

Valve Relocation at Las Flores Creek

This project involves the installation of a 30-inch-diameter electric butterfly valve on the existing 30-inch-diameter Malibu Branch Feeder water transmission main. The proposed valve will be installed at the intersection of Rambla Pacifico Street and Pacific Coast Highway in Malibu. The valve will serve as a replacement for an existing 24 inch diameter plug valve which will be abandoned-in-place. This project was completed in July 2011.
