

Receiving Water Limitations

There were no yes answers to either of the questions. There is no scientific evidence that the City of La Verne is contributing to the degradation of any area water body. Furthermore, the Regional Board has not notified the City of La Verne that it is the cause of pollutants listed on the 303 (d) for Puddingstone Lake, the lake where La Verne's runoff ends. Finally, items that are currently listed on the 303 (d) list for Puddingstone are legacy pollutants and not a result of recent activity.
