

## Topanga Beach Booster Pump Station Upgrade

The project consisted of constructing a new booster pump station in Malibu. The purpose of this project is to replace an existing pump station that is located in an area that is susceptible to landslides. The project included four new vertical turbine booster pumps, two salvaged pumps from the existing pump station, new electrical controls, and a new concrete masonry block pump house. Also, construction of approximately 650 feet of 12-inch-diameter steel pipe and approximately 450 feet of 16-inch diameter pipe is included in the scope of the project. This project was completed in January 2010.
