

ADVENTURE PARK MULTI-BENEFIT STORMWATER CAPTURE PROJECT

SAFE CLEAN WATER PROGRAM

The Project will construct a stormwater capture system at Adventure Park which includes a controlled diversion structure, a pretreatment unit, an underground reservoir, pump stations, and a filtration system. Captured runoff will be diverted into the sanitary sewer system underground. Above ground, park enhancements include a repaved parking lot, new drought-tolerant landscaping, replacement of exercise equipment, walking path restoration, an open seating area, a vegetated bioswale area, and interpretive signs to educate park visitors about the sustainable infrastructure.

The Project is currently in construction and is anticipated to be completed in late 2024.

COMMUNITY BENEFITS

Water Quality

Park/Habitat Improvements

Recreational Opportunities

Reduce Heat Island Effect

Water Supply

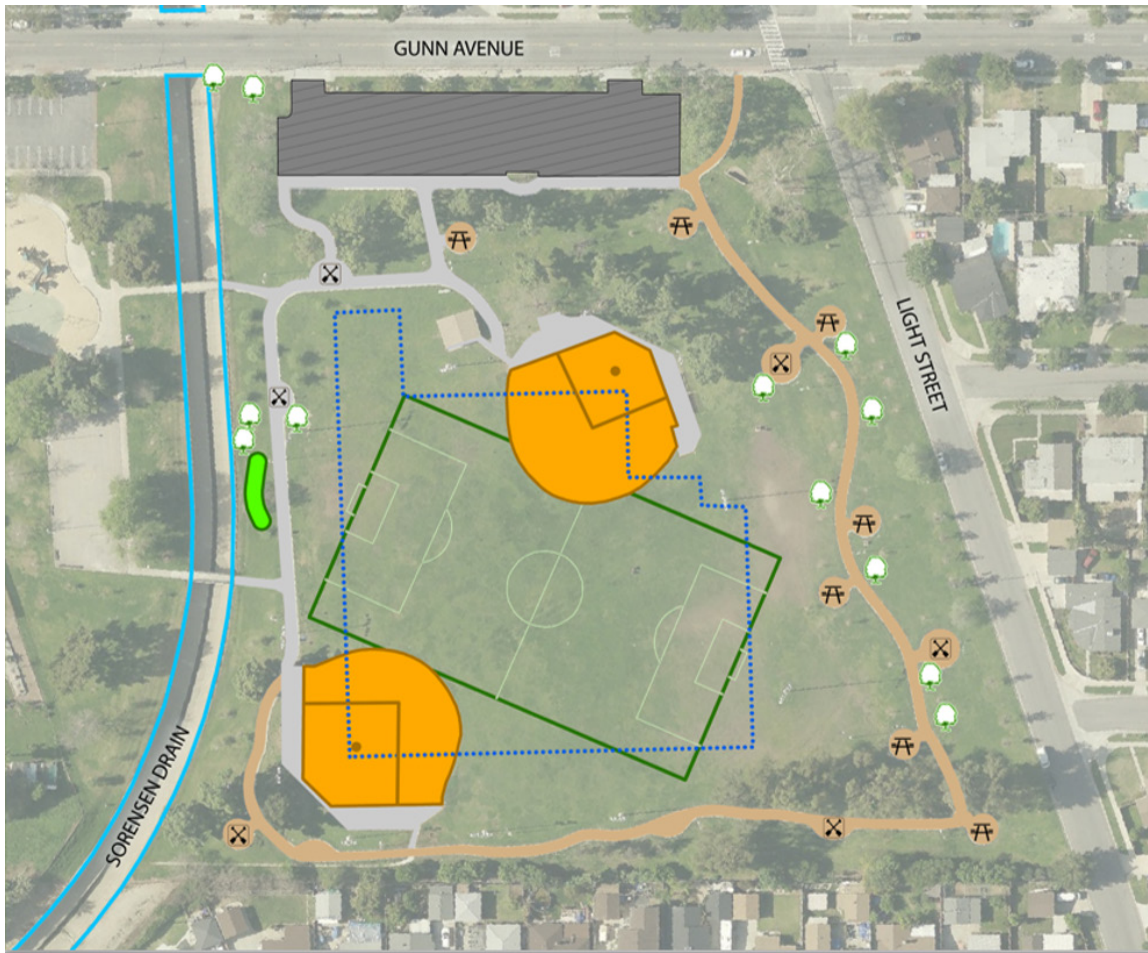

Open Area Enhancement

Natural Processes

Increased Trees and Vegetation

Legend	
	Exercise Equipment with Rubberized Surface
	Picnic Table
	New Tree (Location Tentative)
	Underground Stormwater Storage
	Decomposed Granite Path
	Rain Garden Swale (Location Tentative)
	Resurfaced Parking Lot
	New Baseball/Softball Surface
	Sidewalk
	Soccer Field (Striping Only)
	Sorensen Drain

Above Ground Improvements

Underground Stormwater Capture Treatment System
