

# City of Westlake Village

## Special Provisions Part I-Section E.5

The Malibu Creek Watershed (MCW) is a very cohesive organization that runs on close coordination and frequent communication from four cities, the grant appointed MCW Coordinator, and County and Caltrans representatives. However, as we have begun implementing TMDLs our Water Management Committee (WMC) has enjoyed the participation of additional agencies not in the WMC but a responsible agency of a TMDL in the MCW. This has afforded us the opportunity to address the areas within our watershed under the jurisdiction of an agency not apart of the WMC.

In collaboration with our watershed partners, the City developed and submitted an Integrated TMDL Implementation Plan for the Malibu Creek Watershed to the Regional Board Executive Officer, and we look forward to implementing this plan once it had been approved.

The WMC has focused its attention on structural solutions. Prior to our monthly meetings we invite a BMP manufacture to present their product. This has been valuable in the sense that the group gains knowledge on how to mitigate various pollutants and keep abreast of the latest technology.
