

District No. 29 Tank Recoating & Retrofits, Phase III

This project included work done on three reservoirs serving our customers in the Malibu and Topanga areas. The work includes recoating corroded tanks, repairing and replacing damaged parts of tanks, and retrofitting tanks with flexible connections to reduce the risk of rupture during a seismic event. These improvements were necessary to ensure structural stability, to address water quality concerns, and/or to bring the reservoirs up to current infrastructure standards. Construction of this project began in January 2014 and was completed in July 2014.
