and ceiling anchored.

D. Stone Type: As directed

E. Stone Veining: Cut stone so that, when installed, veining will be approximately vertical.

F. Doors: As directed Plastic laminate, Stainless steel or Wood.

G. Hardware and Bracket (Fitting) Material and Finish: As directed Fabricator's standard chrome-plated brass, stainless steel or polished brass.

2.5 DOORS AND HARDWARE

A. Door Size and Swings: Unless otherwise indicated, provide 24-inch- (610-mm-) wide in-swinging doors for standard toilet compartments and 36-inch- (914-mm-) wide out-swinging doors with a minimum 32-inch- (813-mm-) wide clear opening for compartments designated as accessible.

B. Plastic-Laminate Doors: One-piece plastic-laminate facing sheets pressure laminated to core material without splices or joints in facings or cores; with laminate applied to edges before faces to seal edges and prevent laminate from being pried loose. Seal exposed core material at cutouts to protect core from moisture.

1. Core Material: Particleboard.
2. Finished Door Thickness: Not less than 1 inch (25 mm).
3. Plastic-Laminate Color and Pattern: As selected by Architect from manufacturer's full range.

C. Stainless-Steel Doors: Seamless, stainless-steel facing sheets pressure laminated to core material; with continuous, interlocking stainless-steel molding strip or lapped and formed edge closures; corners secured by welding or clips, and exposed welds are ground smooth. Exposed surfaces shall be free of pitting, seam marks, roller marks, stains, discolorations, telegraphing of core material, or other imperfections.

1. Thickness of Facing Sheets: Manufacturer's standard, but not less than 0.031 inch (0.79 mm).

2. Core Material: Manufacturer's standard sound-deadening honeycomb of resin-impregnated kraft paper in thickness required for finished door thickness.
3. Finished Door Thickness: Not less than 1 inch (25 mm).
4. Stainless-Steel Finish: As directed No. 4 bright, directional polish or Manufacturer's standard textured finish on exposed faces. Protect exposed surfaces from damage by application of strippable, temporary protective covering before shipment.

D. Wood Doors: As specified in Section 081416 "Flush Wood Doors" or Section 081433 "Stile and Rail Wood Doors."

E. Wood Doors: As directed Red-oak- or Birch- veneered, solid-core flush doors, 1 inch (25 mm) thick; with particleboard core and hardwood edge bands bonded on all four edges; finished with transparent or opaque finish as selected by Architect from manufacturer's full range of colors and gloss or matching Architect's sample.

F. Hardware: Manufacturer's standard design, heavy-duty operating hardware and accessories, coordinated with actual thicknesses of stone and door and complying with the following:

1. Cutout-Inset-Type Hinges: Manufacturer's standard design, heavy-duty, paired, self-closing type that can be adjusted to hold doors open at any angle up to 90 degrees. Provide hinges that wrap around stone stiles for through-bolt attachment.
2. Surface-Mounted Hinges: Manufacturer's standard design, heavy-duty, paired, self-closing type that can be adjusted to hold doors open at any angle up to 90 degrees.
3. Latch and Keeper: As directed Manufacturer's standard design, heavy-duty recessed or surface-mounted latch unit designed for emergency access and with combination rubber-faced door strike and keeper. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible.
4. Coat Hook: Manufacturer's standard combination hook and rubber-tipped bumper, sized to prevent in-swinging door from hitting compartment-mounted accessories.
5. Door Bumper: Manufacturer's standard rubber-tipped bumper at out-swinging doors and entrance-screen doors.
6. Door Pull: Manufacturer's standard unit at out-swinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at compartments designated as accessible.

2.6 ACCESSORIES

A. Dowels: Stainless-steel dowels, 1/4-inch (6-mm) diameter, ASTM A276, Type 304.

B. Brackets (Fittings): Fabricator's standard design, heavy-duty cast-brass or cast-stainless-steel, angle-type brackets (fittings), with 1-3/4-by-1-3/4-inch (44-by-44-mm) legs, 1-1/4 inches (32 mm) long, coordinated with actual thickness of stone, and capable of supporting stone units in configuration indicated.

C. Stile Reinforcement: Continuous 1/4-by-3/4-inch (6-by-19-mm) extruded-aluminum spline complying with ASTM B221 (ASTM B221M) in alloy and temper recommended by fabricator for use indicated.

D. Anchorages and Fasteners: Fabricator's standard design, heavy-duty exposed fasteners of stainless steel or chrome-plated steel or brass, finished to match the items they are securing, with theft-resistant-type heads. Provide sex-type through-bolts with lengths coordinated with actual thickness of stone or other material they are securing. For concealed anchors, use stainless steel or hot-dip galvanized steel.

2.7 FABRICATION

A. General: Fabricate stone to sizes and shapes indicated on Drawings.

1. For marble, comply with recommendations in MIA's "Dimension Stone Design Manual."
2. For granite, comply with recommendations in NBGQA's "Specifications for Architectural Granite."

B. Cut stone from contiguous, matched slabs in which natural markings occur. Select and mark stone for final locations to produce assembled toilet compartments with an overall uniform appearance.

C. Provide even (gaged) thicknesses indicated, but not less than the following:

1. Panel and Screen Thickness: As directed 30 or 20 mm.
2. Stile Thickness: 30 mm.

D. Cut stone with a surface tolerance of not more than plus or minimum 0.8 mm from true plane.

E. Finish exposed faces and edges of stone to match approved Samples. Provide stone with eased, exposed edges.

F. Ceiling-Hung Units: Reinforce each stile with a continuous aluminum spline recessed flush in groove cut into the stone and located where panel abuts the stile so as to be concealed within the joint. Use adhesive and mechanical fasteners to attach spline to stone.

G. Ceiling Anchorage: Provide corrosion-resistant anchoring assemblies complete with leveling adjustment nuts to connect stiles to structural support above finished ceiling. Provide assemblies that support stiles from structure without transmitting load to finished ceiling. Locate anchorage to be entirely concealed by the ceiling.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Comply with fabricator's written installation instructions. Install units rigid, straight, level, and plumb.

B. Install anchors, fasteners, and other attachments indicated or necessary to secure stone in place. Shim and adjust anchors and supports to set stone accurately in locations indicated, with uniform joints of widths indicated and with edges and faces aligned.

C. Secure stone panels to walls and stiles with no fewer than three pairs of angle brackets (fittings), installed back to back. Use through-bolt fasteners to attach angle brackets (fittings) to stone. At wall connections, provide fasteners suitable for supporting construction.

D. Do not allow stone to come in contact with plumbing sealant or putty.

E. Floor-Anchored Units: Anchor units to floor rigid, level, and plumb.

1. Hang doors and adjust so tops of doors are level with tops of stiles when doors are in closed position.
2. Floor Anchorage: Set units onto finished floor as indicated, supported on structural floor. Secure each unit with no fewer than two dowels epoxied into unit and structural floor. Provide minimum 1-inch (25-mm) dowel penetration of structural floor.

F. Ceiling-Hung Units: Secure stiles to supporting structure with anchoring assembly, to connect stiles to structural support above finished ceiling as indicated, rigid, level, and plumb. Hang doors and adjust so bottoms of doors are level with bottoms of stiles when doors are in closed position.

G. Floor-and-Ceiling-Anchored Units: Anchor units to floor rigid, level, and plumb; secure tops of stiles to supporting structure with anchoring assembly as indicated.

1. Hang doors and adjust so tops of doors are level with each other when doors are in closed position and level with tops of partitions unless otherwise indicated.
2. Floor Anchorage: Set units onto finished floor as indicated, supported on structural floor. Secure each unit with no fewer than two dowels epoxied into unit and structural floor. Provide minimum 1-inch (25-mm) dowel penetration of structural floor.

H. Prepare joints and apply sealants, at locations indicated, to comply with applicable requirements in Section 079200 "Joint Sealants."

3.2 ADJUSTING AND CLEANING

A. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors and doors in entrance screens to return doors to fully closed position.

B. Clean stone toilet compartments no fewer than six days after completion of sealant installation or installation As directed, using clean water and soft rags. Do not use wire brushes, acid-type cleaning agents, cleaning compounds with caustic or harsh fillers, or other materials or methods that could damage stone; follow methods recommended by MIA.

END OF SECTION 102113.40

SECTION 102116.13 - METAL SHOWER AND DRESSING COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Painted-steel compartments.
2. Shower receptors.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For shower and dressing compartments.

1. Include plans, elevations, sections, and attachment details.

D. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Product certificates.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Accessibility Standard: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1 as directed for shower and dressing compartments designated as accessible.

2.2 PAINTED-STEEL COMPARTMENTS

A. Configuration: As directed.

B. Enclosure Style: Overhead braced or Floor and ceiling anchored as directed.

C. Panel and Pilaster Construction: Seamless steel facing sheets, pressure laminated to core material, with continuous, interlocking molding strip or lapped-and-formed edge closures and with corners secured by welding or clips and exposed welds ground smooth. Exposed surfaces shall be free of pitting, seam marks, roller marks, stains, discolorations, telegraphing of core material, or other imperfections.

1. Core Material: Manufacturer's standard, sound-deadening honeycomb of resin-impregnated kraft paper in thickness required to provide finished thickness of 1 inch (25 mm) for panels and 1-1/4 inches (32 mm) for pilasters.
2. Grab-Bar and Seat Reinforcement: Concealed internal reinforcement of size and material adequate for panel to withstand required grab-bar or seat loading without deformation of panel.
3. Tapping Reinforcement: Concealed reinforcement for tapping (threading) at locations where machine screws are used for attaching items to compartments.

D. Door Construction: Match panels; 1-inch (25-mm) finished thickness.

E. Facing Sheets and Edge Closures: Hot-dip galvanized-steel sheet in manufacturer's standard, nominal base-metal (uncoated) thicknesses.

F. Pilaster Shoes and Sleeves (Caps) as directed: Formed from stainless steel sheet, not less than 3 inches (76 mm) high, finished to match hardware.

G. Brackets (Fittings):

1. Full-Height (Continuous) Type: Manufacturer's standard design; clear-anodized aluminum.
2. Stirrup Type: Ear or U-brackets; as directed.
3. Dressing-Compartment Brackets: Match toilet-compartment brackets specified in Section 102113.13 "Metal Toilet Compartments."

H. Steel-Sheet Finish: Manufacturer's standard baked-on finish with one color or two colors as directed in each room.

1. Color: As directed.

2.3 SHOWER RECEPTORS

A. General: Manufacturer's standard, prefabricated, terrazzo receptor complete with integral drain.

1. Provide each unit with a ramped entrance surface for accessible compartments.
2. Drain Strainer: Manufacturer's standard; removable.
3. Drain Gasket: Manufacturer's standard gasket sized to fit waste pipe.

B. Finish: Manufacturer's standard finish on exposed surfaces, as directed and with slip-resistant floor surface texture.

2.4 MATERIALS

A. Steel Sheet: ASTM A653/A653M, either hot-dip galvanized or galvannealed; mill phosphatized and selected for smoothness.

2.5 ACCESSORIES

A. Door Hardware and Accessories: Manufacturer's standard design, heavy-duty, operating hardware and accessories.

1. Material: As directed.
2. Hinges: Manufacturer's standard, as directed, allowing emergency access by lifting door.
3. Latch and Keeper: Manufacturer's standard, recessed or surface-mounted as directed latch unit designed for emergency access and with combination rubber-faced door strike and keeper. Provide units that comply with regulatory requirements for accessibility at each compartment, accessible or not or at compartments designated as accessible as directed.
4. Clothing Hooks: Manufacturer's standard clothing hooks in each dressing compartment; include one combination hook and rubber-tipped bumper at inswinging doors, sized to prevent door from hitting wall panel or compartment-mounted accessories.
5. Door Bumper: Manufacturer's standard, rubber-tipped bumper at outswinging doors.
6. Door Pull: Manufacturer's standard unit at outswinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at compartments designated as accessible.

B. Overhead Bracing: Manufacturer's standard, continuous, extruded-aluminum headrail or cap with antigrip profile; in manufacturer's standard finish.

C. Headrail with Hooks: Manufacturer's standard, continuous, extruded-aluminum headrail or cap with curtain hooks running in concealed track; with antigrip profile; in manufacturer's standard finish.

D. Curtain Rod with Hooks: Manufacturer's standard, 1-inch- (25-mm-) diameter, stainless steel curtain rod with matching hooks.

E. Curtain: Flame-resistant, polyester-reinforced vinyl fabric or manufacturer's standard fabric that is stain resistant, self-sanitizing, antistatic, antimicrobial, and launderable to a temperature of not less than 90 deg F (32 deg C).

1. Flame Resistance: Passes NFPA 701 tests when tested by a testing and inspecting agency acceptable to authorities having jurisdiction.
2. Labeling: Identify fabrics with appropriate markings of applicable testing and inspecting agency.
3. Length: Where curtain extends to a floor surface, size so that bottom hem clears finished floor by not more than 1 inch (25 mm) and not less than 1/2 inch (13 mm) above floor surface. Where curtains extend to a shower-receptor curb, size so that bottom hem hangs above curb line and clears curb line by not more than 1/2 inch (13 mm).
4. Color and Pattern: As directed.

F. Soap Holder: Surface-mounted or Recessed as directed, seamless stainless steel soap dish.

G. Seats: Manufacturer's standard benches.

1. Material: As directed.
2. Operation: Fixed or Folding as directed.
3. Finish: As directed.

H. Anchorages and Fasteners: Manufacturer's standard, exposed fasteners of stainless steel, chrome-plated steel, or solid brass, finished to match the items they are securing; with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications.

2.6 FABRICATION

A. Overhead-Braced Compartments: Manufacturer's standard, corrosion-resistant supports, leveling method, and anchors at pilasters and walls to suit floor and wall conditions. Provide shoes at pilasters to conceal supports and leveling method.

B. Floor-and-Ceiling-Anchored Compartments: Manufacturer's standard, corrosion-resistant anchoring assemblies at pilasters and walls, with leveling adjustment at tops and bottoms of pilasters. Provide shoes and sleeves (caps) at pilasters to conceal anchorage.

C. Door Sizes and Swings: Unless otherwise indicated, provide 24-inch- (610-mm-) wide, inswinging doors for standard shower and dressing compartments, and 36-inch- (914-mm-) wide, outswinging doors with a minimum 32-inch- (813-mm-) wide, clear opening for compartments designated as accessible.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Comply with manufacturer's written installation instructions. Install compartments rigid, straight, level, and plumb. Secure compartments in position with manufacturer's recommended anchoring devices.

1. Clearances for Dressing Compartments: Maximum 1/2 inch (13 mm) between pilasters and panels; 1 inch (25 mm) between panels and walls.
2. Stirrup Brackets for Dressing Compartments: Secure panels to walls and to pilasters with no fewer than two brackets attached or three brackets attached at midpoint and near top and bottom of panel as directed.

    a. Locate wall brackets so holes for wall anchors occur in masonry or tile joints.
    b. Align brackets at pilasters with brackets at walls.

3. Full-Height (Continuous) Brackets for Dressing Compartments: Secure panels to walls and to pilasters with full-height brackets.

    a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
    b. Align brackets at pilasters with brackets at walls.

B. Curtains: Install curtains to specified length, verify that they hang vertically without stress points or diagonal folds.

C. Shower Receptors: Install prefabricated shower receptors with drain gasket compression fit to OD of waste pipe.

3.2 ADJUSTING

A. Curtain Adjustment: After hanging curtains, test and adjust each track or rod to produce unencumbered, smooth operation. Steam and dress down curtains as required to produce crease- and wrinkle-free installation. Remove and replace curtains that are stained or soiled or that have stress points or diagonal folds.

B. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on inswinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on outswinging doors to return doors to fully closed position.

END OF SECTION 102116.13

SECTION 102116.14 - STAINLESS-STEEL SHOWER AND DRESSING COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Stainless-steel compartments.
2. Shower receptors.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For shower and dressing compartments.

1. Include plans, elevations, sections, and attachment details.

D. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Product certificates.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

B. Accessibility Standard: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1 for shower and dressing compartments designated as accessible.

2.2 STAINLESS-STEEL COMPARTMENTS

A. Configuration: As directed Shower compartment, Shower and dressing compartments, Shower compartment with two dressing compartments or As indicated on Drawings.

B. Enclosure Style: As directed Overhead braced or Floor and ceiling anchored.

C. Panel and Pilaster Construction: Seamless stainless-steel facing sheets, pressure laminated to core material, with continuous, interlocking molding strip or lapped-and-formed edge closures and with corners secured by welding or clips and exposed welds ground smooth. Exposed surfaces shall be free of pitting, seam marks, roller marks, stains, discolorations, telegraphing of core material, or other imperfections.

1. Core Material: Manufacturer's standard, sound-deadening honeycomb of resin-impregnated kraft paper in thickness required to provide finished thickness of 1 inch (25 mm) for panels and 1-1/4 inches (32 mm) for pilasters.
2. Grab-Bar and Seat Reinforcement: Concealed internal reinforcement of size and material adequate for panel to withstand required grab-bar or seat loading without deformation of panel.
3. Tapping Reinforcement: Concealed reinforcement for tapping (threading) at locations where machine screws are used for attaching items to compartments.

D. Door Construction: Match panels; 1-inch (25-mm) finished thickness.

E. Facing Sheets and Edge Closures: Stainless-steel sheet in manufacturer's standard, nominal thicknesses.

F. Pilaster Shoes and Sleeves (Caps): Formed from stainless-steel sheet, not less than 3 inches (76 mm) high, finished to match hardware.

G. Brackets (Fittings):

1. Full-Height (Continuous) Type: Manufacturer's standard design; clear-anodized aluminum.
2. Stirrup Type: Ear or U-brackets; As directed clear-anodized aluminum, stainless steel or chrome-plated brass.
3. Dressing-Compartment Brackets: Match toilet-compartment brackets specified in Section 102113.14 "Stainless-Steel Toilet Compartments."

H. Stainless-Steel Finish: As directed No. 4, bright, directional polish, Manufacturer's standard textured finish as selected, Manufacturer's standard vertically striped finish or Match toilet-compartment finish, specified in Section 102113.14 "Stainless-Steel Toilet Compartments," on exposed faces. Protect exposed surfaces from damage by applying strippable, temporary protective covering before shipment.

2.3 SHOWER RECEPTORS

A. General: Manufacturer's standard, prefabricated, terrazzo receptor complete with integral drain.

1. Provide each unit with a ramped entrance surface for accessible compartments.
2. Drain Strainer: Manufacturer's standard; removable.
3. Drain Gasket: Manufacturer's standard gasket sized to fit waste pipe.

B. Finish: Manufacturer's standard finish on exposed surfaces, matching color of enclosure panels, as indicated by manufacturer's designations or as selected by Architect from manufacturer's full range and with slip-resistant floor surface texture.

2.4 ACCESSORIES

A. Door Hardware and Accessories: Manufacturer's standard design, heavy-duty, operating hardware and accessories.

1. Material: As directed Clear-anodized aluminum, Stainless steel or Chrome-plated brass.
2. Hinges: Manufacturer's standard, paired, self-closing type that can be adjusted to hold doors open at any angle up to 90 degrees, continuous, cam type that swings to a closed or partially open position or continuous, spring-loaded type, allowing emergency access by lifting door.
3. Latch and Keeper: As directed Manufacturer's standard, recessed or surface-mounted latch unit designed for emergency access and with combination rubber-faced door strike and keeper. As directed Provide units that comply with regulatory requirements for accessibility at each compartment, accessible or not or at compartments designated as accessible.
4. Clothing Hooks: Manufacturer's standard clothing hooks in each dressing compartment; include one combination hook and rubber-tipped bumper at inswinging doors, sized to prevent door from hitting wall panel or compartment-mounted accessories.
5. Door Bumper: Manufacturer's standard, rubber-tipped bumper at outswinging doors.
6. Door Pull: Manufacturer's standard unit at outswinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at compartments designated as accessible.

B. Overhead Bracing: Manufacturer's standard, continuous, extruded-aluminum headrail or cap with antigrip profile; in manufacturer's standard finish.

C. Headrail with Hooks: Manufacturer's standard, continuous, extruded-aluminum headrail or cap with curtain hooks running in concealed track; with antigrip profile; in manufacturer's standard finish.

D. Curtain Rod with Hooks: Manufacturer's standard, 1-inch- (25-mm-) diameter, stainless-steel curtain rod with matching hooks.

E. Curtain: As directed Flame-resistant, polyester-reinforced vinyl fabric or manufacturer's standard fabric that is stain resistant, self-sanitizing, antistatic, antimicrobial, and launderable to a temperature of not less than 90 deg F (32 deg C).

1. Flame Resistance: Passes NFPA 701 tests when tested by a testing and inspecting agency acceptable to authorities having jurisdiction.

2. Labeling: Identify fabrics with appropriate markings of applicable testing and inspecting agency.
3. Length: Where curtain extends to a floor surface, size so that bottom hem clears finished floor by not more than 1 inch (25 mm) and not less than 1/2 inch (13 mm) above floor surface. Where curtains extend to a shower-receptor curb, size so that bottom hem hangs above curb line and clears curb line by not more than 1/2 inch (13 mm).
4. Color and Pattern: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from manufacturer's full range.

F. Soap Holder: As directed Surface-mounted or Recessed, seamless stainless-steel soap dish.

G. Seats: As directed Manufacturer's standard, panel-mounted, wall-mounted or floor-mounted benches.

1. Material: As directed Wood, Solid phenolic, Molded plastic or Stainless steel.
2. Operation: As directed Fixed or Folding.
3. Finish: As directed, as indicated by manufacturer's designations, Match Architect's sample, as selected by Architect from manufacturer's full range or Match enclosure panels.

H. Anchorages and Fasteners: Manufacturer's standard, exposed fasteners of stainless steel, chrome-plated steel, or solid brass, finished to match the items they are securing; with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications.

2.5 FABRICATION

A. Overhead-Braced Compartments: Manufacturer's standard, corrosion-resistant supports, leveling method, and anchors at pilasters and walls to suit floor and wall conditions. Provide shoes at pilasters to conceal supports and leveling method.

B. Floor-and-Ceiling-Anchored Compartments: Manufacturer's standard, corrosion-resistant anchoring assemblies at pilasters and walls, with leveling adjustment at tops and bottoms of pilasters. Provide shoes and sleeves (caps) at pilasters to conceal anchorage.

C. Door Sizes and Swings: Unless otherwise indicated, provide 24-inch- (610-mm-) wide, inswinging doors for standard shower and dressing compartments, and 36-inch- (914-mm-) wide, outswinging doors with a minimum 32-inch- (813-mm-) wide, clear opening for compartments designated as accessible.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Comply with manufacturer's written installation instructions. Install compartments rigid, straight, level, and plumb. Secure compartments in position with manufacturer's recommended anchoring devices.

1. Clearances for Dressing Compartments: Maximum 1/2 inch (13 mm) between pilasters and panels; 1 inch (25 mm) between panels and walls.
2. Stirrup Brackets for Dressing Compartments: As directed Secure panels to walls and to pilasters with no fewer than two brackets attached or three brackets attached at midpoint and near top and bottom of panel.

    a. Locate wall brackets so holes for wall anchors occur in masonry or tile joints.
    b. Align brackets at pilasters with brackets at walls.

3. Full-Height (Continuous) Brackets for Dressing Compartments: Secure panels to walls and to pilasters with full-height brackets.

    a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
    b. Align brackets at pilasters with brackets at walls.

B. Curtains: Install curtains to specified length, verify that they hang vertically without stress points or diagonal folds.

C. Shower Receptors: Install prefabricated shower receptors with drain gasket compression fit to OD of waste pipe.

3.2 ADJUSTING

A. Curtain Adjustment: After hanging curtains, test and adjust each track or rod to produce unencumbered, smooth operation. Steam and dress down curtains as required to produce crease- and wrinkle-free installation. Remove and replace curtains that are stained or soiled or that have stress points or diagonal folds.

B. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on inswinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on outswinging doors to return doors to fully closed position.

END OF SECTION 102116.14

SECTION 102116.17 - PHENOLIC-CORE SHOWER AND DRESSING COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Solid, phenolic-core compartments.
2. Shower receptors.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For shower and dressing compartments.

1. Include plans, elevations, sections, and attachment details.

D. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Product certificates.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: As directed.
2. Smoke-Developed Index: 450 or less.

B. Accessibility Standard: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings

and Facilities and ICC A117.1 for shower and dressing compartments designated as accessible as directed.

2.2 PHENOLIC-CORE COMPARTMENTS

A. Configuration: As directed.

B. Enclosure Style: Overhead braced or Floor and ceiling anchored as directed.

C. Panel and Pilaster Construction: Solid phenolic-core panel material with melamine facing on both sides fused together during panel manufacture (not separately laminated) and with eased and polished edges. Provide minimum 3/4-inch- (19-mm-) thick pilasters and minimum 1/2-inch- (13-mm-) thick panels.

D. Door Construction: Match panels; 3/4-inch (19-mm) minimum thickness.

E. Pilaster Shoes and Sleeves (Caps): Formed from stainless steel sheet, not less than 3 inches (76 mm) high, finished to match hardware.

F. Brackets (Fittings):

1. Full-Height (Continuous) Type: Manufacturer's standard design; clear-anodized aluminum.
2. Stirrup Type: Ear or U-brackets; as directed
3. Dressing-Compartment Brackets: Match toilet-compartment brackets specified in Section 102113.17 "Phenolic-Core Toilet Compartments."

G. Phenolic-Panel Finish:

1. Facing Sheet Finish: One color and pattern or Two colors and patterns in each room as directed.
2. Color and Pattern: As directed with manufacturer's standard dark-color core or through-color core matching face sheet.

2.3 SHOWER RECEPTORS

A. General: Manufacturer's standard, prefabricated, terrazzo receptor complete with integral drain.

1. Provide each unit with a ramped entrance surface for accessible compartments.
2. Drain Strainer: Manufacturer's standard; removable.
3. Drain Gasket: Manufacturer's standard gasket sized to fit waste pipe.

B. Finish: Manufacturer's standard finish on exposed surfaces, as directed and with slip-resistant floor surface texture.

2.4 ACCESSORIES

A. Door Hardware and Accessories: Manufacturer's standard design, heavy-duty, operating hardware and accessories.

1. Material: As directed.
2. Hinges: Manufacturer's standard, as directed, allowing emergency access by lifting door.
3. Latch and Keeper: Manufacturer's standard, recessed or surface-mounted as directed latch unit designed for emergency access and with combination rubber-faced door strike and keeper. Provide units that comply with regulatory requirements for accessibility at each compartment, accessible or not or at compartments designated as accessible as directed.
4. Clothing Hooks: Manufacturer's standard clothing hooks in each dressing compartment; include one combination hook and rubber-tipped bumper at inswinging doors, sized to prevent door from hitting wall panel or compartment-mounted accessories.
5. Door Bumper: Manufacturer's standard, rubber-tipped bumper at outswinging doors.
6. Door Pull: Manufacturer's standard unit at outswinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at compartments designated as accessible.

B. Overhead Bracing: Manufacturer's standard, continuous, extruded-aluminum headrail or cap with antigrip profile; in manufacturer's standard finish.

C. Headrail with Hooks: Manufacturer's standard, continuous, extruded-aluminum headrail or cap with curtain hooks running in concealed track; with antigrip profile; in manufacturer's standard finish.

D. Curtain Rod with Hooks: Manufacturer's standard, 1-inch- (25-mm-) diameter, stainless steel curtain rod with matching hooks.

E. Curtain: Flame-resistant, polyester-reinforced vinyl fabric or manufacturer's standard fabric as directed that is stain resistant, self-sanitizing, antistatic, antimicrobial, and launderable to a temperature of not less than 90 deg F (32 deg C).

1. Flame Resistance: Passes NFPA 701 tests when tested by a testing and inspecting agency acceptable to authorities having jurisdiction.
2. Labeling: Identify fabrics with appropriate markings of applicable testing and inspecting agency.
3. Length: Where curtain extends to a floor surface, size so that bottom hem clears finished floor by not more than 1 inch (25 mm) and not less than 1/2 inch (13 mm) above floor surface. Where curtains extend to a shower-receptor curb, size so that bottom hem hangs above curb line and clears curb line by not more than 1/2 inch (13 mm).
4. Color and Pattern: As directed.

F. Soap Holder: Surface-mounted or Recessed as directed, seamless stainless steel soap dish.

G. Seats: Manufacturer's standard benches as directed.

1. Material: As directed.
2. Operation: Fixed or Folding as directed.
3. Finish: As directed.

H. Anchorages and Fasteners: Manufacturer's standard, exposed fasteners of stainless steel, chrome-plated steel, or solid brass, finished to match the items they are securing; with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications.

2.5 FABRICATION

A. Overhead-Braced Compartments: Manufacturer's standard, corrosion-resistant supports, leveling method, and anchors at pilasters and walls to suit floor and wall conditions. Provide shoes at pilasters to conceal supports and leveling method.

B. Floor-and-Ceiling-Anchored Compartments: Manufacturer's standard, corrosion-resistant anchoring assemblies at pilasters and walls, with leveling adjustment at tops and bottoms of pilasters. Provide shoes and sleeves (caps) at pilasters to conceal anchorage.

C. Door Sizes and Swings: Unless otherwise indicated, provide 24-inch- (610-mm-) wide, inswinging doors for standard shower and dressing compartments, and 36-inch- (914-mm-) wide, outswinging doors with a minimum 32-inch- (813-mm-) wide, clear opening for compartments designated as accessible.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Comply with manufacturer's written installation instructions. Install compartments rigid, straight, level, and plumb. Secure compartments in position with manufacturer's recommended anchoring devices.

1. Clearances for Dressing Compartments: Maximum 1/2 inch (13 mm) between pilasters and panels; 1 inch (25 mm) between panels and walls.
2. Stirrup Brackets for Dressing Compartments: Secure panels to walls and to pilasters with no fewer than two brackets attached or three brackets attached at midpoint and near top and bottom of panel as directed.

    a. Locate wall brackets so holes for wall anchors occur in masonry or tile joints.
    b. Align brackets at pilasters with brackets at walls.

3. Full-Height (Continuous) Brackets for Dressing Compartments: Secure panels to walls and to pilasters with full-height brackets.

    a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
    b. Align brackets at pilasters with brackets at walls.

B. Curtains: Install curtains to specified length, and verify that they hang vertically without stress points or diagonal folds.

C. Shower Receptors: Install prefabricated shower receptors with drain gasket compression fit to OD of waste pipe.

3.2 ADJUSTING

A. Curtain Adjustment: After hanging curtains, test and adjust each track or rod to produce unencumbered, smooth operation. Steam and dress down curtains as required to produce crease-

and wrinkle-free installation. Remove and replace curtains that are stained or soiled or that have stress points or diagonal folds.

B. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on inswinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on outswinging doors to return doors to fully closed position.

END OF SECTION 102116.17

SECTION 102116.19 - PLASTIC SHOWER AND DRESSING COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Solid-plastic compartments.
2. Shower receptors.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For shower and dressing compartments.

1. Include plans, elevations, sections, and attachment details.

D. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Product certificates.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: As directed 25, 75 or 200 or less.
2. Smoke-Developed Index: 450 or less.

B. Accessibility Standard: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1 for shower and dressing compartments designated as accessible.

2.2 SOLID-PLASTIC COMPARTMENTS

A. Configuration: Shower compartment, Shower and dressing compartments, Shower compartment with two dressing compartments or As indicated on Drawings.

B. Enclosure Style: As directed Overhead braced or Floor and ceiling anchored.

C. Panel and Pilaster Construction: Solid, high-density polyethylene (HDPE) panel material, not less than 1 inch (25 mm) thick, seamless, with eased edges and with homogenous color and pattern throughout thickness of material.

1. Integral Hinges: Configure doors and pilasters to receive integral hinges.
2. Heat-Sink Strip: Manufacturer's standard, continuous, clear-anodized extruded-aluminum or stainless steel strip fastened to exposed bottom edges of solid-plastic components to hinder malicious combustion.
3. Color and Pattern: As directed One color and pattern or Two colors and patterns in each room; as indicated by manufacturer's designations, as selected by Architect from manufacturer's full range or match toilet compartments specified in Section 102113.19 "Plastic Toilet Compartments".

D. Door Construction: Match panels.

E. Pilaster Shoes and Sleeves (Caps): Manufacturer's standard design; solid plastic or stainless steel.

1. Plastic Color and Pattern: As directed Match pilaster, Contrast with pilaster, as indicated by manufacturer's designations, Contrast with pilaster, as selected by Architect from manufacturer's full range or Match toilet compartments specified in Section 102113.19 "Plastic Toilet Compartments".

F. Brackets (Fittings):

1. Full-Height (Continuous) Type: Manufacturer's standard design; solid plastic matching the panels or clear-anodized extruded aluminum, solid plastic matching the panels or clear-anodized extruded aluminum.
2. Stirrup Type: Ear or U-brackets; As directed clear-anodized aluminum, stainless steel or chrome-plated brass.
3. Dressing-Compartment Brackets: Match toilet-compartment brackets specified in Section 102113.19 "Plastic Toilet Compartments."

2.3 SHOWER RECEPTORS

A. General: Manufacturer's standard, prefabricated, terrazzo receptor complete with integral drain.

1. Provide each unit with a ramped entrance surface for accessible compartments.
2. Drain Strainer: Manufacturer's standard; removable.
3. Drain Gasket: Manufacturer's standard gasket sized to fit waste pipe.

B. Finish: Manufacturer's standard finish on exposed surfaces, matching color of enclosure panels, as indicated by manufacturer's designations or as selected by Architect from manufacturer's full range and with slip-resistant floor surface texture.

2.4 ACCESSORIES

A. Door Hardware and Accessories: Manufacturer's standard design, heavy-duty, operating hardware and accessories. Mount to panels with through-bolts.

1. Material: As directed Clear-anodized aluminum, Stainless steel or Chrome-plated brass.
2. Hinges: Manufacturer's standard, paired, self-closing type that can be adjusted to hold doors open at any angle up to 90 degrees, continuous, cam type that swings to a closed or partially open position, continuous, spring-loaded type or integral hinge for solid-plastic doors, allowing emergency access by lifting door.
3. Latch and Keeper: Manufacturer's standard, recessed or surface-mounted latch unit designed for emergency access and with combination rubber-faced door strike and keeper. As directed Provide units that comply with regulatory requirements for accessibility at each compartment, accessible or not or at compartments designated as accessible.
4. Clothing Hooks: Manufacturer's standard clothing hooks in each dressing compartment; include one combination hook and rubber-tipped bumper at inswinging doors, sized to prevent door from hitting wall panel or compartment-mounted accessories.
5. Door Bumper: Manufacturer's standard, rubber-tipped bumper at outswinging doors.
6. Door Pull: Manufacturer's standard unit at outswinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at compartments designated as accessible.

B. Overhead Bracing: Manufacturer's standard, continuous, extruded-aluminum headrail or cap with antigrip profile; in manufacturer's standard finish.

C. Headrail with Hooks: Manufacturer's standard, continuous, extruded-aluminum headrail or cap with curtain hooks running in concealed track; with antigrip profile; in manufacturer's standard finish.

D. Curtain Rod with Hooks: Manufacturer's standard, 1-inch- (25-mm-) diameter, stainless steel curtain rod with matching hooks.

E. Curtain: As directed Flame-resistant, polyester-reinforced vinyl fabric or manufacturer's standard fabric that is stain resistant, self-sanitizing, antistatic, antimicrobial, and launderable to a temperature of not less than 90 deg F (32 deg C).

1. Flame Resistance: Passes NFPA 701 tests when tested by a testing and inspecting agency acceptable to authorities having jurisdiction.
2. Labeling: Identify fabrics with appropriate markings of applicable testing and inspecting agency.
3. Length: Where curtain extends to a floor surface, size so that bottom hem clears finished floor by not more than 1 inch (25 mm) and not less than 1/2 inch (13 mm) above floor surface. Where curtains extend to a shower-receptor curb, size so that bottom hem hangs above curb line and clears curb line by not more than 1/2 inch (13 mm).

4. Color and Pattern: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

F. Soap Holder: As directed Surface-mounted or Recessed, seamless stainless steel soap dish.

G. Seats: As directed Manufacturer's standard, panel-mounted, wall-mounted or floor-mounted benches.

1. Material: As directed Wood, Solid phenolic, Molded plastic or Stainless steel.
2. Operation: As directed Fixed or Folding.
3. Finish: As indicated by manufacturer's designations, Match Architect's sample, As selected by Architect from manufacturer's full range or Match enclosure panels.

H. Anchorages and Fasteners: Manufacturer's standard, exposed fasteners of stainless steel, chrome-plated steel, or solid brass, finished to match the items they are securing; with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications.

2.5 FABRICATION

A. Overhead-Braced Compartments: Manufacturer's standard, corrosion-resistant supports, leveling method, and anchors at pilasters and walls to suit floor and wall conditions. Provide shoes at pilasters to conceal supports and leveling method.

B. Floor-and-Ceiling-Anchored Compartments: Manufacturer's standard, corrosion-resistant anchoring assemblies at pilasters and walls, with leveling adjustment at tops and bottoms of pilasters. Provide shoes and sleeves (caps) at pilasters to conceal anchorage.

C. Door Sizes and Swings: Unless otherwise indicated, provide 24-inch- (610-mm-) wide, inswinging doors for standard shower and dressing compartments, and 36-inch- (914-mm-) wide, outswinging doors with a minimum 32-inch- (813-mm-) wide, clear opening for compartments designated as accessible.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Comply with manufacturer's written installation instructions. Install compartments rigid, straight, level, and plumb. Secure compartments in position with manufacturer's recommended anchoring devices.

1. Clearances for Dressing Compartments: Maximum 1/2 inch (13 mm) between pilasters and panels; 1 inch (25 mm) between panels and walls.
2. Stirrup Brackets for Dressing Compartments: Secure panels to walls and to pilasters with no fewer than three brackets attached at midpoint and near top and bottom of panel.

a. Locate wall brackets so holes for wall anchors occur in masonry or tile joints.
b. Align brackets at pilasters with brackets at walls.

3. Full-Height (Continuous) Brackets for Dressing Compartments: Secure panels to walls and to pilasters with full-height brackets.

   a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
   b. Align brackets at pilasters with brackets at walls.

B. Curtains: Install curtains to specified length, verify that they hang vertically without stress points or diagonal folds.

C. Shower Receptors: Install prefabricated shower receptors with drain gasket compression fit to OD of waste pipe.

3.2 ADJUSTING

A. Curtain Adjustment: After hanging curtains, test and adjust each track or rod to produce unencumbered, smooth operation. Steam and dress down curtains as required to produce crease- and wrinkle-free installation. Remove and replace curtains that are stained or soiled or that have stress points or diagonal folds.

B. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on inswinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on outswinging doors to return doors to fully closed position.

END OF SECTION 102116.19

SECTION 102123 - CUBICLE CURTAINS AND TRACK

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cubicle-curtain tracks and carriers.
2. Cubicle curtains.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.3 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Cubicle Curtains: Provide curtain fabrics with the following characteristics:

1. Laundering: Launderable to a water temperature of not less than 160 deg F (71 deg C).
2. Flame Resistance: Provide fabrics identical to those that have passed NFPA 701 when tested by a qualified testing agency acceptable to authorities having jurisdiction.

    a. Identify fabrics with appropriate markings of a qualified testing agency.

2.2 CUBICLE-CURTAIN SUPPORT SYSTEMS

A. Extruded-Aluminum Curtain Track: As directed Not less than 1-1/4 inches wide by 3/4 inch high (32 mm wide by 19 mm high) or 5/8 inch wide by 1/2 inch high (16 mm wide by 13 mm high).

1. Curved Track: Factory-fabricated, 12-inch- (305-mm-) radius bends.
2. Finish: As directed Clear anodized, Satin anodized or Baked enamel, acrylic, or epoxy.

B. PVC Curtain Track: Not less than 1-1/4 inches wide by 15/16 inch high (32 mm wide by 24 mm high).

1. Curved Track: Factory-fabricated, 12-inch- (305-mm-) radius bends.

C. Curtain Track Accessories: Fabricate splices, end caps, connectors, end stops, coupling and joining sleeves, wall flanges, brackets, ceiling clips, and other accessories from same material and with same finish as track.

1. End Stop: As directed Nonremovable or Removable with carrier hook.

D. Curtain Roller Carriers: As directed Two nylon rollers and nylon axle with chrome-plated steel, nylon or aluminum hook.

E. Curtain Glide Carriers: As directed One-piece nylon glide with chrome-plated steel or nylon hook.

F. Breakaway Curtain Carriers: As directed One-piece nylon or Velcro breakaway curtain carriers designed to allow curtains to detach from tracks with a pulling force of no more than 5 lbf (22.2 N).

G. Exposed Fasteners: Stainless steel.

H. Concealed Fasteners: As directed Hot-dip galvanized or Stainless steel.

2.3 CURTAINS

A. Fabric: Curtain manufacturer's standard, 100 percent polyester; inherently and permanently flame resistant, stain resistant, and antimicrobial.

1. Proprietary Fiber:

2. Pattern: As directed.
3. Width: As directed.
4. Color: As selected by Architect from manufacturer's full range.

B. Curtain Grommets: Two-piece, rolled-edge, rustproof, nickel-plated brass; spaced not more than 6 inches (152 mm) o.c.; machined into top hem.

C. Mesh Top: As directed Not less than 20-inch- (508-mm-) or 22-inch- (559-mm-) high mesh top.

1. Mesh: No. As directed 50, 40 or 42 nylon mesh.

D. Beaded-Chain Curtain Drop: As directed 6 inches (152 mm), 9 inches (229 mm), 12 inches (305 mm), 15 inches (381 mm) or 18 inches (457 mm) long; nickel-plated steel with aluminum hook.

E. PVC-Strip Curtain Drop: As directed 16 inches (406 mm) or 18 inches (457 mm) long with chrome-plated steel hook.

F. Snap Attachments: Provide manufacturer's standard nickel-plated brass snap attachments for modular panels.

G. Curtain Tieback: Nickel-plated brass chain; one at each curtain termination.

2.4 CURTAIN FABRICATION

A. Continuous Curtain Panels:

1. Width: Equal to track length from which curtain is hung plus 10 percent of added fullness, but not less than 12 inches (305 mm) of added fullness.
2. Length: Equal to floor-to-ceiling height, minus depth of track and carrier at top, and minus clearance above the finished floor of 12 inches (305 mm), 15 inches (381 mm) or As indicated on Drawings.

B. Modular Curtain Panels:

1. Fabric Panels: As directed 48 inches (1219 mm) or 66 inches (1676 mm) wide. Fabricate panels in quantity required to provide assembled curtains equal to track lengths plus 10 percent added fullness, but not less than 12 inches (305 mm) added fullness.
2. Length: Equal to floor-to-ceiling height, minus depth of track and carrier at top, and minus clearance above the finished floor of 12 inches (305 mm), 15 inches (381 mm) or As indicated on Drawings.
3. Mesh Top: As directed Continuous for each track length, matching overall width of assembled curtains or Modular, matching width of modular fabric panels with snap attachments at side hems of mesh-top panels.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install tracks level and plumb, according to manufacturer's written instructions.

B. For tracks of up to 20 feet (6.0 m) in length, provide track fabricated from single, continuous length.

1. Curtain-Track Mounting: As directed Surface, Suspended or As indicated on Drawings.

C. Track Accessories: Install splices, end caps, connectors, end stops, coupling and joining sleeves, and other accessories as required for a secure and operational installation.

1. Provide one hinged loading unit for each bed.

D. Curtain Carriers: Provide curtain carriers adequate for 6-inch (152-mm) spacing along full length of curtain plus an additional carrier.

E. Cubicle Curtains: Hang curtains on each curtain track. Secure with curtain tieback.

END OF SECTION 102123

SECTION 102213 - WIRE MESH PARTITIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Standard-duty wire mesh partitions.
2. Heavy-duty wire mesh partitions.
3. Wire mesh ceilings.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings:

1. Include plans, elevations, sections, details, and attachments to other work.

D. Samples: For units with factory-applied color finishes.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 MATERIALS

A. Steel Wire: ASTM A510 (ASTM A510M).

B. Steel Plates, Channels, Angles, and Bars: ASTM A36/A36M.

C. Steel Sheet: Cold-rolled steel sheet, ASTM A1008/A1008M, Commercial Steel (CS), Type B.

D. Steel Pipe: ASTM A53/A53M, Schedule 40, unless another weight is indicated or required by structural loads.

E. Steel Tubing: ASTM A500/A500M, cold-formed structural-steel tubing or ASTM A513, Type 5, mandrel-drawn mechanical tubing.

F. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B; with G60 (Z180) zinc (galvanized) or A60 (ZF180) zinc-iron-alloy (galvannealed) coating designation.

G. Seismic Bracing: Angles with legs not less than 1-1/4 inch (32 mm) wide, formed from 0.040-inch- (1.0-mm-) thick, metallic-coated steel sheet; with bolted connections and 1/4-inch- (6-mm-) diameter bolts.

H. Shop Primers: Provide primers that comply with Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

I. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer, complying with MPI#79.

J. Galvanizing Repair Paint: High-zinc-dust-content paint for regalvanizing welds in steel, complying with SSPC-Paint 20.

2.3 STANDARD-DUTY WIRE MESH PARTITIONS

A. Mesh: 0.135-inch- (3.5-mm-) diameter, intermediate-crimp steel wire woven into 1-1/2-inch (38-mm) diamond mesh.

B. Vertical Panel Framing: 1-1/4-by-5/8-by-0.080-inch (32-by-16-by-2.0-mm) cold-rolled, C-shaped steel channels with holes for 1/4-inch- (6-mm-) diameter bolts not more than 12 inches (300 mm) o.c.

C. Horizontal Panel Framing: 1-by-1/2-by-1/8-inch (25-by-13-by-3.2-mm) cold-rolled steel channels.

D. Horizontal Panel Stiffeners: Two cold-rolled steel channels, 3/4 by 3/8 by 1/8 inch (19 by 9.5 by 3.2 mm), bolted or riveted toe to toe through mesh or one 1-by-1/2-by-1/8-inch (25-by-13-by-3.2-mm) cold-rolled steel channel with wire mesh woven through channel.

E. Top Capping Bars: 2-1/4-by-1-inch (57-by-25-mm) cold-rolled steel channels.

F. Posts for 90-Degree Corners: 1-1/4-by-1-1/4-by-1/8-inch (32-by-32-by-3.2-mm) steel angles or square tubes with holes for 1/4-inch- (6-mm-) diameter bolts aligning with bolt holes in vertical framing; with floor anchor clips.

G. Posts for Other-Than-90-Degree Corners: Steel pipe or tubing with holes for 1/4-inch- (6-mm-) diameter bolts aligning with bolt holes in vertical framing; with floor anchor clips.

1. Partitions up to 12 Feet (3.7 m) High: 1-1/4-inch (32-mm) OD by 1/8 inch (3.2 mm).
2. Partitions up to 20 Feet (6.1 m) High: 2-1/2-inch (65-mm) OD by 1/8 inch (3.2 mm).

H. Adjustable Corner Posts: Two 1-1/4-by-5/8-by-0.080-inch (32-by-16-by-2.0-mm) cold-rolled, C-shaped steel channels connected by steel hinges at 36 inches (900 mm) o.c., with holes for 1/4-inch- (6-mm-) diameter bolts aligning with bolt holes in vertical framing.

I. Line Posts: 3-inch-by-4.1-lb (76-mm-by-1.9-kg) or 3-1/2-by-1-1/4-by-0.127-inch (89-by-32-by-3.2-mm) steel channels; with 1/4-inch (6.4-mm) steel base plates.

J. Three-Way Intersection Posts: 1-1/4-by-1-1/4-by-1/8-inch (32-by-32-by-3.2-mm) steel tubes or channels, with holes for 1/4-inch- (6-mm-) diameter bolts aligned for bolting to adjacent panels.

K. Four-Way Intersection Posts: 1-1/4-by-1-1/4-by-1/8-inch (32-by-32-by-3.2-mm) steel tubes, with holes for 1/4-inch- (6-mm-) diameter bolts aligned for bolting to adjacent panels.

L. Floor Shoes: Metal, not less than 2 inches (50 mm) high; sized to suit vertical framing, drilled for attachment to floor, and with set screws for leveling adjustment.

M. Swinging Dutch Doors: Fabricated from same mesh as partitions, with framing fabricated from 1-1/4-by-1/2-by-1/8-inch (32-by-13-by-3.2-mm) steel channels or 1-1/4-by-5/8-by-0.080-inch (32-by-16-by-2.0-mm) cold-rolled, C-shaped steel channels, banded with 1-1/4-by-1/8-inch (32-by-3.2-mm) flat steel bar cover plates on three or four sides as directed, and with 1/8-inch- (3.2-mm-) thick angle strike bar and cover on strike jamb.

1. Hinges: Full-surface type, 3-by-3-inch (76-by-76-mm) steel, three per door; bolted, riveted, or welded to door and jamb framing.
2. Padlock Lug: Mortised into door framing and enclosed with steel cover.
3. Cylinder Lock: Mortise type with manufacturer's standard cylinder, cylinder specified in Section 087100 "Door Hardware" or cylinder specified in Section 087111 "Door Hardware (Descriptive Specification)"; operated by key outside and recessed turn knob, knob or lever inside.

N. Sliding Doors: Fabricated from same mesh as partitions, with framing fabricated from 1-1/2-by-3/4-by-1/8-inch (38-by-19-by-3.2-mm) steel channels, banded with 1-1/2-by-1/8-inch (38-by-3.2-mm) flat steel bar cover plates on four sides.

1. Hardware: Two, four-wheel roller-bearing carriers, box track, and bottom guide channel for each door.
2. Padlock Lug: Mortised into door framing and enclosed with steel cover.
3. Cylinder Lock: As directed Mortise type with manufacturer's standard cylinder, cylinder specified in Section 087100 "Door Hardware", cylinder specified in Section 087111 "Door Hardware (Descriptive Specification)"; operated by key outside and recessed turn knob, knob or lever inside.

O. Vertically Sliding Service Windows: As directed Fabricated from same mesh and framing as panels and equipped with a spring catch or slide bolts on each jamb to lock window in open position and a padlock lug to lock window in closed position. Include opening frame in partition fabricated from 1-1/4-by-1/2-by-1/8-inch (32-by-13-by-3.2-mm) steel channels.

P. Swinging Service Windows: Fabricated from same mesh and framing as panels and equipped with spring catch on strike jamb that locks window in closed position. Include opening frame in partition fabricated from 1-1/4-by-1/2-by-1/8-inch (32-by-13-by-3.2-mm) steel channels.

Q. Accessories:

1. Sheet Metal Base: As directed 0.060-inch- (1.5-mm-) or 0.035-inch- (0.9-mm-) thick steel sheet.
2. Adjustable Filler Panels: 0.060-inch- (1.5-mm-) thick steel sheet, capable of filling openings from 2 to 12 inches (50 to 300 mm).

R. Finish: As directed Hot-dip galvanized, Shop primed for field painting, Enamel finish or Powder-coated finish unless otherwise indicated.

1. Color: As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.

2.4 HEAVY-DUTY WIRE MESH PARTITIONS

A. Mesh: 0.192-inch- (4.9-mm-) diameter steel wire woven into 2-inch (50-mm) diamond mesh or welded into 1-1/2-by-2-1/2-inch (38-mm-by-65-mm) rectangular mesh.

B. Vertical and Horizontal Panel Framing: 1-1/2-by-3/4-by-1/8-inch (38-by-19-by-3.2-mm) cold-rolled steel channels; with holes for 3/8-inch- (9.5-mm-) diameter bolts not more than 12 inches (300 mm) o.c.

C. Horizontal Panel Stiffeners: Two cold-rolled steel channels, 1 by 1/2 by 1/8 inch (25 by 13 by 3.2 mm), bolted or riveted toe to toe through mesh.

D. Top Capping Bars: 3-by-1-inch (76-by-25-mm) steel channels.

E. Posts for 90-Degree Corners: 1-1/2-by-1-1/2-by-1/8-inch (38-by-38-by-3.2-mm) steel angles or tubes or 2-by-2-by-0.075-inch (50-by-50-by-1.9-mm) cold-rolled steel angles or tubes, with holes for 3/8-inch- (9.5-mm-) diameter bolts aligning with bolt holes in vertical framing; with 1/4-inch (6.4-mm) steel base plates.

F. Posts for Other-Than-90-Degree Corners: 2-inch- (50-mm) OD by 1/8-inch (3.2-mm) steel pipe or round tube, with holes for 3/8-inch- (9.5-mm-) diameter bolts aligning with bolt holes in vertical framing; with 1/4-inch (6.4-mm) steel base plates.

G. Adjustable Corner Posts: Two 1-1/2-by-3/4-by-1/8-inch (38-by-19-by-3.2-mm) cold-rolled, steel channels or 2-by-2-by-0.075-inch (50-by-50-by-1.9-mm) steel tubes connected by steel hinges at 36 inches (900 mm) o.c. attached to posts; with 1/4-inch- (6-mm-) diameter bolt holes aligning with bolt holes in vertical framing; with 1/4-inch (6.4-mm) steel base plates.

H. Line Posts: 3-inch-by-4.1-lb (76-mm-by-1.9-kg) or 3-1/2-by-1-1/4-by-1/8-inch (89-by-32-by-3.2-mm) steel channels; with 1/4-inch (6.4-mm) steel base plates.

I. Three- and Four-Way Intersection Posts: 2-by-2-by-0.075-inch (50-by-50-by-1.9-mm) steel tubes, with holes for 3/8-inch- (9.5-mm-) diameter bolts aligned for bolting to adjacent panels; with 1/4-inch (6.4-mm) steel base plates.

J. Floor Shoes: Metal, not less than 2 inches (50 mm) high; sized to suit vertical framing, drilled for attachment to floor, and with set screws for leveling adjustment.

K. Swinging Dutch Doors: Fabricated from same mesh as partitions, with framing fabricated from 1-1/2-by-3/4-by-1/8-inch (38-by-19-by-3.2-mm) steel channels, banded with 1-1/2-by-1/8-inch (38-by-3.2-mm) flat steel bar cover plates on four sides, and with 1/8-inch- (3.2-mm-) thick angle strike bar and cover on strike jamb.

1. Hinges: Full-surface type, 3-1/2-by-3-1/2-inch (89-by-89-mm) steel, three per door; bolted, riveted, or welded to door and jamb framing.
2. Padlock Lug: Mortised into door framing and enclosed with steel cover.

3. Cylinder Lock: As directed Mortise type with manufacturer's standard cylinder, cylinder specified in Section 087100 "Door Hardware" or cylinder specified in Section 087111 "Door Hardware (Descriptive Specification)"; operated by key outside and recessed turn knob, knob or lever inside; mounted in lower section of door.

L. Sliding Doors: Fabricated from same mesh as partitions, with framing fabricated from 1-1/2-by-3/4-by-1/8-inch (38-by-19-by-3.2-mm) steel channels, banded with 1-1/2-by-1/8-inch (38-by-3.2-mm) flat steel bar cover plates on four sides.

1. Hardware: Two, four-wheel roller-bearing carriers, box track, and bottom guide channel for each door.
2. Padlock Lug: Mortised into door framing and enclosed with steel cover.
3. Cylinder Lock: As directed Mortise type with manufacturer's standard cylinder, cylinder specified in Section 087100 "Door Hardware" or cylinder specified in Section 087111 "Door Hardware (Descriptive Specification)"; operated by key outside and recessed turn knob, knob or lever inside; mounted in lower section of door.

M. Vertically Sliding Service Windows: As directed Fabricated from same mesh and framing as panels and equipped with a spring catch or slide bolts on each jamb to lock window in open and closed positions. Include opening frame in partition fabricated from 1-1/4-by-1/2-by-1/8-inch (32-by-13-by-3.2-mm) steel channels.

N. Swinging Service Windows: Fabricated from same mesh and framing as panels and equipped with spring catch on strike jamb that locks window in closed position. Include opening frame in partition fabricated from 1-1/4-by-1/2-by-1/8-inch (32-by-13-by-3.2-mm) steel channels.

O. Accessories:

1. Sheet Metal Base: 0.060-inch- (1.5-mm-) thick, steel sheet.
2. Adjustable Filler Panels: 0.060-inch- (1.5-mm-) thick steel sheet, capable of filling openings from 2 to 12 inches (50 to 300 mm).

P. Finish: As directed Hot-dip galvanized, Shop primed for field painting, Enamel finish or Powder-coated finish unless otherwise indicated.

1. Color: As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.

2.5 WIRE MESH CEILINGS

A. Mesh, Framing, and Stiffeners: Fabricated from same mesh and framing as wire mesh partition panels.

B. Perimeter Partition Supports: As directed 1-1/2-by-1-1/2-by-1/8-inch (38-by-38-by-3.2-mm) or 1-1/2-by-1-1/2-by-0.075-inch (38-by-38-by-1.9-mm) steel angle, with holes for 1/4-inch- (6-mm-) diameter bolts aligned for bolting to top of wire mesh partitions and to sides of wire mesh ceiling panels.

C. Wall Supports: As directed 1-1/2-by-1-1/2-by-1/8-inch (38-by-38-by-3.2-mm) or 1-1/2-by-1-1/2-by-0.075-inch (38-by-38-by-1.9-mm) steel angle punched for attachment to wall and wire mesh ceiling panels.

D. Intermediate Supports: Steel I-beams or rectangular tubes, as recommended by manufacturer.

E. Intermediate Support Posts: As directed 2-by-2-by-1/8-inch (50-by-50-by-3.2-mm) or 2-by-2-by-0.075-inch (50-by-50-by-1.9-mm) steel tubes.

F. Finishes: Match adjacent wire mesh partitions.

2.6 FABRICATION

A. General: Fabricate wire mesh items from components of sizes not less than those indicated. Use larger-sized components as recommended by wire mesh item manufacturer. Furnish bolts, hardware, and accessories required for complete installation with manufacturer's standard finishes.

1. Fabricate wire mesh items to be readily disassembled.
2. Welding: As directed Weld corner joints of framing and grind smooth, leaving no evidence of joint, finish sand, remove spatter or leave as applied.

B. Standard- and Heavy-Duty Wire Mesh Partitions: Fabricate wire mesh partitions with cutouts for pipes, ducts, beams, and other items indicated. Finish edges of cutouts to provide a neat, protective edge.

1. Mesh: As directed Securely clinch or Weld mesh to framing.
2. Framing: Fabricate framing with mortise and tenon corner construction.

    a. Provide horizontal stiffeners as indicated or, if not indicated, as required by panel height and as recommended by wire mesh partition manufacturer. Weld horizontal stiffeners to vertical framing.

3. Fabricate wire mesh partitions with 3 to 4 inches (75 to 100 mm) of clear space between finished floor and bottom horizontal framing.
4. Fabricate wire mesh partitions with bottom horizontal framing flush with finished floor.
5. Doors: Align bottom of door with bottom of adjacent panels.

    a. For doors that do not extend full height of partition, provide transom over door, fabricated from same mesh and framing as partition panels.

6. Hardware Preparation: Mortise, reinforce, drill, and tap doors and framing as required to install hardware.

C. Wire Mesh Ceilings: Fabricate wire mesh partitions with cutouts for pipes, ducts, beams, and other items indicated. Finish edges of cutouts to provide a neat, protective edge.

1. Mesh: As directed Securely clinch or Weld mesh to framing.
2. Framing: As directed Fabricate framing with mortise and tenon or welded corner construction.

a. Provide stiffeners as indicated or, if not indicated, as required by panel span and as recommended by wire mesh ceiling manufacturer. Weld stiffeners to framing.

2.7 STEEL AND IRON FINISHES

A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.

B. Preparation for Shop Priming: As directed Prepare surfaces to comply with SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning" or SSPC-SP 3, "Power Tool Cleaning."

C. Shop Priming: Apply shop primer to uncoated surfaces of wire mesh units unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

D. Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard enamel finish, suitable for use indicated, with a minimum dry film thickness of 2 mils (0.05 mm).

1. Color and Gloss: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

E. Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard baked-on powder-coat finish, suitable for use indicated, with a minimum dry film thickness of 2 mils (0.05 mm).

1. Color and Gloss: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 WIRE MESH PARTITIONS ERECTION

A. Anchor wire mesh partitions to floor with 3/8-inch- (9.5-mm-) diameter postinstalled expansion anchors at 12 inches (300 mm) o.c. through anchor clips located at each post and corner. Shim anchor clips as required to achieve level and plumb installation.

B. Anchor wire mesh partitions to floor with 3/8-inch- (9.5-mm-) diameter postinstalled expansion anchors at 12 inches (305 mm) o.c. through floor shoes located at each post and corner. Adjust wire mesh partition posts in floor shoes to achieve level and plumb installation.

C. Anchor wire mesh partitions to walls at 12 inches (305 mm) o.c. through back corner panel framing.

D. Secure top capping bars to top framing channels with 1/4-inch- (6-mm-) diameter "U" bolts spaced not more than 28 inches (700 mm) o.c.

E. Provide line posts at locations indicated.

F. Provide seismic supports and bracing as indicated or, if not indicated, as recommended by manufacturer and as required for stability, extending and fastening members to supporting structure.

G. Where standard-width wire mesh partition panels do not fill entire length of run, provide adjustable filler panels to fill openings.

H. Install doors complete with door hardware.

I. Install service windows complete with window hardware.

J. Weld or bolt sheet metal bases to wire mesh partitions and doors or where indicated.

3.2 WIRE MESH CEILINGS ERECTION

A. Anchor wall support angle to walls at 12 inches (300 mm) o.c.

B. Attach wire mesh ceiling panels to wall support angles with bolts at 12 inches (305 mm) o.c.

C. Attach wire mesh ceiling panels to wire mesh partitions with slotted angles bolted to sides of ceiling panels and to top of partitions at 12 inches (305 mm) o.c.

D. Attach wire mesh ceiling panels to intermediate supports as recommended by manufacturer.

E. Provide seismic supports and bracing as indicated or, if not indicated, as recommended by manufacturer and as required for stability, extending and fastening members to supporting structure.

3.3 ADJUSTING AND CLEANING

A. As directed Adjust doors, gates or service windows to operate smoothly and easily, without binding or warping. Adjust hardware to function smoothly. Confirm that latches and locks engage accurately and securely without forcing or binding.

B. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

C. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas, and repair galvanizing to comply with ASTM A780/A780M.

END OF SECTION 102213

SECTION 102219 - DEMOUNTABLE PARTITIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Site-assembled demountable partitions.
2. Unitized-panel demountable partitions.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For demountable partitions.

1. Include diagrams for power-, signal-, and control-wiring raceways.

D. Samples: For each exposed product and for each color and texture specified.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans and other details, drawn to scale and coordinated with each other, using input from the installers of the items involved:

B. Product certificates.

C. Product test reports.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same production run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Partition Components: Furnish a quantity of each type of full-size unit with installation tools and materials equal to one or two as percent as directed of the amount installed, but no fewer than as directed.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 450 or less.

B. Acoustical Performance: Where acoustical rating is indicated, provide demountable-partition assembly tested by a qualified testing agency for sound transmission loss performance according to ASTM E90, calculated according to ASTM E413, and rated for not less than the STC value indicated.

2.2 SITE-ASSEMBLED DEMOUNTABLE PARTITIONS

A. General: Site-assembled, demountable-partition assembly and components that are the standard products of manufacturer.

B. Acoustical Rating: STC 35.

C. Face Panels: Manufacturer's standard substrate as directed.

1. Finish: As directed.

    a. Color: As directed.

2. Facing: As directed.

    a. Color, Texture, and Pattern: As directed.
    b. Wood-Veneer Species and Finish: White ash, Red oak or Birch as directed with transparent finish or transparent finish over stain.

D. Accessory Panels: Manufacturer's standard as directed.

E. Framing: Metallic-coated steel or aluminum studs and top and bottom tracks, as directed.

F. Trim: Continuous, factory-finished, snap-on type; adjustable for variations in floor level or floor and ceiling levels as directed.

1. Exposed-Metal Trim Finish: As directed
2. Trim Color: As directed.

G. Doors: As specified in Section 081113 "Hollow Metal Doors and Frames", As specified in Section 081416 "Flush Wood Doors" or As specified in Section 081433 "Stile and Rail Wood Doors" as directed.

H. Doors: Manufacturer's standard 1-3/4-inch- (45-mm-) thick door construction as directed.

1. Door Operation: As directed.
2. Door Finish: As directed match face panels of partition, Factory primed for field painting, Factory-applied, baked-enamel or powder-coat finish, Plastic laminate or Wood veneer.

    a. Color, Texture, and Pattern: As directed.
    b. Wood-Veneer Species and Finish: As directed White ash, Red oak or Birch with transparent finish or transparent finish over stain.

I. Door Frames: Manufacturer's standard steel or aluminum frames as directed for 1-3/4-inch (45-mm) doors.

1. Frame Finish: As directed Match metal face panels, Factory primed for field painting, Factory-applied, baked-enamel or powder-coat finish, Clear-anodized aluminum or Color-anodized aluminum.
2. Frame Color: As directed.

J. Door Hardware: As directed

K. Glazing Frames: Manufacturer's standard steel or aluminum frames as directed for frameless (top and bottom-supported) glazing thickness indicated.

1. Frame Finish: As directed Match door frames, Factory primed for field painting, Factory-applied, baked-enamel or powder-coat finish, Clear-anodized aluminum or Color-anodized aluminum.
2. Frame Color: As directed.

L. Glazing: Manufacturer's standard fully tempered clear float glass, insulating, fully tempered clear float glass, laminated clear float glass or as directed.

M. Frameless Glazing: Manufacturer's standard fully tempered clear float glass, laminated clear float glass or as directed for butt-glazing with top and bottom support.

N. Electrical Devices: Integral, concealed raceways to serve electrical power and communication devices indicated on Drawings.

1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 UNITIZED-PANEL DEMOUNTABLE PARTITIONS

A. General: Unitized, demountable-partition assembly and components that are the standard products of manufacturer.

B. Acoustical Rating: STC 35.

C. Unitized Panels: Manufacturer's standard gypsum board, particleboard, steel-sheet-faced gypsum board or stainless-steel-sheet-faced gypsum board or as directed.

1. Finish: Unfinished, Factory primed for field painting, Factory-applied, baked-enamel or powder-coat finish or No. 4 satin polish on stainless steel as directed.

    a. Color: As directed.

2. Facing: Vinyl wall covering, Fabric, Carpet wall covering, Plastic laminate, Wood veneer or Owner-furnished material as directed.

    a. Color, Texture, and Pattern: As directed.
    b. Wood-Veneer Species and Finish: As directed White ash, Red oak or Birch with transparent finish or transparent finish over stain.

D. Accessory Panels: As directed Manufacturer's standard fabric-covered tackboard, porcelain-enamel markerboard or porcelain-enamel chalkboard.

E. Framing: As directed Manufacturer's standard, Steel or Aluminum.

1. Exposed Finish: As directed Match unitized panels, Factory primed for field painting, Factory-applied, baked-enamel or powder-coat finish, Clear-anodized aluminum or Color-anodized aluminum.
2. Color of Exposed Finish: As directed.

F. Trim: Continuous, factory-finished, snap-on type; adjustable for variations in floor level or floor and ceiling levels as directed.

1. Exposed-Metal Trim Finish: As directed Match unitized panels, Factory primed for field painting, Factory-applied, baked-enamel or powder-coat finish, No. 4 satin polish on stainless steel, Clear-anodized aluminum or Color-anodized aluminum.
2. Trim Color: As directed.

G. Doors: Manufacturer's standard 1-3/4-inch- (45-mm-) thick, steel, solid-core wood, framed glass or frameless glass door construction as directed.

1. Door Operation: Pivoting, Sliding or Swinging as directed.
2. Door Finish: Match face panels of partition, Factory primed for field painting, Factory-applied, baked-enamel or powder-coat finish, Plastic laminate or Wood veneer as directed.

    a. Color, Texture, and Pattern: As directed.
    b. Wood-Veneer Species and Finish: As directed White ash, Red oak or Birch with transparent finish or transparent finish over stain.

H. Door Frames: As directed Manufacturer's standard steel or aluminum frames for 1-3/4-inch (45-mm) doors.

1. Frame Finish: As directed Match metal face panels, Factory primed for field painting, Factory-applied, baked-enamel or powder-coat finish, Clear-anodized aluminum or Color-anodized aluminum.
2. Frame Color: As directed.

I. Door Hardware: As directed.

J. Glazing Frames: As directed Manufacturer's standard steel or aluminum frames for frameless (top and bottom-supported) glazing thickness indicated.

1. Frame Finish: As directed Match door frames, Factory primed for field painting, Factory-applied, baked-enamel or powder-coat finish, Clear-anodized aluminum or Color-anodized aluminum.
2. Frame Color: As directed.

K. Glazing: As directed Manufacturer's standard fully tempered clear float glass, insulating, fully tempered clear float glass, laminated clear float glass or glass as indicated on Drawings.

L. Frameless Glazing: Manufacturer's standard fully tempered clear float glass, laminated clear float glass or glass as indicated on Drawings as directed for butt-glazing with top and bottom support.

M. Electrical Devices: Integral, concealed raceways to serve electrical power and communication devices indicated on Drawings.

1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.4 WOOD MATERIALS

A. Particleboard: Panels complying with ANSI A208.1, Grade M-2.

1. Fire-retardant panels made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less when tested according to ASTM E84 or UL 723.

B. Wood Veneer: Genuine wood veneer; clear, vertical grain, straight, and kiln dried; of wood species indicated, laminated to panel substrate with moisture-resistant adhesive.

2.5 OTHER MATERIALS

2.6 FABRICATION

A. General: Fabricate demountable walls for installation with concealed fastening devices and pressure-fit members that will not damage ceiling or floor coverings. Fabricate systems for

installation with continuous seals at floor, ceiling, and other locations where partitions abut fixed construction.

B. Panels for Site-Assembled Demountable Partitions: Face panels fabricated and finished in modular widths indicated.

C. Panels for Unitized-Panel Demountable Partitions: Factory-assembled, flush, unitized-panel construction; with faces smooth and free of buckles, oil-canning, and seams; and insulated with solidly packed, inorganic, mineral filler.

1. Factory glaze panels to the greatest extent possible.

D. Finish Facings: Factory apply finish-facing materials with appropriate backings, using mildew-resistant nonstaining adhesive.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install demountable partitions after other finishing operations have been completed.

1. Install partitions rigid, level, plumb, and aligned. Install seals at connections with floors, ceilings, fixed walls, and abutting surfaces to prevent light and sound transmission.
2. Except for filler panels scribed to fixed walls or columns, do not modify manufacturer's standard components.

B. Suspended-Ceiling System: As directed Do not alter suspended-ceiling system or Make alterations to suspended-ceiling system required by partition installation or to gain access to electrical or communication systems without affecting the structural integrity of suspended-ceiling system. Make alterations so they are not noticeable after panel installation.

3.2 DEMONSTRATION

A. As directed Engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, assemble, disassemble, and maintain demountable partitions.

END OF SECTION 102219

SECTION 102233 - ACCORDION FOLDING PARTITIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Manually operated, accordion folding partitions.
2. Manually operated, fire-rated accordion folding partitions.
3. Electrically operated, accordion folding partitions.
4. Electrically operated, fire-rated accordion folding partitions.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:
1. As directed.

C. Shop Drawings: For accordion folding partitions.

1. Include plans, elevations, sections, and attachment details.
2. Indicate storage and operating clearances.
3. Indicate facing-material seam locations if any.
4. Include diagrams for power, signal, and control wiring.

D. Samples: For each exposed product and for each color and texture specified.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale and coordinated with each other, based on input from installers of the items involved:

B. Setting Drawings: For embedded items and cutouts required in other work, including support-beam, mounting-hole template.

C. Product certificates.

D. Material certificates: For each textile dye lot.

E. Product test reports.

F. Sample warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of accordion folding partitions that fail in materials or workmanship within specified warranty period.

1. Warranty Period: As directed Two or Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Acoustical Performance: Provide accordion folding partitions tested by a qualified testing agency for the following acoustical properties, according to test methods indicated:

1. Sound-Transmission Requirements: Accordion folding partition assembly tested in a laboratory for sound-transmission loss performance according to ASTM E90, calculated according to ASTM E413, and rated for not less than the STC value indicated.
2. Noise-Reduction Requirements: Accordion folding partition assembly, identical to partition tested for STC, tested for sound-absorption performance according to ASTM C423, and rated for not less than the NRC indicated.

B. Fire-Test-Response Characteristics: Provide partitions with finishes complying with one of the following, as determined by testing identical products by a testing and inspecting agency acceptable to authorities having jurisdiction:

1. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency.

a. Flame-Spread Index: 25 or less.
b. Smoke-Developed Index: 450 or less.

2. Fire Growth Contribution: Complying with acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 265 Method B Protocol or NFPA 286.

C. Fire Resistance: Provide fire-rated accordion folding partitions complying with NFPA 80, based on testing according to UL 10B for fire-rated door assemblies.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 ACCORDION FOLDING PARTITION

A. Accordion Folding Partition: Accordion folding frame with pantograph or hinged sections designed for horizontal extension and retraction, covered with decorative facing material, reinforced for hardware attachment, supported by overhead suspension system, and equipped with manufacturer's standard air-release method to prevent billowing.

B. Partition Type: As indicated on Drawings, with the following hardware:

1. Lead Post Latching Hardware: As directed Latch on one side, Latch on one side with coin-slot release on opposite side or Latch on both sides secured to recessed jamb striker, surface jamb striker or meeting post striker.
2. Lead Post Locking Hardware: Key-operated lock cylinder, keyed to master key system, operable from latch side or both sides of post.
3. Lead Post Locking Hardware: Deadlock to receive cylinder, operable from latch side or both sides of post As directed. See Section 087100 "Door Hardware" and Section 087111 "Door Hardware (Descriptive Specification)" for lock cylinder and keying requirements.

C. STC: As directed 30, 35, 40 or 45.

D. NRC: Not less than As directed 0.50, 0.70 or 0.85.

E. Electric Controls: As directed Remote-control station, Two remote-control stations, Obstruction-detection device and emergency release mechanism.

F. Facing Material: As directed Carpet wall covering, Fabric, Vinyl-coated fabric, Vinyl film, Plastic laminate, Wood veneer or Paint.

1. Color/Pattern: Match Architect's samples or As selected by Architect from manufacturer's full range.

2.3 FIRE-RATED ACCORDION FOLDING PARTITION

A. Fire-Rated Accordion Folding Partition: Accordion folding frame with pantograph sections designed for horizontal extension and retraction, covered with decorative facing material, reinforced for hardware attachment, supported by overhead suspension system, and equipped with manufacturer's standard air-release method to prevent billowing.

B. Partition Type: As indicated on Drawings, with the following hardware:

1. Lead Post Latching Hardware: As directed Latch on one side, Latch on one side with coin-slot release on opposite side or Latch on both sides secured to recessed jamb striker.
2. Lead Post Locking Hardware: As directed Key-operated lock cylinder, keyed to master key system, operable from latch side or both sides of post.

3. Lead Post Locking Hardware: Deadlock to receive cylinder, operable from latch side or both sides of post. See Section 087100 "Door Hardware" and Section 087111 "Door Hardware (Descriptive Specification)" for lock cylinder and keying requirements.

C. Fire Rating: As directed 3/4 hour, 1 hour, 1-1/2 hours or 3 hours.

D. STC: As directed 30, 40 or 44.

E. NRC: Not less than As directed.

F. Electric Controls: As directed Remote-control station, Two remote-control stations, Obstruction-detection device and emergency release mechanism.

G. Facing Material: As directed Vinyl film or Paint.

1. Color/Pattern: As directed Match Architect's samples or As selected by Architect from manufacturer's full range.

2.4 COMPONENTS

A. Posts and Seals: Provide types of posts and seals that produce accordion folding partitions complying with performance requirements.

1. Posts: Steel or aluminum; formed with deep-nesting and interlocking interfaces and fabricated to ensure rigidity of accordion folding partition.
2. Perimeter Seals: Manufacturer's standard vinyl, neoprene, or woven silica vertical seals, horizontal top and bottom seals, and closures for lead posts and jambs. Seals and closures at fire-rated partitions shall be identical to products tested for fire rating indicated and shall form an effective smoke and draft seal.

B. Hardware: Manufacturer's standard manually operated pulls, latches, locks, and bolts as required to operate accordion folding partitions; with decorative, protective finish.

2.5 SUSPENSION SYSTEMS

A. Tracks: Steel or aluminum, designed for operation, size, and weight of accordion folding partition indicated. Size track to support partition operation and storage without damage to suspension system, accordion folding partitions, or adjacent construction. Limit track deflection to no more than 0.10 inch (2.54 mm) between bracket supports. Provide a continuous system of track sections and accessories to accommodate configuration and layout indicated for partition operation and storage.

1. Track: As directed Surface mounted or Recessed.

a. Head Closure Trim: Integral with track for protecting overhead surfaces; with factory-applied, decorative, protective finish or primed for field finish.
b. Head Closure Trim and Track Channel Pocket: For protecting overhead surfaces and enclosing overhead track opening; with factory-applied, decorative, protective finish or primed for field finish.

B. Carriers: As directed Trolley system as required for size and weight of partition and for easy, quiet operation; with four-wheel, six-wheel, 12-wheel or manufacturer's standard ball-bearing carriers at lead post and two-wheel or manufacturer's standard ball-bearing carriers at intermediate partition supports.

1. Wheels: As directed Nylon, Steel or Manufacturer's standard.

C. Track Switches and Accessories: Manufacturer's standard switches as required for type of operation, storage, track configuration, and layout indicated.

D. Aluminum Finish: Mill finish or manufacturer's standard, factory-applied, decorative finish unless otherwise indicated.

E. Steel Finish: Factory-applied, corrosion-resistant, protective coating unless otherwise indicated.

2.6 ELECTRIC OPERATORS

A. Factory-assembled electric operation system of size and capacity recommended and provided by accordion folding partition manufacturer for partition specified; with electric motor and factory-prewired motor controls, speed reducer, chain drive, remote-control stations, control devices, and accessories required for operation. Include wiring from control stations to motor. Coordinate operator wiring requirements and electrical characteristics with building electrical system.

B. Comply with NFPA 70.

C. Motor Electrical Characteristics:

1. Horsepower: As directed ¼, 1/3, ¾ or Manufacturer's standard.
2. Volts: As directed 115 or 208.
3. Phase: As directed Single phase or Polyphase.
4. Hertz: 60.

D. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6.

E. Remote-Control Station: For partitions indicated, provide manufacturer's standard key-operated, constant-pressure, three-position control station labeled "Open," "Close," and "Off or Stop." Provide two keys per station.

F. Limit Switches: Provide each partition with adjustable switches, interlocked with motor controls and set to automatically stop accordion folding partition at fully extended and fully stacked positions.

G. Emergency Release Mechanism: For partitions indicated, provide quick disconnect-release of electric-motor drive system, permitting manual operation in event of operating failure.

2.7 WOOD MATERIALS, GENERAL

A. As directed.

2.8 FACING MATERIALS

A. Provide facing materials with appropriate backing that comply with indicated fire-test-response characteristics, and that are factory attached to accordion folding partitions with concealed fasteners.

1. Factory-apply facing material free of air bubbles, wrinkles, blisters, and other defects; in one piece, seamless; with vertical invisible seams complying with Shop Drawings for location; and with no gaps or overlaps. Tightly secure and conceal raw and selvage edges of facing material for finished appearance. Horizontal butted edges or seams are not permitted.
2. Where facing material with directional or repeating patterns or directional weave or directional, repeating, or matching grain are indicated, mark facing-material top and attach facing material in same direction.

B. Carpet Wall Covering: Manufacturer's standard nonwoven, needle-punched carpet with fibers fused to backing, from same dye lot, treated to resist stains.

C. Fabric: Manufacturer's standard fabric or 100 percent polyolefin woven fabric, from same dye lot, treated to resist stains.

D. Vinyl-Coated Fabric: Manufacturer's standard mildew-resistant, washable, vinyl-coated fabric wall covering; complying with WA-101, Type II-Medium Duty or Type III-Heavy Duty; Class A.

E. Vinyl Film: Manufacturer's standard vinyl film laminated to partition substrate.

F. Plastic Laminate: High-pressure decorative laminate; NEMA LD 3, Grade HGS.

G. Wood Veneer: Laminated to noncombustible or fire-retardant-treated wood core with moisture-resistant adhesive.

1. Wood Species and Finish: As directed Match Architect's sample, As selected by Architect from manufacturer's full range, Cherry, Maple, Poplar or Red oak with transparent finish, transparent finish over stain or wood finish as specified in Section 099300 "Staining and Transparent Finishing.".

H. Paint: Manufacturer's standard baked enamel.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Comply with accordion folding partition manufacturer's written installation instructions. Install accordion folding partitions level and plumb, with tight joints and uniform appearance, and free of deformation and surface and finish irregularities.

B. Install accordion folding partitions and accessories after other finishing operations, including painting, have been completed in area of partition installation.

C. Light-Leakage Test: Illuminate one side of partition installation, and observe vertical joints and top and bottom seals for voids. Adjust partitions for alignment and full closure of vertical joints and full closure along top and bottom seals.

D. Verify that safety devices are properly functioning.

3.2 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain accordion folding partitions.

END OF SECTION 102233

SECTION 102239 - FOLDING PANEL PARTITIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Manually operated, acoustical panel partitions.
2. Electrically operated, acoustical panel partitions.
3. Manually operated, fire-rated panel partitions.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For operable panel partitions.

1. Include plans, elevations, sections, attachment details, and numbered panel installation sequence.
2. Indicate stacking and operating clearances. Indicate location and installation requirements for hardware and track, blocking, and direction of travel.
3. Include diagrams for power, signal, and control wiring.

D. Samples: For each exposed product and for each color and texture specified.

E. Delegated-Design Submittal: For operable panel partitions.

1. Include design calculations for seismic restraints that brace tracks to structure above.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Setting Drawings: For embedded items and cutouts required in other work, including support-beam, mounting-hole template.

C. Seismic Qualification Certificates: For operable panel partitions, tracks, accessories, and components, from manufacturer.

D. Product Certificates: For each type of operable panel partition.

E. Product test reports.

F. Sample warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of operable panel partitions that fail in materials or workmanship within specified warranty period.

1. Warranty Period: As directed Two, Five or 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design seismic bracing of tracks to structure above.

B. Seismic Performance: Operable panel partitions shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the partition panels will remain in place without separation of any parts when subjected to the seismic forces specified."

C. Acoustical Performance: Provide operable panel partitions tested by a qualified testing agency for the following acoustical properties according to test methods indicated:

1. Sound-Transmission Requirements: Operable panel partition assembly tested for laboratory sound-transmission loss performance according to ASTM E90, determined by ASTM E413, and rated for not less than the STC indicated.
2. Noise-Reduction Requirements: Operable panel partition assembly, identical to partition tested for STC, tested for sound-absorption performance according to ASTM C423, and rated for not less than the NRC indicated.

D. Fire-Test-Response Characteristics: Provide panels with finishes complying with one of the following as determined by testing identical products by a testing and inspecting agency acceptable to authorities having jurisdiction:

1. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency.

   a. Flame-Spread Index: 25 or less.
   b. Smoke-Developed Index: 450 or less.

2. Fire Growth Contribution: Complying with acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 265 Method B Protocol or NFPA 286.

E. Fire Resistance: Provide fire-rated operable panel partition assemblies including pass doors complying with NFPA 80, based on testing according to UL 10B for fire-rated door assemblies.

1. Pass doors in fire-rated operable panel partition assemblies shall meet positive-pressure requirements.

F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 OPERABLE ACOUSTICAL PANELS

A. Operable Acoustical Panels: Partition system, including panels, seals, finish facing, suspension system, operators, and accessories.

B. Panel Operation: Manually operated, individual, Manually operated, paired, Manually operated, continuously hinged or Electrically operated, continuously hinged panels.

C. Panel Construction: As required to support panel from suspension components and with reinforcement for hardware attachment. Fabricate panels with tight hairline joints and concealed fasteners. Fabricate panels so finished in-place partition is rigid; level; plumb; aligned, with tight joints and uniform appearance; and free of bow, warp, twist, deformation, and surface and finish irregularities.

D. Dimensions: Fabricate operable acoustical panel partitions to form an assembled system of dimensions indicated and verified by field measurements.

E. STC: As directed Not less than 38, 41, 45, 47, 50, 52, 54 or 56.

F. NRC: As directed Not less than 0.50, 0.60, 0.65 or 0.90.

G. Panel Materials:
1. Steel Frame: Steel sheet, manufacturer's standard thickness.
2. Steel Face/Liner Sheets: Tension-leveled steel sheet, manufacturer's standard thickness.
3. Aluminum: Alloy and temper recommended by aluminum producer and finisher for type of use, corrosion resistance, and finish indicated; manufacturer's standard strengths and thicknesses for type of use.

4. Gypsum Board: ASTM C1396/C1396M.
5. Cement Board: ASTM C1288.
6. Particleboard: ANSI A208.1.
7. Medium-Density Fiberboard: ANSI A208.2.
8. Plywood: DOC PS 1.

H. Panel Closure: Manufacturer's standard.

I. Hardware: Manufacturer's standard as required to operate operable panel partition and accessories; with decorative, protective finish.

J. Finish Facing: As directed Vinyl-coated fabric wall covering, Carpet wall covering, Fabric wall covering, High-pressure decorative laminate, Wood veneer or Paint.

2.3 OPERABLE FIRE-RATED PANELS

A. Operable Fire-Rated Panels: Fire-rated, acoustical panel partition system, including panels, seals, finish facing, suspension system, operators, and accessories.

B. Panel Operation: As directed Manually operated, individual or paired panels.

C. Panel Construction: As required to support panel from suspension components and with reinforcement for hardware attachment. Fabricate panels with tight hairline joints and concealed fasteners. Fabricate panels so finished in-place partition is rigid; level; plumb; aligned, with tight joints and uniform appearance; and free of bow, warp, twist, deformation, and surface and finish irregularities.

D. Dimensions: Fabricate operable fire-rated panel partitions to form an assembled system of dimensions indicated and verified by field measurements.

E. Fire Rating: 1 hour(s).

F. STC: As directed Not less than 38, 41, 45, 47, 50, 52 or 54.

G. NRC: As directed Not less than 0.50, 0.60, 0.65 or 0.90.

H. Panel Materials:
1. Steel Frame: Steel sheet, manufacturer's standard thickness.
2. Steel Face/Liner Sheets: Tension-leveled steel sheet, manufacturer's standard thickness.

I. Panel Closure: Manufacturer's standard.

J. Hardware: Manufacturer's standard as required to operate fire-rated operable panel partition and accessories; with decorative, protective finish.

K. Finish Facing: As directed Vinyl-coated fabric wall covering, Carpet wall covering, Fabric wall covering, High-pressure decorative laminate, Wood veneer or Paint.

2.4 SEALS

A. Description: Seals that produce operable panel partitions complying with performance requirements and the following:

1. Seals made from materials and in profiles that minimize sound leakage.
2. Seals fitting tight at contact surfaces and sealing continuously between adjacent panels and between operable panel partition perimeter and adjacent surfaces, when operable panel partition is extended and closed.

B. Horizontal Bottom Seals: Manufacturer's standard continuous-contact seal exerting uniform constant pressure on floor.

C. Horizontal Bottom Seals: Resilient, mechanical, retractable, constant-force-contact seal exerting uniform constant pressure on floor when extended, ensuring horizontal and vertical sealing and resisting panel movement.

1. Mechanically Operated for Acoustical Panels: As directed Extension and retraction of bottom seal by operating handle or built-in operating mechanism, with operating range not less than 1-1/2 inches (38 mm), 2 inches (50 mm), 4 inches (102 mm) or 6 inches (152 mm) between retracted seal and floor finish.
2. Mechanically Operated for Fire-Rated Panels: As directed Extension and retraction of bottom seal by operating handle or built-in operating mechanism, with operating range not less than 1-1/2 inches (38 mm), 2 inches (50 mm) or 4 inches (102 mm) between retracted seal and floor finish.
3. Automatically Operated for Acoustical Panels: As directed Extension and retraction of bottom seal automatically operated by movement of partition, with operating range not less than 1 inch (25 mm), 1-1/2 inches (38 mm) or 2 inches (50 mm) between retracted seal and floor finish.

2.5 PANEL FINISH FACINGS

A. Description: Finish facings for panels that comply with indicated fire-test-response characteristics and that are factory applied to operable panel partitions with appropriate backing, using mildew-resistant nonstaining adhesive as recommended by facing manufacturer's written instructions.

B. Vinyl-Coated Fabric Wall Covering: As directed Manufacturer's standard, mildew-resistant, washable, vinyl-coated fabric wall covering; complying with WA-101, Type I-Light Duty, Type II-Medium Duty or Type III-Heavy Duty; Class A.

1. Color/Pattern: Match Architect's samples or As selected by Architect from manufacturer's full range.

C. Carpet Wall Covering: Manufacturer's standard, from same dye lot, treated to resist stains.

1. Color/Pattern: Match Architect's samples or As selected by Architect from manufacturer's full range.

D. Fabric Wall Covering: As directed Manufacturer's standard fabric or 100 percent polyolefin woven fabric, from same dye lot, treated to resist stains.

1. Color/Pattern: Match Architect's samples or As selected by Architect from manufacturer's full range.

E. High-Pressure Decorative Laminate: NEMA LD 3, Horizontal grade.

1. Color/Pattern: As directed Match Architect's samples or As selected by Architect from manufacturer's full range.

F. Wood Veneer: Laminated to noncombustible or fire-retardant-treated wood core with moisture-resistant adhesive.

1. Species, Cut, and Finish: As selected by Architect from manufacturer's full range.

G. Paint: Manufacturer's standard factory-painted finish.

1. Color: Match Architect's sample or As selected by Architect from manufacturer's full range.

H. Cap-Trimmed Edges: Protective perimeter-edge trim with tight hairline joints concealing edges of panel and finish facing.

I. Trimless Edges: Fabricate exposed panel edges so finish facing wraps uninterrupted around panel, covering edge and resulting in an installed partition with facing visible on vertical panel edges, without trim, for minimal sightlines at panel-to-panel joints.

2.6 SUSPENSION SYSTEMS

A. Tracks: Steel or aluminum mounted directly to overhead structural support, with adjustable steel hanger rods for overhead support, designed for operation, size, and weight of operable panel partition indicated. Size track to support partition operation and storage without damage to suspension system, operable panel partitions, or adjacent construction. Limit track deflection to no more than 0.10 inch (2.54 mm) between bracket supports. Provide a continuous system of track sections and accessories to accommodate configuration and layout indicated for partition operation and storage.

B. Carriers: Trolley system as required for configuration type, size, and weight of partition and for easy operation; with ball-bearing wheels.

C. Track Intersections, Switches, and Accessories: As required for operation, storage, track configuration, and layout indicated for operable panel partitions, and compatible with partition assembly specified. Fabricate track intersections and switches from steel or aluminum.

2.7 ELECTRIC OPERATORS

A. Factory-assembled electric operation system of size and capacity recommended and provided by operable panel partition manufacturer for partition specified; with electric motor and factory-prewired motor controls, speed reducer, chain drive, control stations, control devices, and

accessories required for operation. Include wiring from control stations to motor. Coordinate operator wiring requirements and electrical characteristics with building electrical system.

B. Comply with NFPA 70.

C. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6.

D. Motor Electrical Characteristics:

1. Horsepower: Manufacturer's standard.
2. Volts: As directed 115, 208, 230 or 460.
3. Phase: As directed Single phase or Polyphase.
4. Hertz: 60.

E. Control Stations: Two single-key-operated, constant-pressure control stations located remotely from each other on opposite sides and opposite ends of partition run. Wire in series to require simultaneous activation of both key stations to operate partition. As directed Each three-position control station labeled "Open," "Close," and "Off or Stop." Furnish two keys per station.

F. Obstruction-Detection Devices: As directed Equip each motorized operable panel partition with indicated automatic safety sensor that causes operator to immediately shut off motor or stop and reverse direction.

G. Limit Switches: Adjustable switches, interlocked with motor controls and set to automatically stop operable panel partition at fully extended and fully stacked positions.

H. Emergency Release Mechanism: Quick disconnect-release of electric-motor drive system, permitting manual operation in event of operating failure.

I. Electric Interlock: Equip each motorized operable panel partition with electric interlocks at locations indicated, to prevent operation of operable panel partition under the following conditions:

1. On storage pocket door, to prevent operation if door is not in fully open position.
2. On partitions at location of convergence by another partition, to prevent operation if merging partitions are in place.

2.8 ACCESSORIES

A. Pass Doors: As directed Swinging door built into and matching panel materials, construction, acoustical qualities, fire rating finish and thickness, complete with frames and operating hardware. Hinges finished to match other exposed hardware.

1. Accessibility Standard: As directed Fabricate doors to comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design", the ABA standards of the Federal agency having jurisdiction and ICC A117.1.
2. Single Pass Door: As directed 36 by 80 inches (914 by 2032 mm) or 36 by 84 inches (914 by 2134 mm).

3. Double Pass Door: As directed 72 by 80 inches (1829 by 2032 mm) or 72 by 84 inches (1829 by 2134 mm).
4. Pass-Door Hardware: Equip pass door with the following:

    a. Door Seals: As directed Mechanically operated floor seal on panels containing pass doors or Sweep floor seals.
    b. As directed Panic or Fire exit hardware.
    c. Concealed door closer.
    d. Door Viewer: Installed with view in direction of swing.
    e. Exit Sign: Recessed, self-illuminated.
    f. Latchset: Passage set.
    g. Lock: Key-operated lock with cylinder, keyed to master key system, operable from both sides of door. Include two keys per lock.
    h. Lock: Deadlock to receive cylinder, operable from both sides of door. See As directed Section 087100 "Door Hardware" or Section 087111 "Door Hardware (Descriptive Specification)" for lock cylinder and keying requirements.

B. Storage Pocket Door: Full height at end of partition runs to conceal stacked partition; of same materials, finish, construction, thickness, and acoustical qualities as panels; complete with operating hardware and acoustical seals at soffit, floor, and jambs. Hinges in finish to match other exposed hardware.

1. Manufacturer's standard method to secure storage pocket door in closed position.
2. Rim Lock: Key-operated lock cylinder, keyed to master key system, to secure storage pocket door in closed position. Include two keys per lock.
3. Rim Lock: Deadlock to receive cylinder, to secure storage pocket door in closed position. As directed See Section 087100 "Door Hardware" or Section 087111 "Door Hardware (Descriptive Specification)" for lock cylinder and keying requirements.

C. Windows: Manufacturer's standard or as indicated.

D. Work Surfaces: Quantities, placement, and size indicated.

1. Surface: Porcelain steel marker/projection surface, Self-healing, tackable, vinyl-coated fabric wall covering, complying with WA-101, Type II-Medium Duty; Class A; laminated to natural cork tackboard.
2. Surface Color: Matching Architect's sample or As selected by Architect from manufacturer's full range.

E. Chalk Tray and Eraser Pocket: Manufacturer's standard.

F. Chair Rails: Recessed or Surface mounted in locations indicated on Drawings.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install operable panel partitions and accessories after other finishing operations, including painting, have been completed in area of partition installation.

B. Broken, cracked, chipped, deformed, or unmatched panels are not acceptable.

C. Broken, cracked, deformed, or unmatched gasketing or gasketing with gaps at butted ends is not acceptable.

D. Light-Leakage Test: Illuminate one side of partition installation and observe vertical joints and top and bottom seals for voids. Adjust partitions for alignment and full closure of vertical joints and full closure along top and bottom seals.

3.2 ADJUSTING

A. Adjust pass doors and storage pocket doors to operate smoothly and easily, without binding or warping.

B. Verify that safety devices are properly functioning.

3.3 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain operable panel partitions.

END OF SECTION 102239

SECTION 102239.13 - FOLDING GLASS-PANEL PARTITIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes manually operated, glass-panel partitions.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:
   1. As directed.

C. Shop Drawings: For operable glass-panel partitions.

   1. Include plans, elevations, sections, details, numbered panel installation sequence, and attachments to other work.
   2. Indicate stacking and operating clearances. Indicate location and installation requirements for hardware and track, blocking, and direction of travel.

D. Samples: For each exposed product and for each color and texture specified.

E. Delegated-Design Submittal: For operable glass-panel partitions.

   1. Include design calculations for seismic restraints that brace tracks to structure above.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Setting Drawings: For embedded items and cutouts required in other work, including support-beam, mounting-hole template.

C. Seismic Qualification Certificates: For operable glass-panel partitions, tracks, accessories, and components, from manufacturer.

D. Product Certificates: For each type of operable glass-panel partition.

E. Product test reports.

F. Sample warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of operable glass-panel partitions that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design seismic bracing of tracks to structure above.

B. Seismic Performance: Operable glass-panel partitions shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the partition panels will remain in place without separation of any parts when subjected to the seismic forces specified."

C. Acoustical Performance: Provide operable glass-panel partitions tested by a qualified testing agency for the following acoustical properties according to test methods indicated:

1. Sound-Transmission Requirements: Operable glass-panel partition assembly tested for laboratory sound-transmission loss performance according to ASTM E90, determined by ASTM E413, and rated for not less than the STC indicated.

D. Fire-Test-Response Characteristics: Provide wood-framed panels complying with one of the following as determined by testing identical products by a testing and inspecting agency acceptable to authorities having jurisdiction:

1. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency.

a. Flame-Spread Index: As directed 25 or 75 or less.
b. Smoke-Developed Index: 450 or less.

2.2 OPERABLE GLASS PANELS

A. Operable Glass Panels: As directed Frameless aluminum, Aluminum-framed or Wood-framed glass-panel partition system, including panels, seals, suspension system, operators, and accessories.

B. Panel Operation: As directed Manually operated, individual, paired or continuously hinged panels.

C. Panel Construction: As required to support panel from suspension components and with reinforcement for hardware attachment. Fabricate panels with tight hairline joints and concealed fasteners. Fabricate panels so finished in-place partition is rigid; level; plumb; aligned, with tight joints and uniform appearance; and free of bow, warp, twist, deformation, and surface and finish irregularities.

1. Factory-Glazed Fabrication: Glaze operable glass panels in the factory where practical and possible for applications indicated. Comply with manufacturer's written instructions and with requirements in Section 088000 "Glazing."

D. Glass and Glazing: Glass type as specified in Section 088000 "Glazing."

E. Glass and Glazing: As follows:

1. Glass: As directed Manufacturer's standard or Custom safety glass and glass assemblies as indicated and complying with the following requirements in Section 088000 "Glazing" and as follows:

a. Tempered Glass: As directed ASTM C1048, Kind FT (fully tempered), Type I (transparent flat glass), Class 1 (clear) or Class 2 (tinted), Quality-Q3.
b. Tempered Patterned Glass: ASTM C1048, Kind FT (fully tempered), Type II (patterned flat glass), Class 1 (clear), Form 3 (patterned); and of quality, finish, and pattern specified.
c. Laminated Glass: As directed ASTM C1172, with clear, colored, patterned or graphic interlayer.

1) Annealed Float Glass: As directed ASTM C1036, Type I (transparent flat glass), Class 1 (clear) or Class 2 (tinted), Quality-Q3.
2) Patterned Glass: ASTM C1036, Type II (patterned and wired flat glass), Class 1 (clear), Form 3 (patterned); and of quality, finish, and pattern specified.

d. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass as indicated, separated by a dehydrated interspace, qualified according to ASTM E2190, and complying with other requirements specified.

F. Dimensions: Fabricate operable glass-panel partitions to form an assembled system of dimensions indicated and verified by field measurements.

G. STC: As directed Not less than 36 or 44.

H. Panel Frame Materials:

1. Aluminum: Alloy and temper recommended by aluminum producer and finisher for type of use, corrosion resistance, and finish indicated; manufacturer's standard strengths and thicknesses for type of use.
2. Wood Frame: Clear, vertical-grain, straight, kiln-dried, fire-retardant-treated wood as follows:

    a. Species: Match Architect's sample, as selected by Architect from manufacturer's full range, Cherry, Hemlock, Maple, Meranti, Poplar or Red oak.

I. Panel Closure: Manufacturer's standard unless otherwise indicated.

J. Hardware: Manufacturer's standard as required to operate operable glass-panel partition and accessories; with decorative, protective finish.

K. Panel Frame Finishes:

1. Exposed Metal: Match Architect's sample or as selected by Architect from manufacturer's full range as follows:

    a. Aluminum: As directed Clear anodized, Light bronze anodized, Medium bronze anodized, Dark bronze anodized, Black anodized or Baked powder coating, black color.
    b. Metal-Clad Aluminum: As directed Satin stainless steel, Polished stainless steel, Satin brass, Polished brass, Satin bronze or Polished bronze.

2. Wood Finish: Match Architect's sample or as selected by Architect from manufacturer's full range, as follows:

    a. Type: As directed Transparent finish or Transparent finish over stain over wood variety indicated.

3. Wood Finish: As specified in Section 099300 "Staining and Transparent Finishing."

2.3 SEALS

A. Description: Seals that produce operable glass-panel partitions complying with performance requirements and the following:

1. Seals made from materials and in profiles that minimize sound leakage.
2. Seals fitting tight at contact surfaces and sealing continuously between adjacent panels and between operable glass-panel partition perimeter and adjacent surfaces, when operable glass-panel partition is extended and closed.

2.4 SUSPENSION SYSTEMS

A. Tracks: Steel or aluminum mounted directly to overhead structural support, with adjustable steel hanger rods for overhead support, designed for operation, size, and weight of operable glass-panel partition indicated. Size track to support partition operation and storage without damage to suspension system, operable glass-panel partitions, or adjacent construction. Limit track deflection to no more than 0.10 inch (2.54 mm) between bracket supports. Provide a continuous

system of track sections and accessories to accommodate configuration and layout indicated for partition operation and storage.

B. Carriers: Trolley system as required for configuration type, size, and weight of partition and for easy operation; with ball-bearing wheels.

C. Track Intersections, Switches, and Accessories: As required for operation, storage, track configuration, and layout indicated for operable glass-panel partitions, and compatible with partition assembly specified. Fabricate track intersections and switches from steel or aluminum.

2.5 ACCESSORIES

A. Pass Doors: As directed Swinging door built into and matching panel materials, construction, acoustical qualities, finish and thickness, complete with frames and operating hardware. Hinges finished to match other exposed hardware.

1. Accessibility Standard: Fabricate doors to comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design", the ABA standards of the Federal agency having jurisdiction and or ICC A117.1.
2. Single Pass Door: As directed 36 by 80 inches (914 by 2032 mm) or 36 by 84 inches (914 by 2134 mm).
3. Double Pass Door: As directed 72 by 80 inches (1829 by 2032 mm) or 72 by 84 inches (1829 by 2134 mm).
4. Pass-Door Hardware: Equip pass door with the following:

    a. Door Seals: As directed Mechanically operated floor seal on panels containing pass doors or Sweep floor seals.
    b. Panic hardware.
    c. Concealed door closer.
    d. Latchset: Passage set.
    e. Lock: Key-operated lock with cylinder, keyed to master key system, operable from both sides of door. Include two keys per lock.
    f. Lock: Deadlock to receive cylinder, operable from both sides of door. As directed See Section 087100 "Door Hardware" or Section 087111 "Door Hardware (Descriptive Specification)" for lock cylinder and keying requirements.

B. Storage Pocket Door: Full height at end of partition runs to conceal stacked partition; of same frame material, finish, thickness, and acoustical qualities as panels; complete with operating hardware and acoustical seals at soffit, floor, and jambs. Hinges in finish to match other exposed hardware.

1. Manufacturer's standard method to secure storage pocket door in closed position.
2. Rim Lock: Key-operated lock cylinder, keyed to master key system, to secure storage pocket door in closed position. Include two keys per lock.
3. Rim Lock: Deadlock to receive cylinder, to secure storage pocket door in closed position. See Section 087100 "Door Hardware" or Section 087111 "Door Hardware (Descriptive Specification)" for lock cylinder and keying requirements.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install operable glass-panel partitions and accessories after other finishing operations, including painting, have been completed in area of partition installation.

B. Broken, cracked, chipped, deformed, or unmatched panels are not acceptable.

C. Broken, cracked, deformed, or unmatched gasketing or gasketing with gaps at butted ends is not acceptable.

3.2 ADJUSTING

A. Adjust pass doors and storage pocket doors to operate smoothly and easily, without binding or warping.

B. Verify that safety devices are properly functioning.

3.3 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain operable glass-panel partitions.

END OF SECTION 102239.13

SECTION 102600 - WALL AND DOOR PROTECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Wall guards.
2. Impact-resistant handrails.
3. Corner guards.

B. Related Requirements:

1. Section 055000 "Metal Fabrications" As directed.
2. Section 057300 "Decorative Metal Railings" for metal handrails without plastic bumpers.
3. Section 064023 "Interior Architectural Woodwork for solid-wood handrails, bumper rails, chair rails, or corner moldings without plastic bumpers.
4. Section 087100 "Door Hardware" or Section 087111 "Door Hardware (Descriptive Specification)" as directed for metal and plastic protective trim units, according to BHMA A156.6, used for armor, kick, mop, and push plates.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For each type of wall and door protection showing locations and extent.

1. Include plans, elevations, sections, and attachment details. Show handrail design and support spacing required to withstand structural loads.

D. Samples: For each exposed product and for each color and texture specified, 12 inches (300 mm) long.

1.3 INFORMATIONAL SUBMITTALS

A. Product certificates.

B. Material certificates.

C. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of wall- and door-protection units that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 450 or less.

B. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1 as directed.

2.2 WALL GUARDS

A. Crash Rail: Heavy-duty, PVC-free assembly consisting of continuous snap-on plastic cover installed over concealed retainer; designed to withstand impacts.
1. Cover: Extruded rigid plastic, minimum 0.100-inch (2.5-mm) wall thickness; in dimensions and profiles indicated on Drawings.

a. Surface: As directed.
b. Color and Texture: As directed.

2. Continuous Retainer: Minimum 0.080-inch- (2.0-mm-) thick, one-piece, extruded aluminum.
3. Retainer Clips: Manufacturer's standard impact-absorbing clips designed for heavy-duty performance.
4. Bumper: Continuous, resilient bumper cushion(s).
5. End Caps and Corners: Prefabricated, injection-molded plastic; matching color or contrasting with color cover as directed; field adjustable for close alignment with snap-on cover.
6. Accessories: Concealed splices and mounting hardware.
7. Mounting: As directed.

B. Bumper Rail: Standard-duty, PVC-free assembly consisting of continuous snap-on plastic cover installed over concealed retainer; designed to withstand impacts.

1. Cover: Extruded rigid plastic, minimum 0.078-inch (2.0-mm) wall thickness; in dimensions and profiles indicated on Drawings.

    a. Color and Texture: As directed.

2. Continuous Retainer: Minimum 0.080-inch- (2.0-mm-) thick, one-piece, extruded aluminum.
3. Retainer Clips: Manufacturer's standard impact-absorbing clips.
4. Bumper: Continuous, resilient bumper cushion(s).
5. End Caps and Corners: Prefabricated, injection-molded plastic; matching color or contrasting with color cover as directed; field adjustable for close alignment with snap-on cover.
6. Accessories: Concealed splices and mounting hardware.
7. Mounting: As directed.

C. Rub Rail: Standard-duty, PVC-free assembly consisting of continuous snap-on cover installed over concealed, continuous retainer.
    1. Cover: Extruded plastic, minimum 0.078-inch (2.0-mm) wall thickness; in dimensions and profiles indicated on Drawings.

        a. Color and Texture: As directed.

    2. Retainer: Minimum 0.0625-inch- (1.6-mm-) thick, one-piece, extruded aluminum.
    3. End Caps and Corners: Prefabricated, injection-molded plastic; color matching cover; field adjustable for close alignment with snap-on cover.
    4. Accessories: Concealed splices and mounting hardware.
    5. Mounting: Surface mounted directly to wall or Reveal mounted on bumper cushions as directed.

2.3 IMPACT-RESISTANT HANDRAILS

A. Structural Performance: Handrails, including attachment to building construction, shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

    1. Uniform load of 50 lbf/ft. (0.73 kN/m) applied in any direction.
    2. Concentrated load of 200 lbf (0.89 kN) applied in any direction.
    3. Uniform and concentrated loads need not be assumed to act concurrently.

B. Plastic, Impact-Resistant Handrails: Manufacturer's standard, PVC-free assembly consisting of snap-on plastic cover installed over continuous retainer.
    1. Cover: Minimum 0.078-inch- (2.0-mm-) or 0.100-inch- (2.5-mm-) as directed thick, extruded rigid plastic; in dimensions and profiles indicated on Drawings.

        a. Single Handrail: Cylindrical tube profile cover with continuous retainer; with mounting brackets supporting bottom of rail.
        b. Bumper Rail: Cover with flat or sculpted with contoured thumb recess on front side as directed; with 1-1/2-inch- (38-mm-) diameter gripping surface and finger recess on back side; supported by concealed, continuous retainer and extended mounting brackets.

1) Bumper Surface: As directed.

c. Color and Texture: As directed.

2. Retainer: Minimum 0.080-inch- (2.0-mm-) thick, one-piece, extruded aluminum.
3. Mounting Bracket: Extended mounting on injection-molded plastic or anodized-aluminum mounting brackets as directed.
4. End Caps and Corners: Prefabricated, injection-molded plastic; matching color or contrasting with color cover as directed; field adjustable for close alignment with snap-on cover.
5. Accessories: Concealed splices, cushions, and mounting hardware.

2.4 CORNER GUARDS

A. Surface-Mounted, Plastic-Cover Corner Guards: Manufacturer's standard, PVC-free assembly consisting of snap-on, resilient plastic cover installed over retainer; including mounting hardware; fabricated with 90- or 135-degree turn to match wall condition.
1. Cover: Extruded rigid plastic, minimum 0.078-inch (2.0-mm) or 0.100-inch (2.5-mm) wall thickness as directed; in dimensions and profiles indicated on Drawings.

a. Color and Texture: As directed.

2. Continuous Retainer: Minimum 0.060-inch- (1.5-mm-) thick, one-piece, extruded aluminum or One-piece extruded plastic as directed.
3. Retainer Clips: Manufacturer's standard impact-absorbing clips.
4. Top and Bottom Caps: Prefabricated, injection-molded plastic; color matching cover; field adjustable for close alignment with snap-on cover.

B. Flush-Mounted, Plastic-Cover Corner Guards: Manufacturer's standard, PVC-free assembly consisting of snap-on, resilient plastic cover that is flush with adjacent wall surface, installed over retainer; including mounting hardware; fabricated with 90- or 135-degree turn to match wall condition; full wall height.
1. Cover: Extruded rigid plastic, minimum 0.078-inch (2.0-mm) or 0.100-inch (2.5-mm) wall thickness as directed; in dimensions and profiles indicated on Drawings.

a. Color and Texture: As directed.

2. Continuous Retainer: Minimum 0.060-inch- (1.5-mm-) thick, one-piece, extruded aluminum.
3. Retainer Clips: Manufacturer's standard impact-absorbing clips.
4. Aluminum Cove Base: Nominal 4 inches (100 mm) or 6 inches (150 mm) high as directed.

C. Fire-Rated, Flush-Mounted, Plastic-Cover Corner Guards: Manufacturer's standard, PVC-free assembly consisting of snap-on, resilient plastic cover that is flush with adjacent wall surface, installed over continuous retainer and intumescent fire barrier; including mounting hardware; fabricated with 90- or 135-degree turn to match wall condition; full wall height.
1. Fire Rating: As directed; UL listed and labeled according to ASTM E1966 or UL 2079.

a. L-Rating at Smoke Barriers: Not exceeding 5.0 cfm/ft. (0.00775 cu. m/s x m) of joint at 0.30 inch wg (74.7 Pa) at both ambient and elevated temperatures according to UL 2079.

2. Cover: Extruded rigid plastic, minimum 0.078-inch (2.0-mm) or 0.100-inch (2.5-mm) wall thickness as directed; in dimensions and profiles indicated on Drawings.

a. Color and Texture: As directed.

3. Retainer: Minimum 0.070-inch- (1.8-mm-) thick, one-piece, extruded aluminum.
4. Aluminum Cove Base: Nominal 4 inches (100 mm) or 6 inches (150 mm) high as directed.

D. Surface-Mounted, Opaque-Plastic Corner Guards: Fabricated as one piece as directed; with formed edges; fabricated with 90- or 135-degree turn to match wall condition.
1. Mounting: Countersunk screws through factory-drilled mounting holes or Adhesive as directed.
2. Color and Texture: As directed.

2.5 MATERIALS

A. Plastic Materials: Chemical- and stain-resistant, high-impact-resistant plastic with integral color throughout; extruded and sheet material as required, thickness as indicated.

B. Polycarbonate Plastic Sheet: ASTM D6098, S-PC01, Class 1 or Class 2, abrasion resistant; with a minimum impact-resistance rating of 15 ft.-lbf/in. (800 J/m) of notch when tested according to ASTM D256, Test Method A.

C. Fasteners: Aluminum, nonmagnetic stainless-steel, or other noncorrosive metal screws, bolts, and other fasteners compatible with items being fastened. Use security-type fasteners where exposed to view.

D. Adhesive: As recommended by protection product manufacturer.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Installation Quality: Install wall and door protection according to manufacturer's written instructions, level, plumb, and true to line without distortions. Do not use materials with chips, cracks, voids, stains, or other defects that might be visible in the finished Work.

B. Mounting Heights: Install wall and door protection in locations and at mounting heights indicated on Drawings.

C. Accessories: Provide splices, mounting hardware, anchors, trim, joint moldings, and other accessories required for a complete installation.

1. Provide anchoring devices and suitable locations to withstand imposed loads.

2. Where splices occur in horizontal runs of more than 20 feet (6.1 m), splice aluminum retainers and plastic covers at different locations along the run, but no closer than 12 inches (305 mm) apart.
3. Adjust end and top caps as required to ensure tight seams.

END OF SECTION 102600

SECTION 102800 - TOILET, BATH, AND LAUNDRY ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Public-use washroom accessories.
2. Public-use shower room accessories.
3. Private-use bathroom accessories.
4. Healthcare accessories.
5. Warm-air dryers.
6. Childcare accessories.
7. Underlavatory guards.
8. Custodial accessories.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples: Full size, for each exposed product and for each finish specified.

1.3 INFORMATIONAL SUBMITTALS

A. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 WARRANTY

A. Manufacturer's Special Warranty for Mirrors: Manufacturer agrees to repair or replace mirrors that fail in materials or workmanship within specified warranty period.

1. Warranty Period: 15 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 PUBLIC-USE WASHROOM ACCESSORIES

A. Toilet Tissue (Roll) Dispenser:
   1. Description: As directed Roll-in-reserve dispenser with hinged front secured with tumbler lockset, Single-roll dispenser, Double-roll dispenser or Double-roll dispenser with shelf.
   2. Mounting: As directed Recessed, Partition mounted, serving two adjacent toilet compartments or Surface mounted.
   3. Operation: As directed Noncontrol delivery with standard spindle, Noncontrol delivery with theft-resistant spindle, Spindleless with tension-spring controlled delivery, Spindleless with tension-spring controlled delivery and self-locking device extending through core that prevents core removal until roll is empty or Eccentric-shaped, molded-plastic spindle revolves one-half revolution per dispensing operation for controlled delivery; core cannot be removed until roll is empty.
   4. Capacity: As directed Designed for 4-1/2- or 5-inch- (114- or 127-mm-) or 5-inch- (127-mm-) diameter tissue rolls.
   5. Material and Finish: As directed Stainless steel, No. 4 finish (satin), Chrome-plated zinc alloy (zamac) or steel, Satin-finish aluminum bracket with plastic spindle or ABS plastic, gray.

B. Paper Towel (Folded) Dispenser:
   1. Mounting: As directed Recessed, Semirecessed, Deck mounted, recessed or Surface mounted.
   2. Minimum Capacity: As directed 400 C-fold or 525 multifold towels, 600 C-fold or 800 multifold towels or 400 single-fold towels.
   3. Material and Finish: As directed Stainless steel, No. 4 finish (satin) or ABS plastic, gray.
   4. Lockset: Tumbler type.
   5. Refill Indicator: Pierced slots at sides or front.

C. Paper Towel (Roll) Dispenser:
   1. Description: Lever-actuated mechanism permitting controlled delivery of paper rolls in preset lengths per stroke.
   2. Mounting: As directed Recessed, Semirecessed or Surface mounted.
   3. Minimum Capacity: 8-inch- (203-mm-) wide, 800-foot- (244-m-) long roll.
   4. Material and Finish: As directed Stainless steel, No. 4 finish (satin) or ABS plastic, gray.
   5. Lockset: Tumbler type.

D. Automatic Paper Towel (Roll) Dispenser:
   1. Description: Automatic motion sensing mechanism with user-adjustable delay and paper towel length; battery powered.
   2. Mounting: As directed Recessed, Semirecessed or Surface mounted.
   3. Minimum Capacity: As directed 8-inch- (203-mm-) wide, 800-foot- (244-m-) long roll.
   4. Material and Finish: As directed Stainless steel, No. 4 finish (satin) or ABS plastic, gray.

5. Lockset: Tumbler type.

E. Waste Receptacle:
1. Mounting: As directed Open top, recessed, Self-closing disposal-opening cover, recessed, Semirecessed, Surface mounted, Wall mounted for corner installation, Freestanding or Undercounter.
2. Minimum Capacity: As directed.
3. Material and Finish: Stainless steel, No. 4 finish (satin).
4. Liner: Reusable vinyl liner.
5. Lockset: Tumbler type for waste receptacle.

F. Combination Towel (Folded) Dispenser/Waste Receptacle:
1. Description: Combination unit for dispensing C-fold or multifold towels, with removable waste receptacle.
2. Mounting: As directed Surface mounted, Surface mounted with stainless-steel collar, Recessed, Recessed with projecting receptacle or Semirecessed.

    a. Designed for nominal 4-inch (100-mm) or 6-inch (150-mm) wall depth.

3. Minimum Towel-Dispenser Capacity: 600 C-fold or 800 multifold paper towels.
4. Minimum Waste-Receptacle Capacity: As directed 4 gal. (15 L) or 12 gal. (45.4 L).
5. Material and Finish: Stainless steel, No. 4 finish (satin).
6. Liner: Reusable, vinyl waste-receptacle liner.
7. Lockset: Tumbler type for towel-dispenser compartment and waste receptacle.

G. Combination Towel (Roll) Dispenser/Waste Receptacle:
1. Description: Combination unit for dispensing preset length of roll paper towels, with removable waste receptacle.
2. Mounting: As directed Recessed, Semirecessed or Surface mounted.
3. Minimum Towel-Dispenser Capacity: 8-inch- (203-mm-) wide, 800-foot- (244-m-) long roll.
4. Minimum Waste Receptacle Capacity: As directed 8 gal. (30 L), 12 gal. (45.4 L) or 15 gal. (56.8 L).
5. Material and Finish: Stainless steel, No. 4 finish (satin).
6. Liner: Reusable, vinyl waste-receptacle liner.
7. Lockset: Tumbler type for towel dispenser compartment and waste receptacle.

H. Liquid-Soap Dispenser:

1. Description: As directed Designed for dispensing antibacterial soap in liquid or lotion or lather form.
2. Mounting: As directed, deck mounted on vanity, deck mounted on lavatory, horizontally oriented, recessed, horizontally oriented, surface mounted or vertically oriented, surface mounted.
3. Capacity: As directed.
4. Materials: As directed.
5. Lockset: Tumbler type.
6. Refill Indicator: Window type.

I. Automatic Liquid-Soap Dispenser:

1. Description: Automatic dispenser with infrared sensor to detect presence of hands; battery powered; designed for dispensing antibacterial soap in liquid or lotion or lather form as directed.
2. Mounting: As directed Deck mounted on vanity or Deck mounted on lavatory.
3. Capacity: As directed.
4. Materials: As directed.
5. Refill Indicator: LED indicator.
6. Low Battery Indicator: LED indicator.

J. Grab Bar:
1. Mounting: As directed Flanges with concealed or exposed fasteners.
2. Material: Stainless steel, 0.05 inch (1.3 mm) thick.

    a. Finish: Smooth, No. 4 finish (satin) on ends and slip-resistant texture in grip area.

3. Outside Diameter: As directed 1-1/4 inches (32 mm) or 1-1/2 inches (38 mm).
4. Configuration and Length: As indicated on Drawings or Straight, 36 inches (914 mm) long.

K. Sanitary-Napkin Disposal Unit:
1. Mounting: As directed Recessed or Partition mounted, dual access or Surface mounted.
2. Door or Cover: Self-closing, disposal-opening cover and hinged face panel with tumbler lockset.
3. Receptacle: Removable.
4. Material and Finish: As directed Stainless steel, No. 4 finish (satin) or ABS plastic, gray.

L. Seat-Cover Dispenser:
1. Mounting: As directed Surface mounted, Recessed or Partition mounted, dual access.
2. Minimum Capacity: As directed 250 or 500 seat covers.
3. Exposed Material and Finish: As directed Stainless steel, No. 4 finish (satin) or ABS plastic, gray.
4. Lockset: Tumbler type.

M. Mirror Unit:

1. Frame: As directed Stainless-steel angle, 0.05 inch (1.3 mm) thick, Stainless-steel channel, Stainless steel, fixed tilt or Stainless steel, adjustable tilt.

    a. Corners: As directed Manufacturer's standard, Mitered and mechanically interlocked or Welded and ground smooth.

2. Integral Shelf: 5 inches (127 mm) deep.
3. Hangers: Produce rigid, tamper- and theft-resistant installation, using method indicated below.

    a. One-piece, galvanized-steel, wall-hanger device with spring-action locking mechanism to hold mirror unit in position with no exposed screws or bolts.
    b. Wall bracket of galvanized steel, equipped with concealed locking devices requiring a special tool to remove.

4. Size: As indicated on Drawings.

N. Coat Hook:
1. Description: As directed Double or Single-prong unit.
2. Material and Finish: As directed Solid brass, polished, Polished brass-plated zinc alloy (zamac), Polished chrome-plated brass, Polished chrome-plated zinc alloy (zamac), Stainless steel, No. 4 finish (satin) or Stainless steel, No. 7 finish (polished).

2.3 PUBLIC-USE SHOWER ROOM ACCESSORIES

A. Shower Curtain Rod:

1. Description: As directed 1-inch (25.4-mm) OD; fabricated from nominal 0.0375-inch- (0.95-mm-) thick stainless steel or 1-1/4-inch (32-mm) OD; fabricated from nominal 0.05-inch- (1.3-mm-) thick stainless steel.
2. Mounting Flanges: Stainless-steel flanges designed for exposed fasteners.
3. Finish: Stainless steel, No. 4 finish (satin).

B. Shower Curtain:

1. Size: Minimum As directed 6 inches (152 mm) or 12 inches (305 mm) wider than opening by 72 inches (1828 mm) high.
2. Material: As directed Vinyl, minimum 0.006 inch (0.15 mm) thick, opaque, matte, Duck, minimum 8 oz. (227 g), white, 100 percent cotton or Nylon-reinforced vinyl, minimum 10 oz. (284 g) or 0.008-inch- (0.2-mm-) thick vinyl, with integral antibacterial agent.
3. Color: As directed White, Green or As selected from manufacturer's full range.
4. Grommets: Corrosion resistant at minimum 6 inches (152 mm) o.c. through top hem.
5. Shower Curtain Hooks: Chrome-plated or stainless-steel, spring wire curtain hooks with snap fasteners, sized to accommodate specified curtain rod. Provide one hook per curtain grommet.

C. Folding Shower Seat:
1. Configuration: As directed L-shaped seat, designed for wheelchair access, Rectangular seat, Triangular, corner-type seat or Stainless-steel seat designed to fold into recessed-mounted, stainless-steel wall box.
2. Seat: As directed Phenolic or polymeric composite of slat-type or one-piece construction in color as selected by Architect, White vinyl padded seat or Stainless steel, No. 4 finish (satin); 0.05-inch (1.3-mm) minimum nominal thickness; with single-piece, pan-type construction and edge seams welded and ground smooth.
3. Mounting Mechanism: Stainless steel, No. 4 finish (satin).
4. Dimensions: As directed.

D. Robe Hook:
1. Description: As directed Double or Single-prong unit.
2. Material and Finish: As directed Solid brass, polished, Polished brass-plated zinc alloy (zamac), Polished chrome-plated brass, Polished chrome-plated zinc alloy (zamac), Stainless steel, No. 4 finish (satin) or Stainless steel, No. 7 finish (polished).

2.4 PRIVATE-USE BATHROOM ACCESSORIES

A. Toilet Tissue Dispenser:

1. Description: As directed Single-roll dispenser, Double-roll dispenser, Single-roll dispenser with hood or Double-roll dispenser with hood.
2. Mounting: As directed Recessed or Surface mounted.
3. Capacity: Designed for 4-1/2- or 5-inch- (114- or 127-mm-) diameter tissue rolls.
4. Material and Finish: As directed Solid brass, polished, Polished brass-plated zinc alloy (zamac), Polished chrome-plated brass, Polished chrome-plated zinc alloy (zamac), Stainless steel, No. 4 finish (satin) or Stainless steel, No. 7 finish (polished).

B. Shower Curtain Rod:
1. Outside Diameter: As directed 1 inch (25.4 mm) or 1-1/4 inches (32 mm).
2. Mounting: As directed Flanges with exposed or concealed fasteners.
3. Rod Material and Finish: As directed Solid brass, polished, Polished chrome-plated brass, Stainless steel, No. 4 finish (satin) or Stainless steel, No. 7 finish (polished).
4. Flange Material and Finish: As directed Polished brass-plated zinc alloy (zamac), Polished chrome-plated brass, Polished chrome-plated zinc alloy (zamac), Stainless steel, No. 4 finish (satin) or Stainless steel, No. 7 finish (polished).
5. Accessories: Integral chrome-plated brass glide hooks.

C. Soap Dish:
1. Description: As directed.
2. Mounting: As directed Recessed or Surface mounted.
3. Material and Finish: As directed Solid brass, polished, Polished brass-plated zinc alloy (zamac), Polished chrome-plated brass, Polished chrome-plated zinc alloy (zamac), Stainless steel, No. 4 finish (satin) or Stainless steel, No. 7 finish (polished).

D. Medicine Cabinet:
1. Mounting: As directed Recessed, for nominal 4-inch (100-mm) wall depth or Surface mounted.
2. Size: 18 by 24 inches (460 by 610 mm).
3. Door: Framed mirror door concealing storage cabinet equipped with continuous hinge and spring-buffered, rod-type stop and magnetic door catch.
4. Shelves: Three, adjustable.
5. Material and Finish:

    a. Cabinet: As directed Stainless steel, No. 4 finish (satin) or Steel with corrosion-resistant finish.
    b. Mirror Frame: As directed.
    c. Door: As directed.
    d. Hinge: As directed.
    e. Shelves: As directed.

E. Robe Hook As directed:
1. Description: As directed Double or Single-prong unit.
2. Material and Finish: As directed Solid brass, polished, Polished brass-plated zinc alloy (zamac), Polished chrome-plated brass, Polished chrome-plated zinc alloy (zamac), Stainless steel, No. 4 finish (satin) or Stainless steel, No. 7 finish (polished).

F. Toothbrush and Tumbler Holder:
1. Description: As directed.

2. Material and Finish: As directed Solid brass, polished, Polished brass-plated zinc alloy (zamac), Polished chrome-plated brass, Polished chrome-plated zinc alloy (zamac), Stainless steel, No. 4 finish (satin) or Stainless steel, No. 7 finish (polished).

G. Towel Bar:
1. Description: As directed 3/4-inch- (19-mm-) square tube with rectangular end brackets or 3/4-inch- (19-mm-) round tube with circular end brackets.
2. Mounting: As directed Flanges with concealed or exposed fasteners.
3. Length: As directed 18 inches (457 mm), 24 inches (610 mm) or 30 inches (762 mm).
4. Material and Finish: As directed Stainless steel, No. 4 finish (satin), Stainless steel, No. 7 finish (polished) or Polished aluminum.

H. Towel Shelf:
1. Description: As directed Surface-mounted, guest-towel shelf with four 3/8-inch- (9-mm-) diameter or 5/16-inch- (8-mm-) square stainless-steel tubes mounted in support arms.

a. Towel Bar: As directed 1/4-inch- (6-mm-) diameter or 5/16-inch- (8-mm-) square stainless-steel towel bar below shelf.

2. Length: As directed 18 inches (457 mm) or 24 inches (610 mm).
3. Material and Finish: As directed Polished brass-plated, stainless-steel, Polished chrome-plated, stainless-steel or Stainless steel, No. 7 finish (polished).

I. Towel Rack:
1. Description: Surface-mounted, guest-towel unit with approximately 1/4-inch- (6-mm-) diameter wire rings welded to upright wire bracket.
2. Capacity: As directed Two, Three or Four sets of bath towels, hand towels, and washcloths.
3. Nominal Height: As directed 11 inches (279 mm), 17 inches (432 mm) or 21 inches (533 mm).
4. Material and Finish: As directed Polished brass-plated zinc alloy (zamac) or Polished chrome-plated zinc alloy (zamac).

2.5 HEALTHCARE ACCESSORIES

A. Specimen Pass-Through Cabinet:
1. Description: With self-closing doors on both sides, lock that prevents doors from both being opened at same time, and removable stainless-steel tray.
2. Nominal Wall Opening: 12 by 11-1/4 inches (305 by 285 mm), width by height.
3. Material and Finish: Stainless steel, No. 4 finish (satin).

B. Specimen Pass-Through Box:
1. Description: With minimum 12-inch- (305-mm-) diameter, turntable removable cylinder that revolves on stainless-steel, self-lubricating, ball-bearing plates, and with mechanism to prevent over rotation of cylinder.
2. Nominal Wall Opening: 13-1/4 by 14 inches (335 by 355 mm), width by height.
3. Material and Finish: Stainless steel, No. 4 finish (satin).
4. Lockset: Tumbler type.

C. Bedpan and Urinal Cabinet:
1. Description: For storing one conventional-size bedpan and one urinal bottle; with door that produces 1/2-inch (13-mm) opening at top and bottom of cabinet to allow air circulation.
2. Mounting: Recessed.
3. Nominal Wall Opening: 13-1/2 by 26-1/2 by 5 inches (340 by 670 by 130 mm), width by height by depth.
4. Material and Finish: Stainless steel, No. 4 finish (satin).

D. Bedpan and Urinal Rack:
1. Description: For storing one conventional-size bedpan and one urinal bottle.
2. Mounting: Surface mounted.
3. Size: 12 by 27 inches (300 by 685 mm), width by height.
4. Material and Finish: Stainless steel, No. 4 finish (satin).

2.6 WARM-AIR DRYERS

A. Warm-Air Dryer:
1. Description: Standard-speed, warm-air hand dryer.
2. Mounting: As directed Recessed, Semirecessed, Surface mounted, with low-profile design.
3. Operation: As directed Touch-button or Electronic-sensor activated with timed power cut-off switch.

a. Operation Time: As directed 30 to 40 or 80 seconds.

4. Cover Material and Finish: As directed Steel, with white enamel finish, Cast iron, with enamel finish in color selected by Architect, Chrome-plated steel, Stainless steel, No. 4 finish (satin), Molded plastic, gray or Molded plastic, white.
5. Electrical Requirements: As directed 115 V, 13 A, 1500 W, 115 V, 15 A, 1725 W, 115 V, 20 A, 2300 W or 208-240 V, 9-10 A, 1900-2300 W.

B. High-Speed Warm-Air Dryer:
1. Description: High-speed, warm-air hand dryer for rapid hand drying.
2. Mounting: As directed Recessed, Semirecessed, Surface mounted, with low-profile design.
3. Operation: Electronic-sensor activated with operation time of 10 to 20 seconds.
4. Cover Material and Finish: As directed Steel, with white enamel finish, Cast iron, with enamel finish in color selected by Architect, Chrome-plated steel, Stainless steel, No. 4 finish (satin), Molded plastic, gray or Molded plastic, white.
5. Electrical Requirements: As directed 115 V, 13 A, 1500 W, 115 V, 15 A, 1725 W, 115 V, 20 A, 2300 W or 208-240 V, 9-10 A, 1900-2300 W.

C. Multiple Airflow Warm-Air Dryer:
1. Description: Multiple airflow warm-air hand dryer, using two or more airstreams for rapid hand drying.
2. Mounting: As directed Recessed, Semirecessed, Surface mounted, with low-profile design.
3. Operation: Electronic-sensor activated with operation time of 10 to 20 seconds.

4. Cover Material and Finish: As directed Steel, with white enamel finish, Cast iron, with enamel finish in color selected by Architect, Chrome-plated steel, Stainless steel, No. 4 finish (satin), Molded plastic, gray or Molded plastic, white.
5. Electrical Requirements: As directed 115 V, 13 A, 1500 W, 115 V, 15 A, 1725 W, 115 V, 20 A, 2300 W or 208-240 V, 9-10 A, 1900-2300 W.

2.7 CHILDCARE ACCESSORIES

A. Diaper-Changing Station:
1. Description: As directed Horizontal or Vertical unit that opens by folding down from stored position and with child-protection strap.

    a. Engineered to support minimum of 250-lb (113-kg) static load when opened.

2. Mounting: As directed Surface mounted, with unit projecting not more than 4 inches (100 mm) from wall when closed or Semirecessed, with unit projecting not more than 1 inch (25 mm) from wall when closed.
3. Operation: By pneumatic shock-absorbing mechanism.
4. Material and Finish: As directed HDPE in manufacturer's standard color, HDPE with plastic-laminate insert in color selected by Architect, Stainless steel, No. 4 finish (satin), with replaceable insulated polystyrene tray liner and rounded plastic corners or Stainless steel, No. 4 finish (satin), exterior shell with rounded plastic corners; HDPE interior in manufacturer's standard color.
5. Liner Dispenser: Built in.

2.8 UNDERLAVATORY GUARDS

A. Underlavatory Guard:
1. Description: Insulating pipe covering for supply and drain piping assemblies that prevents direct contact with and burns from piping; allow service access without removing coverings.
2. Material and Finish: Antimicrobial, molded plastic, white.

2.9 CUSTODIAL ACCESSORIES

A. Utility Shelf:
1. Description: With exposed edges turned down not less than 1/2 inch (13 mm) and supported by two triangular brackets welded to shelf underside.
2. Size: 16 inches (406 mm) long by 6 inches (152 mm) deep.
3. Material and Finish: Not less than nominal 0.05-inch- (1.3-mm-) thick stainless steel, No. 4 finish (satin).

B. Mop and Broom Holder:
1. Description: Unit with shelf, hooks, holders, and rod suspended beneath shelf.
2. Length: 36 inches (914 mm).
3. Hooks: Four.
4. Mop/Broom Holders: Three, spring-loaded, rubber hat, cam type.
5. Material and Finish: Stainless steel, No. 4 finish (satin).

a. Shelf: Not less than nominal 0.05-inch- (1.3-mm-) thick stainless steel.
b. Rod: Approximately 1/4-inch- (6-mm-) diameter stainless steel.

C. Paper Towel (Folded) Dispenser:
1. Mounting: As directed Recessed, Semirecessed or Surface mounted.
2. Minimum Capacity: As directed 400 C-fold or 525 multifold towels, 600 C-fold or 800 multifold towels or 400 single-fold towels.
3. Material and Finish: As directed Stainless steel, No. 4 finish (satin) or ABS plastic, gray.
4. Lockset: Tumbler type.
5. Refill Indicator: Pierced slots at sides or front.

D. Paper Towel (Roll) Dispenser:
1. Description: Lever-actuated mechanism permits controlled delivery of paper rolls in preset lengths per stroke.
2. Mounting: As directed Recessed, Semirecessed or Surface mounted.
3. Minimum Capacity: 8-inch- (203-mm-) wide, 800-foot- (244-m-) long roll.
4. Material and Finish: As directed Stainless steel, No. 4 finish (satin) or ABS plastic, gray.
5. Lockset: Tumbler type.

E. Liquid-Soap Dispenser:
1. Description: As directed Designed for dispensing soap in liquid or lotion or lather form.
2. Mounting: As directed Deck mounted on vanity, Deck mounted on lavatory, Horizontally oriented, recessed, Horizontally oriented, surface mounted or Vertically oriented, surface mounted.
3. Capacity: As directed.
4. Materials: As directed.
5. Lockset: Tumbler type.
6. Refill Indicator: Window type.

2.10 FABRICATION

A. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of six keys to Owner's representative.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install accessories according to manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install unit level, plumb, and firmly anchored in locations and at heights indicated.

B. Grab Bars: Install to withstand a downward load of at least 250 lbf (1112 N), when tested according to ASTM F446.

END OF SECTION 102800

SECTION 102813.63 - DETENTION TOILET ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Safety hooks.
2. Shelves.
3. Miscellaneous toilet accessories.
4. Stainless-steel mirrors.
5. Grab bars.
6. Shower seats.

B. Related Requirements:

1. Section 102800 "Toilet, Bath, and Laundry Accessories" for nondetention toilet accessories.

1.2 COORDINATION

A. Detention Specialist: Coordinate with Section 013513.16 "Special Project Procedures for Detention Facilities" for requirements of this Section that are to be performed by a Detention Specialist or other entity.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference as directed.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

C. Samples: For each detention toilet accessory indicated.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Location of each built-in anchor supporting detention toilet accessories, including anchors to be installed as work of other Sections, drawn to scale and coordinated with each other, using input from installers of the items involved.

B. Anchor inspection reports.

C. Field quality-control certification signed by Contractor and Detention Specialist.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace detention toilet accessories that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 DETENTION SAFETY HOOKS

A. Individual, Curved, Detention Safety Hook: 0.188-inch (4.77-m) nominal-thickness, stainless-steel curved hook held by 0.141-inch- (3.58-mm) or 0.109-inch (2.77-mm) thick, stainless-steel bracket punched with not less than two holes for fastening with security fastener as directed. Provide friction washer assembly, adjustable with a nonremovable security screw that maintains pressure on hook and allows hook to pivot when load exceeds preset limit indicated in Part 3.

B. Individual, Straight, Detention Safety Hook: 3/8-inch (9.5-mm) or 1/4-inch (6.3-mm) diameter, stainless-steel straight hook as directed held by 0.109-inch (2.77-mm) or 0.078-inch (1.98-mm) thick, stainless-steel mounting plate approximately 4 inches (102 mm) square as directed. Provide pivoting assembly that maintains pressure on hook and snaps down when load exceeds as directed.
1. Mounting: Front mounting with security fasteners or Chase mounting with welded anchor nuts on backplate as directed.

C. Multiple, Curved, Safety Hook Strip: Minimum 5-1/2-inch (140-mm) high backplate by length indicated, formed thick, stainless-steel sheet as directed. Provide 0.188-inch (4.77-mm) thick, stainless-steel hooks attached to backplate; with each hook having a friction washer assembly, adjustable with a nonremovable security screw that maintains pressure on hook and allows hook to pivot when load exceeds preset limit indicated in Part 3.
1. Configuration: As directed.
2. Mounting: Front mounting with security fasteners or Chase mounting with welded anchor nuts on backplate as directed.

D. Multiple, Straight, Safety Hook Strip: Minimum 5-1/2-inch (140-mm) high backplate by length indicated, formed from thick, stainless-steel sheet as directed. Provide 3/8-inch (9.5-mm) or 1/4-inch (6.3-mm) diameter, stainless-steel straight hooks attached as directed to backplate. Provide pivoting assembly that maintains pressure on hook and snaps down when load exceeds as directed.
1. Configuration: As directed.

2. Mounting: Front mounting with security fasteners or Chase mounting with welded anchor nuts on backplate as directed.

E. Materials:

1. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A666 or ASTM A240/A240M, austenitic stainless steel, Type 304.

F. Stainless-Steel Finish:

1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
2. Polished Finish: Grind and polish surfaces to produce uniform finish, free of cross scratches.

a. Run grain of directional finishes with long dimension of each piece.
b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
c. Directional Satin Finish: No. 4.

2.2 DETENTION SHELVES

A. Surface-Mounted, Steel Detention Shelf: Minimum 6 inches high by 8 inches (152 mm high by 203 mm) deep as directed long; formed as directed from nominal-thickness, metallic-coated steel sheet; with welded side gussets and minimum 1-inch (25.4-mm) flanged front edge; with back punched for fastening to wall with security fasteners.

B. Surface-Mounted, Stainless-Steel Detention Shelf: Minimum 5-1/2 inches high by 8 inches (140 mm high by 203 mm) deep by 18 inches (457 mm) or 24 inches (610 mm) long as directed; formed from 0.078-inch (1.98-mm) thick, stainless-steel sheet; with welded side gussets and hemmed front edge.

1. Mounting: Front mounting with security fasteners or Chase mounting with welded anchor nuts on backplate as directed.

C. Materials:

1. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A666 or ASTM A240/A240M, austenitic stainless steel, Type 304.
2. Metallic-Coated Steel Sheet: ASTM A653/A653M, CS (Commercial Steel), Type B; with G60 (Z180) zinc (galvanized) coating designation.

D. Finishes:

1. Metallic-Coated Steel Sheet Finish:

a. Surface Preparation: Clean surfaces of oil and other contaminants. Use cleaning methods that do not leave residue. After cleaning, apply a conversion coating compatible with the organic coating to be applied over it. Clean welds, mechanical

connections, and abraded areas and apply galvanizing repair paint, complying with SSPC-Paint 20, to comply with ASTM A780/A780M.

b. Factory Prime Finish: After cleaning and pretreating, apply an air-dried primer compatible with the coating to be applied over it.

c. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of 2 mils (0.05 mm).

1) Color and Gloss: As directed.

2. Stainless-Steel Finish:

a. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

b. Polished Finish: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1) Run grain of directional finishes with long dimension of each piece.
2) When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
3) Directional Satin Finish: No. 4.

2.3 MISCELLANEOUS DETENTION TOILET ACCESSORIES

A. Recessed, Detention Toilet Tissue Holder: Minimum 5-inch diameter by 4-1/2 inches (127-mm diameter by 114 mm) deep; formed from 0.062-inch (1.57-mm) thick, stainless-steel sheet. Secure to wall with rear-mounting steel strap and adjustment bolts.

1. Face: 1-inch (25.4-mm) lip around entire face or 7-inch (178-mm) square face flange as directed.

B. Recessed, Detention Soap Dish: Minimum inside dimensions of 5-3/4 inches wide by 4-1/2 inches high by 2-1/2 inches (146 mm wide by 114 mm high by 64 mm) deep with 3/4-inch (19-mm) lip around entire face; formed from 0.062-inch (1.57-mm) or 0.050-inch (1.27-mm) thick, stainless-steel sheet as directed. Secure to wall with rear-mounting steel strap and adjustment bolts.

C. Materials:

1. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A666 or ASTM A240/A240M, austenitic stainless steel, Type 304.

D. Stainless-Steel Finish:

1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
2. Polished Finish: Grind and polish surfaces to produce uniform finish, free of cross scratches.

a. Run grain of directional finishes with long dimension of each piece.

b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
c. Directional Satin Finish: No. 4.

2.4 DETENTION MIRRORS

A. Small, Integrally Framed Detention Mirror: Mirror and integral frame formed from a single sheet of 0.038-inch (0.95-mm) or 0.062-inch (1.57-mm) thick, stainless steel; with round corners as directed.
1. Size: Approximately 9-1/2 by 11 inches (241 by 279 mm).
2. Mounting: Front mounting with security fasteners to 0.168-inch (4.27-mm) nominal-thickness, metallic-coated steel mounting plate or Chase mounting with welded anchor nuts on backplate as directed.

B. Large, Framed Detention Mirror with Round Corners: Formed from a single sheet of 0.038-inch (0.95-mm) or 0.078-inch (1.98-mm) thick, stainless steel as directed; enclosed in a metal frame.
1. Size: Minimum 12 by 16 inches (305 by 406 mm).
2. Frame: Formed from 0.064-inch (1.63-mm) nominal-thickness, chrome-plated steel or 0.078-inch (1.98-mm) thick, stainless-steel sheet as directed. Fabricate frame with welded and ground corners or from one piece of metal.
3. Mounting: Front mounting with security fasteners to 0.168-inch (4.27-mm) nominal-thickness, metallic-coated steel mounting plate or Chase mounting with welded anchor nuts on backplate as directed.

C. Large, Integrally Framed Detention Mirror with Round Corners: Mirror and integral frame formed from thick, stainless-steel sheet; with round corners as directed.
1. Size: Minimum 12 by 16 inches (305 by 406 mm).
2. Mounting: Front mounting with security fasteners to 0.168-inch (4.27-mm) nominal-thickness, metallic-coated steel mounting plate or Chase mounting with welded anchor nuts on backplate as directed.

D. Materials:

1. Metallic-Coated Steel Sheet: ASTM A653/A653M, CS (Commercial Steel), Type B; with G60 (Z180) zinc (galvanized) coating designation.
2. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A666 or ASTM A240/A240M, austenitic stainless steel, Type 304.

E. Finishes:

1. Metallic-Coated Steel Sheet Finish:

a. Surface Preparation: Clean surfaces of oil and other contaminants. Use cleaning methods that do not leave residue. After cleaning, apply a conversion coating compatible with the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas and apply galvanizing repair paint, complying with SSPC-Paint 20, to comply with ASTM A780/A780M.
b. Factory Prime Finish: After cleaning and pretreating, apply an air-dried primer compatible with the coating to be applied over it.

c. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of 2 mils (0.05 mm).

1) Color and Gloss: As directed.

2. Stainless-Steel Finish:

a. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
b. Polished Finish: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1) When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
2) Mirrorlike Reflective, Nondirectional Polish: No. 8.

3. Chrome Plating: ASTM B456, Service Condition Number SC 2 (moderate service).

2.5 DETENTION GRAB BARS

A. Grab Bars: 1-1/2 inches (38.1 mm) in diameter; formed from 0.038-inch (0.95-mm) thick, stainless-steel tubing, with 3-inch (76.2-mm) diameter flanges formed from 0.125-inch (3.18-mm) thick, stainless steel. Closure plates formed from 0.125-inch (3.18-mm) thick, stainless steel. All-welded construction.
1. Length: 36 inches (914 mm) long.
2. Mounting: Front mounting with security fasteners or Chase mounting with welded anchor nuts on backplate as directed.

B. Materials:

1. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A666 or ASTM A240/A240M, austenitic stainless steel, Type 304.
2. Stainless-Steel Tubing: ASTM A1016/A1016M, austenitic stainless steel, Type 304, seamless.

C. Stainless-Steel Finish:

1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
2. Polished Finish: Grind and polish surfaces to produce uniform finish, free of cross scratches.

a. Run grain of directional finishes with long dimension of each piece.
b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
c. Directional Satin Finish: No. 4.

2.6 DETENTION SHOWER SEATS

A. Shower Seats: Double-pan retractable, recessed shower seat with recessed handle. Approximately 16- by 16-inch (406- by 406-mm) overall size formed from 0.062-inch- (1.57-mm-) or 0.078-inch- (1.98-mm-) thick, stainless-steel sheet as directed. Seat pivots on solid 0.375-inch- (9.5-mm-) diameter stainless-steel rod and self-latches when closed. Minimum 750-lb (340-kg) loading capacity.

B. Materials:

1. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A666 or ASTM A240/A240M, austenitic stainless steel, Type 304.

C. Stainless-Steel Finish:

1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
2. Polished Finish: Grind and polish surfaces to produce uniform finish, free of cross scratches.

    a. Run grain of directional finishes with long dimension of each piece.
    b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
    c. Directional Satin Finish: No. 4.

2.7 FABRICATION

A. Coordinate dimensions and attachment methods of detention toilet accessories with those of adjoining construction to produce integrated assemblies with closely fitting joints and with edges and surfaces aligned unless otherwise indicated.

B. Shear and punch metals cleanly and accurately. Remove burrs.

C. Form edges and corners to be free of sharp edges and rough areas. Fold back exposed edges of unsupported sheet metal to form a 1/2-inch (12.7-mm) wide hem on the concealed side, or ease edges to a radius of approximately 1/32 inch (0.8 mm) and support with concealed stiffeners.

D. Form metal in maximum lengths to minimize joints. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

E. Weld corners and seams continuously to comply with referenced AWS standard.

F. Provide for anchorage of type indicated; coordinate with supporting structure. Fabricate and space anchoring devices to secure detention toilet accessories rigidly in place and to support expected loads.

G. Cut, reinforce, drill, and tap detention toilet accessories to receive hardware, security fasteners, and similar items.

H. Form exposed work true to line and level with accurate angles and surfaces. Grind off and ease edges unless otherwise indicated.

I. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible.

2.8 SECURITY FASTENERS

A. Operable only by tools produced by fastener manufacturer or other licensed fabricator for use on specific type of fastener.
   1. Drive-System Type: Pinned Torx-Plus or Pinned Torx as directed.

2.9 SECURITY SEALANTS

A. Polyurethane Security Sealants: Manufacturer's standard, nonsag, tamper-resistant sealant for joints with low movement.

B. Epoxy Security Sealants: Manufacturer's standard, nonsag, tamper-resistant sealant for joints with no movement.

2.10 ACCESSORIES

A. Concealed Bolts: ASTM A307, Grade A unless otherwise indicated.

B. Cast-in-Place Anchors in Concrete: Fabricated from corrosion-resistant materials capable of sustaining, without failure, a load equal to four times the load imposed, as determined by testing according to ASTM E488/E488M, conducted by a qualified testing agency; of type indicated below:

   1. Threaded or wedge type; galvanized ferrous castings, either ASTM A47/A47M malleable iron or ASTM A27/A27M cast steel. Provide bolts, washers, and shims as needed; hot-dip galvanized according to ASTM A153/A153M or ASTM F2329/F2329M.

C. Embedded Plate Anchors: Fabricated from mild steel shapes and plates, minimum 3/16-inch (4.8 mm) thick; with minimum 1/2-inch (12.7-mm) diameter, headed studs welded to back of plate.

D. Proprietary Built-in Masonry Anchors: Fabricated as directed into 6-inch (152-mm) or 8-inch (203-mm) deep blocks as directed matching size of concrete masonry units; with weld nuts attached on inside to receive field-bolted attachments.
   1. Finish: As directed.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Inspect built-in and cast-in anchor installations before installing detention toilet accessories to verify that anchor installations comply with requirements. Prepare inspection reports.

B. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing detention toilet accessories to in-place construction. Include threaded fasteners for inserts, security fasteners, and other connectors.

C. Provide temporary bracing or anchors in formwork for items that are to be built into construction.

D. Apply polyurethane or epoxy security sealant as directed around perimeter in a continuous ribbon on back of detention toilet accessories before installation.

E. Security Fasteners: Install detention toilet accessories using security fasteners with head style appropriate for installation requirements, strength, and finish of adjacent materials. Provide stainless-steel security fasteners in stainless-steel materials.

F. Grab Bars: Install to withstand a downward load of not less than 250 lbf (1112 N) per ASTM F446.

3.2 FIELD QUALITY CONTROL

A. Inspect installed products to verify compliance with requirements. Prepare inspection reports and indicate compliance with and deviations from the Contract Documents.

B. Prepare field quality-control certification endorsed by Detention Specialist that states installed products and their installation comply with requirements in the Contract Documents.

END OF SECTION 102813.63

SECTION 102819 - TUB AND SHOWER ENCLOSURES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes framed shower doors and enclosures.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For tub and shower doors and enclosures.

D. Samples: For each type of exposed finish.

1.3 INFORMATIONAL SUBMITTALS

A. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of tub and shower doors and enclosures that fail in materials or workmanship within specified warranty period, without monetary limitation.

1. Warranty Period: As directed Two or Three years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 FRAMED ENCLOSURES

A. Glass panels with full perimeter frames of extruded aluminum with screw-fastened corners. Minimum 3/8-inch (10-mm) penetration of glass into frame. Framing members of thickness required to support imposed loads.

B. Frames, Hardware, and Trim: Manufacturer's standard units as indicated and as required for a complete installation.

1. Materials: Aluminum; ASTM B221 (ASTM B221M).
2. Finish: As directed Clear anodic, Color anodic or Baked enamel or powder coat.
3. Color: As directed Silver, Gold or Black.

C. Bypassing Doors: Sliding units suspended from top track by fully adjustable ball-bearing rollers. Self-draining sill tracks with nylon panel guides. Molded jamb bumpers with concealed fasteners.

1. Door Pulls: Full-door-width, single-sided towel bars.

D. Swinging Doors: As directed Full-height piano hinge or Top-and-bottom pivot hinges. Manufacturer's standard pulls and latch.

E. Glazing: Comply with requirements in Section 088000 "Glazing."

F. Glazing: Safety glazing materials complying with 16 CFR 1201, Category II, with permanently etched identification acceptable to authorities having jurisdiction.

1. Glass Nominal Thickness: As directed 6 or 10 mm.
2. Patterned Glass: ASTM C1048, Kind FT (fully tempered), Type II, Class 1 (clear), Form 3; Quality-Q6, Finish F1 (patterned, one side).

a. Pattern: As directed Manufacturer's standard or Pattern P3 (random).

G. Fasteners: Manufacturer's standard stainless-steel or other noncorrosive fasteners.

H. Sealant: Mildew-resistant, single-component, nonsag, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 25, for Use NT.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Prepare and install per manufacturer's written instructions unless more stringent requirements are contained in GANA's "Glazing Manual."

B. Clean substrates, removing projections, filling voids, and sealing joints.

C. Set units level, plumb, and true to line, without warp or rack of frames and panels, and anchor securely in place.

D. Fasten components securely in place, with provisions for thermal movement. Install with concealed fasteners unless otherwise indicated.

E. Install components to drain and return water to tub or shower.

F. Install doors to produce smooth operation and tight fit at contact points.

G. Repair, refinish, or replace components damaged during installation.

3.2 ADJUSTING AND CLEANING

A. Adjust operating parts and hardware for smooth, quiet operation and watertight closure. Lubricate hardware and moving parts.

B. Remove nonpermanent labels, and clean surfaces immediately after installation.

END OF SECTION 102819

SECTION 104413 - FIRE PROTECTION CABINETS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes fire-protection cabinets for portable fire extinguishers.

1.2 PREINSTALLATION CONFERENCE

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For fire-protection cabinets.

C. Samples: For each type of exposed finish required.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 COORDINATION

A. Coordinate size of fire-protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.

B. Coordinate sizes and locations of fire-protection cabinets with wall depths.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Rated Fire-Protection Cabinets: Listed and labeled to comply with requirements in ASTM E814 for fire-resistance rating of walls where they are installed.

2.2 FIRE-PROTECTION CABINET

A. Cabinet Type: Suitable for fire extinguisher.

B. Cabinet Construction: As directed.

1. Fire-Rated Cabinets: Construct fire-rated cabinets with double walls fabricated from 0.043-inch (1.09-mm) thick cold-rolled steel sheet lined with minimum 5/8-inch (16-mm) thick fire-barrier material. Provide factory-drilled mounting holes.

C. Cabinet Material: As directed.

D. Recessed Cabinet:

1. Trimless with Concealed Flange: Surface of surrounding wall finishes flush with exterior finished surface of cabinet frame and door, without overlapping trim attached to cabinet. Provide recessed flange, of same material as box, attached to box, to act as plaster stop or drywall bead as directed.
2. Trimless with Hidden Flange: Flange of same metal and finish as box overlaps surrounding wall finish and is concealed from view by an overlapping door.
3. Exposed Flat Trim: One-piece combination trim and perimeter door frame overlapping surrounding wall surface, with exposed trim face and wall return at outer edge (backbend).

E. Semi-recessed Cabinet: One-piece combination trim and perimeter door frame overlapping surrounding wall surface, with exposed trim face and wall return at outer edge (backbend).

1. Square-Edge Trim: 1-1/4- to 1-1/2-inch (32- to 38-mm) backbend depth.
2. Rolled-Edge Trim: Backbend depth as directed

F. Surface-Mounted Cabinet: Cabinet box fully exposed and mounted directly on wall with no trim.

G. Cabinet Trim Material: As directed.

H. Door Material: As directed.

I. Door Style: As directed.

J. Door Glazing: As directed.

1. Acrylic Sheet Color: Clear or Bronze as directed transparent acrylic sheet.
2. Acrylic Sheet Color: Clear transparent acrylic sheet painted on unexposed side as directed.
3. Acrylic Bubble Color: Transparent or as directed.

K. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.

L. Accessories:

1. Mounting Bracket: Manufacturer's standard steel, designed to secure fire extinguisher to fire-protection cabinet, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.

2. Break-Glass Strike: Manufacturer's standard metal strike, complete with chain and mounting clip, secured to cabinet.
3. Break-Glass Door Handle: Manufacturer's standard, integral to glass with the words "PULL TO BREAK GLASS" applied to handle.
4. Lettered Door Handle: One-piece, cast-iron door handle with the word "FIRE" embossed into face.
5. Door Lock: Cam lock that allows door to be opened during emergency by pulling sharply on door handle or Cylinder lock, keyed alike to other cabinets as directed.
6. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as directed.

    a. Identify fire extinguisher in fire-protection cabinet with the words "FIRE EXTINGUISHER."

        1) Location: Applied to cabinet door or cabinet glazing as directed.
        2) Application Process: As directed.
        3) Lettering Color: As directed.
        4) Orientation: Vertical or Horizontal as directed.

7. Alarm: Manufacturer's standard alarm that actuates when fire-protection cabinet door is opened and that is powered by batteries or low voltage, complete with transformer as directed.

M. Materials:

1. Cold-Rolled Steel: ASTM A1008/A1008M, Commercial Steel (CS), Type B.

    a. Finish: As directed.
    b. Color: As directed.

2. Aluminum: ASTM B221 (ASTM B221M) for extruded shapes and aluminum sheet, with strength and durability characteristics of not less than Alloy 6063-T5 for aluminum sheet.

    a. Finish: As directed.
    b. Color: As directed.

3. Stainless Steel: ASTM A666, Type 304.

    a. Finish: No. 4 directional satin finish or No. 8 mirrorlike reflective, nondirectional polish as directed.

4. Copper Alloy, Brass: ASTM B36/B36M alloy as standard with manufacturer.

    a. Finish: Polished or Satin as directed.

5. Copper Alloy, Bronze: ASTM B36/B36M alloy as directed

    a. Finish: As directed.

6. Clear Float Glass: ASTM C1036, Type I, Class 1, Quality q3, 3 or 6 mm thick as directed.

7. Tempered Float Glass: ASTM C1048, Kind FT, Condition A, Type I, Quality q3, 3 mm thick, Class 1 (clear) or Class 2 (tinted, heat absorbing, and light reducing), bronze tint as directed.
8. Break Glass: Clear annealed float glass, ASTM C1036, Type I, Class 1, Quality q3, 1.5 mm thick, single strength.
9. Tempered Break Glass: ASTM C1048, Kind FT, Condition A, Type I, Quality q3, 1.5 mm thick.
10. Wire Glass: ASTM C1036, Type II, Class 1, Form 1, Quality q8, Mesh m1 (diamond), 6 mm thick.
11. Transparent Acrylic Sheet: ASTM D4802, Category A-1 (cell-cast sheet), mm thick as directed, with Finish 1 (smooth or polished) or Finish 2 (patterned, textured) as directed.

2.3 FABRICATION

A. Fire-Protection Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Prepare recesses for recessed and semi-recessed fire-protection cabinets as required by type and size of cabinet and trim style.

B. Install fire-protection cabinets in locations and at mounting heights indicated or, if not indicated, at heights acceptable to authorities having jurisdiction.

C. Fire-Protection Cabinets: Fasten cabinets to structure, square and plumb.

D. Identification: Apply decals or vinyl lettering at locations indicated as directed.

E. Adjust fire-protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.

END OF SECTION 104413

SECTION 104416 - FIRE EXTINGUISHERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes portable, hand-carried fire extinguishers and mounting brackets for fire extinguishers.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.4 INFORMATIONAL SUBMITTALS

A. Warranty: Sample of special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.6 COORDINATION

A. Coordinate type and capacity of fire extinguishers with fire-protection cabinets to ensure fit and function.

1.7 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace fire extinguishers that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Six years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."

B. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.

2.2 PORTABLE, HAND-CARRIED FIRE EXTINGUISHERS

A. Fire Extinguishers: Type, size, and capacity for each fire-protection cabinet and mounting bracket indicated.
   1. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B, and bar coding for documenting fire-extinguisher location, inspections, maintenance, and recharging.

B. Stored-Pressure Water Type: UL-rated 2-A, 2.5-gal. (9.5-L) nominal capacity, with water in stainless-steel container; with pressure-indicating gage.

C. Stored-Pressure Antifreeze Water Type: UL-rated 2-A, 2.5-gal. (9.5-L) nominal capacity, with water and approved antifreeze solution mixed for temperatures as low as minus 40 deg F (minus 40 deg C) in stainless-steel container; with pressure-indicating gage.

D. Stored-Pressure Water-Mist Type: UL-rated 2-A:C, 2.5-gal. (9.5-L) nominal capacity, with water in enameled-steel container; with pressure-indicating gage.

E. Regular Dry-Chemical Type: As directed UL-rated nominal capacity, with sodium bicarbonate-based dry chemical in manufacturer's standard enameled container.

F. Multipurpose Dry-Chemical Type: As directed UL-rated nominal capacity, with monoammonium phosphate-based dry chemical in manufacturer's standard enameled container.

G. Carbon Dioxide Type: As directed UL-rated 5-B:C, 5-lb (2.3-kg), 10-B:C, 10-lb (4.5-kg), 10-B:C, 15-lb (6.8-kg) or 10-B:C, 20-lb (9.1-kg) nominal capacity, with carbon dioxide in manufacturer's standard enameled-metal container.

H. Clean-Agent Type in Steel Container: As directed UL-rated 5-B:C, 4.75-lb (2.2-kg), 1-A:10-B:C, 10-lb (4.5-kg) or 2-A:10-B:C, 14-lb (6.4-kg) nominal capacity, with HFC blend agent and inert material in enameled-steel container; with pressure-indicating gage.

2.3 MOUNTING BRACKETS

A. Mounting Brackets: As directed Manufacturer's standard galvanized steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with plated or red or black baked-enamel finish.

B. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated by Architect.

1. Identify bracket-mounted fire extinguishers with the words "FIRE EXTINGUISHER" in red letter decals applied to mounting surface.

a. Orientation: As directed Vertical or Horizontal.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine fire extinguishers for proper charging and tagging.

1. Remove and replace damaged, defective, or undercharged fire extinguishers.

B. Install fire extinguishers and mounting brackets in locations indicated and in compliance with requirements of authorities having jurisdiction.

1. Mounting Brackets: Top of fire extinguisher to be at 42 inches (1067 mm) above finished floor.

C. Mounting Brackets: Fasten mounting brackets to surfaces, square and plumb, at locations indicated.

END OF SECTION 104416

SECTION 104513 - PHOTOLUMINESCENT EGRESS PATH MARKINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes photoluminescent egress path markings.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For photoluminescent egress path markings.

D. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Product test reports.

B. Sample warranties.

1.4 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to replace photoluminescent egress path markings that fail in materials or workmanship within specified warranty period.

1. Warranty Period: 25 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Luminance: Comply with one of the following; testing by a qualified testing agency:

1. UL 1994.
2. ASTM E2072; except that the charging source shall be 1 foot-candle (11 lux) of fluorescent illumination for 60 min., and the minimum luminance shall be 30 millicandelas/sq. m after 10 min. and 5 millicandelas/sq. m after 90 min.

2.2 PHOTOLUMINESCENT EGRESS PATH MARKINGS

A. Photoluminescent Egress Path Markings: Photoluminescent products containing no radioactive materials and requiring no electrical power.

B. Stair-and-Landing Nosing Markings: As directed Slip-resistive self-adhesive tape stripes; 1 inch (25 mm) or 2 inches (51 mm) wide.

C. Handrail Markings: As directed Self-adhesive tape or semi-rigid stripes; 1 inch (25 mm) or 2 inches (51 mm) wide.

D. Floor-Mounted Perimeter Markings: As directed Self-adhesive tape stripes; 1 inch (25 mm) or 2 inches (51 mm) wide; with directional arrows.

E. Wall-Mounted Perimeter Markings: As directed Self-adhesive tape stripes; 1 inch (25 mm) or 2 inches (51 mm) wide; with directional arrows.

F. Obstacle Marking: Self-adhesive stripe with alternating diagonal bands of black and photoluminescent material.

G. Door Frame Markings: As directed Self-adhesive tape stripes 1 inch (25 mm) or 2 inches (51 mm) wide; with directional arrows.

H. Door Hardware Markings: As directed Square self-adhesive sticker or rigid plastic, 4 inches by 4 inches (102 mm by 102 mm).

I. Exit Signs: Rigid plastic or aluminum sign for low-level mounting, with emergency exit symbol complying with NFPA 170; with self-adhesive backing; with a minimum height of 4 inches (102 mm); and with running man symbol facing right or left to suit installation condition.

J. Adhesive: As recommended by manufacturer.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install photoluminescent egress path markings according to manufacturer's written instructions.

END OF SECTION 104513

SECTION 105113 - METAL LOCKERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Knocked-down corridor lockers.
2. Welded corridor lockers.
3. Knocked-down athletic lockers.
4. Welded athletic lockers.
5. Locker benches.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:
1. As directed.

C. Shop Drawings: For metal lockers.

1. Include plans, elevations, sections, and attachment details.
2. Include locker identification system and numbering sequence.

D. Samples: For each color specified.

1.4 INFORMATIONAL SUBMITTALS

A. Sample warranty.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of metal lockers that fail in materials or workmanship, excluding finish, within specified warranty period.

1. Warranty Period for Knocked-Down Metal Lockers: Two years from date of Substantial Completion.
2. Warranty Period for Welded Metal Lockers: As directed Lifetime or 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Accessibility Standard: For lockers indicated to be accessible, comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design", the ABA standards of the Federal agency having jurisdiction and ICC A117.1.

2.2 KNOCKED-DOWN CORRIDOR LOCKERS

A. Doors: As directed One piece; fabricated from 0.060-inch (1.52-mm) or 0.075-inch (1.90-mm) nominal-thickness steel sheet; formed into channel shape with double bend at vertical edges and with right-angle single bend at horizontal edges.

1. Doors less than 12 inches (305 mm) wide may be fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet.
2. Doors for box lockers less than 15 inches (381 mm) wide may be fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet.
3. Reinforcement: Manufacturer's standard reinforcing angles, channels, or stiffeners for doors more than 15 inches (381 mm) wide; welded to inner face of doors.
4. Stiffeners: Manufacturer's standard full-height stiffener fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet; welded to inner face of doors.
5. Door Style: As directed Unperforated panel. Vented panel as follows:

    a. Louvered Vents: No fewer than six louver openings at top and bottom for single-tier, three louver openings at top and bottom for double-tier or two louver openings at top and bottom, or three louver openings at top or bottom, for triple-tier lockers.
    b. Perforated Vents: Manufacturer's standard shape and configuration.
    c. Concealed Vents: Slotted perforations in top and bottom horizontal door return flanges.

B. Body: Assembled by riveting or bolting body components together. Fabricate from unperforated steel sheet with thicknesses as follows:

1. Tops, Bottoms, and Intermediate Dividers: 0.024-inch (0.61-mm) nominal thickness, with single bend at sides.
2. Backs and Sides: 0.024-inch (0.61-mm) nominal thickness, with full-height, double-flanged connections.
3. Shelves: 0.024-inch (0.61-mm) nominal thickness, with double bend at front and single bend at sides and back.

C. Frames: Channel formed; fabricated from 0.060-inch (1.52-mm) nominal-thickness steel sheet; lapped and factory welded at corners; with top and bottom main frames factory welded into

vertical main frames. Form continuous, integral, full-height door strikes on vertical main frames.

D. Hinges:

1. Knuckle Hinges: Steel, full loop, five or seven knuckles, tight pin; minimum 2 inches (51 mm) high. Provide no fewer than three hinges for each door more than 42 inches (1067 mm) high.
2. Continuous Hinges: Manufacturer's standard, steel, full height.
3. Hinges: Manufacturer's standard, steel, continuous or knuckle type.

E. Projecting Door Handle and Latch: Finger-lift latch control designed for use with either built-in combination locks or padlocks; positive automatic latching, chromium plated; pry and vandal resistant.

1. Latch Hooks: Equip doors 48 inches (1219 mm) and higher with three latch hooks and doors less than 48 inches (1219 mm) high with two latch hooks; fabricated from 0.105-inch (2.66-mm) nominal-thickness steel sheet; welded or riveted to full-height door strikes; with resilient silencer on each latch hook.
2. Latching Mechanism: Manufacturer's standard, rattle-free latching mechanism and moving components isolated to prevent metal-to-metal contact, incorporating a prelocking device that allows locker door to be locked while door is open and then closed without unlocking or damaging lock or latching mechanism.

F. Recessed Door Handle and Latch: Stainless-steel cup with integral door pull, recessed so locking device does not protrude beyond door face; pry and vandal resistant.

1. Multipoint Latching: Finger-lift latch control designed for use with built-in combination locks, built-in key locks, or padlocks; positive automatic latching and prelocking.

    a. Latch Hooks: Equip doors 48 inches (1219 mm) and higher with three latch hooks and doors less than 48 inches (1219 mm) high with two latch hooks; fabricated from 0.105-inch (2.66-mm) nominal-thickness steel sheet; welded or riveted to full-height door strikes; with resilient silencer on each latch hook.
    b. Latching Mechanism: Manufacturer's standard, rattle-free latching mechanism.

2. Single-Point Latching: Nonmoving latch hook designed to engage bolt of built-in combination or cylinder lock, with steel padlock loop that projects through recessed cup and is finished to match metal locker body.

    a. Latch Hook: Equip each door with one latch hook.

G. As directed Door Handle and Latch for Box or 16-Person Lockers: Stainless-steel strike plate with integral pull; with steel padlock loop that projects through metal locker door.

H. Locks: As directed Combination padlocks, Built-in combination locks, Cylinder locks, Built-in, card-operated locks or Digital keypad locks or Built-in, coin-operated locks.

I. Identification Plates: As directed Manufacturer's standard, etched, embossed, or stamped aluminum or plastic plates, with numbers and letters at least 3/8 inch (9 mm) high.

J. Hooks: Manufacturer's standard ball-pointed hooks, aluminum or steel; zinc plated.

K. Coat Rods: Manufacturer's standard.

L. Legs: 6 inches (152 mm) high; formed by extending vertical frame members, or fabricated from 0.075-inch (1.90-mm) nominal-thickness steel sheet; welded to bottom of locker.

1. Provide closed front and end bases.

M. Continuous Zee Base: As directed Fabricated from 0.060-inch (1.52-mm), 0.075-inch (1.90-mm) or manufacturer's standard thickness, but not less than 0.060-inch (1.52-mm) nominal-thickness steel sheet.

1. Height: 4 inches (102 mm).

N. Continuous Sloping Tops: As directed Fabricated from 0.036-inch (0.91-mm), 0.048-inch (1.21-mm) or manufacturer's standard thickness, but not less than 0.036-inch (0.91-mm) nominal-thickness steel sheet.

1. Closures: As directed Vertical or Hipped-end type.

O. Individual Sloping Tops: Fabricated from 0.024-inch (0.61-mm) nominal-thickness steel sheet.

P. Recess Trim: Fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet.

Q. Filler Panels: As directed Fabricated from 0.036-inch (0.91-mm), 0.048-inch (1.21-mm) or manufacturer's standard thickness, but not less than 0.036-inch (0.91-mm) nominal-thickness steel sheet.

R. Boxed End Panels: Fabricated from 0.060-inch (1.52-mm) nominal-thickness steel sheet.

S. Finished End Panels: Fabricated from 0.024-inch (0.61-mm) nominal-thickness steel sheet.

T. Center Dividers: Fabricated from 0.024-inch (0.61-mm) nominal-thickness steel sheet.

U. Materials:

1. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
2. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B; with A60 (ZF180) zinc-iron, alloy (galvannealed) coating designation.

V. Finish: Baked enamel or powder coat.

1. Color: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from manufacturer's full range.

2.3 WELDED CORRIDOR LOCKERS

A. Doors: One piece; fabricated from 0.075-inch (1.90-mm) nominal-thickness steel sheet; formed into channel shape with double bend at vertical edges and with right-angle single bend at horizontal edges.

1. Reinforcement: Manufacturer's standard reinforcing angles, channels, or stiffeners for doors more than 15 inches (381 mm) wide; welded to inner face of doors.
2. Door Style: As directed Unperforated panel. Vented panel as follows:

    a. Louvered Vents: As directed No fewer than six louver openings at top and bottom for single-tier, three louver openings at top and bottom for double-tier or two louver openings at top and bottom, or three louver openings at top or bottom, for triple-tier lockers.
    b. Perforated Vents: Manufacturer's standard shape and configuration.

B. Body: Assembled by welding body components together. Fabricate from unperforated steel sheet with thicknesses as follows:

1. Tops, Bottoms, and Sides: 0.060-inch (1.52-mm) nominal thickness.
2. Backs: 0.048-inch (1.21-mm) nominal thickness.
3. Shelves: 0.060-inch (1.52-mm) nominal thickness, with double bend at front and single bend at sides and back.

C. Frames: Channel formed; fabricated from 0.060-inch (1.52-mm) nominal-thickness steel sheet; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames. Form continuous, integral, full-height door strikes on vertical main frames.

D. Hinges:

1. Knuckle Hinges: Steel, full loop, five or seven knuckles, tight pin; minimum 2 inches (51 mm) high. Provide no fewer than three hinges for each door more than 42 inches (1067 mm) high.
2. Continuous Hinges: Manufacturer's standard, steel, full height.
3. Hinges: Manufacturer's standard, steel, continuous or knuckle type.

E. Projecting Door Handle and Latch: Finger-lift latch control designed for use with either built-in combination locks or padlocks; positive automatic latching, chromium plated; pry and vandal resistant.

1. Latch Hooks: Equip doors 48 inches (1219 mm) and higher with three latch hooks and doors less than 48 inches (1219 mm) high with two latch hooks; fabricated from 0.105-inch (2.66-mm) nominal-thickness steel sheet; welded or riveted to full-height door strikes; with resilient silencer on each latch hook.
2. Latching Mechanism: Manufacturer's standard, rattle-free latching mechanism and moving components isolated to prevent metal-to-metal contact, incorporating a prelocking device that allows locker door to be locked while door is open and then closed without unlocking or damaging lock or latching mechanism.

F. Recessed Door Handle and Latch: Stainless-steel cup with integral door pull, recessed so locking device does not protrude beyond door face; pry and vandal resistant.

1. Multipoint Latching: Finger-lift latch control designed for use with built-in combination locks or padlocks; positive automatic latching and prelocking.

a. Latch Hooks: Equip doors 48 inches (1219 mm) and higher with three latch hooks and doors less than 48 inches (1219 mm) high with two latch hooks; fabricated from 0.120-inch (3.04-mm) nominal-thickness steel sheet; welded to full-height door strikes; with resilient silencer on each latch hook.
b. Latching Mechanism: Manufacturer's standard, rattle-free latching mechanism.

2. Single-Point Latching: As directed Nonmoving latch hook designed to engage bolt of built-in combination or cylinder lock or with steel padlock loop that projects through recessed cup and is finished to match metal locker body.

a. Latch Hook: Equip each door with one latch hook.

G. Door Handle and Latch for Box or 16-Person Lockers As directed: Stainless-steel strike plate with integral pull; with steel padlock loop that projects through metal locker door.

H. Locks: As directed Combination padlocks, Built-in combination locks, Cylinder locks, Built-in, card-operated locks, Digital keypad locks or Built-in, coin-operated locks.

I. Identification Plates: As directed Manufacturer's standard, etched, embossed, or stamped aluminum or plastic plates, with numbers and letters at least 3/8 inch (9 mm) high.

J. Hooks: Manufacturer's standard ball-pointed, aluminum or steel; zinc plated.

K. Coat Rods: Manufacturer's standard.

L. Legs: 6 inches (152 mm) high; formed by extending vertical frame members, or fabricated from 0.075-inch (1.90-mm) nominal-thickness steel sheet; welded to bottom of locker.

1. Provide closed front and end bases.

M. Continuous Zee Base: As directed Fabricated from, 0.060-inch (1.52-mm), 0.075-inch (1.90-mm) or manufacturer's standard thickness, but not less than 0.060-inch (1.52-mm) nominal-thickness steel sheet.

1. Height: 4 inches (102 mm).

N. Continuous Sloping Tops: Fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet, with a pitch of approximately 20 degrees.

1. Closures: As directed Vertical or Hipped-end type.

O. Recess Trim: Fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet.

P. Filler Panels: Fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet.

Q. Boxed End Panels: Fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet.

R. Finished End Panels: Fabricated from 0.024-inch (0.61-mm) nominal-thickness steel sheet to cover unused penetrations and fasteners, except for perimeter fasteners, at exposed ends of nonrecessed metal lockers; finished to match lockers.

S. Materials:

1. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
2. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B; with A60 (ZF180) zinc-iron, alloy (galvannealed) coating designation.

T. Finish: Baked enamel or powder coat.

1. Color: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

2.4 KNOCKED-DOWN ATHLETIC LOCKERS

A. Perforated Doors: One piece; fabricated from 0.075-inch (1.90-mm) nominal-thickness steel sheet with manufacturer's standard diamond perforations; formed into channel shape with double bend at vertical edges and with right-angle single bend at horizontal edges and latch point (bottom) and right-angle single bend at remaining edges for box lockers.

1. Reinforcement: Manufacturer's standard reinforcing angles, channels, or stiffeners for doors more than 15 inches (381 mm) wide; welded to inner face of doors.

B. Expanded-Metal Doors: Fabricated from 0.090-inch (2.28-mm) nominal-thickness expanded metal; welded to 0.105-inch (2.66-mm) nominal-thickness steel angle frame; with 0.090-inch (2.28-mm) nominal-thickness, steel sheet lock panel backed by 0.060-inch (1.52-mm) nominal-thickness, steel sheet retainer welded to door frame.

C. Body: Assembled by riveting or bolting body components together. Fabricate from unperforated steel sheet with thicknesses as follows:

1. Tops and Bottoms: 0.060-inch (1.52-mm) nominal thickness, with single bend at edges.
2. Backs: 0.048-inch (1.21-mm) nominal thickness.
3. Shelves: 0.060-inch (1.52-mm) nominal thickness, with double bend at front and single bend at sides and back.

D. Unperforated Sides: As directed Fabricated from 0.048-inch (1.21-mm) or 0.060-inch (1.52-mm) nominal-thickness steel sheet.

E. Perforated Sides: Fabricated from 0.060-inch (1.52-mm) nominal-thickness steel sheet with manufacturer's standard diamond perforations.

F. Expanded-Metal Sides: Fabricated from 0.090-inch (2.28-mm) nominal-thickness expanded metal; welded to 0.105-inch (2.66-mm) nominal-thickness steel angles or 0.060-inch (1.52-mm) nominal-thickness steel channel frames.

G. Frames: Channel formed; fabricated from 0.060-inch (1.52-mm) nominal-thickness steel sheet or 0.097-inch (2.45-mm) nominal-thickness steel angles; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames. Form continuous, integral, full-height door strikes on vertical main frames.

H. Reinforced Bottoms: As directed Structural channels, formed from 0.060-inch (1.52-mm) or 0.075-inch (1.90-mm) nominal-thickness steel sheet; welded to front and rear of side-panel frames.

I. Hinges:

1. Knuckle Hinges: Steel, full loop, five or seven knuckles, tight pin; minimum 2 inches (51 mm) high. Provide no fewer than three hinges for each door more than 42 inches (1067 mm) high.
2. Continuous Hinges: Manufacturer's standard, steel; side or top mounted as required by locker configuration.
3. Hinges: Manufacturer's standard, steel, continuous or knuckle type.

J. Recessed Door Handle and Latch: Stainless-steel cup with integral door pull, recessed so locking device does not protrude beyond door face; pry and vandal resistant.

1. Multipoint Latching: Finger-lift latch control designed for use with built-in combination locks, built-in cylinder locks, or padlocks; positive automatic latching and prelocking.

    a. Latch Hooks: Equip doors 48 inches (1219 mm) and higher with three latch hooks and doors less than 48 inches (1219 mm) high with two latch hooks; fabricated from 0.120-inch (3.04-mm) nominal-thickness steel sheet; welded to full-height door strikes; with resilient silencer on each latch hook.
    b. Latching Mechanism: Manufacturer's standard, rattle-free latching mechanism.

2. Single-Point Latching: As directed Nonmoving latch hook designed to engage bolt of built-in combination or cylinder lock or with steel padlock loop that projects through recessed cup and is finished to match metal locker body.

    a. Latch Hook: Equip each door with one latch hook.

K. Projecting Turn-Handle and Latch: Steel handle welded to manufacturer's standard, three-point, cremone-type latching mechanism consisting of steel rods or bars that engage locker frame at top and bottom of door, and center latch that engages strike jamb; with steel padlock loop.

L. Door Handle and Latch for Box Lockers: Stainless-steel strike plate with integral pull; with steel padlock loop that projects through metal locker door.

M. Locks: As directed Combination padlocks, Built-in combination locks, Cylinder locks, Built-in, card-operated locks, Digital keypad locks or Built-in, coin-operated locks.

N. Identification Plates: As directed Manufacturer's standard, etched, embossed, or stamped aluminum or plastic plates, with numbers and letters at least 3/8 inch (9 mm) high.

O. Hooks: Manufacturer's standard ball-pointed, aluminum or steel; zinc plated.

P. Coat Rods: Manufacturer's standard.

Q. Legs: 6 inches (152 mm) high; formed by extending vertical frame members, or fabricated from 0.075-inch (1.90-mm) nominal-thickness steel sheet; welded to bottom of locker.

1. Provide closed front and end bases.

R. Continuous Zee Base: 4 inches (102 mm) high; fabricated from 0.075-inch (1.90-mm) nominal-thickness steel sheet.

S. Continuous Sloping Tops: Fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet, with a pitch of approximately 20 degrees.

1. Closures: As directed Vertical or Hipped-end type.

T. Recess Trim: Fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet.

U. Filler Panels: Fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet.

V. Boxed End Panels: Fabricated from 0.060-inch (1.52-mm) nominal-thickness steel sheet.

W. Finished End Panels: Fabricated from 0.024-inch (0.61-mm) nominal-thickness steel sheet to cover unused penetrations and fasteners, except for perimeter fasteners, at exposed ends of nonrecessed metal lockers; finished to match lockers.

X. Materials:

1. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
2. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B; with A60 (ZF180) zinc-iron, alloy (galvannealed) coating designation.
3. Expanded Metal: ASTM F1267, Type II (flattened), Class I (uncoated), 3/4-inch (19-mm) steel mesh, with at least 70 percent open area.

Y. Finish: Baked enamel or powder coat.

1. Color: As directed As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

2.5 WELDED ATHLETIC LOCKERS

A. Perforated Doors: One piece; fabricated from 0.075-inch (1.90-mm) nominal-thickness steel sheet with manufacturer's standard diamond perforations; formed into channel shape with double bend at vertical edges and with right-angle single bend at horizontal edges and latch point (bottom) and right-angle single bend at remaining edges for box lockers.

1. Reinforcement: Manufacturer's standard reinforcing angles, channels, or stiffeners for doors more than 15 inches (381 mm) wide; welded to inner face of doors.

B. Expanded-Metal Doors: Fabricated from 0.090-inch (2.28-mm) nominal-thickness expanded metal; welded to 0.105-inch (2.66-mm) nominal-thickness steel angle frame; with 0.090-inch

(2.28-mm) nominal-thickness, steel sheet lock panel backed by 0.060-inch (1.52-mm) nominal-thickness, steel sheet retainer welded to door frame.

C. Body: Assembled by welding body components together. Fabricate from unperforated steel sheet with thicknesses as follows:

1. Tops and Bottoms: 0.060-inch (1.52-mm) nominal thickness, with single bend at edges.
2. Backs: 0.048-inch (1.21-mm) nominal thickness.
3. Shelves: 0.060-inch (1.52-mm) nominal thickness, with double bend at front and single bend at sides and back.

D. Unperforated Sides: As directed Fabricated from 0.048-inch (1.21-mm) or 0.060-inch (1.52-mm) nominal-thickness steel sheet.

E. Perforated Sides: Fabricated from 0.060-inch (1.52-mm) nominal-thickness steel sheet with manufacturer's standard diamond perforations.

F. Expanded-Metal Sides: Fabricated from 0.090-inch (2.28-mm) nominal-thickness expanded metal; welded to 0.105-inch (2.66-mm) nominal-thickness steel angles or 0.060-inch (1.52-mm) nominal-thickness steel channel frames.

G. Frames: Channel formed; fabricated from 0.060-inch (1.52-mm) nominal-thickness steel sheet or 0.097-inch (2.45-mm) nominal-thickness steel angles; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames. Form continuous, integral, full-height door strikes on vertical main frames.

H. Reinforced Bottoms: As directed Structural channels, formed from 0.060-inch (1.52-mm) or 0.075-inch (1.90-mm) nominal-thickness steel sheet; welded to front and rear of side-panel frames.

I. Hinges:

1. Knuckle Hinges: Steel, full loop, five or seven knuckles, tight pin; minimum 2 inches (51 mm) high. Provide no fewer than three hinges for each door more than 42 inches (1067 mm) high.
2. Continuous Hinges: Manufacturer's standard, steel; side or top mounted as required by locker configuration.
3. Hinges: Manufacturer's standard, steel, continuous or knuckle type.

J. Recessed Door Handle and Latch: Stainless-steel cup with integral door pull, recessed so locking device does not protrude beyond door face; pry and vandal resistant.

1. Multipoint Latching: Finger-lift latch control designed for use with built-in combination locks, built-in cylinder locks, or padlocks; positive automatic latching and prelocking.

a. Latch Hooks: Equip doors 48 inches (1219 mm) and higher with three latch hooks and doors less than 48 inches (1219 mm) high with two latch hooks; fabricated from 0.120-inch (3.04-mm) nominal-thickness steel sheet; welded to full-height door strikes; with resilient silencer on each latch hook.
b. Latching Mechanism: Manufacturer's standard, rattle-free latching mechanism.

2. Single-Point Latching: As directed Nonmoving latch hook designed to engage bolt of built-in combination or cylinder lock or with steel padlock loop that projects through recessed cup and is finished to match metal locker body.

    a. Latch Hook: Equip each door with one latch hook.

K. Projecting Turn-Handle and Latch: Steel handle welded to manufacturer's standard, three-point, cremone-type latching mechanism consisting of steel rods or bars that engage locker frame at top and bottom of door, and center latch that engages strike jamb; with steel padlock loop.

L. Door Handle and Latch for Box Lockers: Stainless-steel strike plate with integral pull; with steel padlock loop that projects through metal locker door.

M. Locks: As directed Combination padlocks, Built-in combination locks, Cylinder locks, Built-in, card-operated locks, Digital keypad locks or Built-in, coin-operated locks.

N. Identification Plates: As directed Manufacturer's standard, etched, embossed, or stamped aluminum or plastic plates, with numbers and letters at least 3/8 inch (9 mm) high.

O. Hooks: Manufacturer's standard ball-pointed, aluminum or steel; zinc plated.

P. Coat Rods: Manufacturer's standard.

Q. Legs: 6 inches (152 mm) high; formed by extending vertical frame members, or fabricated from 0.075-inch (1.90-mm) nominal-thickness steel sheet; welded to bottom of locker.

1. Provide closed front and end bases.

R. Continuous Zee Base: 4 inches (102 mm) high; fabricated from 0.075-inch (1.90-mm) nominal-thickness steel sheet.

S. Continuous Sloping Tops: Fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet, with a pitch of approximately 20 degrees.

1. Closures: As directed Vertical or Hipped-end type.

T. Recess Trim: Fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet.

U. Filler Panels: Fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet.

V. Boxed End Panels: Fabricated from 0.060-inch (1.52-mm) nominal-thickness steel sheet.

W. Finished End Panels: Fabricated from 0.024-inch (0.61-mm) nominal-thickness steel sheet to cover unused penetrations and fasteners, except for perimeter fasteners, at exposed ends of nonrecessed metal lockers; finished to match lockers.

X. Materials:

1. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
2. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B; with A60 (ZF180) zinc-iron, alloy (galvannealed) coating designation.

3. Expanded Metal: ASTM F1267, Type II (flattened), Class I (uncoated), 3/4-inch (19-mm) steel mesh, with at least 70 percent open area.

Y. Finish: Baked enamel or powder coat.

1. Color: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

2.6 LOCKS

A. Combination Padlock: As directed Key-controlled, three-number dialing combination locks; capable of five combination changes or Provided by Owner.

B. Built-in Combination Lock: Key-controlled, three-number dialing combination locks; capable of at least five combination changes made automatically with a control key.

1. Bolt Operation: Manually locking deadbolt or automatically locking spring bolt.

C. Cylinder Lock: Built-in, flush, cam lock with five-pin tumbler keyway, keyed separately and master keyed. Furnish two change keys for each lock and two master keys.

1. Key Type: As directed Flat or Grooved, with minimum 2- by 2.68-inch (51- by 68.3-mm) key head for accessible lockers.
2. Bolt Operation: Manually locking deadbolt or automatically locking spring bolt.

D. Built-in, Card-Operated Lock: Self-contained units mounted on interior of door with replaceable lock cylinders keyed separately and master keyed. Mount instruction decals on both door faces. Furnish one change card key for each lock and one master card key.

1. Bolt Operation: Manually locking deadbolt or automatically locking spring bolt.

E. Digital Keypad Lock: Battery-powered electronic keypad with reprogrammable manager and owner codes that override access. Three consecutive incorrect code entries shall disable lock for three minutes.

1. Designed for permanently assigned access via entry of user's four-digit code.
2. Designed for shared or temporary access by multiple users, with user-defined code to lock and unlock. Provide LED indicator to show when lock is in use.

2.7 LOCKER BENCHES

A. Provide bench units with overall assembly height of 17-1/2 inches (445 mm).

B. Bench Tops: Manufacturer's standard one-piece units, with rounded corners and edges.

1. Size: Minimum 9-1/2 inches wide by 1-1/4 inches thick (241 mm wide by 32 mm thick) except provide 20- to 24-inch- (508- to 610-mm-) wide tops where accessible benches are indicated.
2. Laminated clear hardwood with one coat of clear sealer on all surfaces and one coat of clear lacquer on top and sides.

C. Fixed-Bench Pedestals: Manufacturer's standard supports, with predrilled fastener holes for attaching bench top and anchoring to floor, complete with fasteners and anchors.

1. Color: As directed Match metal lockers, as indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from manufacturer's full range.

D. Movable-Bench Pedestals: Manufacturer's standard supports, with predrilled fastener holes for attaching bench top, complete with fasteners, and as follows:

1. Finish: As directed Manufacturer's standard or No. 4B.

E. Materials:

1. Stainless Steel: ASTM A666, Type 304.
2. Steel Tube: ASTM A500/A500M, cold rolled.

2.8 FABRICATION

A. Fabricate metal lockers square, rigid, without warp, and with metal faces flat and free of dents or distortion. Make exposed metal edges safe to touch and free of sharp edges and burrs.

B. Fabricate each metal locker with an individual door and frame; individual top, bottom, and back; and common intermediate uprights separating compartments.

C. Equipment: Provide each locker with an identification plate and the following equipment:

1. Single-Tier Units: Shelf, one double-prong ceiling hook, and two single-prong wall hooks.
2. Double-Tier Units: One double-prong ceiling hook and two single-prong wall hooks.
3. Triple-Tier Units: One double-prong ceiling hook.
4. Coat Rods: As indicated on Drawings, for each compartment of each locker, In lieu of ceiling hook for metal lockers 24 inches (610 mm) high or more or In lieu of ceiling hook for metal lockers 18 inches (457 mm) deep or more.

D. Knocked-Down Construction: As directed Fabricate metal lockers by assembling at Project site or preassembling at plant prior to shipping, using manufacturer's nuts, bolts, screws, or rivets.

E. Welded Construction: Factory preassemble metal lockers by welding all joints, seams, and connections; with no bolts, nuts, screws, or rivets used in assembly of main locker groups. Factory weld main locker groups into one-piece structures. Grind exposed welds smooth and flush.

F. Accessible Lockers: Fabricate as follows:

1. Locate bottom shelf no lower than 15 inches (381 mm) above the floor.
2. Where hooks, coat rods, or additional shelves are provided, locate no higher than 48 inches (1219 mm) above the floor.

G. Continuous Zee Base: Fabricated in lengths as long as practical to enclose base and base ends; finished to match lockers.

H. Continuous Sloping Tops: Fabricated in lengths as long as practical, without visible fasteners at splice locations; finished to match lockers.

I. Individual Sloping Tops: Fabricated in width to fit one locker frame in lieu of flat locker tops; with integral back; finished to match lockers. Provide wedge-shaped divider panels between lockers.

J. Recess Trim: Fabricated with minimum 2-1/2-inch (64-mm) face width and in lengths as long as practical; finished to match lockers.

K. Filler Panels: Fabricated in an unequal leg angle shape; finished to match lockers. Provide slip-joint filler angle formed to receive filler panel.

L. Boxed End Panels: Fabricated with 1-inch- (25-mm-) wide edge dimension, and designed for concealing fasteners and holes at exposed ends of non-recessed metal lockers; finished to match lockers.

M. Finished End Panels: Fabricated to conceal unused penetrations and fasteners, except for perimeter fasteners, at exposed ends of non-recessed metal lockers; finished to match lockers.

N. Center Dividers: Full-depth, vertical partitions between bottom and shelf; finished to match lockers.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install lockers level, plumb, and true; shim as required, using concealed shims.

1. Anchor locker runs at ends and at intervals recommended by manufacturer, but not more than 36 inches (910 mm) o.c. Using concealed fasteners, install anchors through backup reinforcing plates, channels, or blocking as required to prevent metal distortion.
2. Anchor single rows of metal lockers to walls near top and bottom of lockers or of lockers and to floor.
3. Anchor back-to-back metal lockers to floor.

B. Knocked-Down Lockers: Assemble with manufacturer's standard fasteners, with no exposed fasteners on door faces or face frames.

C. Welded Lockers: Connect groups together with manufacturer's standard fasteners, with no exposed fasteners on face frames.

D. Trim: Fit exposed connections of trim, fillers, and closures accurately together to form tight, hairline joints, with concealed fasteners and splice plates.

1. Attach recess trim to recessed metal lockers with concealed clips.
2. Attach filler panels with concealed fasteners.
3. Attach sloping-top units to metal lockers, with closures at exposed ends.
4. Attach boxed end panels using concealed fasteners to conceal exposed ends of non-recessed metal lockers.

5. Attach finished end panels using fasteners only at perimeter to conceal exposed ends of non-recessed metal lockers.

E. Fixed Benches: Provide no fewer than two pedestals for each bench, uniformly spaced not more than 72 inches (1830 mm) apart.

END OF SECTION 105113

SECTION 105113.13 - COIN-OPERATED METAL LOCKERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Steel, coin-operated lockers.
2. Stainless-steel, coin-operated lockers.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:
1. As directed.

C. Shop Drawings: For coin-operated lockers.

1. Include plans, elevations, sections, and attachment details.
2. Include locker identification system and numbering sequence.

D. Samples: For each color specified.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Accessibility Standard: For coin-operated lockers indicated to be accessible, comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design", the ABA standards of the Federal agency having jurisdiction and ICC A117.1.

2.2 STEEL, COIN-OPERATED LOCKERS

A. Coin-Operated Lockers: Fabricated from steel sheet with thicknesses as follows:

1. Tops, Bottoms, Sides, and Shelves: 0.024-inch (0.61-mm) nominal thickness.
2. Backs: 0.036-inch (0.91-mm) nominal thickness.
3. Frames: 0.060-inch (1.52-mm) nominal thickness.
4. Doors: 0.060-inch (1.52-mm) nominal thickness.
5. Exposed Ends of Nonrecessed Lockers: 0.060-inch (1.52-mm) nominal thickness.

B. Body: Assembled by welding or riveting body components to frames; flanged for double thickness at back vertical corners; back ventilated.

C. Frames: Channel formed; lapped and welded at corners; with top, bottom, and cross frames welded into vertical main frames. Form continuous, integral, full-height door strikes on vertical main frames, and equip frames with resilient bumpers to cushion door closing.

D. Doors: One piece; formed into channel shape at vertical edges and flanged at right angles at horizontal edges; fabricated to swing 180 degrees. Brace or reinforce inner face of doors with manufacturer's standard reinforcing angles, channels, or stiffener panels.

E. Hinges: Manufacturer's standard, full-loop, five- or seven-knuckle type; tight pin; minimum 2-1/2 inches (64 mm) high or continuous type, of same material as door; self-closing. Weld hinge to inside of door frame and attach hinge to door with factory-installed fasteners that are completely concealed and tamper resistant when door is closed.

F. Projecting Door Handle: Manufacturer's standard; stainless steel; pry and vandal resistant.

G. Built-in, Coin-Operated Locks: Self-contained units mounted on door interior with replaceable lock cylinders keyed separately and master keyed. Mount instruction decals on both door faces. Furnish one change key for each lock and one master key.

1. Bolt Operation: Manually locking deadbolt or automatically locking spring bolt.
2. Lock Type: As directed Fee return/deposit or collect/pay.
3. Fee Type: As directed Token, Coin, one quarter or Coin, two quarters.
4. Coin Box: Furnish with removable cylinder and key, and master code changer key.

H. Identification Plates: As directed Manufacturer's standard, etched, embossed, or stamped aluminum or plastic plates, with numbers and letters at least 3/8 inch (9 mm) high.

I. Hooks: Manufacturer's standard ball-pointed hooks, aluminum or steel; zinc plated.

J. Continuous Zee Base: Fabricated from 0.060-inch (1.52-mm) nominal-thickness steel sheet.

1. Height: 4 inches (102 mm).

K. As directed Continuous or Individual Sloping Tops: Fabricated from 0.036-inch (0.91-mm) nominal-thickness steel sheet.

L. Recess Trim: Fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet.

M. Filler Panels: Fabricated from 0.036-inch (0.91-mm) nominal-thickness steel sheet.

N. Finished End Panels: Fabricated from 0.024-inch (0.61-mm) nominal-thickness steel sheet.

O. Materials:

1. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
2. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B; with A60 (ZF180) zinc-iron, alloy (galvannealed) coating designation.

P. Finish: Baked enamel or powder coat.

1. Color: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

2.3 STAINLESS-STEEL, COIN-OPERATED LOCKERS

A. Stainless-Steel Lockers: Fabricated from stainless-steel sheet with thicknesses as follows:

1. Tops, Bottoms, Sides, Backs, and Shelves: 0.025 inch (0.64 mm) thick.
2. Frames: 0.062 inch (1.59 mm) thick.
3. Doors: 0.062 inch (1.59 mm) thick.
4. Exposed Ends of Non-recessed Lockers: 0.062 inch (1.59 mm) thick.

B. Body: Assembled by welding or riveting body components to frames; flanged for double thickness at back vertical corners; back ventilated.

C. Frames: Channel formed; lapped and welded at corners; with top, bottom, and cross frames welded into vertical main frames. Form continuous, integral, full-height door strikes on vertical main frames, and equip frames with resilient bumpers to cushion door closing.

D. Doors: One piece; formed into channel shape at vertical edges and flanged at right angles at horizontal edges; fabricated to swing 180 degrees. Brace or reinforce inner face of doors with manufacturer's standard reinforcing angles, channels, or stiffener panels.

E. Hinges: Manufacturer's standard, full-loop, five- or seven-knuckle type; tight pin; minimum 2-1/2 inches (64 mm) high or continuous type, of same material as door; self-closing. Weld hinge to inside of door frame and attach hinge to door with factory-installed fasteners that are completely concealed and tamper resistant when door is closed.

F. Projecting Door Handle: Manufacturer's standard; stainless steel; pry and vandal resistant.

G. Built-in, Coin-Operated Locks: Self-contained units mounted on door interior with replaceable lock cylinders keyed separately and master keyed. Mount instruction decals on both door faces. Furnish one change key for each lock and one master key.

1. Bolt Operation: Manually locking deadbolt or automatically locking spring bolt.
2. Lock Type: As directed Fee return/deposit or collect/pay.
3. Fee Type: As directed Token, Coin, one quarter or Coin, two quarters.
4. Coin Box: Furnish with removable cylinder and key, and master code changer key.

H. Identification Plates: As directed Manufacturer's standard, etched, embossed, or stamped aluminum or plastic plates, with numbers and letters at least 3/8 inch (9 mm) high.

I. Hooks: Manufacturer's standard ball-pointed hooks, aluminum or steel; zinc plated.

J. Continuous Zee Base: Fabricated from 0.062-inch (1.59-mm) thickness, stainless-steel sheet.

1. Height: 4 inches (102 mm).

K. As directed Continuous or Individual Sloping Tops: Fabricated from 0.038-inch (0.95-mm) thickness, stainless-steel sheet.

L. Recess Trim: Fabricated from 0.050-inch (1.27-mm) thickness, stainless-steel sheet.

M. Filler Panels: Fabricated from 0.038-inch (0.95-mm) thickness, stainless-steel sheet.

N. Finished End Panels: Fabricated from 0.024-inch (0.61-mm) thickness, steel sheet.

O. Materials: ASTM A666, Type 304, stainless-steel sheet.

P. Finish:

1. Tops, Bottoms, Sides, Backs, and Shelves: No. 2B or No. 4.
2. Frames: No. 3 or No. 4.
3. Doors: Manufacturer's standard patterned finish.

2.4 FABRICATION

A. Fabricate coin-operated lockers square, rigid, without warp, and with metal faces flat and free of dents or distortion. Make exposed metal edges safe to touch and free of sharp edges and burrs.

B. Fabricate each coin-operated locker with an individual door and frame; individual top, bottom, and back; and common intermediate uprights separating compartments.

C. For welded assemblies, factory weld main locker groups into one-piece structures. Grind exposed welds smooth and flush.

D. Equipment: Provide each locker with an identification plate and the following equipment:

1. Single-Tier Units: Shelf, one double-prong ceiling hook, and two single-prong wall hooks.
2. Double-Tier Units: One double-prong ceiling hook and two single-prong wall hooks.
3. Triple-Tier Units: One double-prong ceiling hook.
4. Coat Rods: As indicated on Drawings, For each compartment of each locker, In lieu of ceiling hook for coin-operated lockers 24 inches (610 mm) high or more or In lieu of ceiling hook for coin-operated lockers 18 inches (457 mm) deep or more.

E. Accessible Lockers: Fabricate as follows:

1. Locate bottom shelf no lower than 15 inches (381 mm) above the floor.

2. Where hooks, coat rods, or additional shelves are provided, locate no higher than 48 inches (1219 mm) above floor.

F. Continuous Zee Base: Fabricated in lengths as long as practical to enclose base and base ends; finished to match lockers.

G. Continuous Sloping Tops: Fabricated in lengths as long as practical, without visible fasteners at splice locations; finished to match lockers.

H. Individual Sloping Tops: Fabricated in width to fit one locker frame in lieu of flat locker tops; with integral back; finished to match lockers. Provide wedge-shaped divider panels between lockers.

I. Recess Trim: Fabricated with minimum 2-1/2-inch (64-mm) face width and in lengths as long as practical; finished to match lockers.

J. Filler Panels: Fabricated in an unequal leg angle shape; finished to match lockers. Provide slip-joint filler angle formed to receive filler panel.

K. Finished End Panels: Fabricated to conceal unused penetrations and fasteners, except for perimeter fasteners, at exposed ends of non-recessed coin-operated lockers; finished to match lockers.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install lockers level, plumb, and true; shim as required, using concealed shims.

1. Anchor coin-operated locker runs at ends and at intervals recommended by manufacturer, but not more than 36 inches (910 mm) o.c. Using concealed fasteners, install anchors through backup reinforcing plates, channels, or blocking as required to prevent metal distortion.
2. Anchor single rows of coin-operated lockers to walls near top and bottom of lockers or of lockers and to floor.
3. Anchor back-to-back, coin-operated lockers to floor.

B. Welded Lockers: Connect groups together with standard fasteners, with no exposed fasteners on face frames.

C. Trim: Fit exposed connections of trim, fillers, and closures accurately together to form tight, hairline joints, with concealed fasteners and splice plates.

1. Attach recess trim to recessed coin-operated lockers with concealed clips.
2. Attach filler panels with concealed fasteners.
3. Attach sloping-top units to coin-operated lockers, with closures at exposed ends.
4. Attach finished end panels using fasteners only at perimeter to conceal exposed ends of nonrecessed coin-operated lockers.

END OF SECTION 105113.13

SECTION 105116 - WOOD LOCKERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes wood-faced wood lockers and benches.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:
   1. As directed.

C. Shop Drawings: For wood lockers.

   1. Include plans, elevations, sections, and attachment details.
   2. Show locker identification system and numbering sequence.

D. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 QUALITY ASSURANCE

A. As directed.

1.6 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install wood lockers until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature at operating levels during the remainder of the construction period.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of lockers that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Three years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Accessibility Standard: For lockers indicated to be accessible, comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design", the ABA standards of the Federal agency having jurisdiction and ICC A117.1.

2.2 WOOD-FACED WOOD LOCKERS

A. Construction Style: Manufacturer's standard, Flush overlay, reveal overlay or as indicated.

1. Reveal Dimension: 1/2 inch (13 mm) or as indicated.

B. Locker Body: Fabricated from particleboard-core panels covered on both sides with thermoset decorative overlay.

1. Side, Top, and Bottom Panels: Manufacturer's standard 3/4 or 5/8 inch (19 or 16 mm) thick.
2. Back Panel: Manufacturer's standard 1/2 or 3/8 inch (13 or 9.5 mm) thick.
3. Exposed Panel Edges: As directed Thermoset decorative overlay to match panel, 1-mm-thick PVC, 3-mm-thick PVC or Solid wood to match doors.

C. Flush, Wood-Faced Doors: As directed Wood veneer applied over 3/4-inch- (19-mm-) thick, particleboard, medium-density-fiberboard or hardwood-plywood core, with solid wood pull of same wood species as face veneer for full length of door.

1. Wood Veneer: As directed Red oak, plain sliced or Species and cut as indicated.
2. Wood Edges: As directed 1/4-inch (6-mm) or 1-inch (25-mm) thick, solid wood of same wood species as face veneer.
3. PVC Edges: 3 mm thick.

D. Raised-Panel, Wood-Faced Doors: Stiles, rails, and center panel fabricated from 3/4-inch (19-mm) thick, wood-faced, medium-density fiberboard.

1. Wood Veneer: As directed Red oak, plain sliced or Species and cut as indicated.

E. Louver Wood Doors: As directed Solid-wood stiles and rails, 3/4 inch (19 mm) or 1-1/8 inches (29 mm) thick, with 1/4-inch (6-mm) thick, angled, solid-wood louver panels fixed in position. Dowel and glue stile-and-rail joints. Provide red oak, plain sawn or species and cut as indicated.

F. End Panels: Match style, material, construction, and finish of wood-faced wood doors.

G. Shelves: As directed Fabricated from particleboard-core panels covered on both sides with thermoset decorative overlay; fixed, fixed unless otherwise indicated, adjustable or fixed and adjustable, as indicated.

1. Thickness: 3/4 inch (19 mm).
2. Exposed Edges: As directed Thermoset decorative overlay to match panels, 1-mm-thick PVC, 3-mm-thick PVC or Solid wood to match doors.

H. Drawer Faces: Match style, material, construction, and finish of wood-faced wood doors. Attach drawer faces to subfronts with mounting screws from drawer interior.

I. Drawer Subfronts, Sides, and Backs: Fabricated from particleboard-core panels covered on both sides with thermoset decorative overlay.

1. Thickness: 1/2 inch (13 mm).
2. Exposed Edges: As directed Thermoset decorative overlay to match panel, 1-mm-thick PVC, 3-mm-thick PVC or Solid wood to match doors.

J. Drawer Bottoms: 1/4-inch (6-mm) thick, thermoset decorative overlay over particleboard core.

K. Corners and Filler Panels: 3/4-inch (19-mm) thick panel. Match style, material, construction, and finish of wood-faced wood doors.

L. Continuous Finish Base: Wood-faced, 3/4-inch (19-mm) thick panel that matches door faces; fabricated in lengths as long as practical to enclose base and base ends of lockers.

M. Continuously Sloping Tops: Wood-faced, 3/4-inch (19-mm) thick panel that matches door faces for installation over lockers with separate flat tops. Fabricate tops in lengths as long as practical, without visible fasteners at splice locations. Provide fasteners, supports, and closures, as follows:

1. Closures: As directed Vertical or Hipped-end type.

N. Transparent Finish: Manufacturer's standard two-coat, clear, catalyzed lacquer finish with sanding between coats. Seal with moisture-resistant topcoat.

1. Stain: As directed None required, Match approved sample for color or Match Architect's sample.

O. Painted Finish: Manufacturer's standard two-coat, painted acrylic finish.

1. Color: As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.

2.3 MATERIALS

1. As directed.

B. Solid Wood: Clear hardwood lumber, selected for compatible grain and color.

C. Composite Wood: Provide materials that comply with requirements of referenced quality standard for each type of woodwork and quality grade specified unless otherwise indicated.

1. Thermoset Decorative Panels: Particleboard or medium-density fiberboard finished with thermally fused, melamine-impregnated decorative paper and complying with requirements of NEMA LD 3, Grade VGL, for Test Methods 3.3, 3.4, 3.6, 3.8, and 3.10.
2. Medium-Density Fiberboard: ANSI A208.2, Grade 130.
3. Particleboard: As directed ANSI A208.1, Grade M-2 or Grade M-2-Exterior Glue.
4. Softwood Plywood: DOC PS 1, medium-density overlay.
5. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1.

D. Anchors: Material, type, size, and finish as required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.

E. Wood Support Base: As directed 2-by-4-inch nominal-size (51-by-102-mm actual-size) or 2-by-6-inch nominal-size (51-by-152-mm, actual-size) lumber treated with manufacturer's standard preservative-treatment, non-pressure or pressure process.

2.4 HARDWARE

A. Cam Padlock Hasp: Surface mounted, steel; finished to match other locker hardware.

B. Cylinder Lock: Built-in, flush cam locks with five-pin tumbler keyway, keyed separately and master keyed. Furnish two change keys for each lock and two master keys.

1. Key Type: As directed Flat, Grooved, with minimum 2-by-2.68-inch (51-by-68.3-mm) key head for accessible lockers.
2. Bolt Operation: Manually locking deadbolt or automatically locking spring bolt.

C. Built-in Combination Lock: Key-controlled, three-number dialing combination locks; capable of at least five combination changes made automatically with a control key.

1. Bolt Operation: As directed Manually locking deadbolt or Automatically locking spring bolt.

D. Built-in, Card-Operated Lock: Self-contained units mounted to door interior with replaceable lock cylinders, keyed separately and master keyed. Mount instruction decals to both door faces. Furnish one change card key for each lock and one master card key.

1. Bolt Operation: Manually locking deadbolt or automatically locking spring bolt.

E. Digital Keypad Lock: Battery-powered electronic keypad with reprogrammable manager and owner codes that override access. Three consecutive incorrect code entries shall disable lock for three minutes.

1. Designed for permanently assigned access via entry of user's four-digit code.
2. Designed for shared or temporary access by multiple users, with user-defined code to lock and unlock. Provide LED indicator to show when lock is in use.

F. Butt Hinges: 2-3/4-inch (70-mm), five-knuckle, steel hinges; back mounted.

1. As directed Provide two hinges for doors 36 inches (914 mm) or 42 inches (1066 mm) high and less.
2. As directed Provide three hinges for doors more than 36 inches (914 mm) or 42 inches (1066 mm) high.

G. Semi-concealed Hinges: Single-pivot, spring-loaded, steel hinges; back mounted.

1. As directed, Provide two hinges for doors 36 inches (914 mm) or 42 inches (1066 mm) high and less.
2. As directed Provide three hinges for doors more than 36 inches (914 mm) or 42 inches (1066 mm) high.

H. Frameless Hinges (European Type): Fully concealed, self-closing, nickel-plated steel, with not less than 125 degrees of opening.

1. As directed, Provide two hinges for doors 36 inches (914 mm) or 42 inches (1066 mm) high and less.
2. As directed, Provide three hinges for doors more than 36 inches (914 mm) or 42 inches (1066 mm) high.

I. Wire Pulls: Back mounted; As directed 4 inches (1020 mm) long, 5/16 inch (8 mm) in diameter or 5 inches (127 mm) long, 2-1/2 inches (62 mm) deep, and 5/16 inch (8 mm) in diameter.

J. Knobs: Metal; back mounted; As directed 1-inch (25-mm), 1-1/2-inch (38-mm) diameter, flat round or ball shape.

K. Accessible Handle: Metal, fixed, graspable lever handle and rose trim; surface mounted.

L. Shelf Rests: BHMA A156.9, B04013.

M. Drawer Slides: As directed Side-mounted, full-extension, zinc-plated steel drawer slides with steel ball bearings and rated for a load of 75 lbf (330 N) or 100 lbf (440 N).

N. Drawer Locks: Cam padlock hasp or cylinder lock; surface mounted on inside of drawer.

O. Hooks: Manufacturer's standard, ball-pointed aluminum or steel; As directed brass finished, chrome finished, epoxy coated or finished to match other locker hardware. Attach hooks with at least two fasteners.

1. Provide hooks as indicated on Drawings.
2. As directed Provide one double-prong ceiling hook and two single-prong wall hooks for each compartment of single-tier, double-tier triple-tier and open-front lockers.

P. Coat Rods: As directed 1-inch (25-mm) or 3/4-inch (19-mm) diameter steel; finished to match other locker hardware.

1. Provide coat rods as indicated on Drawings.
2. Provide coat rod for each compartment of single-tier lockers.

Q. Exposed Hardware Finish: As directed Polished chrome, Polished brass, Satin chrome or Satin brass unless otherwise indicated.

2.5 ACCESSORIES

A. Door Trays: Fabricated from solid wood, of same species as wood-faced wood doors.

B. Mirrors: ASTM C1036, Type I, Class 1, Quality q2.

1. Frame: Solid wood, of same species as wood-faced wood doors.

C. Security Lock Boxes: 6 inches wide by 6 inches high (152 mm wide by 152 mm high) by depth of locker; fabricated from same panels as locker side walls; As directed with piano hinge and cylinder or built-in combination lock.

D. Security Vaults: 6 inches wide by 4 inches high by 6 inches deep (152 mm wide by 102 mm high by 152 mm deep); fabricated from steel sheet; with built-in combination lock.

E. Protective Mats: 1/8-inch (3-mm) thick, solid rubber.

F. Number Identification Plates: As directed 1-1/2-inch (38-mm) diameter, etched, embossed, or stamped, brass, aluminum, stainless-steel or plastic plates with black numbers and letters at least 1/2 inch (13 mm) high. Identify lockers in sequence indicated on Drawings. Finish plates to match other wood locker hardware.

G. Name Identification Plates and Plate Holders: As directed 1-inch-high by 4-inch-wide (25-mm-high by 102-mm-wide), etched, embossed, or stamped, brass, aluminum, stainless-steel or plastic plates with black letters at least 1/2 inch (13 mm) high. Identify lockers as indicated on Drawings. Finish nameplates and holders to match other locker hardware.

H. Lighting: LED luminaires integrated within locker body.

1. Comply with NFPA 70.
2. Operation: As directed Door switch or motion sensor.

I. Electrical Outlets: Integrated within locker body. Comply with NFPA 70.

1. Duplex Convenience Receptacles: 112 V, 20A, NEMA WD 6 Configuration 5-20R.

a. Wall Plates: Manufacturer's standard. Coordinate with Section 262726 "Wiring Devices."

2. USB Charging Receptacles: 5 V dc, 4.2 A (minimum), USB Type A.

a. USB Receptacles: Dual and quad, Type A.
b. Wall Plates: Manufacturer's standard. Coordinate with Section 262726 "Wiring Devices."

2.6 BENCHES

A. End-Panel Locker Benches: Bench top supported between vertical end supports, as follows:

1. End Supports: As directed 4-inch (102-mm) or 3-inch (76-mm) thickness, with height and width 1 inch (25 mm) more than, 2 inches (51 mm) more than or same as height and width of bench.

    a. Finish: Match style, material, and finish of locker doors.

2. Bench Top: 3-inch (76-mm) thick, particleboard core. Provide 1/2-inch (13-mm) radius top edges on bench sides.

    a. Width: As directed 15 inches (381 mm) or 17 inches (432 mm) or except provide minimum 20-inch (508-mm) width where accessible benches are indicated.
    b. Height: 18 inches (457 mm) measured from top of bench to floor.
    c. Length: As directed 36 inches (914 mm), 48 inches (1219 mm), 60 inches (1524 mm) or 72 inches (1829 mm).
    d. Finish: Match style, material, and finish of locker doors.

B. Pedestal-Leg Locker Benches: Bench top supported by pedestal legs, minimum of two pedestals for each bench, with overall height of 18 inches (457 mm) measured from top of bench to floor, as follows:

1. Wood Pedestal Legs: Solid wood, in inverted-T shape. Match style, material, and finish of locker doors.
2. Metal Pedestal Legs: As directed 1-1/2-inch (38-mm) diameter, stainless-steel round tube or pipe, square, stainless-steel tube, square, brass tube, diameter, solid aluminum or square, painted steel tube.
3. Bench Tops: 1-1/4 inches (32 mm) deep; fabricated as follows:

    a. Butcher Block Top: Solid laminated hardwood of species and finish to match locker doors.
    b. Wood Top: Match style, material, and finish of locker doors.
    c. Width: As directed 15 inches (381 mm) or 17 inches (432 mm) or except provide minimum 20-inch (508-mm) width where accessible benches are indicated.
    d. Length: As directed 36 inches (914 mm), 48 inches (1219 mm), 60 inches (1524 mm) or 72 inches (1829 mm).

4. Bench Backs: Back support for full width of bench, secured to bench.

    a. Construction: Match style, material, and finish of bench top:
    b. Height: Beginning at a point no more than 2 inches (51 mm) above the seat surface to a height no less than 18 inches (457 mm) above the seat surface.

2.7 FABRICATION

A. Fabricate lockers square, rigid, without warp, and with finished faces flat and free of dents, scratches, and chips. Accurately factory machine components for attachments. Make joints tight and true.

B. Accessible Lockers: Fabricate as follows:

1. Locate bottom shelf no lower than 15 inches (381 mm) above the floor.

2. Where hooks, coat rods, or additional shelves are provided, locate no higher than 48 inches (1219 mm) above the floor.

C. Venting: As directed Fabricate lockers with space between doors and locker assembly of not less than 1/4 inch (6 mm) or 3/4 inch (19 mm), with painted metal security screen attached to each shelf between doors.

D. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

E. Shop cut openings, to maximum extent possible, to receive hardware, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install wood support base with 1/2-inch (13-mm) thick, plywood top.

B. Install lockers level, plumb, and true; use concealed shims.

C. Connect groups of lockers together with manufacturer's standard brass-finished fasteners, through predrilled holes, with no exposed fasteners on face frames. Fit lockers accurately together to form flush, tight, hairline joints.

D. Install lockers without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings, providing unencumbered operation. Complete installation of hardware and accessory items as indicated.

1. Installation Tolerance: No more than 1/8 inch in 96-inch (3 mm in 2400-mm) sag, bow, or other variation from a straight line. Shim as required with concealed shims.

E. Locker Anchorage: Fasten lockers through wood locker base, at ends, and not more than 36 inches (910 mm) o.c. with No. 8 flush-head wood screws sized for 1-inch (25-mm) penetration into wood base.

F. Locker Anchorage: Fasten lockers through back, near top and bottom, at ends with No. 8 flush-head wood screws sized for 1-inch (25-mm) penetration into wood framing, blocking, or furring and spaced not more than 16 inches (400 mm) o.c.

G. Scribe and cut corner and filler panels to fit adjoining work using fasteners concealed where practical. Repair damaged finish at cuts.

H. Attach sloping-top units to lockers, with end panels covering exposed ends.

I. Install number identification plates and name identification plates and holders after lockers are in place.

J. Provide protective mat at each shoe shelf.

K. Fixed Locker Benches: Securely fasten tops of pedestals to undersides of bench tops, and anchor bases to floor.

L. Movable Locker Benches: Place benches in locations indicated on Drawings.

M. Electrical Connections: Conceal conductors and cables.

END OF SECTION 105116

SECTION 105123 - PLASTIC-LAMINATE-CLAD LOCKERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes plastic-laminate-clad wood lockers and related benches.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For plastic-laminate-clad wood lockers.

1. Include plans, elevations, sections, and attachment details.
2. Show locker identification system and numbering sequence.

D. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 QUALITY ASSURANCE

1.6 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install lockers until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature at operating levels during the remainder of the construction period.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of lockers that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Three years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Accessibility Standard: For lockers indicated to be accessible, comply with applicable provisions as directed.

2.2 PLASTIC-LAMINATE-CLAD WOOD LOCKERS

A. Construction Style: As directed.

1. Reveal Dimension: 1/2 inch (13 mm).

B. Locker Body: Fabricated from particleboard-core panels covered on both sides with thermoset decorative overlay.

1. Side, Top, and Bottom Panels: Manufacturer's standard 3/4 or 5/8 inch (19 or 16 mm) thick.
2. Back Panel: Manufacturer's standard 1/2 or 3/8 inch (13 or 9.5 mm) thick.
3. Exposed Panel Edges: As directed.

C. Plastic-Laminate-Clad Wood Doors: High-pressure decorative laminate, Grade VGS, over both sides of particleboard or medium-density-fiberboard core as directed.

1. Thickness: 3/4 or 5/8 inch (19 or 16 mm) thick.
2. Panel Edges: As directed.

D. End Panels: Match style, material, construction, and finish of plastic-laminate-clad wood doors.

E. Shelves: Fabricated from particleboard-core panels covered on both sides with thermoset decorative overlay; As directed.

1. Thickness: 3/4 inch (19 mm).
2. Exposed Edges: As directed.

F. Drawer Faces: Match style, material, construction, and finish of plastic-laminate-clad wood doors. Attach drawer faces to subfronts with mounting screws from drawer interior.

G. Drawer Subfronts, Sides, and Backs: Fabricated from particleboard-core panels covered on both sides with thermoset decorative overlay.

1. Thickness: 1/2 inch (13 mm).
2. Exposed Edges: As directed.

H. Drawer Bottoms: 1/4-inch (6-mm) thick, thermoset decorative overlay over particleboard core.

I. Corners and Filler Panels: 3/4-inch (19-mm) thick panels. Match style, material, construction, and finish of plastic-laminate-clad wood doors.

J. Continuous Finish Base: Plastic-laminate-clad, 3/4-inch (19-mm) thick panel that matches door faces; fabricated in lengths as long as practical to enclose base and base ends of lockers.

K. Continuously Sloping Tops: Plastic-laminate-clad, 3/4-inch (19-mm) thick panel that matches door faces for installation over lockers with separate flat tops. Fabricate tops in lengths as long as practical, without visible fasteners at splice locations. Provide fasteners, supports, and closures, as follows:

1. Closures: Vertical or Hipped-end type as directed.

L. Plastic-Laminate Colors, Patterns, and Finishes:

1. As indicated by manufacturer's designations.
2. Match Architect's samples.
3. As selected by Architect from plastic-laminate manufacturer's full range as directed.

2.3 MATERIALS

A. Composite Wood: Provide materials that comply with requirements of referenced quality standard for each type of woodwork and quality grade specified unless otherwise indicated.
1. Thermoset Decorative Panels: Particleboard or medium-density fiberboard finished with thermally fused, melamine-impregnated decorative paper and complying with requirements of NEMA LD 3, Grade VGL, for Test Methods 3.3, 3.4, 3.6, 3.8, and 3.10.
2. Medium-Density Fiberboard: ANSI A208.2, Grade 130.
3. Particleboard: ANSI A208.1, Grade M-2 or Grade M-2-Exterior Glue as directed.
4. Softwood Plywood: DOC PS 1, medium-density overlay.

B. High-Pressure Decorative Laminate: NEMA LD 3, grades as follows:

1. Horizontal Surfaces: Grade HGS or Grade HGL, as directed.
2. Postformed Surfaces: Grade HGP.
3. Vertical Surfaces: Grade HGS or Grade VGS, as directed.

C. Anchors: Material, type, size, and finish as required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.

D. Wood Support Base: 2-by-4-inch nominal-size (51-by-102-mm, actual-size) or 2-by-6-inch, nominal-size (51-by-152-mm, actual-size) lumber treated with manufacturer's standard preservative-treatment, non-pressure or pressure process as directed.

2.4 HARDWARE

A. Cam Padlock Hasp: Surface mounted, steel; finished to match other locker hardware.

B. Cylinder Lock: Built-in, flush cam locks with five-pin tumbler keyway, keyed separately and master keyed. Furnish two change keys for each lock and two master keys.

1. Key Type: Flat or Grooved as directed, with minimum 2-by-2.68-inch (51-by-68.3-mm) key head for accessible lockers, as directed.
2. Bolt Operation: Manually locking deadbolt or automatically locking spring bolt, as directed.

C. Built-in Combination Lock: Key-controlled, three-number dialing combination locks; capable of at least five combination changes made automatically with a control key.

1. Bolt Operation: Manually locking deadbolt or automatically locking spring bolt, as directed.

D. Built-in, Card-Operated Lock: Self-contained units mounted to door interior with replaceable lock cylinders, keyed separately and master keyed. Mount instruction decals to both door faces. Furnish one change card key for each lock and one master card key.

1. Bolt Operation: Manually locking deadbolt or automatically locking spring bolt, as directed.

E. Digital Keypad Lock: Battery-powered electronic keypad with reprogrammable manager and owner codes that override access. Three consecutive incorrect code entries shall disable lock for three minutes.

1. Designed for permanently assigned access via entry of user's four-digit code.
2. Designed for shared or temporary access by multiple users, with user-defined code to lock and unlock. Provide LED indicator to show when lock is in use.

F. Butt Hinges: 2-3/4-inch (70-mm), five-knuckle steel hinges; back mounted.

1. Provide two hinges for doors 36 inches (910 mm) or 42 inches (1067 mm) high and less, as directed.
2. Provide three hinges for doors more than 36 inches (910 mm) or 42 inches (1070 mm) high, as directed.

G. Semi-concealed Hinges: Single-pivot, spring-loaded steel hinges; back mounted.

1. Provide two hinges for doors 36 inches (910 mm) or 42 inches (1070 mm) high and less, as directed.
2. Provide three hinges for doors more than 36 inches (910 mm) or 42 inches (1070 mm) high, as directed.

H. Frameless Hinges (European Type): Fully concealed, self-closing, nickel-plated steel, with not less than 125 degrees of opening.

1. Provide two hinges for doors 36 inches (910 mm) or 42 inches (1070 mm) high and less, as directed.
2. Provide three hinges for doors more than 36 inches (910 mm) or 42 inches (1070 mm) high, as directed.

I. Wire Pulls: Back mounted; 4 inches (102 mm) long, 5/16 inch (8 mm) in diameter or 5 inches (127 mm) long, 2-1/2 inches (62 mm) deep, and 5/16 inch (8 mm) in diameter, as directed.

J. Knobs: Metal; back mounted; 1-inch- (25-mm-) or 1-1/2-inch- (38-mm-) diameter as directed, flat round or ball shape, as directed.

K. Accessible Handle: Metal, fixed, graspable lever handle and rose trim; surface mounted.

L. Shelf Rests: BHMA A156.9, B04013.

M. Drawer Slides: Side-mounted, full-extension, zinc-plated steel drawer slides with steel ball bearings, rated for a load of 75 lbf (330 N) or 100 lbf (440 N) as directed.

N. Drawer Locks: Cam padlock hasp or cylinder lock; surface mounted on inside of drawer.

O. Hooks: Manufacturer's standard, ball-pointed aluminum or steel; As directed. Attach hooks with at least two fasteners.

1. Provide hooks as indicated on Drawings.
2. Provide one double-prong ceiling hook and two single-prong wall hooks for each compartment of lockers, as directed.

P. Coat Rods: 1-inch (25-mm) or 3/4-inch (19-mm) diameter steel as directed; finished to match other locker hardware.

1. Provide coat rods as indicated on Drawings.
2. Provide coat rod for each compartment of single-tier lockers.

Q. Exposed Hardware Finish: As directed.

2.5 ACCESSORIES

A. Door Trays: Fabricated from solid wood.

B. Mirrors: ASTM C1036, Type I, Class 1, Quality q2.

1. Frame: Solid wood.

C. Security Lock Boxes: 6 inches wide by 6 inches high (152 mm wide by 152 mm high) by depth of locker; with piano hinge and cylinder or built-in combination lock as directed.

D. Security Vaults: 6 inches wide by 4 inches high by 6 inches deep (152 mm wide by 102 mm high by 152 mm deep); fabricated from steel sheet; with built-in combination lock.

E. Protective Mats: 1/8-inch (3-mm) thick, solid rubber.

F. Number Identification Plates: 1-1/2-inch (38-mm) diameter, etched, embossed, or stamped, plates as directed with black numbers and letters at least 1/2 inch (13 mm) high. Identify lockers in sequence indicated on Drawings. Finish plates to match other locker hardware.

G. Name Identification Plates and Plate Holders: 1-inch-high by 4-inch-wide (25-mm-high by 102-mm-wide), etched, embossed, or stamped, plates as directed with black letters at least 1/2 inch (13 mm) high. Identify lockers as indicated on Drawings. Finish nameplates and holders to match other locker hardware.

2.6 BENCHES

A. End-Panel Locker Benches: Bench top supported between vertical end supports, as follows:

1. End Supports: 4-inch (102-mm) or 3-inch (76-mm) thickness as directed, with height and width of bench as directed.

    a. Finish: Match style, material, construction, and finish of plastic-laminate-clad locker doors.

2. Bench Top: 3-inch (76-mm) thick, particleboard core. Provide 1/2-inch (13-mm) radius top edges on bench sides.

    a. Width: 15 inches (381 mm) or 17 inches (432 mm) as directed except provide minimum 20-inch (508-mm) width where accessible benches are indicated.
    b. Height: 18 inches (457 mm) measured from top of bench to floor.
    c. Length: As directed.
    d. Finish: Bond the following material to core:

        1) High-Pressure Decorative Laminate: As directed.

B. Pedestal-Leg Locker Benches: Bench top supported by pedestal legs, minimum of two pedestals for each bench, with overall height of 18 inches (457 mm) measured from top of bench to floor, as follows:

1. Wood Pedestal Legs: Solid wood, in inverted-T shape. Match finish of locker doors.
2. Metal Pedestal Legs: 1-1/2-inch (38-mm) as directed.
3. Bench Tops: 1-1/4 inches (32 mm) deep; fabricated as follows:

    a. Butcher Block Top: Solid laminated hardwood.
    b. High-Pressure Decorative Laminate Top: Post formed over particleboard core, with color as directed.
    c. Width: As directed.
    d. Length: As directed.

4. Bench Backs: Back support for full width of bench, secured to bench.

    a. Construction: Match style, material, and finish of bench top:
    b. Height: Beginning at a point no more than 2 inches (51 mm) above the seat surface to a height no less than 18 inches (457 mm) above the seat surface.

2.7 FABRICATION

A. Fabricate lockers square, rigid, without warp, and with finished faces flat and free of dents, scratches, and chips. Accurately factory machine components for attachments. Make joints tight and true.

B. Accessible Lockers: Fabricate as follows:

1. Locate bottom shelf no lower than 15 inches (381 mm) above the floor.

2. Where hooks, coat rods, or additional shelves are provided, locate no higher than 48 inches (1219 mm) above the floor.

C. Venting: Fabricate lockers with space between doors and locker assembly of not less than 1/4 inch (6 mm) or 3/4 inch (19 mm) as directed, with painted metal security screen attached to each shelf between doors.

D. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

E. Shop cut openings, to maximum extent possible, to receive hardware, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

PART 3 - EXECUTION

3.1 EXAMINATION

3.2 INSTALLATION

A. Install wood support base with 1/2-inch (13-mm) thick, plywood top.

B. Install lockers level, plumb, and true; use concealed shims.

C. Connect groups of lockers together with manufacturer's standard brass-finished fasteners, through predrilled holes, with no exposed fasteners on face frames. Fit lockers accurately together to form flush, tight, hairline joints.

D. Install lockers without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings, providing unencumbered operation. Complete installation of hardware and accessory items as indicated.

1. Installation Tolerance: No more than 1/8 inch in 96-inch (3 mm in 2400-mm) sag, bow, or other variation from a straight line. Shim as required with concealed shims.

E. Locker Anchorage: Fasten lockers through wood locker base, at ends, and not more than 36 inches (910 mm) o.c. with No. 8 flush-head wood screws sized for 1-inch (25-mm) penetration into wood base.

F. Locker Anchorage: Fasten lockers through back, near top and bottom, at ends with No. 8 flush-head wood screws sized for 1-inch (25-mm) penetration into wood framing, blocking, or furring and spaced not more than 16 inches (400 mm) o.c.

G. Scribe and cut corner and filler panels to fit adjoining work using fasteners concealed where practical. Repair damaged finish at cuts.

H. Attach sloping-top units to lockers, with end panels covering exposed ends.

I. Install number identification plates and name identification plates and holders after lockers are in place.

J. Provide protective mat at each shoe shelf.

K. Fixed Locker Benches: Securely fasten tops of pedestals to undersides of bench tops, and anchor bases to floor.

L. Movable Locker Benches: Place benches in locations indicated on Drawings.

END OF SECTION 105123

SECTION 105143 - WIRE MESH STORAGE LOCKERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes wire mesh storage lockers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: Include plans, elevations, sections, details, and attachments.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

2.2 MATERIALS

A. Steel Wire: ASTM A510 (ASTM A510M).

B. Steel Plates, Channels, Angles, and Bars: ASTM A36/A36M.

C. Steel Sheet: Cold-rolled steel sheet, ASTM A1008/A1008M, Commercial Steel (CS), Type B.

D. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B, with G60 (Z180) zinc (galvanized) or A60 (ZF180) zinc-iron-alloy (galvannealed) coating designation.

E. Seismic Bracing: Angles with legs not less than 1-1/4 inch (32 mm) wide, formed from 0.040-inch- (1.0-mm-) thick, metallic-coated steel sheet; with bolted connections and 1/4-inch- (6-mm-) diameter bolts.

F. Shop Primers: Provide primers that comply with Section 099123 "Interior Painting."

G. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer, complying with MPI#79.

H. Galvanizing Repair Paint: High-zinc-dust-content paint for regalvanizing welds in steel, complying with SSPC-Paint 20.

2.3 WIRE MESH STORAGE LOCKERS

A. Unit Sizes:

1. Width: As directed 36 inches (914 mm) or 48 inches (1219 mm).
2. Depth: As directed 36 inches (914 mm), 48 inches (1219 mm) or 60 inches (1524 mm).
3. Height: 90 inches (2286 mm)

B. Mesh: As directed 0.135-inch (3.5-mm) diameter, intermediate-crimp steel wire woven into 1-1/2-inch (38-mm) diamond or 1-by-2-inch (25-by-50-mm) rectangular mesh.

C. Wall Panels: 1-1/4-by-1-1/4-by-1/8-inch (32-by-32-by-3-mm) steel angle framing on top, bottom, and back sides, and 3-by-1/8-inch (76-by-3-mm) cold-rolled steel flat bar framing on front side, with wire mesh welded to framing.

1. Horizontal Panel Stiffeners: 1-1/4-by-1-1/4-by-1/8-inch (32-by-32-by-3-mm) steel angles or 3/4-by-1/4-inch (19-by-6-mm) hot-rolled steel flat bars.

D. Backs: As directed 0.028-inch (0.71-mm) or 0.034-inch (0.86-mm) thick, metallic-coated steel sheet. Required for back-to-back units only.

E. Doors: Fabricated from same mesh as wall panels, with framing fabricated from 1-1/4-by-1-1/4-by-1/8-inch (32-by-32-by-3-mm) steel angles on four sides with wire mesh welded to framing. Include padlock hasp.

1. Horizontal Stiffeners for Single-Tier Doors: 3/4-by-1/4-inch (19-by-6-mm) steel flat bars.
2. Hinges: Full-surface type, 2-1/2-by-2-1/2-inch (64-by-64-mm) steel, 1-1/2 pairs per single-tier door; bolted, riveted, or welded to door and jamb framing.

F. Finish for Uncoated Ferrous Steel: As directed Hot-dip galvanized, Shop primed for field painting or Enamel or powder-coated finish unless otherwise indicated.

1. Color: As indicated by manufacturer's designations, Match Architect's samples or As selected by Architect from manufacturer's full range.

2.4 FABRICATION

A. General: Fabricate wire mesh storage lockers from components of sizes not less than those indicated. Use larger size components as recommended by wire mesh manufacturer. Furnish bolts, hardware, and accessories required for complete installation with manufacturer's standard finishes.

1. Fabricate wire mesh storage lockers to be readily disassembled.
2. Welding: As directed Weld corner joints of framing and grind smooth, leaving no evidence of joint, finish sand, remove spatter or leave as applied.

B. Wire Mesh Storage Lockers: Fabricate initial storage locker with front and two sides. Fabricate additional storage lockers as add-on units designed to share one side with initial storage locker.

1. Fabricate wall panel and door framing with slotted holes for connecting adjacent panels.
2. Pre-hang doors in factory.

2.5 STEEL AND IRON FINISHES

A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.

B. Preparation for Shop Priming: As directed Prepare surfaces to comply with SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning" or SSPC-SP 3, "Power Tool Cleaning".

C. Shop Priming: Apply shop primer to uncoated surfaces of wire mesh units unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

D. Enamel or Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard enamel or powder-coat finish, suitable for use indicated, with a minimum dry film thickness of 2 mils (0.05 mm).

1. Color and Gloss: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 WIRE MESH STORAGE LOCKERS ERECTION

A. Anchor wire mesh storage lockers to floor with 3/8-inch (9.5-mm) diameter expansion anchors at 12 inches (305 mm) o.c. through bottom panel framing. Shim panel framing as required to achieve level and plumb installation.

B. Anchor wire mesh storage lockers to walls at 12 inches (305 mm) o.c. through back corner panel framing.

C. Attach adjacent wire mesh storage lockers to each other through side panel framing.

D. Install doors complete with door hardware.

3.2 ADJUSTING AND CLEANING

A. Adjust doors to operate smoothly and easily without binding or warping. Adjust hardware to function smoothly. Confirm that hasps engage accurately and securely without forcing or binding.

B. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

C. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

END OF SECTION 105143

SECTION 105500.13 - USPS-DELIVERY POSTAL SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Mail receptacles.
2. Cluster box units.
3. Parcel lockers.
4. Collection boxes.
5. Accessories.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For postal specialties. Include plans, elevations, sections, and attachment details.

C. Samples: For each type of exposed finish.

1.3 INFORMATIONAL SUBMITTALS

A. Sample warranty.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Furnish lock keys according to USPS requirements; with temporary identification for their respective locks, bagged, and securely taped inside the collection compartment for shipping.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of postal specialties that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MAIL RECEPTACLES

A. Front-Loading Mail Receptacles: USPS-STD-4C; consisting of multiple compartments with fixed, solid compartment backs, enclosed within a recessed wall box.

1. Front-Loading Master Door: Fabricated from extruded aluminum and braced and framed to hold compartment doors; prepared to receive master-door lock.

    a. Master-Door Lock: Door prepared to receive lock provided by local postmaster.

2. Compartments: Number and size as follows: As indicated on Drawings, of the following sizes: As indicated on Drawings.

    a. Type I: A group of mail receptacles in single-column configuration with single master door, three mail compartments not less than 3 inches high by 12 inches wide by 15 inches deep (76 mm high by 305 mm wide by 381 mm deep), one outgoing mail collection compartment prepared for master-door lock, and one parcel-locker compartment 15 inches high by 12 inches wide by 15 inches deep (381 mm high by 305 mm wide by 381 mm deep).
    b. Type II: A group of mail receptacles in double-column configuration with double master door, three mail compartments not less than 3 inches high by 12 inches wide by 15 inches deep (76 mm high by 305 mm wide by 381 mm deep), one outgoing mail collection compartment prepared for master-door lock, and one or two parcel-locker compartment(s): 15 inches high by 12 inches wide by 15 inches deep (381 mm high by 305 mm wide by 381 mm deep) and 18 inches high by 12 inches wide by 15 inches deep (457 mm high by 305 mm wide by 381 mm deep).
    c. Type III: A group of mail receptacles in double-column configuration with single master door, three mail compartments not less than 3 inches high by 12 inches wide by 15 inches deep (76 mm high by 305 mm wide by 381 mm deep), one outgoing mail collection compartment prepared for master-door lock, and one or two parcel-locker compartment(s): As directed 15 inches high by 12 inches wide by 15 inches deep (381 mm high by 305 mm wide by 381 mm deep) and 18 inches high by 12 inches wide by 15 inches deep (457 mm high by 305 mm wide by 381 mm deep).
    d. Type VI (No Parcel-Locker Compartment): A group of mail receptacles in single-column configuration with single master door, three mail compartments not less than 3 inches high by 12 inches wide by 15 inches deep (76 mm high by 305 mm wide by 381 mm deep), and one outgoing mail collection compartment prepared for master-door lock.
    e. Type VIII (No Parcel-Locker Compartment): A group of mail receptacles in double-column configuration with double master door, three mail compartments not less than 3 inches high by 12 inches wide by 15 inches deep (76 mm high by 305 mm wide by 381 mm deep), and one outgoing mail collection compartment prepared for master-door lock.

3. Compartment Doors: Fabricated from extruded aluminum. Equip each with lock and tenant identification as required by USPS-STD-4C. Provide mail slot in the compartment with master-door lock.

a. Compartment-Door Locks: USPS-L-1172C; with three keys for each compartment door.
b. Parcel-Locker-Compartment-Door Locks: Two-key security system in which control key provides access to parcel-locker-compartment key, which opens compartment and is retained once opened.

4. Frames: Extruded aluminum or aluminum sheet; ganged and nested units, with cardholder and blank cards for tenant's identification within each compartment.
5. Concealed Components and Mounting Frames: Aluminum or steel sheet.
6. Exposed Aluminum Finish:

a. Baked-Enamel or Powder-Coated Finish: As directed Silver, Black, Medium bronze, Dark bronze, Gold, Color as indicated by manufacturer's designations or Color as selected by Architect from manufacturer's full range.

B. Rear-Loading Mail Receptacles: USPS-STD-4C; consisting of multiple compartments enclosed within a recessed wall box.
1. Compartments: Number and size as follows: As indicated on Drawings, of the following sizes: As indicated on Drawings.

a. Type IV: A group of mail receptacles in single-column configuration with a rear-access cover, three mail compartments not less than 3 inches high by 12 inches wide by 15 inches deep (76 mm high by 305 mm wide by 381 mm deep), one outgoing mail collection compartment, and one parcel-locker compartment 15 inches high by 12 inches wide by 15 inches deep (381 mm high by 305 mm wide by 381 mm deep).
b. Type V: As directed A group of mail receptacles in double-column configuration with a rear-access cover, three mail compartments not less than 3 inches high by 12 inches wide by 15 inches deep (76 mm high by 305 mm wide by 381 mm deep), one outgoing mail collection compartment, and one or two parcel-locker compartment(s) 15 inches high by 12 inches wide by 15 inches deep (381 mm high by 305 mm wide by 381 mm deep) and 18 inches high by 12 inches wide by 15 inches deep (457 mm high by 305 mm wide by 381 mm deep).
c. Type VII (No Parcel-Locker Compartment): A group of mail receptacles in single-column configuration with a rear-access cover, three mail compartments not less than 3 inches high by 12 inches wide by 15 inches deep (76 mm high by 305 mm wide by 381 mm deep), and one outgoing mail collection compartment.
d. Type IX (No Parcel-Locker Compartment): A group of mail receptacles in double-column configuration with a rear-access cover, three mail compartments not less than 3 inches high by 12 inches wide by 15 inches deep (76 mm high by 305 mm wide by 381 mm deep), and one outgoing mail collection compartment.

2. Rear-Loading Cover: As directed Not required or Lift-off rear cover fabricated from extruded aluminum or aluminum sheet, finished to match front of unit.
3. Rear-Loading Door: Side hinged, fabricated from extruded aluminum or aluminum sheet, finished to match front of unit; with full-length, stainless-steel piano hinge on one side and positive-latching mechanism on the other.
4. Compartment Doors: Fabricated from extruded aluminum. Equip each with lock and tenant identification as required by USPS-STD-4C. One compartment with outgoing mail slot.

a. Compartment-Door Locks: USPS-L-1172C; with three keys for each compartment door.
b. Parcel-Locker-Compartment-Door Locks: Two-key security system in which control key provides access to parcel-locker-compartment key, which opens compartment and is retained once opened.

5. Frames: Extruded aluminum or aluminum sheet; ganged and nested units, with cardholder and blank cards for tenant's identification behind each compartment.
6. Snap-on Trim: Fabricated from same material and finish as compartment doors.
7. Concealed Components and Mounting Frames: Aluminum or steel sheet.
8. Exposed Aluminum Finish:

a. Baked-Enamel or Powder-Coated Finish: Silver, Black, Medium bronze, Dark bronze, Gold, Color as indicated by manufacturer's designations or Color as selected by Architect from manufacturer's full range.

2.2 CLUSTER BOX UNITS (CBUs)

A. Cluster Box Units (CBUs): USPS-B-1118G; consisting of multiple compartments enclosed within a freestanding, pedestal-mounted enclosure.

B. Compartment Enclosure: Aluminum sheet with aluminum mounting pedestal and weather-protection hood, with the following number and size of compartments:

1. Type I: Eight compartments 12 inches wide by 3 inches high by 15 inches deep (305 mm wide by 76 mm high by 381 mm deep), one outgoing mail compartment 12 inches wide by 3 inches high by 15 inches deep (305 mm wide by 76 mm high by 381 mm deep), one parcel-locker compartment 12 inches wide by 10 inches high by 15 inches deep (305 mm wide by 254 mm high by 381 mm deep), and another parcel-locker compartment 12 inches wide by 13-1/2 inches high by 15 inches deep (305 mm wide by 343 mm high by 381 mm deep).
2. Type II: 12 compartments 12 inches wide by 3 inches high by 15 inches deep (305 mm wide by 76 mm high by 381 mm deep), one outgoing mail compartment 12 inches wide by 3 inches high by 15 inches deep (305 mm wide by 76 mm high by 381 mm deep), and one parcel-locker compartment 12 inches wide by 10 inches high by 15 inches deep (305 mm wide by 254 mm high by 381 mm deep).
3. Type III: 16 compartments 12 inches wide by 3 inches high by 15 inches deep (305 mm wide by 76 mm high by 381 mm deep), one outgoing mail compartment 12 inches wide by 3 inches high by 15 inches deep (305 mm wide by 76 mm high by 381 mm deep), one parcel-locker compartment 12 inches wide by 10 inches high by 15 inches deep (305 mm wide by 254 mm high by 381 mm deep), and another parcel-locker compartment 12 inches wide by 13-1/2 inches high by 15 inches deep (305 mm wide by 343 mm high by 381 mm deep).
4. Type IV: 13 compartments 12 inches wide by 4-3/4 inches high by 15 inches deep (305 mm wide by 121 mm high by 381 mm deep), one outgoing mail compartment 12 inches wide by 4-3/4 inches high by 15 inches deep (305 mm wide by 121 mm high by 381 mm deep), and one parcel-locker compartment 12 inches wide by 10 inches high by 15 inches deep (305 mm wide by 254 mm high by 381 mm deep).

C. Compartment Doors and Frames: One-piece extruded aluminum or aluminum sheet. Equip each compartment door with lock, tenant identification, and concealed, full-length, flush hinge on one side. Provide outgoing mail slot with weather protection flap.

1. Tenant Identification: As directed Number engraved into face or applied into recess of compartment door.
2. Compartment-Door Locks: USPS-L-1172C; with three keys for each compartment door.
3. Parcel-Locker-Compartment-Door Locks: Two-key security system in which control key provides access to parcel-locker-compartment key, which opens compartment and is retained once opened.

D. Pedestal: Aluminum, with same finish as compartment enclosure and attached with theft-resistant fasteners.

E. Exposed Aluminum Finish: Finish surfaces exposed to view with powder-coated finish in postal gray (light gray).

2.3 PARCEL LOCKERS

A. Front-Loading Parcel Lockers, Recessed: USPS-STD-4C; consisting of single or multiple compartments enclosed within a larger enclosure of type indicated below.
1. Enclosure Type: Recessed.
2. Compartments: Number and size as follows: As indicated on Drawings, of the following sizes: As indicated on Drawings.

a. Type X, Parcel Only: As directed Single parcel receptacle 15 inches high by 12 inches wide by 15 inches deep (381 mm high by 305 mm wide by 381 mm deep) or 18 inches high by 12 inches wide by 15 inches deep (457 mm high by 305 mm wide by 381 mm deep) without a master door.
b. Type X, Parcel Only: A group of parcel receptacles in single-column configuration without a master door; As directed one or two compartment(s) 18 inches high by 12 inches wide by 15 inches deep (457 mm high by 305 mm wide by 381 mm deep)and one compartment 15 inches high by 12 inches wide by 15 inches deep (381 mm high by 305 mm wide by 381 mm deep).
c. Type XI, Parcel Only: A group of parcel receptacles in single-column configuration with single master door prepared for master-door lock; As directed one, two or compartment(s) 15 inches high by 12 inches wide by 15 inches deep (381 mm high by 305 mm wide by 381 mm deep) and one two compartment(s) 18 inches high by 12 inches wide by 15 inches deep (457 mm high by 305 mm wide by 381 mm deep).

3. Front-Loading Master Door: Fabricated to hold compartment doors; prepared to receive master-door lock provided by local postmaster.
4. Compartment Doors and Frames: As directed Fabricated from same material and finish as adjacent mail receptacles, extruded aluminum, aluminum sheet or metallic-coated steel sheet. Equip each compartment door with lock; identification; and concealed, full-length, spring-loaded, flush hinge on right side.

a. Compartment Identification: As directed Black, sequential numbers engraved into or stamped onto recess in face of compartment door.

b. Compartment-Door Locks: Dual-lock security system in which master lock provides access to customer lock (USPS-L-1172C) and parcel-locker key opens compartment and is retained once opened.

5. Aluminum Finish:

a. Baked-Enamel or Powder-Coated Finish: As directed Silver, Black, Medium bronze, Dark bronze, Gold, Color as indicated by manufacturer's designations or Color as selected by Architect from manufacturer's full range.

B. Rear-Loading Parcel Lockers, Recessed: USPS-STD-4C; consisting of single or multiple compartments enclosed within a recessed wall box.

1. Compartments: Number and size as follows: As indicated on Drawings, of the following sizes: As indicated on Drawings.

a. Type XII, Parcel Only: A group of parcel receptacles in single-column configuration with a rear-access cover; As directed one, two, compartment(s) 15 inches high by 12 inches wide by 15 inches deep (381 mm high by 305 mm wide by 381 mm deep) and one or two compartment(s) 18 inches high by 12 inches wide by 15 inches deep (457 mm high by 305 mm wide by 381 mm deep).

2. Rear-Loading Cover: As directed Not required or Lift-off rear cover fabricated from extruded aluminum or aluminum sheet, finished to match front of unit.
3. Rear-Loading Door: Side hinged, fabricated from extruded aluminum or aluminum sheet, finished to match front of unit; with full-length, stainless-steel piano hinge on one side and positive-latching mechanism on the other.
4. Compartment Doors and Frames: As directed Fabricated from same material and finish as adjacent mail receptacles, extruded aluminum, aluminum sheet, metallic-coated steel sheet or aluminum or metallic-coated steel sheet. Equip each compartment door with lock; identification; and concealed, full-length, spring-loaded, flush hinge on one side.

a. Compartment Identification: As directed Black, sequential numbers engraved into or stamped onto recess in face of compartment door.
b. Compartment-Door Locks: Dual-lock security system in which master lock provides access to customer lock (USPS-L-1172C) and parcel-locker key opens compartment and is retained once opened.

5. Exposed Aluminum Finish:

a. Baked-Enamel or Powder-Coated Finish: Silver, Black, Medium bronze, Dark bronze, Gold, Color as indicated by manufacturer's designations or Color as selected by Architect from manufacturer's full range.

2.4 COLLECTION BOXES

A. Collection Boxes: As directed Consisting of single compartment with fire-resistant cushion bottom, enclosed within wall box, with mail slot or hopper door to receive mail. Provide door for collecting mail from front or rear of unit.
1. Mounting: As directed Recessed, Semi-recessed or Surface mounted.

2. Height: As directed Sized to match height of four, five, six or seven mail receptacles.
3. Height: As indicated on Drawings.
4. Front-Loading Compartment Doors and Frames: Fabricated from 1/4-inch- (6-mm-) thick aluminum, with opening not less than 12 by 20 inches (305 by 508 mm) and not more than 18 by 30 inches (457 by 762 mm). Equip door with lock and concealed, full-length, flush hinge on one side.

    a. Door Lock: Door prepared to receive lock provided by local postmaster.
    b. Identification: Engrave face of compartment door with 1-inch- (25-mm-) high letters as follows: "U.S. MAIL LETTER BOX" on two lines at top or bottom of unit.
    c. Door Style: As directed Set door within face frame or Extend door full width and height of unit, with no exposed frame.

5. Rear-Loading Enclosure: Lift-off rear cover fabricated from same material and finish as front of unit.
6. Rear-Loading Door: Side hinged, with opening not less than 12 by 20 inches (305 by 508 mm) and not more than 18 by 30 inches (457 by 762 mm), from same material and finish as front of unit; with full-length, stainless-steel piano hinge on one side and positive-latching mechanism on the other. Fabricate rear-loading door to remain open while mail is collected.
7. Mail Slot: Fabricated from 1/4-inch- (6-mm-) thick aluminum, with 11-inch-wide by 1-1/4-inch- (279-mm-wide by 32-mm-) high opening, protected by inside hood and hinge flap, and with inside baffle to prevent removal of mail from box.
8. Hopper Door: Fabricated from 1/4-inch- (6-mm-) thick aluminum, with opening that allows a bundle measuring 6-1/2 inches wide by 11-1/2 inches long by 4 inches high (165 mm wide by 292 mm long by 102 mm high) to be deposited, and with inside baffle to prevent removal of mail from box. Equip door with door pull and concealed, full-length bottom hinge.

    a. Identification: Engrave face of hopper door with 1-inch- (25-mm-) high letters as follows: "LETTERS AND LETTER MAIL TIED IN BUNDLES."
    b. Door Style: As directed Set door within face frame or Extend door full width and height of unit, with no exposed frame.

9. Exposed Materials:

    a. Anodic Finish: Clear.
    b. Baked-Enamel or Powder-Coated Finish: As directed.

10. Concealed Components and Mounting Frames: Aluminum or steel sheet.
11. Schedule-Card Holder: Recessed or surface-mounted holder for pickup schedule card in center of bottom front portion of unit. Same material and finish as front of unit.
12. Mailbag Hooks: Two aluminum or stainless-steel hooks at exterior front edge of bottom of surface-mounted units, spaced 15 to 17-1/2 inches (381 to 445 mm) apart, for supporting mailbags.
13. Mailbag Rack: Internal rack system for supporting mailbags within unit.

2.5 ACCESSORIES

A. Key Keeper: Consisting of single compartment with door; interior compartment size not less than 4-3/4 inches wide by 2-1/4 inches high by 1-1/2 inches deep (121 mm wide by 57 mm high by 38 mm deep), USPS approved.
   1. Mounting: As directed Recessed or Surface mounted.
   2. Style: As directed Compartment door set within face frame or extending full width and height of unit, with no exposed frame.
   3. Type of Operation: As directed Loose key in box, Retractor reel with minimum 20-inch- (508-mm-) long chain or Push-button, 24-V switch in box.
   4. Door Lock: Door prepared to receive lock furnished by local postmaster.
   5. Exposed Materials:
      a. Anodic Finish: Clear.
      b. Baked-Enamel or Powder-Coated Finish: As directed.

2.6 FABRICATION

A. Form postal specialties to required shapes and sizes, with true lines and angles, square, rigid, and without warp, and with metal faces flat and free of dents or distortion. Make exposed metal edges and corners free of sharp edges and burrs and safe to touch. Fabricate doors of postal specialties to preclude binding, warping, or misalignment.

B. Preassemble postal specialties in shop to greatest extent possible to minimize field assembly.

C. Where dissimilar metals contact each other, protect against galvanic action by painting contact surfaces with bituminous coating or by applying other permanent separation as recommended by manufacturers of dissimilar metals.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Mail Receptacles: Install mail receptacles with center of tenant-door lock cylinders and bottom of compartments at the maximum and minimum heights above finished floor established by the USPS and manufacturer's written instructions.

B. Pedestal-Mounted Postal Specialties: Anchor units with 1/2-inch- (13-mm-) diameter, stainless-steel anchor bolts with hooked ends.

C. Collection Boxes: As directed Install collection boxes with centerline of mail slots or handle of hopper doors not more than 48 inches (1219 mm) above finished floor.

3.2 FIELD QUALITY CONTROL

A. Arrange for USPS personnel to examine and test postal specialties served by the USPS after they have been installed according to USPS regulations.

END OF SECTION 105500.13

SECTION 105500.16 - PRIVATE-DELIVERY POSTAL SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Horizontal mail receptacles.
2. Vertical mail receptacles.
3. Mail collection boxes.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For postal specialties. Include plans, elevations, sections, and attachment details.

C. Samples: For each type of exposed finish.

1.3 INFORMATIONAL SUBMITTALS

A. Sample warranty.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Furnish lock keys with temporary identification for their respective locks, bagged, and securely taped inside the collection compartment for shipping.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of postal specialties that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 HORIZONTAL MAIL RECEPTACLES

A. Front-Loading, Horizontal Mail Receptacles: Consisting of multiple compartments with fixed, solid compartment backs, enclosed within recessed wall box.

1. Front-Loading Master Door: Braced and framed to hold compartment doors; with master-door lock and concealed, full-length, stainless-steel piano hinge on one side. Fabricate master door to remain open while mail is deposited.

    a. Master-Door Lock: Manufacturer's standard five-pin tumbler, cylinder lock; with two or three keys As directed.

2. Compartments: As directed Manufacturer's standard compartments with extruded aluminum, die-cast brass or die-cast zinc doors. Equip each with lock, tenant identification, and concealed, full-length, flush hinge on one side. Provide one compartment prepared for master-door lock and with outgoing mail slot.

    a. Compartments: Number and size as follows: As indicated on Drawings, of the following sizes: As indicated on Drawings.

        1) Size 1: As directed Provide number of compartments with inside dimensions not less than 3 inches high by 6 inches wide by 15 inches deep (76 mm high by 152 mm wide by 381 mm deep).
        2) Size 2: As directed Provide number of compartments with inside dimensions not less than 5 inches high by 3-1/2 inches wide by 15 inches deep (127 mm high by 89 mm wide by 381 mm deep).
        3) Size 3: As directed Provide number of compartments with inside dimensions not less than 5 inches high by 7-1/2 inches wide by 15 inches deep (127 mm high by 191 mm wide by 381 mm deep).
        4) Size 4: As directed Provide number of compartments with inside dimensions not less than 10-1/2 inches high by 3-1/2 inches wide by 15 inches deep (267 mm high by 89 mm wide by 381 mm deep).
        5) Size 5: As directed Provide number of compartments with inside dimensions not less than 10-1/2 inches high by 7-1/2 inches wide by 15 inches deep (267 mm high by 191 mm wide by 381 mm deep).

3. Compartment-Door Locks: As directed Five-pin tumbler, cylinder cam or spring-latch-type locks capable of at least 1000 key changes; with two or three keys for each compartment door. Key each compartment differently.
4. Frames: Ganged and nested units, with cardholder and blank cards for tenant's identification behind each compartment.
5. Snap-on Trim: Fabricated from the same material and finish as compartment doors.
6. Concealed Components and Mounting Frames: Aluminum or steel sheet with manufacturer's standard finish.
7. Exposed Aluminum Finish: Finish surfaces exposed to view as follows:

    a. Anodic Finish: Clear.
    b. Baked-Enamel or Powder-Coated Finish: As directed Black, Dark bronze, Gold, Medium bronze, Silver, Color as indicated by manufacturer's designations or Color as selected by Architect from manufacturer's full range.

8. Brass Finish: As directed, Buffed finish, lacquered, Hand-rubbed finish, lacquered or Brushed satin, lacquered.
9. Zinc Finish: Manufacturer's standard powder-coated finish, tan.

B. Rear-Loading, Horizontal Mail Receptacles: Consisting of multiple compartments enclosed within recessed wall box.

1. Rear-Loading Cover: As directed or Lift-off rear cover fabricated from extruded aluminum or aluminum sheet, finished to match front of unit.
2. Rear-Loading Door: Side hinged, fabricated from extruded aluminum or aluminum sheet, finished to match front of unit; with full-length, stainless-steel piano hinge on one side and positive-latching or locking mechanism on the other. Fabricate rear-loading door to open not less than 90 degrees and to remain open while mail is deposited.

    a. Rear-Door Lock: As directed Manufacturer's standard five-pin tumbler, cylinder lock; with two or three keys.

3. Compartment Doors: As directed Manufacturer's standard compartments with extruded aluminum, die-cast brass or die-cast zinc doors. Equip each with lock, tenant identification, and concealed, full-length, flush hinge on one side. Provide one compartment prepared for master-door lock and with outgoing mail slot.

    a. Compartments: Number and size as follows: As indicated on Drawings, of the following sizes: As indicated on Drawings.

        1) Size 1: As directed Provide number of compartments with inside dimensions not less than 3 inches high by 6 inches wide by 15 inches deep (76 mm high by 152 mm wide by 381 mm deep).
        2) Size 2: As directed Provide number of compartments with inside dimensions not less than 5 inches high by 3-1/2 inches wide by 15 inches deep (127 mm high by 89 mm wide by 381 mm deep).
        3) Size 3: As directed Provide number of compartments with inside dimensions not less than 5 inches high by 7-1/2 inches wide by 15 inches deep (127 mm high by 191 mm wide by 381 mm deep).
        4) Size 4: As directed Provide number of compartments with inside dimensions not less than 10-1/2 inches high by 3-1/2 inches wide by 15 inches deep (267 mm high by 89 mm wide by 381 mm deep).
        5) Size 5: As directed Provide number of compartments with inside dimensions not less than 10-1/2 inches high by 7-1/2 inches wide by 15 inches deep (267 mm high by 191 mm wide by 381 mm deep).

4. Compartment-Door Locks: As directed Five-pin tumbler, cylinder cam or spring-latch-type locks capable of at least 1000 key changes; with two or three keys for each compartment door. Key each compartment differently.
5. Frames: Ganged and nested units, with cardholder and blank cards for tenant's identification behind each compartment.
6. Snap-on Trim: Fabricated from the same material and finish as compartment doors.
7. Concealed Components and Mounting Frames: Aluminum or steel sheet with manufacturer's standard finish.
8. Exposed Aluminum Finish: Finish surfaces exposed to view as follows:

    a. Anodic Finish: Clear.
    b. Baked-Enamel or Powder-Coated Finish: As directed Black, Dark bronze, Gold, Medium bronze, Silver, Color as indicated by manufacturer's designations or Color as selected by Architect from manufacturer's full range.

9. Brass Finish: As directed, Buffed finish, lacquered, Hand-rubbed finish, lacquered or Brushed satin, lacquered.
10. Zinc Finish: Manufacturer's standard powder-coated finish, tan.

2.2 VERTICAL MAIL RECEPTACLES

A. Vertical Mail Receptacles: Consisting of vertical compartments enclosed within wall box; with inside dimensions of each compartment not less than 15 inches high by 5 inches wide by 6 inches deep (381 mm high by 127 mm wide by 152 mm deep).
1. Mounting: As directed, recessed, Semirecessed with mounting frame, Surface mounted with mounting frame or as indicated on Drawings.
2. Compartments: Provide three or number as indicated on Drawings.
3. Compartment Doors and Frames: Fabricated from striated, extruded aluminum. Equip each compartment door with lock, slot in face of door to receive tenant identification, and concealed, full-length, flush hinge on one side. Provide one double-wide compartment with outgoing mail slot.

    a. Compartment-Door Locks: As directed Five-pin tumbler, cylinder cam or spring-latch-type locks capable of at least 1000 key changes; with two or three keys for each compartment door. Key each compartment differently.

4. Frames: Ganged and nested units, with cardholder and blank cards for tenant's identification within each compartment.
5. Concealed Components and Mounting Frames: Aluminum or steel sheet with manufacturer's standard finish.
6. Exposed Aluminum Finish: Finish surfaces exposed to view as follows:

    a. Anodic Finish: Clear, Gold, As indicated by manufacturer's designations or As selected by Architect from manufacturer's full range.
    b. Baked-Enamel or Powder-Coated Finish: As directed Aluminum, Black, Brass, Dark bronze, Gold, Green, Ivory, Medium bronze, Silver, Color as indicated by manufacturer's designations or Color as selected by Architect from manufacturer's full range.

2.3 MAIL COLLECTION BOXES

A. Mail Collection Boxes: Consisting of single compartment of same depth as horizontal mail receptacles, enclosed within wall box, with slot in top of front to receive mail.
1. Height: As directed Sized to match height of four, five, six or seven horizontal mail receptacles.
2. Mounting: As directed Recessed, Semi-recessed or Surface mounted.
3. Compartment Doors and Frames: As directed Fabricated from extruded aluminum or aluminum sheet that is full height of unit including or in portion of unit below mail slot, and equipped with lock and concealed, continuous side hinge.

    a. Door Lock: Cylinder lock keyed to building keying system; As directed with two or three keys.
    b. Identification: As directed Engrave face of compartment door with 1-inch- (25-mm-) high letters as follows: "LETTERS, OUTGOING MAIL or OFFICE."

4. Aluminum Finish: Finish surfaces exposed to view as follows:

    a. Anodic Finish: Clear.
    b. Baked-Enamel or Powder-Coated Finish: As directed, Black, Dark bronze, Gold, Medium bronze, Color as indicated by manufacturer's designations or Color as selected by Architect from manufacturer's full range.

2.4 ACCESSORIES

A. Letter Drops (Through Wall): Consisting of 11-inch-wide by 3-1/2-inch- (279-mm-wide by 89-mm-) high, top-hinged, spring-loaded flap that pivots inward, held in place by 1-inch- (25-mm-) wide face frame. Fabricated from 1/4-inch- (6-mm-) thick aluminum or steel, with exposed surfaces finished to match adjacent mail receptacles.
    1. Sleeve: Provide metallic-coated steel wall sleeve for full depth of wall.
    2. Finished Frame: Provide finished face frame on back side of wall opening.
    3. Identification: As directed Engrave face of swinging flap with 1-inch- (25-mm-) high letters as follows: "LETTERS or OUTGOING MAIL."
    4. Finish: Exposed surfaces finish as adjacent mail receptacles.

B. Package Depository (Through Wall): Consisting of 1/4-inch- (6-mm-) thick, aluminum or steel faceplate and through-the-wall hopper door with hinged baffle allowing receipt of packages; fabricated from 1/4-inch- (6-mm-) thick aluminum or steel.
    1. Hopper Door: Equipped with door pull and concealed, full-length bottom hinge; with opening size not less than 15 inches wide by 6-1/2 inches high (381 mm wide by 165 mm high) or as indicated on Drawings.
    2. Sleeve: Provide metallic-coated steel wall sleeve for full depth of wall.
    3. Slowdown: Provide steel slowdown ramp on back side of wall opening.
    4. Identification: Engrave face of hopper door with 1-inch- (25-mm-) high letters as follows: "LETTERS."
    5. Finish: Exposed surfaces finished same as mail receptacles.

2.5 FABRICATION

A. Form postal specialties to required shapes and sizes, with true lines and angles, square, rigid, and without warp, and with metal faces flat and free of dents or distortion. Make exposed metal edges and corners free of sharp edges and burrs and safe to touch. Fabricate doors of postal specialties to preclude binding, warping, or misalignment.

B. Preassemble postal specialties in shop to greatest extent possible to minimize field assembly.

C. Where dissimilar metals will contact each other, protect against galvanic action by painting contact surfaces with bituminous coating or by applying other permanent separation as recommended by manufacturers of dissimilar metals.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Mail Receptacles: Install mail receptacles with center of tenant-door lock cylinders not more than 48 inches (1219 mm) and bottom of receptacles not less than 15 inches (381 mm) above finished floor.

B. Mail Collection Boxes: As directed Install collection boxes with centerline of mail slots or handle of hopper doors not more than 48 inches (1219 mm) above finished floor.

END OF SECTION 105500.16

SECTION 105613 - METAL STORAGE SHELVING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Case-type metal storage shelving.
2. Four-post metal storage shelving.
3. Post-and-beam metal storage shelving.

1.2 COORDINATION

A. Coordinate sizes and locations of blocking and backing required for installation of metal storage shelving attached to wall and ceiling assemblies.

B. Coordinate locations and installation of metal storage shelving that may interfere with ceiling systems including lighting, HVAC, speakers, sprinklers, access panels, electrical switches or outlets, and floor drains.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: As directed.

C. Shop Drawings: For metal storage shelving.

1. Include plans, elevations, sections, and attachment details.
2. Include installation details of connectors, lateral bracing, and special bracing.

D. Samples: For each type of metal storage shelving and for each color specified.

E. Delegated-Design Submittal: For seismic restraint of metal storage shelving.

1.5 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Certificates: For metal storage shelving, accessories, and components, from manufacturer.

B. Product certificates.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design metal storage shelving, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Seismic Performance: Metal storage shelving shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. Seismic Component Importance Factor: 1.5 or 1.0 as directed.

C. Sustainable Design Performance:

2.2 CASE-TYPE METAL STORAGE SHELVING

A. Case-Type Metal Shelving: Complying with MH 28.1; freestanding units and field assembled from factory-formed components. Shelves span between two independent supporting sheet metal end panels that allow shelf-height adjustment over full height of shelving unit. Provide fixed top and bottom shelves, adjustable intermediate shelves, and accessories indicated.

B. Load-Carrying Capacity per Shelf: 200 lb (91 kg), uniformly distributed.

C. End Panels: Fabricated from cold-rolled steel sheet, with concealed perforations at front and back edges at 1-inch (25 mm) o.c. for receiving adjustable shelf clips.

1. Adjustable Shelf Clips: Cold-rolled steel, with projections designed to engage at least two perforations in end panels.

D. End Panels: Fabricated from cold-rolled steel sheet; with horizontal slots spaced at 1-inch (25 mm) o.c. or 1-1/2 inches (38 mm) o.c. for supporting shelves as directed.

E. Back Panel: One piece, fabricated from cold-rolled steel sheet.

F. Shelves: Fabricated from cold-rolled steel sheet. Fabricate shelves with vertical front that is flanged and returned.

1. Shelf-Divider Slots: 2-inches (51 mm) o.c.

G. Base: Closed front, with base strips fabricated from same material and with same finish as end panels.

H. Accessories:

1. Finished End Panels: Fabricated as solid or perforated full-height panels as directed from same material and with same finish as end panels, with trim along edges abutting end panels and top shelf.
2. Shelf Dividers: Fabricated from same material and with same finish as shelves; As directed.
3. Bins: Fabricated from same material and with same finish as shelves or Plastic as directed.
4. Shelf-Label Holders: Clear or Colored plastic as directed, designed to clip onto front edge of shelf.

I. Steel Finish: Baked enamel or powder coat.

1. Color and Gloss: As directed.

2.3 FOUR-POST METAL STORAGE SHELVING

A. Open or Closed Four-Post Metal Storage Shelving As directed: Complying with MH 28.1 and field assembled from factory-formed components. Shelves span between supporting corner posts that allow shelf-height adjustment over full height of shelving unit. Provide fixed top and bottom shelves, adjustable intermediate shelves, and accessories indicated.

1. Load-Carrying Capacity per Shelf: As directed.
2. Posts: Fabricated from hot-rolled steel as directed; with perforations at 1-1/2 inches (38 mm) o.c. to receive shelf-to-post connectors.

a. Unit Configuration: Configure shelving units as individual, freestanding or starter- and add-on unit assemblies as directed.

1) Add-On Shelf Posts: Fabricated from hot-rolled steel, as directed; perforated to match main posts.

b. Post Base: Bolt leveler or Adjustable steel floor plate, drilled for floor anchors as directed.

3. Bracing: Manufacturer's standard, single or double diagonal cross bracing.

a. Location: At unit back and ends as required for stability, load-carrying capacity of shelves, and number of shelves indicated.

4. Back Panel: One piece or Two half panels fabricated from cold-rolled steel sheet as directed.

5. End Panels: Fabricated from cold-rolled steel sheet.
6. Solid-Type Shelves: Uncoated or Metallic-coated steel sheet as directed.

    a. Slots or Holes for Shelf Dividers: 2 inches (51 mm) or 3 inches (76 mm) o.c. as directed
    b. Fabricate fronts and backs of shelves with box-formed edges, with corners lapped and welded.
    c. Fabricate fronts and backs of shelves with vertical edges that are flanged and returned, with edges reinforced with steel as directed.

7. Framed-Type Wire Shelves: Steel or Metallic-coated-steel wire as directed; with shelf frame fabricated from same material and with same finish as posts.
8. Truss-Type Wire Shelves: As directed wire-over-wire construction, with downturned wire truss edges.
9. Shelf-to-Post Connectors: As directed.
10. Base: Open, with exposed post legs or Closed, with base strips fabricated from same material and with same finish as shelving as directed.
11. Accessories:

    a. Finished End Panels: Fabricated as solid or perforated as directed full-height panels from manufacturer's standard thickness cold-rolled steel sheet and with same finish as posts, with trim for a finished appearance along edges abutting posts and top shelf.
    b. Shelf Dividers: Fabricated from same material and with same finish as shelves as directed.
    c. Bins: Fabricated from same material and with same finish as shelves; size as indicated on Drawings.
    d. Shelf-Label Holders: Clear or Colored plastic as directed, designed to clip onto front edge of shelf.

12. Steel Finish: Baked enamel or powder coat as directed.

    a. Color and Gloss: As directed.

B. Wire-Type, Four-Post Metal Storage Shelving: Complying with MH 28.1; field assembled from factory-formed components. Shelves span between supporting corner posts that allow shelf-height adjustment over full height of shelving unit. Provide fixed top and bottom shelves, adjustable intermediate shelves, and accessories indicated.

1. Load-Carrying Capacity per Shelf: As directed, Uniformly distributed.
2. Posts: Fabricated from 1-inch- (25-mm-) OD, square or round tubing of indicated material as directed; with grooves or notches at 1 inch (25 mm) o.c. to receive shelf-to-post connectors. Label posts with numbers at not less than 2 inches (51 mm) o.c. for determining shelf height.

    a. Post Material: Steel or Stainless steel as directed.
    b. Post Base: Bolt leveler or Adjustable steel floor plate, drilled for floor anchors as directed.
    c. Post Cap: Nylon or plastic.
    d. Unit Configuration: Configure shelving units as individual, freestanding or starter- and add-on unit assemblies as directed.

3. Framed-Type Wire Shelves: As directed wire-over-wire construction, with shelf frame fabricated from same material and with same finish as posts; with manufacturer's standard post collar, designed to engage collet (wedge), welded at each corner.
4. Truss-Type Wire Shelves: As directed wire-over-wire construction, with downturned wire truss edges; with manufacturer's standard post collar, designed to engage collet (wedge), welded at each corner.
5. Waterfall-Type Wire Shelves: As directed wire-over-wire waterfall construction; with manufacturer's standard post collar, designed to engage collet (wedge), welded at each corner.
6. Shelf-to-Post Connectors: Manufacturer's standard one-piece collet (wedge), designed to engage post collar attached to shelves.
7. Bracing: Manufacturer's standard diagonal cross bracing, as required for stability, load-carrying capacity of shelves, and number of shelves.
8. Accessories:

    a. Shelf Dividers: Fabricated from same material and with same finish as shelves; as directed.
    b. Shelf Inlay: Manufacturer's standard as directed.
    c. Storage Basket: Edge-of-shelf-mounted wire basket, fabricated from same material and with same finish as shelves.
    d. Back Ledges: 1 inch (25 mm) or 4 inches (102 mm) high as directed, fabricated from same material and with same finish as shelves.
    e. Side Ledges: 1 inch (25 mm) or 4 inches (102 mm) high as directed, fabricated from same material and with same finish as shelves.
    f. Garment Hanger Tube: Width of 21 inches (533 mm) or shelves with mounting brackets as directed.
    g. Shelf-Label Holders: Designed to clip onto front edge of shelf as directed.

9. Steel Finish: Baked enamel or powder coat or Manufacturer's standard chrome plated as directed.

    a. Color and Gloss: As directed.

10. Stainless-Steel Finish: No. 4 directional-satin finish or Manufacturer's standard nondirectional-polish finish as directed.

2.4 POST-AND-BEAM METAL STORAGE SHELVING

A. Post-and-Beam Metal Shelving: Complying with MH 28.2; field-assembled from factory-formed components. Shelves are supported by beams that span between supporting corner posts that allow beam-height adjustment over full height of shelving unit. Provide fixed top and bottom beams, adjustable intermediate beams, and accessories indicated.

B. Load-Carrying Capacity per Shelf: As directed, uniformly distributed.

C. Posts: Fabricated from cold-rolled steel; in shape as directed; with perforations at 1-1/2 inches (38 mm) o.c. to receive beam-to-post connectors.

1. Unit Configuration: Configure shelving units as individual, freestanding or starter- and add-on unit assemblies as directed.
2. Post Base: Cold-rolled steel floor plate, drilled for floor anchors.

D. Beams: Fabricated from cold-rolled steel; in shape as directed. Provide beam at each side of each shelf, with center supports as required for load-carrying capacity of shelf.

1. Beam-to-Post Connectors: Projecting at each end that engage posts as directed.

    a. Top and Bottom Shelf Beams: Provide with single or double beam-to-post connectors as directed.
    b. Intermediate Shelf Beams: Provide with single or double beam-to-post connectors as directed.

2. Beam Quantity: As directed per shelving unit.

E. Particleboard Shelves: 5/8 inch (16 mm) thick; factory or field cut.

F. Flat Metal Shelves: Fabricate fronts and backs or fronts, backs, and sides of shelves with box-formed edges, with corners lapped and welded from the following material:

1. Material: Steel sheet, uncoated or metallic coated as directed.

G. Ribbed-Metal-Decking Shelves: Fabricated from steel sheet.

H. Wire Shelves: Welded steel wire; with 2-by-4-inch (51-by-102-mm) as directed.

I. Accessories:

1. Tie Plates: Cold-rolled steel, finished to match posts; designed for joining posts of adjacent shelving units.
2. Supports: Back-to-wall and back-to-back type that bolt to posts; as required for shelving unit stability.
3. Record Boxes: Knocked-down, corrugated fiberboard with white finish and contrasting contents legend; with pre-punched handles and matching separate lid.

    a. Letter/Legal-Size Boxes: 12-1/2 inches wide by 16 inches deep by 10-1/2 inches high (318 mm wide by 406 mm deep by 267 mm high) for letter-size material stored left to right and legal-size material stored front to back.

        1) Quantity: As directed.

    b. Letter-Size Boxes: 12-1/2 inches wide by 24 inches deep by 10-1/2 inches high (318 mm wide by 610 mm deep by 267 mm high) for letter-size material stored left to right.

        1) Quantity: As directed.

4. Record Box Support Rails: 1-1/2-by-1-1/2-inch (38-by-38-mm) metal angle, with length to match depth of shelving unit; fabricated from same material and with same finish as beams.

J. Steel Finish: Baked enamel or powder coat as directed.

1. Color and Gloss: As directed.

2.5 ANCHORS

A. Floor Anchors: Galvanized-steel, as directed. Provide number per unit recommended by manufacturer unless additional anchors are indicated in calculations.

B. Wall Anchors: Manufacturer's standard, galvanized-steel anchors designed to secure metal storage shelving to adjacent wall. Provide one per shelving unit for each shelving unit adjacent to a wall unless additional anchors are indicated in calculations.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install metal storage shelving level, plumb, square, rigid, true, and with shelves flat and free of dents or distortion. Make connections to form a rigid structure, free of buckling and warping.

1. Install exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible.
2. Install braces, straps, plates, brackets, and other reinforcements as needed to support shelf loading and as required for stability.
3. Adjust post-base bolt leveler to achieve level and plumb installation.
4. Anchor shelving units to floor with floor anchors through floor plate. Shim floor plate to achieve level and plumb installation.
5. Install seismic restraints.
6. Connect side-to-side and back-to-back shelving units together as directed.
7. Install shelves in each shelving unit at spacing indicated on Drawings or equal spacing as directed.

    a. Case-Type Metal Storage Shelving: Install adjustable shelf clips at front and back of each shelf.
    b. Four-Post Metal Storage Shelving: Install four clips, one at each post, for support of each shelf; with clips fully engaged in post perforations.
    c. Post-and-Beam Metal Storage Shelving: Install beams with beam-to-post connectors fully engaged in post perforations.

B. Accessories:

1. Install finished end panels and trim at exposed ends of shelving units.
2. Shelf Dividers: Install as directed.
3. Bins: Install as directed.
4. Shelf-Label Holders: Install one on each shelf.

    a. Install as directed within each shelving unit.

5. Record Box Support Rails: Provide two for each record storage box.

6. Shelf Inlays: Install one per shelf or as directed.
7. Storage Baskets: Install as directed.
8. Back Ledges: Install one per shelf or as directed.
9. Side Ledges: Install on each side of each shelf or as directed.
10. Garment Hanger Tubes: Install as directed.

3.2 ERECTION TOLERANCES

A. Erect case-type and four-post metal storage shelving to a maximum tolerance from vertical of 1/2 inch (13 mm) in up to 10 feet (3 m) of height, not exceeding 1 inch (25 mm) for heights taller than 10 feet (3 m).

B. Erect post-and-beam metal storage shelving to a maximum tolerance from vertical of 1/4 inch (6 mm) in 84 inches (2134 mm) of height.

3.3 ADJUSTING

A. Adjust metal storage shelving so that connectors and other components engage accurately and securely.

B. Adjust and lubricate operable components to operate smoothly and easily, without binding or warping. Check and readjust operating hardware.

C. Touch up marred finishes or replace metal storage shelving that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by metal storage shelving manufacturer.

D. Replace metal storage shelving components that have been damaged beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 105613

SECTION 105626 - MOBILE STORAGE SHELVING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Manually operated systems.
2. Mechanically assisted systems.
3. Steel-bracket shelving.
4. Steel-case shelving.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:
1.

C. Shop Drawings: Show shelving layout, location and extent of rail system and clear-aisle widths from face of carriages.

1. Detail fabrication and installation of mobile shelving systems including methods of anchoring shelves to carriages and rails to building structure as required for seismic restraint; coordinate with electrical.
2. Include diagrams for power and control wiring.
3. Include methods of connection for motors and controls and location of electrical rough-in.

D. Samples: For each exposed product and for each color and texture specified.

E. Delegated-Design Submittal: For mobile storage shelving, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Seismic Design Calculations

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer and manufacturer.

B. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Shelf units and accessories.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of mobile shelving systems that fail in materials or workmanship within specified warranty period.

1. Warranty Period: As directed Ten or Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated-Design Submittal: For mobile storage shelving, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

B. Seismic Performance: Mobile shelving systems shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

C. Structural Performance: Provide mobile shelving systems capable of supporting the following:

1. Load per Linear Foot of Carriage: As directed 1000 lb/ft. (1488 kg/m) or 1500 lb/ft. (2232 kg/m).
2. Total Load: As directed load per carriage.

D. Operating Force: For manually operated systems, maximum 1 lbf (4.45 N) required to move 1000 lb (453 kg).

2.2 SYSTEMS AND COMPONENTS

A. General: Provide manufacturer's standard mobile storage shelving systems and components. Where components are not otherwise indicated, provide manufacturer's standard components as required for a complete system.

B. Inserts: Furnish required concrete inserts and similar anchorage devices for installing track system, furnish other components of work where installation of devices is specified in another Section.

C. Flooring: Underlayment thickness required to bring aisle floor finish flush with rail tops.
1. Plywood Underlayment: DOC PS 1, Interior, Underlayment.

a. Fire-Retardant-Treated Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested according to ASTM E84.

2. Particleboard Underlayment: ANSI A208.1, Grade PBU.
3. Ramps: As directed Manufacturer's standard metallic-coated, cold-rolled steel or stainless-steel ramp not steeper than 1:12, with non-slip finish.
4. Floor Finish: As directed Manufacturer's standard level-loop nylon carpet; color as selected by Architect from manufacturer's full range or Manufacturer's standard 12-inch-(305-mm-) square vinyl tile; color as selected by Architect from manufacturer's full range.

D. Tracks: Steel rails with tops machined to mate with guide wheels and with ends designed to provide smooth, secure continuity between sections without field welding. Provide mounting brackets, anchorage devices, adjustable leveling devices, and stops at terminations of rails to prevent carriages from running off track ends.

1. Mounting: As directed Surface mounted or Recessed.

E. Carriages: Rigid frames consisting of C-shaped cold-formed steel beams and cross beams, designed to allow secure anchorage of shelving units.

1. Carriage Width: As directed.
2. Carriage Length: As directed.
3. Wheels: Manufacturer's standard number of bearing-mounted, steel wheels, precision ground to mate with tracks.
4. Bumpers: Provide two rubber bumpers with minimum depth of 1/2 inch (13 mm) each side.

F. Anti-Tip Brackets: Mount on carriage for engagement with track system to secure units against tipping.

G. Carriage End Panels: Full depth and height of shelving units. As directed Provide at the operating end or both ends of each range.

1. Material: As directed, Cold-rolled steel sheet, 0.048 inch (1.22 mm) thick, high-pressure decorative laminate, wood veneer, acrylic sheet or manufacturer's standard.

2.3 MANUALLY OPERATED SYSTEMS

2.4 MECHANICALLY ASSISTED SYSTEMS

A. Drive Systems: Geared transmission and chain systems with tensioning device to provide mechanical assistance and uniform movement along entire length of each carriage. Permanently shielded and lubricated.

B. Drive Shaft: Continuous tubular or solid steel shaft, capable of transmitting torque from drive system without distortion.

C. Locking Pins: Located on range end panels to allow locking of individual range carriage when depressed.

2.5 STEEL-BRACKET SHELVING

A. Steel-Bracket Shelving: ANSI Z39.73, shelving consisting of two uprights and two spreaders per section forming a four-sided frame, with adjustable shelves on one or both sides of uprights cantilever-hung by brackets. Configure units for mounting on mobile carriages.

B. Shelving Units:

1. Type: Welded, self-supporting units.
2. Configuration: As directed, Double or Single-faced units with gusset plates.
3. Width: 36 inches (914 mm).
4. Height: As directed 42 inches (1067 mm), 66 inches (1676 mm), 78 inches (1981 mm), 84 inches (2133 mm) or 90 inches (2286 mm).
5. Shelf Depth: As directed, 8 inches (203 mm), 9 inches (229 mm), 10 inches (254 mm) or 12 inches (305 mm) nominal.
6. Shelf Styles: Provide the following styles and numbers of adjustable shelves:

    a. Flat with integral backstops; As directed, six, five, four or two shelves.
    b. Adjustable divider with integral backstops; As directed, number of shelves. Provide five adjustable partitions per shelf with hooks or tabs to fit in slots in divider shelves.

2.6 STEEL-CASE SHELVING

A. Steel-Case Shelving: Shelving consisting of full end, top, and back panels, with end panels made to receive adjustable shelves in slots or to receive clips to support adjustable shelves. Configure units for mounting on mobile carriages.

B. Shelving Units:

1. Type: As directed Self-supporting, Starter or Adder unit.
2. Configuration: As directed Single or Double-faced units.
3. Width: 36 inches (914 mm).
4. Height: As directed 42 inches (1067 mm), 60 inches (1524 mm), 84 inches (2133 mm) or 90 inches (2286 mm).
5. Shelf Depth: As directed 9 inches (229 mm), 10 inches (254 mm) or 12 inches (305 mm) nominal.
6. Shelf Styles: Provide the following styles and numbers of adjustable shelves:

    a. Flat; As directed six, five, four or two shelves.
    b. Adjustable divider; number of shelves, as directed Provide five adjustable partitions per shelf with hooks or tabs to fit in slots in divider shelves.

2.7 STEEL FOUR-POST SHELVING

A. Steel Four-Post Shelving: Shelving consisting of four angle-iron uprights per section, with adjustable shelves resting on shelf supports hung on uprights. Configure units for mounting on mobile carriages.

B. Shelving Units:

1. Type: As directed Self-supporting, Starter or Adder unit.
2. Configuration: As directed Open, Open with center dividers or Closed back and ends.
3. Width: As directed 30 inches (762 mm), 36 inches (914 mm), 42 inches (1067 mm) or 48 inches (1219 mm).
4. Height: As directed 40 inches (1016 mm), 42 inches (1067 mm), 64 inches (1626 mm), 76 inches (1930 mm) or 88 inches (2235 mm).
5. Shelf Depth: As directed 9 inches (229 mm), 12 inches (305 mm), 18 inches (457 mm) or 24 inches (610 mm) nominal.
6. Shelf Styles: Provide the following styles and numbers of adjustable shelves:

    a. Flat; As directed six, five, four or two shelves.
    b. Adjustable divider; As directed number or shelves. Provide five adjustable partitions per shelf with hooks or tabs to fit in slots in divider shelves.

2.8 MATERIALS

A. High-Pressure Decorative Laminate: NEMA LD 3, Grade VGS.

1. Colors, Textures, and Patterns: As indicated by manufacturer's designations, Match Architect's samples or as selected by Architect from manufacturer's full range.

B. Wood Veneer: Veneer of species indicated, with Grade A faces.

1. Veneer Species and Cut: Red oak, plain sliced.
2. Staining and Finish: As indicated by manufacturer's designations, Match Architect's samples or as selected by Architect from manufacturer's full range.

C. Acrylic Sheet: Thermoformable, monolithic sheet, Finish 1 (smooth or polished).

1. Color: As directed Colorless, transparent, White, translucent, Bronze tinted, transparent or Gray tinted, transparent.

2.9 STEEL FINISHES

A. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to achieve a minimum dry film thickness of 2 mils (0.05 mm).

1. Color and Gloss: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Level and plumb tracks to a tolerance of 0.09 inch in 120 inches (2.4 mm in 3.048 m) with no more than 0.06-inch (1.5-mm) variation between adjacent rails. Use permanent shims or non-shrink grout as indicated by manufacturer.

B. Surface-Mounted Track Systems: Install underlayment, ramps, and finish flooring according to manufacturer's written instructions and flush with track surfaces. Do not extend ramps beyond ends of carriages.

C. Recessed Track Systems: Solidly fill gaps between slab and rail according to manufacturer's written instructions to secure tracks and prevent movement.

D. Carriage Installation: Mount mobile carriages on track system with anti-tip brackets engaged by rails and adjust for smooth operation. Provide non-moving carriages securely fixed to rails where indicated.

E. Attach shelving units to carriages according to manufacturer's written instructions and as required to prevent vibration during movement.

1. Level and plumb shelving units to a tolerance of 1/8 inch in 96 inches (3 mm in 2438 mm).

END OF SECTION 105626

SECTION 107313 - AWNINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Fixed awnings.
2. Manually operated retractable awnings.
3. Motorized retractable awnings.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Include plans, elevations, sections, mounting heights, and attachment details.
2. Detail fabrication and assembly of awnings, including seam layout, spacing, and orientation of awning fabric.
3. Include diagrams for power, signal, and control wiring.
4. Graphics: Show text message, font, character sizes, and other graphic forms; character, word, and line spacing; margin widths; position of copy; and other information related to graphic design.

C. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer and fabricator agree to repair or replace components of awnings that fail in materials or workmanship within specified warranty period.

1. Awning Warranty Period: Five years from date of Substantial Completion.
2. Fabric Warranty Period: As directed Three, Five, Eight or 12 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

B. Fire-Test-Response Characteristics: Provide awning fabrics with the fire-test-response characteristics indicated, as determined by testing identical products according to test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. Flame-Resistance Ratings: As directed Passes NFPA 701 or California Code of Regulations, Title 19.
2. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency for Flame-Spread Index of 25 or less.
3. Permanently attach label to each awning fabric indicating whether fabric is inherently and permanently flame resistant or is treated with flame-retardant chemicals, and whether it requires retreatment after designated time period or cleaning.

2.2 FABRIC

A. As directed.

B. Fabric:

1. Fiber Content: As directed Vinyl-laminated or -coated polyester mesh, Vinyl-laminated or -coated polyester, Acrylic-coated polyester, Resin-coated polyester, Vinyl-coated polyester/cotton blend, Acrylic-coated polyester/cotton blend, Resin-coated polyester/cotton blend, Solution-dyed acrylic, Solution-dyed modacrylic or Expanded PTFE.
2. Weight: As directed.
3. Width: As directed.
4. Mildew Resistance: Showing no growth when tested according to ASTM G21.
5. Applied Treatment: As directed Stain resistant, Mildew resistant, Polymer, flame resistant, Water repellent or Lamination.
6. Pattern and Color: Match Architect's samples, As selected by Architect from manufacturer's full range or as indicated in an awning schedule.

C. Seam Thread: As directed 100 percent expanded PTFE or 100 percent bonded polyester, UV-light, mildew, and rot resistant.

D. Decorative Trims: As directed Borders, Braid and bindings, Cords, Fringe, Patterned edge; scalloped, Patterned edge; V-shaped, Streamers, Tassels or Welting.

1. Colors: As indicated by manufacturer's designations, Match Architect's samples, Matching or coordinating with awning fabric color, as selected by Architect from manufacturer's full range or as indicated in an awning schedule.

2.3 AWNING FRAME AND ACCESSORY MATERIALS

A. Steel:

1. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
2. Steel Tubing: ASTM A500/A500M.
3. Galvanized Steel Tubing: ASTM A787/A787M.
4. Steel Pipe: ASTM A53/A53M, Standard Weight (Schedule 40).

B. Aluminum: Alloy and temper recommended by awning manufacturer for type of use and finish indicated and with not less than the strength and durability properties of alloy and temper required by structural loads.

1. Aluminum Plate and Sheet: ASTM B209 (ASTM B209M).
2. Aluminum Extrusions: ASTM B221 (ASTM B221M).
3. Extruded Structural Pipe and Round Tubing: ASTM B429/B429M, standard weight (Schedule 40).
4. Drawn Seamless Tubing: ASTM B210 (ASTM B210M).

C. Anchors, Fasteners, Fittings, Hardware, and Installation Accessories: Complying with performance requirements indicated and suitable for exposure conditions, supporting structure, anchoring substrates, and installation methods indicated. Corrosion-resistant or noncorrodible units; weather-resistant, tamperproof, vandal- and theft-resistant, compatible, nonstaining materials. Provide as required for awning assembly, mounting, and secure attachment. Number as needed to comply with performance requirements and to maintain uniform appearance; evenly spaced. Where exposed to view, provide finish and color as selected by Architect from manufacturer's full range.

1. Expansion Anchors: Anchor bolt and sleeve assembly with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry assemblies and equal to four times the load imposed when installed in concrete as determined by testing according to ASTM E488 conducted by a qualified independent testing and inspecting agency.

    a. Material: Stainless steel with bolts and nuts complying with ASTM F593 and ASTM F594, Alloy Group 1 or 2 (ASTM F738M and ASTM F836M, Grade A1 or A4).

2. Adhesive-Bonded Anchors: Anchor bolt and sleeve assembly with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry assemblies and equal to four times the load imposed when installed in concrete as determined by testing according to ASTM E1512 conducted by a qualified independent testing and inspecting agency.

a. Material: Stainless steel with bolts and nuts complying with ASTM F593 and ASTM F594, Alloy Group 1 or 2 (ASTM F738M and ASTM F836M, Grade A1 or A4).

D. Galvanizing Repair Paint: High-zinc-dust-content paint for regalvanizing welds in steel, complying with SSPC-Paint 20.

E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187.

2.4 AWNING FABRIC FABRICATION

A. Fabrication: As directed Reinforce wear points and hardware attachment points with nonwoven, mesh or polypropylene mesh webbing. Seam fabrics in locations indicated on the Drawings and as follows:

1. Fabric Edges and Seams: Fold and stitch selvedge and cut fabric edges.
2. Fabric Edges and Seams: Hot cut and sealed.
3. Fabric Edges and Seams: Radio-frequency welded.
4. Fabric Edges and Seams: Adhesively bonded.
5. Fabric Edges and Seams: Manufacturer's standard hemming and seaming methods.
6. Fabric Attachment: As directed Manufacturer's standard. Hem pockets. Screws. Staples.
7. Fabric Attachment: Grommets.

a. Grommet Spacing: 6 inches (150 mm) o.c..

B. Fabric Insets: As directed Heat-sealed or Sewn-in process.

C. Graphic Application: As directed Hand painting, Silk-screen printing, Heat color transfer, Vinyl film with pressure-sensitive adhesive backing, PVDF film with pressure-sensitive adhesive backing, PVF film with pressure-sensitive adhesive backing, Radio-frequency, heat-sealed vinyl film, Eradication or Cut-out lettering.

1. Graphic Image: As indicated on Drawings or as indicated in awning schedule.
2. Text Message: As indicated on Drawings or as indicated in an awning schedule.

a. Text Font: Helvetica.
b. Character Size: Minimum 1-inch- (25.4-mm-) or 1-foot- (0.3048-m-) high characters.
c. Character Colors: As directed.

3. Vinyl Film: As directed, calendered-vinyl film, not less than 3 mils (0.076 mm) thick, with pressure-sensitive adhesive backing, Cast-vinyl film, not less than 2 mils (0.051 mm) thick, with pressure-sensitive adhesive backing or Cast-vinyl reflective film, not less than 2 mils (0.051 mm) thick, with pressure-sensitive adhesive backing.

2.5 FIXED AWNING FABRICATION

1. Frame Fabrication: As directed Fabricate awning frames from steel or aluminum. Preassemble in shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations.
2. Form exposed work true to line and level with accurate angles and surfaces and straight edges.
3. Weld corners and connections continuously. Obtain fusion without undercut or overlap. Remove welding flux immediately. At exposed corners and connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
4. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure awnings in place and to properly transfer loads.

B. Steel Finish: As directed Galvanized mill finish; apply galvanizing repair paint to welds. Manufacturer's standard primed and top-coated decorative or Baked-enamel or powder-coat finish complying with finish manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

1. Color: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from manufacturer's full range.

C. Aluminum Finish: As directed Mill, Manufacturer's standard primed and top-coated decorative or Baked-enamel or powder-coat finish complying with finish manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

1. Color: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from manufacturer's full range.

2.6 MANUALLY OPERATED RETRACTABLE AWNINGS

A. Type: Retractable awning, fabricated form aluminum, with hinged arms attached to steel torsion bar with tensioning system designed to keep fabric taut in any position.

B. Fabric Roll Protection: As directed Cassette design to fully enclose, Semi-cassette design to partially enclose or Sheet metal hood to protect fabric roll when awning is retracted.

C. Manual Operator: Provide gear and crank operator.

1. Manual Operator Assist Mechanism: Manufacturer's standard spring assist for operating heavy awnings.
2. Crank Handle: As directed One or Two, detachable.

D. Mounting Brackets: Configured for mounting to surface indicated, with adjustable pitch.

E. Finish: As directed Manufacturer's standard primed and top-coated decorative or Baked-enamel or powder-coat finish complying with finish manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

1. Color: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from manufacturer's full range.

2.7 MOTORIZED RETRACTABLE AWNINGS

A. Type: Retractable awning, fabricated form aluminum, with hinged arms attached to torsion bar, with tensioning system designed to keep fabric taut in any position.

B. Fabric Roll Protection: Cassette design to fully enclose, Semi-cassette design to partially enclose or Sheet metal hood to protect fabric roll when awning is retracted.

C. Motorized Operator: Provide factory-assembled, motorized, retractable-awning operator designed for retracting awnings of type, size, weight, construction, use, and operation frequency indicated.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6 with NFPA 70, Class 2 control circuit, maximum 24-V ac or dc.

F. Electric Motors: UL-approved or -recognized, totally enclosed, insulated motor, complying with NEMA MG 1, with thermal-overload protection and internal limit switches; sized by awning manufacturer to start and operate size and weight of awning considering service factor or considering Project's service conditions without exceeding nameplate ratings.

1. Service Factor: According to NEMA MG 1 unless otherwise indicated.
2. Motor Characteristics: As directed Single phase, 24, 110 or 220 V, 60 Hz.
3. Coordinate wiring requirements and electrical characteristics of motors with building electrical system.
4. Motor Mounting: Within manufacturer's standard roller enclosure.

G. Remote Controls: As directed Electric controls with NEMA ICS 6, Type 1 or Type 4 enclosure for surface or recessed or flush mounting. Provide the following devices for remote-control activation of awnings:

1. Keyed Control Stations: As directed Maintained or Momentary-contact, three-position, switch-operated control station with open, close, and off functions. Provide two keys per station.
2. Control Stations: As directed Maintained or Momentary-contact, three-position, toggle or rocker-style, wall-switch-operated control station with open, close, and center-off functions.

    a. Color: As directed Ivory, White or as indicated in an awning schedule.

H. Operating Features: Include the following:

1. Backup gear and crank operator for manual operation during power failures with detachable handle, 6 feet (1.8 m) long, manufacturer's standard length, length required to make operation convenient from ground level or length as indicated on Drawings.

2. Limit Switches: Adjustable switches, interlocked with motor controls and set to automatically stop awning at fully raised and fully lowered positions.
3. Preset Position Function: Stop and hold awning at any position or Stop and hold awning at three predetermined positions including open, closed, and one user-programmed position.

I. Finish: As directed Manufacturer's standard primed and top-coated decorative or Baked-enamel or powder-coat finish complying with finish manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

1. Color: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install awnings and motor controls at locations and in position indicated, securely connected to supports, free of rack, and in proper relation to adjacent construction. Use mounting methods of types described and in compliance with Shop Drawings and fabricator's written instructions.

B. Weld frame connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.

C. Anchoring to In-Place Construction: Use anchors, fasteners, fittings, hardware, and installation accessories where necessary for securing awnings to structural support and for properly transferring load to in-place construction.

D. Corrosion Protection: Coat concealed surfaces of aluminum that come in contact with grout, concrete, masonry, wood, or dissimilar metals with a heavy coat of bituminous paint.

E. Adjust hardware and moving parts to function smoothly, lubricate as recommended by retractable-awning manufacturer.

3.2 DEMONSTRATION

A. As directed Engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain retractable awnings.

END OF SECTION 107313

SECTION 107343 - TRANSPORTATION STOP SHELTERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes modular aluminum shelters.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For shelters. Include plans, elevations, sections, details, and attachments to other work including anchor-bolt plans and templates.

C. Samples: For each type of exposed finish.

1.3 INFORMATIONAL SUBMITTALS

A. Evaluation Reports: For anchors, from ICC-ES.

B. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair finish or replace shelters that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance: Shelters shall withstand the following loads and stresses within limits and under conditions indicated according to ASCE/SEI 7:

1. Design Loads: As indicated on Drawings.

B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Safety Glazing Products: Category II materials complying with testing requirements in 16 CFR 1201, permanently marked with certification label acceptable to authorities having jurisdiction.

2.2 MODULAR ALUMINUM SHELTERS

A. Fabricate shelters as an integrated set of modular components ready for assembly on Project site.

B. Building Style: Open front, Dual entrance, Single entrance on left, Single entrance on right or as indicated on Drawings.

1. Size: As directed 48 inches by 96 inches (1219 mm by 2438 mm), 60 inches by 120 inches (1524 mm by 3048 mm), 72 inches by 144 inches (1829 mm by 3658 mm) or 96 inches by 144 inches (2438 mm by 3658 mm).

C. Structural Framework: Fabricated from manufacturer's standard 2.5-by-2.5-by-0.125-inch (64-by-64-by-3.18-mm) aluminum tubing, channel, angle, or tee extrusions. Connect framework with exposed mechanical fasteners.

D. Post Bases: Externally adjustable, flanged, aluminum sleeves; minimum 3-inch (76-mm) vertical adjustment. Include shims for leveling.

E. Anchorage: As directed Cast-in-place anchor bolts or Post-installed anchors, fabricated from stainless steel, with allowable load or strength design capacities calculated to be greater than or equal to the design load.

F. Windows: As directed Extruded-aluminum sash frames, factory glazed with clear tempered float glass, tempered, tinted float glass, polycarbonate glazing or acrylic glazing.

G. Roof: As directed Flat, Standing seam hip, Standing seam gable, Glazed barrel vault or Glazed domes with full perimeter gutter.

1. Exterior Roof Panels: Fabricated from 0.032-inch (0.81-mm) thick aluminum sheet with protective plastic sheet finish.
2. Glazing: As directed Polycarbonate or Acrylic.
3. Canopy Fascia: Fabricated from 0.063-inch (1.60-mm) thick aluminum sheet, of manufacturer's standard design.

a. Height: As directed 6 inches (152 mm) or 8 inches (203 mm).

b. Overhang: 3 inches (76 mm).
c. Graphics: Die-cut vinyl lettering for exterior use.

1) Height: 4 inches (102 mm).
2) Color: White.
3) Font: Helvetica.
4) Message: "Bus Stop" or as indicated on Drawings.

4. Downspouts: Integral, extending 3 inches (76 mm) beyond shelter walls.

H. Integral or Freestanding Bench: As directed Aluminum or Wood bench with backrest.

1. Length: As directed Full length of shelter or Partial length to allow wheelchair access.
2. Wood Species: As directed Oak, Maple or Heart redwood.
3. Armrests: Manufacturer's standard pipe armrests.

I. Display Panels: As directed Full width of shelter window by 30 inches (762 mm) or 72 inches (1829 mm) high for one or two-sided display. Front-hinged panel with locking device.

1. Location: As indicated on Drawings or on left sidewall.
2. Illumination: As directed Internal fluorescent or LED lighting for front-lit, back-lit or perimeter-lit display.

J. Shelter Accessories:

1. Ashtray: Wall mounted, stainless steel.
2. Wind Skirts: Aluminum-sheet closures attached to bottom rail and matching shelter finish, full length of walls. Where required for sloping base, overlapping two-piece closures, with bottom anchored to concrete base.

K. Electrical Power Service: 125-A, 120/240-V ac, single phase, three wire. Run copper wiring in 1/2-inch (13-mm) EMT conduit. Exterior weatherproof connection box and lockable interior circuit breaker panel.

L. Photovoltaic Power: As directed Manufacturer's standard photovoltaic power generation system including pole or roof-mounted photovoltaic modules, batteries, charge controllers, inverters, and mounting structures.

M. Lighting Fixtures: As directed Activated by photocell, motion sensor or tamper-resistant concealed switch.

1. As directed One or Two ceiling-mounted fluorescent lighting fixture(s), 48 inches (1219 mm) long, with acrylic lens and two 40-W lamps in each fixture.
2. Ceiling-mounted LED lighting.

N. Heating Unit: As directed Wall-mounted forced-fan operation or radiant, quartz-tube heater, 110 V, enclosed in enameled-steel cabinet. Adjustable timer and vandal-resistant switch with engraved sign: "Push for Heat." Heating capacity of not less than 5000 Btu/h (1465 W).

O. Exhaust Fans: As directed 7-inch (178-mm), 10-inch (254-mm) or 12-inch (305--mm) diameter units, capable of 135 cfm (63 L/s), 520 cfm (245 L/s) or 980 cfm (462 L/s) airflow exhaust.

P. Materials:

1. Aluminum Sheet: ASTM B209 (ASTM B209M).
2. Aluminum Extruded Shapes: ASTM B221 (ASTM B221M).
3. Clear Tempered Float Glass: ASTM C1048, Kind FT, Condition A, Type I, Class 1, and Quality q3.
4. Tempered, Tinted Float Glass: ASTM C1048, Kind FT, Condition A, Type I, Class 1, and Quality q3.

    a. Tint Color: As directed Blue, Blue-green, Bronze, Green or Gray.

5. Acrylic Glazing: ASTM D4802, thermoformable, monolithic sheet, category as standard with manufacturer, Finish 1 (smooth or polished), Type UVF (formulated with UV absorber).

    a. Color: As directed, Colorless, transparent, White, translucent, Bronze-tinted, transparent or Gray-tinted, transparent.

6. Polycarbonate Glazing: Thermoformable, extruded monolithic sheets, UV resistant, with anti-graffiti coating and with average impact strength of 12 to 16 ft-lb/in. (640 to 854 J/m) of width when tested according to ASTM D256, Test Method A (Izod).

    a. Color: As directed, Colorless, transparent, White, translucent, Bronze-tinted, transparent or Gray-tinted, transparent.

Q. Clear Anodic Finish: As directed AAMA 611, AA-M12C22A41, Class I, 0.018 mm or AA-M12C22A31, Class II, 0.010 mm or thicker.

R. Color Anodic Finish: As directed AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or AA-M12C22A32/A34, Class II, 0.010 mm or thicker.

1. Color: As directed Light bronze, Medium bronze, Dark bronze or Black.
2. Color: Match Architect's sample or as selected by Architect from full range of industry colors and color densities.

S. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm).

1. Color and Gloss: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install shelters according to manufacturer's written instructions.

B. Set shelters plumb and aligned with full bearing on concrete bases.

C. Fasten shelters securely to concrete base with anchorage indicated.

D. Connect to electrical power.

3.2 ADJUSTING

A. After completing installation, inspect exposed finishes and repair damaged finishes.

END OF SECTION 107343

SECTION 107516 - GROUND-SET FLAGPOLES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes ground-set flagpoles made from aluminum and fiberglass.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, operating characteristics, fittings, accessories, and finishes for flagpoles.

B. Delegated-Design Submittal: For flagpoles.

1.3 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For flagpoles to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain flagpoles as complete units, including fittings, accessories, bases, and anchorage devices, from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design flagpole assemblies.

B. Structural Performance: Flagpole assemblies, including anchorages and supports, shall withstand design loads indicated within limits and under conditions indicated.

1. Wind Loads: Determine according to NAAMM FP 1001. Basic wind speed for Project location as directed.

2.3 ALUMINUM FLAGPOLES

A. Aluminum Flagpoles: As directed Cone or Entasis-tapered flagpoles fabricated from seamless extruded tubing complying with ASTM B241/B241M, Alloy 6063, with a minimum wall thickness of 3/16 inch (4.8 mm).

B. Exposed Height: As directed.

C. Metal Foundation Tube: Manufacturer's standard corrugated-steel foundation tube, 0.060-inch (1.52-mm) wall thickness with 3/16-inch (4.8-mm) steel bottom plate and support plate; 3/4-inch- (19-mm-) diameter, steel ground spike; and steel centering wedges welded together. Galvanize foundation tube after assembly. Furnish loose hardwood wedges at top of foundation tube for plumbing pole.

D. Sleeve for Aluminum Flagpole: Fiberglass or PVC pipe foundation sleeve as directed, made to fit flagpole, for casting into concrete foundation.

2.4 FIBERGLASS FLAGPOLES

A. Fiberglass Flagpoles: Cone or Entasis-tapered flagpoles fabricated from polyester resin reinforced with woven glass-fiber roving with 75 percent of glass fibers parallel to length of flagpole as directed.

B. Exposed Height: As directed.

C. Sleeve for Fiberglass Flagpole: Fiberglass or PVC pipe foundation sleeve as directed, made to fit flagpole, for casting into concrete foundation.

2.5 FITTINGS

A. Finial Ball: Flush-seam ball, sized as indicated or, if not indicated, to match flagpole-butt diameter.

1. 0.063-inch (1.6-mm) spun aluminum, finished to match flagpole or with gold anodic finish as directed.

B. Internal Halyard, Winch System: Manually operated winch with control stop device and removable handle, stainless-steel cable halyard, and concealed revolving truck assembly with plastic-coated counterweight and sling. Furnish flush access door secured with cylinder lock. Finish truck assembly to match flagpole.

1. Halyard Flag Snaps: Swivel snap hooks with neoprene or vinyl covers as directed. Furnish two per halyard.

C. Internal Halyard, Cam Cleat System: 5/16-inch- (8-mm-) diameter, braided polypropylene halyard; cam cleat; and concealed revolving truck assembly with plastic-coated counterweight and sling. Furnish flush access door secured with cylinder lock. Finish truck assembly to match flagpole.

1. Halyard Flag Snaps: Swivel snap hooks with neoprene or vinyl covers as directed. Furnish two per halyard.

D. External Halyard: Ball-bearing, non-fouling, revolving truck assembly of cast metal with continuous 5/16-inch (8-mm) diameter, braided polypropylene halyard and 9-inch (228-mm) cast-metal cleats with fasteners. Finish exposed metal surfaces to match flagpole.

1. Halyards and Cleats: One or Two at each flagpole as directed.
2. Halyard Flag Snaps: Swivel snap hooks with neoprene or vinyl covers as directed. Furnish two per halyard.

2.6 MISCELLANEOUS MATERIALS

A. Drainage Material: Crushed stone, or crushed or uncrushed gravel; coarse aggregate.

B. Sand: ASTM C33/C33M, fine aggregate.

C. Elastomeric Joint Sealant: Joint sealant complying with requirements in Section 079200 "Joint Sealants" as directed.

D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.7 ALUMINUM FINISHES

A. Natural Satin Finish: AA-M32, fine, directional, medium satin polish; buff complying with AA-M20; seal aluminum surfaces with clear, hard-coat wax.

B. Clear Anodic Finish: AAMA 611, AA-M12C22A41 or AA-M12C22A31 as directed.

C. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44 or AA-M12C22A32/A34 as directed.

1. Color: As directed.
2. Color: As directed.

2.8 FIBERGLASS FINISHES

A. Fiberglass: UV-light stable, hard, high-gloss gel coat or high-gloss, high-build polyurethane or polyester coating.

1. Color: As directed.

PART 3 - EXECUTION

3.1 PREPARATION

A. Prepare uncoated metal flagpoles that are set in foundation tubes by painting below-grade portions with a heavy coat of bituminous paint.

B. Foundation Excavation: Excavate to neat clean lines in undisturbed soil. Remove loose soil and foreign matter from excavation and moisten earth before placing concrete. Place and compact drainage material at excavation bottom.

C. Foundation Tube: Place foundation tube, center, and brace to prevent displacement during concreting. Place concrete. Plumb and level foundation tube and allow concrete to cure.

D. Sleeves: Locate and secure sleeves in forms by bracing to reinforcement and forms.

E. Place concrete, as specified in Section 033000 "Cast-in-Place Concrete." Or Section 033053 "Miscellaneous Cast-in-Place Concrete" as directed Compact concrete in place by using vibrators. Moist-cure exposed concrete for no fewer than seven days or use nonstaining curing compound.

F. Trowel exposed concrete surfaces to a smooth, dense finish, free of trowel marks, and uniform in texture and appearance. Provide positive slope for water runoff to perimeter of concrete base.

3.2 FLAGPOLE INSTALLATION

A. General: Install flagpoles where indicated and according to Shop Drawings and manufacturer's written instructions.

B. Foundation Tube: Place flagpole in tube, seated on bottom plate between steel centering wedges, and install hardwood wedges to secure flagpole in place. Place and compact sand in foundation tube and remove hardwood wedges. Seal top of foundation tube with a 2-inch (50-mm) layer of elastomeric joint sealant and cover with flashing collar.

END OF SECTION 107516

SECTION 107523 - WALL-MOUNTED FLAGPOLES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes wall-mounted flagpoles made from aluminum, copper alloy (bronze) and fiberglass.

B. Owner-Furnished Material: None

C. Related Requirements:

1. Section 264113 "Lightning Protection for Structures" for connecting wall-mounted metal flagpoles to lightning protection system.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, operating characteristics, fittings, accessories, and finishes for flagpoles.

B. Delegated-Design Submittal: For flagpoles.

1. Include loads, point reactions, and locations for attachment of flagpoles to building's structure.

1.3 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For flagpoles to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain flagpoles as complete units, including fittings, accessories, bases, and anchorage devices, from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design flagpole assemblies.

B. Structural Performance: Flagpole assemblies, including anchorages and supports, shall withstand design loads indicated within limits and under conditions indicated.

1. Wind Loads: Determine according to NAAMM FP 1001. Basic wind speed for Project location, as directed.

2.3 ALUMINUM FLAGPOLES

A. Aluminum Flagpoles: As directed Cone or Entasis-tapered flagpoles fabricated from seamless extruded tubing complying with ASTM B241/B241M, Alloy 6063, with a minimum wall thickness of 3/16 inch (4.8 mm).

B. Exposed Length: As directed 8 feet (2.5 m), 10 feet (3 m), 12 feet (3.7 m), 15 feet (4.6 m), 20 feet (6 m), 25 feet (7.5 m) or 30 feet (9 m).

C. Vertical Wall Mount: Cast-aluminum mounting bracket complete with escutcheon, mounting plate and through-wall anchorage.

1. Finish: As directed Same as flagpole, Gold anodic, Bronze powder coated or Black powder coated.

D. Outrigger Wall Mount: Aluminum mounting bracket complete with escutcheon, mounting plate and through-wall anchorage.

1. Finish: As directed Same as flagpole, Gold anodic, Bronze powder coated or Black powder coated.

2.4 COPPER-ALLOY (BRONZE) FLAGPOLES

A. Copper-Alloy (Bronze) Flagpoles: As directed Cone or Entasis-tapered flagpoles fabricated from seamless pipe or tube complying with ASTM B43 or ASTM B135 (ASTM B135M), Alloy UNS C23000 (red brass, 85 percent copper).

B. Exposed Length: As directed 20 feet (6 m), 25 feet (7.5 m), 30 feet (9 m), 35 feet (11 m) or 40 feet (12 m).

C. Vertical Wall Mount: Cast-copper-alloy (bronze) mounting bracket complete with escutcheon, mounting plate and through-wall anchorage.

1. Finish: Same as flagpole.

D. Outrigger Wall Mount: Copper-alloy (bronze) mounting bracket complete with escutcheon, mounting plate and through-wall anchorage.

1. Finish: Same as flagpole.

2.5 FIBERGLASS FLAGPOLES

A. Fiberglass Flagpoles: As directed Cone or Entasis-tapered flagpoles fabricated from polyester resin reinforced with woven glass-fiber roving with 75 percent of glass fibers parallel to length of flagpole.

B. Exposed Length: As directed 20 feet (6 m), 25 feet (7.5 m), 30 feet (9 m), 35 feet (11 m), 40 feet (12 m).

C. Vertical Wall Mount: Cast-aluminum mounting bracket complete with escutcheon, mounting plate and through-wall anchorage.

1. Finish: As directed Matching flagpole, Gold anodic, Bronze powder-coated or Black powder-coated.

D. Outrigger Wall Mount: Aluminum mounting bracket complete with escutcheon, mounting plate and through-wall anchorage.

1. Finish: As directed Matching flagpole, Gold anodic, Bronze powder-coated or Black powder-coated.

2.6 FITTINGS

A. Finial Ball: Flush-seam ball, sized as indicated or, if not indicated, to match flagpole-butt diameter.

1. As directed 0.063-inch (1.6-mm) spun aluminum, finished to match flagpole or with gold anodic finish.
2. 20-oz. (0.70-mm) copper with 23-karat gold-leaf finish.
3. Spun copper alloy, finished to match flagpole.

B. Finial Eagle: Sized as indicated or as standard with manufacturer for flagpole size indicated.

1. As directed Cast aluminum, finished to match flagpole or with gold anodic finish.
2. 20-oz. (0.70-mm) copper with 23-karat gold-leaf finish.

C. Internal Halyard, Winch System: Manually operated winch with control stop device and removable handle, stainless-steel cable halyard, and concealed revolving truck assembly with plastic-coated counterweight and sling. Furnish flush access door secured with cylinder lock. Finish truck assembly to match flagpole.

1. Halyard Flag Snaps: As directed Chromium-plated bronze, Stainless-steel, Bronze or Nylon swivel snap hooks with neoprene or vinyl covers. Furnish two per halyard.

D. Internal Halyard, Cam Cleat System: 5/16-inch- (8-mm-) diameter, braided polypropylene halyard; cam cleat; and concealed revolving truck assembly with plastic-coated counterweight and sling. Furnish flush access door secured with cylinder lock. Finish truck assembly to match flagpole.

1. Halyard Flag Snaps: As directed Chromium-plated bronze, Stainless-steel, Bronze or Nylon swivel snap hooks with neoprene or vinyl covers. Furnish two per halyard.

E. External Halyard: Ball-bearing, nonfouling, revolving truck assembly of cast metal with continuous 5/16-inch (8-mm) diameter, braided polypropylene halyard and 9-inch (228-mm) cast-metal cleats with fasteners. Finish exposed metal surfaces to match flagpole.

1. Halyards and Cleats: As directed One or Two at each flagpole.
2. Halyard Flag Snaps: As directed Chromium-plated bronze, Stainless-steel or Bronze Nylon swivel snap hooks with neoprene or vinyl covers. Furnish two per halyard.

2.7 ALUMINUM FINISHES

A. Natural Satin Finish: AA-M32, fine, directional, medium satin polish; buff complying with AA-M20; seal aluminum surfaces with clear, hard-coat wax.

B. Clear Anodic Finish: As directed AAMA 611, AA-M12C22A41 or AA-M12C22A31.

C. Color Anodic Finish: As directed AAMA 611, AA-M12C22A42/A44 or AA-M12C22A32/A34.

1. Color: As directed Light bronze, Medium bronze, Dark bronze or Black.
2. Color: Match Architect's sample or As selected by Architect from full range of industry colors and color densities.

2.8 COPPER-ALLOY FINISHES

A. Hand-Rubbed Finish, Lacquered: Directionally textured, fine satin, mechanical finish coated with lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).

B. Statuary Conversion Coating over Satin Finish: Directionally textured, fine satin, mechanical finish with sulfide conversion coating.

1. Color: Match Architect's sample.

2.9 FIBERGLASS FINISHES

A. Fiberglass: UV-light stable, hard, high-gloss gel coat or high-gloss, high-build polyurethane or polyester coating.

1. Color: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 FLAGPOLE INSTALLATION

A. General: Install flagpoles where shown and according to Shop Drawings and manufacturer's written instructions.

B. Mounting Brackets and Bases: Anchor brackets and bases securely to structural support with fasteners as indicated on Shop Drawings.

END OF SECTION 107523

SECTION 107526 - ROOF-MOUNTED FLAGPOLES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes roof-mounted flagpoles made from aluminum and fiberglass.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product. Include construction details, material descriptions, dimensions of individual components and profiles, operating characteristics, fittings, accessories, and finishes for flagpoles.

B. Delegated-Design Submittal: For flagpoles. Include loads, point reactions, and locations for attachment of flagpoles to building's structure.

1.3 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For flagpoles to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain flagpoles as complete units, including fittings, accessories, bases, and anchorage devices, from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design flagpole assemblies.

B. Seismic Performance: Flagpole assemblies shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

C. Structural Performance: Flagpole assemblies, including anchorages and supports, shall withstand design loads indicated within limits and under conditions indicated.

1. Wind Loads: Determine according to NAAMM FP 1001. Basic wind speed for Project location as directed.

2.3 ALUMINUM FLAGPOLES

A. Aluminum Flagpoles: As directed Cone or Entasis-tapered flagpoles fabricated from seamless extruded tubing complying with ASTM B241/B241M, Alloy 6063, with a minimum wall thickness of 3/16 inch (4.8 mm).

B. Exposed Height: As directed 20 feet (6 m), 25 feet (7.5 m), 30 feet (9 m), 35 feet (11 m), 40 feet (12 m), 45 feet (13.5 m) or 50 feet (15 m).

C. Cast-Metal Shoe Base: Made from aluminum for anchor-bolt mounting; furnish with anchor bolts.

1. Furnish connector to building's lightning protection system conductor.

D. Hinged Baseplate: Cast-metal tilting hinged base and anchor plate joined by permanently secured pivot rod. Furnish with stainless-steel screws for securing tilting base to anchor plate when not tilted; furnish with anchor bolts.

1. Furnish connector to building's lightning protection system conductor.

E. Braced Roof Mount: Roof-mounted flagpole socket and either rod or tubular braces with turnbuckles and mounting bases. Provide as a complete assembly with anchor bolts and connector for lightning protection system.

1. Braces, Turnbuckles, and Connectors: Same metal and finish as flagpoles.

2.4 FIBERGLASS FLAGPOLES

A. Fiberglass Flagpoles: As directed Cone or Entasis-tapered flagpoles fabricated from polyester resin reinforced with woven glass-fiber roving with 75 percent of glass fibers parallel to length of flagpole.

B. Exposed Height: As directed 20 feet (6 m), 25 feet (7.5 m), 30 feet (9 m), 35 feet (11 m), 40 feet (12 m), 45 feet (13.5 m) or 50 feet (15 m).

C. Cast-Metal Shoe Base: Made from aluminum for anchor-bolt mounting; furnish with anchor bolts.

1. Furnish connector to building's lightning protection system conductor.

D. Hinged Baseplate: Cast-metal tilting hinged base and anchor plate joined by permanently secured pivot rod. Furnish with stainless-steel screws for securing tilting base to anchor plate when not tilted; furnish with anchor bolts.

1. Furnish connector to building's lightning protection system conductor.

E. Braced Roof Mount: Roof-mounted flagpole socket and either rod or tubular braces with turnbuckles and mounting bases. Provide as a complete assembly with anchor bolts and connector for lightning protection system.

1. Braces, Turnbuckles, and Connectors: Same metal and finish as flagpoles.

2.5 FITTINGS

A. Finial Ball: Flush-seam ball, sized as indicated or, if not indicated, to match flagpole-butt diameter.

1. As directed 0.063-inch (1.6-mm) spun aluminum, finished to match flagpole or with gold anodic finish.
2. 20-oz. (0.70-mm) copper with 23-karat gold leaf finish.

B. Internal Halyard, Winch System: Manually operated winch with control stop device and removable handle, stainless-steel cable halyard, and concealed revolving truck assembly with plastic-coated counterweight and sling. Furnish flush access door secured with cylinder lock. Finish truck assembly to match flagpole.

1. Halyard Flag Snaps: As directed Chromium-plated bronze, Stainless-steel, Bronze or Nylon swivel snap hooks with neoprene or vinyl covers. Furnish two per halyard.

C. Internal Halyard, Cam Cleat System: 5/16-inch (8-mm) diameter, braided polypropylene halyard; cam cleat; and concealed revolving truck assembly with plastic-coated counterweight and sling. Furnish flush access door secured with cylinder lock. Finish truck assembly to match flagpole.

1. Halyard Flag Snaps: As directed Chromium-plated bronze, Stainless-steel, Bronze or Nylon swivel snap hooks with neoprene or vinyl covers. Furnish two per halyard.

D. External Halyard: Ball-bearing, nonfouling, revolving truck assembly of cast metal with continuous 5/16-inch- (8-mm-) diameter, braided polypropylene halyard and 9-inch (228-mm) cast-metal cleats with fasteners. Finish exposed metal surfaces to match flagpole.

1. Halyards and Cleats: As directed One or Two at each flagpole.
2. Halyard Flag Snaps: As directed Chromium-plated bronze, Stainless-steel, Bronze or Nylon swivel snap hooks with neoprene or vinyl covers. Furnish two per halyard.

2.6 MISCELLANEOUS MATERIALS

A. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M.

2.7 ALUMINUM FINISHES

A. Natural Satin Finish: AA-M32, fine, directional, medium satin polish; buff complying with AA-M20; seal aluminum surfaces with clear, hard-coat wax.

B. Clear Anodic Finish: As directed AAMA 611, AA-M12C22A41 or AAMA 611, AA-M12C22A31.

C. Color Anodic Finish: As directed AAMA 611, AA-M12C22A42/A44 or AAMA 611, AA-M12C22A32/A34.

1. Color: As directed Light bronze, Medium bronze, Dark bronze or Black.

2. Color: Match Architect's sample or as selected by Architect from full range of industry colors and color densities.

2.8 FIBERGLASS FINISHES

A. Fiberglass: UV-light stable, hard, high-gloss gel coat or high-gloss, high-build polyurethane or polyester coating.

1. Color: As indicated by manufacturer's designations, Match Architect's sample or as selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 FLAGPOLE INSTALLATION

A. General: Install flagpoles where shown and according to Shop Drawings and manufacturer's written instructions.

B. Baseplate: Install baseplate on washers placed over leveling nuts on bolts, adjust until flagpole is plumb. After flagpole is plumb, tighten retaining nuts and fill space under baseplate solidly with nonshrink, nonmetallic grout. Finish exposed grout surfaces smooth and slope 45 degrees away from edges of baseplate.

C. Mounting Brackets and Bases: Anchor brackets and bases securely to structural support with fasteners as indicated on Shop Drawings.

END OF SECTION 107526

SECTION 107529 - PLAZA-MOUNTED FLAGPOLES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes plaza-mounted flagpoles made from aluminum and fiberglass.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, operating characteristics, fittings, accessories, and finishes for flagpoles.

B. Delegated-Design Submittal: For flagpoles.

1. Include loads, point reactions, and locations for attachment of flagpoles to building's structure.

1.3 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For flagpoles to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain flagpoles as complete units, including fittings, accessories, bases, and anchorage devices, from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design flagpole assemblies.

B. Structural Performance: Flagpole assemblies, including anchorages and supports, shall withstand design loads indicated within limits and under conditions indicated.

1. Wind Loads: Determine according to NAAMM FP 1001. Basic wind speed for Project location As directed.

2.3 ALUMINUM FLAGPOLES

A. Aluminum Flagpoles: As directed Cone or Entasis-tapered flagpoles fabricated from seamless extruded tubing complying with ASTM B241/B241M, Alloy 6063, with a minimum wall thickness of 3/16 inch (4.8 mm).

B. Exposed Height: As directed 20 feet (6 m), 25 feet (7.5 m), 30 feet (9 m), 35 feet (11 m), 40 feet (12 m), 45 feet (13.5 m), 50 feet (15 m), 60 feet (18 m), 70 feet (21 m) or 80 feet (24 m).

C. Cast-Metal Shoe Base: Made from aluminum with same finish and color as flagpoles for anchor-bolt mounting; furnish with anchor bolts.

1. Furnish connector to building's lightning protection system conductor.

2.4 FIBERGLASS FLAGPOLES

A. Fiberglass Flagpoles: As directed Cone or Entasis-tapered flagpoles fabricated from polyester resin reinforced with woven glass-fiber roving with 75 percent of glass fibers parallel to length of flagpole.

B. Exposed Height: As directed 20 feet (6 m), 25 feet (7.5 m), 30 feet (9 m), 35 feet (11 m), 40 feet (12 m), 45 feet (13.5 m), 50 feet (15 m), 60 feet (18 m), 70 feet (21 m) or 80 feet (24 m).

C. Cast-Metal Shoe Base: Made from aluminum with finish matching flagpole for anchor-bolt mounting; furnish with anchor bolts.

1. Furnish connector to building's lightning protection system conductor.

2.5 FITTINGS

A. Finial Ball: Flush-seam ball, sized as indicated or, if not indicated, to match flagpole-butt diameter.

1. As directed 0.063-inch (1.6-mm) spun aluminum, finished to match flagpole or with gold anodic finish.

B. Internal Halyard, Winch System: Manually operated winch with control-stop device and removable handle, stainless-steel cable halyard, and concealed revolving truck assembly with plastic-coated counterweight and sling. Furnish flush access door secured with cylinder lock. Finish truck assembly to match flagpole.

1. Halyard Flag Snaps: As directed Chromium-plated bronze, Stainless-steel or Bronze or Nylon swivel snap hooks with neoprene or vinyl covers. Furnish two per halyard.

C. Internal Halyard, Cam Cleat System: 5/16-inch- (8-mm-) diameter, braided polypropylene halyard; cam cleat; and concealed revolving truck assembly with plastic-coated counterweight and sling. Furnish flush access door secured with cylinder lock. Finish truck assembly to match flagpole.

1. Halyard Flag Snaps: As directed Chromium-plated bronze, Stainless-steel, Bronze or Nylon swivel snap hooks with neoprene or vinyl covers. Furnish two per halyard.

D. External Halyard: Ball-bearing, nonfouling, revolving truck assembly of cast metal with continuous 5/16-inch- (8-mm-) diameter, braided polypropylene halyard and 9-inch (228-mm) cast-metal cleats with fasteners. Finish exposed metal surfaces to match flagpole.

1. Halyards and Cleats: As directed One or Two at each flagpole.
2. Halyard Flag Snaps: As directed Chromium-plated bronze, Stainless-steel, Bronze or Nylon swivel snap hooks with neoprene or vinyl covers. Furnish two per halyard.

2.6 MISCELLANEOUS MATERIALS

A. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M.

B. Elastomeric Joint Sealant: As directed Multicomponent nonsag urethane, Single-component nonsag urethane or Single-component neutral-curing silicone joint sealant complying with requirements in Section 079200 "Joint Sealants."

C. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.7 ALUMINUM FINISHES

A. Natural Satin Finish: AA-M32, fine, directional, medium satin polish; buff complying with AA-M20; seal aluminum surfaces with clear, hard-coat wax.

B. Clear Anodic Finish: As directed AAMA 611, AA-M12C22A41 or AA-M12C22A31.

C. Color Anodic Finish: As directed AAMA 611, AA-M12C22A42/A44 or AA-M12C22A32/A34.

1. Color: As directed Light bronze, Medium bronze, Dark bronze or Black.
2. Color: Match Architect's sample or as selected by Architect from full range of industry colors and color densities.
3. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.8 FIBERGLASS FINISHES

A. Fiberglass: UV-light stable, hard, high-gloss gel coat or high-gloss, high-build polyurethane or polyester coating.

1. Color: As indicated by manufacturer's designations, Match Architect's sample or As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 FLAGPOLE INSTALLATION

A. General: Install flagpoles where indicated and according to Shop Drawings and manufacturer's written instructions.

B. Baseplate: Install baseplate on washers placed over leveling nuts on bolts and adjust until flagpole is plumb. After flagpole is plumb, tighten retaining nuts and fill space under baseplate solidly with nonshrink, nonmetallic grout. Finish exposed grout surfaces smooth and slope 45 degrees away from edges of baseplate.

C. Mounting Brackets and Bases: Anchor brackets and bases securely to structural support with fasteners as indicated on Shop Drawings.

END OF SECTION 107529

SECTION 108316 - BANNERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Decorative banners for interior installation.
2. Decorative banners for exterior installation.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For each type of banner.

1. Detail colors and graphic layout and content. Show text message, font, and spacing.
2. Show locations for blocking, reinforcement, and supplementary structural support. Identify items that are provided by other trades.

C. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Product certificates.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance: Design, fabricate, and install banners to withstand the design wind loads and stresses for under exposure conditions indicated.

1. Design Wind Load: As indicated on Drawings.

B. Fire-Test-Response Characteristics: Passes applicable test method in NFPA 701 as determined by testing identical products by a qualified testing agency.

1. Permanently attach label to fabric of banner assembly indicating whether fabric is inherently and permanently flame resistant or is treated with flame-retardant chemicals and whether it requires retreatment after cleaning or after a designated time period of use.

2.2 FABRIC BANNER

A. Banner Fabric: As directed Nylon, Polyester, Vinyl-coated polyester mesh, Vinyl laminate over polyester or nylon, Vinyl laminate over fiberglass mesh, Cotton, Polyester/cotton blend, Solution-dyed acrylic, Solution-dyed modacrylic or Spun-bonded polyolefin.

1. Fabric Weight: As directed.
2. Height and Width: As indicated on Drawings.
3. Color: As indicated by manufacturer's designations, Match Architect's sample, as selected by Architect from full range of industry colors and color densities or as indicated in banner schedule.
4. Applied Treatment: Stain resistant, Flame resistant, Antistatic, Clear lamination or as directed.

B. Graphics Application: As directed Applique, Hand painting, Silk-screen printing, Heat color transfer, Pressure-sensitive vinyl film, Inkjet, Electrostatic printing, Computer-driven airbrushing, Dye sublimation or Eradication.

C. Anchors, Fasteners, Fittings, Hardware, and Installation Accessories: Suitable for performance requirements, exposure conditions, and installation methods indicated. Corrosion-resistant or noncorrodible units; tamperproof, vandal- and theft-resistant; and nonstaining to other building materials. Where exposed to view, with finish and color as selected by Architect from manufacturer's full range.

D. Construction: As directed Single or Double-sided banner with block-out fabric.

E. Decorative Trims: As directed Borders, Braid and bindings, Cords, Fringe or Patterned edge; scalloped, Patterned edge; V-shaped, Streamers, Tassels or Welting.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install banners at locations and in position indicated, securely connected to supports, in proper relation to adjacent construction, and according to fabricator's written instructions.

END OF SECTION 108316

SECTION 110513 - COMMON MOTOR REQUIREMENTS FOR EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, alternating-current, small and medium, squirrel-cage induction motors, installed at equipment manufacturer's factory, and motors shipped separately by equipment manufacturer for field installation.

1.2 COORDINATION

A. Coordinate features of motors, installed units, and accessory devices and features to be compatible with the following:

1. Motor controllers.
2. Torque, speed, and horsepower requirements of the load.
3. Ratings and characteristics of supply circuit and required control sequence.
4. Ambient and environmental conditions of installation location.

PART 2 - PRODUCTS

2.1 GENERAL MOTOR REQUIREMENTS

A. Comply with requirements in this Section except when stricter requirements are specified in equipment schedules or Sections.

B. Comply with NEMA MG 1 unless otherwise indicated.

2.2 MOTOR CHARACTERISTICS

A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet (1000 m) above sea level.

B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.3 POLYPHASE MOTORS

A. Description: NEMA MG 1, Design B, medium induction motor.

B. Efficiency: Premium efficient.

C. Service Factor: 1.15.

D. Multispeed Motors: Variable torque.

1. For motors with 2:1 speed ratio, consequent pole, single winding.
2. For motors with other than 2:1 speed ratio, separate winding for each speed.

E. Rotor: Random-wound, squirrel cage.

F. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.

G. Temperature Rise: Match insulation rating.

H. Insulation: Class F.

I. Code Letter Designation:

1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
2. Motors Smaller Than 15 HP: Manufacturer's standard starting characteristic.

J. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

2.4 ADDITIONAL REQUIREMENTS FOR POLYPHASE MOTORS

A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.

B. Motors Used with Variable-Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.

1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width-modulated inverters.
2. Premium-Efficient Motors: Class B temperature rise; Class F insulation.
3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.

2.5 SINGLE-PHASE MOTORS

A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:

1. Permanent-split capacitor.
2. Split phase.
3. Capacitor start, inductor run.
4. Capacitor start, capacitor run.

B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.

C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.

D. Motors 1/20 HP and Smaller: Shaded-pole type.

E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 110513

SECTION 111200 - PARKING CONTROL EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Automatic barrier gates.
2. Vehicle detectors.
3. Entry terminals.
4. Exit terminals.
5. Fee computers.
6. Parking facility management software.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For parking control equipment.

1. Include plans, elevations, sections and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

C. Samples: For each exposed product and for each color and texture specified.

1.4 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

B. Software and Firmware Operational Documentation:

1. Software operating and upgrade manuals.
2. Program Software Backup: On USB media and approved online or cloud solution.

3. Device address list.
4. Printout of software application and graphic screens.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

PART 2 - PRODUCTS

2.1 AUTOMATIC BARRIER GATES

A. General: Provide parking control device consisting of operator and controller housed in a weathertight, tamper-resistant cabinet enclosure with gate arm. Device shall be activated by a signal from access or revenue control device. Fabricate unit with gate-arm height in down position of not more than 35 inches (889 mm) above pavement.
   1. Standards: Barrier gate operators that are listed and labeled according to UL 325 by a qualified testing agency.

B. Controller: Factory-sealed, solid-state, plug-in type, with galvanized-steel box for wiring connections. Noncommunicating or Communicating type as directed.

   1. Noncommunicating Type:

      a. Capable of logic for one- and two-way lanes.
      b. Separate momentary contacts for transient patrons, monthly patrons, vehicle entries, and vehicle exits.

   2. Communicating Type:

      a. Real-time communication of lane counts, status messages, and execute commands.
      b. Monitor illegal entries and exits, tailgates, tickets, monthlies, and backouts.
      c. Status messages for gate up too long, backouts, ticket in chute, and gate-arm rebound.
      d. Communication commands for resetting loops, turning "Full" signs on/off, raising and lowering gate arm, and disabling ticket dispensers, card readers, barcode imagers, license plate recognition or automatic vehicle identification as directed.

   3. Physical Characteristics:

      a. On-off power supply switch.
      b. Automatic-manual switch.
      c. Differential counter.
      d. Communication port.
      e. Internal resettable or non-resettable counters as directed.
      f. Thermal-overload protection with manual reset.
      g. Plug-in connectors for two or three vehicle loop detectors as directed.
      h. Thermostatically controlled heater with on/off/auto switch.

i. Thermostatically controlled fan with on/off/auto switch.
j. Switch to test motor and limit switches.
k. Emergency manual disconnect.
l. Battery backup.
m. As directed Single, Two or Four, 115-V ac grounded power receptacle.

4. Operational Characteristics:

a. Able to store successive inputs and sequentially processing each one.
b. Automatic instant-reversing obstacle detector mechanism that stops downward motion of gate arm if arm contacts or nears an object and that immediately returns arm to upward position. Include a zero- to 60-second, variable-time reset device.
c. Directional arming logic.
d. Broken gate-arm monitoring.
e. Programmable automatic timer.
f. Diagnostic mode for on-site testing, with LEDs for inputs and outputs.
g. Automatic and continuous testing of inputs and outputs.
h. Reversible arm capability for right- or left-handed operation.

C. Cabinets: Fabricated from sheet metal with seams welded and ground smooth; approximately 15 inches square by 40 inches tall (381 mm square by 1016 mm tall). Provide single, gasketed access door for each cabinet with flush-mounted locks. Furnish two keys for each lock, all locks keyed alike. Fabricate cabinet with internal reinforcing and four mounting holes accessible only from inside cabinet.

1. Steel Sheet: Not less than 0.097-inch (2.5-mm) thick, galvanized- steel sheet.

a. Finish cabinet, interior and exterior, with manufacturer's standard white or yellow baked-enamel or powder-coat finish as directed.

2. Aluminum Sheet: Not less than 0.125-inch (3.2-mm) thick, aluminum sheet.

a. Finish cabinet, interior and exterior, with manufacturer's standard white or yellow baked-enamel or powder-coat finish as directed.

D. Straight Gate Arm: 1-by-4-inch nominal- (19-by-89-mm actual-) size pine or redwood, 0.097-inch- (2.5-mm-) thick steel, Fiberglass, PVC, or polycarbonate or Aluminum as directed.

1. Traffic-Side Face: Reflective painted finish and black diagonal stripes, Reflective painted finish and red diagonal stripes, Reflective painted finish and black and yellow diagonal stripes or Manufacturer's standard finish and striping as directed.
2. Length: 10 feet (3.0 m), 12 feet (3.7 m) or as indicated on Drawings.
3. Mounting Flange: Provide with breakaway feature to ensure a clean break if arm is struck by vehicle.

E. Folding Gate Arm: Two pieces of 1-by-4-inch nominal- (19-by-89-mm actual-) size pine or redwood joined together with metal side brackets.

1. Traffic-Side Face: Reflective painted finish and black diagonal stripes, Reflective painted finish and red diagonal stripes, Reflective painted finish and black and yellow diagonal stripes or Manufacturer's standard finish and striping as directed.

2. Length: 10 feet (3.0 m), 12 feet (3.7 m) or as indicated on Drawings.
3. Mounting Flange: Provide with breakaway feature to ensure a clean break if arm is struck by vehicle.

F. Operator: UL labeled and listed, Class I, Class II Class III or Class IV as directed. 1/3 or 1/2 hp as directed; number-V as directed, 60-Hz, single-phase, instant-reversing, continuous-duty motor for operating gate arm. Transmit power to gate-arm drive shaft through the speed reducer to harmonic-acting crank and connecting rod. Fabricate crank, rod, and drive shaft of galvanized solid bar steel. Provide an operable cam for adjusting arm travel.

1. Opening Time: Three or Six seconds as directed.
2. Inherently adjustable, torque limiting clutch for safety.

G. Characteristics:

1. Audible alarm that activates as part of a safety device system.
2. Additional obstruction detector; noncontact infrared, photoelectric or radio-frequency barrier as directed.
3. Gate-arm warning safety signs on both sides of unit to limit traffic to vehicular traffic.
4. Low-voltage yellow or red warning lights that illuminate when gate is in down position as directed.
5. Low-voltage light on cabinet top that flashes or changes from red to green when barrier gate is operating.
6. LED integrated into gate-arm for increased visibility.
7. Manually operated crank for emergency operation.
8. Authorities having jurisdiction's emergency access as directed.
9. Gate-arm tip support with electromagnetic lock.
10. Gate-arm skirt bottom and top.

2.2 VEHICLE DETECTORS

A. General: Provide detection devices that sense presence or transit of vehicles and emit signals activating gate-arm operators.

B. Vehicle Loop Detector System: Self-tuning electronic presence detector with adjustable detection patterns, adjustable sensitivity and frequency settings, and panel indicator light. Include automatic closing timer with adjustable time delay before closing, timer cut-off switch, designed to hold gate arm open until traffic clears. Provide number of loops consisting of multiple strands of wire, number of turns, loop size, and method of placement at location indicated on Drawings, as recommended in writing by detection system manufacturer for pave-over or saw-cut installation as directed.

1. Field-Assembled Loop: Wire, in size indicated for field assembly.
2. Factory-Formed Loop: Wire, preformed in size indicated.
3. Operation:

    a. Recognize vehicles within 6 inches (152 mm) of each other on standard-sized loop.
    b. Recognize vehicle direction by detecting vehicle moving from one loop to another.
    c. Generate reverse count if vehicle backs up after generating directional count in forward direction.

d. Continuous diagnostic monitoring and memory for intermittently operating and failed loops.
e. Crosstalk test between adjacent loops.

C. Active Infrared Vehicle Detector: As directed Retroreflective or Emitter/receiver-type presence detector with adjustable detection zone pattern and sensitivity, designed to detect the presence or transit of vehicle in gate-arm pathway by interrupting infrared beam in zone pattern and to emit signal activating gate-arm operator. Include automatic closing timer with adjustable time delay before closing, timer cut-off switch, and vehicle presence detector designed to hold gate arm open until traffic clears.

2.3 ENTRY TERMINALS

A. General: Provide entry terminals with mechanisms, components, and controllers housed in cabinet enclosures.

B. Physical Characteristics:

1. Digital display, touchscreen, or LCD.
2. Time and date display.
3. Time Indicator: 24-hour cycle with A.M. and P.M. or military-time clock mechanism.
4. Voice annunciation.
5. Tickets: Standard paper, Magnetic stripe or Barcode.
6. Removable ticket tray with capacity of 5000 fan-folded tickets.
7. Battery backup for clock and RAM memory.
8. Communication port.
9. Thermostatically controlled heater with on/off/auto switch.
10. Thermostatically controlled fan with on/off/auto switch.
11. Ticket printing and dispensing mechanism.
12. Credit card activation slot, credit card reader with smart card reader, and "Insert Ticket/Card" message.
13. Access card reader.
14. Multiple ticket option for valet parking.
15. Intercom.
16. Pinhole camera.
17. Barcode imager scanner.
18. Proximity access reader.
19. Automatic vehicle identification reader.
20. License plate recognition.

C. Operational Characteristics:

1. Operation: Standalone or Online communication to remote computer as directed.
2. Activation by button with "Push for Ticket" message, vehicle detector, credit card in/out, license plate recognition, automatic vehicle identification, proximity, scanned electronic or hardcopy media or access card as directed.

    a. On activation by button, unit automatically records entry time, license plate, and date on ticket, sounds buzzer, dispenses ticket, and raises barrier gate.

b. On activation by means other than button, credentials are recorded and signal is automatically sent to raise barrier gate.

3. Credit card pay on entry.
4. Automatic ticket validation.
5. Programmable ticket numbering.
6. Programmable facility code.
7. Programmable display.
8. Programmable timer for closing barrier gate.
9. Built-in-service diagnostics.
10. Low-ticket alarm.
11. Out-of-ticket alarm.
12. Ticket jam detection.
13. Test ticket printing.
14. Back-out ticket function.
15. Cancel transaction function.

D. Cabinets: Fabricated from sheet metal with seams welded and ground smooth, approximately 15 inches square by 40 inches tall (381 mm square by 1016 mm tall); consisting of base and top components. Provide single, gasketed access door for each base component with flush-mounted locks. Furnish two keys for each lock, all locks keyed alike. Fabricate cabinet with internal reinforcing and four mounting holes accessible only from inside cabinet. Fabricate top component so it can be unlocked and opened for ticket loading and maintenance. Include flush-mounted lock in rear of top, keyed the same as base component lock.

1. Steel Sheet: Not less than 0.097-inch (2.5-mm) thick, galvanized-steel sheet.

a. Finish cabinet, interior and exterior, with manufacturer's standard white or yellow baked-enamel or powder-coat finish as directed.

2. Aluminum Sheet: Not less than 0.125-inch (3.2-mm) thick, aluminum sheet.

a. Finish cabinet, interior and exterior, with manufacturer's standard white or yellow baked-enamel or powder-coat finish as directed.

E. Ticket-Dispensing Mechanisms: Removable assembly, with self-sharpening ticket cutter or ticket burster and plug-in controller.

2.4 EXIT TERMINALS

A. General: Provide exit terminals with controllers and components housed in cabinet enclosures.

B. Physical Characteristics:

1. Digital display, touchscreen, or LCD.
2. Time and date display.
3. Voice annunciation.
4. Battery backup for clock and RAM memory.
5. Communication port.
6. Thermostatically controlled heater with on/off/auto switch.

7. Thermostatically controlled fan with on/off/auto switch.
8. Credit card activation slot, credit card reader with smart card reader, and "Insert Ticket/Card" message.
9. Access card reader.
10. Ticket reader.
11. Receipt printer.
12. Intercom.
13. Pinhole camera.
14. Barcode imager scanner.
15. Proximity access reader.
16. Automatic vehicle identification reader.
17. License plate recognition.

C. Operational Characteristics:

1. Standalone or Online communication to remote computer as directed.
2. Activation by ticket insertion, vehicle detector, credit card in/out, license plate recognition, automatic vehicle identification, proximity, scanned electronic or hardcopy media or access card as directed.
3. Activation results in the following:

    a. Valid Prepaid Exit: Signal is automatically sent to raise barrier gate.
    b. Pay at Exit: Parking fee is calculated and displayed for payment.
    c. Invalid Exit: Activation is rejected and "Pay Cashier First" or "Return to Cashier" message is displayed.

4. Programmable lost ticket function.
5. Display fee.
6. Accept payment by credit card, debit card, smart card, prepaid value card, scanned media and merchant ticket as directed.
7. Accept discounted coupons.
8. Print receipts on demand.
9. Programmable facility code.
10. Programmable grace period.
11. Programmable display.
12. Programmable timer for closing barrier gate.
13. Reports for events and exception events.
14. Programmable merchant validations.
15. Built-in service diagnostics.
16. Cancel transaction function.

D. Cabinets: Fabricated from sheet metal with seams welded and ground smooth; approximately 15 inches square by 40 inches tall (381 mm square by 1016 mm tall). Provide single, gasketed access door for each cabinet with flush-mounted locks. Furnish two keys for each lock, all locks keyed alike. Fabricate cabinet with internal reinforcing and four mounting holes accessible only from inside cabinet.

1. Steel Sheet: Not less than 0.097-inch (2.5-mm) thick, galvanized- steel sheet.

    a. Finish cabinet, interior and exterior, with manufacturer's standard white or yellow baked-enamel or powder-coat finish as directed.

2. Aluminum Sheet: Not less than 0.125-inch (3.2-mm) thick, aluminum sheet.

    a. Finish cabinet, interior and exterior, with manufacturer's standard white or yellow baked-enamel or powder-coat finish as directed.

2.5 FEE COMPUTERS

A. General: Provide modular PC-based system. Register permanent record of each transaction in computer's memory.

B. Physical Characteristics:

1. Touchscreen display.
2. Battery backup for clock and RAM memory.
3. Communication port.
4. Cash drawer or Two cash drawers as directed.
5. Standard ticket reader.
6. Magnetic stripe ticket reader.
7. Barcode ticket reader.
8. Credit card reader with smart card reader.
9. Access card reader.
10. Proximity access reader.
11. Automatic Vehicle Identification reader.
12. License plate recognition.
13. Keyed or Keyless-membrane keypad as directed.
14. Detachable printer.

C. Operational Characteristics:

1. Compute multiple parking fees based on entry times on ticket from ticket dispenser.
2. Compute multiple taxes by percentage and fixed amount.
3. Programmable lost ticket function.
4. Display fee on remote fee display device.
5. Credit card in/out.
6. Accept payment by cash and credit card, debit card, smart card, prepaid value card and merchant ticket as directed.
7. Accept discounted coupons.
8. Control independent cash drawer.
9. Compute change.
10. Print receipts.
11. Print validation on ticket.
12. Print audit trail.
13. Reload value cards.
14. Interface to automatic barrier gate.
15. Programmable with up to six fee structures.
16. Programmable time.
17. Programmable keys.
18. Programmable for special events validations.
19. Programmable for automatic activation for limited date and time validations.

20. Programmable merchant validations.
21. Programmable valet parking.
22. Programmable hotel guest parking.
23. Three levels of security including cashier, supervisor, and master.
24. Recall last transaction.
25. Test mode to verify accuracy of fee structure program.
26. Built-in service diagnostics.
27. View cash audit, revenue, operational, and statistical reports on screen or print on demand.
28. Duress alarm output for emergencies.

D. Cash Drawer: Fabricated with a removable tray and drawer, with five compartments for paper currency and five compartments for coins.

E. Remote Fee Display: Single-faced signs designed for use with fee computer, consisting of 1-inch (25-mm) tall, digital displays or LCDs contained in welded steel bodies with baked-enamel or powder-coat finish.

1. Messages: Amount due, "Thank You," "Closed," and time in A.M./P.M. format.
2. Mounting: Front of cashier's booth or 42-inch- (1067-mm-) high pedestal as directed.

2.6 PARKING FACILITY MANAGEMENT SOFTWARE

A. General: Manufacturer's standard software that is compatible with security-access control system and that provides automatic facility monitoring, supervision, and remote control of parking control equipment from one or more locations.

B. Operation:

1. Collect data for revenue and activity reporting.
2. Collect data for access and space control.
3. Notification services.
4. On-line prepaid parking.
5. Event management.
6. Validation solutions.
7. License plate recognition systems.
8. Pay-by-phone.
9. Loyalty programs.
10. Track tickets.
11. Programmable parking control equipment.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Install parking control equipment as required for complete and integrated installation.

1. Rough-in electrical connections.

3.2 INSTALLATION OF AUTOMATIC BARRIER GATES

A. Anchor cabinets to concrete bases with anchor bolts or expansion anchors, and mount barrier gate arms.

1. Install barrier gates according to UL 325.

3.3 INSTALLATION OF VEHICLE DETECTORS

A. As directed Cut grooves in pavement and bury or Bury and seal wire loop at locations indicated on Drawings according to manufacturer's written instructions. Connect to parking control equipment operated by detector.

3.4 INSTALLATION OF ENTRY TERMINALS

A. Attach cabinets to concrete bases with anchor bolts or expansion anchors.

1. Connect equipment to remote computer.
2. Load ticket dispenser with supply of tickets.

3.5 INSTALLATION OF EXIT TERMINALS

A. Attach cabinets to concrete bases with anchor bolts or expansion anchors.

1. Connect equipment to remote computer.
2. Load ticket dispenser with supply of tickets.

3.6 INSTALLATION OF FEE COMPUTERS

A. Install computers at locations indicated, including connecting to peripheral equipment and remote computers.

3.7 INSTALLATION OF ELECTRICAL

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

3.8 FIELD QUALITY CONTROL

A. Testing Agency: As directed Owner will engage or Engage a qualified testing agency to perform tests and inspections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters.
2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Parking control equipment will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.9 SOFTWARE SERVICE AGREEMENT

A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for two years.

B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.

1. Upgrade Notice: At least 30 days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.

3.10 DEMONSTRATION

A. As directed Engage a factory-authorized service representative to train or Train Owner's maintenance personnel to adjust, operate, and maintain parking control equipment.

END OF SECTION 111200

SECTION 111313 - LOADING DOCK BUMPERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes loading dock bumpers.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of loading dock bumper.

B. Shop Drawings: For dock bumpers. Include plans, elevations, sections, and attachment details.

PART 2 - PRODUCTS

2.1 LOADING DOCK BUMPERS

A. General: Surface-mounted bumpers; of type, size, and construction indicated; designed to absorb kinetic energy and minimize damage to loading dock structure.

B. Laminated-Tread Loading Dock Bumper: Fabricated from multiple, uniformly thick plies cut from fabric-reinforced rubber tires.

1. Thickness: 4-1/2 inches (114 mm) or 6 inches (152 mm), as directed.
2. Horizontal Style: As directed.
3. Vertical Style: As directed.

C. Molded-Rubber Loading Dock Bumpers: Fabricated from molded-rubber compound reinforced with nylon, rayon, or polyester cord; with Shore A durometer hardness of 80, plus or minus 5, when tested according to ASTM D2240.

1. Configuration: As directed.
2. Thickness: As directed.

D. Materials: ASTM A36/A36M for steel plates, shapes, and bars. Hot-dip galvanize according to ASTM A123/A123M.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Attach loading dock bumpers to face of loading dock in a manner that complies with requirements indicated for spacing, arrangement, and position relative to top of platform and anchorage.

1. Welded Attachment: Plug-weld anchor holes in contact with steel inserts and fillet weld at other locations.
2. Bolted Attachment: Attach dock bumpers to preset anchor bolts embedded in concrete or to cast-in-place inserts or threaded studs welded to embedded-steel plates or angles. If preset anchor bolts, cast-in-place inserts, or threaded studs welded to embedded-steel plates or angles are not provided, attach dock bumpers by drilling and anchoring with expansion anchors and bolts.
3. Screw Attachment: Attach dock bumpers to wood construction with lag bolts as indicated.

B. After completing installation of exposed, factory-finished dock bumpers, inspect exposed finishes and repair damaged finishes.

END OF SECTION 111313

SECTION 111316 - LOADING DOCK SEALS AND SHELTERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Foam-pad loading dock seals.
2. Frame-type loading dock shelters.
3. Transparent-strip door curtains.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Include plans, elevations, sections, and attachment details.

C. Samples: For each exposed product and for each color and texture specified.

PART 2 - PRODUCTS

2.1 FOAM-PAD LOADING DOCK SEALS

A. General: Dock seals consisting of fabric-covered foam pads designed to compress 4 to 5 inches (102 to 127 mm) under pressure of truck body.

B. Stationary Head Pad: High and same depth as jamb pads, as directed; beveled; sized for opening width.

C. Adjustable Head Pad: High and same depth as jamb pads, as directed; sized for opening width; with manufacturer's standard hardware and tension spring or counterweight mechanism for adjusting pad height.

D. Jamb Pads: As directed.

1. Nominal Size: 8 inches (203 mm) wide or 12 inches (305 mm) wide, as directed and sized for opening height.

E. Construction: Consisting of single- or double-ply, coated, fabric-covered, urethane-foam core with supporting frame.

1. Wood Support Frame: Factory-painted, pressure-treated wood; with steel mounting hardware.

2. Steel Support Frame: Steel channel frame of manufacturer's standard weight, shape, and finish; with steel mounting hardware.

    a. Steel Finish: Hot-dip galvanize components to comply with the following:

        1) ASTM A123/A123M for iron and steel support framing.
        2) ASTM A153/A153M or ASTM F2329 for iron and steel hardware and anchors.

3. Tapered Side Panels: Taper side panels to angle required to accommodate sloped loading dock approach grades, make sealing edge of dock seal parallel to back edge of truck. Taper as directed.
4. Guide Strips: 4-inch (102-mm) wide, coated, nylon guide strips on jamb pads.
5. Pleated Protectors: On face of jamb pads of overlapping layers of coated fabric attached to base fabric; As directed, wear exposure.
6. Reinforcing: Manufacturer's standard reinforcing over cover fabric on dock seal, as directed.

F. Materials:

1. Vinyl-Coated Nylon Cover Fabric: Minimum total weight of 22 oz./sq. yd. (746 g/sq. m) or 40 oz./sq. yd. (1356 g/sq. m).

    a. Color: As directed.

        1) High-Visibility Layer: Manufacturer's standard yellow or orange layer.

2. Neoprene-Coated Nylon Cover Fabric: Minimum total weight, as directed.

    a. Color: As directed.

        1) High-Visibility Layer: Manufacturer's standard yellow or orange layer.

3. Hypalon-Coated Nylon Cover Fabric: Minimum total weight of 16 oz./sq. yd. (543 g/sq. m) or 40 oz./sq. yd. (1356 g/sq. m).

    a. Color: As directed.

        1) High-Visibility Layer: Manufacturer's standard yellow or orange layer.

4. Cover Fabric: Manufacturer's proprietary cover fabric.

    a. Color: As directed.

        1) High-Visibility Layer: Manufacturer's standard yellow or orange layer.

5. Pleated Protectors: Same fabric as cover.
6. Wood: DOC PS 20 dimension lumber, select structural grade, kiln dried.
7. Pressure-Treated Wood: DOC PS 20dimension lumber, select structural grade, kiln dried, and pressure treated with waterborne preservatives to comply with AWPA U1; Use Category UC3.

a. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium.

2.2 FRAME-TYPE LOADING DOCK SHELTERS

A. General: Dock shelters designed to form a seal with sides and top of truck body while leaving entire width and height of truck's rear opening unobstructed.

B. Rigid-Frame Type: Fabricated from fabric-covered or fiberglass side and top panels attached to fixed supporting framework. Provide head and side curtains with built-in flexible stays, wind straps between head curtain and side frame, pleated protectors, reinforcing, and guide strips. Slope head frame from center for drainage. Provide replaceable, fabric-covered, tapered, foam-bottom pads and protective steel bumpers of size and type required for application shown.

C. Flexible-Frame Type: Fabricated from fabric-covered side and top panels attached to retractable supporting framework with independent spring-tension extension arms. Provide head and side curtains with built-in flexible stays, pleated protectors, reinforcing, and guide strips. Provide replaceable, fabric-covered, tapered, foam-bottom pads of size and type required for application shown.

D. Head-Pad Height: As directed.

E. Construction: Fabricate to sizes and shapes indicated or required to fit door-opening sizes shown, allow for not less than 18 inches (457 mm) of truck-body penetration when truck is docked.

1. Wood Framework: Factory painted; mechanically fastened together using nails and lag bolts or metal connectors to form a rigid assembly.
2. Steel Framework: Zinc-plated steel tubing of size and thickness standard with manufacturer, with joints welded.

    a. Steel Finish: Hot-dip galvanize components to comply with the following:

        1) ASTM A123/A123M for iron and steel support framing.
        2) ASTM A153/A153M or ASTM F2329 for iron and steel hardware and anchors.

3. Top and Side Panels: White, translucent fiberglass, 0.045 inch (1.1 mm) thick, weighing 6 oz./sq. ft. (1831 g/sq. m).
4. Top and Side Panels: White, translucent vinyl, weighing 14 oz./sq. ft. (4272 g/sq. m).
5. Tapered Side Panels: Taper side panels to angle required to accommodate sloped loading dock approach grades, make sealing edge of dock shelter parallel to back edge of truck. Taper for declined or inclined approach.
6. Guide Strips: 4-inch- (102-mm-) wide, coated, nylon guide strips on side curtains.
7. Pleated Protectors: On head curtain of overlapping layers of coated fabric attached to base fabric.
8. Reinforcing: Manufacturer's standard reinforcing over cover fabric on side curtains and top cover of dock shelter.

F. Fabric:

1. Vinyl-Coated Nylon Cover Fabric: Minimum total weight of 22 oz./sq. yd. (746 g/sq. m) or 40 oz./sq. yd. (1356 g/sq. m).

   a. Color: As directed.

2. Polyurethane-Coated Nylon Cover Fabric: Minimum total weight of 25 oz./sq. yd. (848 g/sq. m).

   a. Color: As directed.

3. Neoprene-Coated Nylon Cover Fabric: Minimum total weight as directed.

   a. Color: As directed.

4. Hypalon-Coated Nylon Cover Fabric: Minimum total weight of 16 oz./sq. yd. (543 g/sq. m) or 40 oz./sq. yd. (1356 g/sq. m).

   a. Color: As directed.

5. Cover Fabric: Manufacturer's proprietary cover fabric.

   a. Color: As directed.

6. Pleated Protectors: Same fabric as cover.

G. Accessories:

1. Buffer flaps.
2. Bottom filler curtain.
3. Bottom seal pads.

2.3 TRANSPARENT-STRIP DOOR CURTAINS

A. General: Door curtains consisting of overlapping strips suspended from top of opening to form a sealed door curtain.

B. Strip Material: Curved, clear, transparent, extruded PVC. Fabricate strips for manufacturer's standard method of attachment to overhead mounting system indicated.

1. Standard Grade: Designed to withstand temperature range of 0 to plus 150 deg F (minus 18 to plus 66 deg C).
2. Low-Temperature Grade: USDA accepted; designed to withstand temperature range of minus 30 to plus 150 deg F (minus 34 to plus 66 deg C).
3. Strip Dimensions: Width and thickness, respectively, as directed.
4. Overlap: As directed.

C. Header Mounting: Angle bolted or welded to opening lintel; equip angle with permanently attached mounting pins and a steel-angle or -plate retaining strip attached to angle with wing nuts.

D. Steel-Plate Wall Surface Mounting: Steel plate bolted to side of lintel; equip plate with permanently attached, threaded, mounting pins and steel-angle or -plate retaining strip attached to plate with wing nuts.

E. Steel-Plate Wall Surface Mounting: Steel pipe attached to side of lintel by manufacturer's standard, winged-U-type suspension brackets.

F. Wall Surface Mounting: Rigid, vinyl, wall-mounting unit bolted to side of lintel above opening; equip unit with a similarly formed, rigid, vinyl retainer attached to unit with wing nuts.

G. Wall Offset Mounting: Angle bolted to face of wall projecting out on each side of door opening to allow hanging strips to clear overhead door hood. Equip angle with permanently attached mounting pins and a steel angle or plate retaining strip attached to angle with wing nuts. Return hanging strips to face of wall at jambs to fully enclose space interior to overhead door.

H. Steel Finish: Hot-dip galvanize components to comply with the following:

1. ASTM A123/A123M for iron and steel support mounting.
2. ASTM A153/A153M or ASTM F2329 for iron and steel hardware and anchors.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Coordinate electrical connections with Division 26 Sections.

3.2 INSTALLATION OF FOAM PAD LOADING DOCK SEALS

A. Attach dock-seal support frames securely to building structure in proper relation to openings, dock bumpers, and dock levelers to ensure compression of dock seals when trucks are positioned against dock bumpers.

3.3 INSTALLATION OF LOADING DOCK SHELTERS

A. Attach dock shelters securely to building structure in proper relation to openings, dock bumpers, and dock levelers to ensure an effective seal of dock-shelter curtains with sides and top of truck body when trucks are positioned against dock bumpers.

3.4 INSTALLATION OF FRAME-TYPE LOADING DOCK SHELTERS

A. Attach dock shelters securely to building structure in proper relation to openings, dock bumpers, and dock levelers to ensure an effective seal of dock-shelter curtains with sides and top of truck body when trucks are positioned against dock bumpers.

3.5 INSTALLATION OF TRANSPARENT-STRIP DOOR CURTAINS

A. Transparent-Strip Door Curtains: Attach door-curtain mounting system to lintel with screw anchors or toggle bolts. Mount curtain strips to overlap.

3.6 ADJUSTING

A. After completing installation, inspect exposed factory finishes and repair damaged finishes.

END OF SECTION 111316

SECTION 111319 - STATIONARY LOADING DOCK EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Recessed loading dock levelers.
2. Edge-of-dock loading dock levelers.
3. Stationary loading dock lifts (scissor lifts).
4. Truck restraints.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For stationary loading dock equipment.

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of anchors and each field connection.
3. Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Product test reports.

C. Sample warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

B. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

1.7 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace dock levelers that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Structural Assembly: 10 years from date of Substantial Completion.
2. Warranty Period for Hydraulic System: Four or Five years from date of Substantial Completion as directed.
3. Warranty shall be for unlimited usage of leveler for the specified rated capacity over the term of the warranty.

PART 2 - PRODUCTS

2.1 RECESSED LOADING DOCK LEVELERS

A. General: Recessed, hinged-lip-type dock levelers for permanent installation in concrete pits preformed in the edge of loading platform.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Standard: Comply with MH 30.1, except for structural testing to establish rated capacity.

D. Rated Capacity: As directed Capable of supporting total gross load of 20,000 (9072), 25,000 (11 340), 30,000 (13 608) or 45,000 (20 412) lb (kg) without permanent deflection or distortion.

E. Platform: As directed Not less than 3/16- (5-), 1/4- (6-) or 3/8- (9.5-) inch- (mm-) thick, nonskid steel plate.

1. Platform Width: As directed 72 inches (1829 mm), 78 inches (1981 mm), 84 inches (2134 mm) or as indicated on Drawings.
2. Platform Length: As directed 72 inches (1829 mm), 96 inches (2438 mm), 120 inches (3048 mm) or as indicated on Drawings.
3. Frame: Manufacturer's standard or Clean-pit type, designed to support leveler at sides of pit, with no supports at front of pit floor as directed.
4. Toe Guards: Equip open sides of dock leveler over range indicated with steel toe guards.

a. Toe-Guard Range: Entire upper operating or working range as directed.

F. Hinged Lip: As directed Not less than 1/2 (13), 5/8 (16), ¾ (19) or 1 (25) inch (mm) thick, nonskid steel plate.

1. Hinge: Full-width, piano-type hinge with heavy-wall hinge tube and grease fittings, with gussets on lip and ramp for support.
2. Safety Barrier Lip: Designed to protect material-handling equipment from an accidental fall from loading platform edge of the dock leveler when the leveler is not in use.

G. Function: Dock levelers shall compensate for differences in height between truck bed and loading platform.

1. Vertical Travel: Operating range above platform level of sufficient height to enable lip to extend and clear truck bed before contact with the following minimum working range:

    a. Above Adjoining Platform: 12 inches (305 mm), 18 inches (457 mm) or as indicated on Drawings.
    b. Below Adjoining Platform:12 inches (305 mm), 14 inches (356 mm) or as indicated on Drawings.

2. Automatic Vertical Compensation: Floating travel of ramp with lip extended and resting on truck bed shall compensate automatically for upward or downward movement of truck bed during loading and unloading.
3. Automatic Lateral Compensation: Tilting of ramp with lip extended and resting on truck bed shall compensate automatically for canted truck beds of up to 4 inches (102 mm) over width of ramp.
4. Lip Operation: Manufacturer's standard mechanism, which automatically extends and supports hinged lip on ramp edge with lip resting on truck bed over dock leveler's working range, allows lip to yield under impact of incoming truck and automatically retracts lip when truck departs.

    a. Length of Lip Extension: Not less than 12 inches (305 mm) from face of dock bumpers and not less than) 16 inches (406 mm), 18 inches (457 mm), 20 inches (508 mm) or dimension indicated on Drawings measured from ramp edge.

5. Automatic Ramp Return: Automatic return of unloaded ramp, from raised or lowered positions to stored position, level with platform, as truck departs.
6. Interlock: Leveler does not operate while overhead door is in closed position, leveler night lock is engaged, truck restraint is not engaged, inflatable dock seal is not inflated and inflatable dock shelter is not inflated as directed.

H. Mechanical Operating System: Manual control; counterbalance and spring operation. Spring-operated raising and walk-down lowering of unloaded ramp. Equip leveler with an upward-biased-spring counterbalancing mechanism controlled by a hold-down device. Ramp raises to top limit of operating range by operating recessed control handle in ramp to disengage hold-down device. Ramp lowers below platform level with lip retracted by operating auxiliary, recessed control handle to release support legs.

1. Free-Fall Protection: Manufacturer's standard protection system to limit free fall of loaded ramps with front edge supported by truck bed.

I. Hydraulic Operating System: Electric control from a remote-control station; fully hydraulic operation. Electric-powered hydraulic raising and hydraulic lowering of ramp. Equip leveler with a packaged unit including a unitized, totally enclosed, nonventilated electric motor, pump, manifold reservoir, and valve assembly of proper size, type, and operation for capacity of leveler indicated. Include means for lowering ramp below platform level with lip retracted behind dock bumpers. Provide a hydraulic velocity fuse connected to main hydraulic cylinder to limit loaded ramp's free fall to not more than 3 inches (76 mm).

1. Remote-Control Station: As directed Weatherproof single or Single-button station of the constant-pressure type, enclosed in NEMA ICS 6, Type 4 or Type 12 box. Ramp raises by depressing and holding button; ramp lowers at a controlled rate by releasing button.
2. Remote-Control Station with Emergency Stop: As directed Weatherproof multibutton or Multibutton control station with an UP button of the constant-pressure type and an emergency STOP button of the momentary-contact type, enclosed in NEMA ICS 6, Type 4 or Type 12 box. Ramp raises by depressing and holding UP button; ramp lowers at a controlled rate by releasing UP button. Ramp movement stops, regardless of position of ramp or lip, by depressing STOP button. Normal operation resumes by engaging a manual reset button or by pulling out STOP button.
    a. Dual-Panel Control Station: Remote-control station for operating side-by-side dock levelers.
    b. Master Panel: Control panel with integral fused disconnecting means for operating dock leveler, dock door, and truck restraints.
3. Independent Lip Operation: Electric-powered hydraulic raising and hydraulic lowering of lip, controlled independent of raising and lowering of ramp.

J. Electric Operating System: Electric control from a remote-control station; motorized operation. Electric activation for raising of ramp and automatic extending of lip. Equip leveler with a packaged unit including a unitized electric motor and shaft assembly of proper size, type, and operation for capacity of leveler indicated. Include means for lowering ramp below platform level with lip retracted behind dock bumpers.

1. Remote-Control Station: Weatherproof single or single-button station of the constant-pressure type, enclosed in NEMA ICS 6, Type 4 or Type 12 box. Ramp raises by depressing and holding button; ramp lowers at a controlled rate by releasing button.
2. Remote-Control Station with Emergency Stop: Weatherproof multibutton or Multibutton control station with an UP button of the constant-pressure type and an emergency STOP button of the momentary-contact type, enclosed in NEMA ICS 6, Type 4 or Type 12 box. Ramp raises by depressing and holding UP button; ramp lowers at a controlled rate by releasing UP button. Ramp movement stops, regardless of position of ramp or lip, by depressing STOP button. Normal operation resumes by engaging a manual reset button or by pulling out STOP button.

K. Air-Bag Operating System: Electric control from a remote-control station; pneumatic operation. High-volume, low-pressure lifting of ramp. Equip leveler with a packaged unit including a PVC-coated, reinforced polyester lifting bag and two-stage, single-speed electric fan of proper size, type, and operation for capacity of leveler indicated. Include dock-leveler supports controlled by release chain for lowering ramp below platform level without extending lip.

1. Remote-Control Station: Weatherproof single or Single-button station of the constant-pressure type, enclosed in NEMA ICS 6, Type 4 box. Ramp raises by depressing and holding button; ramp lowers at a controlled rate by releasing button.

L. Construction: Fabricate dock-leveler frame, platform supports, and lip supports from structural- or formed-steel shapes. Weld platform and hinged lip to supports. Fabricate entire assembly to withstand deformation during both operating and stored phases of service. Chamfer lip edge to minimize obstructing wheels of material-handling vehicles.

1. Cross-Traffic Support: Manufacturer's standard method of supporting ramp at platform level in stored position with lip retracted. Provide a means to release supports to allow ramp to descend below platform level.
2. Maintenance Strut: Integral strut to positively support ramp in up position during maintenance of dock leveler.

M. Integral Molded-Rubber Dock Bumpers: Fabricated from 4 (102) or 6 (152) inch (mm) thick, heavy molded-rubber compound reinforced with nylon, rayon, or polyester cord; with Shore A durometer hardness of 80, plus or minus 5, when tested according to ASTM D2240. Provide two dock bumpers for each recessed dock leveler, attached to face of loading dock with expansion bolts.

N. Integral Laminated-Tread Dock Bumpers: Fabricated from 4-1/2 (114) or 6 (152) inch (mm) thick, multiple, uniformly thick plies cut from fabric-reinforced rubber tires. Laminate plies under pressure on not less than two 3/4-inch (19-mm) diameter, steel supporting rods that are welded at one end to 1/4-inch (6-mm) thick, structural-steel end angle and secured with a nut and angle at the other end. Fabricate angles with predrilled anchor holes and sized to provide not less than 1 inch (25 mm) of tread plies extending beyond the face of closure angles.

O. Materials:

1. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
2. Rolled-Steel Floor Plate: ASTM A786/A786M, rolled from steel plate complying with ASTM A572/A572M, Grade 55 (380).
3. Steel Tubing: ASTM A500/A500M, cold formed.
4. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

P. Dock-Leveler Finish: Manufacturer's standard prime-paint or baked-on factory finish, Hot-dip galvanized or Spray zinc metallized.

1. Toe Guards: Baked-on factory finish.

Q. Accessories:

1. Curb Angles: 3-by-3-by-1/4-inch (76-by-76-by-6-mm) galvanized-steel curb angles for edge of recessed leveler pit, with 1/2-inch (13-mm) diameter by 6-inch (152-mm) long concrete anchors welded to angle at 6 inches (152 mm) o.c.
2. Self-Forming Pan: Manufacturer's standard prefabricated, self-forming spray zinc metallized steel form system for poured-in-place construction of concrete pit.

3. Night Locks: Manufacturer's standard means to prevent extending lip and lowering ramp when overhead doors are locked.
4. Side and rear weatherseals.
5. Foam insulation under dock-leveler platform.
6. Abrasive skid-resistant or Smooth surface.

2.2 EDGE-OF-DOCK LOADING DOCK LEVELERS

A. General: Surface-mounted, hinged-lip-type, edge-of-dock levelers designed for permanent installation on face of loading dock platform.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Standard: Comply with MH 30.1, except for structural testing to establish rated capacity.

D. Rated Capacity: Capable of supporting total gross load of 20,000 (9072), 25,000 (11 340), 30,000 (13 608) lb (kg) without permanent deflection or distortion.

E. Platform Ramp Width: 66 inches (1676 mm), 72 inches (1829 mm), 78 inches (1981 mm), 84 inches (2134 mm) or as indicated on drawings.

F. Hinged Lip: Not less than 3/8 (9.5), 7/16 (11) or ½ (13) inch (mm) thick, nonskid steel tread plate.

1. Hinge: Full-width, piano-type hinge with heavy-wall hinge tube and grease fittings, with gussets on lip and ramp for support.

G. Function: Dock levelers shall compensate for differences in height between truck bed and loading platform.

1. Vertical Travel: Operating range above platform level of sufficient height to enable lip to extend and clear truck bed before contact with the following minimum working range:

    a. Above Adjoining Platform: 5 inches (127 mm), 6 inches (152 mm) or as indicated on drawings.
    b. Below Adjoining Platform: 5 inches (127 mm) or as indicated on drawings.

2. Automatic Vertical Compensation: Floating travel of ramp with lip extended and resting on truck bed shall compensate automatically for upward or downward movement of truck bed during loading and unloading.
3. Automatic Lateral Compensation: Tilting of ramp with lip extended and resting on truck bed shall compensate automatically for canted truck beds of up to 3 inches (76 mm) over width of ramp.
4. Lip Operation: Manufacturer's standard mechanism, which automatically extends and supports hinged lip on ramp edge with lip resting on truck bed over dock leveler's working range, allows lip to yield under impact of incoming truck and automatically retracts lip when truck departs.

a. Length of Lip Extension: Not less than 12 inches (305 mm) from face of dock bumpers and not less than 15 inches (381 mm), 17 inches (432 mm) or dimension indicated on drawings measured from ramp edge.

5. Automatic Ramp Return: Automatic return of unloaded ramp, from raised or lowered positions to stored position, level with platform, as truck departs. Leveler shall be capable of retracting to stored position while truck is at loading dock.

H. Mechanical Operating System: Manual control; counterbalance and spring operation. Spring-operated raising and walk-down lowering of unloaded ramp. Equip leveler with a torsion-spring counterbalancing mechanism controlled by a hold-down device.

1. Lever Handle: Self-storing lever handle for raising unloaded ramp with minimal lifting force by pulling lever back to extend lip and pushing lever forward to lower ramp and lip.
2. Removable Lifting Handle: For raising unloaded ramp by lifting action.

I. Hydraulic Operating System: Electric control from a remote-control station; fully hydraulic operation. Electric-powered hydraulic raising and hydraulic lowering of ramp. Equip leveler with a packaged unit including a unitized, totally enclosed, nonventilated electric motor, pump, manifold reservoir, and valve assembly of proper size, type, and operation for capacity of leveler indicated. Provide a hydraulic velocity fuse connected to main hydraulic cylinder to limit loaded ramp's free fall to not more than 3 inches (76 mm).

1. Remote-Control Station: Weatherproof single or Single-button station of the constant-pressure type, enclosed in NEMA ICS 6, Type 4 or Type 12 box. Ramp and lip raise to vertical position and extend to truck bed by depressing and holding button.

J. Construction: Fabricate dock-leveler frame, platform supports, and lip supports from structural- and formed-steel shapes. Weld platform and hinged lip to supports. Fabricate entire assembly to withstand deformation during both operating and stored phases of service. Chamfer lip edge to minimize obstructing wheels of material-handling vehicles.

1. Cross-Traffic Support: Manufacturer's standard method of supporting ramp at platform level in stored position with lip retracted. Provide a means to release supports to allow ramp to descend below platform level.
2. Maintenance Strut: Integral strut to positively support ramp in up position during maintenance of dock leveler.

K. Integral Molded-Rubber Dock Bumpers: Fabricated from 4 (102) or 6 (152) inch (mm) thick, heavy molded-rubber compound reinforced with nylon, rayon, or polyester cord; with Shore A durometer hardness of 80, plus or minus 5, when tested according to ASTM D2240. Provide two dock bumpers for each recessed dock leveler, attached to face of loading dock with expansion bolts.

L. Integral Laminated-Tread Dock Bumper: Fabricated from 4-1/2 (114) or 6 (152) inch (mm) thick, multiple, uniformly thick plies cut from fabric-reinforced rubber tires. Laminate plies under pressure on not less than two 3/4-inch (19-mm) diameter, steel supporting rods that are welded at one end to 1/4-inch (6-mm) thick, structural-steel end angle and secured with a nut and angle at the other end. Fabricate angles with predrilled anchor holes and sized to provide not less than 1 inch (25 mm) of tread plies extending beyond the face of closure angles.

M. Materials:

1. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
2. Rolled-Steel Floor Plate: ASTM A786/A786M, rolled from steel plate complying with ASTM A572/A572M, Grade 55 (380).
3. Steel Tubing: ASTM A500/A500M, cold formed.
4. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

N. Dock-Leveler Finish: Manufacturer's standard prime-paint or baked-on factory finish, Hot-dip galvanized or Spray zinc metallized.

O. Accessories:

1. Self-forming pan.
2. Cast-in-place design.
3. Run-off guards.
4. Ramp approach plate.
5. Interlock to truck restraint or Key switch.

2.3 STATIONARY LOADING DOCK LIFTS

A. General: Stationary, scissors-type, single-leg, hydraulic dock lift.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Standard: MH 29.1.

D. Rated Capacity: Lifting capacity of not less than 8000 lb (3629) kg) or load indicated on drawings with axle loads of 6500 lb (2948 kg) at ends and 5000 lb (2268 kg) at sides or magnitudes indicated on drawings.

E. Platform: Nonskid, safety-tread or Smooth-surface heavy hot-dip galvanized steel deck plate.

1. Platform Size: 72 inches (1829 mm) long by 72 inches (1829 mm) wide, 96 inches (2438 mm) long by 72 inches (1829 mm) wide, 120 inches (3048 mm) long by 72 inches (1829 mm) wide or as indicated on drawings.
2. Platform Guarding: Bevel toe guards, Toe sensor, Indicator bar, Skirts or Enclosure to comply with requirements in MH 29.1.
3. Removable or Fixed Guard Rails: Provide steel, hot-dip galvanized-steel or aluminum guard rails on two sides of platform with a single, removable chain across each end. Provide guard rails not less than 39 inches (991 mm) high with midrail and 4-inch (102-mm) high, kick plate at bottom. Mount rail sockets flush with platform surface.

F. Bridge: Nonskid, safety-tread steel or Nonskid, safety-tread, hot-dip galvanized-steel or High-tensile aluminum plate.

1. Hinged Bridge: Hinged, throw-over bridge bolted to full-length, heavy-duty, piano-type hinge welded to toe guard at end of platform. Provide bridge complete with heavy-duty

lifting chains. Chamfer edge of bridge to minimize obstructing wheels of material-handling vehicles.

2. Size: 18 inches (457 mm) long by 60 inches (1524 mm) wide, 18 inches (457 mm) long by 72 inches (1829 mm) wide or as indicated on drawings.
3. Locations: Ends, Sides or as indicated on Drawings.

G. Function: Dock lifts shall compensate for differences in height between truck bed and loading platform.

1. Vertical Travel and Travel Speed: As indicated on Drawings.
2. Vertical Travel: Maximum of 60 (1524) inches (mm) from a lowered height of 12 (305) inches (mm) for a total raised height of 72 (1829) inches (mm) or as directed.
3. Travel Speed: Nominal raising speed of 8 (0.04), 10 (0.05) or 12 (0.06) fpm (m/s).
4. Hinged Throw-over Bridge Operation: Manual, Spring assist, Manual-assist bridge winch or automatic powered.

H. Hydraulic Operating System: Self-contained, electric, hydraulic power unit for raising and lowering lift; of size, type, and operation needed for capacity of lift indicated; controlled from a remotely located push-button station.

1. Power Unit: Consisting of continuous-duty motor, high-pressure gear pump, valve manifold, oil-line filters, and oil reservoir.

    a. Equip manifold with relief valve, check valve, pressure-compensated flow-control valve, and solenoid valve and with provisions for lowering lift manually if power fails.
    b. Equip reservoir, valve manifold, and pressure line with oil-line filters.

2. Cylinders: Equip lift with not less than two heavy-duty, high-pressure, hydraulic, ram-type cylinders. Rams shall be manufacturer's standard, either direct-displacement-plunger or rod-and-piston type with positive internal stops. Cylinder rods shall be chrome plated and polished.

    a. Rate of Descent Protection: Pressure-compensated flow control or hydraulic velocity fuse to limit down speed for each cylinder.

3. Remote-Control Station: Multibutton control station of the constant-pressure type with UP and DOWN push buttons. Controller shall consist of magnetic motor starter with three-pole adjustable overloads and 24-V control transformer with 4-A, fused secondary prewired to terminal strips and enclosed in NEMA ICS 6, Type 12 box.

    a. Upper-Travel-Limit Switch: Equip unit with manufacturer's standard, adjustable, upper-travel-limit switch.

I. Construction: Fabricate lift from structural-steel shapes rigidly welded and reinforced for maximum strength, safety, and stability. Design assembly to withstand deformation during both operating and stored phases of service. Provide mounting brackets and removable lifting eyes for ease of installation.

1. Scissors Mechanism: Fabricate leg members from heavy, hot-dip galvanized steel-formed tube or plate members to provide maximum strength and rigidity.

2. Scissors Configuration: Single leg, Multiple width or Multiple length.
3. Bearings: Pivot points with permanently lubricated antifriction bushings or sealed ball-bearings for minimum maintenance.
4. Maintenance Leg: Removable, safety maintenance leg or hinged, safety maintenance bars.
5. Mounting: Surface or Pit.

J. Materials:

1. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
2. Rolled-Steel Floor Plate: ASTM A786/A786M, rolled from steel plate complying with ASTM A572/A572M, Grade 55 (380).
3. Steel Tubing: ASTM A500/A500M, cold formed.

K. Dock Lift Finish: Manufacturer's standard baked-on factory finish unless otherwise indicated.

2.4 TRUCK RESTRAINTS

A. General: Manufacturer's standard device designed to engage truck's rear-impact guard and hold truck at loading dock.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Standard: Comply with MH 30.3.

D. Rated Capacity: Capable of supporting total gross load of 30,000 (13 608) or 32,000 (14 515) lb (kg) without permanent deflection or distortion.

E. Operating Range: Capable of restraining rear-impact guards within a range from:

1. Vertical Range: Minimum of 7 inches (178 mm), 8 inches (203 mm), 9 inches (229 mm), 11 inches (279 mm) or dimension indicated on drawings to maximum of 28 inches (711 mm), 30 inches (762 mm), 34 inches (864 mm) or dimension indicated on drawings above driveway.
2. Horizontal Range: Zero to 10 inches (254 mm), 12 inches (305 mm), 15 inches (381 mm) or dimension indicated on drawings in front of dock bumpers.

F. Power Operating System: Manufacturer's standard electromechanical or hydraulic unit.

1. Remote-Control Station: Single-button station of the constant-pressure type, enclosed in NEMA ICS 6, Type 12 box. Restraint is engaged by depressing and holding button; restraint is released by releasing button.
2. Interlock: Leveler does not operate while truck restraint is not engaged.

G. Mechanical Operating System: Restraint operates by use of a lifting rod or hook to raise engagement device.

H. Rear-Impact-Guard Sensor: Detects presence of rear-impact guard and automatically returns to stored position if rear-impact guard is not engaged.

I. Caution Signs: Exterior, surface mounted; designed to inform both dock attendant and truck driver; with sign copy as follows. Provide one sign at each truck-restraint location.

1. Sign Copy in Forward and Reverse Text: Manufacturer's standard text permitting truck movement with green light.
2. Interior Sign Copy: Manufacturer's standard text permitting truck movement with green light.

J. Light Communication System: Red and green illuminated signal-light sets, with lens approximately 4 inches (102 mm) in diameter, designed to indicate status to both dock attendant and truck driver. Equip system with steel control panel located at interior of dock that includes illuminated lights indicating or indicates status of exterior signal lights. Provide signal-light set and control panel at each location indicated for light communication system. Enclose exterior signal-light sets in steel or plastic housing with sunshade.

1. Manual Operation: System is activated by push button or switch located on interior or truck-restraint control panel.
2. Automatic Operation: System is activated automatically by limit switch, photoelectric sensor or magnetic switch mounted on overhead door track. Provide on-off switch located on light communication system or truck-restraint control panel.
3. Automatic Operation: System is activated automatically when device engages rear-impact guard. Provide on-off switch located on truck-restraint control panel.
4. Mounting: Wall, Driveway, Pit or Pedestal.

    a. Pedestal: 4 by 4 inches (102 by 102 mm) post with base plate and face plate for mounting light communication system, 60 inches (1524 mm) high.

        1) Finish: Manufacturer's standard baked-on factory finish in yellow or orange or Hot-dip galvanized.

K. Alarm: Audible and visual system indicating that rear-impact guard is not engaged, with manual reset.

L. Materials:

1. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
2. Rolled-Steel Floor Plate: ASTM A786/A786M, rolled from steel plate complying with ASTM A572/A572M, Grade 55 (380).
3. Steel Tubing: ASTM A500/A500M, cold formed.
4. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

M. Truck-Restraint Finish: Manufacturer's standard electrodeposited zinc coating or Hot-dip galvanized.

N. Accessories: Interlock to dock leveler or Key switch.

2.5 FINISH REQUIREMENTS

A. Finish loading dock equipment after assembly and testing.

B. Hot-Dip Galvanizing: Comply with the following:

1. ASTM A123/A123M for iron and steel loading dock equipment.
2. ASTM A153/A153M or ASTM F2329/F2329M for iron and steel hardware for loading dock equipment.

C. Spray Zinc Metallizing: ASTM B833.

D. Electrodeposited Zinc Coatings: ASTM B633.

E. Steel Prime Paint Finish: Clean, pretreat, and apply manufacturer's standard primer.

F. Baked-on Factory Finish: Clean, pretreat, and apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.

1. Color: Manufacturer's standard or Match Architect's sample.
2. Toe Guards: Paint to comply with ANSI Z535.1.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Install loading dock equipment as required for a complete installation.

1. Rough-in electrical connections.

3.2 INSTALLATION OF RECESSED LOADING DOCK LEVELERS

A. Attach dock levelers securely to loading dock platform, flush with adjacent loading dock surfaces and square to recessed pit.

3.3 INSTALLATION OF EDGE-OF-DOCK LOADING DOCK LEVELERS

A. Attach dock levelers to loading dock platform in a manner that complies with requirements indicated for arrangement and position relative to top of platform.

1. Weld anchor holes in contact with continuous embedded loading dock edge channel. Weld or bolt bumper blocks to face of loading dock.

3.4 INSTALLATION OF STATIONARY LOADING DOCK LIFTS

A. Attach dock lifts securely to loading platform, floor of recessed pit or surface of driveway.

3.5 INSTALLATION OF TRUCK RESTRAINTS

A. Attach truck restraints in a manner that complies with requirements for arrangement and height required for device to engage vehicle rear-impact guard. Interconnect control panel and signals with dock leveler.

1. Wall-Mounted Units Weld or Anchor.

    a. Weld truck restraints to steel curb angle, edge channel or mounting plate embedded in loading dock edge.
    b. Anchor truck restraints to face of loading dock with expansion anchors and bolts.

2. Driveway-Mounted Units: Anchor truck restraints to driveway with expansion anchors and bolts.
3. Pit-Mounted Units: Anchor truck restraints to concrete pit with expansion anchors and bolts.

3.6 ADJUSTING

A. Adjust loading dock equipment to function smoothly and safely, lubricate as recommended by manufacturer.

B. Test dock levelers for vertical travel and adjust to maintain operating range indicated.

C. After completing installation of exposed, factory-finished loading dock equipment, inspect exposed finishes and repair damaged finishes.

3.7 DEMONSTRATION

A. Engage a factory-authorized service representative to train or train Owner's maintenance personnel to adjust, operate, and maintain loading dock equipment.

END OF SECTION 111319

SECTION 111323 - PORTABLE DOCK EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes portable loading dock lifts (scissors lifts).

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For portable dock equipment.

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location of each field connection.
3. Include diagrams for power, signal, and control wiring.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

PART 2 - PRODUCTS

2.1 PORTABLE LOADING DOCK LIFTS (SCISSOR LIFTS)

A. General: Portable, scissors-type, single-leg, hydraulic dock lift of capacity, size, and construction indicated; complete with controls, safety devices, and accessories required.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Standard: MH 29.1.

D. Rated Capacity: Lifting capacity of not less than 8000 lb (3629 kg) or load indicated on Drawings as directed and with axle loads of 6500 lb (2948 kg) at ends and 5000 lb (2268 kg) at sides or magnitudes indicated on Drawings.

E. Platform: As directed Nonskid, safety-tread or Smooth-surface heavy hot-dip galvanized-steel deck plate.

1. Platform Size: 72 inches (1829 mm) wide by 72 inches (1829 mm) long, 72 inches (1829 mm) wide by 96 inches (2438 mm) long, 72 inches (1829 mm) wide by 120 inches (3048 mm) long or As indicated on Drawings.
2. Platform Guarding: As directed Bevel toe guards, Toe sensor, Indicator bar, Skirts or Enclosure to comply with requirements in MH 29.1.
3. Removable or Fixed Guard Rails As directed: Provide steel, hot-dip galvanized-steel or aluminum guard rails on two sides of platform with a single, removable chain across each end. Provide guard rails not less than 39 inches (991 mm) high with midrail and 4-inch (102-mm) high, kick plate at bottom. Mount rail sockets flush with platform surface.

F. Bridge: Nonskid, safety-tread steel, Nonskid, safety-tread hot-dip galvanized-steel or High-tensile aluminum plate as directed.

1. Hinged Bridge: Hinged, throw-over bridge bolted to full-length, heavy-duty, piano-type hinge welded to toe guard at end of platform. Provide bridge complete with heavy-duty lifting chains. Chamfer edge of bridge to minimize obstructing wheels of material-handling vehicles.
2. Size: 18 inches (457 mm) long by 60 inches (1524 mm) wide, 18 inches (457 mm) long by 72 inches (1829 mm) wide or as indicated on Drawings.
3. Locations: Ends, Sides or as indicated on Drawings.

G. Function: Dock lifts shall compensate for differences in height between truck bed and loading platform.

1. Vertical Travel and Travel Speed: As indicated on Drawings.
2. Vertical Travel: Maximum of 60 (1524) inches (mm) from a lowered height of 12 (305) inches (mm) for a total raised height of 72 (1829) inches (mm).
3. Travel Speed: Nominal raising speed of 8 (0.04), 10 (0.05) or 12 (0.06) fpm (m/s) as directed.
4. Hinged Throw-over Bridge Operation: Manual, Spring assist, Manual-assist bridge winch or Automatic powered as directed.

H. Hydraulic Operating System: Self-contained, electric, hydraulic power unit for raising and lowering lift; of size, type, and operation needed for capacity of lift indicated; controlled from a remotely located push-button station.

1. Power Unit: Consisting of continuous-duty motor, high-pressure gear pump, valve manifold, oil-line filters, and oil reservoir.

    a. Equip manifold with relief valve, check valve, pressure-compensated flow-control valve, and solenoid valve and with provisions for lowering lift manually if power fails.
    b. Equip reservoir, valve manifold, and pressure line with oil-line filters.

2. Cylinders: Equip lift with not less than two heavy-duty, high-pressure, hydraulic, ram-type cylinders. Rams shall be manufacturer's standard, either direct-displacement plunger or rod-and-piston type with positive internal stops. Cylinder rods shall be chrome plated and polished.

    a. Rate of Descent Protection: Pressure-compensated flow control or hydraulic velocity fuse to limit down speed for each cylinder.

3. Remote-Control Station: Multibutton control station of the constant-pressure type with UP and DOWN push buttons. Controller shall consist of magnetic motor starter with three-pole adjustable overloads and 24-V control transformer with 4-A, fused secondary prewired to terminal strips and enclosed in NEMA ICS 6, Type 12 box.

    a. Upper-Travel-Limit Switch: Equip unit with manufacturer's standard, adjustable, upper-travel-limit switch.

I. Construction: Fabricate lift from structural-steel shapes rigidly welded and reinforced for maximum strength, safety, and stability. Design assembly to withstand deformation during both operating and stored phases of service. Provide mounting brackets and removable lifting eyes for ease of installation.

1. Scissors Mechanism: Fabricate leg members from heavy, hot-dip galvanized steel-formed tube or plate members to provide maximum strength and rigidity.
2. Scissors Configuration: Single leg, Multiple width or Multiple length as directed.
3. Bearings: Pivot points with permanently lubricated antifriction bushings or sealed ball-bearings for minimum maintenance.
4. Maintenance Leg: Removable, safety maintenance leg or hinged, safety maintenance bars.

J. Materials:

1. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
2. Rolled-Steel Floor Plate: ASTM A786/A786M, rolled from steel plate complying with ASTM A572/A572M, Grade 55 (380).
3. Steel Tubing: ASTM A500/A500M, cold formed.

2.2 FINISH REQUIREMENTS

A. Baked-on Factory Finish: Provide unless otherwise indicated. Clean, pretreat, and apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat in manufacturer's standard color.

1. Toe Guards: Paint to comply with ANSI Z535.1.

B. Hot-Dip Galvanizing: Comply with the following:

1. ASTM A123/A123M for iron and steel portable dock equipment.
2. ASTM A153/A153M or ASTM F2329/F2329M for iron and steel hardware for portable dock equipment.
